

ENERGY

The Tulane Energy Institute (TEI) provides educational opportunities that improve understanding of the integration of energy markets, policies, technology and the environment. These initiatives include programming in energy accounting, analytics, economics, finance, operations and supply chain management, risk management, strategy and trading, as well as applied and basic research in business, engineering and sciences.

Through a specialization at the undergraduate level and the Master of Management in Energy program at the graduate level, TEI is focused on developing a highly skilled pool of employee talent to work successfully in the energy industry and related banking, consulting, financial, technology and trading firms.
