# TABLE OF CONTENTS

2019-2020 University Catalog ........................................................................... 11
The University ................................................................................................. 12
Newcomb-Tulane College ............................................................................... 18
Graduate Degrees and Professional Programs ........................................... 35
  Office of Graduate and Postdoctoral Studies ........................................... 35
  Academic Policies ..................................................................................... 35
  Master’s Programs Requirements ............................................................... 36
  Ph.D. Program Requirements ................................................................ 39
Graduate Programs ......................................................................................... 42
School of Architecture .................................................................................... 45
  Architecture ............................................................................................. 48
    Architectural Research and Design, M.S.Arc ........................................ 48
  Architecture Minor .................................................................................. 49
  Architecture, B.Arch ............................................................................... 49
  Architecture, BSA ................................................................................... 51
  Architecture, M.Arch ............................................................................. 52
Preservation ..................................................................................................... 53
  Preservation Minor .................................................................................. 53
  Preservation Studies Certificate (Graduate) .......................................... 53
  Preservation Studies, MPS .................................................................... 54
Real Estate Development .............................................................................. 54
  Real Estate Minor ................................................................................... 55
    Sustainable Real Estate Development Certificate (Graduate) ............. 55
    Sustainable Real Estate Development, MSRED .................................. 56
Social Innovation & Social Entrepreneurship .............................................. 56
  Social Innovation & Social Entrepreneurship Minor ......................... 57
A.B. Freeman School of Business ................................................................. 58
  Accounting ............................................................................................. 62
    Accounting Minor (Freeman School of Business) ............................ 63
    Accounting, MAC ............................................................................... 63
  Business Analytics .................................................................................. 63
  Business Analytics, MAN ................................................................. 64
Energy ............................................................................................................ 64
  Energy, MME ....................................................................................... 64
  Energy Certificate .................................................................................. 65
  Master of Management in Energy with UCASS .................................. 65
Entrepreneurial Management ........................................................................ 66
  Entrepreneurial Management Certificate ........................................... 66
Finance .......................................................................................................... 66
  Business, PhD ....................................................................................... 66
  Executive Master of Finance at Houston, MFN .................................. 69
  Finance Major ....................................................................................... 69
  Finance Minor (Freeman School of Business) ...................................... 70
  Finance, MFN ....................................................................................... 70
  Master of Finance with Universidad Francisco Marroquin and UCASS, MFN ................................................. 72
Global Management ..................................................................................... 72
  Alliance Global MBA with Baltic Management Institute, IESA, ITAM, Shanghai Jiao Tong University, University of the Andes, and Xiamen University, MGM ................................................. 72
Legal Studies in Business ............................................................................ 73
  Legal Studies in Business Major ......................................................... 73
  Legal Studies in Business Minor .......................................................... 73
Management ................................................................................................. 74
  Management Major ............................................................................... 74
  Management Minor ............................................................................... 75
  Management, MMG ............................................................................. 75
  Master of Management with Universidad Francisco Marroquin, MMG ......................................................... 75
Marketing .................................................................................................... 76
  Marketing Major ................................................................................... 76
Marketing Minor ......................................................................................... 76
MBA ............................................................................................................. 77
  International EMBA with University of Chile, Centrum, & ICESI ........ 77
  Business, Executive MBA ................................................................ 78
  Business, Fast Track MBA ................................................................ 79
  Business, Full-Time MBA ................................................................ 79
  Business, Professional MBA .............................................................. 80
Minor for Non-Business Students ............................................................... 81
School of Law ................................................................................................. 82
  Juris Doctor ........................................................................................... 82
  JD Certificates ....................................................................................... 85
    Civil Law Certificate .......................................................................... 85
    Environmental Law Certificate ......................................................... 85
    European Legal Studies Certificate ................................................. 85
    International and Comparative Law Certificate .............................. 85
    Maritime Law Certificate ................................................................ 85
    Sports Law Certificate ..................................................................... 85
  Master of Laws ..................................................................................... 86

This version of the catalog was published in February of 2019 and takes precedence over any previously printed or online catalog. The University Catalog is not intended to nor does it contain all regulations that relate to students. Students are held individually responsible for meeting all requirements as determined by Tulane University. Failure to read and comply with policies, regulations, and procedures will not exempt a student from being governed by and accountable to them.

The catalog of the University is the document of authority for all students. Any academic unit may issue additional or more specific information (e.g. student handbooks or program manuals) that is consistent with approved policy. These publications provide detailed and useful information; however, the information in the catalog supersedes that issued by any other unit if there is a conflict between the two. The University reserves the right to change the requirements given in the catalog at any time. Changes will become effective whenever the proper authorities so determine and will apply to both prospective students and those already enrolled.

Catalog Production Information

The 2019-2020 Tulane University Catalog was produced by the Office of the University Registrar in conjunction with the Office of Academic Affairs and Provost.
Mission Statement

Tulane's purpose is to create, communicate and conserve knowledge in order to enrich the capacity of individuals, organizations, and communities to think, to learn, and to act and lead with integrity and wisdom.

Tulane pursues this mission by cultivating an environment that focuses on learning and the generation of new knowledge; by expecting and rewarding teaching and research of extraordinarily high quality and impact; and by fostering community-building initiatives as well as scientific, cultural and social understanding that integrate with and strengthen learning and research. This mission is pursued in the context of the unique qualities of our location in New Orleans and our continual aspiration to be a truly distinctive international university.

History

Tulane University, one of the foremost independent national research universities in the country, is ranked among the top quartile of the nation's most highly selective universities. With ten schools and colleges that range from the liberal arts and sciences through a full spectrum of professional schools, Tulane gives its students a breadth of choice equaled by few other independent universities in the country. Tulane University's ten academic divisions enroll approximately 8,000 undergraduates and about 5,000 graduate and professional students. The schools of Architecture, Business, Liberal Arts, Public Health and Tropical Medicine, and Science and Engineering offer both undergraduate and graduate programs. Other divisions include the schools of Law, Medicine, Social Work and Professional Advancement.

Tulane traces its origins back to the founding of the Medical College of Louisiana, the Deep South's first medical school, in 1834. Classes started the next year when 11 students and seven faculty members met in a rented hall; students paid for instruction by the lecture. Born of the desperate need for competent medical care in this region and of the founders' dedication to study and treat "the peculiar diseases which prevail in this part of the Union," the college quickly earned recognition. Soon the medical college merged with the public University of Louisiana in New Orleans, adding a law department and a "collegiate" department that became Tulane College. The university continued building a national reputation. J.L. Riddell, professor of chemistry, built the first successful binocular microscope in 1852. The medical department faculty fought for improved public health and sanitation, and, in 1857, Christian Roselius, an early graduate of the collegiate and law departments, was appointed chief justice of the Louisiana Supreme Court.

The Civil War forced the university to close. After the war, the university reopened in financial trouble. Total assets, excluding buildings, totaled $4,570.39 in 1866. In the early 1880s, merchant and philanthropist Paul Tulane provided a permanent solution by donating more than $1 million "for the promotion and encouragement of intellectual, moral, and industrial education." Tulane made his fortune in New Orleans before returning to his native Princeton, New Jersey; his gift expressed his appreciation to the city.

The 17-member board authorized to administer the Tulane Educational Fund decided to revitalize the struggling University of Louisiana instead of founding a new institution. Paul Tulane concurred, and in 1884, the Louisiana Legislature gave the University of Louisiana to the Administrators of the Tulane Educational Fund. Tulane University of Louisiana, a private, non-sectarian institution, was born. As a result of its new strength, the university was able to create the Department of Philosophy and Science, which later became the Graduate School, and initiate courses in architecture and engineering.

In 1886, Josephine Louise Newcomb founded Newcomb College as a memorial to her daughter, Harriott Sophie. Newcomb College was the first degree-granting women's college in the nation to be established as a coordinate division of a men's university. It became the model for other coordinate women's colleges, including Barnard and Radcliffe. Newcomb's founding is linked with the World's Industrial and Cotton Exposition, which opened in Audubon Park in 1884. Several artisans who came to the New Orleans Exposition to exhibit their own work and see the works of others stayed to establish the arts program, which was at the heart of Newcomb's early curriculum. By the early 1900s, Newcomb pottery had won a bronze medal at the Paris Exposition, its fame had spread across the nation and young women were engaged in the unusual task of earning an independent living.

In 1894, Tulane moved to its present campus on St. Charles Avenue, five miles by streetcar from its former site in downtown New Orleans. At about the same time, the Richardson Memorial Building was built on Canal Street to house the medical school. Some medical classes were moved to the uptown campus, but clinical teaching remained downtown. The medical school was split between campuses until a major reorganization in the 1960s. For a quarter of a century, Newcomb College was located on Washington Avenue in the Garden District. In 1918 it, too, moved uptown to join other divisions of the university.

Around the turn of the century, Tulane's curriculum grew as several new professional schools were established, including the Deep South's first schools of architecture, business, and social work. City officials frequently consulted the College of Technology, which became the School of Engineering, on construction techniques and soil conditions. Engineering alumnus A. Baldwin Wood designed the famous Wood screw pump that helps drain New Orleans in times of torrential rains and flooding. The first student yearbook, *Jambalaya*, and the first *Tulanian*, the alumni magazine, were published. The Alumni Association was founded with 800 members, and significant contributions to the university financed new buildings, library holdings and research facilities. The Middle American Research Institute, founded in 1924, became a pioneer in Central American archaeology and anthropology, excavating and restoring the Mayan village of Dzibilchaltun in the Yucatan.

Since then, research in many disciplines has flowered through the establishment of research centers including the Murphy Institute of Political Economy, Newcomb Research Center, the Roger Thayer Stone Center for Latin American Studies, the Center for Bioenvironmental Research, the Brain Institute, the Tulane Museum of Natural History, and the Amistad Research Center— curator of one of the largest collections in the world of primary source material on American ethnic groups, especially African-Americans.

As early as the 1890s, Tulane offered free lectures and classes to the New Orleans community. This commitment to community service was reaffirmed in 1942 with the founding of University College, now
the School of Professional Advancement, which offers educational opportunities for working adults.

After World War II, Tulane's Graduate School and the professional programs continued to grow. The university was elected to the Association of American Universities, a select group of over 60 universities with "pre-eminent programs of graduate and professional education and scholarly research."

In the fall of 2005, following the devastation of Hurricane Katrina, Tulane University was confronted with unprecedented and existential challenges. The administration and the Board of Tulane University were faced with redefining and renewing the university for the future. President Scott Cowen called the resulting plan "the most significant reinvention of a university in the United States in over a century."

The plan had at its center:

- a focus on an exceptional undergraduate program that is campus- and student-centric and a dedication to the holistic development of students.
- a core that is surrounded and strengthened by superb graduate, professional, and research programs that build on the university's historical strengths and distinctive characteristics.

In July 2014, Michael Fitts became the 15th president of Tulane, bringing with him a strong emphasis on heightening cross-disciplinary education and research.

Under President Fitts' leadership Tulane's national ranking and reputation have improved dramatically; each year's incoming classes have broken records in terms of their academic achievements and diversity; the university's annual operating cash deficit of $15-20 million has been eliminated and the university has enjoyed record fundraising years.

President Fitts believes students and higher education institutions can set themselves apart in a fast-changing world and ever-shifting economy through the combining of different fields and skills. In his first year at Tulane, he launched task forces to lead the university in deepening its unique strengths for interdisciplinary collaboration. He sees powerful advantages in the university's manageable size, which deepens its unique strengths for interdisciplinary collaboration. He aims to create the most engaged undergraduate experience in the country through this rethinking of academic options, residential living, extracurricular activities, and more. In graduate education and research, he will foster intellectual cross-pollination that can produce solutions to some of the world's most fundamental problems.

This focus also extends to Tulane's physical campuses. President Fitts has initiated a campus master planning process with a 21st century vision of spaces redesigned to promote connections. That includes drawing people together from different parts of campus and linking different functions of the university, such as residence halls with dining hubs and academic venues.

The many major building projects under Fitts include the more than $35 million Goldring/Woldenberg Business Complex; the transformation of Mussafer Hall into the central location for services dedicated to student success; the building of new residence halls; and construction of The Commons, a three-story, $55 million, 77,000-square-foot marvel that will house a new dining hall, multipurpose meeting spaces and a permanent home for the Newcomb College Institute.

Another avenue for making connections is public service, an area where Tulane is a leader in higher education. President Fitts lauds the pursuit of community work for its power to show students how theory connects with practice. It gives them real-world experience with the concepts they study in class. His vision for the university includes enhancing the ties between public service and academics.

Accreditation

Tulane University is accredited by the Southern Association of Colleges and Schools Commission on Colleges (SACSCOC). Tulane University is accredited by SACSCOC to award associate, baccalaureate, masters, doctorate, and professional degrees. For questions about the accreditation of Tulane University, contact SACSCOC at 1866 Southern Lane, Decatur, Georgia 30033-4097 or call 404-679-4500.

Assistant Vice President, Campus Health
University Registrar
Colette P. Raphel
B.A., Tulane University

Enrollment Management

Satyajit Dattagupta
Vice President for Enrollment Management and Dean of Undergraduate Admission
M.B.A., Southwest Minnesota State University

Rebecca Ancira
Associate Vice President for Enrollment Management
B.A., Tulane University

Bradly K. Booke
Assistant Vice President for Enrollment and Retention
A.M., University of Chicago

Leila Labens
Director of Strategic Recruitment
M.B.A., Tulane University

Jeff Schiffman
Director of Undergraduate Admission
M.L.A., Tulane University

Academic Policies

Registration Policies and Procedures

All students must register by the last day to add classes each semester. Students register online by accessing Gibson Online (https://gibson.tulane.edu), which can be found via the University Registrar’s website at www.registrar.tulane.edu. Gibson Online is a gateway to online services such as registration, grades, degree audit, Canvas, and the Schedule of Classes (https://classschedule.tulane.edu/Search.aspx). Registration can also be accessed by logging directly into the Schedule of Classes (https://classschedule.tulane.edu/Search.aspx). Summer and Fall semester course offerings are typically available for review in March, and Spring semester courses are typically available in October. The Schedule of Classes (https://classschedule.tulane.edu/Search.aspx) contains live data and reflects course availability at that moment in time. The convenience of registration online coupled with the delivery of tuition bills via email greatly reduces the time each student must spend on campus dealing with administrative details. By registering for classes students assume full financial responsibility and assume the responsibility of informing the university of any changes in address via Gibson Online (https://gibson.tulane.edu) so that bills may be delivered promptly.

Students are required to confirm their attendance at the beginning of each semester. Each term, enrolled students will be notified via email when confirmation is made available on Gibson Online. In addition, they must consult the official Academic Calendar (https://registrar.tulane.edu/academic-calendar) on the University Registrar’s webpage for important registration and refund deadlines. Failure to heed the dates set forth in the official academic calendar could result in academic or financial penalty.

Grade Grievance Procedure

Students who believe a grade to be incorrect should first consult with their instructor to address any discrepancies. If questions remain or the situation is unresolved, students seeking redress should follow the official grade grievance procedure (https://advising.tulane.edu/advising-center/grade-grievance-procedure).

Address Changes

It is the responsibility of the student to keep the university notified of changes in local or permanent address. Many important notices are sent to students and parents via US mail and it is therefore important to maintain accurate mailing addresses. These notices may include: communications from individual schools within the university or Information Technology, bills (if requested via mail), and notices concerning academic action. It is therefore essential that any change in address be updated using the "Update Addresses and Phones" option found under Student Services on Gibson Online.

Name Changes

Students who wish to change their legal name must supply supporting legal documentation and complete the request for name change form with the Office of the Registrar (https://registrar.tulane.edu). Staff or faculty members who have a student record must change their legal name with the Office of the Registrar prior to making a name change request with Human Resources.

Expected Behavior at Tulane University

Tulane University expects and requires behavior compatible with its high standards of scholarship. By accepting admission to the university, a student accepts its regulations (i.e., Code of Academic Conduct (https://college.tulane.edu/code-of-academic-conduct), Code of Student Conduct (https://conduct.tulane.edu/resources/code-student-conduct)) and acknowledges the right of the university to take disciplinary action, including suspension or expulsion, for conduct judged unsatisfactory or disruptive.

The integrity of Tulane University is based on the absolute honesty of the entire community in all academic endeavors. As part of the community, students have certain responsibilities regarding all independent work that forms the basis for the evaluation of their academic achievement. Students are expected to be familiar with these responsibilities at all times.

The scholarly community of the university depends on the willingness of both instructors and students to uphold the Code of Academic Conduct (https://college.tulane.edu/code-of-academic-conduct). When a violation of the Code of Academic Conduct is suspected, it is the duty of every member of the academic community who has evidence to take action. Students should take steps to uphold the Code of Academic Conduct by reporting any suspected offense to the instructor or the
Honor Board. Students should under no circumstances tolerate any form of academic dishonesty.

Behavior Norms
Listed below are generally accepted guidelines for student behavior in classrooms, laboratories, and studios. Instructors and schools may impose other expectations.

- Computers are to be used for class-related purposes only; instructors will specify when computers may not be used.
- Students and instructors will turn off all cell phones and electronic devices at the beginning of each class; these items will remain off for the duration of the class.
- Students and instructors are required to observe copyright laws.
- Students are responsible for checking their Tulane e-mail accounts daily when classes are in session.
- Instructors expect students to be punctual when arriving for classes and presentations; they also expect uninterrupted attendance for the duration of the class.
- Students submitting work late can expect, at the instructor’s discretion, to have the work refused or to receive a grade penalty.
- Videotaping or recording a class requires the instructor’s approval in advance.

Discipline
For all academic activities and disruptive behavior, the authority for control and discipline rests with the dean of Newcomb-Tulane College and the deans of the undergraduate schools. In all other areas, the vice president of student affairs is responsible for formulating appropriate procedures and regulations concerning student behavior and for the judicial consideration of violations. Students should refer to the Code of Student Conduct (https://conduct.tulane.edu/resources/code-student-conduct) for a full description.

Code of Student Conduct
All students are bound by the Code of Student Conduct that is administered by the Office of Student Affairs. The full text is available here (https://tulane.app.box.com/s/f5dbw5rtf1xg4liojq8stnkmqrjsbw).

Credit-Hour
Program Integrity Rules issued by the U.S. Department of Education require institutions to establish a definition of “credit hour.” This applies to all degree programs (including credit for full and part-time undergraduate, graduate, professional, post-baccalaureate, and online programs):

- The assignment of credit-hours to a course occurs through a formal review process conducted at the appropriate levels of faculty governance.
- For courses in lecture format, one credit-hour represents the subject content that can be delivered in one academic hour (50 min) of contact time each week for the full duration of one academic semester, typically fifteen weeks along. For undergraduate courses, one credit-hour also includes associated work that can be completed by a typical student in 1-2 hours of effort outside the classroom. For graduate and professional courses taught in lecture format, 2-3 hours of outside work is expected for each academic hour of contact time as well.
- For courses taught in other than lecture format (e.g., seminars, laboratories, independent study, clinical work, research, online courses, etc.), one credit-hour represents an amount of content and/or student effort that in aggregate is no less than that described in (2) above.

While Tulane’s standard definition of a credit hour applies across the University, in some cases the definition may vary to meet specific accrediting body requirements.

General Policies
Tulane University is an Affirmative Action/Equal Employment Opportunity institution. Consequently, its policy of nondiscrimination includes recruitment, employment, admission, retention, and promotion of the most qualified students, faculty, and staff regardless of an individual’s race, sex, color, religion, marital/ethnic origin, citizenship, marital status, sexual orientation, handicap, or veteran status. Tulane University does not discriminate in its provision of services and benefits or in its treatment of students, patients, and employees. Inquiries regarding this policy may be referred to the Office of Institutional Equity (https://equity.tulane.edu).

Tulane University is committed to a policy of compliance with Federal laws and regulations concerning nondiscrimination on the basis of race, sex, color, national/ethnic origin, religion, age handicap, or veteran status in educational or institutional programs and activities. Title VI and Title VII of the Civil Rights Act of 1964, Title IX of the Educational Amendments of 1972, Section 504 of the Rehabilitation Act of 1973, and the other similar legislation prohibit such discrimination.

Tulane University has implemented grievance procedures for faculty, staff, and students concerning cases of alleged discrimination, including those of alleged sexual harassment. It is the policy of the University that harassment on the basis of sex among employees constitutes an impermissible employment practice, which is subject to disciplinary action and shall not be tolerated. Complaints or confidential inquiries may be referred to the Office of Human Resources (https://hr.tulane.edu) or the Office of Institutional Equity (https://equity.tulane.edu).

Sexual harassment involving students and university personnel or among students is equally impermissible and shall not be tolerated. The University is committed to providing an environment to study free of discrimination and sexual harassment.

Reporting the Complaint: It is not necessary to first confront the harasser prior to instituting a complaint under this policy. However, it is appropriate to promptly report a complaint so that a full and complete investigation is possible. Any person designated to receive complaints from students, employees, or faculty must notify the Office of Institutional Equity within twenty-four (24) hours of receiving a harassment complaint.

Complaints by students: A student who believes she or he has been harassed or is being harassed may report the alleged harassing behavior to any of the following individuals or agencies:
• Dean of the Newcomb-Tulane College, Dean of the school, or Dean of Students (or person designated by same) with which complaining student is affiliated.
• Vice President for Student Affairs (or person designated by same), 504-865-5180
• Associate Dean for Student Affairs, Tulane University Health Sciences Center, 504-988-5668
• Office of Institutional Equity, 504-862-8083 or 504-247-1760
• Tulane University Department of Public Safety, 504-865-5381
• Tulane University Health Sciences Center Security Services, 504-988-5531
• Contact the Office of Institutional Equity for additional information about Tulane University's Equal Opportunity and Harassment Policies. Uptown Square Suite 105, 504-247-1760.

Tulane University complies with the provision of the Family Education Rights and Privacy Act of 1974 (FERPA), which was enacted to protect the privacy of education records, to establish the right of students to inspect and review their education records, and to provide guidelines for the correction of inaccurate or misleading data. Students have the right to file complaints with the U.S. Department of Education Family Policy Compliance Office (ferpa.complaints@ed.gov) concerning alleged failures by the institution to comply with the Act. Information concerning the rights and protection under the Act, the types and locations of education records maintained, and the procedure to be used by the institution for compliance with the provisions of the Act can be obtained from the following offices: Vice President for Student Affairs/Dean of Student Services (https://studentaffairs.tulane.edu/contact-us/contact-us) and Registrar's Office (https://registrar.tulane.edu/contact-us). Tulane University’s FERPA policy may be found here (https://registrar.tulane.edu/privacy-policies-forms). Grievances or confidential inquiries concerning the Act may be referred to the Office of Institutional Equity (https://equity.tulane.edu).

It is the policy and practice of Tulane University to comply with the Americans with Disabilities Act and all state and local requirements regarding individuals with disabilities. Under these laws, no qualified individual with a disability shall be denied access to, or participation in, services, programs, and activities of Tulane University. Accommodations are provided to those with documented disabilities through the Goldman Center for Student Accessibility (https://accessibility.tulane.edu). This office can be reached at (504) 862-8433.

Sr. Associate Dean of Student Advising & Career Development

Introduction
Newcomb-Tulane College has administrative oversight for the full-time undergraduate experience and the common core curriculum. Newcomb-Tulane College comprises all full-time undergraduate programs at the university, including those in architecture, business, liberal arts, public health and tropical medicine, and science and engineering. All prospective undergraduate students apply to Newcomb-Tulane College for admission. A student designates a major no later than the beginning of the fourth semester. After the selection of a major, the student continues to be a Newcomb-Tulane College student as well as a student in the school in which the major resides. For example, a student who majors in cell and molecular biology is in the School of Science and Engineering and Newcomb-Tulane College.

Academic Policies

Course Loads
The normal academic course load for all students is 15 credits to 19 credits per semester. The student who completes 15 credits each semester can meet degree requirements in four years for most but not all degrees. The minimum course load is 12 academic credits per semester. Students must have registered for a minimum of 12 credits by the last day to add classes. An exception to this regulation is made for seniors who, in their final semester, need fewer than 12 credits to graduate.

In any given semester, when registration opens for the next semester, students may register for as many as 19 credits. After the close of a semester, students who have earned a grade-point average of 3.000 or better on 15 letter-graded credits or more during that semester may register for as many as 22 credits in the following semester. After the close of a semester, students who have earned a cumulative grade-point average of 3.500 may register for as many as 25 credits.

Full-time students with a course load of fewer than 14 credits should realize that they cannot qualify for Dean's List and risk falling behind their class level.

Class Status
Class status is determined by the total number of earned credit hours; credit hours for currently enrolled courses are not included. Credit for coursework taken at another institution is included only after the transfer credit approval process and credit posting are complete.

<table>
<thead>
<tr>
<th>Classification</th>
<th>Earned Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Freshmen</td>
<td>0-24 earned credit hours</td>
</tr>
<tr>
<td>Sophomores</td>
<td>25-56 earned credit hours</td>
</tr>
<tr>
<td>Juniors</td>
<td>57-86 earned credit hours</td>
</tr>
<tr>
<td>Seniors</td>
<td>87 or more earned credit hours</td>
</tr>
</tbody>
</table>

Course Sequencing
Course at Tulane offerings increase in sophistication and specialty with increasing course number, and usually follow the following conventions:

<table>
<thead>
<tr>
<th>Course number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1000-level</td>
<td>Introductory-level undergraduate courses</td>
</tr>
<tr>
<td>2000-level and 3000-level</td>
<td>Intermediate-level undergraduate courses; may require 1000-level prerequisites.</td>
</tr>
<tr>
<td>4000-level</td>
<td>Advanced-level undergraduate courses; may require multiple level prerequisites.</td>
</tr>
<tr>
<td>5000-level</td>
<td>undergraduate courses: honors thesis courses, courses taken abroad, or courses transcripted via our School of Record relationship with the Council on International Educational Exchange (CIEE).</td>
</tr>
<tr>
<td>6000-level</td>
<td>Introductory-level graduate or advanced-level undergraduate courses; often open to both undergraduate and graduate students; sometimes cross-listed with 3000 or 4000-level courses.</td>
</tr>
<tr>
<td>7000-level</td>
<td>Intermediate-level graduate courses; not open to undergraduates.</td>
</tr>
<tr>
<td>8000-level and 9000-level</td>
<td>Advanced graduate-level courses; often independent graduate study or dissertation research.</td>
</tr>
</tbody>
</table>

Cross-Registration
Students enrolled in Newcomb-Tulane College may register for courses at Loyola University, Dillard University and Xavier University, provided that the same course has not been offered at Tulane University within the past year. Students must be registered for at least nine credits of coursework at Tulane in the semester of Loyola, Dillard or Xavier registration and may not use the Loyola, Dillard or Xavier credits to satisfy core curriculum requirements or school-specific core
requirements. Additional restrictions may apply; interested students should contact their Newcomb-Tulane College academic advisor.

Auditing Courses

A student registered for a full-time course load (at least 12 credits) may audit one course per semester in addition to his or her full-time course load without credit after completing formal registration and obtaining approval of the instructor for the course. Although credit is not granted for audited courses, such courses are considered part of the student’s semester course load and are recorded on the student’s permanent record. An audit enrollment that results in an overload is not permitted unless the student is qualified for such an overload. An auditor who is absent excessively will be dropped without record. Students who decide to audit a course after initially attending the course as a grade-seeking student must submit the appropriate grade type change form to the Registrar following the approval of the Newcomb-Tulane College academic advisor.

Grades/Grading Policy

Federal law prohibits the release of grades or other confidential information to third parties, including parents and guardians, unless the student provides the Newcomb-Tulane College dean’s office with written authorization for release of such information. Such a request may be made by the student at any time.

A student’s progress toward graduation is measured not only by credits earned but also by the grade-point average. The grade-point average is determined by dividing the student’s total number of quality points by the total number of quality hours. Graduation requires a 2.000 grade-point average, equivalent to an average grade of C, in all courses as well as in the major.

<table>
<thead>

</tbody>
</table>

Grades of WF are assigned by administrators and are computed in the grade-point average as if they were Fs.

In cases where students are suspended or expelled during the semester, W or WF grades may be assigned at the discretion of Newcomb-Tulane College. A grade of WF may be assigned for excessive absence from a course and may be assigned for disciplinary penalties in connection with an honor code or conduct code violation. A student who ceases to attend a class but has not withdrawn officially will receive a UW. After the last day to drop without record and before the last day to drop a course, students who drop courses voluntarily will have W noted on their transcripts for each course dropped.

Incomplete Grades

An incomplete grade, I, is given at the discretion of instructors when, in their view, special circumstances prevent a student from completing work assigned during the semester and with the understanding that the remaining work can be completed within 30 days. Incomplete grades also are given when a student’s absence from a final examination has been excused by the Newcomb-Tulane College dean prior to or within one day following the final examination. Incomplete grades must be resolved within 30 days of the end of the semester or they are changed to Fs. The I will remain on the student’s transcript, accompanied by the final course grade. Extensions of the 30-day deadline must be requested in writing by the student and must be approved by the instructor and an Assistant Dean in Academic Advising. Students should contact their academic advisor with any questions.

Extensions are approved only when a student has made an attempt to complete the missing work within the original 30-day period but, in the view of the instructor and Newcomb-Tulane College, has been prevented from completing the work by some special circumstance beyond the student’s control. Extensions must be approved before the 30-day deadline expires; extensions are not approved retroactively.

IP Grades

An in-progress grade, IP, is used to show progress during the first semester of a year-long honors or capstone course. When the final
semester's grade for the course is awarded, the IP is changed to reflect that grade and grade points are awarded accordingly.

Satisfactory/Unsatisfactory Option

Where individual schools permit, students in good standing may elect to take one course on a satisfactory/un satisfactory (S/U) basis per semester. They may count no more than ten credits from such courses toward degree requirements. The S/U option may not be used to satisfy the writing, foreign language, quantitative or formal reasoning, and laboratory components of the core curriculum, or major or minor requirements. The last date for designating or revoking the S/U option is the deadline for dropping courses. Schools may impose additional limitations on courses that can be taken S/U; please refer to the appropriate school section for more information.

A student electing this option gets academic credit for the course without affecting the grade-point average as long as the work is at the C-level or better. A grade of U is not counted in the grade-point average and carries no credit for the course. Students are cautioned that because a grade of S is not counted in the grade-point average, it will not count toward the Dean's List honors or towards the 2.000 grade-point average required for graduation.

Examinations

Tulane University administers final examinations according to a published schedule available on the registrar’s website at the beginning of each semester. The university expects students and instructors to follow this schedule. Instructors must give final examinations within the hours set aside in the examination schedule; the instructor determines the length and time of the examination within the schedule.

Misreading or ignorance of the schedule is not sufficient reason for a student's absence or tardiness to a final examination. Students are advised to check the schedule before making travel arrangements; such arrangements are not grounds for excusing a student from a final examination.

Students may be excused from final examinations by the Newcomb-Tulane College dean and the course instructor when there is a serious, incapacitating medical problem or when there is a death in the immediate family. Students who must be absent from the final examination for one of these reasons must contact the Newcomb-Tulane dean's office before or within 24 hours after the examination for approval. A student with an excused absence will receive a grade of I and a make-up examination; a student with an unexcused absence will earn a grade of F in the course. (See school sections for further information.)

Class Attendance

Students are expected to attend all classes unless they are ill or prevented from attending by exceptional circumstances. Instructors may establish policies for attendance and making up missed work in their classes, which are announced at the beginning of the semester. Students who find it necessary to miss class are responsible for obtaining notes on material covered in lectures or other class sessions.

Students are responsible for notifying instructors about absences that result from serious illnesses, injuries, or critical personal problems. Medical recommendations are issued by the Student Health Center in the following instances: illnesses or injuries that involve hospitalization and a partial or complete withdrawal due to medical reasons. In these instances medical information will be released only with the student's written permission.

Instructors are authorized to lower the grades of students who are absent excessively without a satisfactory excuse or do not make up work missed because of absences. Instructors are authorized to lower the grades of students who are absent excessively without a satisfactory excuse or do not make up work missed because of absences. With the approval of the Assistant Dean of Advising (contact: advising@tulane.edu), an instructor may have a student who has excessive absences involuntarily dropped from a course with a WF grade after written warning at any time during the semester.

Leave of Absence

Students who voluntarily leave any school of the university and return to that school within one calendar year will be allowed to continue study under the degree requirements in effect for them at the time they left. Any student returning to the university after more than one calendar year will be required to complete the degree requirements in effect at the time of readmission. Students taking a leave of absence who wish to receive registration materials and to preregister for classes during the priority period may formally file for a leave of absence for up to one year. Students who are allowed a one-year leave of absence are not required to complete a readmission application; however, they should submit a letter-of-intent to resume study at least eight weeks prior to the semester in which they wish to return. Students who leave a school without formal approval for a leave of absence must file an application for readmission with an advisor and will not receive registration materials until after the readmission has been processed. The deadline for applying for a leave of absence is the last day to register or to add courses in the semester after the last regular semester of a student's enrollment. Students who do not return to Tulane University for a particular term and do not request a leave of absence by the deadline for doing so are not eligible to return without applying for readmission.

Before registering at other institutions, students must consult the Newcomb-Tulane College's policy on transfer of credit and follow the established procedures. Following such study elsewhere, students must submit a transcript from the other institution showing all courses attempted. Students must have satisfactorily completed their academic programs and must obtain statements of continued good standing from the other institution before being allowed to return. Students who take a leave for health reasons may be required to obtain clearance from the Student Health Center before they are allowed to resume study.

Credit Expiration

At the time of readmission, any credit earned at Tulane more than ten years previously would not apply toward the degree. While the credits may be more than ten years old by the time the student completes the Tulane degree, they would still count toward the degree so long as the student had remained continuously enrolled at Tulane. Departments and schools may apply more restrictive rules in evaluating credits to be applied toward a major or professional degree.

Grade Reports

Tulane University attempts to keep its students well-informed of their academic progress throughout their attendance. All official grades as well as temporary midterm grades are available to the student in
written report form (for the current term only) and on-line. Instructions for obtaining grades are outlined in the Schedule of Classes at www.registrar.tulane.edu.

Temporary grades are assigned by faculty to first-year students at midterm. For classifications above the first-year level, instructors are encouraged to report unsatisfactory grades (D, F, and U) to both student and the Newcomb-Tulane College academic advisor.

Final grades are assigned in all subjects for all students and become a part of the student’s permanent academic record. Final grades are based on the complete body of a student’s work throughout the semester including the final examination.

**Degree Audits**

Degree audit reports are available to currently enrolled students through the Gibson portal on an overnight basis by student request. The computerized degree audit matches the courses a student has taken against the College’s and schools’ general degree requirements as well as the major requirements and indicates which of the requirements are left to be taken. While advisors are available to discuss degree audits with students, it remains the student’s responsibility to know the exact requirements for the desired degree as stated in this document and to enroll in the appropriate courses to satisfy those requirements.

**Transcripts**

Students may order electronic and/or mailed transcripts through the “Order A Transcript” link in the student section of Gibson Online. Alternatively an official transcript of a student’s record may be sent to any person or institution upon the student’s written instruction. Requests for official transcripts must be sent to the University Registrar. Instructions on the information to include with the request are available on the Registrar’s Office website: www.registrar.tulane.edu. Transcripts may be withheld for unpaid financial accounts with the university.

**Changes to Academic Records**

No changes to course enrollment status, grades or grade types will be made more than three years after the close of the semester in which the course was offered. This rule places a three year time limit on the retroactive adding or dropping of courses or requesting grade changes.

**Retention of Academic Records**

Academic records (in electronic storage in Academic Advising) will be retained for eight years from the time of first fall enrollment of that student cohort. For most students, this will mean that their records will be kept for 4 years after graduation (3 years for Architecture students). This restriction does not apply to records kept by the Registrar’s Office; those records are retained permanently.

**Dean’s List Policies**

Students who have earned a distinguished record in all of their subjects throughout the semester may be recognized on the Dean’s List of Newcomb-Tulane College.

The Newcomb-Tulane College Dean’s List is prepared after each semester and recognizes superior academic achievement. A 3.500 grade-point average is required of first-year students and sophomores and a 3.667 GPA is required of juniors and seniors. To qualify for the Dean’s List, a student must have been enrolled in 14 credits of letter-graded work, excluding courses taken on a satisfactory/unsatisfactory basis.

**Quality-of-Work Requirements**

**Continuation Requirements**

Full-time undergraduate students enrolled in Newcomb-Tulane College are degree-seeking students. Those students who are not making satisfactory progress toward a degree are not permitted to remain enrolled at the university.

Students who earn at least 12 credits per full-time semester at Tulane and achieve at least the minimum cumulative grade-point average (GPA) for good standing are considered to be making progress toward the baccalaureate degree and are in academic good standing. Policies that apply to students who do not meet these scholastic standards are described below. Students experiencing academic difficulty are advised to give particular attention to the appropriate paragraphs of the explanation of the quality-of-work rules that are summarized in the tables that follow. Students should note that the standards are based on both total credits earned at Tulane and total earned hours.

**Options to Restore Academic Good Standing**

At the end of each spring semester students are reviewed for academic progress. Students who are deficient in either credits earned at Tulane or in cumulative GPA are placed on academic probation. They have three options to restore academic good standing:

- Students may remove their deficiency in Tulane Summer School.
- Students who have made more than the minimum required progress to degree (cumulative GPA and Tulane credits earned) but less than that required for good standing may return in the fall on academic probation. Minimum progress is the specific standard a student must meet to be permitted to return to Tulane on academic probation. It is NOT good standing.
- Students who have not made the minimum required progress to degree are required to sit out for a full academic year (and earn no transfer credit) and may return on academic probation no sooner than the following summer.
- Students can return in a fall semester while on probation (either 2 or 3 above) only once. The second time that a student fails to meet continuation standards at the close of a spring semester, he or she must restore good standing by the close of the second summer term or face dismissal from Tulane.

**Minimum Credits Earned at Tulane**

Students must earn at least 12 credits at Tulane per full-time semester. A deficit in one semester can be made up with a surplus in another semester or with credits earned in summer school at Tulane. Students below this threshold are offered probation if they are lacking no more than 12 credits and their cumulative GPA meets continuation requirements described below. Students who are deficient more than 8 credits are likely to be required to attend one or more sessions of Tulane Summer School to restore good standing. Those more than 12 credits below the threshold are dismissed for one academic year and are eligible to return the following summer. The credit hour requirements are summarized in the table below.
Cumulative Grade Point Average (GPA) Requirements
Minimum Cumulative GPA thresholds are based on the total number of earned hours (EHRS) that a student has accumulated. This includes all AP and IB credits and transfer credit.

There are two thresholds, the minimum for good standing and the minimum to be eligible for probation. Students whose cumulative GPA falls below the minimum required for good standing and at or above the minimum for probation are eligible to return in the fall semester on probation. Students whose cumulative GPA falls below the minimum for probation are dismissed for one academic year.

The cumulative GPA for good standing is 1.500 (0-12 EHRS), 1.750 (13-24 EHRS), 1.850 (25-36 EHRS) and 2.000 (37 or more EHRS). Students at or above the appropriate standard and earning the minimum credits for good standing described above are in academic good standing.

The minimum cumulative GPA to be eligible for probation is 1.000 (0-12 EHRS), 1.250 (13-24 EHRS), 1.500 (25-36 EHRS), 1.750 (37-72 EHRS), 1.800 (73-96 EHRS) and 1.850 (97 or more EHRS). Students at or above this minimum and below the good standing threshold are offered probation. Students not meeting this minimum are dismissed for one academic year and are eligible to return on academic probation the following summer (or fall). The GPA requirements are summarized in the table below.

<table>
<thead>
<tr>

</tbody>
</table>

Probation and Dismissal
Students who are placed on academic probation or probationary leave of absence are ineligible to obtain a letter of good standing, study at another institution and transfer the credit to Tulane University. Students who have been academically dismissed from Newcomb-Tulane College are not allowed to re-enroll. Academic dismissal is noted permanently on the student’s transcript.

Summer School Attendance
Students may attend Tulane Summer School for the purpose of enriching their academic programs or accelerating their graduation. Students on academic dismissal at the close of spring semester may attend Tulane Summer School and remedy their deficiencies.

Full credit is given, without special approvals, for Tulane Summer School courses offered by the full-time undergraduate schools at Tulane. Other Tulane Summer School courses may be taken within the nine-credit limit for courses outside the College. Candidates for a degree may count 15 credits of summer work at Tulane among the final 30 credits that must be earned in residence. Students should consult with their academic advisors regarding the proposed Tulane Summer School program during the registration period in the spring.

Students in academic good standing may attend the summer school of any regionally accredited, four-year institution. To ensure that credits earned at another institution will transfer to Tulane, students should consult the "Transferring credit to Tulane University" section of this catalog. Students must obtain prior approval of their choice of institution and proposed summer program no later than the end of the final-examination period in spring semester. Grades earned at other institutions are not computed in the student’s grade-point average; therefore, a student cannot make up a grade-point deficiency at Tulane by attendance at another institution. Students may apply up to six credits of approved coursework from another institution toward the senior residency requirement.

Transferring Credit to Tulane University
Transferring credit earned prior to matriculating at Tulane University.

Incoming first-year students planning to enroll in courses elsewhere during the summer prior to arriving at Tulane must consult with an academic advisor for approval. In order to be considered for approval, college courses taken prior to enrolling in Tulane University, Newcomb-Tulane College requires:

leave of absence are ineligible to obtain a letter of good standing, study at another institution and transfer the credit to Tulane University. Students who have been academically dismissed from Newcomb-Tulane College are not allowed to re-enroll. Academic dismissal is noted permanently on the student’s transcript.

Dual Enrollment
Tulane may award up to fifteen credits for dual enrollment high school courses (those courses appearing on both the high school transcript and the transcript of the college/university) as long as the course(s) meets all other requirements for pre-matriculation:

- The courses were offered by a regionally accredited college or university;
- The courses were listed in the official catalog of the college or university from which the credit was earned;
- Course was composed primarily of degree-seeking college students;
- The courses were taught by college or university faculty;
- A grade of C or better was earned in each course.

Dual Enrollment
Tulane may award up to fifteen credits for dual enrollment high school courses (those courses appearing on both the high school transcript and the transcript of the college/university) as long as the course(s) meets all other requirements for pre-matriculation:

- The courses were offered by a regionally accredited college or university;
- The courses were listed in the official catalog of the college or university from which the credit was earned;
- Course was composed primarily of degree-seeking college students;
In order to process transfer credit for these courses, the Newcomb-Tulane College advisor will verify the student's eligibility to earn transfer credit and the accreditation of the school at which the student wishes to study. Each course is evaluated by Tulane departments and programs. All courses are subject to approval, and in some cases courses may not be approved for credit. Grades are not transferred with the credits.

Transferring Credit Earned after Matriculation at Tulane University

Continuing or returning students in academic good standing are eligible to apply for transfer credit from other regionally accredited four-year institutions within the United States. Prior approval is necessary in order for currently enrolled students to take course(s) for transfer credit to Tulane University. To be eligible for transfer credit from study-abroad programs, students must have at least a 2.70 cumulative grade-point average at Tulane and obtain approval for the program abroad from the Center for International Studies. The transfer credit policy for the university is as follows.

The currently enrolled student must obtain the catalog description for each course the student wishes to take at another regionally accredited, four-year institution. The Freeman School of Business requires that students also provide a syllabus for each course. Please note that some transfer credits may be denied for applicability to a professional school's major/minor degree requirements due to accreditation standards.

In order to process transfer credit approval requests for all college courses taken prior to enrolling in Tulane University:

• A Transfer Credit Approval Form from his or her Newcomb-Tulane College advisor.
• An official transcript issued to Tulane University (not a grade report or transcript issued to the student).
• Course descriptions from the college catalogs or brochures that correspond to the courses on the transcript, and other documentation (syllabi, etc.) that the academic department requires for review.

Following submission of these items to Newcomb-Tulane College's academic advisor, the courses will be evaluated, and if found to be equivalent to Tulane University coursework, the student's Tulane transcript will be adjusted to reflect the academic credit awarded in transfer. Individual course equivalency for dual high school/associate degree courses will be determined by Tulane departments and programs. All courses are subject to approval, and in some cases courses may not be approved for credit. Grades are not transferred with the credits.

Graduation with University Honors

To be eligible for university honors, a student must have completed a minimum of 60 credits (75 for dual degree candidates) while enrolled...
at Tulane University; this may include enrollment in Tulane's year-
long and semester programs abroad and Washington Semester. Only
Tulane credits are computed in the cumulative grade-point average for
honors candidates. A student completing two degrees may be awarded
university honors for both degrees. Eligibility for honors for each degree
will be determined by grades earned in all course work counting toward
the respective degree.

Scholarly Honors
Students who complete an Honors Thesis for their academic major
or majors will graduate "with Honors in" that major or majors. In order
to write an Honors Thesis and to receive Scholarly Honors, a student
must at the time of graduation have an overall cumulative GPA of
3.400 or higher, and a cumulative major GPA of 3.500 or higher. See the
Honors Program for information for details about eligibility for writing
an Honors Thesis, as well as the rules, process, and deadlines (http://
honors.tulane.edu/content/honors-thesis-0).

Latin Honors
For Students Who Entered Tulane In Fall 2013 Or Later
Latin Honors (cum laude, magna cum laude, and summa cum laude)
are awarded to the top 30% of the graduating class based on their
overall GPA.

- The top 5% will be awarded their degrees summa cum laude.
- The next 10% will be awarded their degrees magna cum laude.
- The next 15% will be awarded their degrees cum laude.

The standards each year will be set based on the GPA of the previous
graduating class, and will be publicized to students in the summer
before their graduation year. (August graduates will be recognized
according to the standards set in the previous academic year;
December graduates will be recognized according the standards of the
academic year in progress.)

Currently the standards are the following:

- Summa cum laude = 3.900
- Magna cum laude = 3.800
- Cum laude = 3.600

Policy Changes
The University reserves the right to change any of its rules, courses,
regulations, and charges without notice and to make such changes
applicable to students already registered as well as to new students.
Students should review material provided for them, including their on-
line degree audit, and seek aid and direction from academic advisers,
faculty advisers, and deans and. However, each student must accept
full responsibility for knowledge of and compliance with the policies of
Tulane University and its schools and for the fulfillment of requirements
for the course of study selected.

Withdrawal
Voluntary
A student who has registered for a semester and plans to withdraw
from the university must inform their academic advisor. After
appropriate action has been completed with Academic Advising,
confirmation of withdrawal will be sent to the student. The official date
of the withdrawal must be approved by an assistant dean of advising
or associate dean of the college and usually is the date of formal
notification. The withdrawal date is important for determining possible
refunds. Students who officially have withdrawn from the university
cannot reside on campus.

Medical
A withdrawal from courses for medical reasons requires an official
letter of recommendation from a physician in the Student Health Center
and the approval of an assistant dean of advising or associate dean
in Newcomb-Tulane College. Students seeking a medical withdrawal
must report to their academic advisor before going to the health
service for an evaluation. Medical withdrawal letters issued by the
Student Health Center should be delivered to the dean’s office within 48
hours after they are issued. Grades of W are assigned when a student
withdraws from one or more courses for medical reasons after the last
day to drop without record.

A partial medical withdrawal (from some but not all courses) or
incomplete grades in one or more courses may be permitted upon the
recommendation of the Student Health Center. Students requesting a
partial medical withdrawal must confer with their academic advisor,
who will confer with the associate dean of Newcomb-Tulane College,
who makes the final decision on this matter. Withdrawals from
individual courses for medical reasons after the published deadline for
dropping a course will require supporting justification. The deadline for
medical withdrawals from all courses is the last day of classes each
term. Requests for retroactive medical withdrawals normally are not
approved.

The university may require a medical clearance before a student
can continue studies in a semester that begins subsequent to
administrative action (leave of absence, voluntary withdrawal,
extension of I grades, course-load reduction) that has been taken on
behalf of the student for medical reasons.

Required
A student may be required to withdraw from any course or from the
university, temporarily or permanently, for any of the following reasons:
possibility of danger to the health of the student or to that of other
students if enrollment is continued; refusal to obey regulations;
v violation of the Honor Code or other serious misconduct; unsatisfactory
class attendance; or work below the required scholastic standards.

Refunds
The deadlines for the refund of full, three-quarter, one-half, or one-
quarter tuition in any semester are listed in the academic calendar.
Refunds are recommended by the Newcomb-Tulane College dean in
strict accord with the calendar deadlines and only when withdrawals
are official. No refunds will be granted after the one-quarter refund
deadline.

The established deadlines are applicable under all conditions for
withdrawal. University fees, including the student activity fee, are
refundable only through the last day to register or add classes.

Code of Academic Conduct
This Code applies to all undergraduate students, full-time, and part-
time, in Tulane University. The full text and additional information
is available at the following websites: http://college.tulane.edu/
Degrees and Requirements

Degrees

Degrees offered in Newcomb-Tulane College expose students to a wide range of thought, fact, and human experience. Such a liberal education broadens students’ knowledge and awareness of each of the major areas of human understanding into which the disciplines are divided and prepares students for a constructive role in society and for continued learning that contributes to a productive career and a rewarding personal life.

- Bachelor of Arts (B.A.)
- Bachelor of Fine Arts (B.F.A.)
- Bachelor of Science (B.S.)
- Bachelor of Science in Engineering (B.S.E.)
- Bachelor of Science in Management (B.S.M.)
- Bachelor of Science in Public Health (B.S.P.H.)
- Bachelor of Science in Architecture (B.Arch.)
- Master of Architecture (M.Arch.)

The degree awarded to the student is dependent on the primary major program(s) completed. Candidates completing a primary major program in the humanities or the social sciences receive the B.A. degree; those completing a primary major program in the fine arts receive either the B.A. or the B.F.A. degree. The B.S. degree is awarded to candidates completing a primary major program in the sciences or architecture. Candidates completing primary major programs in anthropology, economics and linguistics receive either the B.A. or B.S. degree.

Degree Requirements

The credits presented for an undergraduate degree must satisfy the core curriculum, school specific core curriculum and major requirements described within the appropriate program of study. Each candidate for degree is required to have completed at least 120 credits of academic work and to have achieved a 2.000 cumulative grade-point average at the university and in the major. At least 66 of the 120 credits must be earned in courses above the 1000 level. Academic credit is awarded on the credit-hour system (https://catalog.tulane.edu/university/#academicpolicies/text).

Students who have not completed the first-year writing core requirement (ENGL 1010 Writing (4 c.h.) or presented an appropriate AP test score) by the end of the second semester of enrollment may not early register for the following semester and may not return to the College until this requirement has been fulfilled.

The College’s foreign language requirement is competence at the 1020/1120 level and at least one semester of coursework in this language taken at Tulane. Students who entered Tulane as transfer students may be permitted to satisfy this requirement with transfer credit. See the individual school sections of this catalog for any additional requirements set by the schools. All students must receive formal placement in any foreign language they plan to take while at Tulane.

These policies apply to all students, including those who contemplate leaving for any reason prior to graduation.

The recommended semester program consists of 15 credits to 19 credits. All degree candidates must have completed the last 30 credits of coursework in residence in the college and a minimum of 60 credits at Tulane University. Students who participate in a Tulane study abroad program or other Tulane-sponsored program in the senior year are earning Tulane grades and credits and, therefore, are considered to be meeting the senior residency requirement.

Subject to approval, students may count a maximum of 15 credits of summer work at Tulane, or up to six credits of summer work from other four-year, regionally accredited institutions, as part of their last 30 credits that must be completed in residence. Other school- or program-specific restrictions may apply. Students are encouraged to consult with their advisers.

A maximum of nine credits from courses offered by schools that are not within Newcomb-Tulane College (in the Schools of Continuing Studies, Law, and Social Work) may count toward graduation requirements.

At any time, students can access automated degree audits from the University Registrar’s website (http://www.registrar.tulane.edu) showing all completed courses and indicating the general degree requirements and major requirements that remain to be fulfilled before graduation. Students should discuss their degree audits with their advisers and report errors to their academic adviser as soon as possible. Each student is responsible for knowing the exact degree requirements as stated in the school sections of this catalog and for enrolling in appropriate courses to satisfy those requirements.

Dual Degrees

Tulane University offers the option of obtaining two undergraduate degrees. Newcomb-Tulane College students should refer to the school-specific sections for more information on pursuing dual degrees within the same school and consult with their advisers early in their academic careers.

To qualify for two baccalaureate degrees (dual degree) from any of the schools, a student must complete a minimum of 150 credits (75 credits completed at Tulane University) at least 82 of which must be above the 1000-level and satisfy all requirements for each degree and each major. A candidate also must file a degree application for each degree at least two semesters prior to the anticipated date of graduation.

Joint-Degree Programs

Tulane University offers joint-degree programs (undergraduate and graduate) in Business, Law, and Public Health & Tropical Medicine. The undergraduate schools allow qualified students who have completed three years of undergraduate work to begin graduate studies in one of the professional programs. A student who completes the junior year in residence in any of the schools (not on a Tulane year-long study abroad program) and then begins study in one of these professional programs may receive a bachelor’s degree from the respective school after satisfactorily completing one year of full-time professional study.
To enter one of these programs, students are required to be accepted by the professional program and to obtain approval from the Newcomb-Tulane College dean by the end of the sixth semester of study. Joint-degree candidates are required to complete 90 credits in Newcomb-Tulane College during three years of study before starting work in the professional program. Credits earned in divisions outside Newcomb-Tulane College (in Schools of Law, Medicine, Social Work or School of Professional Advancement) may not be applied to the 90 credits. Candidates must meet all core curriculum and major requirements for the bachelor's degree in the undergraduate school. Students in joint-degree programs must complete 120 credits by the close of their fourth year of study in order to receive a degree from the undergraduate school. Students who fail to do so will be required to attend Tulane Summer School to make up their credit deficiency before beginning their second year in the professional school. Transfer students must complete two years of undergraduate work at Tulane to be eligible for a joint-degree program.

All students must file an application for degree at least two semesters prior to the anticipated date of graduation. Every course taken during the first year in the professional program must be passed, and the student’s performance in the first year’s work in the professional program must be of sufficient quality for advancement to the second year. A student who fails to meet this requirement may become a candidate for a degree in the undergraduate school after satisfactorily completing an additional year of study in the undergraduate school. If a student in a joint-degree program is a candidate for honors, the grade-point average used to determine the eligibility includes the applicable work done in the professional program.

Advanced Standing and Exemption

Although the university awards placement or credit to students who have earned sufficiently high scores on AP or IB exams, students not in these programs also may have special expertise in a foreign language. Students, who prove proficient in a foreign language through a sufficiently high score on the College Board Achievement Test or on a departmentally administered proficiency exam, are exempted from the competency portion of the foreign language requirement only, with no credit awarded; all students must take at least one foreign language course in that language at Tulane University. Exemption may be given in other departments on an individual basis.

Advanced Placement (AP)/ International Baccalaureate (IB) Credits

Advanced placement or college credit is awarded to students who receive the required scores on the College Board AP exams as established by Tulane University academic departments. It is the student’s responsibility to ensure that an official report of the AP test scores is sent to Tulane University.

When planning their fall schedules, first-year students should not enroll in courses for which AP credit is expected. AP credit does NOT count toward the minimum or maximum course load or toward the minimum number of earned credits required to remain in academic good standing. No more than four credits of English and no more than four credits of a single modern foreign language will be awarded to any student, even if the student has high scores on the language and literature tests.

A complete listing of AP credit and placement for individual subject areas is located at here (http://www.advising.tulane.edu). Questions regarding advanced placement credit should be directed to the Newcomb-Tulane College Academic Advising Center.

In addition, Tulane University also awards credit for scores of 5 or better on higher-level International Baccalaureate exams. For more information about IB credit, please contact the Newcomb-Tulane College dean’s office.

Residency

All degree candidates must have completed a minimum of 60 credits at Tulane University (excluding Tulane study abroad and Washington Semester programs).

Students must complete the last 30 credits of coursework in residence in the College. Students who participate in a Tulane study abroad program or in the Washington Semester program in the senior year are considered to be meeting the senior residency requirement but these credits will not apply toward the 60 credit university residency requirement. Students participating in dual degree physics and engineering programs (Tulane and approved partner universities) are exempted from the senior residency requirement but not the Tulane residency requirement.

At least half of the credits required for each major must be completed at Tulane University.

CLEP

Full-time undergraduate students enrolled in Newcomb-Tulane College may not earn credit toward a degree through the College Level Examination Program (CLEP).

Core Curriculum

The core curriculum (http://tulane.edu/advising/curriculum.cfm) is designed to provide a common academic experience for undergraduates across all schools of the university, the core curriculum ensures the attainment of basic competencies in writing, foreign language, scientific inquiry, cultural knowledge, and interdisciplinary scholarship. Use the links on Core Curriculum webpage (http://tulane.edu/advising/curriculum.cfm) to see how individual school requirements affect the core requirements.

Major Component

A major field of study provides each student the opportunity to explore a single area of inquiry in depth and to gain the self-confidence derived from mastery of a subject. The major must be selected no later than the beginning of a student’s fourth semester of college study. The selection of a major program also determines the school with which the student will be affiliated. Students may change their majors at any point in their academic careers; students choosing to change their majors should be aware that:

• this action may necessitate a change in school,
• not all previously completed coursework may apply to the newly selected school or major, and
• additional coursework may be necessary to meet the new major requirements.
Students who elect to complete more than one major must complete all courses for each major. Students declaring a second major must submit their programs of study to the appropriate dean’s office for approval. At least half of the coursework required for each major must be completed at Tulane University. Newcomb-Tulane College students should be aware that obtaining a second major in professional degree programs requires obtaining the professional degree, i.e. B.S.E., B.S.M., B.S.P.H., M.Arch.

**Minor Component**

Undergraduate students may complete one or more minors. The minor is optional and is designed to provide structure to the study of a secondary field of interest chosen by the student. Students who elect to complete the requirements for a minor must earn a grade-point average of at least 2.000 in courses counting toward that minor. No courses counting toward the student’s first minor will count toward the student’s second minor. Individual schools or departments may specify the number of credits allowed on major-minor overlap. Students should consult departmental listings for additional information.

**Self-Designed Majors**

A student with a 3.00 GPA may construct a unique self-designed coordinate major program of study by grouping courses from different academic departments and programs primarily in Liberal Arts. While interdisciplinary in nature, a self-designed major should be focused in the School of Liberal Arts. Self-designed major proposals require a petition to the Committee on Undergraduate Academic Requirements, which may grant approval after a review of the proposal, rationale, and proposed list of courses. Detailed instructions for preparing the proposal can be found here (http://tulane.edu/liberal-arts/upload/Self-Designed-Majors.html).

**Double Majors**

Newcomb-Tulane College students must have a primary major in the Schools of Architecture, Business, Liberal Arts, Public Health and Tropical Medicine, or Science and Engineering. Any student may also pursue a second major. If the second major is not housed in the primary school, the student does not have to complete the school-specific core of the secondary school. Subject to approval by their advisers, students may also pursue a second major in a professional degree program; however, this option requires completing all degree requirements for the second major and obtaining the professional degree, i.e., B.S.E., B.S.M., B.S.P.H., M.Arch. (See Dual Degrees.)

Full-time students may pursue second majors or minors in the School of Continuing Studies only as a voluntary overload. The second majors available are journalism or media arts; the second minors available are journalism, Louisiana studies, graphic design, media arts, telecommunications, Web application development or website development.

**Premedical and Pre-Professional Health Programs**

While undergraduate students are completing the regular baccalaureate curriculum of their choice, they may work concurrently to complete the courses required to enter programs in the health professions, including dentistry, medicine, optometry, osteopathy, podiatry, and veterinary medicine. Preparation for such programs normally includes two semesters each of biology (with laboratory), general chemistry (with laboratory), organic chemistry (with laboratory), and physics (with laboratory). Many schools have additional entrance requirements including mathematics and upper-level science courses. Due to the variations in course requirements imposed by these professions, students should request specific information from schools in their fields of interest or from the health professions adviser.

Students interested in one of these professions may pursue a baccalaureate degree in any discipline. In the first three years, however, they should plan a course of study to meet the basic requirements of the professional school. Students considering a career in medically related fields should begin consulting the health professions adviser early in their undergraduate career to discuss available options in their choice of and preparation for a future profession.

**Creative Premedical Scholars Program**

The Creative Premedical Scholars Program seeks students who want to major in the liberal arts at Tulane and pursue a career in medicine after graduation. Successful applicants receive guaranteed admission to Tulane’s School of Medicine and are not required to take the MCAT. Relieved of the pressures that often accompany preparation for the MCAT and applying to medical school, Creative Premedical Scholars are free to invest in a course of study within the humanities, arts, and social sciences.

To be eligible for consideration, applicants must have a 3.6 GPA, complete a minimum of 60 credits of undergraduate coursework, and earn a B- or higher in all of the premedical science course requirements by the end of their sophomore year. The requirements are: one year each of general biology, general chemistry, organic chemistry, and physics, all with laboratories. Courses may be taken during the summer at Tulane or at another institution that has been approved by the respective departments for transfer credit. Students accepted into the program are expected to earn a BA or BFA degree in the School of Liberal Arts. Majors in the Business School, School of Science and Engineering, School of Continuing Studies, or School of Public Health are not acceptable, though a student may pursue any minor. Students who have completed more than two years of undergraduate work or have transferred to Tulane from another university are not eligible.

Applications are due in early April of the sophomore year. Applications will be reviewed by the Creative Scholars Nominating Committee and top-ranked students will be invited to interview with the committee at the end of April. The Committee will notify applicants regarding their decision by mid-June. Creative Medical Scholars are expected to carry at least 15 credits per semester. They must also write an Honors thesis (Scholars not in the Honors program will write a thesis in their major department).

For further information please contact the Pre-Health Advisor. http://tulane.edu/advising/prehealth/index.cfm

**Prelaw Program**

There is no standard prelaw curriculum that must be followed to qualify for admission into law school. A well-rounded education is the best preparation for the study of law, because such an education ensures exposure to a wide variety of ideas and leads to an understanding of the various social, political, economic, and cultural forces that have shaped laws and the societies they govern. Students should develop
analytical reasoning and communication skills. Proficiency in writing is essential. Students considering law school are encouraged to begin consulting with the prelaw adviser early in their undergraduate career.

**Prelaw Early Acceptance Program**

Particularly well-motivated and well-qualified juniors may apply to the Tulane University Law School through the Prelaw Early Acceptance Program. Prelaw Early Acceptance Program candidates complete all requirements of the normal baccalaureate program, but are guaranteed admission to the Law School upon graduation. Students are expected to follow an academically rigorous program while maintaining a high level of academic performance throughout their college careers. Only students who complete all four years of college at Tulane (with the exception of the Tulane study abroad program) are eligible. (This program should not be confused with the 3+3 program, in which Tulane students are accepted to the Law School during the junior year and permitted to enroll at the Law School during what would otherwise be the student’s senior year, receiving the baccalaureate degree after the first year of law school and the law degree after two additional years of law school.)

To be considered for the program, students must provide a Tulane transcript showing normal progress (at least 30 credits per year) for at least five regular, full-time semesters of Tulane coursework, and evidence of in-depth study in at least one area. Students must present a cumulative grade-point average of at least 3.400 and a score on the Law School Admission Test (LSAT) of at least 161. Applications should be submitted between October 1 of the junior year and February 1 of the senior year. The LSAT may be taken anytime between June after the sophomore year and December of the senior year. The earliest point at which the Law School will offer admission occurs after the fall semester of the junior year.

**Internships for Academic Credit**

Consult the individual schools’ sections of this catalog for information on internships for academic credit within a major or degree program and for policies regarding limitations on internship credit.

A one-credit internship, INTR 1990, is available to students in the College who are seeking opportunities with organizations that require interns to receive credit for their experience. INTR 1990 credit applies toward the degree but does not apply to any specific degree requirements. This course is offered only on a satisfactory/unsatisfactory basis and counts within the credit limit for S/U courses. It may be taken more than once but will count as credit toward the degree only once. Before registering, students must apply for this internship course with the Newcomb-Tulane College Dean’s office.

**Co-Operative Education**

A co-operative education program is offered for seniors in Chemical Engineering. Consult the School of Science and Engineering for details.

**Independent Studies**

Many departments and programs offer to a limited number of students with superior scholastic standing creative opportunities for independent study normally under the direction of full-time faculty members. The work may take the form of directed readings, laboratory or library research, or original composition. Instead of traditional class attendance, the student substitutes conferences, as needed, with the director. An independent study is a stand-alone course that may not be added to another course and may not replicate existing courses.

**Graduate Work**

Students in Newcomb-Tulane College with a grade-point average of at least 3.33 in their major program may register, normally in their senior year, for up to six credits of graduate-level courses, for credit toward a baccalaureate degree. Approvals from the course instructor, advisor, chair of the major department, dean of the College and dean of the school offering the course are required.

**Provisional Graduate Credit**

A senior who completes all baccalaureate requirements before the end of the senior year and intends to enter a Tulane University graduate program may apply for provisional graduate credit in up to, but not more than, 12 credits of graduate 6000- and 7000-level courses. These courses must be approved by the applicable department beyond the credits needed for the baccalaureate. Graduate credit for such work, if passed with a grade of B or better, will be awarded when the student is admitted to full graduate status in the applicable school, upon recommendation of the department chair and approval of the dean. These provisions do not apply to transfer of credits to or from other graduate institutions.

**4+1 Programs**

Tulane University has developed “4+1” programs in which students can obtain a master’s degree within one year of completing the bachelor’s degree. Students who pursue this option take courses in the fifth year at a substantially reduced tuition rate. Fields of study in which these programs are offered include anthropology, art history, classics, biomedical engineering, economics, environmental biology, environmental science, English, French, history, linguistics, statistics, neuroscience, philosophy, physics, psychology, and Spanish and Portuguese. Interested students should contact their academic advisers for more information.

**Overview**

The Honors Program at Tulane offers academically gifted and intellectually curious students of all academic majors unique opportunities for immersion in both multi-disciplinary and specialized scholarship. The Honors Program embraces the ideal of scholarly engagement as a goal for all high achieving students. This foundation is built through close contact with faculty both inside and outside the classroom, and an active, scholarly community of peers. Honors students pursue serious engagement in academic scholarship...
Through coursework, research, residential communities, international study, opportunities for prestigious awards, and the senior honors thesis; this multifaceted experience culminates in the highest quality undergraduate experience at Tulane University. The scholarly achievements and high academic standards of the Honors Program represent a firm commitment to embodying the academic excellence of Newcomb-Tulane College and to teaching students to live a life of meaning and purpose.

**Participation and Eligibility**

All students invited by the Office of Admission to join the Honors Program are eligible to do so by signing up for one of the Fall semester Honors courses: COLQ 1010 Freshmen Colloquium Seminar (1.5 c.h.), COLQ 1020 Freshman Colloquium (1-3 c.h.) or TIDB (H), Honors Business TIDES (1.5 c.h.). To maintain affiliation with the Honors Program in the Spring semester, students must enroll in the Spring semester course COLQ 1030 Quest for Answers (1.5 c.h.) or the second semester of TIDB (H) (1.5 c.h.). Students in the Newcomb Scholars program may fulfill the second semester Honors requirement with the required Newcomb Scholars seminar, INTU 1000 Hist &Phil of Higher Education (3 c.h.). For more information on Honors courses, see Honors courses [here](https://honors.tulane.edu/content/courses).

To remain eligible for the Honors Program, students who began the freshman year in Honors must have a GPA of at least 3.6 at the end of the first year. At the end of the sophomore year and in subsequent years, students must maintain a GPA of at least 3.8. Students who were not offered participation in the Honors Program at the start of freshman year may apply for Honors status as soon as the end of the first semester, provided they have a GPA of 3.8 or higher.

**Research Colloquium and the Honors Thesis**

Through the Honors Colloquium seminar courses, students learn from their professors how to tackle issues and ideas relevant to our lives. Colloquium faculty bring their research into the classroom, introducing students to the latest scholarship. The Honors curriculum encourages students to formulate new questions on existing scholarship and invites them to participate as members of a collaborative academic community even in their first year of study.

After completing the first-year colloquia described above, sophomore Honors students are not required but strongly encouraged to take COLQ 2010 Honors Soph Colloquium (1.5-3 c.h.), either in the fall or spring of the sophomore year. This course introduces students to research opportunities in their field or fields of interest, and prepares them to begin thinking about scholarly opportunities in the sophomore and junior year (including through the Honors Summer Research Program, field work, REUs, and study abroad) and the Honors Thesis in the senior year.

Junior students who plan to write an Honors Thesis in the senior year are strongly encouraged to take COLQ 4013 Special Topics (1-3 c.h.) in the spring of the junior year.

The culminating experience of the Honors Program is the Honors Thesis, which students write across two semesters in the senior year. The Thesis is an independent research project mentored by two faculty members in the student’s major or majors and a third faculty member who represents a different field. Students who complete the Honors Thesis graduate with Departmental Honors in the major or majors in which the thesis is written. (For more information, see Honors Thesis [here](https://honors.tulane.edu/content/honors-thesis-0).)

A student need not be a member of the Honors Program to complete an Honors Thesis, but must have a minimum GPA of 3.4 overall, and 3.5 in the major or majors in which the thesis is written. At the discretion of the Director of the Honors Program, students may be allowed to begin the thesis with a lower GPA, with the understanding that they must achieve a thesis-eligible GPA by the end of the senior year in order to qualify for Departmental Honors and for their work to count as an Honors Thesis. Students who begin the thesis, but fall below the GPA requirements for thesis eligibility at the end of the year, will (with the approval of their thesis advisors) convert their work to independent studies.

**Honors Residential Life Communities**

The Honors Program oversees two residential learning communities: Wall Residential College for freshmen, and Weatherhead Hall for sophomores. Both communities are overseen by faculty members in residence. In partnership with Housing and Residence Life, the Honors Program sponsors a variety of co-curricular and social events in both buildings. For example, students in Wall participate in the activities of the Wall Societies, which are led by faculty members who represent a variety of academic disciplines. Programming in Weatherhead includes regular roundtable events in which faculty come to the community to discuss their research or issues of interest to the students; the roundtables are organized in large part by the student community.

**Honors Study Abroad**

International opportunities play a significant role in the Honors experience at Tulane and do so in a variety of ways. As an undergraduate, Honors students may participate in the Honors Summer in Berlin Program or other travels related to field work, research, or service. Honors students are introduced to graduate study abroad with funding from the Rhodes Trust and Marshall and Mitchell Scholarships, as well as other opportunities such as through the US Student Fulbright Program, Peace Corps, Luce Scholarship Program, and Global Health Corps.

Special study abroad opportunities for Honors students include the Honors in Berlin Program, which is designed to offer a rich, interdisciplinary experience for students seeking greater scholarly engagement in a dynamic city that is a fulcrum for the study of politics, history, and science. Taking advantage of Berlin’s intellectual culture and unique history, the program offers courses that are meant to be taught in Berlin. Contact the Honors Program for more information.

**Funding Opportunities**

The Honors Program offers two kinds of funding opportunities: the Honors Summer Research Program and the Jean Danielson Memorial Scholarship Fund.

The Honors Summer Research Program is an opportunity for students to work with a Tulane professor on a scholarly project for six weeks during the summer. Honors freshmen, sophomores, and juniors in all schools are welcome to apply, and it is open to students who have no research experience or who already have some experience with research. Funding includes housing and a stipend, so students can focus on this enhanced academic experience. For more information,
The Altman Program in International Studies and Business is a unique opportunity for incoming Tulane students who share Dr. Danielson’s commitment to living a life of purpose and intellectual vigor to apply for funds for a research or other field experience in the US or abroad. For more information, see The Jean Danielson Scholarship Fund (https://honors.tulane.edu/content/jean-danielson-scholarship-fund).

Nationally Competitive Scholarships
The Honors staff includes a Coordinator for Nationally Competitive Scholarships, Dr. Jennifer Beers, who is responsible for advising students about scholarships, fellowships, and other postgraduate opportunities. The Honors Program coordinates the application process and serves as the campus nominator for scholarships like the Goldwater, Truman, Beinecke, Fulbright, Rhodes, and Marshall. Conversations along these lines can begin as early as freshman year. See Scholarships & Fellowships (https://honors.tulane.edu/content/scholarships-fellowships).

Washington Semester Program
Tulane participates in American University’s Washington Semester Program. A small number of students are selected in the fall and spring semesters to participate in one of several tracks within the program: American Politics, Foreign Policy, International Environment and Development, International Law and Organizations, Justice and Law, Peace and Conflict Resolution, and Transforming Communities.

Each of these tracks consists of two seminars, an internship and a research project. Interested students should contact the Center for Global Education.

For more information on the Washington Semester Program, and to apply see https://studyabroad.tulane.edu/index.cfm?FuseAction=Programs.ViewProgram&Program_ID=10135. Applications to participate in the Washington Semester are considered on the same cycle and with the same deadlines as applications to study abroad.

Altman Program
Altman Program in International Studies and Business

The Altman Program in International Studies & Business is a special four-year undergraduate program that integrates liberal arts and business disciplines, extensive language instruction, and two study abroad experiences in the developed and developing worlds. Altman Scholars earn two degrees - a Bachelor of Arts from the School of Liberal Arts and a Bachelor of Science in Management from the A. B. Freeman School of Business. Altman Scholars specialize in a region of the world in which their chosen foreign language is spoken, and will be able to combine practical and theoretical knowledge of global economies with deep cultural and linguistic competency. The program admits a cohort of 20 students who are selected before their matriculation at Tulane as freshmen.

Curriculum
The Altman Program combines the curricula of two undergraduate degree programs: the School of Liberal Arts and the A. B. Freeman School of Business. Students may major in finance, management, marketing, or legal studies at the Freeman School and may major in approved social science, area studies or language disciplines within the School of Liberal Arts. The link between the two majors in the schools is the interdisciplinary "Altman Core," the curricular focus of the Altman Program, which includes a common experience every semester, a summer group immersive experience abroad, a junior year abroad experience, and integrative seminars in the senior year.

Specific courses open only to students in this program include a TIDES seminar; ISIB 3010 Introduction to Globalization (3 c.h.); ISIB 1910 Study Abroad Pre-Dep (1 c.h.) ISIB 2020 Special Topics (3 c.h.); ISIB 6010 Approaches to Global Dilemmas (3,4 c.h.), and ISIB 6020 Altman Senior Seminar (1 c.h.).

Newcomb Scholars Program

Program Description
The Newcomb Scholars Program is a unique opportunity for incoming women at Tulane who are interested in an academically enriching and shared four-year experience through undergraduate research, seminars, and experiential learning opportunities.

Credits and grades earned in INTU 1000 Hist &Phil of Higher Education (3 c.h.) and in POLC 3003 Women Leading Change (3 c.h.) will apply toward a degree. Credits and grades earned in INTU 2000 Seeking Knowledge (3 c.h.) and in INTU 4000 Newcomb Research Seminar (3 c.h.) will appear on the Tulane transcript but will not apply toward the 120 credits required for a degree.

Newcomb-Tulane College Academic Programs

Newcomb-Tulane College Academic Programs office administers the TIDES, Tulane Interdisciplinary Experience Seminar, series for first year-students, the Tulane Reading Project, NTC Grants, Sophomore programming as well as College Coffee. Housed in Cudd Hall, the office fosters the academic experience of all Tulane University students by continuously developing an environment of academic programming and faculty engagement beyond the classroom. To view all of our programs and resources, please visit https://success.tulane.edu/.

Email: tides@tulane.edu

For more information on TIDES, see http://tides.tulane.edu. For more information on the Reading Project, see https://success.tulane.edu/reading. For more information on NTC Grants, see https://college.tulane.edu/grants.
Advising Services supports Newcomb-Tulane College students in a holistic approach that integrates academic, career and personal advice. Every Newcomb-Tulane College student has a team of advisors to discuss academic plans and career interests.

By utilizing Academic and Career Advising Services, students have the opportunities to:

- Explore and choose majors and minors
- Plan academic and career paths
- Investigate pre-law and pre-health tracks
- Connect with faculty and major advisors
- Find resources and guidance from academic and career advising experts

Center for Global Education comprises the Office of Study Abroad (OSA), Office of International Students and Scholars (OISS) and the Office of English as a Second Language.

Office of Study Abroad (OSA) maintains a portfolio of high-quality semester and yearlong study abroad programs that have been approved by the Newcomb-Tulane Study Abroad Committee. These programs are open to all qualified undergraduate students pursuing degrees in the Schools of Liberal Arts, Science & Engineering, Architecture, Public Health & Tropical Medicine, and Business.

Tulane University partners with top overseas universities and international institutions to make the highest quality overseas educational experiences available to its students. The range of subject matter reflects the particular opportunities and scholastic strengths available in each location. Language instruction is an integral part of the programs in non-English-speaking countries.

Approved Semester and Yearlong Options
The OSA administers over 120 study abroad programs for undergraduates in Europe, Latin America, Africa, Asia, and Australia. More details are available from the Office of Study Abroad web site.

The OSA currently offers academic-year and semester programs in Argentina, Australia, Botswana, Brazil, Chile, China, Colombia, Costa Rica, Cuba, Czech Republic, Denmark, Egypt, France, Germany, Ghana, Greece, Hungary, India, Ireland, Israel, Italy, Japan, Jordan, Mexico, Morocco, Netherlands, New Zealand, Peru, Poland, Russia, Senegal, Singapore, South Africa, South Korea, Spain, Sweden, Thailand, the United Kingdom, and Uruguay. (This list is subject to change.) These programs are open to all qualified students in the Newcomb-Tulane College who meet specific eligibility requirements.

Independent Scholar Option (ISO)
Students may choose to design their own study abroad experience for a semester or year abroad through the Independent Scholar Option. The ISO offers exceptional juniors and seniors the opportunity to propose a semester or year abroad pursuing a course of study for which there is no equivalent on an existing approved program. Students considering the ISO are required to have a meeting with the director of study abroad to discuss the proposed course of study abroad and the application process.

ISO applicants must have a 3.5 GPA and should demonstrate a high degree of maturity, independence, and preparation.

Credits and Grades
Grades earned abroad will appear on the official transcript but will not be calculated into the cumulative GPA. This policy will not apply to Tulane faculty-led summer programs, or to courses completed in study abroad programs offered through the Freeman School of Business.

Advising for Study Abroad
Newcomb-Tulane undergraduates are encouraged to begin their academic preparation for study abroad as early as their first semester at Tulane. Students may select a program independently or in close consultation with the OSA study abroad advisor, as well as the academic and major advisors. The OSA hosts informational meetings, advising sessions, discussion groups, and panel talks to inform students of their options for studying abroad. In addition, the OSA organizes an annual fall study abroad fair to promote education abroad opportunities. A complete guide to study abroad is available on the OSA web site.

Eligibility and Selection Criteria
At the time of application, all students must present persuasive evidence of the necessary academic and intellectual strength, linguistic skills, and special preparation in the area of the proposed course of study. A compelling argument that the proposed program and destination are appropriate in terms of academic, cultural and personal goals should be clearly articulated in the application essay.
Students must also demonstrate the individual initiative and strong sense of personal responsibility required to complete the program abroad. Students must familiarize themselves with the program-specific GPA and course prerequisites when planning for study abroad. Due to high demand, competition may occur within the various programs because some have a limited number of spaces.

The student’s academic and major advisors must support the application and indicate that the proposed overseas study will advance and not impede progress toward the degree. Applicants are also asked to indicate how they expect to complete graduation requirements. Qualified students may study abroad as early as the freshman year.

Honor Code and Code of Student Conduct
Students who have been found guilty of or have pled guilty to a violation of the Code of Academic Conduct within the past year may not study abroad. If the violation was earlier than the past year, the student may apply to study abroad and the violation will be reviewed as part of the student’s record. Students may not study abroad while on disciplinary probation

Tuition and Fees
For each semester abroad, participants pay Tulane tuition and the academic support service fee. Airfare, housing, meals, vacation travel, and personal expenses are extra and vary by location.

Financial Aid and Scholarships
For eligible students, all federal financial aid (Pell Grants, Supplemental Educational Opportunity Grants, Perkins Loans, Stafford Loans, and Parent Plus Loans) except for work-study awards can be applied to all Tulane study abroad programs. All Tulane University institutional aid (Dean’s Honor Scholarship, Distinguished Scholars Award, Founders Scholarship, and Tulane Need-Based Scholarship), except for the housing stipends, can be used for participation in Tulane study abroad programs as well. Students must meet with their financial aid advisor to confirm their financial aid status.

There are several scholarships available for study abroad depending on location. Student should visit the OSA web site for a complete list of awards available through the College as well as those available from partner institutions.

Tulane Summer Programs
Undergraduate students can take advantage of a variety of faculty-led summer study abroad programs focused on special topics.

The OSA currently offers short-term summer programs in France, Ireland, Sweden, Germany and Italy. Some of the courses include service-learning and writing-intensive credits.

Other Tulane departments and programs, such as the Center for Public Service and the Stone Center for Latin American Studies, also offer short-term summer study abroad programs. In recent years, programs have been offered in Australia, Brazil, Chile, Costa Rica, Guatemala, India, Malaysia and Mexico.

Costs and application procedures vary by program; visit the OSA web site for a list of available summer programs.

Non-Tulane Study Abroad Programs
To participate in a study abroad program during the academic year that has not been approved by the Tulane Study Abroad Committee, students must apply through the OSA website and work with the Academic Advising Center to transfer credit back to Tulane. Students participating on a non-Tulane semester or summer program must complete the "Non-Tulane Study Abroad" application available on the OSA web site.

ROTC
Tulane University recognizes the need for military officers with a quality education in a variety of academic specialties and highly recommends the Reserve Officer Training Corps programs as one method of meeting this need. The university maintains Air Force, Army, and Naval ROTC units which are part of the School of Science and Engineering. Their programs are open equally to men and women in all schools. Each of the programs provides an opportunity to develop leadership and management abilities, as well as to perform a valuable service to the nation. Individuals who wish to earn a commission and to serve a brief period of active duty, as well as those who are interested in a career of military service, are encouraged to participate.

A maximum of 15 credits from ROTC courses may be applied to a Tulane degree.

Air Force Reserve Officer Training Corps (AFROTC)
Air Force Reserve Officer Training Corps (AFROTC) offers three and four year programs through which students can earn a commission as a Second Lieutenant in the United States Air Force upon graduation.

AFROTC is a comprehensive academic and hands-on training program. Students have the unique opportunity to enhance their interpersonal communications, teamwork, leadership, and management skills.

The curriculum is divided into two parts: the General Military Course (GMC) for freshman and sophomores, and the Professional Officer Course (POC) for juniors, seniors, and graduate law or nursing students. GMC students attend a 1-hour class and a 2-hour laboratory each week. POC students attend a 3-hour class and a 2-hour laboratory each week. Cadets compete for and must be selected to attend field training (a four-week session) between their sophomore and junior years.

LLAB cadets are classified into one of four groups with respect to field training attendance and/or commissioning. Initial Military Training (IMT) cadets are part of the General Military Course (GMC) but are not scheduled to attend field training (normally AS1000 cadets). The focus of IMT objectives/activities are to promote the Air Force way of life and help effectively recruit and retain qualified cadets. This time is spent acquainting the cadets with basic Air Force knowledge and skills to help them determine whether they wish to continue with the AFROTC program. Field Training Prep (FTP) cadets are scheduled to attend field training in the upcoming year (normally AS2000 cadets). The FTP objectives provide training to ensure every cadet is mentally and physically prepared for the rigorous field training environment. Intermediate Cadet Leaders (ICL) are cadets returning from field training (normally AS3000 cadets). ICL objectives/activities give cadets the opportunity to further develop the leadership and followership skills learned at field training.
Every cadet position should provide the ICL the opportunity to sharpen their planning, organizational, and communication skills, as well as their ability to effectively use resources to accomplish a mission in a constructive learning environment. Senior Cadet Leaders (SCL) are cadets scheduled to be commissioned in the upcoming year (normally AS4000 cadets). This time is spent on additional opportunities to develop leadership and supervisory capabilities, and prepares cadets for their first active duty assignment. Extended Cadet Leaders (ECL) are cadets whose ROTC academic requirements are complete but still have one or more terms of college left to complete. These cadets may hold special duty or regular positions within the cadet corps upon discretion of the Detachment Commander (Det CC) or Commandant of Cadets (COC).

Students may enroll in the GMC without incurring any military obligation. Entry into the POC is competitive and requires a commitment to the Air Force. Additional summer programs are available to cadets on a voluntary basis. These professional development opportunities include parachuting, soaring, language immersion, base visits and more. Textbooks and uniforms are issued to cadets without cost. Scholarship cadets qualify for yearly book allowance per year and a subsistence allowance per month during academic year.

The Air Force offers excellent scholarship opportunities in a wide variety of academic majors. For additional information or to check scholarship eligibility, contact AFROTC Detachment 320, Tulane University, at (504) 865-5394, afrotc@tulane.edu, https://tulane.edu/det320 or visit www.afrotc.com.

Army Reserve Officer Training Corps (AROTC)

Army Reserve Officer Training Corps (AROTC) is a comprehensive program of studies through which a student can qualify to be commissioned as an officer in the United States Army, the National Guard, or the United States Army Reserve. Students learn leadership and management skills important in any profession. The Army ROTC program consists of a two-year Basic Course, which is open to freshmen and sophomores only, and a two-year Advanced Course. Non scholarship students participating in the first two years of AROTC do not incur any obligation to the U.S. Army. Army ROTC offers four, three, and two year scholarships that include the Guaranteed Reserve Forces scholarship. Army scholarships provide tuition assistance, a flat rate for textbooks, and a monthly subsistence allowance (up to 10 months per year). Students may elect to use scholarships for room and board (up to $10,000 annually) in lieu of tuition and fees. Admission to the AROTC Advanced Course is conditional on meeting academic, physical, and age requirements and the approval of the Professor of Military Science. Physical training is an integral part of the AROTC program.

To be commissioned as an officer, a student must complete either the regular four-year program, a three-year program (whereby the Basic Course is compressed into one year), or a two-year program (requiring completion of the summer AROTC basic camp giving the student credit for the Basic Course). Advanced placement for AROTC training may be given to veterans and students with previous ROTC experience. In addition to these requirements, a student must complete at least one course each in the areas of written communication, human behavior, military history, computer literacy and math reasoning. Uniforms and military science textbooks are issued without cost to all students. Advanced Course and scholarship students receive a subsistence allowance. They are also paid for the summer advanced leadership camp they must attend prior to completing the Advanced Course. For further information contact the Army ROTC office at 1-800-777-ARMY or 504-865-5594.

Naval Reserve Officer Training Corps (NROTC)

The Naval Reserve Officer Training Corps (NROTC) program at Tulane University offers students the opportunity to earn a commission in the Navy or Marine Corps. Students typically earn a national scholarship out of high school. Students matriculating to Tulane University, who have not already been awarded an NROTC scholarship, may participate in the NROTC College Program and compete for a 3, 2, or 1 year scholarship. These students are selected from applicants each year by the Professor of Naval Science.

NROTC Scholarship Process

The NROTC scholarship board begins accepting applications in April for the following academic year. The deadline for applications is December 31. The scholarship board uses a “rolling” selection process. The board commences reviewing applications in August and continues into the spring. Students aspiring to serve their nation should begin the application process early and provide updates through their fall semester to the closing of the application deadline. The Navy encourages future officers to have backgrounds in STEM majors, but all degrees are accepted.

NROTC Scholarship rewards students with full tuition, university fees, uniforms, a textbook stipend, and a subsistence stipend. Scholarship students participate in paid summer training periods and receive commissions in the Navy or Marine Corps Reserve as Ensigns or Second Lieutenants upon graduation. They have a minimum five-year active duty obligation after commissioning.

NROTC College Program

NROTC College Program students are selected from applicants each year by the Professor of Naval Science. First-year students may apply to participate in the college program at the beginning of their first or second year. College program students compete nationally for a one, two, and three-year NROTC scholarship. During the sophomore year, non-scholarship students compete for “Advanced Standing”. “Advanced Standing” guarantees the student a commission in the service upon graduation. Students failing to attain “Advanced Standing” are dismissed from the program. Advanced Standing students participate in one paid summer training period (between the junior and senior years) and receive commissions in the Navy or Marine Corps Reserve upon graduation. They incur a minimum five-year active duty obligation. Advanced Standing students are furnished uniforms and naval science textbooks and a subsistence stipend during their junior and senior years.

NROTC Requirements

Members of the NROTC program are expected to achieve high academic standards minimum of 2.5 GPA, excel at physical training and be of sound moral judgment. All members of the program are required to enroll in Naval Science classes every semester and participate in morning drill and physical training. In addition, Navy Option scholarship
recipients are required to take 2 semesters of Calculus and 2 semesters of Physics.

The NROTC Unit sponsors many teams in campus intramural sports and many specialty organizations that represent the unit on campus and throughout Louisiana and the southern United States. If you would like to schedule a visit or have any questions, please call the NROTC Unit, Tulane University at (504) 865-5104, email Navy@tulane.edu (navy@tulane.edu) or visit https://nrotc.tulane.edu/content/schedule-visit-0. Additional information may be found at https://nrotc.tulane.edu/.

**SoPA Majors for NTC Students**

**Majors**

- Health and Wellness Major (p. 224)
- Homeland Security Major (p. 215)
Admission to graduate programs at Tulane University is managed by their respective schools. Each program embraces our core values of learning, innovation, and creativity. At Tulane, we are dedicated to recruiting the best and brightest local, national, and international students for each area of study. Each school or degree program has its own requirements and standards for admission, but all graduate students receive the full Tulane experience.

**Office of Graduate and Postdoctoral Studies**

The Office of Graduate and Postdoctoral Studies serves as an umbrella office to ensure consistency in graduate education policies and effectiveness. OGPS develops and reviews policies that apply to graduate students and postdoctoral fellows. Professional programs are under the oversight of the professional schools. OGPS also coordinates with the Graduate Council and the Office of Academic Affairs to supervise and provide guidance to graduate education programs and professional programs undergoing major changes. The office provides programming and advising for research based masters students, PhD students, and postdoctoral fellows to support them during their academic career at Tulane University and as they prepare for careers after their studies.

Typically graduate students in each school will report to their department or Dean's Office, especially in regards to signing up for classes, applying for graduation, or handing in their theses.

**Academic Policies**

**Rules and Regulations**

Upon admission, students are held responsible for compliance with the regulations Tulane University has set forth in this catalog and in relevant school and/or program handbooks and catalogs. They should familiarize themselves with these regulations.

The University reserves the right to change any of its courses and charges without advance notice and to make such changes applicable to students already registered as well as to new students.

**The Graduate Council**

The Graduate Council (http://tulane.edu/ogps/graduate-council.cfm) establishes and maintains university-wide procedures, rules and standards for the Master of Arts (M.A.), Master of Fine Arts (M.F.A.), Master of Liberal Arts (M.L.A.), Master of Science (M.S.), Master of Professional Studies (M.P.S.), and Doctor of Philosophy (Ph.D.) degree programs. The council approves new degree programs and major curriculum changes in existing programs, performs periodic program reviews, and advises the Senior Vice President for Academic Affairs and Provost on graduate education issues. The voting membership of Graduate Council consists of the Provost, who serves as its chair, and twelve elected faculty members— each elected by a vote of the graduate faculty of their respective schools. More details on the council’s membership and functions are available at: h (http://tulane.edu/ogps/graduate-council.cfm)

**Graduate Studies Student Association**

The Graduate Studies Student Association (GSSA) (http://www.tulane.edu/%7Egssa) is responsible for addressing issues which affect graduate students in the School of Liberal Arts and the School of Science and Engineering, as well as allocating funds for graduate studies activities. GSSA’s parent body is GAPSA (Graduate and Professional Student Association). (http://www.tulane.edu/%7Egapsa)

**Unified Code of Graduate Student Academic Conduct**

Tulane University expects students to conduct their academic endeavors with honesty and integrity. As part of the University community, graduate students have certain responsibilities regarding work that forms the basis for the evaluation of their academic achievement. Any student behavior that has the effect of interfering with the education, pursuit of knowledge, and/or a fair evaluation of the student’s performance is considered a violation of the prescribed academic conduct, as set forth in the Unified Code of Graduate Student Academic Conduct. (https://ogps.tulane.edu/sites/g/files/rdw1126/f/Unified-Code-of-GS-Academic-Conduct-06-18-13.pdf) The Code also outlines procedures to be followed if there is a suspected violation. Students are expected to be familiar with the Code. Principles and activities not covered by the Code may fall under the purview of University or departmental research and/or ethics committees. Questions concerning jurisdiction should be addressed to the dean of the respective school.

**Code of Student Conduct**

The University requires of all of its students behavior compatible with its high standards of scholarship and conduct. By accepting admission to Tulane University, a student accepts its regulations, including the Code of Student Conduct, and acknowledges the right of the University to take conduct action, including suspension or expulsion, for conduct judged unsatisfactory or disruptive. The Vice President for Student Affairs is responsible for formulating appropriate procedures and, as set forth in the Code of Student Conduct (http://tulane.edu/studentaffairs/conduct/code.cfm), regulations concerning student behavior and for the resolution of conduct cases.

Except as noted below, information regarding tuition and fees, residence halls and meals, financial obligations, financial aid, academic management services, short-term charitable remainder trust, and veteran’s benefits is the same as for undergraduate students. See “Financial Information” (https://www2.tulane.edu/financialaid/upload/2018-2019-Graduate-Source-Book-042618.pdf) for more information.

**Tuition and Fees**

Tuition and fees rate schedules are established at the university level; however, some fees, such as dissertation fees, are established by the individual schools or programs. Students who have assistantships are often granted tuition waivers, but fees are the responsibility of the student. Consult the graduate adviser of the appropriate school for more information on tuition and fees.
Financial Obligation to the University

No diploma or certificate of credit is given to a student who is in default of any payment due to a division of the University.

Financial Assistance

Tulane’s graduate programs award their own scholarships, fellowships, and assistantships. Contact a particular graduate program for information on the availability of funds and how to apply. Tulane’s Financial Aid Office calculates a student’s eligibility for federal aid to supplement awards made by a graduate program.

Master’s Programs Requirements

The general characteristics of the graduate programs of study are outlined below, but as with admissions, specific requirements for all graduate degrees, including concurrent and dual or joint degrees, may be obtained from the schools in which the programs are to be carried out. These characteristics are specific to the MS, MA, MFA, MLA, and MPros degree programs.

Admission to Degree Programs

Admission to all graduate studies programs at Tulane is on the basis of academic accomplishments and potential, regardless of race, sex, color, religion, national/ethnic origin, citizenship, marital status, sexual orientation, disability, or veteran status.

Specific admission standards are set by the individual schools or programs, but in general, only applicants who have earned an undergraduate degree from a recognized institution may be admitted if their academic records and personal attributes indicate the ability to pursue advanced study successfully. Applicants must present evidence, to the satisfaction of the department or the program committee concerned, of adequate preparation for the subjects in which they seek to specialize. All students must hold the undergraduate degree before enrolling. Only students with undergraduate averages of B or better, or with undergraduate study of otherwise certifiable equivalent quality, ordinarily are admitted.

A master’s degree is not prerequisite to the beginning of study for the Doctor of Philosophy degree, but a student may be required to qualify for the master’s degree while working toward the doctorate.

Prospective students should consult the graduate admissions offices of their program of interest for additional admission requirements, application deadlines, and degree requirements.

Master’s Degree Minimum Degree Requirements

Minimum Credit Hour Requirements

The minimum credit hour requirement for a non-professional Master’s degree is 30 credit hours; however, some programs may require additional hours of coursework. Those programs that require 24 credit hours of coursework and a thesis for the Master’s degree are in compliance with this policy.

Continuous Registration Requirements

A student admitted in a degree program must be continuously registered in a degree-granting division of the university during the academic year (exclusive of summer session) in either full-time or part-
time status from the date of first registration until the awarding of the degree, unless the registration is terminated by resignation or by dismissal for academic or disciplinary reasons.

A student who has not completed the minimum coursework requirements for the degree must enroll for a minimum of three hours per semester (exclusive of Summer Session). Some schools may require registration for a higher number of credit hours or may charge a continuous registration fee.

Failure to be continuously registered is de facto withdrawal and the school reserves the right not to readmit. A student who is readmitted is obligated to pay any applicable fee required to maintain continuous registration. Under exceptional circumstances a student may be granted leave by the dean of the appropriate school, and during such a period of leave will be considered in continuous registration without any payment of fee.

**Full-Time Status**

Full-time status consists of registration for at least nine hours of graduate credit per semester, or a combination of coursework and equivalent academic activities such as teaching or research. To hold a Tulane-sponsored fellowship, scholarship, or assistantship, a student must be in full-time status. Off-campus employment may disqualify a student from receiving a Tulane-sponsored fellowship, scholarship, or assistantship.

**Part-Time Status**

Part-time status consists of registration for less than nine hours of graduate credit per semester. In such cases, the department or the program committee can provide no certification that the student is engaged in a full-time academic program.

**Transfer Credit**

Acceptance of graduate credit for work done at other graduate institutions or in another division of Tulane must be approved by the department or program concerned, or by the dean of the appropriate school. In general, a maximum of 15 semester hours of transfer credit may be accepted toward a Master’s degree. Some programs may allow fewer transfer credits and/or limit the applicability of transfer credits to degree programs.

**Tenure for Degree Students**

Tenure is the maximum period of time normally permitted for the completion of all requirements for a degree, and it is determined on the basis of consecutive academic years from the date of registration for graduate study at Tulane or at another institution. Tenure for the Master’s degree is five years. Tenure is not affected by residence status. Under certain circumstances, upon the recommendation of the chairperson of a student’s department or program committee, the dean may extend tenure, but a student whose period of graduate study is unduly prolonged or interrupted may be required to perform additional work. Tenure regulations are applicable to all degree students, regardless of date of first registration.

**Dual Degree Programs**

Tulane offers a number of dual degree programs with the master’s degree. In all instances, the student must fulfill the requirements for each degree in order for the dual degrees to be conferred.

**Thesis Requirements**

If a thesis is required for the master’s degree, the subject of the thesis must be in the field of major study and must have the approval of the professor by whom the thesis is to be directed. The finished thesis must have the approval of the thesis committee.

Students are required to submit their completed theses to the University’s Theses and Dissertations Archive (http://library.tulane.edu/dissertations_and_theses/). Schools may require students to submit a paper copy of their thesis.

**Thesis Committees**

Master’s thesis committees must consist of at least three faculty members, the majority of whom are Tulane faculty. Exceptions to this stipulation may be made by the appropriate school’s dean.

**4+1 Master’s Programs**

In some programs, undergraduate students have the option of obtaining a master’s degree with one additional year of study beyond the bachelor’s degree (4+1). Program requirements vary, but most 4+1 degrees do not require a thesis, in which case 30 credit hours of additional coursework beyond the bachelor’s level are required. Those programs that offer a thesis-based 4+1 option require 24 credit hours of coursework beyond the bachelor’s level. In some cases, a modified undergraduate curriculum is required to complete the 4+1 program; e.g., enrollment during the senior year in 6000-level courses that can be applied to both the bachelor’s and master’s degrees. Because this may be the case, interested students are advised to consult with their program’s graduate advisor prior to their junior year to obtain specific instructions for participation in the 4+1 program. Tuition for the fifth year of the 4+1 program is set by the appropriate school or program.

**Additional Requirements**

Schools and graduate programs may have additional requirements for completion of the master’s degree. Students are advised to consult with the appropriate departmental graduate adviser or dean for this information.

**Registration Policies and Procedures**

Registration information for graduate students is the same as that for undergraduate students.

**Change of Courses**

Students wishing to add or drop courses should consult the Schedule of Classes for instructions, as well as the official Academic Calendar (https://Registrar.tulane.edu/academic-calendar). Failure to make schedule adjustments promptly and accurately may result in financial or academic penalties.

**Change of Departmental Program**

A student who has been admitted to a degree program in one department and wishes to transfer to a program in another department must obtain the approval of the chair of both departments concerned and the approval of the dean of the school before the change is official. The necessary form for such changes is available in the dean’s office.
Grades

Grades are reported as follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td></td>
</tr>
<tr>
<td>A-</td>
<td></td>
</tr>
<tr>
<td>B+</td>
<td></td>
</tr>
<tr>
<td>B</td>
<td></td>
</tr>
<tr>
<td>B-</td>
<td></td>
</tr>
<tr>
<td>C+</td>
<td>A course in which a grade of C+ or less is earned cannot be counted toward a graduate degree.</td>
</tr>
<tr>
<td>C</td>
<td></td>
</tr>
<tr>
<td>C-</td>
<td></td>
</tr>
<tr>
<td>D+</td>
<td></td>
</tr>
<tr>
<td>D</td>
<td></td>
</tr>
<tr>
<td>D-</td>
<td></td>
</tr>
<tr>
<td>F</td>
<td></td>
</tr>
<tr>
<td>I</td>
<td>Incomplete - This grade will automatically become F unless the work is made up within 30 days after the beginning of the following semester, excluding Summer School. This grade is not to be used as an automatic extension but only for unavoidable delays caused by illness or other emergencies.</td>
</tr>
<tr>
<td>R</td>
<td>Research - In those cases where research or experimentation, or both, cannot be completed within the 30-day limit following the end of the semester, this grade will be given to indicate this circumstance. This grade carries a different meaning from that of IP which is given at the end of the first semester of a two-semester course.</td>
</tr>
<tr>
<td>IP</td>
<td>In Progress - Satisfactory progress at the end of the first semester of a year-long course; grades are assigned upon completion of the course.</td>
</tr>
</tbody>
</table>

W Courses may be dropped without record within six weeks of the first day of classes. Refer to Academic Calendar for exact dates each semester. Withdrawals with the grade of W after these dates may be accomplished only if the instructor notifies the dean that the student is passing and recommends permission to withdraw. WF (withdrawn failing) will be assigned if the student’s work in a course is unsatisfactory at the time of withdrawal.

In some departments grades for certain courses are reported as follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>S</td>
<td>Satisfactory</td>
</tr>
<tr>
<td>U</td>
<td>Unsatisfactory</td>
</tr>
</tbody>
</table>

In some departments, grades for certain other designated courses may also be reported simply as S or U at the student’s option, provided that the option is declared by the student no later than the end of the second week of class.

Medical Excuses

Students are expected to attend all classes unless they are ill or prevented from attending by exceptional circumstances. Instructors may establish policies for attendance of their classes, which are announced at the beginning of the semester. Students who find it necessary to miss class must assume responsibility for making up the work covered during that session, including quizzes, examinations, and other exercises; they also are responsible for obtaining notes on material covered in lectures or other class sessions.

Students are responsible for notifying professors about absences that result from serious illnesses, injuries, or critical personal problems. However, medical excuses are not issued by the University Health Service, except in instances of illnesses or injuries that involve hospitalization.

Required Withdrawal and Denial of Enrollment

A student may be required to withdraw from any course or from the university, temporarily or permanently, for any of the following reasons:

- Work below the standard specified by the college in which the student is enrolled.
- Violation of the honor system or other misconduct.
- Possibility of danger to the health of the student or to other students if enrollment is continued.

The university reserves the right to forbid any student’s continued enrollment without assignment of reason. The school, however, will provide a student with a statement of reason in writing from the department. An appellate procedure has been established in cases involving academic performance or possible infringement of
academic freedom. Schools also have appellate procedures in cases involving non-reappointment of fellowships or scholarships when the formal terms of the first award have given reasonable expectation of renewal. Such procedures may also apply to cases in which a graduate, teaching, or research assistant, is relieved of a position before the end of the term of the appointment or is not reappointed when the formal terms of the first appointment have given reasonable expectation of reappointment. Copies of these procedures are available in the dean’s office.

Resignation from a graduate program must be made in writing to the dean. The student who finds it necessary to withdraw or to resign should report to the dean’s office to complete a withdrawal or resignation form.

Conferring of Degrees
All degrees are conferred by Tulane University. Degrees earned at the graduate level are awarded three times a year in December, May, and August. There is one commencement program each year in May. Candidates for degrees are required to complete an application for degree form on or before deadline dates, as stipulated by each school.

Dual Degree Programs
Tulane University offers a number of dual or joint degrees that are pursued as single coherent program of study. Up to 12 credit hours may be shared between the two degrees to meet Master’s degree requirements and up to 24 credit hours may be shared to meet Ph.D. requirements. For joint Ph.D. programs, the requirements of the Ph.D. must be maintained and satisfied in order to receive the Ph.D. degree.

Ph.D. Program Requirements
The general characteristics of the graduate programs of study are outlined below; but as with admissions, specific requirements for all graduate degrees, including concurrent and dual or joint degrees, may be obtained from the schools in which the programs are to be carried out. For maximum periods of time to complete requirements for these degrees, see Tenure for Degree Students.

Degree of Doctor of Philosophy
Students undertaking work for the degree of Doctor of Philosophy (Ph. D.) should understand that this degree is awarded not for an accumulation of course credits only, but for superior independent research and scholarship in the chosen field, as evidenced in the dissertation.

Admission to Degree Programs
Admission to all graduate studies programs at Tulane is on the basis of academic accomplishments and potential, regardless of race, sex, color, religion, national/ethnic origin, citizenship, marital status, sexual orientation, disability, or veteran status.

Specific admission standards are set by the individual schools or programs, but in general, only applicants who have earned an undergraduate degree from a recognized institution may be admitted if their academic records and personal attributes indicate the ability to pursue advanced study successfully. Applicants must present evidence, to the satisfaction of the department or the program committee concerned, of adequate preparation for the subjects in which they seek to specialize. All students must hold the undergraduate degree before enrolling. Only students with undergraduate averages of B or better, or with undergraduate study of otherwise certifiable equivalent quality, ordinarily are admitted.

A master’s degree is not prerequisite to the beginning of study for the Doctor of Philosophy degree, but a student may be required to qualify for the master’s degree while working toward the doctorate.

Prospective students should consult the graduate admissions offices of their program of interest for additional admission requirements, application deadlines, and degree requirements.

PhD Minimum Degree Requirements
The PhD is awarded not for an accumulation of course credits only, but for superior independent research and scholarship in the chosen field, as evidenced in the dissertation.

Minimum Credit Hour Requirements
The minimum credit hour requirements for the PhD are 48 credit hours; however, some programs may require additional hours of coursework.

Continuous Registration Requirement
A student admitted in a degree program must be continuously registered in a degree-granting division of the university during the academic year (exclusive of summer session) in either full-time or part-time status from the date of first registration until the awarding of the degree, unless the registration is terminated by resignation or by dismissal for academic or disciplinary reasons.

A student who has not completed the minimum coursework requirements for the degree must either enroll for a minimum of three hours per semester (exclusive of Summer Session) or register for Dissertation Research in order to maintain continuous registration. A student who has completed the minimum hours of coursework required for the degree must register for Dissertation Research (no credit hours) in order to maintain continuous registration. Some schools may require registration for a higher number of credit hours or may charge a continuous registration fee.

Failure to be continuously registered is de facto withdrawal and the school reserves the right not to readmit. A student who is readmitted is obligated to pay any applicable fee required to maintain continuous registration. Under exceptional circumstances a student may be granted leave by the dean of the appropriate school, and during such period of leave, a student will be considered in continuous registration without payment of fee.

Residency
A student must be in residence at Tulane for at least two semesters.

Full-Time Registration Status
Full-time status consists of registration for at least nine hours of graduate credit per semester, or a combination of coursework and equivalent academic activities such as teaching or research. PhD students must be in full-time status for at least one academic year (exclusive of summer session), though some schools and programs may require full-time status for a longer period. To hold a Tulane-sponsored fellowship, scholarship, or assistantship, a student must
be in full-time status. Off-campus employment may disqualify a student from receiving a Tulane-sponsored fellowship, scholarship, or assistantship.

A student who has completed the minimum hours of coursework and is registered for Dissertation Research (no credit hours) can be classified as a full-time student with full student privileges. Schools, however, may require the department or program committee to certify that the student is engaged in academic activities equivalent to a full-time commitment.

**Part-Time Registration Status**

Part-time status consists of registration for less than nine hours of graduate credit without certification by the department or the program committee that the student is engaged in a full-time academic program.

**Transfer Credit**

Acceptance of graduate credit for work done at other graduate institutions or in another division of Tulane must be approved by the department or program concerned and by the dean of the appropriate school. In general, a maximum of 24 semester hours of transfer credit may be accepted toward the PhD. Some programs may allow fewer transfer credits.

**Tenure for Degree Students**

Tenure is the maximum period of time normally permitted for the completion of all requirements for a degree, and it is determined on the basis of consecutive academic years from the date of registration for graduate study at Tulane. Tenure for the PhD degree is seven years. Tenure is not affected by registration status. Under certain circumstances, upon the recommendation of the chairperson of a student’s department or program committee, the dean of the school may extend tenure, but a student whose period of graduate study is unduly prolonged or interrupted may be required to perform additional work. Tenure regulations are applicable to all degree students, regardless of date of first registration. A registration block will be imposed by the school dean for those students who are beyond their time of tenure. The registration block can only be removed with permission from the school’s dean.

**Dual Degree Programs**

Tulane offers a number of dual degree programs with the PhD. In all instances, the requirements for the PhD degree must be maintained and satisfied in order to receive the PhD degree.

**Dissertation Committees**

PhD dissertation committees must consist of at least three faculty members, the majority of whom are Tulane faculty. Exceptions to this stipulation may be made by the school dean.

**Admission to Candidacy**

Admission to a PhD program does not constitute admission to candidacy for the PhD. To be admitted to candidacy, a student must complete certain degree requirements, as specified by each school or graduate program. See the department or program director of graduate studies for specific information.

**The Prospectus**

A student must write a prospectus in order to graduate. See the department or program director of graduate studies for specific requirements related to when and how a prospectus should be completed.

**The Dissertation**

The dissertation is the culmination of the PhD degree. It is the necessary demonstration that the candidate is worthy of taking a place among research scholars in the discipline. It must demonstrate not only mastery of the literature of the subject, but also the ability to carry on independent research that results in a genuine contribution to knowledge or an original interpretation of existing knowledge, and it must do so in a literate and lucid fashion. The dissertation committee will pass on the acceptability of the dissertation before it is submitted in final form. Acceptability, however, is not final approval. The candidate must defend the dissertation successfully before the degree is awarded. Consult the dean of the appropriate school or program for regulations regarding formatting of the dissertation and submission deadlines.

Students are required to submit their completed dissertation to the University’s Theses and Dissertation Archives (https://digitallibrary.tulane.edu/theses_and_dissertations). Schools may require students to submit a paper copy of their dissertation.

**Additional Requirements**

Schools and graduate programs may have additional requirements for completion of the PhD degree. Students are advised to consult with the appropriate departmental graduate adviser or dean for this information.

**Registration Policies and Procedures**

Registration information for graduate students is the same as that for undergraduate students.

**Change of Courses**

Students wishing to add or drop courses should consult the Schedule of Classes for instructions, as well as the official Academic Calendar (https://registrar.tulane.edu/academic-calendar) for relevant deadlines. Failure to make schedule adjustments promptly and accurately may result in financial or academic penalties.

**Change of Departmental Program**

A student who has been admitted to a degree program in one department and wishes to transfer to a program in another department must obtain the approval of the chair of both departments concerned and the approval of the dean of the school before the change is official. The necessary form for such changes is available in the dean’s office of the appropriate school.

**Grades**

Grades are reported as follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td></td>
</tr>
<tr>
<td>A-</td>
<td></td>
</tr>
<tr>
<td>Grade</td>
<td>Description</td>
</tr>
<tr>
<td>-------</td>
<td>-------------</td>
</tr>
<tr>
<td>S</td>
<td>Satisfactory</td>
</tr>
<tr>
<td>U</td>
<td>Unsatisfactory</td>
</tr>
</tbody>
</table>

In some departments, grades for certain other designated courses may also be reported simply as S or U at the student's option, provided that the option is declared by the student no later than the end of the second week of class.

**Medical Excuses**

Students are expected to attend all classes unless they are ill or prevented from attending by exceptional circumstances. Instructors may establish policies for attendance of their classes, which are announced at the beginning of the semester. Students who find it necessary to miss class must assume responsibility for making up the work covered during that session, including quizzes, examinations, and other exercises; they also are responsible for obtaining notes on material covered in lectures or other class sessions.

Students are responsible for notifying professors about absences that result from serious illnesses, injuries, or critical personal problems. However, medical excuses are not issued by the University Health Service, except in instances of illnesses or injuries that involve hospitalization.

**Required Withdrawal and Denial of Enrollment**

A student may be required to withdraw from any course or from the university, temporarily or permanently, for any of the following reasons:

- Work below the standard specified by the college in which the student is enrolled.
- Violation of the honor system or other misconduct.
- Possibility of danger to the health of the student or to other students if enrollment is continued.

The university reserves the right to forbid any student's continued enrollment without assignment of reason. The school, however, will provide a student with a statement of reason in writing from the department. An appellate procedure has been established in cases involving academic performance or possible infringement of academic freedom. Schools also have appellate procedures in cases involving non-reappointment of fellowships or scholarships when the formal terms of the first award have given reasonable expectation of renewal. Such procedures may also apply to cases in which a graduate, teaching, or research assistant, is relieved of a position before the end of the term of the appointment or is not reappointed when the formal terms of the first appointment have given reasonable expectation of reappointment. Copies of these procedures are available in the dean's office of the appropriate school.

Resignation from a graduate program must be made in writing to the dean. The student who finds it necessary to withdraw or to resign should report to the dean's office to complete a withdrawal or resignation form.
Conferring of Degrees
All degrees are conferred by Tulane University. Degrees earned at the graduate level are awarded three times a year in December, May, and August. There is one commencement program each year in May. Candidates for degrees are required to complete an application for degree form on or before deadline dates, as stipulated by each school.

Dual Degree Programs
Tulane University offers a number of dual or joint degrees that are pursued as single coherent program of study. Up to 12 credit hours may be shared between the two degrees to meet Master’s degree requirements and up to 24 credit hours may be shared to meet Ph.D. requirements. For joint Ph.D. programs, the requirements of the Ph.D. must be maintained and satisfied in order to receive the Ph.D. degree.

Graduate Programs

Architecture
Tulane School of Architecture (http://architecture.tulane.edu/home)

• Social Work (https://tssw.tulane.edu/degree-programs) (DSW, MSW, Online MSW (https://socialwork.tulane.edu))
the School of Architecture moved into its present facility, Richardson Memorial Hall, and experienced another increase in enrollment that continued throughout the seventies. Professor William Kay Turner became dean in 1972, and in 1975, a small graduate program was initiated, offering a post-professional Master of Architecture II degree. Ronald Coulter Filson became dean in 1980.

In the summer of 1990 the school began a program offering a Master of Architecture as a first professional degree for students with undergraduate degrees in other disciplines. Donna V. Robertson succeeded Dean Filson in 1992. Tulane faculty member Donald F. Gatzke was appointed dean in 1997, just as the school initiated its Master of Preservation Studies program. Also in 1997, a supplemental Certificate in Preservation Studies was offered to undergraduates for the first time. In 2003, the school eliminated the five-year Bachelor of Architecture degree, replacing it with a five-year Master of Architecture as the professional degree. Former Architecture Magazine editor-in-chief Reed Kroloff became dean in October 2004. In 2005, the school initiated the Tulane City Center, now known as the Albert and Tina Small Center for Collaborative Design, its urban research and outreach program, as well as URBANbuild, which helps rehabilitate neighborhoods through urban design and the construction of student-designed and built housing prototypes.

Kenneth Schwartz, FAIA became dean in July 2008, increasing national and international recognition for the work of students, faculty and alumni. In 2011, the school initiated its Master of Sustainable Real Estate Development Program. The school added a Bachelor of Science in Architecture degree track in 2014 and a real estate summer minor institute in 2015. The school also expanded its degree offerings and international study opportunities, and initiated a drive to fully integrate digital design throughout the curriculum.

Iñaki Alday was appointed as dean in May 2018 and began his term August 1, 2018.

### Academic Policies

#### Academic Policies

A full description of academic policies for all students in Newcomb-Tulane College (p. 18) can be found in the college's section of this catalog. Students should review these policies thoroughly. Academic policies and specific requirements for all School of Architecture graduate and undergraduate programs are included in the student handbook for each program. You can find the student handbooks on the school's website here (http://architecture.tulane.edu/current-students/student-information).

#### Degree Requirements

##### Undergraduate

**Newcomb-Tulane College Requirements**

**General Education Curriculum**

**Newcomb-Tulane College General Education Curriculum**

Newcomb-Tulane College Core Curriculum allows students to explore a wide-range of disciplines and embodies the mission and values of the
College by allowing students to have flexibility in their core curriculum courses while exploring a full-range of courses.

The core curriculum—which is composed of a minimum of 30 credits—is divided into two parts: proficiency requirements and a distribution of knowledge. To ensure that students experience the breadth of knowledge at the collegiate level, AP and IB courses can be used to satisfy proficiency requirements only in Formal Reasoning and Foreign Language.

Courses will be designated as satisfying the distribution requirements according to the content and methodology rather than the departmental affiliation of the course.

The new core curriculum general education requirements will go into effect with the entering class of 2018.

Courses proposed to satisfy core requirements will be ratified by the Newcomb-Tulane Curriculum Committee and the Newcomb-Tulane College faculty.

### Proficiency Requirements

#### Writing Skills (2 courses and 6 credits)

Tulane undergraduates should be able to communicate effectively. Students completing this requirement will produce coherent texts that combine analysis, argument, and research.

- Tier 1: Freshman writing (ENGL 1010 or ENGL 1011) unless the student is exempt. Students receiving exemption from ENGL 1010/1011 are required to take an approved writing class during their freshman year. At least 1/3rd of the grade based upon writing (excluding in class exams), but no revision required.
- Tier 2: One additional writing course at the 2000 level or above taken from an approved list. At least 1/3rd of the grade based upon writing (excluding in class exams), to include revision and re-evaluation by the instructor.

*Note: creative writing courses cannot be used to satisfy the writing proficiency requirement.*

#### Formal Reasoning (1 course and 3 credits)

One course in mathematics or symbolic logic (PHIL 1210)

#### Foreign Language (0-3 courses)

The foreign language proficiency is achieved by a passing grade at the 2030 level, or an AP score of 4 or 5, or a Higher-Level IB score of a 5 or higher, or an SAT II achievement test of 640 or higher, or a passing grade in a Tulane administered proficiency test. This requirement is waived for students in B.S.E. programs.

### Distribution Areas (A course can satisfy only one of the distribution areas.)

#### Mathematics and the Natural Sciences (2 courses including 1 lab science course and 7 credits)

Tulane undergraduates should understand the methods of scientific inquiry. The mathematics and natural sciences requirement will equip students to understand and assess scientific issues that affect the world today. (Those completing the B.F.A. degree need only complete 1 course with lab.)

#### Social and Behavioral Sciences (2 courses and 6 credits)

Tulane undergraduates should think critically about human cultures, societies, and behaviors. This requirement acquaints students with the methods of research and inquiry in the social science disciplines.

#### Textual and Historical Perspectives (2 courses and 6 credits)

Tulane undergraduates should evaluate literary, philosophical, and historical texts. This area of the curriculum introduces exposes students to the methods used to examine and interpret fundamental issues of human experience.

#### Aesthetics and the Creative Arts (3 credits)

Tulane undergraduate students should be able to understand and appreciate the creative process and various forms of artistic expression.

### Additional Core Requirements

#### The First Year Seminar

This requirement can be satisfied by a Tulane Interdisciplinary Seminar (TIDES) course or an Honors Colloquium course (COLQ 1010 or 1020).

#### Public Service

All students will complete public service that is satisfied by service learning courses, an approved internship, or research experience. These courses can also be used to satisfy other areas of general education. The nature of the requirement is to be determined by the NTC faculty. Currently this is a two-tiered experience.

#### Race and Inclusion

One course that focuses on race and inclusion in the United States, to be completed by end of the sophomore year. Courses that fulfill this requirement will focus at least 60% of their content on race and inclusion in the United States. These courses may also be used to satisfy other general education curriculum requirements.

#### Global Perspectives

One course that focuses on a global-international context from a perspective outside of the U.S., with at least 60% of content with stated objectives to develop historical, cultural, and societal knowledge of an area beyond the U.S. This requirement should be completed by end of the sophomore year. These courses can also be used to satisfy other areas of general education.

#### Bachelor of Architecture, B.Arch

The five-year Bachelor of Architecture (p. 49) program is structured with required courses and electives that provide thorough professional preparation and opportunities for study in the liberal arts and advanced study in architecture. This degree is accredited by the National Architectural Accrediting Board. (http://architecture.tulane.edu/programs/naab-accreditation)

#### Bachelor of Science in Architecture, BSA

The Bachelor of Science in Architecture (p. 51) degree is a 4-year-long undergraduate course of study. This program offers an integrated curriculum in the liberal arts and architecture designed to promote
an understanding of design as a cultural expression while providing
a strong preparation for graduate professional study in architecture or an
array of other potential career paths

Graduate

Master of Architecture, M.Arch I
The first professional Master of Architecture (p. 52) degree program
is accredited by the National Architectural Accrediting Board (NAAB)
(http://architecture.tulane.edu/programs/naab-accreditation) and
is open to students with a baccalaureate degree in any field from an
accredited college or university.

Master of Science in Architectural Research and Design, M.S.Arc
Our post-professional Master of Science in Architectural Research and
Design (p. 48) degree is a one-year program intended for individuals
with an accredited professional architecture degree interested in
teaching and research as a career in the field of architecture.

Master of Preservation Studies, MPS
In just two semesters of full-time coursework, plus a practicum or
thesis that can be completed anywhere in the world, the Master of
Preservation Studies (p. 54) program prepares students to become
leaders in the field of preservation.

Master of Sustainable Real Estate Development, MSRED
The Master of Sustainable Real Estate Development (p. 56) degree
is an interdisciplinary one-year graduate program that prepares
students from diverse backgrounds to become effective and
influential participants in the fields of real estate finance, design and
development.

Outreach Initiatives

Learning Through Engagement
Public service is central to the mission of Tulane University. It is part of
what defines and distinguishes us as a university community. Applying
what is taught in the classroom to real life problems not only helps our
neighbors in New Orleans and around the globe, it also increases our
students’ knowledge and skills while helping them find their place as
engaged citizens of the world.

Albert and Tina Small Center for Collaborative Design
The Albert and Tina Small Center for Collaborative Design is the
community design center of the Tulane School of Architecture. We work
with community-based organizations to provide design services for
constituencies who are underserved by the architecture and design
professions. Staff, students and faculty collaborate with the leadership
and constituents of partnering nonprofit organizations throughout New
Orleans. Partner organizations bring their project ideas, and the Small
Center brings design expertise to bear in collaboration, supporting New
Orleans residents in imagining and pursuing projects that strengthen
neighborhoods and contribute to a city shaped by its citizens.

Our design work, whether a visual narrative or a built structure, is often
a small, but critical contribution to advancing the ongoing efforts of our
partner organizations. We develop projects in collaboration with faculty
designers and professional consultants to create designs that strive for
beauty, social justice and true sustainability, while working with other
experts to build capacity in our partner organizations. Our work focuses
on equitable process, meaningful outcomes, design excellence and
inclusion as critical parts of the design process.

Follow Small Center’s projects, progress, and news on our
website: small.tulane.edu

URBANbuild

URBANbuild is an unique urban design and construction program
launched by the School of Architecture in 2005. Students engaged in
URBANbuild studios are deployed to neighborhoods throughout the city
to develop creative and sustainable urban design strategies, innovative
designs for new housing, historic property inventories, and proposals
for site-specific urban interventions and large-scale mixed use urban
environments. As an integral component of the URBANbuild program,
students will also design and construct a prototypical house for each of
the study neighborhoods in partnership with community non-profit
agencies that specialize in affordable housing and neighborhood
redevelopment. URBANbuild is a laboratory for city research and
design, a real generator for urban transformation and revitalization, and
a program which directly engages students in the processes of digital
fabrication, materials’ research and advanced construction processes and
technologies.

URBANbuild is a design/build program in which teams of students take
on the design and construction of prototypical homes for New Orleans’
neighborhoods. URBANbuild’s partners in the development of these
homes have been a number of non-profit community partners such as
Neighborhood Housing Services of New Orleans (NHS), the Make It
Right Organization of New Orleans (MIR), and Harmony Neighborhood
development. Work with these organizations has exposed the School
to the needs of the city’s underprivileged families as well as to what
is required for the revitalization of New Orleans’ urban fabric and
neighborhoods.

The program is an educational collaboration of individuals,
orizations, and businesses committed to revitalizing New
Orleans’ rich cultural and architectural heritage. Neighborhoods are
strengthened by the rebuilding of homes; allied professionals and
educators come together for a common cause, and students develop
as designers with a deep understanding and commitment to the urban
environment.

Over the course of the past decade, Tulane’s URBANbuild program
has realized a body of work in collaboration with a number of local
community partners, vendors and material suppliers. Along this journey
the program attempted to develop responsible housing prototypes
with reliance upon understanding of the common cultural needs of the
local environment, the limits of the regional workforce and a growing
awareness of what is considered to be affordable. Throughout the
work of recent years, many limitations have been discovered. Even
in the face of these limitations, the program has produced habitable
structures for families within some of the city’s disadvantaged
neighborhoods.

More information about the design-build program can be found
at www.URBANbuild.tulane.edu.

Social Innovation/Social Entrepreneurship Minor
Building upon Tulane University's strengths in civic engagement and service learning, the Social Innovation and Social Entrepreneurship (SISE) minor provides students with skills to create a more just and equitable society. The five main SISE courses introduce students to concepts of social innovation, mindsets of human-centered design, and frameworks for social impact leadership. Social Innovation and Social Entrepreneurship is an interdisciplinary minor for undergraduate students from across the campus. The 17 credit hour minor includes a variety of courses taught by SISE faculty members and Social Entrepreneurship Professors from across the university. The SISE minor is supported by a variety of programming offered at the Phyllis M. Taylor Center for Social Innovation and Design Thinking (http://taylor.tulane.edu).

Summer Career Exploration

Tulane Pre-College offers an engaging introduction to architecture for high school students who have completed at least their sophomore year, as well as younger students who showcase an exceptional ability to thrive. In order to provide students with a fun and rewarding experience, the program forces students to think about the whole world around them and how it was designed.

In addition to classes, students attend walking tours of New Orleans with professional architects. By exposing students to the buildings of New Orleans, students begin to see how architecture blends history and culture. Students leave with a portfolio of work, which will allow them to continue to explore their initial interest in the field at Tulane University or other schools with an architecture focus.

More information about the summer program can be found here (https://summer.tulane.edu/areas-of-study/architecture).

Architecture

Overview

WE ENVISION A GENERATION OF ARCHITECTS dedicated to crafting the buildings, places and institutions that create vibrant, vital, and sustainable cities.

Using the rich environmental, historical, and cultural landscape of New Orleans as a laboratory, our architecture programs engage students directly in an ongoing effort to reconsider and rebuild New Orleans. We believe that architects are uniquely suited to be leaders in a movement toward an urban renaissance of sustainable design and community engagement, and our architecture programs provide students with the knowledge, education, and experience they need to be those leaders.

The mission of the Tulane School of Architecture is to prepare students for leadership positions in the design professions and in their communities. This school aspires to provide the highest quality professional education in architecture, to develop and conserve knowledge, and to promote excellence and innovation in architecture, landscape urbanism, preservation, and urban and environmental design and development. We recognize the centrality of design thinking as a process of synthesis that incorporates history, theory, technology, economics, behavior, and culture. The school supports diversity and meaningful engagement with urban and community issues, while embracing the creative potential and imperative of sustainable design.

The Tulane School of Architecture offers both undergraduate and graduate degrees in architecture. For more information, please contact the corresponding Program Director.

Marianne Desmarais (mdesmara@tulane.edu),
Director, Undergraduate Architecture
Benjamin J. Smith (bsmith34@tulane.edu), Director, Graduate Architecture

Understanding Architecture Course Numbers

The School of Architecture uses the hundreds position in the course number to further designate subject matter as follows,

ARCH x0xx - Studio
ARCH x1xx - History/Theory
ARCH x2xx - Technology
ARCH x3xx - Digital and Visual Media
ARCH x5xx - Professional Concerns
ARCH x6xx - Advanced History/Theory
ARCH x7xx - Urban Studies
ARCH x9xx - Special course numbers (e.g. Independent Study, Transfer Credit, Special Topics, Thesis related)

Architectural Research and Design, M.S.Arc

Our post-professional Master of Science in Architectural Research and Design degree program (formerly known as M.ARCH II.) is the most advanced research venue at Tulane School of Architecture. It is a selective design research degree that builds on the deep expertise of our faculty and the strategic commitment of the school and the university as a whole. It is intended for individuals with an accredited professional architecture degree interested in teaching and research as a career in the field of architecture.

The program offers six concentrations directed by our internationally-renowned faculty.

1. River and Coastal Urbanism (Climate Change Adaptation)
2. Design/Build
3. Design and Social Engagement
4. Building Technologies
5. Advanced Fabrication and Design
6. Representation Theory

Students are encouraged to develop an area of expertise through independent scholarship. Under the guidance of our diverse faculty, the program focuses on cultivating advanced theory and technology relevant to the design and construction of sustainable and resilient built environment. The program provides opportunities to form a course of study around students' interests and to develop appropriate strategies within the Research and Design Thesis framework.

### Architecture Minor

Available to all Tulane undergraduate students, the Minor in Architecture provides the opportunity to develop study in architecture beyond the introductory level. Students are encouraged to pursue a broad and flexible range of courses aligned with their academic interests to gain an overview of the discipline. The requirements of this non-professional degree are designed to provide tailored experiences within the School of Architecture curricular offerings. Students wishing to minor in architecture should meet with the Director of Student Affairs, Emily Parsons (eparsons@tulane.edu), to establish a curriculum.

A minor in architecture requires at least five courses and a minimum of 15 hours of course work within the School of Architecture. The only specifically required course is ARCH 1110 Intro to Architecture (3 c.h.). In addition to this introductory history course, the minor requires a minimum of two courses from the design, history/theory, and/or technology curricula. Some of these courses have prerequisites and, in order to enroll in them, minors must satisfy the prerequisites or have permission of the instructor. Students may satisfy the remainder of the credit requirement for a minor with any courses offered within the School of Architecture.

### Requirements

The following charts summarize two ways to fulfill the requirement for the Architecture Minor.

### Architecture, B.Arch

The five-year Bachelor of Architecture (B.Arch) program is structured with required courses and electives that provide thorough professional preparation and opportunities for study in the liberal arts and advanced study in architecture. This degree is accredited by the National Architectural Accrediting Board (NAAB). (http://architecture.tulane.edu/programs/naab-accreditation)

#### First Year

First-year courses include required study in design, visual and digital media, architectural history and theory, technological systems, writing, and other electives in cultural knowledge and scientific inquiry. The emphasis in first-year design focuses on developing a fundamental understanding of formal, spatial and material principles in architecture, while obtaining a strong skill base in freehand drawing, descriptive geometry, material techniques, and visual and digital media. First year electives allow students to supplement their background in physics or calculus, begin or advance foreign language study, broaden their skills in the arts, or choose any other subject area from among over forty offered by the University's undergraduate divisions. In their first semester, students may also participate in one of the many TIDES (Tulane InterDisciplinary Experience) courses offered by the University to engage other students and faculty in an intimate, interactive environment.

#### Second and Third Years

Second and third-year courses cover the majority of the program requirements. Intensive studio work in architectural design is complemented by study in architectural history and theory, structures, technological systems, digital media and urban studies. In second-year, students are fully immersed in digital design techniques while learning to incorporate knowledge from historic, environmental, social, programmatic and technological studies into the design studio. This is followed by third-year, where, in the second semester, coordinated coursework allows students a truly synthetic experience in the integrated design of a complex architectural project.
**Fourth Year**
The fourth-year curriculum involves advanced architectural design in elective studio courses as well as graduate level seminars in architectural theory, technology, professional concerns, urban studies, and digital media. In the fourth year of study, emphasis is placed on the relationship of architecture to the urban environment, both locally and globally. Students may spend one semester at the Albert and Tina Small Center for Collaborative Design, studying in one of the many programs ranging from urban design, to housing, to design/build. In the fourth-year, students will also have the opportunity for international study through various programs ranging from one week to full semester abroad programs in Europe, Latin America and Asia. Upper level study is intended to be diverse and includes many electives intended to provide significant opportunities for study within architecture as well as in the liberal arts and sciences.

**Fifth Year**
In the fifth year of study, students will develop an advanced thesis through research, analysis and design in one of four topical areas.

**Transfer Students**
Transfer students with previous college work but without any background in architecture may take an intensive summer curriculum as the equivalent of first-year. The intensive summer program includes no English or general electives because previous college work is a prerequisite. For such students, the Bachelor of Architecture as a first college degree may then be obtained in four additional years.

**Total Credit Hours**

163

¹ ARCH 1110 Intro to Architecture (3 c.h.) satisfies the Aesthetic and Creative Arts core requirement.
² ARCH 2892 Service Learning: ARCH 2022 (0 c.h.) satisfies the Tier I Service Learning core requirement.
³ These are Architecture specific requirements for fulfilling the Formal Reasoning, and Math and Natural Sciences Core Curriculum requirements.
⁴ A minimum of 15 architecture elective credit hours, 6 history/theory credits and 9 general architecture credits, are required. These are usually earned with five courses, but may require additional electives if any of the courses carry fewer than 3 credit-hours.
⁵ Usually, in addition to the courses used to fulfil the Newcomb-Tulane Core Curriculum requirements, at least two or three 3-credit-hour unrestricted university electives are needed to reach the NAAB required minimum of 45 hours of non-architecture work. However, the total number of university electives may vary for students with advanced placement credit, transfer credit, or when students chose to take courses with higher or lower credit counts.

**Notes on School of Architecture Curriculum**

- NAAB requires 45 hours be taken in courses without architectural content.
- The B.Arch degree requires a minimum of 163 credit hours. Given the composition of the Newcomb-Tulane and Architecture School requirements, the typical student transcript will consist of a total of 117 architecture credits, and 46 non-architecture credits.
- Students are strongly encouraged to reinforce and expand their skills and knowledge through professional internship experiences, recognized in the form of academic credits. Undergraduate
Notes on Newcomb Tulane College Core Curriculum

- Questions regarding these requirements should be directed to your NTC Academic Advisor.
- University Core and elective courses, with the exception of TIDES and English Composition, may be completed at any time during the student's curriculum.
- To satisfy the Tier 2 Writing Intensive NTC Core Requirement students must take at least one Tier 2 designated course prior to beginning the of fifth year of study.
- Architecture specific requirements within the core curriculum are described in the footnotes to the course requirements (listed above).

Architecture, BSA

The Bachelor of Science in Architecture (BSA) degree is a 4-year-long undergraduate course of study. This program offers an integrated curriculum in the liberal arts and architecture designed to promote an understanding of design as a cultural expression while providing a strong preparation for graduate professional study in architecture or an array of other potential career paths. The BSA is a pre-professional degree in architecture that allows flexibility in the potential for double majoring and opportunities to join the architecture program after the freshman year. Graduates of this program are prepared to work in architectural or related offices and those who wish to become licensed architects would typically pursue a 2-year course of graduate study to attain an accredited professional degree in architecture.

Many graduates of this program will choose career paths or graduate education in a wide variety of areas including law, business, real estate, preservation, planning, and landscape architecture.

Fully approved and accredited through the Southern Association of Colleges and Schools.

Notes on School of Architecture Curriculum:

Students are strongly encouraged to reinforce and expand their skills and knowledge through professional internship experiences. These experiences are recognized in the form of academic credits. Undergraduate students may earn up to a total of six credit hours for
Notes on Newcomb Tulane College Core Curriculum:

- University core & elective courses, with the exception of TIDES and English Composition, may be completed at any time during the student’s curriculum.
- To satisfy the Tier 2 Writing Intensive NTC Core Requirement students must take at least one Tier 2 designated course prior to the beginning of the fourth year of study.
- Questions regarding these requirements should be directed to your NTC Academic Advisor.

Architecture, M.Arch

Tulane University is one of the most highly regarded and selective independent research universities in the United States. As a member of the prestigious Association of American Universities, we take pride in being a part of this select group of “pre-eminent programs of graduate education and scholarly research.”

The first professional Master of Architecture degree program (M.Arch I) is accredited by the National Architectural Accrediting Board (NAAB) (http://architecture.tulane.edu/programs/naab-accreditation) and is open to students with a baccalaureate degree in any field from an accredited college or university. The M.Arch I program fulfills the professional degree requirements leading to architectural licensure and registration. Two distinct tracks accommodate students’ diverse undergraduate backgrounds.

3.5-year track

The 3.5-year track is structured for students with minimal or no previous architectural education. The seven-semester curriculum begins with a rigorous summer introductory semester, followed by four semesters of core instruction. The final two semesters are primarily elective options, encouraging students to develop customized educational experiences through our rich course offerings.

Students with a Bachelor of Arts in Architecture degree, bachelor’s degree in Interior Design or in other three-dimensional design fields may qualify for one semester advanced standing. Students with a pre-professional architecture degree should apply to the two-year track.

2-year track (advanced standing)

The two-year track provides an accelerated path for students with substantial architectural education. Those with a pre-professional degree such as a Bachelor of Science in Architecture or a Bachelor of Environmental Design, or international students with a terminal architecture degree in their respective country who wish to work towards licensure in the US and Canada should apply to this track to gain advanced standing within the M.Arch I program.

The Director of Graduate Architecture determines the level of advanced standing based on students’ college transcripts and design portfolio strength. Typically, students will complete the curriculum in four semesters, two semesters of core instruction to fulfill NAAB requirements and two semesters of elective options to develop independent scholarship. International students with license to practice architecture or eligible for licensure in their respective countries may qualify for further advanced standing to complete the degree in three semesters.

Dual degree options

Graduate students may pursue a Master of Architecture degree in conjunction with a Master of Preservation Studies or Master of Sustainable Real Estate degree, typically with one additional semester of course work. Learn more on the Dual Degree (http://architecture.tulane.edu/programs/dual-degree) page, or by contacting Graduate Architecture Director Benjamin J. Smith (bsmith34@tulane.edu).

Elective Course VII 3

---

**Preservation**

**Overview**

The Preservation Studies program at the Tulane School of Architecture offers an interdisciplinary opportunity to learn about architectural preservation in one of America's most historic cities. New Orleans maintains a wealth of experience in architectural heritage protection resulting from its over eighty years of historic preservation legislation and its history of preservation achievements.

The Preservation Studies program was founded by architect and preservationist Eugene Cizek, Ph.D. in 1996, with guidance and support from the noted American preservation educator James Marston Fitch, who also attended Tulane's School of Architecture. Since July 2011, the Preservation Studies program has been directed by John H. Stubbs, international architectural conservation practitioner, former director of field projects for the World Monuments Fund, and teacher of preservation theory and practice at Columbia University for over two decades. The program is also supported by a strong Tulane Preservation Alumni Group, and a Preservation Studies Advisory Group. The program also hosts a biennial Preservation Matters symposium addressing new directions in the field.

For more information, please contact the Program Directors.

John Stubbs (jstubbs2@tulane.edu), Director, Preservation Studies

Laura Blokker (lblokker@tulane.edu), Assistant Director, Preservation Studies

---

**Preservation Minor**

Students in the undergraduate Minor in Preservation Studies program learn the fundamentals of historic preservation practice through courses in historic preservation theory and practice, preservation technology, and architectural history. The Minor requires a minimum of four courses totaling 12 credits. PRST 6210 Intro Preservation Studies (3 c.h.) must be among the first taken.

The Minor in Preservation Studies is open to undergraduates at the junior level and above. Interested students should apply to the Director of Preservation Studies for admittance. Students attaining grades above a 3.0 in two or more PRST courses may receive advanced standing in the graduate level Master of Preservation Studies program on separate application and acceptance to the Masters program.

**Preservation Studies Certificate (Graduate)**

The Certificate in Preservation Studies is open to graduate students only. Due to the robust presence of historic preservation in America today and that roughly half of the country’s construction work involves rehabilitation of existing buildings, a Certificate or Dual Degree in Preservation from an established program such as Tulane’s Preservation Studies program is a valuable addition to one’s terminal degree in Architecture or Sustainable Real Estate Development (MSRED). The Certificate in Preservation Studies is designed for students in the graduate M.Arch I program or MSRED program who wish to gain general knowledge understanding and ability in this specialized field of study and practice. The Tulane School of Architecture offers this Certificate for current graduate students and it requires 15 hours of coursework.
Applicants to this program must submit a completed Certificate in Preservation Studies Application form to the Dean’s office and MPS Program Director by the second semester of their third year.

### Preservation Studies, MPS

New Orleans is an incomparable place to study preservation. In addition to its extraordinary inventory of some of the most distinctive historic architecture in the U.S., New Orleans is a microcosm of global issues from sea level rise to housing affordability and social justice.

In just two semesters of full-time coursework, plus a practicum or thesis that can be completed anywhere in the world, the Master of Preservation Studies program prepares students to become leaders in the field of preservation. Our alumni have a proven track record of job attainment (http://architecture.tulane.edu/sites/default/files/pdf/mps_job_titles.pdf) in all sectors of the field across the country. Come be in that number.

Only at Tulane. Only in New Orleans.

### Comprehensive, Three-Semester Program

The Master of Preservation program is fast-paced, with two semesters of campus-based learning and one part-time semester with remote options. A comprehensive curriculum gives you the knowledge and skills to succeed in the dynamic, multidisciplinary field of preservation.

Course topics include:
- Building preservation
- History
- Urban conservation
- Law
- Advocacy
- Economics
- Technology

Most classes take place in the afternoons and evenings, providing flexibility for part-time students.

Students may apply to and concurrently complete master degrees in both Architecture, M.Arch I and Preservation Studies, MPS.

### Real Estate Development

**Overview**

The Sustainable Real Estate Development program offers opportunities for both undergraduates and graduates to gain core skills and practical experience in the real estate industry.

The core of the program is the Master of Sustainable Real Estate Development, which is a practice-based three semester graduate program that prepares students with classes in real estate finance and economics, design, planning and legal issues in development.

Note: Tulane’s MPS curriculum conforms to the standards of the National Council for Preservation Education and includes courses in architectural history, preservation theory and practice, research and documentation methodologies, building conservation, preservation law, and architectural and urban preservation planning. It also includes a practicum derived from practical field experience or a thesis.
The program also offers an intensive Real Estate Summer Minor Institute for Tulane undergraduates who are interested in entry level knowledge of the real estate industry. For more information, please contact the Program Directors.

Real Estate Minor
The Real Estate Summer Minor Institute is an intensive, 8-week program designed to help students obtain the essential knowledge and skills for entry level positions and careers in the real estate industry, both residential and commercial. The program provides a strong foundation on Real Estate as a business, specifically focusing on careers as a real estate investor, owner or developer, in real estate finance and in real estate consulting. In addition, the minor provides robust knowledge in real estate market analysis, due diligence, legal concepts, project analysis, and tax credits. The program also encourages sustainability by preparing students to take the LEED GA exam.

Requirements
These courses are taken as an 8 week program over the course of one summer.

Sustainable Real Estate Development Certificate (Graduate)
The SRED Certificate program gives students the basic tools and knowledge to navigate the demands of being part of a development team and contribute with solutions that provide a lasting, positive impact on the project, its users and surrounding community. This certificate can supplement both our Master of Architecture degrees, and our Master of Preservation Studies degree.

Architects are at the forefront of design decisions in projects. They must be integrated with the development team at large. Essential knowledge of finance tools, as well as understanding the environmental and social impact of development projects are crucial to successfully participating in today's projects small and large. Preservationists must also be able to engage the development team on their own terms, articulating the value of integrating long-term sustainable solutions into projects.

Today, over 54% of the world's population lives in cities and this number is expected to grow to 66% in the next few decades. As urban life becomes more complex, the need for providing sustainable solutions for the built environment is more imperative than ever. We define sustainability as development that addresses immediate needs while reducing long-term stresses.

Students who earn the SRED Certificate will be able to:

• Understand basic concepts of real estate finance needed for determining a project’s viability.
• Understand sustainable design and construction principles.
• Identify real estate finance products that can be applied to a project.
• Understand the urban environment and its relationship to the political, economic, environmental and cultural context.

Program Logistics
The SRED Certificate program starts with an intensive summer semester: four courses over five weeks, starting in early July through the first week of August. Students join the incoming class of the Master of Sustainable Real Estate Development for these introductory courses. This summer session ends with, SRED 6400, a week-long Field Study trip, usually to Washington, DC and Philadelphia.

Following the summer semester, SRED Certificate students must take the Real Estate Finance course offered during the fall semester in order to complete the requirements.

Applications
Applications must be submitted by the second semester of the student’s second year. Contact the MSRED Program Director, Casius Pealer (cpealer@tulane.edu), for additional information.

Sustainable Real Estate Development, MSRED

The Master of Sustainable Real Estate Development (MSRED) degree is an interdisciplinary one-year graduate program that prepares students from diverse backgrounds to become effective and influential participants in the fields of real estate finance, design and development. We equip our graduates with a blended education in business, economics, sustainable design, urbanism, and legal issues. The MSRED degree is practice-oriented and emphasizes opportunities for students to gain experience and build a professional network in innovative for-profit, nonprofit and public settings.

- Faculty of Industry Professionals: Learn from current practitioners who bring real-world experience and a commitment to teaching.
- Experiential Learning: Get direct field experience through structured internships, client-based research projects, and field study trips to learn the challenges and successes in other cities nationally.
- Alumni Success: MSRED alumni are making an impact in high-level leadership positions across the industry.
- Connections with Local and National Organizations: Build a professional network through interaction with industry professionals at the local, state and national levels.

Key Facts
- Program Length: Full time (one year) or part time (two years)
- Start Date: June
- Small Class Size: 20-24 students
- Dual Degree Options: MBA/MSRED and M.Arch/MSRED tracks available
- Career Opportunities: Project Manager, Financial Analyst, Development Associate, Consultant, Principal, Owner

Social Innovation & Social Entrepreneurship

Overview

Building upon Tulane University’s strengths in civic engagement and service learning, the Social Innovation and Social Entrepreneurship (SISE) minor provides students with skills to create a more just and equitable society. The five main SISE courses introduce students to concepts of social innovation, mindsets of human-centered design, and frameworks for social impact leadership.

Social Innovation and Social Entrepreneurship is an interdisciplinary minor for undergraduate students from across the campus. The 17 credit hour minor includes a variety of courses taught by SISE faculty members and Social Entrepreneurship Professors from across the university.

SISE offices are located on the fourth floor of Howard Tilton Memorial Library next to the Latin American Library, in the Phyllis M. Taylor Center for Social Innovation and Design Thinking. Students wishing to declare the SISE minor can consult the SISE Academic Advisor Rebecca Otten (rotten@tulane.edu?Subject=SISE minor).

The SISE minor is supported by a variety of programming offered at the Phyllis M. Taylor Center for Social Innovation and Design Thinking (http://taylor.tulane.edu).

SISE also offers Taylor Your Life, a career development lab that teaches students how to approach their future with the mindset and toolkit of a

A.B. FREEMAN SCHOOL OF BUSINESS

A. B. Freeman School of Business
A. B. Freeman School of Business
Goldring/Woldenberg Business Complex
7 McAlister Drive
New Orleans, LA 70118
https://freeman.tulane.edu/

The A. B. Freeman School of Business offers the Bachelor of Science in Management degree at the undergraduate level. In addition, the Freeman School offers a variety of graduate degrees: Master of Accounting, Master of Business Administration, Master of Business Analytics, Master of Finance, Master of Global Management, Master of Management, Master of Management in Energy and Doctor of Philosophy.

Mission
We inspire, engage, and enable students, organizations, and our global business community to contribute to human achievement and prosperity by creating and disseminating high-impact business knowledge and by leveraging the experiences that New Orleans and Tulane provide.

History
Tulane University’s College of Commerce and Business Administration was founded in September 1914, supported by business leaders who envisioned a school that would strengthen the New Orleans economy and capitalize on its international ties. Under the leadership of Dean Morton A. Aldrich, the college joined 16 leading business schools in founding the Association to Advance Colleges Schools of Business (AACSB International) and thus set the standards for business education in the United States. The school has maintained continuous accreditation since 1916.

In 1984, the A. B. Freeman School of Business was named in honor of Alfred Bird Freeman, chairman of the Louisiana Coca-Cola Bottling Co. A renowned business innovator and civic leader, Freeman advocated foreign trade zones and further development of the port of New Orleans.

Today, the Freeman School continues to meet the needs of the business community - locally, nationally, and internationally - by educating the leaders of today and tomorrow through its Bachelor of Science in Management, Master of Accounting, Master of Business Administration, Master of Business Analytics, Master of Finance, Master of Global Management, Master of Management, Master of Management in Energy, and Doctor of Philosophy in Business Administration degree programs.

Academic Policies
Undergraduate
Double Majors
BSM students can only have one second business major or one business minor in addition to their first business major. Overlap is allowed for required business major or minor courses only. Students completing a second major or minor outside the business school must complete the school’s requirements for that major or minor.

Special Programs
Two specializations are available to students pursuing a Bachelor of Science in Management: energy and entrepreneurship. Students must complete nine semester credit hours selected from specified courses in the field of study and receive approval from faculty in the designated program.

Summer Study Abroad
Freeman’s Study Abroad programs enable students to live and learn in another culture. During the intensive summer study abroad programs, students earn elective credits toward completion of their Freeman business degrees. In these immersive settings, students develop international management skills by focusing on cultural understanding and global strategies that create competitive advantages in international business. All courses are taught by Freeman-affiliated international faculty and are taught in English. At the host institutions abroad, Freeman students study in a campus environment with business students from around the world. Classes, seminars, company visits, and cultural activities are typically included in the program itinerary. Summer programs are offered at two European and two Asian locations each year. Courses completed during summer study abroad count as Freeman electives.

Semester Study Abroad
The Freeman School offers qualified students the opportunity to study abroad for one or two semesters through a direct exchange with one of our 40 partner institutions in more than 20 countries. Students may select the semester when they go abroad, and the curriculum can be tailored to the students’ interest. Participants are directly enrolled at the partner institution and fully experience campus life in the host country. Business courses are most often taught in English by Freeman-affiliated international faculty and include both local and international students. If students are proficient in the host country language, they can also take courses taught in that language. Study abroad offers a broad range of academic offerings as well as cultural immersion and the freedom to engage in extracurricular activities at the host university. This program is governed by the BSM Curriculum Committee and is managed by the staff of Study Abroad & Exchange.

Study Abroad staff members are available for student advising appointments in order to assist students with selecting the right program for them. Factors that students should weigh include academics, personal and professional goals, language(s) of instruction, level of immersion, host university environment and support services, rankings and academic rigor, safety and security, housing preferences, financial considerations, academic calendars, and program reviews.

Independent Study
To register for an independent study, students must have senior standing and an overall GPA of 3.333 or higher. Approval of the instructor and of the area head are required.

Internships
Qualified business majors may apply to receive credit for completing an unpaid internship. Students will earn one credit that will be shown as a 4000-level course on their transcripts. Please note: This credit
Graduate Grading System

Grade Symbols:
All graduate programs in the Freeman School use a letter grade system with the following quality point equivalents:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>4.00</td>
</tr>
<tr>
<td>A-</td>
<td>3.67</td>
</tr>
<tr>
<td>B+</td>
<td>3.33</td>
</tr>
<tr>
<td>B</td>
<td>3.00</td>
</tr>
<tr>
<td>B-</td>
<td>2.67</td>
</tr>
<tr>
<td>C+</td>
<td>2.33</td>
</tr>
<tr>
<td>C</td>
<td>2.00</td>
</tr>
<tr>
<td>C-</td>
<td>1.67</td>
</tr>
<tr>
<td>D+</td>
<td>1.33</td>
</tr>
<tr>
<td>D</td>
<td>1.00</td>
</tr>
<tr>
<td>D-</td>
<td>0.67</td>
</tr>
<tr>
<td>F</td>
<td>0.00</td>
</tr>
<tr>
<td>I</td>
<td>Incomplete - This grade will automatically become F unless the work is made up within 30 days after the beginning of the following semester, excluding Summer School. This grade is not to be used as an automatic extension but only for unavoidable delays caused by illness or other emergencies.</td>
</tr>
</tbody>
</table>

The quality point total for each course is computed by multiplying the numerical value of the grade received by the course credit hours.

Graduate credit is awarded for grades of D- or better; however, lower grades must be offset with higher grades to meet continuation and graduation requirements. The grades of W (withdrawal), WF (withdrawal failing), and UW (unofficial withdrawal) may be assigned by the instructor when the student withdraws from a course before its completion. A grade of W does not affect the grade point average. Grades of WF or UW are computed in the grade point average as an F. A grade of P (pass) is not counted in the grade point average but is counted in earned hours. A grade of F (fail) is not counted in earned hours but is counted in the grade point average.

Grading Guidelines:
The Freeman School faculty approved the following recommended grading guidelines for the class GPA for each type of graduate course:

6000-level courses are expected to have a mean class GPA in the range of 3.00 to 3.33.
7000-level courses are expected to have a mean class GPA in the range of 3.33 to 3.67.

Faculty members teaching more than one section of the same course may pool the students in the different sections and compute one class GPA.

Incomplete Grades
If, for reasons acceptable to the instructor, a student fails to complete the required work within a course, he or she may receive the grade of I (incomplete). The student then has one semester (excluding the summer session) to complete the requirements for course credit. Should the incomplete not be resolved within one semester, the I automatically becomes an F. Once a grade of I is assigned, it remains on the official transcript beside the final grade received.

Repeating Courses
Graduate credit is earned on all Freeman courses in which a grade of D- or higher is earned. Courses for which a student has received credit can be repeated. A student must repeat any required course in which a failing grade is earned. However, both grades remain on the transcript. When a course is repeated, only the latest grade contributes to the grade point average. Elective courses do not need to be repeated, but the credit hour and grade point average requirements for graduation must be met. If a student receives a grade of WF due to a determined infringement of the unified code of graduate student academic conduct, the failing grade will remain in the GPA calculation, even if the course is repeated for credit.

Auditing Courses
The Freeman School discourages auditing courses. In exceptional circumstances, however, students may be allowed to audit a course with the permission of their program adviser. Once a course is audited, it may only be taken for credit at a later date with the approval of the instructor and the program adviser.

Class Attendance/Medical Withdrawals
Students are expected to attend all classes unless they are ill or prevented from attending by exceptional circumstances. Instructors should establish policies for attendance in their classes that are announced at the beginning of the semester. Students who find it necessary to miss class are responsible for obtaining notes on material covered in lectures or other class sessions. It is up to the instructor to determine whether or not to allow the student to make up missed quizzes, examinations or other exercises. Students are responsible for notifying professors about absences that result from serious illnesses, injuries or critical personal problems. Check with the Student Health Center on the current policies for medical excuses.

Courses in Other Divisions of Tulane
A student may petition the associate dean for permission to take up to six credit hours of graduate coursework in other divisions of Tulane University. The petition must be approved prior to registration if the
course is to be included as a part of the degree requirements for the MBA.

The petition should be submitted to the associate dean through the director of graduate education. The petition should include a statement describing the course's contribution to the student's professional career goals. If there are special circumstances relating to the request, they should be summarized in the petition. Appended to the petition should be a course description and a current course syllabus, if available. If the syllabus is not available, a syllabus from the most recent offering should be included.

Such courses must be at the graduate level and carry the equivalent of a 7000-level designation. Undergraduate courses, courses that include substantial undergraduate enrollment, or School of Professional Advancement courses are not accepted.

The hours earned for these courses will be counted toward the hours required for the MBA degree. Grades earned in these courses will not be included in the grade point average, since they were assigned using a policy different from that of the Freeman School, nor will they be used for determining graduation, continuation, awards, honors, and fellowships. Minimum passing grades are determined by the school offering the course. Students must receive a passing grade in the course to have it count for degree purposes. Since these grades will not be counted in grade point averages, students must meet all grade point average requirements for their degrees using only Freeman School courses.

Course Withdrawals or Additions
Students can drop and add courses according to the dates set each semester by the Office of Graduate Programs. These dates are available at https://registrar.tulane.edu and in the Office of Graduate Programs. It is important that students be informed of these dates in order to avoid unnecessary financial obligations. Drop/add forms are available on the Freeman website and in the Office of Graduate Programs. They must be completed and signed by the student and then signed and processed by the program adviser. Students should discuss implications of course withdrawals or additions with their program adviser if they have questions.

Continuation Requirements
Each graduate degree program has its own continuation requirements, based on the number of credit hours completed. These standards are applied to all work attempted and completed in the degree program at Freeman, including earned grades of F, WF and UW. If a course is repeated, only the latest grade contributes to the grade point average.

Probation
A student who fails to meet continuation requirements is placed on academic probation. The terms of such probation will vary depending on the particular circumstances. These terms ordinarily will include a requirement that the student raise his or her GPA to the level required and may include a requirement to take specific courses and achieve specified levels of performance in those courses. Probation conditions may include restrictions on non-academic activities and on maximum or minimum course loads. Students may not receive the grade of I (incomplete) while on probation.

Dismissal
Students who fail to meet the terms of probation will be dismissed from the program. In addition, students who remain on probation for two consecutive semesters or whose cumulative GPA is below 2.00 will be dismissed from the program.

Right of Appeal
A student who receives a letter of dismissal has the right to appeal to the associate dean. A petition stating the reasons for the appeal should be submitted in writing to the program adviser, who will forward it to the associate dean. The student may request, or be requested, to appear in person if further information is needed. Favorable action on the appeal will depend on the student's ability to demonstrate that his or her academic performance to date is not representative of future performance. The associate dean will attempt to determine if the student in future semesters can achieve the required performance and rectify any deficiencies. The burden of argument in the appeal process rests with the student. A student who is reinstated following a successful appeal of dismissal is placed on probation.

Graduation Requirement
An overall GPA of 3.00 on all coursework attempted in the graduate program is required for graduation. If a course is repeated, only the latest grade contributes to the grade point average. However, if a student receives a grade of WF due to a determined infringement of the unified code of graduate student academic conduct, the failing grade will remain in the GPA calculation, even if the course is repeated for credit.

Leave of Absence
A student in good academic standing may choose not to register for coursework in a given semester and still remain in the program. The student must notify the program adviser of his or her intention and proposed return date. Should a student not take courses for three consecutive semesters (including the summer), he or she must apply for reactivation in the program. Letters requesting reactivation should be submitted to the program adviser. Any student who breaks the continuity of his or her program for more than three consecutive semesters (including summer semesters) must reapply for admission to the program through the Office of Graduate Admissions. Readmitted or reactivated students must meet the degree requirements and abide by the academic policies in place at the time of their return to the program. The associate dean will review the student's record and indicate which courses taken in the past will meet the new degree requirements and which will not. No course more than seven years old may be used to meet the degree requirements without the written approval of the associate dean.

Degree Requirements
Undergraduate
Newcomb-Tulane College Requirements
General Education Curriculum
Newcomb-Tulane College General Education Curriculum

Newcomb-Tulane College Core Curriculum allows students to explore a wide-range of disciplines and embodies the mission and values of the
College by allowing students to have flexibility in their core curriculum courses while exploring a full-range of courses.

The core curriculum—which is composed of a minimum of 30 credits—is divided into two parts: proficiency requirements and a distribution of knowledge. To ensure that students experience the breadth of knowledge at the collegiate level, AP and IB courses can be used to satisfy proficiency requirements only in Formal Reasoning and Foreign Language.

Courses will be designated as satisfying the distribution requirements according to the content and methodology rather than the departmental affiliation of the course.

The new core curriculum general education requirements will go into effect with the entering class of 2018.

*Courses proposed to satisfy core requirements will be ratified by the Newcomb-Tulane Curriculum Committee and the Newcomb-Tulane College faculty.*

**Proficiency Requirements**

**Writing Skills (2 courses and 6 credits)**

Tulane undergraduates should be able to communicate effectively. Students completing this requirement will produce coherent texts that combine analysis, argument, and research.

- Tier 1: Freshman writing (ENGL 1010 or ENGL 1011) unless the student is exempt. Students receiving exemption from ENGL 1010/1011 are required to take an approved writing class during their freshman year. At least 1/3rd of the grade based upon writing (excluding in class exams), but no revision required.
- Tier 2: One additional writing course at the 2000 level or above taken from an approved list. At least 1/3rd of the grade based upon writing (excluding in class exams), to include revision and re-evaluation by the instructor.

*Note: creative writing courses cannot be used to satisfy the writing proficiency requirement.*

**Formal Reasoning (1 course and 3 credits)**

One course in mathematics or symbolic logic (PHIL 1210)

**Foreign Language (0-3 courses)**

The foreign language proficiency is achieved by a passing grade at the 2030 level, or an AP score of 4 or 5, or a Higher-Level IB score of a 5 or higher, or an SAT II achievement test of 640 or higher, or a passing grade in a Tulane administered proficiency test. This requirement is waived for students in B.S.E. programs.

**Distribution Areas (A course can satisfy only one of the distribution areas.)**

**Mathematics and the Natural Sciences (2 courses including 1 lab science course and 7 credits)**

Tulane undergraduates should understand the methods of scientific inquiry. The mathematics and natural sciences requirement will equip students to understand and assess scientific issues that affect the world today. (Those completing the B.F.A. degree need only complete 1 course with lab.)

**Social and Behavioral Sciences (2 courses and 6 credits)**

Tulane undergraduates should think critically about human cultures, societies, and behaviors. This requirement acquaints students with the methods of research and inquiry in the social science disciplines.

**Textual and Historical Perspectives (2 courses and 6 credits)**

Tulane undergraduates should evaluate literary, philosophical, and historical texts. This area of the curriculum introduces exposes students to the methods used to examine and interpret fundamental issues of human experience.

**Aesthetics and the Creative Arts (3 credits)**

Tulane undergraduate students should be able to understand and appreciate the creative process and various forms of artistic expression.

**Additional Core Requirements**

**The First Year Seminar**

This requirement can be satisfied by a Tulane Interdisciplinary Seminar (TIDES) course or an Honors Colloquium course (COLQ 1010 or 1020).

**Public Service**

All students will complete public service that is satisfied by service learning courses, an approved internship, or research experience. These courses can also be used to satisfy other areas of general education. The nature of the requirement is to be determined by the NTC faculty. Currently this is a two-tiered experience.

**Race and Inclusion**

One course that focuses on race and inclusion in the United States, to be completed by end of the sophomore year. Courses that fulfill this requirement will focus at least 60% of their content on race and inclusion in the United States. These courses may also be used to satisfy other general education curriculum requirements.

**Global Perspectives**

One course that focuses on a global-international context from a perspective outside of the U.S., with at least 60% of content with stated objectives to develop historical, cultural, and societal knowledge of an area beyond the U.S. This requirement should be completed by end of the sophomore year. These courses can also be used to satisfy other areas of general education.

**A.B. Freeman School of Business Requirements**

**Bachelor of Science in Management**

The BSM program mission is to educate socially responsible business leaders with the intellectual capital necessary to succeed in a technologically sophisticated and dynamic global business environment. We accomplish this goal by building a rigorous, interdisciplinary business curriculum on the foundation of a broad liberal arts education. The faculty designed the curriculum to stimulate students’ intellectual curiosity and to emphasize the skills and values necessary for them to continuously learn, adapt, and ultimately advance to positions of leadership.
Freeman offers various majors, minors, and specializations within the Bachelor of Science in Management program. From finance to marketing, the BSM curriculum for each major includes a focus on international business, preparing students to compete and lead in the complex global marketplace. Additional information can be found online at https://business.tulane.edu/freemandirectory/bsm-home.php.

Candidates for the Bachelor of Science in Management degree are required to complete a minimum of 122 credit hours with a minimum cumulative grade point average of 2.0 in their business courses and a 2.0 cumulative grade point average overall. The BSM degree consists of a minimum of 58 to 61 Freeman credit hours, depending on the major, and a minimum of 39 credit hours from the schools of Architecture, Liberal Arts, Public Health and Tropical Medicine, Science and Engineering, or Social Work. The latter 39 credits satisfy the non-business course requirements in the Newcomb-Tulane College core curriculum and the required non-business courses for BSM students. Students can take the remaining credits needed to reach the 122-credit minimum at the schools of Architecture, Business, Liberal Arts, Public Health and Tropical Medicine, Science and Engineering, or Social Work.

Graduate

Master of Accounting

The Tulane Master of Accounting (https://freeman.tulane.edu/programs/graduate/master-accounting) (MACCT) program prepares college graduates for successful careers in public accounting firms and major corporations. Through the comprehensive, 30 credit-hour program, students will work closely with a faculty advisor to design an individualized curriculum based on their career aspirations. Freeman undergraduates may apply for admission to the MACCT program in the junior year and earn both the BSM and MACCT (https://freeman.tulane.edu/programs/graduate/master-accounting) (MFIN) degrees concurrently.

Master of Business Administration

Freeman’s MBA students develop the financial and analytical skills essential for leadership in an increasingly interconnected world. Students may earn the Master of Business Administration (MBA) in one of four formats: Executive MBA (https://freeman.tulane.edu/programs/graduate/executive-mba-program), Fast-Track MBA (https://freeman.tulane.edu/programs/graduate/fast-track-mba), Full-Time MBA (https://freeman.tulane.edu/programs/graduate/full-time-mba), or Professional MBA (https://freeman.tulane.edu/programs/graduate/professional-mba).

Master of Business Analytics

Tulane’s Master of Business Analytics (https://freeman.tulane.edu/programs/graduate/master-business-analytics) (MANA) program provides recent college graduates with rigorous, quantitative training which allows graduates to translate vast amounts of complex data into manageable intelligence in order to guide business decisions. The program requires 36 credit hours which is completed over 10 or 18 months.

Master of Finance

The Master of Finance (https://freeman.tulane.edu/programs/graduate/master-finance) (MFIN) program is designed for recent college graduates who desire in-depth knowledge of finance without the broad-based managerial curriculum typical of MBA studies.

Freeman’s 34 credit-hour program can be completed in 11 months or extended to 18 months to allow for a summer internship.

Master of Global Management

To earn Tulane’s Master of Global Management (https://freeman.tulane.edu/programs/graduate/global-mba) (MGM) degree, students must complete six graduate-level modules (19 credit hours), which includes a global consulting project completed remotely over five months. Modules are taught by Tulane faculty, with the support of other top business schools from across the globe. These modules are held at five key business locations around the world. All modules are offered in an intensive, week-long executive format which is both convenient and accessible for current students and working professionals.

Master of Management

The Master of Management (https://freeman.tulane.edu/programs/graduate/master-management) (MMG) program provides recent college graduates with a broad knowledge of business fundamentals through this intensive 11-month, 36-credit hour program. Students have the option of pursuing a specialization in Real Estate or Hospitality.

Master of Management in Energy

The Master of Management in Energy (https://freeman.tulane.edu/programs/graduate/master-management-energy) (MME) program is for recent college graduates with quantitative backgrounds who are seeking specialized industry knowledge in preparation for fast-track careers in energy. Through this 11-month, 36 credit-hour, full-time program, students acquire the knowledge and skills needed to hit the ground running at energy companies, utilities, banks, financial services and consulting firms, trading organizations, ISOs, and regulatory agencies.

Doctor of Philosophy

The PhD program (https://freeman.tulane.edu/programs/phd) in business administration at the A. B. Freeman School of Business is a full-time, research-intensive program. The Doctor of Philosophy program is designed for students who want in-depth coverage in preparation for teaching at the college level. It is a four-year, 48 credit-hour program. Students must have earned an undergraduate degree prior to beginning the PhD program.

Accounting

At the undergraduate level, the Freeman School offers an accounting minor for students in the Bachelor of Science in Management (BSM) program.

At the graduate level, a one-year Master of Accounting (MACCT) program is offered to recent college graduates and a combined five-year program is available to current BSM students.

Programs

Undergraduate

Minors

• Accounting Minor (Freeman School of Business) (p. 63)

Graduate
Accounting Minor (Freeman School of Business)

At the undergraduate level, we offer an accounting minor in business for students who are enrolled as Business majors. The Freeman school limits BSM Students to two Business majors or to one Business major and one Business minor. Typically, a minor consists of three or four courses. If a student chooses to pursue a major and a minor within the Freeman School, the student cannot double count courses and must select how the courses will apply to each major/minor. BSM students must earn a grade point average of at least 2.0 in courses that count towards each major and minor.

Accounting, MAC

The Master of Accounting (MACCT) program prepares college graduates for successful careers in public accounting firms and major corporations. Through a comprehensive, industry-endorsed curriculum which requires 30 credit hours, students develop analytical skills and acquire the professional expertise to take on the challenges of a professional accounting career.

Freeman also offers a five-year joint Bachelor of Science in Management/Master of Accounting (BSM/MACCT) program. This course of study is designed to give students the knowledge, skills and preparation to immediately enter the accounting profession following graduation. In just five years, students graduate with two degrees, eligibility to sit for the CPA exam in the jurisdictions of their choice, and the confidence and expertise to become an accounting professional.

Requirements

Several accounting prerequisites must be completed prior to beginning the program:

- Financial Accounting [ACCN 2010 Financial Accounting (3 c.h.) or equivalent]
- Managerial or Cost Accounting [ACCN 3010 Managerial Accounting (3 c.h.) or equivalent]

Business Analytics

Employers in all industries urgently need to hire graduates who can translate vast amounts of complex data into manageable intelligence in order to guide business decisions. Tulane’s Master of Business Analytics (MANA) program provides students with the rigorous, quantitative training needed to break into this sought-after field.

Learning from distinguished faculty members (http://business.tulane.edu/faculty-research/faculty-listings-specialization.php?specialization=analytics), students will be grounded in the practical application of business analytics through a curriculum (https://freeman.tulane.edu/programs/graduate/master-business-analytics/curriculum) co-designed by industry partners. Students in this program will learn how to make informed, data-driven decisions, guided by the knowledge gleaned from big data, by analyzing real data sets and working with industry partners.
Business Analytics, MAN

Employers in all industries urgently need to hire graduates who can translate vast amounts of complex data into manageable intelligence in order to guide business decisions. Tulane’s Master of Business Analytics (MANA) program provides the rigorous, quantitative training students need to break into this sought-after field. This 36 credit-hour program can be completed in 11 months.

Learning from the Freeman School’s distinguished faculty members (http://business.tulane.edu/faculty-research/faculty-listings-specialization.php?specialization=analytics), students will be grounded in the practical application of business analytics through a curriculum (https://freeman.tulane.edu/programs/graduate/master-business-analytics/curriculum) co-designed by industry partners. Students will learn how to make informed, data-driven decisions, guided by the knowledge gleaned from big data, by analyzing real data sets and working with industry partners.

Requirements
The Master of Business Analytics (MANA) curriculum starts in July and consists of a summer boot camp, fall, and spring semesters.

Energy

At the undergraduate level, students in the Bachelor of Science in Management (BSM) program may earn the Energy certificate by completing at least nine semester credit hours of energy-related coursework.
Energy Certificate

With the approval of the Energy Institute Faculty Committee and the BSM Curriculum Committee, a student in the Bachelor of Science in Management program may receive an Energy Certificate by completing the Energy Specialization, that is, earning at least nine semester credit hours of energy-related coursework. In addition to satisfying the course requirements, each student who receives the Energy Specialization must be approved by faculty affiliated with the Tulane Energy Institute. The Tulane Energy Institute Faculty Committee must review and approve any waivers or deviations from these requirements.

Requirements

A total of nine (9) semester credit hours of approved coursework is required for the Energy Certificate.

1 Provided the class was not selected a required course in the section above.
2 These courses can also count as Finance electives.

Notes:

FINE 4160 Equity Analys/Burkenroad may be used in the Energy Specialization; however, the student is also required to serve as a financial analyst for an energy company in the Burkenroad Reports portfolio of companies. Burkenroad Reports cover approximately 25 small- to mid-cap energy companies.

FINE 4610 Darwin Fenner Mangd Fund may be used in the Energy Specialization; however, the student must focus on the energy sector. Participation in this course is by invitation only by the finance faculty and is based on academic performance.

A student may take ENRG 4100 Energy Mkts Econ & Policy, ENRG 4110 Energy Financial Modeling, or ENRG 4200 Energy Fund & Trading to count towards the additional courses required to reach nine (9) credits for the Energy Specialization. Application forms may be found at http://www.freeman.tulane.edu/energy/students.php#. Students should submit any requests for waivers or deviations from these requirements in writing, addressed to “Energy Institute Faculty,” c/o The Tulane Energy Institute, Goldring/Woldenberg Business Complex, 7 McAlister Drive, New Orleans, LA 70118.

Master of Management in Energy with UCASS

The International Master of Management in Energy (MME) program is a degree curriculum designed for students recruited by the University of Chinese Academy of Social Sciences (UCASS) in China. The program is designed for participants with quantitative backgrounds who are seeking careers in energy finance and trading. The participants will receive the MME degree from Tulane University.

The 18 month, 37-hour curriculum includes 18 credit hours of foundation courses taught by UCASS and 19 credit hours of course work delivered by Tulane faculty in Beijing, China. Students attend advanced energy trading in Houston and energy investment banking in New Orleans as part of their program curriculum.

Requirements

Students in the MME program must complete the 37-credit hour curriculum with a minimum of a 3.0 overall GPA. Students take 19 credit hours of courses offered by Tulane University and 18 credit hours of electives offered at their home institutions.

Entrepreneurial Management

By completing nine credits of entrepreneurship coursework and receiving approval, you can earn an Entrepreneurial Management notation on your transcript, a credential that signifies you have the skills to add value to innovative, early stage ventures.

As a student in the Entrepreneurial Management program, you’ll choose from courses in entrepreneurial finance, management and other related areas while having the opportunity to connect with successful entrepreneurs through Tulane’s respected Albert Lepage Center for Entrepreneurship and Innovation. With a specialization in entrepreneurship, you’ll acquire a unique skillset that will help you stand out from the crowd when you embark upon your career.

Finance

At the undergraduate level, finance is the most popular major within the Bachelor of Science in Management (BSM) program. A minor option also exists. Finance graduates go on to secure jobs they love — in corporate finance, commercial banking, financial intermediaries, or as analysts at investment banks or equity research firms.

At the graduate level, recent college graduates may pursue the Master of Finance (MFIN) program. For those interested in teaching or research, the Doctor of Philosophy (PhD) program concentrates on finance and financial accounting.

Business, PhD

The Freeman School’s PhD program leads to a Doctor of Philosophy in Business Administration degree with a concentration in finance and financial accounting.
Program Goal
The curriculum prepares students for a career as a finance or financial accounting faculty member at peer and aspirant schools. A Freeman School doctorate prepares students to conduct influential empirical research in the areas of finance and financial accounting.

Unique Features of the Program
The doctoral program has the following features:

- Niche in Freeman’s Areas of Excellence: The program is focused on training students to publish research and to teach in the areas of corporate finance, investments, and financial accounting. These are areas of research strength for Freeman faculty.
- Focus on Empirical Research: The finance, financial accounting, and economics faculty have a research strength in empirical research. The classes students take are designed to build on this strength.
- Competitive Student Support: Freeman offers very competitive financial support which is designed to attract high-quality students and to enhance their success.
- Teaching Experience: PhD students will teach classes independently as part of the program. This provides the opportunity to show teaching effectiveness to potential employers and to facilitate an easier transition to a faculty job.

Requirements

General Requirements
Students earning the Finance and Financial Accounting Concentration of the Freeman School’s Doctor of Philosophy in Business Administration Degree are required to take a minimum of 48 credits. These credits include required coursework in the first two years of the program, a third-year paper, some elective choices, and some independent research credits in subsequent years.

Econometrics Comprehensive Exam
In the summer after the first year, students will be required to take and pass the comprehensive exam in econometrics (to be administered and graded by the Department of Economics, with the passing grade determined by the tenure system Finance/Financial Accounting faculty).

First-Year Paper
In the summer after the first year, students will also be required to complete a replication of an empirical paper in finance or financial accounting. The paper assignment will be the principal requirement of a for-credit course and should be completed by the end of the summer term. Alternatively, students may work as a co-author with a tenure system faculty member, who along with a second tenure-track faculty member will certify that the student has met the requirements for the first-year paper in the joint work. Co-authoring arrangements will be based on voluntary agreements between students and faculty members, without any a priori guarantee or compulsion.

Major Area Comprehensive Exam
In the summer after the second year, students will be required to take and pass the comprehensive exam in finance.

Third-Year Paper
Starting in the summer after the second year (or earlier), students will be required to work on an independent research project in finance or financial accounting. This project should result in a paper and is to be completed under the supervision of an appropriate faculty committee approved by the program director. The student must complete and successfully present the paper to the finance and financial accounting faculty for advancement in the program. The final paper should be completed and presented by the end of the spring semester of the third year. The presentation will be considered an oral examination. Students successfully passing this examination will be admitted into candidacy.

Dissertation Proposal and Defense
After entering candidacy, students will be expected to actively pursue dissertation research.

Finance Seminars/Workshops
Students are required to attend Finance/Financial Accounting workshops and seminars unless they have a class conflict or an emergency. They are also encouraged to attend seminars in the economics department.

Scholarships, Assistantships, and Teaching Requirements
Students will be granted assistantships and scholarships for up to six years. The scholarship will be half of the financial assistance per year provided the student is making satisfactory progress. The assistantship will be an additional half of the financial assistance per year provided the student is making satisfactory progress and performing well in his or her assistantship duties.

Students will be assigned to either a research assistantship or a teaching assistantship for each semester during the first two and a half years in the program. They will rotate across the two types of assistantships, which will provide mentoring experiences for students on the teaching dimension and the research dimension. Each semester-long assistantship will entail 15 hours per week as a research or teaching assistant under the supervision of a faculty member. In the third year, students are expected to serve as a research or teaching assistant for one semester and to teach one course for the other semester. During the fourth and fifth year (and the sixth year if a student is still in the program), students will teach two courses per year for their assistantship.

Note: Students must successfully complete one teaching assistantship and attend the CELT class for graduate teaching assistants before they teach a class independently.

### Elective Details

Students who want to pursue a career in financial accounting but who lack a financial accounting background must take at least two graduate-level accounting courses, to be determined by the PhD faculty director. Students are encouraged to take these classes early in the program if possible.
Students who want to pursue a career in finance but who lack a finance background must take at least two graduate-level finance courses, to be determined by the PhD faculty director. Students are encouraged to take these classes early in the program if possible.

Doctoral electives are available in the Economics Department. For example, Advanced Price Theory III which covers general equilibrium models is offered in the fall semester every other year (even years).

Additional doctoral electives in business may be offered depending on staffing availability and support.

Executive Master of Finance at Houston, MFN

The Tulane Executive Master of Finance (MFIN) is an accelerated alternate-weekend program designed for experienced professionals to earn the MFIN degree in 14 months. The 32-credit hour, lockstep curriculum offers basic to advanced finance knowledge and skills that professionals need to rise to higher challenges, improve career opportunities, and drive corporate growth.

Pre-Program
In the months immediately before the MFIN curriculum begins, prep courses in accounting, spreadsheet modeling and quantitative skills help to align student skills with the requirements of the early courses in the curriculum. The subsequent orientation familiarizes new students with policies and procedures, and introduces faculty, classmates, and study teams.

Alternate Weekends
Classes are held on an alternate weekend structure, wherein students attend classes on Friday evenings and Saturdays. Each set of two courses, a module, is typically completed in 7 weeks.

Requirements
To earn the Master of Finance degree, students must complete the 32-credit hour, lockstep curriculum with a minimum GPA of 3.0.

Finance Major

The financial services industry demands enthusiastic, skilled professionals with a penchant for quantitative analysis. If this description sounds like you, you can gain the skills you need as a Freeman School finance major.

Finance graduates go on to secure jobs they love — in corporate finance, commercial banking, financial intermediation, or as analysts at investment banks or equity research firms. Many Freeman finance majors also choose to attend graduate school.

Finance Minor (Freeman School of Business)

At the undergraduate level, we offer a finance minor in business for students who are enrolled as Business majors. A finance minor can give the student a general understanding of how finance works in all areas of business. The Freeman school limits BSM Students to two Business majors or to one Business major and one Business minor. Typically, a minor consists of three or four courses. If a student chooses to pursue a major and a minor within the Freeman School, the student cannot double count courses and must select how the courses will apply to each major/minor. BSM students must earn a grade point average of at least 2.0 in courses that count towards each major and minor.

Total Credit Hours: 12

Finance, MFN

Developed in conjunction with industry professionals, the Tulane Master of Finance (MFN) program prepares college graduates for successful careers in finance. The rigorous and specialized MFN curriculum (http://freeman.tulane.edu/programs/graduate/master-finance/curriculum), which requires 34 credit hours, provides students with a solid foundation in the fundamentals of finance and the use of financial analysis tools. Students are taught by internationally-recognized faculty known for high-impact research published in the top academic journals.

Students will study a curriculum centered on providing real-world experiences and designed around an industry specialization (analytics, banking and financial services, or energy) so they can apply what they learn in a real setting as a financial analyst.

The program is a CFA Program Partner of the CFA Institute (https://www.cfainstitute.org/community/university/Pages/cfa_program_partners_overview.aspx) and the Freeman School is an AACSB-accredited institution. The MFN program is also STEM-designated.

The MFN program offers an 11-month option and an 18-month option, which allows time for a summer finance internship.

Requirements Master of Finance

The Master of Finance (https://freeman.tulane.edu/programs/graduate/master-finance) (MFN) curriculum was designed by a team of faculty members who teach in the program, and it reflects input from industry professionals about the types of skills they want potential employees to possess. The program focuses on developing strong fundamental analysis skills and uses practical applications to reinforce the technical expertise developed in the classroom. Students experience real-world finance through analyzing cases, completing projects, and building financial models. Communication skills are enhanced through a financial communications class, written projects, and presentations of student financial analysis. These courses provide hands-on experience and career-building skills. The MFN curriculum consists of 34 credit hours and begins in the summer. It can be completed in 11 months or spread out over 18 months to allow for a summer internship.

Master of Finance with Universidad Francisco Marroquín and UCASS, MFN

The International Master of Finance (MFIN) program is a curriculum designed for students recruited by partner institutions in Latin America and China who wish to pursue the Tulane MFIN degree. Tulane offers this program in cooperation with Universidad Francisco Marroquín in Guatemala and Panama and UCASS (University of Chinese Academy of Social Sciences) in China.

UFM students enroll in a 34-hour curriculum, which includes 16 credit hours of foundation courses taught by Universidad Francisco Marroquín and 18 credit hours of course work delivered by Tulane faculty in Panama City and Guatemala City.

UCASS students enroll in a 36-hour curriculum, which includes 18 credit hours of foundation courses taught by UCASS and 18 credit hours of course work delivered by Tulane faculty in Beijing, Shanghai and Shenzhen, China.

Both UFM and UCASS students participate in an on campus business module in New Orleans as part of their program curriculum.

Requirements

Students in the International MFIN program must complete the 34 or 36-credit hour curriculum with a minimum of a 3.0 overall GPA. Students take 16-18 credit hours at the partner institution and 18 credit hours from among the following Tulane courses as part of the double degree curriculum.

Global Management Overview

The Alliance Global MBA program offers qualified MBA, PMBA, and EMBA students and graduates from the Alliance partner schools access to a unique global strategy curriculum and experience. Participants may earn a second degree, the Tulane Master of Global Management (MGM), or a certificate, the Alliance Certificate in Global Management (CGM), offered by the Alliance partner schools jointly.

Programs

Graduate

- Alliance Global MBA with Baltic Management Institute, IESA, ITAM, Shanghai Jiao Tong University, University of the Andes, and Xiamen University, MGM (p. 72)

Alliance Global MBA with Baltic Management Institute, IESA, ITAM, Shanghai Jiao Tong University, University of the Andes, and Xiamen University, MGM

The Alliance Global MBA is a double degree program wherein participants receive an MBA degree from their home institution, plus a Master of Global Management (MGM) degree from Tulane University. Students and alumni of partner MBA, Executive MBA, and Professional MBA programs enroll in six modules focused on global strategy to complete the double degree requirements. Modules are held in five different countries with a cohort of classmates from Latin America, Asia, and the US. Each of the five modules are offered in a one-week, intensive executive format. The consulting project module continues over 5 months.

To be considered for admission, candidates must have a minimum of 6 years of work experience and must be alumni of or currently enrolled students at one of the Alliance universities.

The Alliance partners are top business schools from around the world including the Baltic Management Institute in Lithuania, IESA in Venezuela, ITAM in Mexico, Shanghai Jiao Tong University and Xiamen University in China, Tulane University in the United States, and the University of the Andes in Colombia.

Requirements

To earn the Tulane Master of Global Management degree students must complete 6 modules (19 semester credit hours), which includes a global consulting project, in addition to a minimum of 18 credits in MBA core coursework from their home institution.

Legal Studies in Business Minor

At the undergraduate level, Freeman offers a legal studies minor in business for students who are enrolled as Business majors. The legal studies minor gives a student a broad understanding of legal issues present in managerial decisions. The Freeman school limits BSM Students to two Business majors or to one Business major and one Business minor. Typically, a minor consists of three or four courses. If a student chooses to pursue a major and a minor within the Freeman School, the student cannot double count courses and must select how the courses will apply to each major/minor. BSM students must earn a grade point average of at least 2.0 in courses that count towards each major and minor.

Management Major

From entrepreneurial startups to established corporations, organizations rely on excellent management. With a management major from Freeman, you'll graduate with the knowledge and skills for making strategic decisions, managing people and bringing new technologies and innovations to market. In doing so, you'll be well prepared for work as a consultant, entrepreneur or manager.

Quantitative Reasoning

A hallmark of the Master of Management (MMG) program is strengthening quantitative reasoning skills. Whether choosing which projects to fund or achieving sustainability for a social enterprise, an ability to evaluate and apply quantitative data is critical.

Master of Management with Universidad Francisco Marroquin, MMG

The International Master of Management program is a dual degree curriculum designed for executives recruited by partner institutions in Latin America. The participants are those who wish to pursue the MMG from Tulane University and the MBA from Universidad Francisco Marroquin. This program is offered at two locations: Panama City, Panama and Guatemala City, Guatemala. The International MMG program enables students to expand cross-cultural leadership and teamwork skills and understand the dynamics of global markets while having the opportunity to study in other countries.

The 36-hour curriculum includes seventeen (17) credit hours of foundation courses taught by partner institutions and nineteen (19) credit hours of course work delivered by Tulane faculty in Panama and Guatemala. Students attend an on-campus business module in New Orleans as part of their program curriculum.

Requirements

Students in the International Master of Management with Universidad Francisco Marroquin (UFM) must complete the 36-hour curriculum with a minimum of a 3.0 overall GPA. Students take 17 credit hours at UFM and 19 credit hours from the following Tulane courses as part of the double degree curriculum.

Total Credit Hours: 80-82.5

1. Completion of both MATH 1150 Long Calculus I (3 c.h.) and MATH 1160 Long Calculus II (3 c.h.) or MATH 1210 Calculus I (4 c.h.) is required for students admitted Fall 2014 and later.
2. Beginning for students admitted Fall 2019.
3. If the course is not taken as a required course.

Marketing Minor

At the undergraduate level, we offer a marketing minor in business for students who are enrolled as Business majors. This minor can provide BSM students with an understanding of sales and marketing principles used in business and how they relate to other aspects of the business world. The Freeman school limits BSM Students to two Business majors or to one Business major and one Business minor. Typically, a minor consists of three or four courses. If a student chooses to pursue a major and a minor within the Freeman School, the student cannot double count courses and must select how the courses will apply to
BSM students must earn a grade point average of at least 2.0 in courses that count towards each major and minor.

### MBA

At Tulane, students may earn the Master of Business Administration (MBA) through one of four options: Executive MBA (https://freeman.tulane.edu/programs/graduate/executive-mba-program), Fast-Track MBA (https://freeman.tulane.edu/programs/graduate/fast-track-mba), Full-Time MBA (https://freeman.tulane.edu/programs/graduate/full-time-mba), or Professional MBA (https://freeman.tulane.edu/programs/graduate/professional-mba).

### Programs

#### Graduate

- International EMBA with University of Chile, Centrum, & ICESI (p. 77)
- Business, Executive MBA (p. 78)
- Business, Fast Track MBA (p. 79)
- Business, Full-Time MBA (p. 79)
- Business, Professional MBA (p. 80)

### International EMBA with University of Chile, Centrum, & ICESI

The International Executive MBA program is a dual degree curriculum designed for executives recruited by partner institutions in Latin America who wish to pursue an EMBA degree from Tulane University and their home institution. Programs are offered at University of Chile in Santiago, CENTRUM in Lima, Peru, and ICESI in Cali, Colombia. The International EMBA program enables students to expand cross-cultural leadership and teamwork skills and understand the dynamics of global markets while having the opportunity to study in other countries.

The 48-hour curriculum includes a minimum of twenty-three (23) credit hours of foundation courses taught by partner institutions and twenty-five (25) credit hours of course work delivered by Tulane faculty in host countries. Students attend an on-campus business module in New Orleans as part of their program curriculum.

#### Requirements

Students in the International MBA programs with University of Chile, Centrum, and ICESI must complete the 48-hour curriculum with a minimum of a 3.0 overall GPA. Students take a minimum of 23 credit hours at the partner institution and 25 credit hours from among the following Tulane courses as part of the double degree curriculum.

1. Taken in New Orleans by students from U. of Chile and ICESI as part of the EMBA International Intensive Week.
Business, Executive MBA

The Tulane Executive MBA (EMBA) is an accelerated alternate-weekend MBA program designed for experienced professionals to earn an MBA in 17 months. The 48-credit hour, lockstep curriculum offers the advanced business knowledge and management skills managers need to rise to higher challenges, improve career opportunities and drive corporate growth. All students earn a concentration in global strategy, and students may earn a second concentration in finance or management by choosing electives in those areas. The Executive MBA program is offered with an identical curriculum in New Orleans and in Houston with students taking combined classes for the intensive modules and international seminar.

Requirements

Pre-Program

In the months immediately before the EMBA (https://freeman.tulane.edu/programs/graduate/executive-mba-program) curriculum begins, prep courses in accounting and quantitative skills help to align student skills with the requirements of the early courses in the curriculum. The subsequent orientation and team building sessions will familiarize new students with policies and procedures, and introduce faculty, classmates, and study teams.

Intensive Weeks

The EMBA program begins in January with a week-long session, Intensive Week I. Students complete two courses, including exams, in this 8-day intensive. Here students are reintroduced to academic life, and begin to practice time-management, balancing work, home, and school responsibilities.

A multi-cultural intensive week is held on the New Orleans campus in January of the second year. During this Intensive Week II, students form new global study teams, collaborating and sharing a classroom with their EMBA counterparts from Tulane’s Houston program, along with EMBA participants from partner universities in Asia, Europe and Latin America.

Alternate Weekends

After Intensive Week I, classes then move to an alternate weekend structure, where students attend classes on Fridays and Saturdays of alternate weekends. Each set of two courses, a module, is typically completed in 7 weeks.

Electives

In the second half of the curriculum, elective courses are introduced. Students can earn finance or management concentrations by selecting the elective course tracks in those areas.

International Seminar

The international business seminar abroad brings a global depth to the program, giving students firsthand knowledge of global business and management practices and focuses on the strategic and operational issues of doing business abroad. Today’s markets and their economic interdependence demand that managers understand global strategic imperatives. This essential management knowledge makes the international business experience a critical and required component of the EMBA curriculum.

During the international seminar:

- Students explore the economic, technological, and political environments that influence global business initiatives and discover global business opportunities specific to the host country.
- Students develop a keen understanding of global business challenges and management strategies for meeting those challenges.
- Students gain firsthand knowledge of global business culture and practice through face-to-face interaction with international business leaders.
- Students learn the specific challenges these companies face and the strategies employed to meet these challenges.
- Students often work directly with these global companies to solve real business problems.

For the seminar, we handle all academic and logistical planning, including airfare, ground transportation, logistics, accommodations, group meals, and company visits. These seminar costs are included in the total program cost.

The seminar destination is usually determined eight to twelve months in advance. In past years, seminars have been held in Beijing, Cape Town, and Paris, each presenting students a distinct and culturally unique business environment.

Management
Business, Fast Track MBA

Prospective students who have both an undergraduate degree in a business-related field and post-graduate work experience may expedite their education with the one-year Fast-Track MBA at Freeman. Students can complete the 35 credit-hour MBA program in nine months from an internationally-recognized university and a business school held in high regard by leading employers. The Fast-Track MBA minimizes the time students spend away from their careers while obtaining an MBA degree from a prestigious program.

Requirements

Fast-Track MBA Curriculum

The Tulane Fast-Track MBA, a two-semester program, begins in August and includes:

- 35 credit hours consisting of a combination of core and elective courses, many with experiential components.
- Concentration and specialization opportunities to support career goals.

Fast-Track MBA Concentrations & Specializations

The Freeman School offers a variety of concentrations and specializations for fast-track MBA students. While no concentration or specialization is required, this option allows students to create a program of study that meets more specific academic and career goals. Students may declare up to two concentrations and/or specializations while earning their MBA.

Available concentrations and specializations include:

- Analytics
- Energy
- Entrepreneurial Hospitality
- Entrepreneurship
- Finance
- Real Estate
- Strategic Management and Innovation

Business, Full-Time MBA

Earn a Master of Business Administration (MBA) from an internationally-recognized university and business school held in high regard by leading employers throughout the world.

Through the full-time MBA program, students complete a 61 credit-hour curriculum over 21 months. Students acquire broad-based knowledge in all areas of business and develop financial and analytical skills essential for leaders in an increasingly interconnected world. With an extensive elective set, students can focus on specific areas of interest through concentrations and specializations. Opportunities to participate in experiential learning, a hallmark of Freeman's program, exist throughout the MBA curriculum. In a one-of-a-kind global leadership module, students gain a global perspective on business while earning a supporting concentration in international business. Freeman is the only business school in the nation that features program-based travel to Latin America, Europe, and Asia as part of its MBA curriculum.

Requirements

MBA Curriculum & Courses

The Tulane MBA degree, completed in two years over four semesters, includes:

- 20 credits of knowledge core - classes that teach business fundamentals including finance, management, operations, accounting, statistics, and marketing
• 11 credits of global leadership - classes that combine classroom instruction in New Orleans with international travel and hands-on consulting projects
• 30 credits of electives - classes that enable students to pursue specific career interests

Full-Time MBA Concentrations & Specializations
The Freeman School offers a variety of concentrations and specializations for full-time MBA students. While no concentration or specialization is required, this option allows students to create a program of study that meets more specific academic and career goals. Students may declare up to two concentrations and/or specializations while earning their MBA.

Available concentrations and specializations include:
• Analytics
• Energy
• Entrepreneurial Hospitality
• Entrepreneurship
• Finance
• International Business
• Real Estate
• Strategic Management and Innovation

Business, Professional MBA
The Tulane Professional MBA (PMBA) program is for rising professionals with at least two years of work experience seeking to increase their effectiveness and fast-track their careers in a flexible environment.

This three-year, part-time MBA program, comprised of 54 credit hours, is taught by faculty members from Freeman’s prestigious full-time MBA program. In small classes, MBA students acquire expertise through experience—how to analyze problems critically, how to set smart goals, and how to be both a team player and an effective manager.

Professional MBA Concentrations & Specializations

In addition to developing a common body of knowledge in practical business matters, students in the PMBA program are able to complete a concentration or specialization in select fields. While no concentration or specialization is required, these options provide students the opportunity to create a program that meets more specific academic and career goals. Students may declare up to two concentrations and/or specializations while earning their MBA.

Available concentrations and specializations include:

- Analytics
- Energy
- Entrepreneurial Hospitality
- Entrepreneurship
- Finance
- International Management/Business
- Real Estate
- Strategic Management and Innovation

Global MBA Options for PMBAs

Program Description

The Tulane Global MBA (GMBA) is a special graduate program focused on global business strategy. It offers current students and recent graduates of MBA programs access to a unique global strategy curriculum, an international network, and the option to receive a second degree: the Master of Global Management (MGM). It is available to MBA, Professional MBA, and Executive MBA students at Tulane and its affiliated business schools around the globe.

Credit Hours 12.5

To participate in the GMBA program, there are three options:

Option One – Electives

PMBA students can take one or more of the above six GMBA courses on a space-available basis to count as electives in the PMBA program.

Option Two – Concentration in International Management or Specialization in International Business

PMBA students can take four of the six GMBA courses to earn a concentration in International Management or take three of the six GMBA courses to earn a specialization in International Business.

Option Three – Degree – Master of Global Management (MGM)

PMBA students can take all six GMBA courses to earn the MGM degree in addition to the MBA degree.

Minor for Non-Business Students

Freeman’s Business Minor Summer Institute is an accelerated program that provides students with the fundamental business skills needed to shine in the corporate world. In just 10 weeks, you’ll earn up to 23.5 credits and acquire a business minor. In the process, you’ll gain the business knowledge, professionalism, connections and confidence to jump start your career.

Make connections with Freeman’s most distinguished faculty members. Diversify your academic portfolio. Open doors for employment opportunities along your career path.

The Business Minor Summer Institute will equip you with the additional knowledge and skills you need to start your career with confidence.

Tulane Law School is the nation's 12th oldest law school. From its founding in 1847, Tulane has always prided itself as a place of intense creativity and innovation in the study of law.

Its location in Louisiana, the country's sole civil-law jurisdiction, gives Tulane a distinctive understanding of the interaction of different legal systems and is the foundation for Tulane's world-renowned strength in international and comparative law. The unique exposure our students gain to both the common law of the Anglo-American tradition and the civil-law systems that dominate the rest of the globe is an increasingly powerful advantage in a world in which business, governance, and law practice are increasingly transnational.

The distinctively global perspective of Tulane Law is enlivened by a student body drawn from approximately 25 countries, by Tulane-led academic programs in a half-dozen countries abroad, and by an international faculty whose scholarly distinction ranges from advising on constitutional design in Iraq, Egypt, and Tunisia, and legal barriers to Russian gas pipelines to Europe, to intercultural negotiation of legal and political conflicts.

Yet, Tulane Law pairs that global perspective with a deep commitment to its own community and to equipping students with the practical skills and judgment they need to make a difference in their careers. The first law school in the nation to require pro bono service of all students, Tulane is a leader in preparing students for practice through service to others.

An early leader in clinical legal education, Tulane Law continues to offer five live-client clinics and now offers students a growing array of creative experiential-learning opportunities – including an intensive, one-week simulation of law practice through a Lawyering Skills Boot Camp, a Business Literacy Boot Camp for 1L students, and externships across the globe.

This distinctive approach to legal education, both global in outlook and grounded through professional skills training in service to our own community, prepares Tulane Law alumni for leadership in their careers wherever their passions take them.

Academic Policies

A full description of academic policies for all students in the School of Law can be found in the Law Student Handbook located at https://law.tulane.edu/policies. Students should review these policies thoroughly.

Degree Requirements

Juris Doctor

Candidates for the Juris Doctor degree must spend six full-time semesters in academic residence and complete 88 semester hours at the Law School with at least a 2.0 or C average. All candidates must successfully complete (i) the first-year curriculum, (ii) the Legal Profession course, (iii) the upper-class writing requirement, (iv) six credits of experiential learning, and (v) the 50-hour pro bono requirement.

Master of Laws

Candidates for the Master of Laws degree must complete 24 semester hours of coursework. Full-time students are expected to complete the LLM in two semesters (one academic year). LLM students must also write at least one paper in connection with a seminar in their field of interest or in connection with a directed research project.

LLM Students who received a JD or LLB (or equivalent) from a school located outside of the United States must enroll in a three-week summer orientation course, Introduction to US Law. International students must also complete and pass a legal research and writing course.

Doctor of Juridical Science

Each SJD student is assigned a faculty advisor upon admission. During the first semester of enrollment, SJD students take between 10 and 12 credits of coursework. Thereafter, most SJD students work full-time on the dissertation until it is completed. Tulane’s expectation is that the final SJD dissertation will be submitted within four years following initial enrollment in the program. The dissertation is to make an original and significant contribution to legal scholarship. Each candidate defends his or her dissertation in an oral examination before a committee of the Tulane Law School faculty, supplemented with other University faculty where appropriate.

Master of Jurisprudence

The Master of Jurisprudence program requires the completion of 30 credit hours, and typically takes two years to complete. This online, non-residential program was designed for human resource professionals and those seeking to transition into HR. Students will obtain additional expertise and familiarity with the extensive and complex body of federal and state regulations that govern most aspects of recruitment, hiring and retention of employees. The MJ-LEL program includes a one-time on-campus Education Immersion Weekend, in addition to its online course curriculum.

Juris Doctor

Our Curriculum

Tulane's first-year program emphasizes developing core analytic and legal writing skills. Faculty teach required first-year courses in classes of approximately 75 students to encourage close participation in the give-and-take of Socratic discussion. Using the case method, students dissect judicial decisions, respond to professors’ and classmates’
questions and carefully consider competing arguments. First-year legal research and writing professors also teach small-section courses, in which students develop the writing strategies and skills to succeed in practice.

After the first year, students are free to design their own curriculum from an array of electives. Tulane offers specialized courses in conjunction with our certificate programs, which approximately one-third of students complete. Many students also earn academic credit through in-depth training opportunities outside the classroom. Some choose to hone their writing and editing techniques by joining one of our eight legal journals. Others compete in trial and appellate moot court teams to train in oral and written advocacy. Students acquire real-world experience in our law clinics and labs. Our clinics, Trial Advocacy course and boot camp skills-training program teach the students key skills to succeed in their future practice.

Areas of Study

Tulane is proud to offer six distinctive programs in which students may earn a certificate of concentration: Civil Law, International and Comparative Law, European Legal Studies, Maritime Law, Environmental Law and Sports Law.

Beyond the certificate programs, Tulane holds core courses in alternative dispute resolution; constitutional law; consumer law; corporate and commercial law; civil law and procedure; criminal law and procedure; energy law; legal ethics and professionalism; family law; health law; labor and employment law; property and real estate law; administrative and regulatory law; state and local government procedure; tax law; and advanced legal writing. Faculty in both specialty and traditional areas of study are nationally and internationally recognized for their contributions to their fields. Upper-level students have the freedom to choose from our broad range of course offerings and can select any combination of classes.

Civil Law Program

Tulane Law’s capacity to teach the world’s two preeminent legal systems is one of its greatest strengths. Students who intend to practice in common law jurisdictions will find the same extensive course offerings at Tulane as at other national law schools. However, Tulane offers students who plan to practice internationally or in civil law jurisdictions an assortment of civil law classes not offered at most law schools. Students may take either common or civil law courses, and many take a mix of both to expand their legal knowledge and practice potential.

Requirements

1. General Degree Requirements for the JD Program

To be eligible for graduation, a JD student must have spent six full-time semesters in academic residence and complete 88 semester hours at the Law School with at least a 2.0 or C average. Transfer students must earn at least 59 of the 88 semester hours at Tulane and must have spent at least four full-time semesters in academic residence at Tulane to receive the JD degree. The credit-hour and residency requirements for students enrolled in approved joint degree programs are set forth in Section II.B of the Student Handbook (https://law.tulane.edu/policies). A full-time semester is one in which a student has registered for a minimum of 10 law credits and satisfactorily completed 9 credits. Attendance and accumulation of credits at a summer school in law will not reduce the number of full-time semesters for which a student must be in academic residence.

A student who has earned 88 credits toward the JD degree may not enroll in any more courses that will appear on the student’s transcript or average into the student’s GPA. Thus, a student may not register for any courses after 88 credits have been earned for the purpose of increasing his/her GPA. A student who has not yet earned 88 credits toward the JD degree may register in a semester or summer school session for up to the maximum number of credits allowed during that semester or session. In such case, all of the courses taken during that semester or session will be reflected on the student’s transcript and the grades earned in all of the courses averaged into the student’s GPA.

To receive any degree from the Law School, a student must receive the approval of the faculty and must have satisfied all financial obligations to the University. Students must also have completed all course requirements (i.e., paper, exam) in courses for which they have received an Incomplete as any “I” converts to “F” upon graduation.

To graduate, all JD students must successfully complete (pass) all of the courses in Tulane’s first year curriculum and the Legal Profession course. The Professional Responsibility Seminar does not substitute for Legal Profession. Transfer students who completed their first year at another law school must take and successfully complete (pass) any Tulane first year course for which they did not take and complete a comparable course in their first year. These required first year courses and the Legal Profession course must be taken for a letter grade and may not be taken on a Pass/D/Fail basis. If, however, a student transfers from an ABA-Accredited law school that requires a two-hour rather than three-hour Legal Profession course, successful completion of the two-hour course at the student’s home institution will satisfy the Legal Profession requirement under this Section. Further, all students must successfully complete one rigorous writing project after the first year of law school, the experiential learning requirement and the pro bono service requirement. See Section V.D.2-4 of the Student Handbook (https://law.tulane.edu/policies).

2. Upper-Class Writing Requirement

In order to promote the further development of effective legal writing skills, emphasize the intellectual rigor required for complex legal analysis, reasoning, and argumentation, and expose students to advanced legal scholarship, each JD student must, as a requirement for graduation, successfully complete one rigorous writing project after his or her first year of law school. Successful completion is defined as earning a grade of “C” or better in a course graded on the normal grading scale or earning a “Pass” in a course that is graded Pass/D/Fail. If a grade of “C” or better is not earned in a course graded on the normal grading scale, the project does not satisfy the upper class writing requirement, even if the student has exercised the Pass/D/Fail option in the course.

The upper class writing requirement may be satisfied by successfully completing an approved seminar, course, or a directed research project approved and supervised by a faculty member. Students may also fulfill the writing requirement through production under faculty supervision of a publishable Case Note or Comment in any of the law school's journals.

In all cases, to satisfy this requirement, the student must do all of the following:
becomes a member of the bar, a student's work should address the
each student a sense of responsibility to the community when each
Because the Tulane pro bono requirement is designed to instill in
distinguished pro bono volunteers.
induction into the Pro Bono Krewe, an honorary community/society of
Luncheon. Additionally, each Spring, qualifying 3Ls are eligible for
exemplary pro bono service are recognized annually at the Pro Bono
semester in which the work was completed. Students who contribute

the student's transcript. In order to receive credit towards the Pro Bono
and Public Interest Programs. All pro bono hours will be reflected on
reporting mechanism provided by the Office of Experiential Learning
choose to contribute any number of hours in excess of the minimum
satisfactorily completed.

3. Experiential Learning Requirement
Professional skills are necessary for effective and responsible
participation in the legal profession. Therefore, starting with students
in Fall 2016, JD candidates must successfully complete (pass) courses providing a minimum of six experiential learning credits. In order to qualify for experiential credits, an approved course must be designated as an "experiential course" as provided in Section V.I of the Student Handbook. The courses that fulfill this requirement are designated and separately listed in the registration materials.

4. Pro Bono Requirement
In addition to the academic requirements set forth above, in order to be eligible for the JD degree, each student must complete a total of 50 hours of approved uncompensated, supervised, law-related public interest service. It is recommended that the required 50 hours be performed at a single placement during one semester or during the summer when feasible. Students are also encouraged to do more than one pro bono placement once their first assigned placement is satisfactorily completed.

For students to receive credit towards the Pro Bono requirement, the student cannot receive remuneration or academic credit. Students may choose to contribute any number of hours in excess of the minimum required and should report all pro bono hours via the electronic time recording mechanism provided by the Office of Experiential Learning and Public Interest Programs. All pro bono hours will be reflected on the student's transcript. In order to receive credit towards the Pro Bono requirement, time records and the Supervisory Form must be received by the Office of Experiential Learning and Public Interest Programs on or before the relevant deadline, which typically occurs at the end of the semester in which the work was completed. Students who contribute exemplary pro bono service are recognized annually at the Pro Bono Luncheon. Additionally, each Spring, qualifying 3Ls are eligible for induction into the Pro Bono Krewe, an honorary community/society of distinguished pro bono volunteers.

Because the Tulane pro bono requirement is designed to instill in each student a sense of responsibility to the community when each becomes a member of the bar, a student's work should address the needs of underserved individuals or the community-at-large. Qualifying pro bono service covers a wide spectrum of activities and locales:

• Students may work under the supervision of private practitioners or firms where the work is performed at no cost on behalf of persons of limited means or otherwise underrepresented groups.
• The work may be performed in the public sector on behalf of a local, state or federal government entity (e.g., the district attorney's office, the indigent defender program, the Department of Justice, the courts, EPA).
• Work may be performed on behalf of public-interest non-profit organizations (excluding trade organizations) qualifying under IRS sections 501c (3) and (4), which endeavor to protect rights of underrepresented persons and groups.
• Students may contribute to a qualifying student-led organization serving public interest goals, such as SUFEO (Stand Up for Each Other), VITA (tax assistance for low-income individuals through Tulane Law School), or a community legal education program benefiting low-income individuals.

Qualifying pro bono work must be law-related. Qualifying tasks include client interviewing, document drafting and review, case planning and preparation, legal research and writing, drafting of legislation or regulations, formulation of legal policy, and participation in legal education programs in the public schools. Training time (up to 5 hours in a 50-hour placement) and limited administrative tasks, pertinent to the legal assignment, are viewed as law-related work counting toward the fulfillment of the requirement.

Students may opt for one of many placements advertised and coordinated through the Office of Experiential Learning and Public Interest Programs. Placements during the academic year are generally located in the New Orleans metro area. In addition to pre-approved placements scheduled through the Office of Experiential Learning, students may also submit an Independent Placement proposal for pro bono credit before beginning proposed volunteer work. Once determined to satisfy the law school requirement, the work may be performed in any location around the globe.

All JD students must complete the requisite number of pro bono hours on or before April 15 of the third year of law school. Completion of this requirement shall be demonstrated by appropriate submission of electronic time records reflecting the requisite minimum hours (or more) and the "services performed" in an approved placement. The Time Sheet is to be certified by the electronic signature of the student's supervising attorney. The Office must also receive the completed Pro Bono Supervisory Report form submitted by the supervising attorney and the Pro Bono Student Survey form. All forms are subject to the approval of the Associate Dean for Experiential Learning and Public Interest Programs.

Third year students must submit their time records and/or report on progress towards the requirement before they will be permitted to register for spring classes. Third-year students failing to complete the Pro Bono requirement by the April 15 deadline are subject to an administrative assessment of $75.00. In addition to payment of the fee, the late student must then complete the Pro Bono requirement by April 25 to be eligible for graduation at the end of the spring semester. As there is ample opportunity to complete the Pro Bono requirement any time between matriculation and April 15 of the third year, there will be no extension of this deadline, absent truly extraordinary circumstances approved by the Assistant Dean of Students. Students not completing the requirement within that period will have the opportunity to complete
it thereafter and then be eligible to graduate at the end of a subsequent term (provided all other graduation requirements are also met).

## JD Certificates

Tulane Law is proud to offer Juris Doctor (JD) candidates the opportunity to pursue a certificate of concentration in areas that draw upon our curricular strengths and the expertise of our faculty.

Students may elect to pursue a concentration in one of six certificate programs:

- Maritime Law
- Civil Law
- Environmental Law
- European Legal Studies
- International & Comparative Law
- Sports Law

## Requirements

There are currently six areas in which Tulane J.D. students can earn a certificate of concentration upon graduation if they complete a prescribed curriculum of upper-class courses. These areas are Civil Law, Environmental Law, European Legal Studies, International & Comparative Law, Maritime Law, and Sports Law. To avoid having students overspecialize in their J.D. studies, no student will be awarded more than one certificate of concentration. Students will register for a certificate program by submitting the JD Certificate Selection Form before their last semester (the form is located under the Forms link of the Academic Services page on the TLS Intranet (https://intranet.law.tulane.edu/default.aspx), or may be picked up from the Law School Academic Services Office). The specific requirements for each certificate are listed in the registration materials.

## Civil Law Certificate

Tulane has taught both common and civil law courses for more than 160 years and takes pride in fostering exceptional civil law scholarship both in Louisiana and across the globe. For students who plan to practice internationally or in civil law jurisdictions, Tulane offers an assortment of civil and comparative law courses unavailable at most law schools.

## Requirements

To earn the Civil Law Certificate, students must complete and pass a total of 15 credits in courses chosen from the following three basic groups: Fundamental Principles, Obligations, and Special Contracts; Persons and Family Property; and Property and Procedure. An additional 3 hours may be taken from these groups or from a list of civil law enrichment courses provided each year.

## Environmental Law Certificate

As a leader in environmental legal education since 1979, Tulane is one of a relatively small number of national law schools offering a certificate in Environmental Law for JD students. The certificate program is designed to prepare students for the legal problems they will confront in practice, whether on behalf of government agencies, industrial clients, private litigants, or public interest groups.

## Requirements

Students must complete two foundation courses chosen from Pollution Control, Natural Resources, and Administrative Law and nine credits of additional study from an array of environmental or energy law electives.

## European Legal Studies Certificate

Tulane’s commitment to opportunities for international and comparative study led to the development of a certificate of specialization in European Legal Studies. By enrolling in elective courses in European Union law and related areas, JD students can receive this certificate along with the Juris Doctor diploma.

## Requirements

The Certificate requires completion of 15 credit hours of electives, such as European Legal Systems, European Union: Business Law & European Union: Constitutional Law, International Business Transactions, Transnational Litigation, and Obligations.

## International and Comparative Law Certificate

Tulane’s capacity to teach the world’s two preeminent legal systems is one of our greatest strengths: The intermingling of legal systems in Tulane’s curriculum sparked the development of our International and Comparative Law Program, which prepares students to tackle complex legal issues at home and across the globe.

## Requirements

To earn a certificate in International and Comparative Law, students must complete and pass two foundation courses in comparative law, public international law, or transnational litigation and an additional nine credits of international and comparative law courses.

## Maritime Law Certificate

Tulane’s Admiralty Law Program offers more admiralty and maritime law courses than any other law school in the United States. The courses are taught by members of the full time faculty, distinguished visiting professors and judges from around the world, and experienced practitioners from the local admiralty bar.

## Requirements

Candidates may use a portion of their elective hours during the second and third years of law school to obtain the Certificate of Concentration in Maritime Law. Students must complete and pass Admiralty I and Admiralty II, plus additional full-semester admiralty courses, for a total of 12 credit hours.

## Sports Law Certificate

Tulane’s Sports Law Program enables students to understand and deal with the challenging legal and business problems regularly confronting people in the sports industry.
Requirements

Students must complete a prescribed curriculum of subjects critical to a comprehensive understanding of the field, including two sports law courses covering professional and amateur sports, Antitrust, Labor Law and Intellectual Property. Recommended courses include Income Tax, Business Enterprises and additional skills electives.

Master of Laws

For more than 75 years, Tulane Law’s Master of Laws (LLM) program has offered students from across the globe a unique and valuable opportunity to pursue advanced legal education.

Candidates for the Master of Laws (LLM) degree must complete 24 semester hours of coursework. Full-time students are expected to complete the LLM in two semesters (one academic year). LLM students must also write at least one paper in connection with a seminar in their field of interest or in connection with a directed research project.

LLM Students who received a JD or LLB (or equivalent) from a school located outside of the United States must enroll in a three-week summer orientation course, Introduction to US Law. International students must also complete and pass a legal research and writing course.

LLM candidates may pursue one of the following degree programs:

- General LLM
- LLM in Admiralty
- LLM in American Law
- LLM in Energy & Environment
- LLM in International & Comparative Law

Requirements

Coursework

Each LLM program requires completion of 24 semester hours of coursework. Most students complete the degree requirements during a single academic year. Although there is no thesis requirement, LLM students are required to write at least one paper in connection with a seminar in their field of interest or in connection with a directed research project.

For those students who received the JD or LLB (or equivalent) from a school located outside of the United States, enrollment in a three-week summer orientation course, Introduction to US Law, is mandatory. International students must also complete and pass a legal research and writing course.

Length of Study

All LLM programs are offered on a full-time and part-time basis. Full-time students are expected to complete the LLM in two semesters, or one academic year. Due to student visa requirements, many international students are required to enroll on a full-time basis. Attorneys in full-time practice in the New Orleans area have an exclusive option to enroll in the part-time program toward the LLM in Admiralty. All part-time LLM students must complete the program in four consecutive (non-summer) semesters.

Residency Requirements

All international LLM students begin the Introduction to US Law course in mid-July and proceed directly into the fall semester, which begins in late August and concludes at the beginning of December; fall-semester exams take place in December before the winter break. The spring semester begins in mid-January and concludes in late April, followed by spring-semester exams. Commencement ceremonies and conferral of degrees take place in May.

Summer Abroad Option

Tulane LLM students admitted to any of our full-time programs may begin the LLM program in the summer by attending one of Tulane’s summer abroad programs. Up to 3 of the 24 credits required for the LLM program may be completed in a Summer Abroad Program. Tuition is included in the academic year costs, leaving students who proceed immediately into the LLM program responsible only for their living expenses during the summer abroad program. International students must arrive in New Orleans by the start of the Introduction to US Law course in mid-July.

Admiralty, LMA

Tulane Law School is known internationally for its admiralty and maritime law program. The city of New Orleans, located near the mouth of the Mississippi River and the Gulf of Mexico, is a significant maritime center, and the lower Mississippi River is one of the largest ports in the world. New Orleans itself has the second largest admiralty bar in the United States. As a result of the natural focus on maritime issues in New Orleans, Tulane Law School has become an important center for the study of admiralty and maritime law.

Requirements

To qualify for the degree of LLM in Admiralty, the student must complete at least 13 of the 24 hours required for the degree in admiralty courses. A list of admiralty courses from the current and past two academic years may be found here (https://law.tulane.edu/course-descriptions?field_academic_area_value=1&field_category_value=All). Additional admiralty courses, including mini courses, are offered each year by visiting professors from throughout the world.

Students may enroll in this program on a full-time basis, completing it over one year. Attorneys practicing full-time in the New Orleans area may enroll on a part-time basis, completing the program over four consecutive semesters.

American Law, AML

This degree is intended primarily for international students who hold a first degree in law (JD or LLB or equivalent) from a non-U.S. law school and who wish to establish eligibility to take a state bar examination in the United States, where permitted by state bar authorities. The degree will give students from foreign jurisdictions a thorough understanding of the fundamental principles of U.S. law and the American legal system, as well as an appreciation for law practice in the United States.

The academic program is designed to enable students who earn the degree to satisfy the American law school course requirements of the Bar Admissions Committees of Louisiana and New York.
These two U.S. states are among those whose rules permit foreign lawyers to sit for their bar exam subject to, inter alia, completion of certain coursework in American Law. Students seeking to take the bar examinations in these two states, or any other state, must still meet all other eligibility requirements of the state in which they seek to take the bar examination, and are therefore urged to review those requirements at the earliest possible time.

Requirements
The American LLM requires, in addition to the general degree requirements, completion of at least 14 hours of coursework in the following subjects: Constitutional Law, Contracts, Criminal Law, Corporations or Business Enterprises, Evidence, Intellectual Property, Federal Civil Procedure, Taxation, Uniform Commercial Code, Torts, or (if planning to take the Louisiana bar exam) Louisiana Civil Procedure or Louisiana Obligations Law. Students seeking this degree are also required to take either Common Law Property or Civil Law Property. Remaining hours of coursework for the degree may be selected from any other courses open to graduate students at Tulane Law School.

Energy & Environment, MEL
Since 1979, Tulane Law School has taken a lead role in the advancement of environmental legal education and the training of well-prepared environmental lawyers. The LLM in Energy & Environment program was initiated in 1984 and has evolved over time from a program concentrating primarily on oil, gas, and energy issues, to one in which both energy and the environment hold center stage. Tulane seeks to graduate students who understand not only the theory, but also the practice and advocacy of environmental issues.

Tulane is an ideal location for the study of both environmental and energy law. Located in an area of the United States in which these two areas come into frequent conflict, students have the opportunity for exposure to areas of great natural beauty as well as to industrial complexes. Among the resources the Center for Environmental Law (https://law.tulane.edu/centers/environment) and the Center for Energy Law (https://law.tulane.edu/centers/energy) offer students are an outstanding and dedicated faculty, a student-run journal devoted to environmental issues, active and engaged student organizations, and an Institute for Water Resources Law & Policy.

Students in the LLM in Energy & Environment program include recent law graduates, experienced lawyers practicing in local law firms, government agencies and corporations, and attorneys from foreign countries with emerging environmental law systems. Recent years have seen LLM candidates from more than a dozen US states and from at least two dozen countries including Australia, Belgium, Bulgaria, Canada, China, Colombia, Costa Rica, Croatia, Germany, India, Kenya, Liberia, Mexico, New Zealand, Nigeria, Sudan, Taiwan, Thailand, and Turkey.

Requirements
The LLM in Energy & Environment requires, in addition to the general degree requirements for LLM candidates, completion of 16 credit hours of coursework in energy and environmental law courses. Students must enroll in the Graduate Seminar in Energy & Environment (https://law.tulane.edu/courses/energy-environment-llm-seminar) as well as two of the following three courses: Natural Resources (https://law.tulane.edu/courses/environmental-law-natural-resources), Pollution Control (https://law.tulane.edu/courses/environmental-law-pollution-control) and Energy Law, Regulation and Policy (https://law.tulane.edu/courses/energy-law-regulation-and-policy). A list of additional energy and environmental law electives from the current and past two academic years may be found here (https://law.tulane.edu/course-descriptions?field_academic_area_value=9). Not all of these courses are offered every year. In appropriate circumstances and with the concurrence of the faculty, other courses may be substituted.

General Law, LLM
The General LLM program allows students to design their own courses of study. General LLM students may enroll in virtually any course, with the general exception of clinical programs and Trial Advocacy. Some students pursue a broad range of courses, and others focus their choices more narrowly.

Many international students use the General LLM program as a way to gain exposure to a variety of areas of US law. They may choose to enroll in a combination of introductory and more advanced courses in a variety of areas. Because the typical first-year course are open to our graduate students, some choose to take such courses as Torts, Contracts, Criminal Law, Constitutional Law, and Property.

Requirements
Students find that the General LLM program lends itself to the development of ad hoc concentrations. For example:

- Students interested in intellectual property might take Intellectual Property, Copyright & Trademarks, Patent Law, one or more specialized courses in the area, a Directed Research project supervised by a faculty member who is an expert in the area, and even one or two unrelated courses.
- Students interested in international trade might take such courses as: International Trade, Finance & Banking; Financial Institutions; International Tax; International Business Transactions; and a variety of related courses.

Students may even find it possible to concentrate in two areas through the General LLM program. Because the General LLM program has no distribution requirements, students are free to make independent choices about the courses in which they enroll.

International and Comparative Law, LMI
The breadth and depth of the international and comparative law curriculum at Tulane Law School provide unparalleled opportunities for both US and foreign lawyers to receive a basic foundation in international legal practice. Tulane’s program offers courses in public international law, private international law including international business transactions, and comparative law. Tulane’s unique perspective in a historically mixed common law-civil law jurisdiction results in an unusually rich experience for students.

Tulane offers its students a strong faculty with significant international experience and training, an outstanding library, and the resources of the Eason-Weinmann Center for Comparative Law, which brings together
outstanding legal scholars from various countries and legal systems for seminars and lectures.

Requirements

All candidates for the LLM in International & Comparative Law must fulfill the General Degree Requirements. In conjunction with those requirements, candidates for this specialty degree are required to enroll in a total of 13 semester hours of international and comparative law courses. All students who have not already taken a public international law course are required to take Public International Law (https://law.tulane.edu/courses/public-international-law). A list of international and comparative law electives from the current and past two academic years may be found here (https://law.tulane.edu/course-descriptions?field_academic_area_value=14).

Each student’s course of study is at least somewhat dependent upon the background and previous legal education of the individual student and on the student’s objectives. For example, US students interested in European legal studies would need exposure to European legal sources and European Community Law. A student from Germany, however, might focus her studies somewhat differently, seeking exposure to common law subjects and to other areas which she would be unlikely to have studied previously. Each student designs his or her course of study with the assistance of a faculty advisor.

Master of Jurisprudence

The Master of Jurisprudence (M.J.) is a post-baccalaureate degree that allows non-legal professionals to enhance career related skills through the study of the laws, governmental policy, and the legal system. This degree is designed to infuse career based knowledge with legal education. MJ-LEL students are chosen from among this nation’s incumbent and aspiring human resource professionals, as well as those in management and leadership roles who have personnel responsibilities. The Labor and Employment Law MJ program from Tulane is delivered in a hybrid format through which students complete most of their coursework online and only come to campus once for a multi-day Education Immersion Weekend. The program is ideally suited for accomplished, busy working professionals from companies across the nation.

Human resource professionals — whether they carry formal HR titles or are business managers with personnel responsibilities — serve as the crucial link between an organization’s management and its employees. A formal, academic credential in Labor and Employment Law offers the knowledge needed to comply with the myriad regulations established by state and federal law and teaches the skills required to successfully navigate everything from creating personnel manuals, to engaging in collective bargaining, to administering benefits, to handling sensitive employee relations issues.

The program requires the completion of 30 credit hours, and typically takes two years to complete. This online, non-residential program was designed for human resource professionals and those seeking to transition into HR. Students will obtain additional expertise and familiarity with the extensive and complex body of federal and state regulations that govern most aspects of recruitment, hiring and retention of employees. The MJ-LEL program includes a one-time on-campus Education Immersion Weekend, in addition to its online course curriculum.

Requirements

The Online MJ-LEL program requires students to complete a total of 30 credits, allowing students to graduate in as few as two years. The curriculum is organized as follows:

Semester 1

Students must take both of these required courses:

- Introduction to Employment Discrimination Law Principles and Strategies (3 credits)
- Legal Analysis I (2 credits)

Semester 2

Students must take both of these required courses:

- Introduction to Labor Law Principles and Strategies (3 credits)
- Legal Analysis II (2 credits)

Semester 3

Students must take both of these required courses:

- IP Issues in the Employment Context (3 credits)
- Employment Law (2 credits)

Semester 4

Students must take this required course, plus one 2-credit elective:

- Employee Medical Leaves of Absence (3 credits)

Semester 5

Students must take this required course, plus one 2-credit elective:

- Social Media Issues in the Workplace (3 credits)

Semester 6

Students must take this required course, plus one 2-credit elective:

- Capstone (3 credits)

Elective Courses

- Investigating, Mediating and Arbitrating Employee Complaints (2 credits)
- Privacy in the Workplace (2 credits)
- Developing and Managing the Workforce: Recruitment, Retention, Termination, Retirement and Turnover (2 credits)
- Sex and Gender Issues in the Workplace (2 credits)
- Negotiating Skills (2 credits)

Doctor of Juridical Science

The Doctor of Juridical Science (SJD) program is a small and selective program for students who wish to make an original, significant contribution to legal scholarship.

Eligibility
An applicant for the SJD program must hold an LL.M. degree or its equivalent either from Tulane University or other accredited American universities or foreign universities that the Law School Graduate Affairs Committee (the faculty admissions committee) has ascertained have good standing among the higher education community in the home country.

Admission

Admission to the SJD candidacy requires the endorsement of the Law School Graduate Affairs Committee. The Committee will examine, along with the student’s performance at the LL.M. or the equivalent qualifying degree level, the strength of the candidate’s proposal to determine whether the individual has the capacity for advanced legal research and for outstanding scholarship. Strong interest in and support of the proposal and the candidacy of the applicant by a Tulane Law School faculty member who is willing to serve as a supervisor will be an important factor in the Committee’s decision. Applicants are strongly encouraged to make every effort to find a supervisor, but they are discouraged from circulating mass letters to the faculty of the Law School.

Course of Study

Each SJD student is assigned a faculty advisor upon admission. During the first semester of enrollment, SJD students take between 10 and 12 credits of coursework. Thereafter, most SJD students work full-time on the dissertation until it is completed. Tulane’s expectation is that the final SJD dissertation will be submitted within four years following initial enrollment in the program. The dissertation is to make an original and significant contribution to legal scholarship. Each candidate defends his or her dissertation in an oral examination before a committee of the Tulane Law School faculty, supplemented with other University faculty where appropriate.

Requirements

In order to obtain the SJD degree, a student must fulfill the following requirements, depending on the student’s particular circumstances upon admission to the program:

a. Students admitted to the SJD program with a Tulane Law School Master's degree awarded five or fewer years prior to admission to the SJD program are exempt from any further coursework requirement.

b. Students admitted to the SJD program with a Tulane Master's degree awarded more than five years prior to admission to the SJD program must complete an additional 10 hours of coursework with a grade of B or better in each course.

c. Students admitted to the SJD program with a Master's degree from a law school in the United States (other than Tulane) or from an approved foreign law school in all cases must complete an additional 12 hours of coursework at Tulane.

(2) All SJD students, including those exempt from some or all further coursework requirements, must be in residence for at least one year but are only required to pay full-time tuition and fees for at least one semester, typically the first semester of enrollment in the program. Students wishing to enroll in courses outside that one semester may do so on the understanding that they must pay tuition for each additional course they take.

(3) Every SJD candidate must write and defend successfully a dissertation which makes an original and significant contribution to legal scholarship. Unless specifically exempted from this requirement for very exceptional circumstances by the Graduate Programs Committee, the dissertation must be complete and the defense must take place within four years from the initial enrollment in the SJD program.

(4) Dissertation Committee: The committee will consist of three members one of whom is the supervisor who acts as the chair of the committee. The chair of the committee shall be a tenured member of the faculty. At least one of the other two members of the committee shall be a tenured or tenure-track member of Tulane Law School. Under normal circumstances, all members of the committee will be Tulane Law School faculty members, but there may be cases where it becomes necessary to ask a faculty member from another department of the University or a faculty member at another institution, foreign or domestic, to join the committee. The outside member must, however, be a tenured member of the faculty at his or her home institution. The selection of the dissertation committee will be decided by the student in consultation with the chair of the committee. The committee shall be empaneled at the earliest time after the candidate has taken residence but no later than the end of the first semester of residence. As soon as the committee has been established, the chair of the committee shall notify the Graduate Affairs Committee of the names of the members of the committee. The Graduate Affairs Committee shall transmit the information to the Assistant Dean for Academic Services for record keeping.

(5) Lengths of dissertations vary depending on the subject matter and the writing style of the authors, but as a general matter the length of a dissertation ranges between 200-300 pages, including appendix and bibliography. After the dissertation committee has approved the dissertation, the supervisor shall set up a meeting at which the candidate shall present an oral defense of the doctoral thesis. The dissertation committee will conduct the oral examination. The meeting for the oral defense is open to members of the Law School faculty.

(6) Clinical programs, the Trial Advocacy course and externships are not open to SJD students.
The School of Liberal Arts at Tulane encompasses the arts, humanities, and social sciences through sixteen departments and nineteen interdisciplinary programs as well as the Carroll Gallery, Shakespeare Festival, Summer Lyric Theatre, and the Middle American Research Institute. Our small classes allow students to be active learners directly engaged with their courses. With a broad array of majors, minors, Master’s and Ph.D. programs, students can choose to specialize in a wide number of fields, developing long-standing interests or discovering new passions. Engaged in the liberal arts, students not only learn key skills of writing, analysis, and communication but come to understand better both themselves and the world beyond.

Academic Policies
A full description of academic policies for all students in Newcomb-Tulane College (p. 18) can be found in the college’s section of this catalog. Students should review these policies thoroughly.

Degree Requirements
Undergraduate
Newcomb-Tulane College Requirements
General Education Curriculum

Newcomb-Tulane College General Education Curriculum
Newcomb-Tulane College Core Curriculum allows students to explore a wide-range of disciplines and embodies the mission and values of the College by allowing students to have flexibility in their core curriculum courses while exploring a full-range of courses.

The core curriculum—which is composed of a minimum of 30 credits—is divided into two parts: proficiency requirements and a distribution of knowledge. To ensure that students experience the breadth of knowledge at the collegiate level, AP and IB courses can be used to satisfy proficiency requirements only in Formal Reasoning and Foreign Language.

Courses will be designated as satisfying the distribution requirements according to the content and methodology rather than the departmental affiliation of the course.

The new core curriculum general education requirements will go into effect with the entering class of 2018.

Courses proposed to satisfy core requirements will be ratified by the Newcomb-Tulane Curriculum Committee and the Newcomb-Tulane College faculty.

Proficiency Requirements
Writing Skills (2 courses and 6 credits)
Tulane undergraduates should be able to communicate effectively. Students completing this requirement will produce coherent texts that combine analysis, argument, and research.

- Tier 1: Freshman writing (ENGL 1010 or ENGL 1011) unless the student is exempt. Students receiving exemption from ENGL 1010/1011 are required to take an approved writing class during their freshman year. At least 1/3rd of the grade based upon writing (excluding in class exams), but no revision required.
- Tier 2: One additional writing course at the 2000 level or above taken from an approved list. At least 1/3rd of the grade based upon writing (excluding in class exams), to include revision and re-evaluation by the instructor.

Note: creative writing courses cannot be used to satisfy the writing proficiency requirement.

Formal Reasoning (1 course and 3 credits)
One course in mathematics or symbolic logic (PHIL 1210)

Foreign Language (0-3 courses)
The foreign language proficiency is achieved by a passing grade at the 2030 level, or an AP score of 4 or 5, or a Higher-Level IB score of a 5 or higher, or an SAT II achievement test of 640 or higher, or a passing grade in a Tulane administered proficiency test. This requirement is waived for students in B.S.E. programs.

Distribution Areas (A course can satisfy only one of the distribution areas.)
Mathematics and the Natural Sciences (2 courses including 1 lab science course and 7 credits)
Tulane undergraduates should understand the methods of scientific inquiry. The mathematics and natural sciences requirement will equip students to understand and assess scientific issues that affect the world today. (Those completing the B.F.A. degree need only complete 1 course with lab.)

Social and Behavioral Sciences (2 courses and 6 credits)
Tulane undergraduates should think critically about human cultures, societies, and behaviors. This requirement acquaints students with the methods of research and inquiry in the social science disciplines.

Textual and Historical Perspectives (2 courses and 6 credits)
Tulane undergraduates should evaluate literary, philosophical, and historical texts. This area of the curriculum introduces exposes students to the methods used to examine and interpret fundamental issues of human experience.
Aesthetics and the Creative Arts (3 credits)

Tulane undergraduate students should be able to understand and appreciate the creative process and various forms of artistic expression.

**Additional Core Requirements**

**The First Year Seminar**

This requirement can be satisfied by a Tulane Interdisciplinary Seminar (TIDES) course or an Honors Colloquium course (COLQ 1010 or 1020).

**Public Service**

All students will complete public service that is satisfied by service learning courses, an approved internship, or research experience. These courses can also be used to satisfy other areas of general education. The nature of the requirement is to be determined by the NTC faculty. Currently this is a two-tiered experience.

**Race and Inclusion**

One course that focuses on race and inclusion in the United States, to be completed by end of the sophomore year. Courses that fulfill this requirement will focus at least 60% of their content on race and inclusion in the United States. These courses may also be used to satisfy other general education curriculum requirements.

**Global Perspectives**

One course that focuses on a global-international context from a perspective outside of the U.S., with at least 60% of content with stated objectives to develop historical, cultural, and societal knowledge of an area beyond the U.S. This requirement should be completed by end of the sophomore year. These courses can also be used to satisfy other areas of general education.

**School of Liberal Arts Requirements**

A liberal arts education helps students develop and improve necessary skills of critical thought and analysis, while learning to express complex analytical arguments clearly, concisely, and coherently in written prose and oral presentations. The essence of a liberal arts education is that it combines both breadth and depth. Breadth ensures that students have a basic exposure to the diverse subjects of the humanities, social sciences, and sciences, with their distinctive ways of defining issues, thinking about problems, assessing evidence and reaching conclusions. Breadth also ensures that students have some understanding of the fine arts and how such works might be understood. Depth requires students to gain a deeper understanding of a discipline and its modes of thought, with all the subtleties and complexities that this entails, while learning how difficult it is to attain anything approaching true mastery.

Students completing a BA or BFA degree in the School of Liberal Arts must complete a minimum of 120 credits, 66 of which are above the 1000-level with a cumulative grade point average of at least 2.000 and a major GPA of at least 2.000. Students completing majors in Anthropology, Economics, or Linguistics may elect to complete a BS or BA degree. For information on the BS requirements, consult the relevant departmental section of this catalog.

School of Liberal Arts Writing Intensive Requirement

Writing is the most important skill that a student masters in a liberal arts education. In order to assure that all of its students have achieved a high level of writing proficiency by the time they graduate, the School of Liberal Arts requires them to complete the Tier II writing requirement of the general core curriculum via a writing-intensive course within the School. Students may satisfy this requirement by taking a course that is designated “writing-intensive” in the course schedule. If a course is to satisfy the writing-intensive requirement, it must require

1. At least 5000 words (20 pages) of expository, analytical writing, whether distributed among a number of short assignments or fewer, longer papers. Creative and technical writing assignments do not qualify for inclusion. Only School of Liberal Arts courses may be used to fulfill this requirement. Creative writing theses may count as long as they include an analytic component of at least 20 pages.
2. Sole authorship by an individual student.
3. Regular, detailed evaluation by the instructor of the written work for organization, content, grammar and technical presentation.
4. Revision of at least one project totaling 2500 words, with re-evaluation by the instructor.

Students are encouraged, but not required, to satisfy the writing-intensive requirement with a course in their major. Students may satisfy this requirement with a capstone course in the major, as long as the writing requirements of the course achieve the defined minimum for a writing-intensive course, or with a senior honors thesis. The S/U option may not be used to satisfy the writing requirement.

**Majors**

A major field of study gives each student the opportunity to explore a single area of inquiry in depth and to gain the self-confidence derived from mastery of a subject. Majors must be selected no later than the beginning of a student’s fourth semester of college study. Students may elect to complete more than one major. They must complete all courses for each major. Three courses can overlap with additional majors. At least half of the course work required for majors must be completed at Tulane University.

**Coordinate Majors**

Some coordinate major programs also are available. These coordinate majors require a primary undergraduate major. Some coordinate majors restrict the choice of primary major. Students must complete all courses for each major. Three courses can overlap in the two majors.

**Self-Designed Majors**

A student with a 3.5 cumulative grade-point average may construct a major program by grouping courses from different academic departments. Such self-designed majors must include at least 10 courses, more than half of which must be at the 3000-level or above; no more than two courses below the 3000-level may be taken in any one department. A self-designed major cannot be a student’s primary major. A student wishing approval of a self-designed major must prepare a proposal including the title of the major, proposed list of courses, rationale, and appropriate departmental approval. This proposal must be submitted for review to the school’s Committee on Undergraduate Academic Requirements before the end of the student’s sixth semester. As these proposals often require revision and resubmission, they should be submitted earlier than this deadline. Detailed instructions for
Academic Departments

- Department of Anthropology (p. 94)
- Department of Art (p. 99)
- Department of Classical Studies (p. 102)
- Department of Communication (p. 104)
- Department of Economics (p. 104)
- Department of English (p. 107)
- Department of French and Italian (p. 110)
- Department of Germanic and Slavic Studies (p. 116)
- Department of History (p. 118)
- Department of Jewish Studies (p. 121)
- Department of Music (p. 122)
- Department of Philosophy (p. 128)
- Department of Political Science (p. 134)
- Department of Sociology (p. 138)
- Department of Spanish and Portuguese (p. 138)
- Department of Theatre and Dance (p. 142)
- Interdisciplinary Programs and Coordinate Majors (p. 148)

Minors

The College of Liberal Arts allow students to complete one or two minors. The minor is optional and designed to give structure to the study of a secondary field of interest chosen by the student. Students who elect to complete the requirements for a minor must earn a grade point average of at least 2.000 in courses counting toward that minor. No courses counting toward the student’s first minor will count toward the student’s second minor. Individual departments may have additional restrictions on major-minor overlap. Students should consult the department listings for additional information.

Internships

Some departments offer internships for academic credit as part of the major. An internship combines a relevant academic component with experiential learning. The academic component may, for example, consist of a term paper, a number of short papers, or discussions of a number of books. Internships ordinarily are open only to those students completing a major in the department that will award the credit. Students participating in internships register for Internship Studies (course numbers 4560, 4570) within the appropriate department after having made initial arrangements with a professor who will sponsor the internship. Registration is completed in the academic department sponsoring the internship. A student may not take a salaried position outside the university while earning credit for an internship, except where such an arrangement is required by the cooperating organization for insurance purposes. If a student must take a salaried position for this reason, a letter to this effect from the cooperating organization must be filed with the chair of the sponsoring department prior to the end of the add period.

Only one internship may be completed each semester. Students may earn a maximum of six credits toward the degree from internships. The sponsoring professor will assign a grade for the internship at the close of the semester after evaluating its academic and experiential aspects.

Internships offered through departments in the School of Liberal Arts are open only to juniors and seniors in good standing.

An alternative internship experience is offered to students through the office of the Dean of Newcomb-Tulane College. This internship was created to accommodate students seeking internships with organizations requiring that interns earn credit for their experience. INTR 1990 carries one credit, which will apply toward the degree but will not apply toward any proficiency, distribution, major, or minor requirement. Only one credit of INTR 1990 may be applied toward the degree. INTR 1990 must be taken on a satisfactory/unsatisfactory (S/U) basis and will count as one of the ten allowable (S/U) credits. Students who have completed fewer than 30 credits may not register for this course. Students desiring to register for INTR 1990 must receive approval from the associate dean of Newcomb-Tulane College.

The School of Liberal Arts Academic Awards

The Ann Royal Arthur Memorial Award in German was established in 1987 in memory of Professor Ann Arthur of the Department of Germanic and Slavic Languages. It is awarded to a student who has demonstrated a commitment to the study of German.

The Sidney Beyer Prize for Excellence in American History was established in 1976 by Joel Beyer in memory of his father and is awarded to a superior student of American History.

The Purvis E. Boyette Memorial Freshman Essay Award was established in 1988 in memory of Professor Purvis E. Boyette of the Department of English.

The Brazilian-American Cultural Institute Award for Excellence in Portuguese is given by the Portuguese government, on recommendation of the faculty, to a student who has excelled in the study of Portuguese.

The Victoria R. Bricker Award for Excellence in Linguistics

The Almir Bruneti Award for Excellence in Luso-Brazilian Studies

The Glendy Burke Medal was established in 1848 by Glendy Burke. This award was for excellence in the field of speech.

The Louis Bush Medal

The Classical Studies Prize awarded for excellence in Latin, Greek, or the study of ancient history, culture or archaeology.

The Premio Clavileno is awarded for excellence in Spanish.

The Alice Raymond Scudder Coates Scholarship in Art is awarded to either a student in any area of concentration in art.

The Rusty Collier Memorial Award in Studio Art is awarded to an art major.

The Charles Till Davis Prize for Excellence in European History.

The Charles E. Dunbar, Jr. Fellowships in Political Science are awarded each year to two political science majors who have demonstrated academic excellence and an interest in public affairs.
The France-Amerique Award is given for exceptional achievement in the study of the French language.

The French Government Prize is given by the French government, on recommendation of the faculty, to a student who has excelled in the study of French.

The Juanita Gonzalez Prize in Ceramics is awarded to the outstanding undergraduate ceramist in the Department of Art.

The Bodo Gotzkowsky Award for Research and Travel in Germany.

The Shirley Weil Greengus Memorial Award for Achievement in Political Science is awarded to the senior majoring in political science who has the highest scholastic average in the major.

The Henry Award recognizes outstanding achievement in the study of French.

The Jose Hernandez Award in Spanish-American Literature, established in 1985, is awarded to a graduating senior for excellence in Hispanic studies. The student must have excelled in at least one advanced course in Spanish-American literature.

The Anne Butler Hess Award, established in 1964 by Mrs. Robert D. Hess in memory of her daughter, is awarded to the graduating senior who has shown the greatest proficiency in philosophy.

The Italian Government Prize is given by the Italian government, on recommendation of the faculty, to a student who has excelled in the study of Italian.

The Japan-Tulane Friendship Award was established in 1987 by Jack Aron and Japan Air Lines for the best dissertation, thesis, or research paper on Japanese affairs.

The Arden King Award for Excellence in Anthropology.

The Elizabeth H. and Frederick "Fritz" Krauss Award is awarded to the outstanding undergraduate student majoring in Jewish Studies.

The T. Krumpelmann Award for Achievement in German.

The Ephraim Lisitzky Memorial Award, established in 1989, is granted to a student of exceptional achievement in the study of Hebrew language and Jewish history, culture, and religion.

The Dan W. Mullin Memorial Award, established in 1970 by Mr. Albert Salzer, is awarded for excellence in technical theater production.

The Charles H. Murphy Prize in Political Economy was established by the Murphy Institute to recognize an outstanding student majoring in political economy.

The Ashton Phelps Award in Communication Studies is given on recommendation of the faculty for excellence in communication studies.

The Pi Sigma Alpha Award, established in 1963 by the Tulane chapter of Pi Sigma Alpha, is awarded annually to the senior who has done most to stimulate scholarship and intelligent interest in the subject of government.

The Russian Book Prize is presented by the Department of Germanic and Slavic Languages for excellence in Russian.

The Henry Stern Prize in Art History is awarded to the student who produces the best paper in the field of art history.

The Elizabeth Watts Award for Excellence in Physical Anthropology.

The Robert Wauchope Award for Excellence in Anthropology.

Anthropology, BA

Anthropology, the study of humanity in its broadest sense, was called by Alfred Kroeber “the most humanistic of the sciences and the most scientific of the humanities.” At Tulane anthropology is divided into four subdisciplines: anthropological archaeology, biological anthropology, cultural anthropology, and linguistic anthropology. These subdisciplines are not silos, however; anthropologists at Tulane often straddle the boundaries of the subdisciplines, and we collaborate with scholars from other departments and schools. Anthropology is perhaps the world’s oldest cross-disciplinary discipline, and at Tulane anthropologists study topics as seemingly disparate as two million year-old fossil hominins, the impact of Islam in West Africa, Mayan hieroglyphic texts, political movements in Mexico, and variations in spoken New Orleans English.

The roots of Tulane’s Department of Anthropology date back to 1924, when the Department of Middle American Research (now the Middle American Research Institute [MARI]) was founded. Anthropology courses were first offered at Tulane during the 1938-1939 academic year, and by 1947, anthropologists were employed in the Department of Sociology and Anthropology until a separate Department of Anthropology was established in 1967. From the early 1990s to today the Department more than doubled in size, and in 2010, the Department and MARI moved into newly-renovated space in Dinwiddie Hall.

Tulane’s Department of Anthropology’s traditional strength has been in the archaeology, cultural anthropology, and linguistics of Mesoamerica (that region from Central Mexico to Nicaragua). However, today the teaching and research interests of our faculty have a much more global reach: North America, especially the southeastern United States and the Gulf South, South America and other parts of Central America, the Caribbean, Africa, East, South and Southeast Asia, and Europe.

Requirements

Thirty credit hours of approved coursework are required for a major in anthropology. Typically, this requirement can be satisfied by ten anthropology courses. Within the 30 credit hours (or 10 courses) required for a major in anthropology, students must fulfill the following requirements for a degree in anthropology.
Anthropology, the study of humanity in its broadest sense, was called by Alfred Kroeber “the most humanistic of the sciences and the most scientific of the humanities.” At Tulane anthropology is divided into four subdisciplines: anthropological archaeology, biological anthropology, cultural anthropology, and linguistic anthropology. These subdisciplines are not silos, however, anthropologists at Tulane often straddle the boundaries of the subdisciplines, and we collaborate with scholars from other departments and schools. Anthropology is perhaps the world’s oldest cross-disciplinary discipline, and at Tulane anthropologists study topics as seemingly disparate as two million year-old fossil hominins, the impact of Islam in West Africa, Mayan hieroglyphic texts, political movements in Mexico, and variations in spoken New Orleans English.

The roots of Tulane’s Department of Anthropology date back to 1924, when the Department of Middle American Research Institute (now the Middle American Research Institute [MARI]) was founded. Anthropology courses were first offered at Tulane during the 1938-1939 academic year, and by 1947, anthropologists were employed in the Department of Sociology and Anthropology until a separate Department of Anthropology was established in 1967. From the early 1990s to today the Department more than doubled in size, and in 2010, the Department and MARI moved into newly-renovated space in Dinwiddie Hall.

Tulane’s Department of Anthropology’s traditional strength has been in the archaeology, cultural anthropology, and linguistics of Mesoamerica (that region from Central Mexico to Nicaragua). However, today the teaching and research interests of our faculty have a much more global reach: North America, especially the southeastern United States and the Gulf South, South America and other parts of Central America, the Caribbean, Africa, East, South and Southeast Asia, and Europe.

Requirements

Thirty credit hours of approved coursework are required for a major in anthropology. Typically, this requirement can be satisfied by ten anthropology courses. Within the 30 credit hours (or 10 courses) required for a major in anthropology, students must fulfill the following requirements for a degree in anthropology:

- At least one course above the 1000 level in each of the four major subdivisions of anthropology: biological anthropology, cultural anthropology, linguistic anthropology, and archaeology.
- Five or six elective courses in anthropology.

Please note the following:

- Students may take no more than two 1000-level courses (six credit hours) as electives to be counted towards the 30 credit hours required for degrees in anthropology.
- Newcomb-Tulane College requires all undergraduates to take a writing practicum or a writing-intensive course to fulfill its undergraduate writing requirement. Some anthropology courses may have writing-intensive sections, but the additional credit hours earned through writing-intensive courses are not counted towards the 30 hours necessary for degrees in anthropology.

Given the diversity of topics of interest to anthropologists, anthropology majors are encouraged to take a variety of courses in the different anthropological subfields and in related disciplines, and they are encouraged to integrate anthropology coursework within pre-professional programs of study. Upon consultation with anthropology faculty advisors, students may count up to six credits (two courses) as electives towards the anthropology major from approved courses in other departments.

The subject matter of anthropology is such that most of the curriculum is not an explicitly ordered sequence. Few anthropology courses at Tulane have specific prerequisites (exceptions, mostly linguistic courses, are noted in the catalog), and anthropology majors are expected to choose their courses from among all those with numbers less than 7000. The 6000-level courses are specifically designed for undergraduate as well as graduate students, and all junior and senior majors should choose freely from among these offerings. Anthropology majors are eligible to apply for the 4+1 program in anthropology, based on consultation with advisors and other mentors. Students in the 4+1 program can earn B.A. or B.S. degrees in anthropology within four years, and M.A. degrees in anthropology based on an additional year of graduate coursework in anthropology taken during their fourth and fifth years. Requirements for this program are outlined on the departmental web site and in the anthropology majors handbook.

The anthropology department administers the Kenneth J. Opat Fund in Anthropology, reserved for the support of undergraduate research in anthropology. Students majoring in anthropology are encouraged to seek further information from their anthropology advisors about the use of this research fund.

Anthropology, BS

Anthropology, the study of humanity in its broadest sense, was called by Alfred Kroeber “the most humanistic of the sciences and the most scientific of the humanities.” At Tulane anthropology is divided into four subdisciplines: anthropological archaeology, biological anthropology, cultural anthropology, and linguistic anthropology. These subdisciplines are not silos, however, anthropologists at Tulane often straddle the boundaries of the subdisciplines, and we collaborate with scholars from other departments and schools. Anthropology is perhaps the world’s oldest cross-disciplinary discipline, and at Tulane anthropologists study topics as seemingly disparate as two million year-old fossil hominins, the impact of Islam in West Africa, Mayan hieroglyphic texts, political movements in Mexico, and variations in spoken New Orleans English.

The roots of Tulane’s Department of Anthropology date back to 1924, when the Department of Middle American Research Institute (now the Middle American Research Institute [MARI]) was founded. Anthropology courses were first offered at Tulane during the 1938-1939 academic year, and by 1947, anthropologists were employed in the Department of Sociology and Anthropology until a separate Department of Anthropology was established in 1967. From the early 1990s to today the Department more than doubled in size, and in 2010, the Department and MARI moved into newly-renovated space in Dinwiddie Hall.

Tulane’s Department of Anthropology’s traditional strength has been in the archaeology, cultural anthropology, and linguistics of Mesoamerica (that region from Central Mexico to Nicaragua). However, today the teaching and research interests of our faculty have a much more global reach: North America, especially the southeastern United States and the Gulf South, South America and other parts of Central America, the Caribbean, Africa, East, South and Southeast Asia, and Europe.

The anthropology department administers the Kenneth J. Opat Fund in Anthropology, reserved for the support of undergraduate research in anthropology. Students majoring in anthropology are encouraged to seek further information from their anthropology advisors about the use of this research fund.

**Anthropology, MA**

Anthropology, the study of humanity in its broadest sense, was called by Alfred Kroeber "the most humanistic of the sciences and the most scientific of the humanities." At Tulane anthropology is divided into four subdisciplines: anthropological archaeology, biological anthropology, cultural anthropology, and linguistic anthropology. These subdisciplines are not silos, however; anthropologists at Tulane often straddle the boundaries of the subdisciplines, and we collaborate with scholars from other departments and schools. Anthropology is perhaps the world’s oldest cross-disciplinary discipline, and at Tulane anthropologists study topics as seemingly disparate as two million year-old fossil hominins, the impact of Islam in West Africa, Mayan hieroglyphic texts, political movements in Mexico, and variations in spoken New Orleans English.

The roots of Tulane’s Department of Anthropology date back to 1924, when the Department of Middle American Research (now the Middle American Research Institute [MARI]) was founded. Anthropology courses were first offered at Tulane during the 1938-1939 academic year, and by 1947, anthropologists were employed in the Department of Sociology and Anthropology until a separate Department of Anthropology was established in 1967. From the early 1990s to today the Department more than doubled in size, and in 2010, the Department and MARI moved into newly-renovated space in Dinwiddie Hall.

Tulane’s Department of Anthropology’s traditional strength has been in the archaeology, cultural anthropology, and linguistics of Mesoamerica (that region from Central Mexico to Nicaragua). However, today the teaching and research interests of our faculty have a much more global reach: North America, especially the southeastern United States and the Gulf South, South America and other parts of Central America, the Caribbean, Africa, East, South and Southeast Asia, and Europe.

We offer an M.A. degree to our current Tulane undergraduate students who by taking an extra two 6000-level anthropology classes over and above what they need to earn their B.A./B.S. degrees, are able to spend a fifth year taking 24 hours of anthropology classes to earn their M.A. degrees.

We also offer an M.A. degree to our Ph.D. students midway through their training for the doctorate.

**Requirements MA Degrees for both "4+1" and PhD Students**

**General Requirements for MA Degrees**

The requirements for MA degrees in anthropology for students in the PhD program are the following.

- The completion of 30 hours of graduate coursework, or 24 hours for students doing an MA thesis. Note that for “4+1” students, 6 hours (2 courses) are taken in the student’s fourth year, before admittance to the MA program. A minimum of 6 credit hours must be taken at the 7000 level. Students must earn grades of “B-” or better to receive graduate credit, but the department generally expects Ph.D. students to earn grades of “B” or better in graduate coursework.
- Certification in one foreign language by the Department (see Foreign Language Requirement in PhD Requirements section). This must be completed before the student is admitted to the program or as soon thereafter as is possible.
- Demonstration of competence in basic statistics (see Quantitative Methods Requirement in PhD Requirements section).

Comprehensive exams and advancement to PhD candidacy are not requirements for MA degrees in anthropology.

A student intending to defend a thesis must inform the Chair of the Department, in writing, of that intention during the first 2 weeks of the semester in which he or she wishes the defense to be scheduled. When the thesis has been completed to the satisfaction of the Chair of the thesis committee and approval of the committee has been given, the director will then recommend it to the faculty for acceptance and the candidate will be advised to complete the preparation of the manuscript in accordance with the rules of the Graduate School as set forth in the Graduate Handbook.

Students wishing to receive an MA degree with a thesis at May graduation must submit complete copies of their theses to their committee members by February 1. Students wishing to receive an MA degree at August graduation must submit complete copies of their theses to their committee members by the last Monday in March. To receive an MA degree in December, students must submit complete copies of their theses to all committee members by November 1.

**Anthropology, PhD**

Anthropology, the study of humanity in its broadest sense, was called by Alfred Kroeber “the most humanistic of the sciences and the most scientific of the humanities.” At Tulane anthropology is divided into four subdisciplines: anthropological archaeology, biological anthropology, cultural anthropology, and linguistic anthropology. These subdisciplines are not silos, however; anthropologists at Tulane often
straddle the boundaries of the subdisciplines, and we collaborate with scholars from other departments and schools. Anthropology is perhaps the world's oldest cross-disciplinary discipline, and at Tulane anthropologists study topics as seemingly disparate as two million year-old fossil hominins, the impact of Islam in West Africa, Mayan hieroglyphic texts, political movements in Mexico, and variations in spoken New Orleans English.

The roots of Tulane's Department of Anthropology date back to 1924, when the Department of Middle American Research (now the Middle American Research Institute [MARI]) was founded. Anthropology courses were first offered at Tulane during the 1938-1939 academic year, and by 1947, anthropologists were employed in the Department of Sociology and Anthropology until a separate Department of Anthropology was established in 1967. From the early 1990s to today the Department more than doubled in size, and in 2010, the Department and MARI moved into newly-renovated space in Dinwiddie Hall.

Tulane's Department of Anthropology's traditional strength has been in the archaeology, cultural anthropology, and linguistics of Mesoamerica (that region from Central Mexico to Nicaragua). However, today the teaching and research interests of our faculty have a much more global reach: North America, especially the southeastern United States and the Gulf South, South America and other parts of Central America, the Caribbean, Africa, East, South and Southeast Asia, and Europe.

The Ph.D. program at Tulane is highly competitive; all students admitted to the program receive a stipend and a tuition waiver for four years. If you are interested in applying to the program, please contact the faculty member(s) with whom you are interested in working.

Requirements

General Requirements for Graduate Degrees

Requirements for the degree of Doctor of Philosophy and for the degree of Master of Arts are specified by the graduate faculty and the Department. The regulations discussed on this website include both sets of requirements. In general, the steps for admission to PhD candidacy are:

1. Certification of foreign language competence
2. Completion of coursework
3. Passing of comprehensive examinations
4. Demonstration of competence in basic statistics
5. Passing the oral examination
6. Acceptance of the prospectus for the dissertation

Foreign Language Requirement

The foreign language requirements for the master's and doctoral degrees may be fulfilled in the following ways:

1. By coursework: The student must present evidence of attaining an average of B or better grades in a one-year foreign language course taken at the junior or equivalent level (i.e. 5th and 6th undergraduate semesters) within 3 years of the date of first registration in the Anthropology Graduate Program or by earning a B or better in the summer language courses sponsored by the Tulane Graduate Programs Office.

2. By examination: Departmental language examinations are administered once each semester, on a preannounced date. Students wishing to take a Departmental examination must submit a written request to the Department Chair by a specific date.

3. By native fluency: Native speakers of languages other than English may petition the Anthropology Department to count either English or their native language as satisfying a foreign language requirement.

Doctoral (PhD) Program in Anthropology

The Department enrolls qualified students in programs of study specializing in archaeology, biological anthropology, cultural anthropology, and linguistic anthropology. The formal requirements for the PhD in anthropology are:

1. Completion of a minimum of 48 hours of coursework beyond the BA degree, at least 15 hours of which must be at the 700 level. Students specializing in biological anthropology must complete 54 hours of coursework beyond the BA degree; those specializing in archaeology must complete 60 hours of coursework beyond the BA degree.

2. Demonstration of competence in basic statistics. This requirement must be completed before advancement to candidacy for the PhD or before the award of the MA degree. It is expected that most students would fulfill this requirement before the end of their coursework residency. The statistics requirement may be satisfied by three options:
   a. Satisfactory completion of a college-level course in basic statistics no more than 5 years prior to entering the Graduate Program in Anthropology at Tulane. A student wishing to pursue this option should petition the Department, providing bulletin copy and other relevant documentation in support of the petition.
   b. Satisfactory completion for graduate credit of a course in statistical methods at Tulane. A grade of B or better in ANTH 6010 Quantitative Methods in ANTH (3 c.h.) or a preapproved course in another department satisfies this option. A student wishing to use other graduate level courses should petition the Department, in advance, for approval.
   c. A student seeking certification in basic statistics without proper course credit may petition the Department for special examination in basic statistics. The Department administers such an examination only once during each academic year, pertaining to all petitions approved during the preceding 12 months.

3. Within biological anthropology, students specializing in skeletal biology or human paleontology must take a course in (ANAT 6090 Gross Anatomy/Embryology (11 c.h.)) and one additional course in a related field outside the Anthropology Department, in addition to 48 hours of coursework within the Department. Students specializing in Primatology must take 3 courses in related field outside the Department in addition to 45 hours of coursework in the Department. Related fields include Ecology and Evolutionary Biology, Biomedical Engineering, Cell and Molecular Biology, Earth and Environmental Sciences, Epidemiology, Biostatistics, and Psychology. The selection of courses taken outside of the Department is to be agreed upon by the student and his or her faculty advisor.
4. Certification in one foreign language (see Foreign Language Requirement, above). It is desirable that the foreign language requirement be met within 18 months of matriculation. The requirement must be fulfilled before admission to candidacy.

5. An 8-hour written comprehensive examination will be administered over two consecutive days before the conclusion of the 6th semester of residency. This comprehensive examination will cover the subdiscipline of Anthropology in which the student is specializing.

6. An oral examination of one hour will be required of students in archaeology, linguistic anthropology, and cultural anthropology. These oral exams must be taken before the end of the 6th semester of residency. In archaeology and cultural anthropology, the oral exam will cover the anthropology of the geographic area of the student’s specialization. In linguistics, the exam will cover the topic of the student’s specialization. Biological anthropology does not require an oral exam. Students must petition the Department Chair in writing for the formation of an oral examination committee. Usually, the student’s advisor will chair his/her committee. Other members will be chosen by the Department.

7. Submission of a brief prospectus outlining the subject of the dissertation and approval of this by the Department and the Graduate Council. Guidelines for the preparation of prospectuses are available in the Department office. Students must petition the Department Chair in writing for the formation of a dissertation prospectus committee. Usually, the student’s advisor will chair his/her committee. Other members will be chosen by the Department. Normally, prospectus committees will be formed only after the student has passed the comprehensive and oral examinations. However, grant application deadlines may make it necessary for some students to define their dissertation research ahead of schedule. In such instances, a student may petition the Department Chair in writing for the formation of an advisory committee. Usually, the student’s advisor will chair his/her advisory committee. The Department will select other members. This advisory committee will automatically become the student’s dissertation prospectus committee upon successful completion of the oral and comprehensive examinations.

   a. All students must give each and every member of the Departmental faculty, including Dr. Canuto at MARI, a copy of the prospectus at least 3 business days before the prospectus defense is to take place. For example, if the defense is scheduled for Tuesday at 3:00pm, then copies are due in the hands of the faculty before 3:00pm the preceding Tuesday.

8. Completion of approximately 1 year of approved anthropological field work. Data collected are usually used in the doctoral dissertation.

9. Presentation of a dissertation on the approved topic and an oral defense of the dissertation before the faculty of the Department. Students who intend to defend a dissertation must inform the Chair of the Department, in writing, of that intention during the first 2 weeks of the semester in which they wish the defense to be scheduled. Students wishing to receive the PhD degree at May graduation must have a complete copy of their dissertation in the hands of their committee members by February 1. Students wishing to receive the PhD degree in December must give their committee members their complete dissertations by October 15.

10. All doctoral students are expected to receive some teaching experience. This teaching will be, to the extent feasible, monitored by the Department, primarily through its Graduate Student Teaching Oversight Committee (GSTOC). Eligibility for teaching ANTH 1010 Intro to Biological Anth (3 c.h.) (Human Origins) includes qualification in the areas of archaeology and biological anthropology. Qualification in archaeology can be accomplished by satisfactory completion of ANTH 6250 Old World Paleolithic Pre (3 c.h.) or ANTH 7150 Prehistory of Africa (3 c.h.) or by passing the archaeology comprehensive examination. Qualification in biological anthropology can be accomplished by satisfactory completion of ANTH 6500 Human Evolution (3 c.h.) or by passing the biological anthropology comprehensive exam. Eligibility for teaching ANTH 1020 Cultural Anthropology (3 c.h.) includes qualification in cultural anthropology, which can be accomplished by satisfactory completion of a theory course from List A, below, and an ethnography course from List B, or by passing the cultural anthropology comprehensive examination. Eligibility for teaching ANTH 1030 Languages of the World (3 c.h.) can be accomplished by satisfactory completion of ANTH 7290 Linguistic Analysis (3 c.h.) or equivalent and one of the following: ANTH 7310 Prehistory of Languages (3 c.h.), ANTH 7590 Syntactic Theory (3 c.h.), ANTH 7630 Linguistic Phonetics (3 c.h.), ANTH 7640 Phonology (3 c.h.), ANTH 7650 Morphology (3 c.h.) or by passing the comprehensive exam in linguistic anthropology.

**Transfer Credit Approval**

Students may request transfer credit for graduate coursework done at other institutions, as indicated in the Graduate Programs Handbook. Because approval of the request for the transfer of courses has the effect of decreasing the course residency requirement, students receiving such approval will decrease by one or two semesters their ability for financial aid.

Art History Major
The major in art history is designed to impart an understanding of the historical development and context of art, primarily in western Europe and the Americas. Majors are required to take 33 credits in art history, which must include a two-semester survey (ARHS 1010 Art Survey I: Prehist-Mid Ages (3 c.h.) and ARHS 1020 Art Sur II: Renaiss to Present (3 c.h.)) and a minimum of nine advanced classes or 27 credits distributed among three broad areas. At least two courses should be in two of the following fields and at least one course in the other:
1. Ancient, Pre-Columbian, African, Asian (before 1300), Medieval;
2. Renaissance, Baroque, colonial Latin American, and Asian (early modern period);
3. American, African Diaspora, and modern/contemporary art.

At least three other courses must be seminars at the 6000-level. Students are also encouraged to take a foundations course in studio art for the insight provided into the making of works of art. A limited number of internships in local museums are available for academic credit. A one-credit writing practicum that satisfies the college intensive writing requirement is available with art history courses at the 6000-level.

Five of the nine advanced level courses should come from the following fields (two each from two fields and one from the third field):
• Ancient, Pre-Columbian, African, Asian (before 1300), and Medieval
• Renaissance, Baroque, colonial Latin America, and Asian (early modern period)
• American, African Diaspora, and modern/contemporary art

Art History Minor
A minor in the History of Art consists of at least 21 credit hours of art history, in which ARHS 1010 Art Survey I: Prehist-Mid Ages (3 c.h.) and ARHS 1020 Art Sur II: Renaiss to Present (3 c.h.) are required.

Art History, MA
Since 1960, the MA program in the history of art at Tulane has prepared outstanding students for careers in research, teaching, and museum work. About a third of our graduates have continued toward their doctoral degrees either at Tulane or elsewhere. The program welcomes students who have majored in fields other than art history. The MA stipend is about $18,100 a year.

Curriculum:
The MA requires 24 credit hours (8 courses) at the 6000 and 7000 levels, plus a thesis.

According to their specialization, students will fall into one of the following two tracks: ancient and early modern studies (track I), or modern and contemporary studies (track II). Distribution requirements call for students in both tracks to take one class in each of the following three areas: 1) Classical, Byzantine, Medieval, Pre-Columbian; 2) Renaissance, Baroque, Colonial Latin American; 3) American; Modern Europe, US, Caribbean, and Latin America. Students in each track are also expected to take three classes with the regular faculty teaching in the area that most closely relates to their own research, and who will most likely be in their thesis committees.
The 7000-level courses are for graduate students only and are sometimes taught in tandem with 3000-level courses for undergraduates. The 6000-level courses are taken by juniors and seniors as well as graduate students. Both include seminars on special topics. With the permission of their graduate advisor, students may take two courses outside the art history program.
Language Requirement:
Reading proficiency in at least one foreign language relevant to the student’s work is required. French, German, Italian, Latin, and Spanish are especially useful for research in art history. The requirement is satisfied by passing a reading exam. Because reading knowledge of foreign languages is necessary for research in most art-historical fields, students are urged to take their language exam early.

Thesis:
An important step in the MA program is the writing of a thesis and its subsequent oral defense. The thesis may be the outgrowth of a seminar paper, or it may focus on a special interest of the student insofar as it falls within the area of competency of the faculty. Students work with their graduate advisors in selecting the appropriate topic, establishing the thesis committee, and preparing the thesis prospectus by the end of the first year. A member of the thesis committee may be from another department or school in the university. While moderate in length and considerably more limited in scope than a doctoral dissertation, the MA thesis should demonstrate the student’s ability to do research of publishable quality. The defense usually takes place a month before the end of the last semester.

Art Studio, MFA
Through the School of Liberal Arts, the Newcomb Art Department offers the MFA degree in an intensive, two-year residency program that emphasizes close interaction with faculty and peers, with concentrations in Ceramics, Digital Art, Glass, Painting, Photography, Printmaking, and Sculpture. Degree requirements focus on studio work but include two graduate level courses in the history of art, and four MFA seminar courses that rotate in theme: Pedagogy, Professionalism, Studio Practice and Art Theory.

Requirements
Sample Schedule, Master of Fine Arts, Studio Art
The Master of Fine Arts requires sixty (60) hours of graduate level courses. Two courses in Art History (6 hours) at the graduate level are required, as is attendance in the MFA seminar courses (12 hours) that are held each semester and rotate in theme (Pedagogy, Professionalism, Studio Practice, Art Theory). Of the remaining courses (42 hours) 30 hours must be in studio disciplines and are designed to meet individual needs and interests. These are mainly of a “workshop” or “atelier” nature. During the second year, all students are required to present a thesis exhibition in the Carroll Gallery and complete a written thesis contextualizing the exhibition. In addition, an oral examination is conducted by an appointed faculty thesis committee.

Applications for Fall 2019 admission to the MFA program (https://liberalarts.tulane.edu/departments/art/academics/graduate/studio-art) will be accepted in all disciplines.

Frequently Asked Questions (https://liberalarts.tulane.edu/departments/art/academics/graduate/studio-art/faqs) about applying to the MFA Program.

Studio Art Minor
A minor in studio art consists of five studio courses: Drawing 1050, one 1000 level two-dimensional course (painting, digital art, drawing, photography, printmaking), one 1000 three-dimensional course (sculpture, ceramics, glass), and two additional courses: one course at the 2000 level and one course at the 3000 level. Also required are two art history courses, 1020 recommended. The minor requires a total of 21 credit hours. No more than half of required studio and art history courses can be transferred into the minor program.

Requirements
A minor in studio art consists of eight courses:

The major in studio art incorporates a comprehensive exploration into studio art practices. Students learn formally, conceptually, and technically how to create art through the various disciplines of ceramic, drawing, digital art, glass, painting, photography, printmaking, and sculpture.

**Requirements**

For a B.A. in studio art, the student must fulfill all general requirements as described in the liberal arts curriculum including those of the Newcomb-Tulane College core. In addition, the B.A. in studio art program requires a total of 39 credits. The B.A. requires 30 credits in studio courses including three courses from among six in the Foundations of Art Series. (If two foundation courses are taken in two-dimensional areas, the third must be taken in a three-dimensional area or vice versa.) Also required are ARST 1050 Beginning Drawing I (3 c.h.) and ARST 1060 Beginning Drawing II (3 c.h.). Of the remaining studio credits, at least 9 credits must be in one area beyond the 1000-level, three credits may be in any other studio area above the 1000-level, and the remaining three must be fulfilled with the department capstone course (ARST 4930 Senior Capstone Studio (3 c.h.) offered only in the spring semester). Also 3 courses in art history are required, these include ARHS 1010 Art Survey I: Prehist-Mid Ages (3 c.h.) and ARHS 1020 Art Survey II: Renaiss to Present (3 c.h.), and one additional course which must be a contemporary or modern art history course, 19th century - present. No more than half of required studio and art history courses can be transferred into the degree program.

**Studio Art, BFA**

The Bachelor of Fine Arts provides a pre-professional introduction to the visual arts with a greater degree of concentration on courses in the studio area. It incorporates a comprehensive exploration into studio art practices. Students learn formally, conceptually, and technically how to create art through the various disciplines of ceramic, drawing, digital art, glass, painting, photography, printmaking, and sculpture. For the B.F.A. in studio art, the student must fulfill all general requirements as described in the liberal arts curriculum including those of the Newcomb-Tulane College core with the following exceptions: two courses required in the sciences and mathematics category instead of three; and two courses required in the social science category instead of three.

**Requirements**

The B.F.A. requires at least 54 art credits, of which a minimum of 45 must be in studio courses, including three courses from among six in the Foundations of Art series. (If two foundation courses are taken in two-dimensional areas, the third must be taken in a three dimensional area or vice versa.)

No more that half of required studio and art history courses can be transferred into the degree program.

Transfer students wishing advanced standing in studio courses toward the B.F.A. are required to submit representative examples of the work done for which credit has been received at another institution.

Incoming first-year students who expect to be art majors are advised to take ARST 1050 Beginning Drawing I (3 c.h.) and three foundations courses during their first year. At the end of the sophomore year, the art department studio faculty will assign an adviser. Candidates for the
B.F.A. are allowed to take only one level of a studio course sequence in summer school.

Declaration of the B.F.A. major is contingent on the acceptance by the faculty and must be done at least one year before graduation. Review of applications will take place once at the end of each semester. Applications must include:

1. major declaration form;
2. current degree audit sheet;
3. portfolio of 5-10 pieces of artwork in any medium.

The faculty strongly suggests that the student meet with his/her major studio professor before initiating this process. Accepted candidates will then be reviewed and evaluated during the spring semester of their junior year and late in the fall semester of their senior year.

In the senior year, each candidate for the B.F.A. develops a substantial body of studio work in ARST 5010 Major Project (3 c.h.) and ARST 5020 Major Project (3 c.h.) and ARST 4930 Senior Capstone Studio (3 c.h.) which constitute the capstone experience. The art studio faculty will review each project at the end of the fall and spring semester. A grade of (B) or higher is mandatory for continuation in the B.F.A. program. The studio faculty will review the completed B.F.A. thesis show. If in the judgment of the faculty in the Art Department, the work demonstrates sufficient evidence of artistic accomplishment, the student will be recommended for graduation.

**Department of Classical Studies**

**Programs**

**Undergraduate**

**Majors**
- Classical Studies Major (p. 102)
- Greek Major (p. 103)
- Latin Major (p. 103)

**Minors**
- Classical Studies Minor (p. 102)
- Greek Minor (p. 103)
- Latin Minor (p. 104)

**Graduate**
- Classical Studies, MA (p. 103)

**Classical Studies Major**

The study of the cultures of ancient Greece and Rome is inherently valuable, and it also offers an opportunity for critical reflection on our own society and its values. The field of classical studies combines history, literature, archaeology, art history, law, and linguistics, and so is fundamentally interdisciplinary in character. The study of Greece and Rome thus provides students with an historical perspective on and better understanding of the institutions, values, and intellectual traditions of the world in which we live. Our students gain an understanding not only of various aspects of the ancient world but also of the methodologies of classical studies can work separately and together to widen and deepen our comprehension of human cultures in all periods.

Through the major program in Classical Studies, we aim to educate students in the cultures of the ancient Mediterranean world through the study of Greek and Roman texts in translation and ancient material culture. In addition, since we emphasize research and writing in all of our classes, we seek to foster our students’ intellectual curiosity and to develop their research and writing skills.

For more information about the Department of Classical Studies (https://liberalarts.tulane.edu/departments/classical-studies) please visit our website.

**Requirements**

**Classical Studies (CLAS) Majors** need 30* credits in CLAS, GREK, and/or LATN courses

- at least 9 credits of which must be at the 4000 level
- *27 credits, if the student has multiple majors

**Language Requirement:** Greek or Latin courses may be used to satisfy the Newcomb-Tulane College foreign language requirement. However, any courses used to satisfy the language requirement cannot also be counted toward the major or minor.

**Classical Studies Minor**

The study of the cultures of ancient Greece and Rome is inherently valuable, and it also offers an opportunity for critical reflection on our own society and its values. The field of classical studies combines history, literature, archaeology, art history, law, and linguistics, and so is fundamentally interdisciplinary in character. The study of Greece and Rome thus provides students with an historical perspective on and better understanding of the institutions, values, and intellectual traditions of the world in which we live. Our students gain an understanding not only of various aspects of the ancient world but also of the methodologies of classical studies can work separately and together to widen and deepen our comprehension of human cultures in all periods.

Through the minor program in Classical Studies, we aim, first, to introduce students to the ancient history and culture of the Mediterranean world through the study of ancient texts in translation and ancient material culture, and, second, to foster our students’ desire and ability to analyze critically the evidence on which our knowledge of the ancient Mediterranean is based.

For more information about the Department of Classical Studies (https://liberalarts.tulane.edu/departments/classical-studies) please visit our website.

**Requirements**

**Classical Studies (CLAS) Minors** need 15 credits in CLAS, GREK, and/or LATN courses.

- at least 9 credits must be at or above the 3000 level
- at least 3 credits of those must be at the 4000 level
Language Requirement: Greek or Latin courses may be used to satisfy the Newcomb-Tulane College foreign language requirement. However, any courses used to satisfy the language requirement cannot also be counted toward the major or minor.

Classical Studies, MA

The study of the cultures of ancient Greece and Rome is inherently valuable, and it also offers an opportunity for critical reflection on our own society and its values. The field of classical studies combines history, literature, archaeology, art history, law, and linguistics, and so is fundamentally interdisciplinary in character. The study of Greece and Rome thus provides students with an historical perspective on and better understanding of the institutions, values, and intellectual traditions of the world in which we live. Our students gain an understanding not only of various aspects of the ancient world but also of the methodologies of classical studies can work separately and together to widen and deepen our comprehension of human cultures in all periods.

The MA in Classics serves two primary purposes: (1) to prepare students for entry into a PhD program in Classics or a related field, and (2) to prepare students for teaching Latin, Greek, and the history and culture of the ancient Mediterranean world in secondary schools.

For more information about the Department of Classical Studies (https://liberalarts.tulane.edu/departments/classical-studies) please visit our website.

Requirements

The requirements for the M.A. degree are:

- A minimum of 30 semester hours of graduate-level courses completed with a minimum grade of B.
- Two qualifying papers or an M.A. thesis defended before a committee of three faculty members.
- Satisfactory completion of a reading exam in a modern language (German, French, or Italian). We encourage students without preparation in a modern language (excluding English) to enroll in undergraduate language courses as part of their M.A. coursework.

Greek Major

The acquisition of ancient Greek provides first-hand access to the literature of the ancient Mediterranean world and the early medieval period. In addition, the study of these ancient languages provides excellent training in logical analysis and a superior understanding of how languages function to convey meaning. Reading Greek literature in the original languages enables students to engage deeply with the intellectual world of ancient cultures and so to reflect on our own in a more informed fashion.

For more information about the Department of Classical Studies (https://liberalarts.tulane.edu/departments/classical-studies) please visit our website.

Requirements

Greek (GREK) Majors need 30* credits in CLAS, GREK, and/or LATN courses.

- at least 15 credits must be in Greek
- at least 6 credits must be at the 4000 level
- no more than 6 credits in GREK at the 3000 level

*27 credits, if the student has multiple majors

Latin Major

The acquisition of ancient Latin provides first-hand access to the literature of the ancient Mediterranean world and the early medieval period. In addition, the study of these ancient languages provides excellent training in logical analysis and a superior understanding of how languages function to convey meaning. Reading Latin literature in the original languages enables students to engage deeply with the intellectual world of ancient cultures and so to reflect on our own in a more informed fashion.

For more information about the Department of Classical Studies (https://liberalarts.tulane.edu/departments/classical-studies) please visit our website.

Requirements

Latin (LATN) Majors need 30* credits in CLAS, GREK, and/or LATN courses.

- at least 15 credits must be in Latin
- at least 6 credits must be at the 4000 level
- no more than 6 credits in LATN at the 3000 level

*27 credits, if the student has multiple majors
**Language Requirement:** Greek or Latin courses may be used to satisfy the Newcomb-Tulane College foreign language requirement. However, any courses used to satisfy the language requirement cannot also be counted toward the major or minor.

**Latin Minor**

The acquisition of ancient Latin provides first-hand access to the texts of the ancient Mediterranean world and the early medieval period. In addition, the study of these ancient languages provides excellent training in logical analysis and a superior understanding of how languages function to convey meaning.

For more information about the Department of Classical Studies (https://liberalarts.tulane.edu/departments/classical-studies), please visit our website.

**Requirements**

Latin (LATN) Minors need 15 credits in CLAS, GREK, and/or LATN courses.

- including at least 3 LATN courses at or above the 3000 level
- of which 1 LATN course must be at the 4000 level

**Language Requirement:** Greek or Latin courses may be used to satisfy the Newcomb-Tulane College foreign language requirement. However, any courses used to satisfy the language requirement cannot also be counted toward the major or minor.

**Department of Communication**

**Programs**

**Undergraduate**

**Major**

- Communication Major (p. 104)

**Communication Major**

The Department of Communication offers a major which seeks to produce theoretically informed graduates with the necessary practical and analytical skills for successful professional careers, including the ability to: think critically and express ideas clearly and creatively; perform close textual analysis of various forms of communication (written, visual, nonverbal); analyze historical and contemporary forces behind cultural identities and relationships; and, finally, analyze the structures and institutions that inform the relationship between media, technology and society.

**Requirements**

The major consists of ten courses with a minimum of 30 credits.

**Course ID** | **Title** | **Credits**
--- | --- | ---
COMM 2900 | Communication Studies $^1$ | 3

**Required Core Courses**

**Identities and Relationships:**

COMM 3140 | Cross-Cultural Analysis | 3

**Texts and Representation:**

Select one of the following: 3-4

<table>
<thead>
<tr>

**Structures and Institutions:**

COMM 3160 | Technology Analysis | 3

or COMM 3260 | Media Analysis | |

**Additional Courses**

Select six elective courses in consultation with the Communication advisor $^3$ 18

**Total Credit Hours**

30-31

1. Must be taken before any of the required core courses.
2. Majors must complete three core courses, one in each area of the curriculum, preferably by the end of junior year.
3. At least two of these courses must be 3000-level or above, and two must be 4000-level or above. In general, 1000- and 2000-level courses are introductory courses. 3000-level courses encourage applications of communication theory through research methods and service learning. Most 4000-level classes are courses that stress writing, creative production, or service learning. Students wishing to graduate with honors in Communication must take either the graduate seminar (COMM 6210 Seminar In Comm Studies (3 c.h.) or COMM 6220 Seminar In Comm Studies (3 c.h.)) or another 4000-level honors course and complete an honors project. Majors planning to study abroad should seek departmental advice as early as possible.

**Department of Economics**

**Programs**

**Undergraduate**

**Majors**

- Economics, BA (p. 105)
- Economics, BS (p. 106)

**Minor**

- Economics Minor (p. 105)

**Graduate**

- Economics Analysis and Policy, PhD (p. 104)
- Policy Economics, MA (p. 106)

**Economics Analysis and Policy, PhD**

Tulane University’s Economics Department offers a Ph.D. program in Economic Analysis and Policy. This Ph.D. program gives students distinctive training designed to make them attractive candidates for employment in universities, government, multilateral organizations, the private sector, and the non-profit sector. Our program is distinguished by three features:
Applied focus. The program is designed for students who are interested in using economic analysis to investigate real world problems. Students receive extensive training in the tools of economic analysis. These tools are an essential job skill for those who seek to evaluate public policies.

Interdisciplinary approach. The program breaks down the barriers to interdisciplinary graduate education by incorporating field coursework and research experiences with our prestigious cross campus partners. Our cross campus partners include the Freeman School of Business, the Stone Center for Latin American Studies, the School of Public Health and Tropical Medicine, the Cowen Institute for Public Education Initiatives, the Department of Political Science, and the Murphy Institute of Political Economy. Students will acquire the practical interdisciplinary knowledge necessary for innovative research and careful policy analysis.

Small, highly selective program with a high faculty-to-student ratio. This facilitates closer interaction between students and faculty, who are dedicated to research at the frontiers of their fields. Importantly, students have the opportunity to undertake joint research projects with faculty, as part of the training. Generous fellowships are available and are awarded on the basis of academic merit and potential for scholarship. Accepted students receive funding for five years, conditional on satisfactory progress through the program.

Requirements

Curriculum

The degree of Ph.D. in economics requires 48 credit hours, passage of preliminary examinations within the first two years of study, a dissertation prospectus, a dissertation proposal, and a final dissertation defense.

The course of study in the first year includes:

- microeconomics (two semesters)
- econometrics (two semesters)
- macroeconomics (one semester)
- applied econometric methods for policy analysis (one semester)

In their second and third years, students will complete field courses in economics and in partner schools. Interdisciplinary fields of study have been designed so that students can draw from the expertise of faculty in Economics as well as our partner schools. The fields of concentration are:

- Health, education, and human capital
- Public economics and public policy
- Development, inequality, and poverty.

While student research may ultimately focus on a single field of concentration, students will take classes spanning multiple concentrations and will be encouraged to explore synergies between multiple areas.

More information on the degree can be found on the Department's website at:

https://liberalarts.tulane.edu/departments/economics/academics/graduate/phd/student-guide

Economics Minor

A minor in economics is to consist of a minimum of five economics classes. Students who complete ECON 1010 and ECON 1020 to fulfill a requirement in their major must take five additional economics courses to be eligible for a minor in economics, for a total of seven courses — i.e., 1010 and 1020, plus any five economics courses of their choice.

Those students whose major does not specifically require ECON 1010 and ECON 1020 must take a total of five economics courses: 1010 and 1020, plus any three courses offered in the department except ECON 3010, 3020, and 3230. The completion of ECON 3010 is strongly recommended even though it does not count toward the minor. In both cases certain other courses may count toward the minor; check with the department.

Requirements

A minor in economics consists of a minimum of five economics classes as follows:

Students who complete ECON 1010 Intro to Microeconomics (3 c.h.) and ECON 1020 Intro to Macroeconomics (3 c.h.) to fulfill a requirement in their major must take five additional economics courses to be eligible for a minor in economics, for a total of seven courses - i.e., ECON 1010 and ECON 1020, plus any five economics courses of their choice.

Those students whose major does not specifically require ECON 1010 Intro to Microeconomics (3 c.h.) and ECON 1020 Intro to Macroeconomics (3 c.h.) must take a total of five courses:

1. Except ECON 3010 Intermed Microeconomics (3 c.h.), ECON 3020 Intermed. Macroeconomics (3 c.h.), and ECON 3230 Econometrics (3 c.h.). The completion of ECON 3010 is strongly recommended even though it does not count toward the minor for these students.

Economics, BA

The B.A. in economics combines economic science with broad liberal arts training, providing an excellent background for postgraduate work in business, public policy, or law, and also for the student who will enter the labor force upon graduation.

Requirements

Students pursuing one of the economic majors are strongly encouraged to complete ECON 1010 Intro to Microeconomics (3 c.h.) and ECON 1020 Intro to Macroeconomics (3 c.h.) in their freshman year. They are also encouraged to complete ECON 3010 Intermed Microeconomics (3 c.h.) and ECON 3020 Intermed. Macroeconomics (3 c.h.) by the end of their second year. Finally students are encouraged to complete an introductory course in statistics offered by the Department of Mathematics.

1 Of these, at least two must be at the 4000 level or above. ECON 3880 (c.h.), ECON 3890 Service Learning: ECON 3100 (0-1 c.h.), ECON 4570 Internship (1-3 c.h.), ECON 4880 (c.h.), and ECON 5000 Honors Thesis (4 c.h.) do not count toward this requirement.

Economics, BS

The B.S. in economics provides a rigorous quantitative background for advanced study in economics or for outstanding postgraduate programs in business. Those students enrolled in the School of Business wishing to emphasize economics should consult their economic advisers.

Requirements

Students pursuing one of the economic majors are strongly encouraged to complete ECON 1010 Intro to Microeconomics (3 c.h.) and ECON 1020 Intro to Macroeconomics (3 c.h.) in their freshman year. They are also encouraged to complete ECON 3010 Intermed Microeconomics (3 c.h.) and ECON 3020 Intermed. Macroeconomics (3 c.h.) by the end of their second year. Finally students are encouraged to complete an introductory course in statistics offered by the Department of Mathematics.

1 Of these, at least one must be at the 4000 level or above. ECON 3880 (c.h.), ECON 3890 Service Learning: ECON 3100 (0-1 c.h.), ECON 4570 Internship (1-3 c.h.), ECON 4880 (c.h.), and ECON 5000 Honors Thesis (4 c.h.) do not count toward this requirement.

Policy Economics, MA

The Master of Arts in Policy Economics at Tulane University integrates economic analysis and quantitative methods in a program of study designed for practitioners. Successful students will be prepared to enter the job market with a set of analytical skills designed for economic policy analysis. Whereas a Ph.D. in economics is a research degree, the M.A. in Policy Economics provides a curriculum of applied analysis and quantitative techniques better suited for the practitioner of economics.

This program provides students with a deep and broad exposure to the analytical methods of modern economics that can be applied to policy settings, without requiring the advanced mathematics training that is only essential to academic researchers. The program builds on the strengths of the bachelor’s degrees in Economics at Tulane by increasing the required number of economics courses and expanding their rigor and depth. In courses offered jointly with the undergraduates, M.A. students are held to higher academic standards and are generally assigned supplementary research work. Successful students can expect to complete at least seven applied projects in the course of earning the M.A. degree.

Requirements

Masters Program Sample Course Schedule

Internal Applicants (4 + 1)

Internal applicants (4 + 1) must satisfy all remaining bachelor’s degree requirements in their senior year in the undergraduate program. In satisfying these requirements, they may take at most 4 6000-level courses in economics (12 credit hours) that will also count towards the degree of M.A. in Policy Economics. The remaining 24 credit hours must be taken after graduation from their undergraduate program.

- English, MA (p. 108)

English Major
The English Major (https://liberalarts.tulane.edu/departments/english/english-major) at Tulane University offers a rich curriculum in which students learn to read, write, and think creatively and critically. In addition to coursework in diverse literatures, the English Department (https://liberalarts.tulane.edu/departments/english) offers classes in such areas as film, television, graphic novels, hip hop, stand up comedy, new media, environmental studies, queer studies, cultural studies, gender studies, critical race studies, postcolonialism, digital humanities, archival research, philosophy, creative writing, and theory.

Our majors receive extensive training in writing, speaking, and critical thinking throughout the curriculum and become adept at close reading, argumentation, complex and inventive thinking, interpretation, analysis, and research. The courses we offer also invite students to approach their world with a sense of empathy, civic engagement, inclusion, and justice, both through reading literature and through service-learning experiences that allow students to collaborate with local community members, such as those in schools and prisons.

The course of study for the Major provides our students with experience in textual analysis, substantial instruction in writing, an understanding of literary history, and the freedom to tailor coursework according to individual interests. As an English major, you can aim for breadth of study, taking courses in a variety of fields, or you can aim for depth of study, taking a number of courses within a particular field. Students may also opt for a Creative Writing Concentration (https://liberalarts.tulane.edu/departments/english/creative-writing-concentration) by taking at least 4 creative writing courses among their electives.

Requirements
Required
The course of study for the Major provides students with training in literary analysis and critical thinking, substantial instruction in writing, an understanding of literary history, and the freedom to tailor coursework according to individual interests.

Majors complete a minimum of 10 courses, which must include:

**The Gateway Course** (ENLS 2000 Literary Investigations): This course introduces majors to the discipline of literary studies, with an emphasis on close reading and analysis, theoretical approaches, research, and writing.

**1 Survey Course** (ENLS 2010 Intro To British Literature I, ENLS 2020 Intro To British Literature II, or ENLS 2030 Intro To American Literature): Our survey courses provide our majors with some understanding of literary and cultural history. By covering hundreds of years of literature, the courses make larger movements and shifts visible and provide a crucial context for understanding content in 4000- and 5000-level courses.

**1 Capstone Seminar** (ENLS 5010 Capstone Seminars): Usually taken during the senior year, capstones are seminar-style courses (small class size; discussion-driven) that focus on a specialized field of study and culminate in a substantial research paper. Students who complete an English honors thesis do not need to take the Capstone, though they are welcome to do so for elective credit toward the Major. Students in the 4+1 Masters (https://liberalarts.tulane.edu/departments/english/academics/graduate/programs/4-plus-one-ma-program) program take graduate courses during their senior year that substitute for the Capstone; 4+1 students are still welcome to take Capstones for elective credit toward the Major. The Capstone also satisfies the SLA/Newcomb-Tulane Writing Intensive requirement.

**7 Electives:** In consultation with their major advisors, majors use electives to design their own course of study. Some majors opt for breadth, taking a variety of courses; others aim for depth, focusing on writing or a particular field of literature. There are some guidelines—see below for information about course level and distribution requirements. Students may also use electives to earn a Creative Writing Concentration (https://liberalarts.tulane.edu/departments/english/creative-writing-concentration).

- 6 of these electives must be upper division courses (any ENLS course at the 3000, 4000, or 5000 level)
- 1 elective may be at the 2000 level or higher
- Students may take more than one Capstone Seminar, in which case the additional Capstone would count as an elective.
- Students may complete an Internship (approved by the Department) for elective credit.
DISTRIBUTION REQUIREMENTS: At least one of the courses above (survey, elective, or capstone) must be in literature before 1800, and one must be in American or Anglophone literature (i.e., not British).

<table>
<thead>
<tr>

</tbody>
</table>

Survey Course
Select one of the following:
- ENLS 2010 Intro To British Literature I
- ENLS 2020 Intro To British Literature II
- ENLS 2030 Intro To American Literature

Electives
Select six upper division electives (any ENLS courses at the 3000 level or higher): 18
Select one additional elective (any ENLS course at the 2000 level or higher): 3

Capstone Seminar
ENLS 5010 Capstone Seminars 1 4

Total Credit Hours 31

1 Typically taken in the senior year

Distribution requirements that can be satisfied by surveys, electives, or capstone:
- 1 course in literature before 1800 (British or American literature)
- 1 course in American or Anglophone literature (i.e., not British)

English Minor

The English Minor (https://liberalarts.tulane.edu/departments/english/english-minor) is a flexible minor available to all Tulane undergraduates who are keen to develop their writing, reading, and critical thinking skills and to explore literature and its historical and cultural contexts. The English Minor is excellent preparation for the many career (https://liberalarts.tulane.edu/departments/english/academics/graduate/programs/4-plus-one-ma-program) for Tulane undergraduate English majors, and a three-semester external M.A. program (https://liberalarts.tulane.edu/departments/english/academics/graduate/programs/external-ma) for English or Literature majors with B.A. degrees from Tulane or from other institutions. Each has its own admission requirements and its own timetable to completion.

Both programs offer a Certificate in Documentary Literary Studies (https://liberalarts.tulane.edu/departments/english/academics/graduate/programs/certificate-program).

Students who have earned M.A. degrees in our programs have gone on to doctoral programs and law schools. They have embarked on careers as journalists as well as editors at magazines and publishing houses. Several of our graduates now teach in public and private secondary schools. We have graduates who work on staff as museum curators and in rare book libraries. But some of our graduates go on to careers not directly related to the degree. They chose to pursue the M.A. in order to challenge themselves, to continue the study of literature they enjoy, and to acquire a credential that adds value to their employment profile.

4+1 M.A. Program

The 4+1 M.A. Program in English serves Tulane English majors who are interested in pursuing careers or further education in literary studies, museum studies, library science, secondary teaching, and publishing, to name a few of the areas to which our students gravitate. The program begins in the student's senior year and continues for one additional year (the "+1" year) towards completion of the M.A. degree.

During the "+1" year, tuition is approximately one-third the cost of regular undergraduate tuition, not including fees. Regular tuition applies to the senior year. More information on "+1" year tuition is available on the School of Liberal Arts’ Applying to an SLA Graduate Program (https://liberalarts.tulane.edu/academics/graduate-studies/prospective-students) page.

Undergraduate scholarships do not transfer to the "+1" year.

How to Apply to the 4+1 Program

Applications are made online at https://applygrad.tulane.edu/apply. Consult the Director of Graduate Studies about the deadline.

Application check list:
1. Completed online application and a $50 application fee, payable online
2. 10-20 page writing sample on a topic in literary studies
External M.A. Program

We accept highly qualified students with B.A.s in English or Literary Studies from excellent undergraduate institutions. The external M.A. Program has the same curricular requirements and opportunities as the 4+1 program, including the Certificate in Documentary Literary Studies (https://liberalarts.tulane.edu/departments/english/academics/graduate/programs/certificate-program). The external M.A. is designed for students who are enhancing their education for eventual application to a doctoral program.

We accept up to four courses of graduate work completed at other universities for transfer credit toward the M.A. degree. Although the program is designed to be completed in three semesters, students are permitted to complete it in four semesters.

The tuition for the program is approximately one-third of undergraduate tuition, not including fees. More information on tuition is available on the School of Liberal Arts’ Applying to an SLA Graduate Program (https://liberalarts.tulane.edu/academics/graduate-studies/prospective-students) page.

How to Apply to the External M.A. Program

The application deadline is February 1, 2019. Application forms are available online through the School of Liberal Arts (https://liberalarts.tulane.edu/academics/graduate-studies/prospective-students).

Via the form, please submit the following materials:

1. Statement of purpose
2. Names and electronic contact information of two persons who will electronically submit letters of academic recommendation on your behalf
3. Self-reported GRE scores in Verbal and Quantitative (All applicants are also required to submit official GRE scores. They should direct ETS to send official GRE scores to Tulane’s School of Liberal Arts, Code 6183.)
4. An unofficial transcript from each university attended
5. A 10-20 page research paper on a topic in literary studies

Applicants will be notified of the department’s decision on their application by the Office of Graduate Programs in Tulane’s School of Liberal Arts.

Joel Dinerstein, Director of Graduate Studies
Department of English

E-mail: jdinerst@tulane.edu

Requirements

The 4+1 M.A. Course of Study

The program is designed so that students can complete the program in two years by taking two required graduate courses in their senior year, ENLS 7890 Fundamentals: Literary Theory in the fall term, and ENLS 7050 Bibliography & Research Method in the spring term.

These two courses count as a 4000- or 5000-level elective course in the undergraduate English major, and they count as well toward the credit hour total for undergraduate graduation. Students must fill out and submit to their academic advisor a Degree Audit Substitution Form supplied by the Director of Graduate Studies to obtain undergraduate credit for these courses. This form must be signed for approval by the English Department’s Director of Graduate Studies or Director of Undergraduate Studies. (Of course, both courses concurrently count toward the graduate degree.)

In the second, “+1” year, students are expected to take four courses in each semester.

Students taking the Certificate in Documentary Literary Studies enroll in ENLS 7920 Independent Study in the Fall term of their “+1” year, in addition to three graduate seminars/proseminars. In the Spring term of their “+1” year, they take four seminars/proseminars, and complete a certificate portfolio under the supervision of a departmental mentor.

A typical course of study for an entering student in the 4+1 program would be:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENLS 7890</td>
<td>Fundamentals: Literary Theory</td>
<td>3</td>

<td></td>
</tr>
<tr>
<td>Credit Hours</td>
<td>12</td>
<td></td>
</tr>
<tr>
<td>Total Credit Hours</td>
<td>30</td>
<td></td>
</tr>
</tbody>
</table>

Students may take up to two graduate courses in other departments, by direct petition to the Director of Graduate Studies (to receive credit for such coursework, students are required to submit a Degree Audit Substitution Form (http://tulane.edu/advising/forms.cfm)). No graduate courses are offered during the summer term.

The External M.A. Course of Study

The external M.A. program requires 10 courses. No M.A. thesis is required. Students typically take three or four courses per term. There are two required methodology courses, which students usually
complete in their first year: ENLS 7890 Fundamentals: Literary Theory (usually offered in fall) and ENLS 7050 Bibliography & Research Method (usually offered in spring).

A typical course of study for an entering student in the external M.A. program would be:

<table>
<thead>
<tr>

1 If students are pursuing the Certificate in Documentary Literary Studies (https://liberalarts.tulane.edu/departments/english/academics/graduate/programs/certificate-program), they would take the internship course ENLS 7920 Independent Study (0-3 c.h.) in the first or second of the three semesters, and complete their portfolio in the following semester.

**Documentary Literary Studies Certificate**

The Department of English offers a certificate in Documentary Literary Studies (https://liberalarts.tulane.edu/departments/english/academics/graduate/programs/certificate-program) in its M.A. programs in order to further instruct students in the importance of book history and to enhance students' success in post-M.A. education and employment. The program instructs students in basic archival techniques for processing and handling a variety of types of documents and artifacts held in museums, rare book libraries, and special collections as well as standard formal apparatuses used in preparing editions, referencing, and cataloging. Students are trained in electronic technologies for online archiving, finding aids, retrieval, and presentation. In addition, students receive some instruction in virtual technologies and software technologies.

Certification requirements include coursework, an internship course (ENLS 7920 Independent Study), and an individual portfolio developed under the direction of a faculty mentor. The completion of the internship and individual portfolio earns a total of three credit hours, while a positive evaluation of the portfolio earns certification. The certificate program begins in the spring Bibliography and Research Methods course. During the final year of the M.A. program, each student pursuing the certificate serves as an intern in an approved collection on campus, whenever possible one that is relevant to the student's own interests, such as the Amistad Research Center, the Hogan Jazz Archive, the Howard-Tilton Library special collections division, the Newcomb Art Museum, and others. The student then develops a portfolio that reflects her or his training and internship to demonstrate proficiency in the certification area. Portfolios are evaluated by the Certification Committee with the assistance of staff and faculty from special collections at Tulane.

Each interested student will choose a faculty member in the English Department to direct his/her project. Ideally, this faculty mentor should be in a research field that aligns with or complements the student's archival interests. Students will find a faculty mentor for their projects during the Spring semester before their final year in the program.

</tbody>
</table>

1 This course includes a unit on archival studies and electronic technologies as well as editorial and bibliographic practices.

2 Students work for 3-5 hours per week for one semester in one of the major collections at Tulane University as archival/curatorial/exhibition/digitization assistants. Collections include the Amistad Research Center, Nadine Vorhoff Library, the Hogan Jazz Archive, the Louisiana Collection, the Newcomb Art Museum, and the Rare Book library. The aim of the internship is to give students hands-on experience with the handling, cataloguing, and curating of archives and the role that electronic technologies increasingly play in these activities.

Final awarding of the certificate depends upon an evaluation of the certificate portfolio, by a committee consisting of the Director of the Certificate Program, Director of the Graduate Studies, and Faculty Mentor.

Students interested in pursuing the certificate should contact the Director of the DLS Certificate Program, Professor Melissa Bailes (mbailes@tulane.edu).

**Department of French and Italian Programs**

**Undergraduate Majors**

- French Major (p. 111)
- Italian Major (p. 115)

**Minors**

- Arabic Studies Minor (p. 111)
- French Minor (p. 112)
- Italian Minor (p. 116)
Arabic Studies Minor

Standard Arabic has an estimated 206 million speakers, while colloquial Arabic is spoken by a total of over 400 million, which makes it the fifth most widely spoken language in the world. Arabic classes at Tulane highlight the richness of Arabic culture and literature, as well as its practical applications in the global political economy.

Requirements

The Arabic minor consists of 5 courses for a minimum of 15 credits, distributed as follows:

<table>
<thead>
<tr>
<th>Course ID</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ARBC 2030</td>
<td>Intermediate Arabic</td>
<td>4</td>
</tr>
<tr>
<td>ARBC 3150</td>
<td>Advanced Arabic</td>
<td>3</td>
</tr>
</tbody>
</table>

Electives

Select three or four of the following:  

<table>
<thead>
<tr>
<th>Course ID</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ARBC 3060</td>
<td>Business Arabic</td>
<td>3</td>
</tr>
<tr>
<td>ARBC 3170</td>
<td>Media Arabic</td>
<td>3</td>
</tr>
<tr>
<td>ARBC 3220</td>
<td>Intro to Arabic Literature</td>
<td>3</td>
</tr>
<tr>
<td>ARBC 3250</td>
<td>Arab Modern Culture</td>
<td>3</td>
</tr>
<tr>
<td>ARBC 3300</td>
<td>Arabic Intl Rela &amp; Diplomacy</td>
<td>3</td>
</tr>
</tbody>
</table>

1 ARBC 2030 Intermediate Arabic (4 c.h.) will count toward the minor provided students do not use it to fulfill the SLA language requirement. If students wish to count ARBC 2030 Intermediate Arabic (4 c.h.) toward the SLA language requirement, they will need to take 5 courses beyond ARBC 2030 Intermediate Arabic (4 c.h.).

2 Select three if ARBC 2030 Intermediate Arabic (4 c.h.) will count toward the minor. Select four if ARBC 2030 Intermediate Arabic (4 c.h.) will be used to fulfill your SLA language requirement.

If a student wishes to complete two or more minors, no courses counting toward the student’s one minor will count toward the student’s other minor(s). Courses taken abroad that the student wishes to count toward the Arabic minor will be evaluated on a case-by-case basis.

French Major

The major in French is designed to provide students with the necessary skills to communicate effectively in French both orally and in writing. The French program further seeks to familiarize students with the most influential literary, philosophical, critical, and cinematographic works in French, properly understood within their cultural and historical context; to introduce them to the major social and political developments that have shaped the Francophone world, including North Africa, Sub-Saharan Africa, Asia, and the Caribbean; and to provide them with an understanding of the structure of the French language, attitudes towards its use, and the variation it displays across time, geographical space, and social groups.

Students may also explore Creole and Cajun languages in linguistics classes and fieldwork. The junior year and semester abroad programs are integral to the majors in French and are also encouraged for non-majors.

Placement

Entering freshmen are placed at the appropriate level by assessment of their high school records and their performance on a placement test. Successful completion of French 2030, a passing score on the French proficiency test, a score of 4 or 5 on the Advanced Placement examination, or a score of 640 or better on the College Board examination fulfills the language requirement for graduation.

Requirements

A total of 10 or 11 courses, 31 or 34 credit hours, is required.

<table>
<thead>

<td>3</td>
</tr>
<tr>
<td>FREN 3250</td>
<td>Fren Society &amp; Inst</td>
<td>3</td>
</tr>
</tbody>
</table>

1 The Senior Seminar is offered in the fall semester only. It is required of all French majors, even those who are double majors. In other words, the Capstone experience is a requirement of the major.

Electives

• Two of the advanced electives must be literature courses.
• For one of the advanced electives, students may substitute a 3000-level course taught in English by the Department (e.g. FREN 3110 The French Cinema (3 c.h.) ) OR an advanced course in a related field (e.g. a course in French Art, French History, French Politics).
• A senior thesis written for Honors in French can count as one of these electives.
• 5000-level courses taken abroad that have been approved as counting toward the FREN major are generally included among the Group III electives.

Nota Bene

• FREN 4560/4570 (Internship Studies) does not count toward the major. The typical Internship involves 60 hours of work, carries 1 credit hour and is graded on an S/U basis.
French Minor

The minor in French is designed to provide students with the necessary skills to communicate effectively in French both orally and in writing. The French program further seeks to familiarize students with the most influential literary, philosophical, critical, and cinematographic works in French, properly understood within their cultural and historical context; to introduce them to the major social and political developments that have shaped the Francophone world, including North Africa, Sub-Saharan Africa, Asia, and the Caribbean; and to provide them with an understanding of the structure of the French language, attitudes towards its use, and the variation it displays across time, geographical space, and social groups.

Students may also explore Creole and Cajun languages in linguistics classes and fieldwork. The junior year and semester abroad programs are integral to the majors in French and are also encouraged for non-majors.

Placement

Entering freshmen are placed at the appropriate level by assessment of their high school records and their performance on a placement test. Successful completion of French 2030, a passing score on the French proficiency test, a score of 4 or 5 on the Advanced Placement exam for French, or a score of 640 or better on the College Board examination fulfills the language requirement for graduation.

Requirements

A total of 6 courses, 19 credits, is required.

<table>

French Studies, MA

In New Orleans and Louisiana, French is a living language. In no other state in the Union – in no other city – is French culture so integrally built into the social fabric and its heritage still so vitally in play. The strong appeal of our program both nationally and internationally demonstrates that place matters: students who choose Tulane understand the compelling logic of pursuing their passion in a city so thoroughly steeped in its Francophone past. Located in what is often referred to as “the northernmost city of the Caribbean,” Tulane is at the crossroads of the two Americas and the larger Atlantic world, and in proximity to Haiti and the French Antilles. With the cultural history of French in our city and region, a living tradition of Francophonie, and the presence and activities of the French Consul General, our city remains an ideal place for French study.

As a student in Tulane’s 4+1 M.A. in French, you will be part of the recovery of New Orleans’s French-speaking world. You will be contributing to the preservation of the cultural memory of French colonization and immigration from France, Canada, and the Caribbean, and of the city’s historic linguistic and ethnic diversity.

The 4+1 M.A. in French is designed to establish a comprehensive knowledge of French and Francophone literature as well as an acquaintance with linguistics, literary theory, and the techniques of literary scholarship.

The 4+1 M.A. in French may also be combined with a DIPLÔME DE FRANÇAIS PROFESSIONNEL awarded by the Paris Chamber of Commerce in the following fields:

- AFFAIRES (https://liberalarts.tulane.edu/departments/french-italian/academics/certificate-in-business)
- RELATIONS INTERNATIONALES (https://liberalarts.tulane.edu/departments/french-italian/academics/certificate-in-international-relations)

Requirements

Undergraduate Tulane Students who major in French are eligible to apply for the 5-year combined B.A. and M.A. program in French if they maintain a grade point average of at least 3.0. The M.A. in French may be combined with a DIPLÔME DE FRANÇAIS PROFESSIONNEL awarded by the Paris Chamber of Commerce in the following fields:

- AFFAIRES (https://liberalarts.tulane.edu/departments/french-italian/academics/certificate-in-business)
- RELATIONS INTERNATIONALES (https://liberalarts.tulane.edu/departments/french-italian/academics/certificate-in-international-relations)

Students may apply to enter this program beginning in the Fall semester of their junior year, and applications will be accepted through the Fall semester of their senior year.

Coursework

Students in the 4+1 M.A. program will complete the normal undergraduate French major comprising 33 hours (15 hours of core courses and 18 hours of advanced courses). In their senior year (4th year), students will take 12 credits in French (four 6000-level classes or three 6000-level plus one 7000-level seminar). These 12 credits will...
then also be counted towards the 33 hours required for the M.A. in French.

**BA Degree with Major in French**
33 hours of course work
- 15 hours of core courses
- 18 hours of advanced courses, of which 12 will be taken during the senior year. (In exceptional cases, and depending on the rotation of course offerings, one or more courses taken in the junior year may be counted among these 12 hours.)

Note: French majors doing the regular B.A. are not required to take 6000-level courses. 4+1 candidates will take 4 courses at the 6000 or 7000 level in their 4th year.

**MA in French**
In their fifth year, students will take 4 courses in the Fall semester and 3 courses in the Spring semester. All course work should be taken within the Department of French and Italian.

**The M.A. Paper**
Students will write and defend an original research paper written under supervision of a faculty member and a second reader. It may be an expanded version of a course paper, and in its final form should be from 20 to 30 pages in length. At least one member of the M.A. committee must be a tenure-line faculty member. In the event that neither of the first two readers is a tenure-line faculty member, a third, tenure-line faculty member will be added to the committee. In all cases the first reader will be a faculty member whose institutional appointment includes the expectation of research. The revised paper is to be submitted to the first reader by March 1st. The defense must take place no later than the first week of April. The supervising professor and a second faculty reader will participate with the student in an oral defense of the paper. The defense will be open to the departmental faculty.

**Language Requirement**
Before the end of the Spring semester of their fifth year, all students in the M.A. program will be expected to demonstrate reading competence in one of the following languages: Arabic, Creole (both taught within the department), Spanish, Italian, Latin, German, or Old Occitan. The department will consider students’ petitions to have other languages accepted, but acceptance will depend upon the student making a case for the usefulness of this language to his or her research.

**Diplôme de Français Professionnel**
If an MA in French will open the door to increased career prospects, the Diplômes de français professionnel will give you the accreditation necessary to make these prospects a reality.

Recognized by companies and organizations worldwide and adapted to the modern business and cultural world, the Diplômes de français professionnel will enable you to demonstrate the level of competency required by your future employers. They will also allow you to connect with international and French-speaking professionals and will help you, therefore, on your path to becoming a successful global citizen.

Designed and offered by the Paris Ile-de-France Chamber of Commerce and Industry, the Diplômes de français professionnel are calibrated to coincide with the different levels of the Common European Framework of Reference for Languages (CEFR) developed by the Council of Europe, with diplomas ranging from level elementary (A2) to proficient (C2).

Candidates obtain a diploma upon completion of an exam, which is conceived based on real-life professional situations and is adapted to today’s economy. To prepare for the exam, students will be offered, depending on interest expressed, study skill workshops or individual sessions. They will also be given practice exams to take.

In order for the department to gauge student interest in each particular diplôme, please declare your interest early during the semester by sending an email to Professor Sojic: asojic@tulane.edu (cmignot@tulane.edu).

**Filing for the Degree**
Students must inform the School of Liberal Arts of their desire to participate in graduate ceremonies. The Graduate Director will be asked to confirm, by audit, that candidates have completed their degree requirements. Students must also complete a departmental form available from the Graduate Director, called the 4+1 M.A. Checklist (see Graduate Handbook appendix).

To apply, please go to: https://applygrad.tulane.edu/apply/

**French Studies, PhD**
From Occitan to Louisiana Creole, from codex to hypertext, graduate study at Tulane fosters a comprehensive and integrative approach to French Studies. With an international faculty covering a broad range of research and teaching interests, our program allows students to choose from a rich array of courses and encourages them to approach the study of language, literature and civilization through transhistorical and cross-cultural perspectives. This kind of comparative engagement provides students with intellectual depth and interdisciplinary dynamism.

Students at Tulane have unique opportunities for exploring the French, Creole and Cajun cultures of Louisiana. Our location affords us a privileged vantage point from which to observe other situations of localized or marginalized languages and cultures in their relationship to broader, often hegemonic forces: France’s regional languages (Occitan, Breton, Alsatian, etc.) in conflict with the official language revered as an inviolable symbol of national unity; immigrant cultural practices (such as the wearing of the veil) in conflict with French cultural norms; creole languages stigmatized as corrupt forms of the standard, etc. In our various fields of research, a focus on the local provides both a revealing lens through which to view the global and a healthy check on universalizing theories of culture and language.

The program’s areas of strength include Francophone, Afro-Caribbean and Mediterranean studies, medieval and early modern studies, cultural studies and cultural history, critical theory, political theory, gender studies, film theory, creole linguistics, European and African philosophy, performance studies and poetics.

Financial support includes full tuition remission and a stipend for up to five years of Ph.D. study (four years for students entering with the M.A. degree). The stipend is approximately $21,500.

To apply, please go to: https://applygrad.tulane.edu/apply/
Requirements

The Ph.D. builds on a solid core of course work in French Studies and includes as well a concentration in an interdisciplinary subfield that may be fulfilled entirely or in part through courses taken in other departments or programs. The degree is interdisciplinary and integrative, drawing on diverse fields for a broad methodological base.

Coursework

Students must complete a minimum of 54 credit hours, including transfer work and work already presented for the M.A. degree. For students entering with a B.A., it is expected that course work will be completed by the beginning of the third year of study. Students will graduate with a Ph.D. in French Studies and a concentration in one of five integrated areas:

- Visual cultures and technologies – Courses in film, urbanism, new media, performance
- European studies – Courses in human rights; political, cultural and institutional histories; Islam in Europe; medical anthropology and ethno-psychiatry
- Francophone colonial and post-colonial studies – Courses in Atlantic, Caribbean and African area studies; Creole(s) and creolization; Arabic and Islamic studies
- Language and identity – Courses in theory, philosophy, ethics and law; minority languages and identities, world languages and literatures
- Linguistics – Courses to include Survey of French Linguistics (FREN 6070), History of the French Language (FREN 6210), Field Research on French in Louisiana (FREN 6110), Special Problems in French Linguistics (FREN 6910), Translation Theory and Practice (FREN 6160), and courses in the Linguistics program (any course with an LING prefix).

Students entering the program with the M.A. should declare their concentration at the end of their second semester on campus. B.A. students who will be continuing on to the Ph.D. should inform the Graduate Director of their choice of concentration when completing the M.A. degree.

Concentration in one of the four subfields will be constituted by successful completion of two graduate courses on topics related to the subfield. Students are also expected to demonstrate knowledge of their chosen field of concentration in the Ph.D. qualifying exams. One or both of the required courses may be taken in correlate departments or programs. Each semester, students at the Ph.D. level are allowed to take at most one course outside the Department of French and Italian.

French 6050 (“Teaching French”) and French 6150 (“Critical Theory”) are required of all students and must be taken in the first semester that they are offered after the student enters the program.

Beyond the 3 credits of 7000-level courses required for the M.A., doctoral candidates who begin the program with a B.A. must complete two additional 7000-level courses (that is, 6 credits of seminar-level courses). Students entering the program with an M.A. from another institution must complete two 7000-level courses in the Tulane program.

During the course of their graduate study, Ph.D. students cannot take more than 3 hours (1 course) in independent study. Independent studies courses are approved only in exceptional cases; students are encouraged to fulfill their course requirements through regularly scheduled courses.

Ph.D. Qualifying Exams

For students entering the program with a B.A., two of three written Ph.D. preliminary exams will be taken in the Spring semester of the student’s third year, no later than two weeks before the end of classes. The specific date will be determined on an annual basis by the Graduate Advisor. The third, self-designed, exam will be taken in the second full week of classes of the Fall semester of the student’s fourth year.

Students entering the program with an M.A. will take their first two exams in the Spring semester of their second year, no later than two weeks before the end of classes. The specific date will be determined on an annual basis by the Graduate Advisor. These students will take the third, self-designed, exam in the second full week of classes of the Fall semester of their third year.

In the first week of the Fall semester prior to the semester in which the student plans to take the first two exams, s/he must notify the Director of Graduate Studies. The Director of Graduate Studies will then contact the student’s prospective dissertation advisor, who will serve as head of the examining committee and will select two additional readers.

Students will sit for three written examinations and an oral examination. The oral examination will normally take place in the week following the first two written exams. All three written exams are take-home and open-book. The questions for the written exams normally will be made available to the student on a Friday morning at 9:00 a.m., and the answers must be submitted electronically to the examining committee by 5:00 p.m. of the following Monday. It is expected that the answers be both synthetic and analytical, and that they demonstrate familiarity with the primary and secondary texts on the reading list independently of recourse to lengthy quotation and paraphrase. All sources consulted must be duly cited.

For each written exam, the student will answer either one or two questions. Students will normally write from 3500 to 4200 words (i.e., 10 to 12 pages in 12-point Times New Roman font with one-inch page margins) for each exam. If an exam consists of two separate questions, the 10 to 12 pages should be divided more or less evenly between them.

The first written examination will cover a particular century. The second written examination will cover either a century or one of the four subfields listed above. The third, self-designed, written examination will be based on a reading list composed by the student in close consultation with his or her prospective dissertation director. The reading list for the self-designed exam should not significantly overlap with the reading list for either of the other two written exams, and should be considered a blueprint for the dissertation bibliography.

The oral examination will last for approximately one hour; the first twenty minutes of which will consist of the student’s analysis of a literary text. The analysis should not be read but presented extemporaneously from a copy of the primary text along with an outline or notes prepared ahead of time by the student. The remainder of the
oral exam will cover the same material that was initially tested on the two written exams.

The passage for textual analysis is chosen by the committee head in a conversation with the student in the semester prior to the examination semester. The student will not know ahead of time the precise work from which the text for analysis will be drawn, but will be provided with the text immediately upon his or her completion of the written exams.

For all preliminary exams, the language of examination will be alternately French and English. The first exam will be written in one of those two languages and the second exam will be written in the other. The self-designed exam is to be written in the same language as the dissertation. The opening portion of the oral exam (the textual analysis and subsequent questions or comments pertaining to the analysis) will be presented in French. The remaining portion of the oral exam will be conducted primarily in French, but examiners may also ask questions in English, particularly when the reading material being tested is in English. When students announce their intention to sit for the Ph.D. exams, they should remember to inform the Director of Graduate Studies of their choice of language for each of the written exams.

All examinations will be evaluated on a Pass/Fail basis, and a failed exam may be re-taken only once, normally within two to three weeks of the original exam. Students must pass all four exams, written and oral, in order to be admitted to candidacy. They will be informed of the result of the oral examination immediately following that exam, and they will learn of the committee’s decision regarding the first two written exams, including any need for re-takes, only after all sections of the exam (both oral and written) have been completed. Once the student has passed the self-designed exam, s/he will meet with the members of the examining committee to discuss the answer(s) to the exam and obtain guidance for writing the prospectus.

Defense of the dissertation prospectus

The dissertation prospectus should be defended by December 15 of the semester in which the student sits for the self-designed exam. The prospectus is approximately 10 to 15 pages in length, including a supporting bibliography that convincingly lays the ground for subsequent dissertation research. The student should be familiar with the works listed in the bibliography and be able to explain their relevance to the research project. After summarizing the prospectus, the student will answer questions from the faculty. The prospectus is to be approved by the dissertation director (first reader) and by two other professors serving as second and third readers. All committee members and all full-time faculty of the Department of French and Italian are invited to attend the prospectus defense, which is to be held during the academic year, but not during semester finals or between semesters. The prospectus must be submitted to readers no less than two weeks before the date of the defense, with a copy left in the conference room for other faculty to read.

Upon successful defense of the prospectus, the student should ask readers to sign the form provided by the School of Liberal Arts (http://tulane.edu/liberalarts/upload/prospectusform1.pdf).

Reading knowledge examinations

Students must demonstrate by examination reading competence in a second foreign language (beyond the language presented for the Master’s) that is pertinent to their field of study. Students normally choose from among Arabic, Creole, Spanish, Italian, Latin, German, and Old Occitan, but they may petition to have another language accepted if they can clearly demonstrate that it will be of significant use in their research.

Language competence may be demonstrated by passing an examination administered by the department at Tulane in which the language is taught, by standardized (ETS) examination, official record of competence demonstrated elsewhere at the graduate level, or satisfactory performance in a 6000- or 7000-level course taught in the language.

In the summer, the Graduate School may offer reading-competence courses in languages for which there is adequate demand. Satisfactory performance on an exam given at the end of the course fulfills the reading-competence requirement for the degree. However, students may, if they wish, opt to take one of the external exams (as listed in the paragraph above) rather than sit for the in-course examination.

As an alternative to demonstrating competence in this second foreign language (actually a fourth language, beyond French, English, and a third language for the M.A.), students may elect to do advanced course work in the same language in which they demonstrated competence for the M.A. Successful completion of a graduate course requiring reading, speaking, writing, and lectures in that language will be accepted by the department in lieu of an examination in an additional language.

Students who wish to conduct research in the early periods, as well as those who wish to pursue topics in other fields requiring special linguistic competence, are strongly urged to consult with faculty members in the relevant fields so that they may plan which languages to study.

Defense of the dissertation

The oral defense of the dissertation, held after the dissertation has been approved by all three committee members (or, if necessary, by two out of the three), will be open to all members of the committee and to all full-time faculty of the Department of French and Italian.

Italian Major

A major in Italian consists of nine courses beyond ITAL 2030 Intermediate Italian (4 c.h.)/ITAL 2040 Intermed Ital Romnc Lang (4 c.h.) and introduces students to Italian literature, culture and thought.

Requirements

The student is required to take the following courses:

<table>

Majors
- German Studies Major (p. 116)
- Russian Major (p. 117)

Minors
- German Studies Minor (p. 116)
- Russian Minor (p. 117)

German Studies Major

German Studies provides students with a wide range of opportunities to explore culture, literature, and language of the German-speaking countries. Such studies may fulfill the language requirement, serve as part of the general education, or lead to an in-depth course of study as a German Studies major, double major, or minor. The study of German prepares students for academic careers in fields such as history, art history, religion, philosophy, political science, literature, and music as well as for professional careers that emphasize the international aspects of business, law, economics, finance, government, science, engineering, and education.

Requirements

The major in German Studies consists of a total of 30 credits or ten courses beyond GERM 2030 Intermediate German (4 c.h.), with 4 Foundational courses (12 credits) and 6 Advanced courses (18 credits).

All German studies majors complete three advanced courses, one 4000/6000-level course, one Advanced Undergraduate Seminar and one Senior Seminar. The three advanced courses may include up to e.g. courses in German art, history, music, philosophy, and politics

1. Providing there is a significant reading and writing requirement in German. (e.g. GERM 3440 Representing Holocaust (3 c.h.), GERM 3510 Ger Cult & Civilization (3 c.h.), GERM 3530 Rehearsing Revolution (3 c.h.), GERM 3540 Marx, Nietzsche, & Freud (3 c.h.), GERM 3550 Genn Lit In Translation (3 c.h.), GERM 3660 Love, Death & Sexuality (3 c.h.), GERM 3670 Grimm: Devel German Fairy Tale (3 c.h.), GERM 3710 Intro To German Film (3 c.h.), GERM 3720 Weimar Cinema (3 c.h.).)

2. e.g., GERM 4410 The German Novelle (3 c.h.), GERM 4430 German Drama (3 c.h.), GERM 4710 Special Topics (3,4 c.h.), GERM 4720 Special Topics (3 c.h.), GERM 6030 Survey of German Lit I (3 c.h.), GERM 6040 Survey of German Lit II (3 c.h.), GERM 6150 Studies In 19th Cen Lit. (3 c.h.), GERM 6180 Age of Goethe & Schiller (3 c.h.), GERM 6910 Independent Study (3 c.h.).

3. e.g., GERM 4410 The German Novelle (3 c.h.), GERM 4430 German Drama (3 c.h.), GERM 4710 Special Topics (3,4 c.h.), GERM 4720 Special Topics (3 c.h.), GERM 6030 Survey of German Lit I (3 c.h.), GERM 6040 Survey of German Lit II (3 c.h.), GERM 6150 Studies In 19th Cen Lit. (3 c.h.), GERM 6180 Age of Goethe & Schiller (3 c.h.), GERM 6910 Independent Study (3 c.h.).

German Studies Minor

German Studies provides students with a wide range of opportunities to explore culture, literature, and language of the German-speaking countries. Such studies may fulfill the language requirement, serve as part of the general education, or lead to an in-depth course of study as a German Studies major, double major, or minor. The study of German prepares students for academic careers in fields such as history, art history, religion, philosophy, political science, literature, and music as well as for professional careers that emphasize the international aspects of business, law, economics, finance, government, science, engineering, and education.
Requirements

The minor in German Studies consists of five courses above GERM 2030 Intermediate German (4 c.h.).

One course taught in the department in English at the 3000-level is allowed (providing there is a significant reading and writing requirement in German).

Russian Major

Russian Studies Major

The Russian Major is housed in our Department and is designed to provide students with the necessary skills to communicate effectively in Russian both orally and in writing. The Russian program also seeks to familiarize students with influential literary, critical, and cinematographic works in Russian, studied within their cultural and historical context. Furthermore, the program introduces students to various ethnicities, their histories and roles in shaping today’s Russia. Finally, it provides them with an understanding of key social and political trends and challenges defining the Soviet and the post-Soviet era.

Requirements

The Russian minor requires 15 credits (five courses) above RUSS 2030. Courses taught in English, such as Tolstoy and Dostoevsky or courses on Russian art, count toward the major. Students may petition for permission to use one course outside the department (e.g. in Russian history or Russian politics) toward the minor. The department generally accepts transfer credit toward the minor from summer and semester study at accredited U.S. and Russian universities. No more than four courses can be counted toward major if the student spends an entire year abroad, and no more than 3 courses for one semester abroad.

</table>
majors are required to take a 3000-level seminar that has a one-credit Historical Methods laboratory co-requisite (with the number 3000). It is not sufficient to take the 3000-level seminar without the co-requisite laboratory in order to satisfy this requirement. It is preferable for the students to take this Methods seminar in the first or second year.

Second, all history majors must take one of the department’s 6000-level advanced seminars. Students may not complete the Advanced Seminar requirement until their Junior or Senior year. All 6000-level seminars have, as one of their central requirements, a major research paper of at least 20 pages that incorporates analytical, research and writing skills. Finally, students must take a third seminar at the 3000 or the 6000 level.

Requirements

The History major consists of ten courses totaling at least 30 credits, excluding one-credit courses.

- All majors must take at least three seminars:
  - One of those must be a 3000-level Historical Methods Seminar.
  - One of those must be a 6000-level Advanced Seminar.
  - Both of these courses must be taken at Tulane.
- A maximum of two courses from other departments can count towards the major.
- No more than three 1000-level courses may count toward the major.
- Courses that do not have a letter grade cannot count toward the major with the exception of approved transfer credits.
- History majors must satisfy the following distribution requirements:
  - Students must take at least one pre-1800 course and at least one post-1800 course.
  - Students must take at least one course in four of the following six areas: Africa (HISB), Asia (HISC), Europe (HISA and HISE), Latin America (HISL), Middle East (HISM), and United States (HISU).

Advanced Seminars

Advanced seminars - numbered 6000 to 6999 - are open to sophomores, juniors and seniors, and also to graduate students. Sophomores may require permission from the course instructor to enroll in a 6000-level seminar.

Pre-1800 Courses

Ancient and Medieval History (HISA)

- All HISA courses are included under Ancient and Medieval History with the exception of HISA 3230 Great Capts Alexander-Patton (3 c.h.)
- The following courses in Classical Studies can be counted toward the history major, as European history courses prior to 1800:

History Minor

In order to receive a history minor, students must complete six courses, including two seminars. Students working toward a history minor are encouraged to take a range of courses but are free to pursue their own academic interests. It is expected that by taking six history courses students will develop both research and writing skills, including working with primary and secondary sources.

## Requirements

The History Minor consists of six courses distributed as follows:

- No more than one course at the 1000-level.
- At least one 3000-level seminar.
- At least one Advanced Seminar numbered 6000-6999.
- Courses that do not have a letter grade cannot count toward the major or minor.

## History, MA

Please note that we do not offer a terminal M.A. degree outside of the 4+1 program and the Tulane Staff M.A.

### The 4+1 Program in History

The 4+1 in History offers current Tulane students and recent grads the opportunity to earn an M.A. degree through our accelerated M.A. program. The program is designed for History majors or those who have taken at least 6 units of 6000 or 7000 level history courses that will then count towards the accelerated M.A.

The application and admissions process is fairly straightforward; students do not need to take the GRE, nor is there a language requirement once in the program. Students, however, must have a minimum GPA of 3.33 in the History courses in order to be eligible to apply, and must maintain this GPA during the program. In addition, they must have a letter of recommendation from a current Tulane History Department faculty member who will agree to work with the student through completion of the M.A.

The M.A. degree is earned with a minimum of 30 hours of coursework. At least 6 hours (2 courses) and up to 12 hours (4 courses) of applicable 6000- or 7000-level History courses taken as an undergraduate may count toward the degree. Students may choose to complete the 4+1 either with a thesis or non-thesis option. The non-thesis option requires a comprehensive exam administered by two faculty members.

Applications are accepted on a rolling basis, but priority evaluations is given to students who submit all required materials by April 1. Students have two years from the time of graduation to apply to the 4+1 program.

## History, PhD

The Ph.D. in History is a highly selective program. It is both small enough to ensure plenty of faculty-student engagement and large enough to allow students to pursue research within broad chronological, geographic and thematic fields. We encourage students to develop the widest possible range of methodological skills in dealing with historical sources. The faculty in the Department of History have broad teaching and research interests, with particularly strong major fields in United States history (especially the U.S. South), Latin American history; Europe from the Renaissance to the present; and ancient and medieval Europe. In addition, minor fields are offered in a variety of geographic, transnational and thematic fields.
Requirements

Students earn their M.A. degree while working towards the Ph.D. degree. Candidates working towards the Ph.D. must complete the following requirements:

- Complete required historiography and methodology courses: HIST 7001 Seminar in Historical Practice (3 c.h.) in the fall semester of their first year and HIST 7003 Historiography & Methods I (3 c.h.) before the start of their second year. HIST 7003 Historiography & Methods I (3 c.h.) is normally taken as an independent studies sequence over the spring and summer of the first year.
- Complete at least a further twelve credits of course work, including HIST 7005 Historiography & Methods II (3 c.h.) before the start of their third year. HIST 7005 Historiography & Methods II (3 c.h.) is normally taken as independent studies over the summer.
- Students must include in their course work at least three 7000-level seminars in addition to the required seminar HIST 7001 Seminar in Historical Practice (3 c.h.) (independent studies do not count as a seminar). Courses taken outside of the department of history require approval of the advisor.
- Complete two required writing courses: HIST 7006 Intermediate Hist. Writing (3 c.h.) is normally taken during the summer before the second year, and HIST 7007 Advanced Hist. Writing (3 c.h.) is normally taken in the summer before the start of the third year.
- Demonstrate proficiency in two languages (one language for students whose first field is United States or Britain from 1500).
- Complete the following service obligations: Five semesters of TA and RA service. Depending on departmental need, students have the option to teach their own course in the fall or spring of their third year.
- Complete HIST 7008 Prof. Deve. and Documentation (3 c.h.), leading to the successful compilation and defense of the portfolio.
- Write an acceptable dissertation, and defend this in an oral examination.

Department of Jewish Studies

Programs

Undergraduate

Major

- Jewish Studies Major (p. 121)

Minor

- Jewish Studies Minor (p. 121)

Jewish Studies Major

The major consists of at least 30 credits in Jewish studies courses, Hebrew courses, or courses in related fields. The major must include JWST 1010 and JWST 1020 as well as courses in each of the following periods:

- Pre-modern: At least two courses required from JWST 3100, 3120, 3220, 3330, 3340, 3440, 3750, 4150, 4210, 4300, 4420, 4670.

At least one course must be at the 4000 level or above. Courses taken to fulfill Tulane’s foreign language proficiency requirement may not count toward the major.

Additional courses require departmental approval for substitution (ex: CLAS and RLST).

Requirements

The major consists of at least 30 credits in Jewish Studies courses, Hebrew courses, or courses in related fields. The major must include JWST 1010 and JWST 1020 as well as courses in each of the periods below.

</table>

At least one course must be at the 4000 level or above. Courses taken to fulfill Tulane’s foreign language proficiency requirement may not count toward the major. Additional courses require departmental approval for substitution (ex: CLAS and RLST).

Jewish Studies Minor

A minor in Jewish Studies consists of 15 credit hours in 5 courses.

Requirements

A minor in Jewish Studies consists of 15 credit hours in 5 courses.

Requirements include:
• Only one 1000 level course may count towards the minor; however, students are not required to take a 1000 level course for the minor.
• Up to two HBRW courses past the 2030 level may count toward the minor. No courses used to satisfy the University's language requirement may be used as credits toward the minor. Hebrew courses are not required to complete the minor.
• At least one course should be at the 4000 level or above (CLAS 3140 accepted substitute).
• All 3000 or 4000 level coursework for the minor must be taken in residency at Tulane; courses taken abroad do not count toward this requirement.
• Additional courses require departmental approval for substitution (ex: CLAS and RLST).

Jazz Studies Major

The BFA degree in Jazz Studies, like all of our BFA degrees in Music, shares a core curriculum in musicology, performance, and composition, along with additional required courses that are specific to the area. This includes courses in theory, ear-training and harmony; courses in World Music, European art music, American music, and jazz in particular; and basic methods of jazz orchestration and arranging. The program also includes opportunities to develop performance skills in a variety of jazz combos.

Total Credit Hours 60

¹ It is strongly recommended that BFA Jazz students take MUSC 1530 Jazz Theory (3 c.h.), MUSC 3340 History of Jazz (3,4 c.h.), and/or MUSC 1900 Music in New Orleans (3 c.h.) which are offered as part of the CORE.
² Pre-requisites and/or Co-requisites (see course descriptions)
³ Students may elect to mature within an ensemble by taking the major ensemble for his/her instrument up to 8 times for credit.
⁴ Students are encouraged to take applied lessons every semester; however, a course substitution, one semester of APMS 4910 Lect Rec Prep/Lect Rec (2 c.h.) is available for students lacking one semester of lessons.

Music, BA

The Department of Music offers both a BA and a BFA track for music majors. All students seeking music degrees will begin under the BA music track. Students may then apply to the BFA track "by audition." No audition is required for admission into the BA program. Ordinarily, BFA auditions will take place during the third semester of matriculation at Tulane.
The BA in Music is a flexible degree that gives students grounding in all three fields of music study (performance, theory, and musicology) while allowing them to cater to their particular interests. By choosing from a variety of core courses and electives, students can design their own concentrations in performance, composition, musicology, ethnomusicology, jazz, musical theatre, or other areas.

**Music Minor**

The Minor in Music is a flexible degree that gives students grounding in all three fields of music study (performance, theory, and musicology) while allowing them to cater to their particular interests. By choosing from a variety of core courses and electives, students can design their own concentrations in performance, composition, musicology, ethnomusicology, jazz, musical theatre, or other areas.

Pre-requisites and/or Co-requisites (see course descriptions)

**Music, MA**

The Department of Music offers the Master of Arts degree in Musicology and Composition.

**M.A. in Musicology with a concentration on New Orleans Music**

The M.A. program allows students to take advantage of the unique musical culture of New Orleans while pursuing a rigorous curriculum in musicology. Study is focused on music and culture of the American South, the Caribbean, Latin America, Africa, and Europe and especially their interrelation in New Orleans. Methods of historical musicology, ethnomusicology, and musical theory are utilized in the interpretation and analysis of jazz, ragtime, classical, blues, funk, hip-hop, and other forms, while emphasizing the geographic and social context in which the music has been produced. Resources include the Hogan Archive of New Orleans Jazz, the Maxwell Music Library, the Louisiana Collection, the Amistad Research Center, the Stone Center for Latin American Studies, and the seemingly limitless possibilities of interacting with local musicians and institutions.

**M.A. in Composition**

Music composition is about creativity, imagination, communication and collaboration. It requires highly developed multilinear critical analytical skills, excellent organizational skills and a great deal of attention to detail. Music brings people from different backgrounds and communities together, enhances creativity, develops imaginations and helps you to make emotional connections with people. Several of
our Music Composition program alumni have had highly successful and diverse careers as composers of abstract music and as faculty members and administrators at major institutions. Many others have successfully aligned their creative endeavors with interdisciplinary pursuits in areas such as multimedia, music for film, music therapy, music business, music and management, or entertainment law. Over the years, the Music Composition program has also graduated many alumni who have had highly successful careers in other diverse disciplines: from the sciences, to medicine, to finance, mathematics, and management.

If you have any questions about the following material please contact Prof. Sakakeeny (mattsak@tulane.edu).

Requirements

Musicology Candidates for the M.A. degree must complete at least 24 semester hours of course work (including MUSC 7030 Intro To Graduate Study (3,4 c.h.)), pass a reading knowledge examination in one modern foreign language (French, Spanish or other with approval) by the end of the first semester, write an acceptable thesis, and defend this thesis in an oral examination. Candidates for the M.A. degree in musicology with a specialization in New Orleans music must take the following:

<table>
<thead>
<tr>
<th>Course ID</th>

</tbody>
</table>

Total Credit Hours 24

This program accepts students every other year, and the next admission period is for Fall 2019. In addition to the requirements on the official application, applicants must submit a writing sample for consideration. The sample may be brief, and undergraduate papers are acceptable, as long as the sample demonstrates fundamental research and writing skills. Questions may be directed to Prof. Sakakeeny (mattsak@tulane.edu).

Candidates for the M.A. degree in Composition must complete at least 24 semester hours of course work (including MUSC 7010 Advanced Composition (3 c.h.), MUSC 7020 Advanced Composition (3 c.h.), MUSC 7040 Seminar Musical Analysis (3 c.h.)) and must present a recital of original works including a major, extended work (consult with Head of Composition for details).

Music, MFA

The Department of Music offers the Master of Fine Arts degree in Performance and Musical Theatre.

The Department of Music offers an M.A. in Performance for graduate students receiving training from music professors who are professional artists and scholars. Performers have the advantage of training in an intense academic environment while sharpening music techniques and performance skills. This occurs through participation in large and small ensembles, as well as through varied solo performance opportunities.

Our goal is for students to become well-rounded performers with essential instrumental or vocal technique who are able to make historically informed performance choices.

If you have any questions about the following material please contact Prof. Sakakeeny (mattsak@tulane.edu).

Requirements

Piano, Voice, Guitar, Other Instruments Candidates for the M.F.A. degree in performance must take 30 hours of course work:

<table>
<thead>
<tr>
<th>Course ID</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select 18 hours in music literature, theory, history, performance, or other appropriate areas</td>
<td>18</td>
<td></td>
</tr>
<tr>
<td>Select 12 semester hours of lessons in voice or in the specialized instrument</td>
<td>12</td>
<td></td>
</tr>
</tbody>
</table>

Total Credit Hours 30

In place of the thesis the candidate must perform a full-length recital of 90 minutes.

Candidates for the M.F.A. degree in Musical Theater must take 36 hours of course work and must either perform a recital or choreograph or direct a major musical theater production. Performers must submit a headshot and resume to Michael McKelvey (mmckelve@tulane.edu), head of the Musical Theatre Program. The performers will be expected to audition live or with a video. The audition will include two songs and a monologue. Dance is optional.

Performance, BFA

The Department of Music offers BA and BFA tracks for music majors with all students receiving training from music professors who are professional artists and scholars. Performers have the advantage of training in an intense academic environment while sharpening music techniques and performance skills. This occurs through participation in large and small ensembles, as well as through varied solo performance opportunities. All students study performance, theory, and musicology that enable students to become well-rounded performers with essential instrument technique who are able to make historically informed performance choices.

The performance program features balanced and comprehensive instrumental and vocal training and allows student to choose from a variety of core courses and electives designed to give students flexibility in degree coursework. Through solo recitals, master class participation, and performance in chamber music and larger ensembles, students gain practical experience and earn academic credit. Many students find it possible to double major or to obtain multiple minors while studying music.

### Musical Theatre, BFA

The Musical Theatre B.F.A. is a voice-focused program, with additional requirements for acting and dance. The curriculum stresses vocal training and year-round participation in our musical theatre ensemble, Musical Theatre Workshop, as well as courses in music theory and musicology. In addition to the one or more productions staged by the department each semester and regular student-produced performances, the program is affiliated with Summer Lyric Theatre at Tulane, an Equity summer stock company which produces three full-scale musicals every summer.
It is strongly recommended that BFA Musical Theatre students take:

- MUSC 2450 Intro To Opera (3 c.h.) and
- MUSC 3320 Musical Theatre In Amer (3 c.h.) which are offered as part of the CORE.

BFA Musical Theatre students are urged to take as many dance and acting electives as possible, and are strongly encouraged to take at least one dance class each semester.

Composition, BFA

Music composition is about creativity, imagination, communication and collaboration. It requires highly developed multilinear critical analytical skills, excellent organizational skills and a great deal of attention to detail. Music brings people from different backgrounds and communities together, enhances creativity, develops imaginations and helps you to make emotional connections with people.

Several of our Music Composition program alumni have had highly successful and diverse careers as composers of abstract music and as faculty members and administrators at major institutions. Many others have successfully aligned their creative endeavors with interdisciplinary pursuits in areas such as multimedia, music for film, music therapy, music business, music and management, or entertainment law. Over the years, the Music Composition program has also graduated many alumni who have had highly successful careers in other diverse disciplines: from the sciences, to medicine, to finance, mathematics, and management.

Our Music Composition majors are expected to take composition lessons for at least six semesters, study orchestration and take classes in music theory, music history, electronic music and computer music. Graduating seniors are required to present a senior composition recital which involves 60 minutes of original music and demonstrates their ability to function as independent composers. Music Composition majors also participate in ensembles and are strongly encouraged to take instrument lessons. Piano proficiency, in particular, is generally considered as an invaluable tool for composition.

Though it is not required, composition majors are encouraged to take Composition for Electronic Media and other electronic and computer music courses through the Music Science and Technology program. Composition for Electronic Media examines theoretical and practical aspects of the study of computer and electro-acoustic music composition. Through individual composition projects, this course focuses on developing computer and electro-acoustic compositional techniques with projects in pre-recorded material manipulation, sound synthesis and analysis, music signal processing, algorithmic composition, and music performance systems design, to name a few. There are many other courses offered in the Music Science and Technology that we encourage composition majors to take in order to strengthen their foundations in composing with electronic media. These include Introduction to Computer Applications in Music, Music and Digital Signal Processing, and Algorithmic and Computer Music.

For more information regarding these courses please see the Music, Science, & Technology program description.

Our music complex includes a 1,000-seat auditorium, Dixon Hall, a 200-seat recital hall, Dixon Recital Hall, a choral hall, a band room, two computer music labs, and practice rooms that are available 24/7 by student ID card access for students enrolled in music courses. At the end of Spring 2019, construction of a new state-of-the-art recording and electronic music studio will begin. This will be available for use after taking the required training for use of the studio. As the Newcomb Music Department is an All-Steinway School, all of our practice and performance spaces are equipped with Steinway pianos. The University also owns a wide range of other instruments which are available for students to borrow.

Students admitted to the University as intended music majors are eligible for Musicianship Awards. Musicianship Awards are partial scholarships offered to incoming freshmen who are selected by the Office of Undergraduate Admission based on recommendation from faculty and staff to students who have academic credentials and a history of talent and dedication to music, and is only granted to students intending to major in music.

Total Credit Hours 49

1 Pre-requisites and/or Co-requisites (see course descriptions)

2 Students may elect to mature within an ensemble by taking the major ensemble for his/her instrument up to 8 times for credit.

3 Students are encouraged to take applied lessons every semester; however, a course substitution, one semester of APMS 4910 Lect Rec Prep/Lect Rec (2 c.h.), is available for students lacking one semester of lessons.

Requirements

All students majoring in philosophy and not writing an honors thesis must complete a total of nine courses (27 credits) in philosophy. All students majoring in philosophy and writing an honors thesis must complete ten courses (31 credits). In this case, honors thesis work in PHIL 4990 Honors Reading (3 c.h.) and PHIL 5000 Honors Thesis (4 c.h.) counts for two courses and seven credits. (One of these seven credits is a writing requirement credit.) In addition to the standard major, the department offers two more specialized tracks within the major: Law, Morality, and Society; and Language, Mind, and Knowledge.

Honors Thesis

- PHIL 4990 Honors Reading (3 c.h.)
- PHIL 5000 Honors Thesis (4 c.h.)

Standard Major

For the standard major in philosophy the specific course requirements are:

Philosophy Major

The Philosophy major provides a traditional course of study in philosophy.
Philosophy Major with Concentration in Language, Mind, and Knowledge

Language, Mind & Knowledge (track)
The Philosophy Language, Mind & Knowledge (track) is designed for students primarily interested in the part of philosophy that lies on one of the most exciting of today's interdisciplinary interfaces, cognitive science. The Department is also associated with the Cognitive Studies Coordinate Major (https://liberalarts.tulane.edu/programs/cognitive-studies).

Requirements
All students majoring in philosophy and not writing an honors thesis must complete a total of nine courses (27 credits) in philosophy. All students majoring in philosophy and writing an honors thesis must complete ten courses (31 credits). In this case, honors thesis work in PHIL 4990 Honors Reading (3 c.h.) and PHIL 5000 Honors Thesis (4 c.h.) counts for two courses and seven credits. (One of these seven credits is a writing requirement credit.) In addition to the standard major, the department offers two more specialized tracks within the major: Law, Morality, and Society; and Language, Mind, and Knowledge.

Honors Thesis
• PHIL 4990 Honors Reading (3 c.h.)
• PHIL 5000 Honors Thesis (4 c.h.)

Additional Information
At least two of these courses must be at the 6000-level.
Philosophy Major with Concentration in Law, Mortality, and Society

The Philosophy Law, Morality & Society (track) is designed to cater to students with a specific career interest in law, public policy or politics.

Requirements

All students majoring in philosophy and not writing an honors thesis must complete a total of nine courses (27 credits) in philosophy. All students majoring in philosophy and writing an honors thesis must complete ten courses (31 credits). In this case, honors thesis work in PHIL 4990 Honors Reading (3 c.h.) and PHIL 5000 Honors Thesis (4 c.h.) counts for two courses and seven credits. (One of these seven credits is a writing requirement credit.) In addition to the standard major, the department offers two more specialized tracks within the major: Law, Morality, and Society; and Language, Mind, and Knowledge.

Honors Thesis

- PHIL 4990 Honors Reading (3 c.h.)
- PHIL 5000 Honors Thesis (4 c.h.)

- PHIL 6750 Mill’s Util Liberalism

Additional Requirements

Select 1 additional course at the 3000 level or above. At least two courses must be at the 6000 level. 6

Total Credit Hours 27

Additional Information

At least two courses must be at the 6000-level.

Philosophy Minor

A minor in Philosophy consists of five Philosophy courses, three of which must be above the 1000 level.

Requirements

A minor in philosophy consists of five philosophy courses, three of which must be above the 1000-level.

Philosophy, MA

Tulane offers a terminal MA degree in Philosophy. The program is intended for students who are eager to continue their study of philosophy, but do not feel ready to enter a PhD program. The MA program can help students develop a deeper and more comprehensive understanding of both contemporary issues in philosophy as well as the history of philosophy, and to prepare to seek admission into a competitive PhD program. It is also useful for students who have a strong interest in philosophy, but are unsure about whether they would like to commit to pursuing a PhD.

The philosophy department at Tulane offers a wide variety of courses, and is especially attractive for students wishing to pursue research in ethics, political philosophy, the history of philosophy, and philosophy of mind. For information about our faculty members, please see our faculty page (https://liberalarts.tulane.edu/departments/philosophy/people/fulltime-faculty).

An undergraduate major in philosophy is desirable for graduate study in philosophy, but it is not essential. However, students admitted with insufficient background in ethics or logic or the history of philosophy may be required to take courses in these areas without graduate credit.

Transfer course credit for previous graduate work in philosophy is possible.

The terminal MA program is independent of the PhD program at Tulane. Subsequent admission to the PhD program at Tulane requires application through the normal channels. The program is intended to be completed within two years.

For information about the terminal MA program at Tulane, please contact the Director of Graduate Studies, Oliver Sensen (https://
The 4+1 Masters Degree Program

The Department also offers a program of study that allows Tulane undergraduates who graduate with a major in philosophy to receive an MA in Philosophy after one additional year. The program is intended primarily for students who are eager to continue their study of philosophy, yet either do not feel ready to apply for admission into a PhD program, or have no interest in doing so. The 4+1 program MA program helps students develop a deeper and more comprehensive understanding of both contemporary issues in philosophy as well as the history of philosophy, and to prepare to seek admission into a competitive PhD program. It is also useful for students who have a strong interest in philosophy, but are unsure about whether they would like to commit to pursuing a PhD. The philosophy department at Tulane offers a wide. A variety of courses, and is especially attractive for students wishing to pursue research in ethics, political philosophy, the history of philosophy, and philosophy of mind. For information about our faculty members, please see our faculty page. The 4 + 1 MA program is independent of the PhD program. Subsequent admission to the PhD program requires application through the normal channels.

Requirements

The terminal MA Degree may be earned in one of two ways.

- Satisfactory completion of 24 hours of coursework (8 courses) and submission and defense of a thesis. This route is not intended for candidates for the PhD.
- Satisfactory completion of 30 hours of coursework (10 courses) and passing one qualifying paper.

The 4+1 M.A. degree will be awarded to students who obtain either of the following:

Passing grades in 30 credit hours of graduate level courses (i.e., 6000-level and 7000-level). Passing grades in 24 credit hours of graduate level courses and a Master's thesis. The first option will be encouraged in most cases. In order to satisfy either of these options, it will be necessary to carry over a number of courses from the undergraduate degree. The requirements for the Philosophy Major in the B.A. degree include two courses at the 6000-level. ONE AND ONLY ONE of those courses can count toward the 4+1 M.A. requirements. However, any additional 6000-level or 7000-level courses that have been taken for the undergraduate degree may be transferred (UP TO A MAXIMUM OF 12 CREDIT HOURS). Further details and information about the application process may be obtained from the Director of Graduate Studies, Oliver Sensen.

Philosophy, PhD

An undergraduate major in Philosophy is desirable for graduate study in philosophy, but it is not essential. However, students admitted with insufficient background in ethics or logic or the history of philosophy will be required to take courses in these areas without graduate credit.

Transfer course credit for previous graduate work in philosophy is possible.

There are two tracks in the Ph.D. Program, the standard track and the specialty track in Moral Philosophy. The two tracks differ in the coursework requirements for them. Students may either take the standard Ph.D. track or the specialty Ph.D. track in moral philosophy, and may opt into or out of the specialty track at any time.

Requirements

The Ph.D. Degree (Standard track and Moral Philosophy track) has three components:

- Satisfactory completion of 48 hours (16 courses) of coursework in accordance with departmental distribution requirements (see below).
- Submission of one satisfactory Qualifying Paper. Students are subject to dismissal should the qualifying paper be deemed unacceptable.
- Presentation and defense of a Doctoral Thesis.

Students in the PhD program must submit all materials for any incomplete class grades by September 1 of the following year. For example, materials for any incomplete from courses during the 2019-2020 academic year would have to be submitted by September 1, 2020.

Students in the PhD program are subject to an annual review, described below.

Deadlines for the Qualifying Paper and Dissertation Progress are described below. No student may miss a deadline without a strong excuse presented to the Director of Graduate Studies (such as a documented medical or family emergency). A failure to meet one of these deadlines is cause to bring the issue of the student's performance before the department as a whole.

Distribution Requirement for Coursework (Standard Track)

The distribution requirement for coursework in the Standard track is as follows. Students must take at least one course in three of the following areas:

- Metaphysics
- Epistemology
- Philosophy of Mind
- Philosophy of Language
- Philosophy of Science

In addition, students are required to take three courses in the history of philosophy (at least one in Ancient as well as one in Modern), one course in Morals/Political/Legal Philosophy and one in Logic.

The distribution requirement in Logic may be waived if a student demonstrates graduate-level competence by passing an examination in this subject after joining the program.

Of the remaining eight courses, two may be taken in another department, with approval of the Philosophy Department Graduate Studies Committee.
Distribution Requirement for Coursework (Moral Philosophy Track)

The distribution requirement for coursework in the specialty track in Moral Philosophy is as follows. Students must take at least one course in three of the following areas:

- Metaphysics
- Epistemology
- Philosophy of Mind
- Philosophy of Language
- Philosophy of Science

In addition, students are required to take three courses in the history of philosophy (at least one being the History of Ethics or the History of Political Philosophy), and one in Formal Methods (which may include logic, game theory, rational choice theory, or another course in the methodological tools relevant to the student's philosophical work). The distribution requirement in Formal Methods may be waived if a student demonstrates graduate-level competence by passing an examination in this subject after joining the program. Of the remaining nine courses, six must be in moral and political philosophy, with at least one course each from four of the following subdisciplines:

- Political Philosophy
- Philosophy of Law
- Moral Psychology
- Agency and Responsibility
- Metaethics
- Normative Ethics
- Applied Ethics
- Feminist Ethics

Two of these courses may be taken in another department, with approval of the Philosophy Department Graduate Studies Committee. Students in this track are also expected to attend and participate regularly in Murphy Institute seminars and lectures in moral philosophy.

The Qualifying Paper

Purpose of the Qualifying Paper

The purpose of the project is to evaluate the student’s ability to produce a "professional" quality paper. The paper may be the result of reworking a term paper from a course. Students are encouraged but not required to write the qualifying paper on the topic of their dissertation. The paper must represent new work written by the student. It is not allowed, for instance, simply to submit a previous MA thesis. Any old work must be substantially revised.

Quality

Students are subject to dismissal should the Qualifying Paper be deemed unacceptable. It is therefore important to approach the task of writing this paper with a sense of the quality of work that is expected and how this may be achieved. The qualifying paper should provide strong evidence that the student is willing and able to produce publishable work. An acceptable paper will demonstrate ability to engage your own philosophical thinking in relation to the relevant literature and competence with that literature.

This might be achieved by:

- Presenting an argument dialectically among several writers and entering the discussion with your own view.
- Providing an illuminating account of a philosopher’s argument(s) or contention(s)
- Interpreting a philosophic text in order to bring to light its argument or teaching
- Tracing the historical development of an idea that you analyze and evaluate

It is not acceptable to:

- Simply review several books or articles on a given topic
- Present different philosopher’s claims or arguments and merely opt for one of them.

The Committee

The Qualifying Paper is evaluated by a committee consisting of three faculty members. The Director will be a faculty member agreed upon by the student, the Director of Graduate Studies (DGS), and the faculty member. The Second and Third Reader on the Committee will be assigned by the DGS in consultation with the Director.

The student is advised to make arrangements with the director of the paper about how the interchange between them shall work out as the composition of the paper progresses. Different professors may wish to do this in different ways. A general understanding between director and student should be reached before the summer vacation that precedes the year in which semester in which the paper is due. With the approval of the director, topics may be modified or changed.

Deadlines

The day two weeks before the last day of Spring semester classes is the target date for submitting a proposal for the Qualifying Paper to the DGS. For example, if the Qualifying Paper is due on October 1, 2019, the student should submit a proposal two weeks before the end of the Spring 2020 semester. The proposal should include a brief description of the project (at least several lines) and the name of the faculty member who has agreed to serve as director.

The Qualifying Paper must be submitted by October 1 during the student’s third year (or second year if the student entered with a transferable MA degree).

It is expected that one or more drafts of the paper would have been submitted before the deadline and the final version would reflect responses to comments from members of the committee.

Evaluation

The members of the committee will evaluate the paper and independently submit to the DGS a judgment on it, with comments and justification for the judgment. Faculty must report grades for the Qualifying paper by November 15.

The original submission will be evaluated as "Pass," "Fail," or "Revise and Resubmit." Two "Fail" votes on the original submission results in a failed paper. Only one "Revise and Resubmit" or "Fail" vote is needed to force revisions, and in that case, the revised paper will be due on February 1. After that date a majority vote will decide whether the
paper passes or fails. The final grade for the Qualifying Paper must be
submitted by the faculty members by March 1.

A failed paper will result in dismissal from the doctoral program,
subject to a review by the whole department.

The faculty committee members may not inform the student of his/ 
her evaluation until the Director of Graduate Studies or the Philosophy 
Department faculty releases the information.

The Dissertation
Students should complete an "Admission to Candidacy" form to the 
DGS after completing all requirements but the dissertation.

Students should seek a dissertation supervisor and in consultation with 
that professor form a committee with two other faculty members.

Students must submit to the DGS the dissertation prospectus, along 
with a "Dissertation Prospectus Approval" form by October 1 of the 4th 
year (3rd year if the student entered with a transferable MA degree).

Students must submit to the DGS a dissertation chapter that shows 
significant progress beyond the Qualifying Paper by February 1 of the 
4th year (3rd year if the student entered with a transferable MA degree).

Students must submit to the DGS an additional dissertation chapter 
that is different from the first one by February 1 of the 5th year (4th year 
if the student entered with a transferable MA degree).

For more information about graduation requirements see the 
Dissertation Guidelines at the Tulane Graduate Studies (https:// 
liberalarts.tulane.edu/academics/graduate-studies) website.

Annual Review
The Department will conduct an annual review at which faculty 
members review the progress of graduate students. The meeting will 
be held during the spring semester, typically around March 1, and at the 
meeting a warning might be issued to a student to either

1. end funding or
2. terminate a student from the program.

A student will be automatically dismissed from the program, subject to 
a review by the whole department, if

1. he or she failed the qualifying paper,
2. has a preponderance of B grades (or lower),
3. has two B- grades (or lower), or
4. a C+ grade (or lower) in their classes.

In addition, the department can vote to warn the student that

1. funding will be terminated or
2. the student will be dismissed from the program if – among other 
   possible reasons –
   a. the student has three or more B grades (or lower),
   b. misses one of the deadlines stated above,
   c. has a weak qualifying paper, or
   d. shows insufficient progress in his or her dissertation.

The department has to state the cause for concern in the warning 
letter, and after being warned, students would have a semester to 
markedly improve their performance as well as present any evidence 
that might put their performance in a different light. Without this, the 
initial department vote would take effect after the semester is over, and either

1. the funding would be terminated, or
2. the student would be dismissed from the program.

Progress Requirements for Students 
Receiving External Fellowships
Students on a fellowship or leave for a year must show substantial 
evidence of work they have completed. This would typically be 
two chapters of the dissertation, or one chapter along with papers 
for publication or presentation, which should be submitted to the 
dissertation Director and Graduate Director. Further support in the 
program, such as continuation of the graduate stipend or adjunct 
teaching, will depend on meeting this requirement.

Summary of Deadlines

Coursework
September 1: all materials for any "Incomplete" grade from a course 
during the previous academic year are due

Qualifying Paper
- Two weeks before the last day of the Spring semester of the 
  2nd year (1st year if the student entered with a transferable MA): 
  proposal for the Qualifying Paper due to the Director of Graduate 
  Studies
- October 1 of the 3rd year (2nd year if the student entered with a 
  transferable MA): Qualifying Paper due
- November 15: Faculty must report grades on the Qualifying Paper
- February 1 of the 3rd year (2nd year if the student entered with a 
  transferable MA): revised Qualifying Paper due (if the original 
  submission must be revised due to receiving one "Fail" grade or one 
  or more "Revise and Resubmit" grades)
- March 1: Faculty must submit the final grade for the Qualifying 
  Paper to the Director of Graduate Studies

Dissertation
- "Admission to Candidacy" form due to the Director of Graduate 
  Studies upon the completion of all requirements for the Ph.D. 
  except the Dissertation
- October 1 of the 4th year (3rd year if the student entered with a 
  transferable MA): the Dissertation Prospectus, and a "Dissertation 
  Prospectus Approval" form, due to the Director of Graduate Studies
- February 1 of the 4th year (3rd year if the student entered with a 
  transferable MA): a Dissertation chapter that shows significant 
  progress beyond the Qualifying Paper due to the Director of 
  Graduate Studies
- February 1 of the 5th year (4th year if the student entered with 
  a transferable MA): Additional Dissertation chapter due to the 
  Director of Graduate Studies
Annual Review
• March 1: Annual Review of graduate students conducted by the faculty

• Political Science/International Development Minor (p. 136)

Graduate
• Political Development, PhD (p. 136)

Political Science Major

Students majoring in political science are challenged to think creatively and analytically about historically and currently relevant topics. Through participation in lectures, seminars, internships, and independent studies, our students develop critical reasoning, communication, data analysis, and reflectional skills.

Many graduates go on to obtain advanced degrees in law, business, public policy, political science, and public administration. Others apply their degree to relevant career employment, pursuing work in political campaigns, lobbies, non-profit foundations, think tanks, corporations, public relations firms, news organizations, government, and international organizations.

Requirements

TO DECLARE A POLS, PSIR OR PSDV MAJOR: Pick up a major-declaration form from your academic advisor and bring it to the office of our Director of Undergraduate Studies, Prof. Brox (302 Norman Mayer), during his office hours: Wednesday 10-12 and 1-3. You will be assigned a major advisor at that point.

Please note, you cannot declare two political science majors. You must choose either POLS, PSIR or PSDV.

</tr>
</tbody>
</table>

Select one additional course (3 credits) beyond the SLA foreign-language requirements

Electives

Select at least six electives in political science

1  
Political Science (POLS) majors who are double majors in Sociology or Psychology may satisfy this requirement through the successful completion of SOCI 3030 Intro To Research Design (3 c.h.), PSYC 3090 Univariate I & Lab (4 c.h.). Equivalent courses from other departments or schools may also satisfy this requirement for any student majoring in Political Science, as determined by the Department Chair or Undergraduate Studies Director.

2  
No more than four of these courses can be in any single subfield (POLA, POLC, POLI, or POLT).

Pre-requisites

For all major tracks (POLS, POLI, & PSDV), students must have successfully completed POLS 2010 Scope/Methods Poli Sci (3 c.h.) and the correlating introductory course in order to enroll in any course above the 3000-level. For example, students must complete POLA 2100 American Government (3 c.h.) in order to enroll in POLA 4000 or 6000-level courses. Faculty may choose to add other pre-requisites to any course and are encouraged to do so in any case in which they feel that doing so would improve student preparation for and performance in their own courses. Non-major juniors and seniors may enroll in courses at the 4000-level or above with the consent of the instructor. The Political Science department enforces all pre-requisites. Students must have successfully completed a pre-requisite the semester before registering for any class. The department reserves the right to drop students who are missing the pre-requisite from the course without notice.

Level of Coursework

• Students must successfully complete at least two courses at the 4000 level or above. This does not include internships, independent studies, or honors thesis credits.
• Students must successfully complete either one course at the 6000 level or one 4-credit writing intensive course in political science. Honors thesis credits do not count as political science writing courses.
• Students may not exceed six credits of internship toward their total hours of graduation and can count only one internship course (POLS 4560 Internship (1,3 c.h.) toward the major requirements.

Political Science Minor

Students minoring in political science (https://liberalarts.tulane.edu/departments/political-science) are challenged to think creatively and analytically about historically and currently relevant topics. Through participation in lectures, seminars, internships, and independent studies, our students develop critical reasoning, communication, data analysis, and reflectional skills.
Many graduates go on to obtain advanced degrees in law, business, public policy, political science, and public administration. Others apply their degree to relevant career employment, pursuing work in political campaigns, lobbies, non-profit foundations, think tanks, corporations, public relations firms, news organizations, government, and international organizations.

Requirements

A minor in political science consists of six courses in political science, in at least two different subfields, with at least three courses at the 3000-level or above.

Political Science/ International Relations Major

Students majoring in political science (https://liberalarts.tulane.edu/departments/political-science) are challenged to think creatively and analytically about historically and currently relevant topics. Through participation in lectures, seminars, internships, and independent studies, our students develop critical reasoning, communication, data analysis, and reflectional skills.

<tbody>
<tr>
<td>POLC 6110</td>
<td>Comparatv Political Econ</td>
<td>3</td>
</tr>
</tbody>
</table>

Foreign Language Component

Students must complete one additional three-credit course beyond the SLA foreign-language requirements.

Electives

SIX courses, at least THREE of which must be in either International Relations (POLI) and/or Comparative Politics (POLC). Not more than FOUR of the electives may be in any single subfield (POLA, POLC, POLI, or POLT).

1 A course in the political economy department (such as PECN 3040 Comp & Intl Pol Econ (3 c.h.)) that is approved by the political science department's director of undergraduate studies may also be considered. POLI 3540 International Political Economy (3,4 c.h.) and POLC 6110 Comparatv Political Econ (3 c.h.) can count for either the Economics Component or an Elective but not both.

2 Not more than FOUR of the electives may be in any single subfield (POLA, POLC, POLI, PSDV or POLT).

Pre-requisites

For all major tracks (POLS, POLI, & PSDV), students must have successfully completed POLS 2010 Scope/Methods Poli Sci (3 c.h.) and the correlating introductory course in order to enroll in any course above the 3000-level. For example, students must complete POLA 2100 American Government (3 c.h.) in order to enroll in POLA 4000 or 6000-level courses. Faculty may choose to add other pre-requisites to any course and are encouraged to do so in any case in which they feel that doing so would improve student preparation for and performance in their own courses. Non-major juniors and seniors may enroll in courses at the 4000-level or above with the consent of the instructor. The Political Science department enforces all pre-requisites. Students must have successfully completed a pre-requisite the semester before registering for any class. The department reserves the right to drop students who are missing the pre-requisite from the course without notice.

Level of Course Work

- At least two courses need to be at the 4000-level or above. This does not include internships, independent studies, or honors thesis credits.
- Either one course at the 6000 level OR one four-credit writing intensive course in political science. This course cannot be “double-counted” and used to fulfill the requirement above; in other words, it does not count toward the “two classes at the 4000-level or above” requirement.
- Students may not exceed six credits of internship toward their total hours of graduation and can count only one internship course (POLS 4560 Internship (1,3 c.h.)) toward major requirements.

Political Science/ International Development Major

Students majoring in political science (https://liberalarts.tulane.edu/departments/political-science) are challenged to think creatively and analytically about historically and currently relevant topics. Through participation in lectures, seminars, internships, and independent
studies, our students develop critical reasoning, communication, data analysis, and reflectional skills.

Foreign Language Component

Students must complete one additional three-credit course beyond the SLA foreign-language requirements. Course must be taught in the target language.

Electives

FIVE courses, at least ONE must be a PSDV class. At least TWO must come from outside of Political Science (see the approved list of classes in the checklist).

Pre-requisites

For all major tracks (POLS, POLI, & PSDV), students must have successfully completed POLS 2010 Scope/Methods Poli Sci (3 c.h.) and the correlating introductory course in order to enroll in any course above the 3000-level. For example, students must complete POLA 2100 American Government (3 c.h.) in order to enroll in POLA 4000 or 6000-level courses. Faculty may choose to add other pre-requisites to any course and are encouraged to do so in any case in which they feel that doing so would improve student preparation for and performance in their own courses. Non-major juniors and seniors may enroll in courses at the 4000-level or above with the consent of the instructor. The Political Science department enforces all pre-requisites. Students must have successfully completed a pre-requisite the semester before registering for any class. The department reserves the right to drop students who are missing the pre-requisite from the course without notice.

Level of Course Work

- At least two courses need to be at the 4000-level or above. This does not include internships, independent studies, or honors thesis credits.
- Either one course at the 6000 level or one four-credit writing intensive course in political science. This course cannot be “double-counted” and used to fulfill the requirement above; in other words, it does not count toward the “two classes at the 4000-level or above” requirement.
- Students may not exceed six credits of internship toward their total hours of graduation and can count only one internship course (POLS 4560 Internship (1,3 c.h.)) toward major requirements.

Political Science/ International Development Minor

Students majoring in political science (https://liberalarts.tulane.edu/departments/political-science/) are challenged to think creatively and analytically about historically and currently relevant topics. Through participation in lectures, seminars, internships, and independent studies, our students develop critical reasoning, communication, data analysis, and reflectional skills.

Many graduates go on to obtain advanced degrees in law, business, public policy, political science, and public administration. Others apply their degree to relevant career employment, pursuing work in political campaigns, lobbies, non-profit foundations, think tanks, corporations, public relations firms, news organizations, government, and international organizations.

Requirements

A minor in political science with a concentration in international development (PSDV) consists of six courses, including PSDV2400 (Intro to International Development) and PSDV3200 (Development Issues and Strategies), either ECON1020 (Macroeconomics) OR POLI3450 (International Political Economy), and three electives. All of the electives must be 3000-level or above, at least one must be PSDV and at least one from the department approved list.

Political Development, PhD

The new interdisciplinary PhD program in Political Development (https://liberalarts.tulane.edu/departments/political-science/...
academics/graduate) focuses on the development of political institutions over time and the ways in which they facilitate or impede adaptation to rapidly changing circumstances under the impact of globalization. The formation of political institutions, their evolution, their sources of change, their distributional effects, how they organize cooperation, and how they resolve or fail to resolve conflict have stimulated some of the most prominent theorizing in the study of politics. The emphasis on the development of political institutions invites multidisciplinary approaches. By their very nature political institutions affect the organization of the economy, the distribution of life chances in society, and cultural values; which are, of course, the concern of economics, sociology and anthropology. Because political development has a time dimension and its conceptualization and normative orientation are open to contestation it is of great interest to historians and philosophers.

Based on the strengths of the faculty in the Department of Political Science, and in collaboration with faculty from other units, the PhD in PD will train students in two broad, integrally connected areas of research: the quality of government institutions and the policy process more generally in the search for solutions to pressing public policy issues; and the design of political institutions for the protection and exercise of rights and the politics that go into their making, including pressure from civil society.

The program will develop these skills in two core substantive fields: (1) the political economy of political development; (2) the politics of the institutionalization of rights.

Collaboration with Other Tulane Programs

The PhD in PPD offers rich opportunities for collaboration with faculty from other units. They will be critical resources for the specialization of students in the PD program.

The PhD in PD builds on Tulane’s outstanding resources and tradition of scholarship on Latin America, embodied in the Stone Center for Latin American Studies (https://stonecenter.tulane.edu) and the Center for Inter-American Policy and Research (http://cipr.tulane.edu). The Murphy Institute’s seminars with an emphasis on political economy, rights and policy will enrich our student’s experience and vice versa. Students interested in urban politics can draw on the recently established interdisciplinary PhD program in City, Culture and Community (CCC) (p. 155) with its focus on “interdisciplinary research aimed at understanding the causes and consequences of urban social problems, relationships between global processes and local change, and the challenges of sustainable development” as well as its concern with urban policy and the post-Katrina recovery of New Orleans. Students interested in global community health and global environmental health may work with faculty from the Institute for Global Health (https://ogh.tulane.edu). The PhD in PD’s concern with political institutions for rule of law and institutional organization offer opportunities for interaction with the Law School (p. 82) and the Business School (p. 58).

Requirements

To advance to candidacy, students need to complete 48 credits of coursework, pass two qualifying exams, and successfully defend a dissertation prospectus. Of the 48 credits of coursework, 30 credits consist of required courses in the Political Science department. The remaining 18 credits will consist of electives taken in the Political Science department and in other departments that offer relevant courses. Independent-study courses, worked out between individual students and a faculty member, may count as elective credit and may under certain circumstances be undertaken over the summer. At least 9 credits of coursework must be completed outside the Political Science department. Foreign language courses will count as elective credit only with the approval of the Director of Graduate Studies.

**Semester 6:**
Dissertation Prospectus Defense
POLS 7116 | Graduate Professional Skills | 3

Total Credit Hours 48

Exams

During their fifth semester, students will take qualifying exams in the two areas of substantive concentration. Each exam will consist of two parts: a “field exam”, and an interdisciplinary “substantive concentration exam.” Exams will be written and by the end of the sixth semester both exams must be passed.

Teaching

During their graduate training, students may be required to teach for at least two semesters, at least one of which will be an introductory course on Political Development.

Dissertation

Dissertation committees will include three or, at most, four professors, with a chairperson from Political Science and at least one member outside of the Political Science Department. Students are required to take seminars on grant writing (the Professional Skills Seminar) and
dissertation prospectus preparation during their fifth semester; and, by the end of their third year, students will present a written prospectus for dissertation research and conduct an oral defense before their committee. On defending their prospectus, students will advance to candidacy, and will have three years in which to complete their dissertation.

Department of Sociology

Programs

Undergraduate

Major

Minor
- Sociology Minor (p. 138)

Sociology Major

Welcome to the Department of Sociology at Tulane University. Sociology is the study of social life, social change, and the social causes and consequences of human behavior.

Tulane Sociologists use a variety of theoretical approaches and research methods to investigate the structure and processes of groups, organizations, and societies, and how people interact within these various contexts.

Tulane Sociologists are committed to excellence in teaching, research, and service. We provide undergraduate and graduate students with exceptional opportunities to learn valuable, life-long transferable skills in critical thinking, data collection, data analysis, and communicating research to a public audience.

Requirements

To major in sociology a student must complete a minimum of 27 credits (nine three-credit courses) taken from courses offered by the department.

Note: None of the courses taken in fulfillment of the sociology minor may be used to fulfill the requirements of other majors or minors.

Department of Spanish and Portuguese

Programs

Undergraduate

Majors
- Portuguese Coordinate Major (p. 138)
- Spanish and Portuguese Major (p. 139)
- Spanish Major (p. 140)

Minors
- Portuguese Minor (p. 139)
- Spanish Minor (p. 141)

Graduate
- Spanish and Portuguese, MA (p. 139)
- Spanish and Portuguese, PhD (p. 141)
- Spanish, MA (p. 140)

Portuguese Coordinate Major

The Department of Spanish and Portuguese is dedicated to the study of languages, literatures, and cultures of Latin America and the Iberian
Peninsula. Our department offers a wide variety of undergraduate classes, from basic language instruction in Spanish and Portuguese to upper-level courses in literature, culture, and film. Undergraduates may pursue majors and minors in Spanish and Portuguese, or a Joint Major in Spanish and Portuguese.

**Requirements**

Students majoring in Portuguese must complete ten courses (30 credits) beyond the 2000 level. All majors must take at least three 6000-level courses except for Junior Year Abroad students, who are required to take two 6000-level courses in the department. The Portuguese Major is classified as a coordinate major, meaning that it must be paired with a separate primary major (for example, Latin American Studies, Public Health, etc) and cannot be taken as a student's sole major. Students complete their writing intensive requirement and service learning requirement through the primary major.

**Portuguese Minor**

The Department of Spanish and Portuguese is dedicated to the study of languages, literatures, and cultures of Latin America and the Iberian Peninsula. Our department offers a wide variety of undergraduate classes, from basic language instruction in Spanish and Portuguese to upper-level courses in literature, culture, and film. Undergraduates may pursue majors and minors in Spanish and Portuguese, or a Joint Major in Spanish and Portuguese.

**Requirements**

A minor in Portuguese consists of 15 credits above the 2000 level, at least one of which must be at the 6000 level. The courses should be selected in consultation with the major adviser and according to the interest of the student, whether in language, literature and culture, or a combination.

**Spanish and Portuguese Major**

The Department of Spanish and Portuguese is dedicated to the study of languages, literatures, and cultures of Latin America and the Iberian Peninsula. Our department offers a wide variety of undergraduate classes, from basic language instruction in Spanish and Portuguese to upper-level courses in literature, culture, and film. Undergraduates may pursue majors and minors in Spanish and Portuguese, or a Joint Major in Spanish and Portuguese.

**Requirements**

Students pursuing the joint major in Spanish and Portuguese must complete 34 credits (eleven courses) to be distributed as follows:

<table>
<thead>
<tr>
<th>Course ID</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>3000-Level</td>

<td>Select any 6000-level course in Portuguese</td>
<td>3</td>
</tr>
<tr>
<td>6000-Level</td>
<td>SPAN 6850 Senior Sem Major Authors</td>
<td>4</td>
</tr>
</tbody>
</table>

Total Credit Hours 34

All courses in the major must be taken in sequence, although two sequential classes may be taken simultaneously. Students may not receive credit for courses taken out of sequence.

**DOUBLE MAJORS**

Double majors must complete 31 credits (ten courses + writing intensive) in the Spanish and Portuguese joint major, with a reduction of one 6000-level course. Double majors may receive credit for one course taught in English, not to be counted above the 4000 level.

**Spanish and Portuguese, MA**

We do not offer a stand-alone M.A. degree in Spanish or Spanish and Portuguese. Only undergraduate majors at Tulane may apply to the 4+1 M.A. Degree Program which allows them to earn the M.A. degree in Spanish or the joint M.A. degree in Spanish and Portuguese in one year. This program is ideally suited to students interested in deepening their knowledge of Hispanic or Luso-Brazilian literature and cultural studies before attending professional school or going on to pursue any of the many careers today for which expertise in Spanish and Portuguese cultures and languages is an asset. Many students enrolled in this program also pursue a teaching certificate through Tulane’s Teacher Preparation and Certification Program (https://teacher.tulane.edu).

**Applying**

Interested students must complete an online application form available through the Office of Graduate Programs of Tulane's School of Liberal Arts (https://liberalarts.tulane.edu/academics/graduate-studies/prospective-students). They must also submit a statement of purpose and two letters of recommendation, at least one of which should be from a professor in the Department of Spanish and Portuguese. The annual application deadline is February 1.

**Requirements**

**Undergraduate Component**

By the end of the junior year, candidates should have completed all Newcomb-Tulane distribution requirements for the B.A. degree, and all "core" requirements for the Spanish or joint Spanish and Portuguese major. In addition, candidates are required to have a minimum cumulative GPA of 3.25 in the major by the close of the junior year. By the end of the senior year, candidates will have completed all requirements for the B.A. degree in Spanish or Spanish and Portuguese.

**Fifth (Graduate) Year**

In the fifth year, 21 semester hours of graduate (6000 or 7000 level) courses will be completed in the Department of Spanish and Portuguese. Subject to departmental approval, three semester hours (one course) toward the graduate degree can be taken in another graduate department or school (e.g. English, French, Women Studies, ADST, Communications). There is no thesis requirement or comprehensive exam.
Spanish, MA

We do not offer a stand-alone M.A. degree in Spanish or Spanish and Portuguese. Only undergraduate majors at Tulane may apply to the 4+1 M.A. Degree Program which allows them to earn the M.A. degree in Spanish or the joint M.A. degree in Spanish and Portuguese in one year. This program is ideally suited to students interested in deepening their knowledge of Hispanic or Luso-Brazilian literature and cultural studies before attending professional school or going on to pursue any of the many careers today for which expertise in Spanish and Portuguese cultures and languages is an asset. Many students enrolled in this program also pursue a teaching certificate through Tulane’s Teacher Preparation and Certification Program (https://teacher.tulane.edu).

Applying

</table>

\(^1\) SPAN 3040 Spanish Grammar and Writing (3 c.h.) is a prerequisite for all other 3000 level courses; it may be taken in the same semester as other 3000 level courses.

\(^2\) SPAN 4060 Pre 20th Century Reading (3 c.h.) is a prerequisite for all other courses at the 4000-level and above. This course may be taken simultaneously with the last 3000-level course or any other 4000-level course.

\(^3\) Pending approval, relevant internships may count as a one credit elective but do not count towards the major or minor.

Sequence of Courses

All courses in the major must be taken in sequence, although two sequential classes may be taken simultaneously (except 3040 or 3050 or 3060 which are prerequisites for other courses at 3000 level).

Students may not receive credit for courses taken out of sequence.

Pre-#20th Century Requirement

Each student is required to take ONE pre-twentieth-century course at 4000 level (besides 4060)

The following courses satisfy the pre-twentieth-century requirement:

4000 level (SPAN4060 does not satisfy this requirement)

Other courses may also apply with departmental approval.

Double Majors
Double majors must complete 31 credits (10 courses + writing intensive) in the Spanish major, with a reduction of one 6000-level course. Majors may receive credit for one course taught in English.

Native and Heritage Speakers
Native speakers of Spanish begin the major with SPAN 4060. Additionally, they complete any seven courses at the 4000 level, as well as the three requirements at the 6000 level.

Native speakers complete the minor with number SPAN 4060, plus five additional 4000-level courses.

Native speakers may not enroll in courses at the 3000 level.

Heritage speakers of Spanish must meet with the Director of Undergraduate Studies to determine their placement in the program.

Spanish Minor

The Department of Spanish and Portuguese is dedicated to the study of languages, literatures, and cultures of Latin America and the Iberian Peninsula. Our department offers a wide variety of undergraduate classes, from basic language instruction in Spanish and Portuguese to upper-level courses in literature, culture, and film. Undergraduates may pursue majors and minors in Spanish and Portuguese, or a Joint Major in Spanish and Portuguese.

Requirements
The Spanish minor consists of 18 credits (six courses), which are constituted by the 3 sections below, plus any other three 4000-level courses. Students are encouraged, but not required, to take SPAN 4060. Minors may not receive credit for courses taught in English.

Spanish and Portuguese, PhD

Tulane University is home to one of the country’s leading Ph.D. programs in Spanish and Portuguese. Our faculty consists of nationally and internationally recognized scholars and teachers in the literatures and cultures of Spain, Portugal, Spanish America, Brazil, and Lusophone Africa, in addition to linguistics. Tulane’s Howard-Tilton Library contains extensive holdings that support our respective fields, including the Latin American Library (http://lal.tulane.edu), one of the largest collections of its kind in the United States. Tulane is also home to the Stone Center for Latin American Studies (http://stonecenter.tulane.edu), a renowned center of comparative and interdisciplinary study on Latin America, which has also been a generous source of research support for Tulane graduate students.

The goal of the Ph.D. program is to prepare students to become scholars and teachers of the highest quality. Together with coursework, graduate students participate in an extensive teaching and pedagogy development, which entails taking a course in modern language pedagogy and teaching at most one course per semester in the department’s basic language and literature curriculum. Additionally, the department offers a yearly course on grant writing, the academic job market, and other key topics of professional development. Our Ph.D.’s have consistently obtained tenure-track appointments at leading colleges and universities in the United States and abroad.

All students in the graduate program receive a tuition waiver and four or five years of stipend support. For students entering the program without an M.A., five years of funding is granted; after year one those students teach one course per semester. Students who begin the program with an outside M.A. receive four years of funding and teach one course per semester. All students are eligible for a full dissertation writing fellowship in their final year of study.

Applying
Applications are made online through the Office of Graduate Programs of Tulane’s School of Liberal Arts (https://liberalarts.tulane.edu/academics/graduate-studies/prospective-students). The annual application deadline is February 1. The following are required: complete application form, GRE scores, TOEFL scores for foreign students, academic transcripts, statement of purpose, and three letters of recommendation (in English, Spanish, or Portuguese). In addition to the materials required by the School of Liberal Arts, applicants must submit a sample of academic writing in Spanish or Portuguese.

In addition, see the Department’s page on Frequently Asked Questions (https://liberalarts.tulane.edu/sites/g/files/rdfw466/f/sites/default/files/FAQ-for-website-Aug-2016-2.pdf) about graduate admission.
Further questions may be directed to the Department of Spanish and Portuguese (spanportgrad@tulane.edu).

We look forward to your application!

**Requirements**

- Course work: 17 courses in total (51 credits), including SPAN 6010 Method Tchg Span & Port (3 c.h.) and 4 7000-level seminars, including SPAN 7960 Ph.D Prep & Professional Dev (3 c.h.). A select number of courses may be taken outside the department, with permission of the faculty.

- M.A. comprehensive exam: Based on reading lists in four areas (Medieval and Early Modern Iberian; Modern Spanish Peninsular; Colonial and 19th-Century Latin American; Contemporary Latin American)

- Reading proficiency in two foreign languages in addition to the language of specialization

- Ph.D. qualifying exam: Based on customized reading lists in one major area of specialization and two minor areas

- Dissertation prospectus

- Dissertation and final defense

For further information on the expectations of the program, see the Spanish and Portuguese Graduate Student Handbook (https://liberalarts.tulane.edu/sites/g/files/rdw466/f/sites/default/files/Grad-Stud-Handbook-revised-April-17.pdf).

- US/Caribe Social Dance
- Dance Composition III
- Laban Movement Studies (with S/L)
- Conditioning for Dance
- Choreography & Media
- Senior Choreographic Project (Senior Standing required)
- Special Topics
- Building Comm Thru Arts (with S/L)
- Design For Dancers
- Production & Design I
- Fundamentals of Lighting

Select one other 3-credit course from the university by proposal and approval of the dance faculty as related to dance.

**Total Credit Hours**

33

### Dance Technique (12 credits)

BA Dance majors must achieve Level III in either ballet or modern dance and Level IV in the other dance style to fulfill the degree requirements for graduation. Note: a minimum of two semesters of ballet and a minimum of two semesters of modern dance are required. Two semesters of Level III or Level IV jazz will be accepted toward the dance technique requirement. Students will be evaluated at the end of each academic year. Dance majors must continue to be enrolled in technique classes through graduation. For the BA dance candidate, the maximum number of dance technique credits that may count toward the 120 hours needed for graduation is 24 credits.

Select one other 3-credit course from the university by proposal and approval of the dance faculty as related to dance.

**Total Credit Hours** 33

**Dance Technique (12 credits)**

BA Movement Arts students must achieve a Level II standing or above for graduation. Note: a minimum of two semesters of ballet and a minimum of two semesters of modern dance are required. Students will be evaluated at the end of each academic year. Movement Arts students must continue to be enrolled in technique classes through graduation. For the BA Movement Arts candidate, the maximum number of dance technique credits that may count toward the 120 hours needed for graduation is 24 credits.

**Dance, BFA**

The B.F.A. curriculum in dance emphasizes professional level training within a liberal arts setting while focusing on the development of technical abilities, choreographic skill, teaching methods, dance technology, movement studies, the study of dance history, and other dance related courses. The program strives to unite academic and artistic inquiry with a wide range of course offerings in both practice and research. **Audition is required.**

**Requirements**

The major requires 57 credits as follows:

**Note:** Auditions are required for the BFA degree. Candidates audition in the spring semester of their sophomore year. They may audition for the BA in their first year. BA auditions are held every year in the fall semester.

Dance Technique
Students must achieve level IV in either ballet or modern dance technique and level III in the other in order to graduate and will be evaluated at the end of each academic year. Students who demonstrate proficiency at the technique level III in modern dance or ballet (DANC 3830 Intensive Modern Dance III (3 c.h.), DANC 3840 Intensive Ballet III (3 c.h.)) will be placed at level IV (DANC 4830 Intensive Modern Dance IV (3 c.h.), DANC 4840 Intensive Ballet IV (3 c.h.)). Each of these courses may be repeated for credit. Dance majors must continue to be enrolled for credit in ballet and modern dance through graduation. BFA candidates are required to enroll in both Intensive Modern Dance (4-day) and Intensive Ballet (4-day) each semester at their proper level III or IV. For the BFA candidate, the maximum number of dance technique credits that may be counted toward the 120 credit hours for graduation is 30 credits.

Interdisciplinary Dance Performance, MFA
Through the lens of movement and performance making, the Interdisciplinary Dance Performance (IDP) MFA program is envisioned to provide graduate opportunities for scholarly investigation in diverse disciplines that directly link to creative practice and performance making. The program is designed to create performance practitioners who understand the intellectual ramifications of their work and scholars who understand the practical applications of their theories. That is, the research in any given discipline will be source material for the creative work and creative work will illuminate and integrate research.

Total Credit Hours 27-29

Curriculum Timetable, Interdisciplinary Dance Performance (IDP) MFA, 3 years

- First Year: Creative Projects, Movement Practice, Seminar I and II, Laban Movement Studies, Interdisciplinary Courses, Work/Study in design shops, choreography for undergraduates, choreography for Young Performers/Split-Shift each semester.
- Second Year: Creative Projects, Movement Practice, Choreography and Media, Teaching Practices, Interdisciplinary Courses, Work/Study teaching undergraduates, choreography for undergraduates, choreography for Young Performers/Split-Shift each semester, thesis proposal at end of fall semester.

Total – 58 minimum credits

Interdisciplinary courses to be coordinated with respective departments. Summary due at end of each semester for dance faculty outlining courses completed and relationship to IDP MFA.

Theatre Design and Production, MFA
The Master of Fine Arts degree in Design at Tulane University offers an in-depth study of theatrical design areas with an emphasis on preparing the student for a career in the professional theatre or as a teacher of a specialized field at the university level. Applicants to the program must have completed an undergraduate degree in theatre or have had equivalent training and experience.

The Master of Fine Arts degree in Design places concentration and emphasis on design as a collaborative process with equal emphasis
on technical and creative skills as learned both through classwork and practical production.

The program is a three-year program. Two and a half years are spent in residence and one semester of the third year in an internship with a professional theatre. Students with an MA in design or production may, at the discretion of the faculty, complete their degree sooner. Normally, 48 hours of course work are required for completion of the degree. In addition, twelve hours are earned with the internship assignment and a thesis production.

It is the philosophy of the design faculty that the design process is best taught through the realization of designs in actual production situations. Each year, the Department of Theatre and Dance provides a number of opportunities for such realized design projects. The department produces three to four mainstage productions and one dance concert each year directed by faculty or guest directors. Students in design and technical direction are assigned to these projects as their skills develop. The Third Year Thesis Project becomes the culmination of a number of realized projects. The selection of this production is intended to provide a showcase of each student’s talents and skill. Each student’s work is reviewed by the faculty on a semester-to-semester basis.

Admission

Admission to the MFA Design program is highly selective and only a small number of candidates are selected every other year. This ensures each student considerable production experience as well as continual one-on-one contact with Theatre Design faculty. Prospective applicants are referred to the Graduate Program in the School of Liberal Arts for application materials and a catalog outlining further requirements and deadlines.

Please note that while the university states a February 1 application deadline, the department extends its deadline past that date as we traditionally recruit at USITT in March. Admission to the program is based primarily on consideration of the candidate’s academic ability as evidenced by his/her undergraduate GPA, previous theatre experience, and portfolio. The GRE is no longer required.

Ideally, the design faculty would like the opportunity to look at the applicant’s portfolio during an interview. However, if an interview is not possible, the department will request that the applicant send a portfolio of representative work for review. Please do not send your portfolio with your application; wait until it is requested by the department.

Areas of Specialization

Tulane University Theatre Department offers Scene Design, Costume Design, Lighting Design, and Technical Direction as areas of specialization within the framework of the Master of Fine Arts Degree.

An MFA in Design candidate must select one of these areas of concentration and is urged to select a secondary area of specialization as well.

An MFA student is required to take all courses stipulated as core courses for a major in design. In addition, a sequence in the area of specialization (listed below under electives) is required. If a secondary area of specialization is also elected, six units in that area, from the elective list, are required.

Whenever possible, the design faculty utilizes class time as an opportunity to supervise closely the work of a student who is holding a design assignment in a given semester. For instance, if a student is enrolled in Costume Design and is also designing costumes for a production in the same semester, the design assignment will be substituted for one or more design projects.

Reviews

At the end of each semester, design students are required to attend the design gallery and an individual MFA review with the faculty. In the gallery, the student presents a record of his or her most representative work in the program and should be prepared to answer questions regarding that work. These reviews provide the all of faculty with the chance to see the work of individual students and exchange ideas and commentary on the student’s progress. During their reviews, in addition to reviewing their work, students have an opportunity to voice their needs for further development within the program.

The end of the semester review is intended as a positive meeting for evaluation and discussion of a student’s work. If, however, a student’s work (or attitude) is evaluated as undesirable or sub-standard, the student may be placed on probationary status the following semester. If the quality of the student’s work has not improved by the end of the probationary semester, the student will be asked to leave the program. In some cases where either a student’s work, attitude, or grades are deemed so unsatisfactory that their continuation in the program would be of no benefit to either them or the department, dismissal may be considered, in consultation with the Dean of the School of Liberal Arts. The student will be notified of his or her status in written form following their review each semester.

Production Assistantships/Stipends

Tulane University requires that each graduate student commit 15-20 hours a week of service to the department in which the student is involved. This is required of a student regardless of acceptance or non-acceptance of a stipend. Any student offered an assistantship will be granted a full tuition waiver. Currently, all of our graduate students receive a stipend and a full tuition waiver.

Professional Internships

The program recommends that all MFA candidates in Design or Technical Production spend one semester of their third year as an intern in a professional theatre. This gives the student an opportunity to apply, in a purely production environment, the educational experiences of the first two years of graduate training. Further, it provides employment contacts which should be invaluable upon completion of the MFA.

During the internship, the University continues to provide the graduate stipend. While the choice of theatre and arrangements for the position are primarily the responsibility of the student, the student’s faculty advisor makes every effort to aid in finding a satisfactory position.
Design Options
In addition to the departmental productions, there are a number of other opportunities for design open to graduate students that the design faculty encourages its students to explore.

Operated in conjunction with the Department of Theatre and Dance at Tulane University, The New Orleans Shakespeare Festival at Tulane is a professional resident theater company with a summer repertory. Students in the graduate programs of Design and Technical Production are encouraged to spend at least one summer on staff, and are given some consideration in the technical and design positions available. There are other opportunities both on and off campus.

Requirements
The required credits for a Design Major is 60 hours.

Total Credit Hours 23

Theatre, BA

The department offers a Bachelor of Arts with concentrations in Performance, Design, or Theatre Generalist. Admission to the BA
in Performance is by audition. These are typically scheduled once a semester.

Students interested in Design should submit a letter of application to the Head of the Design Program, requesting admission into the track.

Students interested in being theatre majors are strongly encouraged to seek departmental advisement to create a curriculum plan, especially if considering either a semester or year abroad. Majors should finish the core curriculum as early as possible, as they are prerequisites for all other departmental courses.

Requirements

An early decision to major in theatre is highly encouraged. Majors should finish the core curriculum as early as possible, as they are prerequisites for all other departmental courses. All majors are put into a general category when first declaring a major. Those interested in design/technology should then apply for acceptance into that track. Auditions will be held each year for those interested in the performance track.

Graduate Studies

Students aiming toward graduate study in this discipline should take additional courses according to a planned sequence. Courses both in theatre and in such disciplines as English, history, music, art, and dramatic literature courses in classics, French, Italian, German, Russian, and English are expressly recommended for this purpose.

Theatre, BFA

The Bachelor of Fine Arts degree with an emphasis in design is intended for students who want professional training in theatre production. For admission to the program, students must apply no earlier than the end of the freshman year and no later than the first semester of their junior year, to the Head of the Design Program.

There currently is no BFA in Performance.

Requirements

An early decision to major in theatre is highly encouraged. Majors should finish the core curriculum as early as possible, as they are prerequisites for all other departmental courses.

Interdisciplinary Programs and Coordinate Majors

Programs

Undergraduate Majors

• Africana Studies Major (p. 149)
• Altman Program in International Business (p. 152)
• Asian Studies Major (p. 153)
• Cognitive Studies Coordinate Major (p. 155)
• Digital Media Production Coordinate Major (p. 156)
• Environmental Studies Major (p. 156)
Africana Studies Major

Africana Studies offers a broad course of interdisciplinary study relating to Africa, people of African descent, and the many different contexts of the African Diaspora around the world. Drawing on diverse methodologies and academic disciplines, Africana Studies teaches students to think analytically and critically about global Black experiences across space and time. Africana Studies also trains students to make intellectual connections among global, national, and local contexts. Building on the university’s strengths in the social sciences, behavioral sciences, and humanities, Africana Studies provides an intellectual center for teaching, research, and community engagement that prepares students to function effectively in a multicultural society and diverse international environments.

Students graduating with a degree in Africana Studies are well prepared with the cultural resources and tools needed to pursue most professional careers. Recent graduates have enrolled in graduate school, launched for-profit and not-for-profit businesses, and conducted relief work in various African countries. Others have pursued professional careers in medicine, social work, and law.

Students should note that more than half of the courses which count toward the Africana Studies Major are based in other Departments, Programs and Schools across the University. Students may take a wide range of electives in departments such as Art History, Communication, French, Music, Political Science or Psychology for example in order to complete the Africana Studies Major.

Requirements

Ten courses (minimum of 30 credits) are required for the major. The major consists of the following:

<table>

<td></td>
</tr>
<tr>
<td>Upper Level Courses:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Select at least four Upper Level courses at the 4000 level or higher. These courses may be 4000-level courses based in the Africana Studies Program OR 4000 and 6000 level courses based in other Departments and Programs, so long as those upper level courses have been approved for credit in the Africana Studies Major. ⁴</td>
<td>12</td>
<td></td>
</tr>
</tbody>
</table>

Total Credit Hours: 30

¹ This course is offered every semester.
² Note: Students are strongly encouraged to take this course during the Freshmen or Sophomore year however it may be taken by any student including Juniors and Seniors.
³ Upper level courses may also fill this requirement.
⁴ Upper level courses may also fill this requirement.
Limits: A maximum of six credits in Dance courses may count toward the major.

Language Courses: Language classes at any level in Arabic, Haitian Creole, Swahili, Twi, Xhosa, Yoruba and Zulu may all be counted for elective credit in the Africana Studies Major.

A maximum of three electives (nine credits) at the 1000 or 2000 levels may be counted toward major.

Students must ensure that at least four of the electives (twelve credits) are at the 4000-level or higher and no more than three electives (nine credits) are at the 1000- or 2000-levels. Students must fulfill the distribution component of at least two courses (six credits) in African studies and two courses (six credits) in African Diaspora studies. Students should try to choose elective courses from both the humanities as well as the social or behavioral sciences. A maximum of six dance credits may count toward the major.

**Other Electives**

The following courses do not meet the GEOGRAPHIC DISTRIBUTION requirements for African or African Diaspora credits. But all of these courses may be taken as general electives to fulfill the requirements of the major. (Most of these courses include coverage of both the African continent and the African diaspora around the world. This is the reason they do not fulfill Geographic Distribution Requirements.) Students may also petition to count any course related to African Studies or African Diaspora Studies, whether offered at Tulane or taken at another university, as a part of their major curriculum. Such petitions will be considered by the Program Director in consultation with Africana Studies Program faculty.
Africana Studies offers a broad course of interdisciplinary study relating to Africa, people of African descent, and the many different contexts of the African Diaspora around the world. Drawing on diverse methodologies and academic disciplines, Africana Studies teaches students to think analytically and critically about global Black experiences across space and time. Africana Studies also trains students to make intellectual connections among global, national, and local contexts. Building on the university’s strengths in the social sciences, behavioral sciences, and humanities, Africana Studies provides an intellectual center for teaching, research, and community engagement that prepares students to function effectively in a multicultural society and diverse international environments.

Requirements

Six courses (minimum of 18 credits) are required for the minor which includes:

1. **Introductory Course**
   - AFRS 2000 Intro to Africana Studies 1
   - Credits: 3

2. **Elective Courses**
   - Select at least one course in African Studies to fulfill Geographic Distribution
   - Credits: 3
   - Select at least one course in African Diaspora Studies to fulfill Geographic Distribution
   - Credits: 3
   - Select at least three Upper Level courses at the 3000 level or higher
   - Credits: 12

3. **Total Credit Hours**
   - Credits: 18

Additional Information

Students must ensure that at least three of the electives (nine credits) are at the 3000-level or above. Furthermore, students must choose elective courses from both the humanities as well as the social and behavioral sciences and must fulfill a distribution component of at least one course (three credits) in African Studies and one course (three credits) in African Diaspora Studies.

### Altman Program in International Business

The Altman Program in International Studies & Business is a special four-year undergraduate program that integrates liberal arts and business disciplines, extensive language instruction, and two study abroad experiences. Altman Scholars earn two degrees - a B.A. from the School of Liberal Arts and a B.S.M. from the A. B. Freeman School of Business.

The Altman Program provides students with an Altman-specific course each semester, a cohort summer study abroad trip between freshman and sophomore years, and logistical support for junior year abroad and internships. The program admits a cohort of 20 students who are selected before their matriculation at Tulane as freshmen.

### Requirements Curriculum

The Altman Program combines the curricula of two undergraduate degree programs: the School of Liberal Arts and the A. B. Freeman
School of Business. Students may major in finance, management, marketing, or legal studies at the Freeman School and may major in approved social science, area studies or language disciplines within the School of Liberal Arts. The link between the two majors in the schools is the interdisciplinary "Altman Core", a cohort-specific academic course every semester.

Specific courses open only to students in this program include a TIDES seminar; ISIB 3010 Introduction to Globalization (3 c.h.); ISIB 1910 Study Abroad Pre-Dep (1 c.h.); ISIB 2020 Special Topics (3 c.h.) ISIB 6010 Approaches to Global Dilemmas (3,4 c.h.); and ISIB 6020 Altman Senior Seminar (1 c.h.).

Asian Studies Major

The major in Asian Studies is designed so that students may pursue their particular areas of interest within the Asian Studies program offerings. The major consists of ten courses; students may fulfill these course requirements with courses taken for either three or four credits.

Specific measurable learning outcomes of students graduating with a major in Asian Studies:

- Possess at least an elementary proficiency in Chinese (Mandarin, Japanese, or Vietnamese).
- Possess at least a basic understanding of the historical, social, and cultural background of at least two of the three program-targeted regions, East Asia, South Asia, Southeast Asia.
- Able to locate, evaluate and utilize research materials germane to Asian Studies.
- Able to analyze and interpret specific issues and to develop arguments for research papers related to Asia.

Requirements

Course ID Title Credits
Select two courses in an Asian language (students who demonstrate proficiency in an Asian language may substitute other Asian Studies courses) 1 6
Select eight additional courses within Asian Studies 2 24
Total Credit Hours 30

1 Language courses taken in fulfillment of the foreign language may not count toward the major. No more than 4 Asian language classes may count toward the major.

2 ASTA 1800 Intro to Asian Studies (3 c.h.) and 2 courses from any two of the the targeted regions- East Asia, South Asia, Southeast Asian are required.

Additional Courses

1. Students should take at least one of the following gateway content courses that either introduce them to Asian Studies (ASTA 1800 Intro to Asian Studies (3 c.h.) core course) or expose them to the major disciplinary concerns of various fields of study that focus on Asia. Here is a current listing of the relevant courses:

3. Students need to complete a writing-intensive practicum in an Asian Studies course, Asian-related course, or a course approved by the Asian Studies Director.

China Studies within the Asian Studies Program

Students selecting to pursue the China track within the Asian Studies major must complete five Chinese-related classes as part of the overall requirements for the major. At least two Chinese language classes
must be included within the five required track courses. However, students who use Chinese language classes to fulfill the Newcomb-Tulane language proficiency requirement may elect to take five non-language courses to fulfill the track requirements. At least two of these courses must be at or beyond the 3000-level. No more than five Chinese language courses may be applied to the China track requirements. In addition, at least half of the required credits must be taken on the Tulane campus or through a Tulane approved off-campus program. In the case of special topics courses, only China-related topics will be considered and pre-approval is required from the Director of Asian Studies. Specific measurable learning outcomes of students graduating with a coordinate major in Asian Studies with a concentration in the China track.

- Possess at least an elementary proficiency in Chinese.
- Possess at least a basic understanding of the historical, social, and cultural background of China.
- Able to locate, evaluate and utilize research materials germane to Chinese studies.

**Japan Studies within the Asian Studies Program**

Students selecting to pursue the Japan track within the Asian Studies coordinate major must complete five Japanese-related classes as part of the overall requirements for the major. At least two Japanese language classes must be included within the five required track courses. However, students who use Japanese language classes to fulfill the Newcomb-Tulane language proficiency requirement may elect to take five non-language courses to fulfill the track requirements. At least two of these courses must be at or beyond the 3000-level. No more than five Japanese language courses may be applied to the Japan track requirements. In addition, at least half of the required credits must be taken on the Tulane campus or through a Tulane approved off-campus program. In the case of special topics courses, only Japan-related topics will be considered and pre-approval is required from the Director of Asian Studies. Specific measurable learning outcomes of students graduating with a coordinate major in Asian Studies with a concentration in the Japan track.

- Possess at least an elementary proficiency in Japanese.
- Possess at least a basic understanding of the historical, social, and cultural background of Japan.
- Able to locate, evaluate and utilize research materials germane to Japanese studies.

**Asian Studies Minor**

Students selecting a minor in Asian Studies must complete six classes within the approved Asian Studies course options. At least two of the six classes must be taken in two of the three targeted regions: East Asia, South Asia, and Southeast Asia. No more than two Asian language courses may be used as part of the required six courses.

1 No more than two Asian language courses may be used to fulfill the minor.

**Chinese Language Minor**

Students selecting a minor in Chinese Language must complete five Chinese language courses. Chinese language courses used to fulfill the undergraduate language proficiency requirement may not be counted toward this minor. (Note: students who use Chinese language courses below ASTC 2040 Intermediate Chinese II (4 c.h.) to satisfy the undergraduate language proficiency requirement may not find sufficient additional Chinese language courses available to complete the minor.)

Incoming freshmen who are placed in ASTC 2040 Intermediate Chinese II (4 c.h.) and who are planning to pursue a minor in Chinese language are encouraged to take a proficiency test before the fall semester starts, joining those students who wish to test out of ASTC 2030 Intermediate Chinese I (4 c.h.) ASTC 2030 Intermediate Chinese I (4 c.h.).

City, Culture, and Community, PhD

CCC Ph.D. Program awards degrees in three disciplines:

- Ph.D. in Social Work—City, Culture, and Community
- Ph.D. in Sociology—City, Culture, and Community
- Ph.D. in Urban Studies-City, Culture, and Community

CCC PhD students will be encouraged to work with faculty to develop their graduate educational plan that includes courses from across the campus and beyond. Some students will wish to seek academic appoints in traditional programs (e.g., Social Work, Sociology, Urban Studies) or non-traditional ones. Finally, students will also be encouraged to select dissertation topics that offer the potential for a cross-disciplinary approach.

Cognitive Studies Coordinate Major

The coordinate major in cognitive studies combines a regular major with a curriculum in three tracks: formal disciplines, philosophical foundations and psychology. The program is designed to provide basic knowledge of current research on mind, cognition, and language.

Requirements

The Cognitive Studies major consists of ten courses of which six are required and four elective. At least one elective must be in each of the three component tracks. With the director's consent, work in a different but relevant discipline may be substituted for, at most, one elective course. It is suggested that students interested in philosophy take an introductory course, preferably PHIL 1040 Beginning With Minds (3 c.h.).

Select four of the following, a minimum of one in each track: 12

Formal Disciplines Track:
Digital Media Production Coordinate Major

The mission of the undergraduate major in Digital Media Production is to educate students in the art and technology of film, television and sound production. The strength of the program is in the hands-on experience it provides in areas such as writing, producing, directing, lighting and cinematography, color grading, program development and sound design. Students are expected to develop their individual talents and skills in these areas within a collaborative working environment. In the context of the liberal arts, these experiences are enhanced by a commitment to critical approaches to analyzing artistic products. By considering new technological developments, students will learn to adapt to and shape new media forms and new modes of production.

All students must complete the two semester senior capstone film. In the first semester, each student writes an original script, from which budgets and schedules are produced, investigates sources of funding, finds a cast, and secures locations. In the second semester the student directs, shoots and edits the film and creates the promotional materials through such vehicles as trailers, posters, web sites and social media. A public screening of these films is held at a local theater at the end of each semester. Internship opportunities are available in the New Orleans area as well as in other cities in the United States and around the world. A summer program in The Contemporary Film Industry is offered to students interested in exploring the economic globalization, screen aesthetics, narrative forms and audience reception of films made in Louisiana and in Hollywood. Trips to studios, sets, production companies and post houses and a week in Los Angeles are included in the program.

Requirements

The coordinate major in digital media production is an interdisciplinary, 30 credit program that can include courses from Digital Media Production, Film Studies, Music, Theatre and Dance, Communication, Art, or English. Students will take 5 required courses and 5 electives:

Total Credit Hours 30

Environmental Studies Major

The Environmental Studies (EVST) major enables undergraduate students to pursue an interdisciplinary Bachelor of Arts degree focused on understanding the relationships between humans and the environment. Through coursework offered by several of Tulane’s most prestigious Schools and Colleges, internships, and opportunities for independent study and honors theses, our majors develop a sophisticated understanding of the interplay between humans and the environment and rigorous knowledge of key environmental and humanistic concerns. This background prepares students to engage productively with the world around them: knowledgeable about people and the environment, and armed with skills in critical thinking and analysis that prepare them for careers in environmental education, advocacy, policy, research, and a wide range of other fields.

Requirements

The major in environmental studies has both core course requirements and a credit requirement. The major requires students to take at least 30 credits of approved course work and a minimum of ten courses in environmental studies (EVST) or courses in associated fields listed below. A maximum of three courses or nine credits from 1000-level
courses can be counted toward the fulfillment of the major, and a maximum of two study abroad courses can count towards the degree. In addition, a minimum of three courses above the 3000-level are required for the major. The major requires students to take three core EVST courses, one methods course and six electives, three of which must come from the School of Liberal Arts (SLA). A minimum of two, and a maximum of four, courses are to be taken from outside the School of Liberal Arts. Only one internship (EVST 4560 Enviro Stud Internship (0-4 c.h.)) may be counted towards the major requirements. Students should note that some courses have prerequisites or be open only to majors (e.g., IDEV 3200 Appr To Sustained Devlp 3 c.h.)). Some of these restrictions may be waived with instructor approval if space allows. Careful academic planning, in consultation with your EVST faculty advisor, is strongly recommended.

1 A minimum or 3 must come from School of Liberal Arts
Film Studies Program

Undergraduate

Major

- Film Studies Major (p. 158)

Minor

- Film Studies Minor (p. 159)

Film Studies Major

Film Studies adopts a critical, theoretical, and historical approach to the analysis of individual films and to the study of cinema as an institution. Courses analyze film as a medium that produces meanings through formal strategies; they investigate wider debates about cinema as a cultural form; and they examine industry developments and practices. The textual and social implications of recent changes in film as a digital rather than a photographic medium are also addressed. In addition, a number of courses in the program focus on world cinema and the history, organization, and cultural role of specific national cinemas. The silent era to the contemporary period are covered. Film Studies may be combined with other majors and with film production programs and courses.

Requirements

A major in Film Studies involves the successful completion of ten Film Studies courses, seven of which should be at the 3000 level or above. All students working toward the major are required to take COMM 3150 Film Analysis (4 c.h.) followed by COMM 4860 Film Theory (4 c.h.) and one upper-level capstone seminar course. Capstone courses may be selected from regularly taught and special topics elective courses that include a capstone option. (This designation will be noted in the Schedule of Classes.) For capstone credit attached to this course, students should also enroll in FMST 5110 Capstone (0 c.h.). In addition to the required courses, students may select from the list of elective courses below. In the case of special topics courses, only film topics will count toward the FMST major or minor and approval of the Film Studies Director is required. Film courses that are not listed below may be included with the prior approval of the Director.

### Course ID | Title | Credits
--- | --- | ---
COMM 3150 | Film Analysis | 4
COMM 4860 | Film Theory | 4
FMST 5110 | Capstone (in conjunction with capstone option course) | 0

The silent era to the contemporary period are covered. Film Studies may be combined with other majors and with film production programs and courses.

**Requirements**

A minor in film studies requires the successful completion of six film studies courses, four of which would be at the 3000-level or above. All students working toward the minor are required to take COMM 3150 Film Analysis (4 c.h.) followed by COMM 4860 Film Theory (4 c.h.). In addition to the required courses, students may select from the list of elective courses below. In the case of special topics courses, only film topics will count toward the FMST major or minor and approval of the Film Studies Director is required. 1 Only film topics will be considered and approval of the Film Studies Director is required.

**Film Studies Minor**

Film Studies adopts a critical, theoretical, and historical approach to the analysis of individual films and to the study of cinema as an institution. Courses analyze film as a medium that produces meanings...
of knowledge that emerges from critical perspectives on culture and society.

Requirements
A major in Gender and Sexuality Studies consists of a minimum of 33 credits.

Graduate
- Latin American Studies and Art History, PhD (p. 161)
- Latin American Studies, MA (p. 164)
- Latin American Studies, PhD (p. 165)

Latin American Studies and Art History, PhD

This joint program is small and highly selective. It will probably accept only one or two highly qualified applicants each year, based on recommendations, performance, and other indicators of academic excellence and the ability to conduct original, clearly articulated research that will advance the frontiers of knowledge. Prospective students should submit their application to this joint Ph.D. program here (https://liberalarts.tulane.edu/academics/graduate-studies/prospective-students), where you can read relevant information on the application process and where you can find the link to the actual online application system in the “APPLY” section of the page.

Students are admitted to the program only after demonstrating an ability to work in a critical and imaginative fashion. Along with the School of Liberal Arts graduate program application form, applicants submit transcripts, GRE scores, three letters of recommendation, a statement of purpose, evidence of language ability, and an M.A. thesis or two substantive research papers.

Requirements

The Ph.D. requires 54 credit hours (including an M.A. thesis or equivalent) in addition to qualifying examinations in two concentration areas and the production of a dissertation. Of the 54 credit hours of coursework, at least 30 hours must have a Latin American content, including at least 18 hours in Latin American art; other Latin American courses can be taken in departments such as Anthropology, Economics, History, Political Science, Sociology, and Spanish and Portuguese; the School of Architecture; and Latin American Studies special offerings. Fifteen credit hours must be in art history pertaining to areas outside Latin America. The balance of credit hours are electives; they may be in art history and/or Latin America, but they may also pertain to other areas relevant to the student’s work (e.g.,
European history, Medieval thought, writing systems). The Latin American Studies core seminar is required, as is a course on art historical method and/or theory. All courses must be at the 6000 and 7000 levels.

Students must develop a primary concentration (e.g., Pre-Columbian, colonial, or modern) and a secondary one. The second concentration may be within Latin American art (e.g., Pre-Columbian, colonial, or modern), or it may cover a comparative area (e.g., modern Latin American art paired with modern European art, or colonial Latin American art paired with medieval and early modern European art). Twenty-one semester hours (7 courses) must pertain to the primary concentration, and 12 semester hours (4 courses) must pertain to the secondary concentration. These courses may be in Art History or other disciplines with Latin American content. For example, a student with a primary concentration in Precolumbian and a secondary concentration in colonial would take 7 art history and anthropology courses with a Precolumbian content, and 4 courses with a colonial content in art history, history, or literature.

**Latin American Studies Major**

The Bachelor of Latin American Studies curriculum focuses on achieving an interdisciplinary understanding of the region relative to an increasingly globalizing world. Under an advisor’s supervision, students write their own majors, selecting electives from more than twenty cooperating departments taught by some seventy affiliated faculty specializing in Latin America. The program strives to develop critical thinking, intercultural competency and research, analytical and communicative skills. The major requires a minimum of 30 credit hours in 10 Latin American content courses. Courses are selected from the various departments offering classes in the field as well as from Latin American Studies.

**Required Courses**

1. **Creativity**
2. **Encounter**
3. **Exchange**
4. **Identity**
5. **Land**
6. **Nation**
7. **People**
8. **Welfare**

There are no specific required classes for any single concentration. Students may choose from a wide variety of Latin American content electives taught in numerous disciplines and departments according to their own conception of the concentration. Students will work closely with the undergraduate adviser to select appropriate classes and construct a coherent concentration.

**Language Requirement**

Latin American Studies majors must demonstrate linguistic competency in either Spanish or Portuguese. This can be done in one of three ways:

1. Complete with a passing grade at least one course at the 4000-level or higher in Spanish or Portuguese
2. Complete with passing grades at least one semester of coursework in Spanish or Portuguese on a study abroad program
3. Place into the 6000-level on the language test administered by the Department of Spanish and Portuguese

Note that language classes below the 3100-level do not count as electives for the Latin American Studies major or minor programs.

**Sample Courses by Concentration**

Note that these lists are just an example of courses that could apply to a concentration. They are not comprehensive and do not account for all of the courses offered in each department nor those that might be offered as special topics in the departments or Latin American Studies.

**Creativity:**
- ARHS 3760 Art in Latin America, 1900-50
- COMM 4190 Introduction of Latin American Film
- SOCI 6930 Social Movements in Latin America
- SPAN 6190 Avant-Garde Movements in Latin America
- HISL 6610 Modernity and Its Discontents in Latin America

**Encounter:**
- ARHS 3710 Colonial Art of Latin America
- SPAN 6220 Chronicles and Epics of Spanish Conquest
- HISL 3200 History of Voodoo and Other African Derived Religions
- FREN 6085 Pigeons and Creoles
- MUSC 3300 Music Cultures of the World

**Exchange:**
- HISL 3100 Explorers, Liars and Travelers
- IDEV 4320 Migrants, Refugees and Development
- POLI 4600 Latin American International Relations
- ARHS 6780 Latin American Avant-Gardes

**Additional Information**

Six of the remaining seven Latin American content electives must be at the 2000-level or higher. Finally, three must be at the 6000-level. Students who take at least 20 college credits in 7 courses with Latin American content while on academic programs in Latin America approved by Tulane are required to take only two courses at the 6000-level. All 6000-level coursework for the major must be taken in residence at Tulane University, courses taken abroad will not count toward this requirement.

**Concentrations**

Five elective courses must concentrate on one of the themes that are the foundation of the interdisciplinary Latin American Studies program at Tulane. The concentration system serves to focus the coursework of Latin American Studies majors and minors. Working with the Undergraduate Adviser, students may choose one of the following:

- LAST 4000 [https://catalog.tulane.edu/catalog-18-19/courses/html-cat/LAST4000.html] - Core Seminar

Courses taken abroad and on Tulane summer programs can also count toward the concentrations.

**Sample Courses by Concentration**

- ARHS 3760 Art in Latin America, 1900-50
- COMM 4190 Introduction of Latin American Film
- SOCI 6930 Social Movements in Latin America
- SPAN 6190 Avant-Garde Movements in Latin America

1 Six of the remaining seven Latin American content electives must be at the 2000-level or higher. Finally, three must be at the 6000-level. Students who take at least 20 college credits in 7 courses with Latin American content while on academic programs in Latin America approved by Tulane are required to take only two courses at the 6000-level. All 6000-level coursework for the major must be taken in residence at Tulane University; courses taken abroad will not count toward this requirement.

2 The concentration system serves to focus the coursework of Latin American Studies majors and minors. Students will work closely with the undergraduate adviser to construct a coherent concentration of coursework, as Latin American content electives include a wide variety taught in several disciplines.

**Language Requirement**

Latin American Studies majors must demonstrate linguistic competency in either Spanish or Portuguese. This can be done in one of three ways:

- complete with a passing grade at least one course at the 4000-level or higher in Spanish or Portuguese
- complete with passing grades at least one semester of coursework in Spanish or Portuguese on a study abroad program
- place into the 6000-level on the language test administered by the Department of Spanish and Portuguese

Note that, language classes below the 3100-level do not count as electives for the Latin American Studies major or minor programs.

**Latin American Studies Minor**

The Bachelor of Latin American Studies curriculum focuses on achieving an interdisciplinary understanding of the region relative to an increasingly globalizing world. Under an advisor’s supervision, students write their own minors, selecting electives from more than twenty cooperating departments taught by some seventy affiliated faculty specializing in Latin America. The program strives to develop critical thinking, intercultural competency and research, analytical and communicative skills. A minor in Latin American Studies consists of 15 credit hours in 5 courses.

**Requirements**

A minor in Latin American Studies consists of 15 credit hours in 5 courses.

Required courses include one of the two introductory courses on Latin America:
The Stone Center also collaborates with other units across the University to offer specialized graduate degree programs. Such programs include joint professional degree programs with the Law School (MA/JD) and the Business School (MA/MBA), and a dual Doctor of Philosophy degree (a Ph.D. in Latin American Studies and Art History). For further information on these specialized degree programs, please consult the relevant sections of our website (https://stonecenter.tulane.edu/pages/detail/7/Academic-Programs).

**Requirements**

**Distribution Requirements**

Degree requirements include 30 credit hours as follows:

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**Additional Information**

Three of which must be at the 200 level or higher, and one of which must be at the 600 level. All 600-level coursework for the minor must be taken in residency at Tulane; courses taken abroad do not count toward this requirement. Three electives must concentrate on one of the themes listed above.

There is no language requirement for Latin American Studies minors.

**Latin American Studies, MA**

The Roger Thayer Stone Center for Latin American Studies is one of the largest and most prestigious interdisciplinary units at Tulane University. It functions in many capacities to provide programming and degree plans to a broad range of educational constituencies. Currently, these include a Bachelor of Arts major and minor in Latin American Studies, a Master of Arts degree in Latin American Studies, and a Doctor of Philosophy degree in Latin American Studies.

The design of the M.A. curriculum in Latin American Studies is dependent upon the student's particular research interests. The Graduate Advisor and the student will discuss these research interests before the start of the student's first semester of coursework and will map out a comprehensive program of study with the goal of developing an interdisciplinary research project. Students accumulate the research skills and tools by undertaking coursework in multiple disciplines or fields. Students should expect to narrow their coursework to one primary and two secondary concentration areas. Of course, there is also the opportunity to extend one's coursework beyond these three concentration areas when the research project will be enhanced by doing so.

The Stone Center also collaborates with other units across the University to offer specialized graduate degree programs. Such programs include joint professional degree programs with the Law School (MA/JD) and the Business School (MA/MBA), and a dual Doctor of Philosophy degree (a Ph.D. in Latin American Studies and Art History). For further information on these specialized degree programs, please consult the relevant sections of our website (https://stonecenter.tulane.edu/pages/detail/7/Academic-Programs).

**Concentrations**

The concentrations are usually departmental/disciplinary and are intended more as a guide to help organize a student’s curriculum around a specific research project. Where a student’s program suggests that there is an educational and qualitative logic, it is also possible to declare one synthetic concentration that combines courses from more than one department. Such a concentration might be, for example, "Cultural Studies" or "Mexican Studies." Students are also encouraged, in consultation with the Graduate Advisor, to take courses that may fall outside of their concentration areas if such courses are critical to the development of specific research skills, tools, methods, or content necessary in the pursuit of their research agendas.

**Language Requirement**

The requirement for graduation with the M.A. in Latin American Studies is demonstrated competence in either Spanish or Portuguese. Students are expected to pass a language examination in Spanish or Portuguese during the first year of study. The required level of competence in Spanish and Portuguese corresponds to “intermediate” on the American Council on the Teaching of Foreign Language (ACTFL) scale. This competency is considered a minimum requirement. Students are encouraged to develop additional languages as needed by their research fields.
Currently, these language examinations are administered by Professors in the Department of Spanish and Portuguese as assigned by that department. Students should contact the Department of Spanish and Portuguese directly for further information on the administration of these exams. Native Spanish and Portuguese speakers are exempt from this requirement.

Transfer of Credit

Upon entering the program a maximum of six credits (two courses) may be transferred from another department of Tulane or another University toward your Latin American Studies M.A. degree. However, students who do choose to transfer two courses will lose one semester of M.A. funding (limiting thesis writers to three semesters and non-thesis writers to two). To be considered for transfer credit toward an M.A. degree, graduate work done at another institution must carry a grade of 3.0 (on a 4.0 scale) or better and must have been completed no more than four years from the date of first registration for graduate work at Tulane.

Acceptance of graduate credit for work done at other graduate institutions must be approved by the Stone Center for Latin American Studies and by the Dean of the School of Liberal Arts. Although the official decision concerning the acceptance of transfer credit towards the Latin American Studies M.A. degree will be made only after the student has completed one semester of successful study in the program, the Stone Center Graduate Advisor can evaluate the transferability of previous coursework before the student enters the program. If you are planning to transfer credit, remember to contact your Graduate Advisor after you have completed your first semester in the degree program so that he may recommend your credit for transfer.

Independent Studies

Independent Studies can be an important part of your program if used properly and sparingly. Typically an independent project is created to fill an academic need or interest that is not being met by regular disciplinary offerings or to expand upon research begun in other courses but not fully completed. Ordinarily, the Graduate Advisor will not authorize students to take more than two Independent Studies courses during the course of their M.A. degree. Students may register for the independent study directly through the Latin American Studies program; but students should first attempt to register for the independent study through the department of the sponsoring faculty member. Please consult the Graduate Advisor for further information on registering for independent study.

Latin American Studies, PhD

The Roger Thayer Stone Center for Latin American Studies is one of the largest and most prestigious interdisciplinary units at Tulane University. It functions in many capacities to provide programming and degree plans to a broad range of educational constituencies. Currently, these include a Bachelor of Arts major and minor in Latin American Studies, a Master of Arts degree in Latin American Studies, and a Doctor of Philosophy degree in Latin American Studies.

The design the Ph.D. curriculum in Latin American Studies is dependent upon the student’s particular research interests. The Graduate Advisor and the student will discuss these research interests before the start of the student’s first semester of coursework and will map out a comprehensive program of study with the goal of developing an interdisciplinary research project. Students accumulate the research skills and tools by undertaking coursework in multiple disciplines or fields. Students should expect to narrow their coursework to one primary and two secondary concentration areas. Of course, there is also the opportunity to extend one’s coursework beyond these three concentration areas when the research project will be enhanced by doing so.

The Stone Center also collaborates with other units across the University to offer specialized graduate degree programs. Such programs include joint professional degree programs with the Law School (MA/JD) and the Business School (MA/MBA), and a dual Doctor of Philosophy degree (a Ph.D. in Latin American Studies and Art History). For further information on these specialized degree programs, please consult the relevant sections of our website (https://stonecenter.tulane.edu/pages/detail/7/Academic-Programs).

The standard Tulane University graduate program online application system allows applicants to identify whether their application should be considered for admission either as an M.A. student or as a Ph.D. student. The admissions policy of the Stone Center, however, is to consider for admission directly to the Ph.D. program only individuals who have an earned Master’s Degree or relevant professional degree (i.e. M.D., J.D., etc.)

Applicants interested in the Ph.D. Program in Latin American Studies, but who do not have an earned Master’s Degree or a relevant professional degree, will be considered for admission only to the M.A. program in Latin American Studies. Upon completion of the M.A. Program in Latin American Studies, such students are then able to reapply to the Ph.D. program. Admission to the M.A. program does not guarantee continuation in the Ph.D. program.

Requirements

Doctor of Philosophy in Latin American Studies Curriculum

The degree of Doctor of Philosophy in Latin American Studies is awarded for mastery of a body of literature and for the production of imaginative and original research. A student may enter the program (1) progressing from the M.A. program in Latin American Studies at Tulane, (2) transferring to the program with an M.A. conferred by another Tulane department, (3) or by applying directly to the Latin American Studies Ph.D. program after having completed an M.A. in any discipline or field, or an equivalent Professional Degree (JD, MD, MBA, etc.). In each instance, prospective students must submit a formal application for admission to the Ph.D. program.

Each semester doctoral students normally enroll in three classes and teach one class. By university regulations, students are allowed to enroll in a minimum of two courses while they serve as Teaching Assistants.

Students also begin preparation for general preliminary examinations, which are given during students’ last semester of classes and should be taken no later than the first semester after the completion of all coursework requirements. These are normally in October or March.

Upon satisfying the coursework and language requirements and completing the general exams, students begin research for the dissertation, presenting a formal prospectus for faculty approval. Once approved they can apply for admittance to candidacy for the
doctoral degree and commence formal work on the dissertation, which must demonstrate their ability to carry out an original investigation in the field of Latin American Studies. Degrees are conferred only after the dissertation is approved in a formal defense before a faculty committee.

Coursework and Distribution Requirements

The minimum coursework requirement for the Ph.D. is 54 credit hours. Portions of this requirement are often satisfied by credit awarded for academic work completed in fulfilling requirements for the M.A. degree with thesis.

Students with an M.A. in Latin American Studies from Tulane may transfer up to 30 credits of relevant work from their M.A. program, while students transferring from other departments at Tulane or other universities may transfer no more than 12 hours of relevant work (see Transfer Credit below).

General requirements for the Ph.D. degree are:

- Thirty semester hours in the primary concentration, including a minimum of six semester hours in theory, methodology, and pedagogy. Students transferring to the Stone Center from other programs must take the Latin American Studies Core Seminar in their first Fall semester to satisfy three hours of the theory and methodology requirement. And all Ph.D. students must take the required Pedagogy and Professional Development course in the Spring semester before the academic year in which they are scheduled to teach the LAST1010/1020 course cycle for the first time. NOTE: Of the thirty semester hours in the primary concentration, twelve hours or four courses should be at the 7000 level when possible; and no more than nine hours or three courses can be independent study.
- Twelve semester hours in a first supporting concentration; six of these hours, when possible, should be at the 7000 level.
- Twelve semester hours in a second supporting concentration; six of these hours, when possible, should be at the 7000 level.
- A demonstrated knowledge of at least two languages, including Spanish or Portuguese.
- The successful completion of three general preliminary examinations in the primary and supporting concentrations.
- The successful defense of a dissertation prospectus.
- The successful completion and defense of the dissertation.

Concentrations

The concentrations are usually departmental/disciplinary and are intended more as a guide to help organize a student’s curriculum around a specific research project. Where a student’s program suggests that there is an educational and qualitative logic, it is also possible to declare one synthetic concentration that combines courses from more than one department. Such a concentration might be, for example, Cultural Studies or Mexican Studies or Gender Studies, etc. Students are also encouraged, in consultation with the Graduate Advisor, to take courses that may fall outside of their concentration areas if such courses are critical to the development of specific research skills, tools, methods, or content necessary in the pursuit of their research agendas.

Transfer Credits

At the time of admission, the Graduate Advisor can provide an informal assessment about what previous course credit can be transferred to meet Ph.D. requirements, but University policy allows the Graduate Advisor to make a formal evaluation of requests for transfer credit only after students have completed nine hours in residence at Tulane. After that point, and before the student accumulates a total of 42 credit hours, the Graduate Advisor recommends the transfer of appropriate and germane credit to the Graduate Dean for approval. Students seeking transfer credits should be prepared to provide copies of syllabi and/or course term papers as evidence of the relevance of the courses in question to their graduate work in their Latin American Studies program. Only courses that have a theoretical or content-specific logic to a student’s Latin American Studies academic program will be approved for transfer credit.

As noted above, students with an M.A. (with thesis) in Latin American Studies from Tulane may transfer up to 30 credits of relevant work from their M.A. program, while students transferring from other departments at Tulane or other universities may transfer up to 12 hours of relevant coursework.

Acceptance of graduate credit for work done in other M.A. programs at Tulane or other universities is recommended by the Graduate Advisor and approved by the Dean of the School of Liberal Arts. To be considered for transfer credit, coursework must have received a grade of 3.0 or better on a 4.0 scale and must have been completed no more than six years before the date of first registration in the Center’s doctoral program. Only in very special cases, and with the recommendation of the Stone Center’s Graduate Advisor, will the Dean consider transfer of credit for courses taken earlier.

Language Requirements

The language requirement for graduation with the Ph.D. in Latin American Studies is demonstrated competence in two languages. Normally, one is Spanish; the second Portuguese. However, other languages may be presented if essential for the student’s research. German, Quechua, Nahuatl, or Kaqchikel are examples. The required level of competence in Spanish and Portuguese corresponds to intermediate-high on the American Council on the Teaching of Foreign Language scale. This competency is considered a minimum requirement. Students are encouraged to develop additional languages as needed by their research fields. Levels of competency similar to those described for Spanish and Portuguese are required in any language presented to satisfy this requirement. Currently, language competency examinations in Spanish and Portuguese are administered by Professors in the Department of Spanish and Portuguese as assigned by that department. Students should contact the Department of Spanish and Portuguese directly for further information on the administration of these exams. All students, even native speakers, must be either examined for minimal linguistic competency as explained above or certified as to their native fluency by the Spanish and Portuguese Department.

Certification of competency in a second language must be presented by the end of the second year of study. Transfer students are expected to pass one language during the first year of study, and a second language examination by the end of second year of study. Testing procedures are discussed further in the “Grades and Evaluation” section.
Linguistics

Programs

Undergraduate

Majors

• Linguistics, BA (p. 167)
• Linguistics, BS (p. 169)

Graduate

• Computational Linguistics, MA (p. 167)
• Linguistics, MA (p. 170)
• Linguistics, PhD (p. 170)

Computational Linguistics, MA

Computational Linguistics is a field that appeals to students with a zeal for both linguistics and computer science and a passion for developing ideas at the intersection of these fields. The program relies on the resources of the linguistics program and the department of computer science. Students studying computational linguistics will focus on the scientific study of language from a computational perspective, in which opportunities abound in many growing fields in today’s job market, such as:

• Automated text analysis
• Speech recognition
• Information retrieval
• Web search
• Machine translation
• "Big Data"
• Cryptography
• Computer security

The program admits a small-sized class size of three to five, composed of (i) Tulane undergraduate students with a background in either linguistics, computer science or the study of language who are admitted into the 4+1 program, and (ii) external outstanding students, preferably with an undergraduate degree in linguistics, computer science or the study of a language.

Requirements

Students will complete a core curriculum, several electives and an internship in a calendar year (two semesters plus summer).

MA Computation Linguistics Courses:

<table>
<thead>
<tr>
<th>Course ID</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANTH 7340</td>
<td>Dialectology</td>
<td>3</td>
</tr>
<tr>
<td>ANTH 7590</td>

<td>3</td>
</tr>
<tr>
<td>ANTH 7680</td>
<td>Language and Power</td>
<td>3</td>
</tr>
</tbody>
</table>

In order to satisfy the 30 credit requirement for the MA, students will select 10 out of these courses. Five courses must be taken in linguistics and five in computer science. The following are required courses:

• ANTH 7630 Linguistic Phonetics
• ANTH 7590 Syntax
• LING 6810 Special Topics (Natural Language Processing)
• CMPS 3140/6140 – Introduction to Artificial Intelligence
• CMPS 3240/6240 – Introduction to Machine Learning
• CMPS/MATH 3250 – Introduction to the Theory of Computation
• CMPS 3280/6280 – Information Theory

All other courses are electives.

Notes:

• CMPS 2170 Intro to Discrete Math (3 c.h.) or CMPS 2170 Intro to Discrete Math (3 c.h.) must be taken during students’ undergraduate training for it is a prerequisite for some CMPS graduate courses.
• Additional linguistic electives at the graduate level are available in the following cooperating departments: French, Spanish, Philosophy, Neuroscience, and Psychology.

Non-course requirement of the curriculum

There will be a (6-8 week) summer internship requirement for obtaining practical experience on key applications in human language technology. The Institute for Human and Machine Cognition (Ocala, Florida) is the ideal facility for this purpose due to the strong expertise in Natural Language Processing of several of its members (Dr. Yorick Wilks, Dr. James Allen, Dr. Lucian Galescu). Tulane has close ties with IHMC through Professor Brent Venable (Computer Science) who has a joint appointment at IHMC. Furthermore, local internship opportunities are available through TurboSquid, a web-based technology company in New Orleans. A written report summarizing the internship experience is required after the internship.

Linguistics, BA

Linguistics is a major that gives students insight into one of the most intriguing aspects of human knowledge and behavior. Majoring in linguistics means that you will learn about many aspects of human language, including sounds (phonetics, phonology), words (morphology), sentences (syntax), and meaning (semantics). At Tulane, we look at how languages change over time (historical linguistics); how language varies from situation to situation, group to group, and place to place (sociolinguistics, dialectology); how people use language in context (pragmatics, discourse analysis); how to model aspects of language (computational linguistics); how people acquire or learn
language (language acquisition); and how people process language (psycholinguistics, brain and language).

The array of courses offered by the Program allows linguistics majors to master the basics of the discipline. Linguistics majors develop valuable intellectual skills in analytical reasoning and critical thinking, lucid communication, and the use of research methodologies. Career opportunities for linguistics majors are: publishing, computer industry, foreign language education, advertising, national security, translating/interpreting, speech and language pathology.

Requirements

The major in linguistics consists of ten courses selected from the lists below. The student should take at least one course in each of the following areas: phonology, syntax, language history, and language and thought. As courses are distributed among various departments, the student must consult with the Program Adviser in selecting courses to fulfill this distribution requirement. No language courses taken to fulfill the college proficiency requirement may be counted toward the major.

Capstone Courses within the Major

Capstone courses within the major include:

Course ID  Title  Credits
ANTH 3310 Historical Linguistics  3
ANTH 3670 Language & Acquisition  3
ANTH 4930 Languages of Louisiana  3
ANTH 6400 Language and Culture  3
ANTH 6420 Linguistic Field Methods  3
LING 4850 Proseminar In Linguistics  3

In addition to courses listed here in cooperating departments, students may elect to take language courses to broaden their linguistic base.

As courses are distributed among various departments, the student must consult with the Program Adviser in selecting courses to fulfill this distribution requirement.

Linguistics, BS

Linguistics is a major that gives students insight into one of the most intriguing aspects of human knowledge and behavior. Majoring in linguistics means that you will learn about many aspects of human language, including sounds (phonetics, phonology), words (morphology), sentences (syntax), and meaning (semantics). At Tulane, we look at how languages change over time (historical linguistics); how language varies from situation to situation, group to group, and place to place (sociolinguistics, dialectology); how people use language in context (pragmatics, discourse analysis); how to model aspects of language (computational linguistics); how people acquire or learn language (language acquisition); and how people process language (psycholinguistics, brain and language).

The array of courses offered by the Program allows linguistics majors to master the basics of the discipline. Linguistics majors develop valuable intellectual skills in analytical reasoning and critical thinking, lucid communication, and the use of research methodologies.

Career opportunities for linguistics majors are: publishing, computer industry, foreign language education, advertising, national security, translating/interpreting, speech and language pathology.

Requirements

The major in linguistics consists of ten courses selected from the lists below. The student should take at least one course in each of the following areas: phonology, syntax, language history, and language and thought. As courses are distributed among various departments, the student must consult with the Program Adviser in selecting courses to fulfill this distribution requirement. No language courses taken to fulfill the college proficiency requirement may be counted toward the major.

Students majoring in linguistics who elect to graduate with a B.S. degree must have credit for two mathematics courses:

- one calculus course, MATH 1210 Calculus I (4 c.h.) or equivalent;
- one statistics course MATH 1230 Stats For Scientists (4 c.h.), or a higher level class in statistics.

Linguistics, MA

4+1 MA in Linguistics

The Linguistics Program at Tulane offers an accelerated Master of Arts program in Linguistics to enrolled seniors. Students choosing this fast-track option are eligible to take up to six graduate credits while still completing undergraduate coursework. This program allows students to bypass the time commitment and anxiety of the graduate admissions process and places them within a year of obtaining their Master's degree upon graduating with their Bachelor's. The MA in Linguistics requires 30 credits (10 courses).

Linguistics, PhD

Linguistics is a major that gives students insight into one of the most intriguing aspects of human knowledge and behavior. Majoring in linguistics means that you will learn about many aspects of human language, including sounds (phonetics, phonology), words (morphology), sentences (syntax), and meaning (semantics). At Tulane, we look at how languages change over time (historical linguistics); how language varies from situation to situation, group to group, and place to place (sociolinguistics, dialectology); how people use language in context (pragmatics, discourse analysis); how to model aspects of language (computational linguistics); how people acquire or learn language (language acquisition); and how people process language (psycholinguistics, brain and language).

Our PhD program is unique because it is the only university-level interdisciplinary linguistics program in New Orleans and in the state at large, as well as one of only three in the Gulf South. We have unique resources, physical and human: (1) the Roger Thayer Stone Center for Latin American Studies, (2) the Cuban and Caribbean Studies Institute, (3) the Women's Center, (4) the Amistad Center, (5) the Latin American Library, (6) the Louisiana Collection, (7) An enticing mix of less commonly taught languages (for example, Kaqchikel, Nahuatl, Yucatec Maya, Spoken Yoruba, Diaspora Yoruba, Swahili, Haitian Creole, Classical languages and writings of the Maya), (8) a growing computer science program with strong emphasis on artificial intelligence and human cognition, and (9) a committed faculty.

The Linguistics Ph.D. program at Tulane is highly competitive. All students admitted to the program receive a stipend and a tuition waiver for four years. If you are interested in applying to the program, please contact the faculty member(s) with whom you are interested in working. You may also contact the Director of the program at ling@tulane.edu.

Requirements

As a graduate student in linguistics, you are required to complete 48 hours of course work before advancement to candidacy, which will include at least one course drawn from each of the following categories:

1. Acoustic phonetics
2. Phonology
3. Morphology or syntax
4. Language variation and change (for instance, sociolinguistics, historical, dialectology, bilingual education, or multilingualism)
5. Semantics, pragmatics, philosophy of language, or discourse
6. A non-Indo-European language other than your native language (Note that this requirement can be satisfied by one of the Less Commonly Taught Languages offered at the 1000 level, which will be covered by the tuition waiver as long as you are a full-time student, but a course below the 6000 level cannot count towards graduate credit. Non-Indo-European languages taught in the Anthropology Department are 6000 level and above and so
Depending on your previous course work and training, you may be able to waive some of these courses. Course waivers are to be requested on an individual basis, and must be approved by the program graduate adviser.

This range of courses ensures that you will receive a rigorous and broad background in linguistics, which will prepare you for your own research projects and will make you highly qualified for the job market. You should normally enroll in 12 credit hours (4 courses) per semester until you have completed the required course work for the Ph.D., which will normally take 4-5 semesters, depending on your background.

This ensures that you will fulfill Tulane’s residency requirement of four semesters of full-time study at the university, as well as Tulane’s minimum course-hour requirements. (See the university graduate requirements for more information on Tulane’s residency and course-hour requirements.)

In all of your course work, a grade level of B- (B minus) is the formal minimum for a passing performance in the graduate program. Although a grade of B- is a passing grade, it is considered a “weak” pass. One or two B- grades can be cause for probation or dismissal. In addition to your course grades, however, the general assessment of your overall progress in the program will also include the opinions of the faculty. The faculty meets at the end of each semester to discuss graduate students’ progress. Renewal of your fellowship from year to year is dependent upon continuing satisfactory progress in your studies.

Language of Scholarship Requirement

In addition to taking at least one course in a non-Indo-European language, you must show competence in a major language of published scholarship other than English. You should meet with your adviser or the program director to discuss your proposed language and your plan for fulfilling the requirement. This requirement must be fulfilled before advancement to candidacy.

If your native language is a major language of published scholarship other than English, you can use English to satisfy this requirement.

For everyone else, competence can be demonstrated by (i) two semesters of language instruction at the junior (3000) level or above, or (ii) a translation exam.

Comprehensive Examinations

Students must take two Ph.D. comprehensive examinations, a general examination covering all major fields of linguistics and a special field examination tailored to their chosen field of dissertation research. The general comprehensive examination is to be taken in early September of the student’s third year (fifth semester) in the program, and the special field examination is to be taken in early to mid-January of the third year (sixth semester). You may petition the program to substitute a published paper for the special field exam.

Dissertation Prospectus

Immediately after taking your special field examination, if not before, you should form your dissertation committee. It must consist of at least three tenured or tenure-track Tulane faculty members. Your dissertation committee may have additional members as well, but this is not required.

Your first task with the dissertation committee is to write a research paper, called the dissertation prospectus. The prospectus should consist of a substantial dissertation proposal and a comprehensive bibliography. It may be based on a grant proposal to an external funding agency, particularly in the case of proposed fieldwork. The work described in the prospectus should lead naturally into your dissertation. The prospectus should contain a statement of the topic area of your proposed dissertation project, a problem statement, a statement of the theoretical orientation and methodology, and a comprehensive bibliography. Work out the specific details of your prospectus with the members of your dissertation committee. Once it is complete, you will schedule an oral defense of the prospectus before the members of your committee. The prospectus defense should take place before the end of your third year (sixth semester) in the program.

Advancement to Candidacy

After you have passed your comprehensive examinations and your language requirement and your dissertation committee has approved your prospectus, you will apply for Candidacy for the Ph.D. Once you have advanced, you are considered ‘ABD’ (All But Dissertation). Application for some research grants requires this status.

Fieldwork

You may find it necessary to conduct fieldwork before writing your dissertation. It is expected that you will pursue outside funding in order to support yourself and your fieldwork during this time—normally your fourth year in the program—and that you will therefore not be on fellowship during that year. If your research does not require you to absent yourself in order to pursue fieldwork, you may continue directly to writing your dissertation.

Writing, filing, and defending the dissertation

Following advancement to candidacy, you may be eligible for a final year of support to work full time toward the completion of the dissertation, an interruption of one year to conduct fieldwork as mentioned in the previous paragraph. Receiving your final year of fellowship is contingent upon your having met the following requirements:

- Achievement of ABD status
- Submission of an acceptable plan for research and writing during the final year of support
- Submission of evidence of having applied to sources from outside Tulane for research funding for your field work and, in particular if outside funding for field work was not secured, for the dissertation write-up
- Completion of the language requirements

Students generally find writing a dissertation to be a challenging and rewarding process. However, it is also an inherently stressful activity. For this reason, you should meet regularly with the members of your committee at every stage of your project, and keep in touch with them about data collection and writing. And finally, remember that all of the faculty members have also written a dissertation (and likely supervised
a number of them too), and are happy to discuss any issues that come up for you.

Upon completion of an acceptable draft of your dissertation, you will then, in consultation with the chair of your dissertation committee, schedule a public defense of your work. All members of the Tulane community are invited to the defense, and anyone else is welcome to attend. You should prepare a short presentation of your work, summarizing the main research question(s), how you went about doing your project, and your key findings. Your dissertation committee will then ask you questions about your dissertation, as may other members of the audience, time permitting.

There are a host of important deadlines to keep track of, as well as very specific formatting minutia which you must strictly follow in order to file the dissertation. Consult the relevant sections of Deadlines for Graduating Students (https://liberalarts.tulane.edu/academics/graduate-studies/graduating-students). As always, you are ultimately responsible for being aware of and complying with all formal requirements and university deadlines. After you have submitted a complete draft of your dissertation, defended it publicly, and made any revisions suggested by your committee, you are ready to file the dissertation. Tulane’s general guidelines permit a maximum of seven years from your initial matriculation to file the Ph.D.

When the final version of the dissertation is accepted by the doctoral committee and filed with the university, and all other requirements are certified as fulfilled, you have earned a Ph.D. in Linguistics!

## Medieval and Early Modern Studies Major

MEMS is a multidisciplinary program with a focus on the history and cultures of the medieval and early modern world. The Program consists of faculty and students from diverse departments within the School of Liberal Arts (Art History, Asian Studies, Classical Studies, English, French and Italian, Germanic and Slavic Studies, History, Jewish Studies, Music, Philosophy, Political Science, Spanish and Portuguese) and offers undergraduate major and minor concentrations, as well as graduate degree programs in affiliated professors’ home departments. We regularly sponsor presentations by scholars from universities around the country, conferences, and colloquia.

## Requirements

The major consists of 30 credits (10 courses) to be distributed in the following manner:

<table>
<thead>
<tr>
<th>Course ID</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select three courses each from two of three categories:</td>
<td>18</td>
<td></td>
</tr>
<tr>
<td>Medieval (300-1499)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Early modern (1500-1699)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Crossover (spanning medieval and early modern)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Select four additional courses</td>
<td>12</td>
<td></td>
</tr>
<tr>
<td>Total Credit Hours</td>
<td>30</td>
<td></td>
</tr>
</tbody>
</table>

The student may take up to four courses in a single department. Of the ten courses, no more than three courses may be taken below the 3000 level, and at least two must be completed at the 4000 level or above.

Musical Cultures of the Gulf South Coordinate Major

Musical Cultures of the Gulf South is an interdisciplinary course of study that teaches students to investigate how their academic and professional goals relate to their surroundings — a portable mindset that will enrich their lives wherever they may go. Students are educated in the underlying currents of New Orleans and the Gulf South through coursework related to the Atlantic slave trade, the rituals of expressive circum-Gulfic and circum-Caribbean culture and resistance, and the social, environmental, economic, and political history of the region.

This coordinate major is offered under the auspices of the New Orleans Center for the Gulf South. All of our programs are inspired by the belief that the more we understand where we are, the more fully we can engage in our democracy and collective destiny.

Requirements

Musical Cultures of the Gulf South is a 27-credit program. Three required core courses encompass the fields of Anthropology, Ethnomusicology, History, Theatre and Dance, and Urban Geography. Electives courses are offered in African and African Diaspora Studies, Communication, Ecology and Evolutionary Biology, Economics, English, Environmental Studies, French, History, and Urban Studies. Students are welcome to petition the program director for elective course credit for courses that are not cross-listed. A public service course provides students opportunity to cultivate professional experience outside of the classroom. Our affiliated staff provide one-on-one academic, internship, and career advising for majors and interested students. Students must first declare a major in another discipline before declaring the MCGS coordinate major.

Course ID  | Title                      | Credits
----------|----------------------------|--------
MUSC 1900 | Music in New Orleans       | 3      
MCGS 2000 | Intro Music Cultures GS    | 3      
ANTH 3395 | Cultures of NO/Fr La       | 3      

Electives

Students must take a minimum of 3 additional electives or nine credits from the courses listed below in order to reach a minimum of 27 credits for the major. A total of only two 1000-level courses can count towards

**Political Economy Major with Concentration in Economics and Public Policy**

Tulane University’s most popular and acclaimed multidisciplinary major, the Political Economy major aims to promote sustained reflection on the multiple connections between political and economic activities and institutions.

The Political Economy major supports and promotes Tulane University’s mission to create, communicate and conserve knowledge in order to enrich the capacity of individuals, organizations and communities to think, to learn, to act and to lead with integrity and wisdom.

The political economy major aims to promote sustained reflection on the interrelations of political and economic activities and institutions. It provides undergraduate students with the basic skills of economic analysis. The major is also based firmly on the view that the study of the interrelations of politics and economics has a rich humanistic tradition and that its pursuit can encourage sustained reflection on fundamental values. Political economy is a multidisciplinary major built on a core of eight required courses and five elective courses drawn from economics, political science, history and philosophy.

This major is designed to avoid the sometimes excessive specialization that characterizes more traditional undergraduate majors. While providing students basic skills of economic analysis, the political economy major at Tulane is distinctively based on the view that technical economic analysis should not be divorced from a broader concern for understanding the moral and historical foundations of economic institutions and political structures.

**Internship Grants and Honors Program**

In the summer between junior and senior years, a political economy major may elect to participate in a summer internship. The Murphy Institute offers a limited number of grants in an open competition for political economy majors only. With consent of the Associate Director and the honors program, a student may pursue a degree with honors in political economy. A senior honors thesis is required.

Finally, it should be noted that undergraduate majors in political economy are invited to participate in various activities sponsored by the Murphy Institute. The Murphy Institute hosts prominent scholars and public figures in a series of annual lectures. Student majors are invited to all of these occasions, as well as to more informal meetings with our visitors.

The Political Economy major supports and promotes Tulane University's mission to create, communicate and conserve knowledge in order to enrich the capacity of individuals, organizations and communities to think, to learn, to act and to lead with integrity and wisdom.

The political economy major aims to promote sustained reflection on the interrelations of political and economic activities and institutions.
Political Economy Major with Concentration in Law, Economics, and Policy

Tulane University's most popular and acclaimed multidisciplinary major, the Political Economy major aims to promote sustained reflection on the multiple connections between political and economic activities and institutions.

The Political Economy major supports and promotes Tulane University's mission to create, communicate and conserve knowledge in order to enrich the capacity of individuals, organizations and communities to think, to learn, to act and to lead with integrity and wisdom.

The political economy major aims to promote sustained reflection on the interrelations of political and economic activities and institutions. It provides undergraduate students with the basic skills of economic analysis. The major is also based firmly on the view that the study of the interrelations of politics and economics has a rich humanistic tradition and that its pursuit can encourage sustained reflection on fundamental values. Political economy is a multidisciplinary major built on a core of eight required courses and five elective courses drawn from economics, political science, history and philosophy.

This major is designed to avoid the sometimes excessive specialization that characterizes more traditional undergraduate majors. While providing students basic skills of economic analysis, the political economy major at Tulane is distinctively based on the view that technical economic analysis should not be divorced from a broader concern for understanding the moral and historical foundations of economic institutions and political structures.

Internship Grants and Honors Program

In the summer between junior and senior years, a political economy major may elect to participate in a summer internship. The Murphy Institute offers a limited number of grants in an open competition for political economy majors only. With consent of the Associate Director and the honors program, a student may pursue a degree with honors in political economy. A senior honors thesis is required.

Finally, it should be noted that undergraduate majors in political economy are invited to participate in various activities sponsored by the Murphy Institute. The Murphy Institute hosts prominent scholars and public figures in a series of annual lectures. Student majors are invited to all of these occasions, as well as to more informal meetings with our visitors.

**Religious Studies Minor**

Religion is and always has been a central feature of human life, for individuals and communities. The interdisciplinary field of Religious Studies enables students to approach it from different perspectives: philosophical, historical, political, sociological, anthropological and literary.

**Requirements**

5 courses (15 hours), completed with a grade of C or better, courses in at least 2 distinct areas or disciplines, and at least 2 at the 3000-level or higher. Eligible courses already taken can count toward the degree. (In accordance with SLA rules, courses taken for this Minor cannot overlap with another Minor, and cannot be included in 27 credit hours for a Major.) Courses can be found each semester on the Class Schedule under “Religious Studies” (RLST) as well as in listings of particular departments. Examples of courses eligible for the RLST Minor:

**School of Liberal Arts Management Minor**

The SLAMM minor is intended to introduce non-business majors to an understanding of management practices and principles within the perspective of the liberal arts. As an interdisciplinary minor, and through a curriculum divided into three tiers, it incorporates basic economic and accounting courses with classes throughout the arts, humanities and social sciences as well as specially designed SLAMM
courses focusing on leadership, ethics, law, public relations, marketing and strategy. Students completing the minor will acquire skills that may be applicable for future careers as well as gaining an appreciation of the origins and implications of contemporary business methods and institutions.

**Learning outcomes**

**Financial Literacy** — Students will gain an understanding of the language and practice of financial markets and industry, including measuring and communicating the results of business operations, financial positions, and cash flow.

**Management Concepts and Practices** — Students will develop and analyze individual and team based problem solving, communication, and leadership skills. They will demonstrate knowledge of business and organizational behavior, legal structures, and strategic planning.

**Critical Perspectives on Business and Society** — Students will utilize a liberal arts perspective to gain an understanding of the market within a global perspective. They will explore how economic trends and conditions are rooted in historical, political, and social conditions, and have critical ethical implications.

**Integration of Disciplinary Expertise with Career Opportunities** — Students will be able to link their chosen majors to the trends and practices learned through the management minor. Specific, discipline based elective courses, reinforced by internships, will connect theory to practice in existing areas of employment.

**Requirements**

The minor requires a minimum of six courses (18 hours) selected from three tiers that will ensure the students have an acquaintance with basic business language and practices as well as an interdisciplinary perspective. Courses taken in the Freeman School, apart from ACCN 2010 Financial Accounting (3 c.h.), will be considered for credit on a case by case basis. A maximum of two courses may be counted from a study-abroad program, provided the courses are accepted by the specific department advisor and the director of SLAMM. Registration is restricted to SLAMM minors during priority registration. Open to all students thereafter.

**Social Policy and Practice Coordinate Major**

The multidisciplinary coordinate Major in Social Policy & Practice introduces students to problems, policies, and methods in the social policy and welfare field through three core courses and additional elective coursework in the social and behavioral sciences. The major is designed to encourage students to explore social policy interests prior to employment or graduate education. It also serves as an excellent pre-professional major for social work, the social sciences, education, law, public health, public policy, and related fields.

The program in Social Policy & Practice is designed to grant students a considerable degree of freedom in the choice of electives and to offer ample avenues for students interested in pursuing independent research and/or internship experiences. The program is particularly interested in encouraging the study of social problems related to living in an urban environment such as issues related to race, class, poverty, gender, social justice and the intersections among them. Students in the program are encouraged to pursue study abroad opportunities. The option to write an honors thesis is available to students who are in the University’s Honors Program.

Social Policy & Practice graduates often find that they have many career options because of their broad academic backgrounds and well-developed writing, critical thinking, and interpersonal skills that are highly valued by employers in a wide variety of settings. Students in the major are well prepared for entering the fields of social work, education, public policy, public health, law, medicine, business, and any other field that values a solid liberal arts education.
All social policy majors are required to have a coordinate major in one of three social science departments: Political Science, Economics, or Sociology.

**Elective Courses**

Select seven elective courses 21

**Total Credit Hours** 30

All SPP students are required to take 7 elective courses (21 hours) to be selected from a list of approved courses (see below) or to be negotiated in conjunction with the Program Director. These courses will be policy-oriented courses in sociology, economics, political science, and other SLA disciplines and programs. No elective credit will be accepted for courses outside of Newcomb-Tulane College.

Students can take only three courses below the 4000-level for elective credit. All other elective courses must be at the 4000-level or above.

All the departments have approved their courses for listing as SPP electives. The courses below are offered on a regular basis at Tulane by regular faculty members. Please note that some of these courses have prerequisites. Students should consult the course catalog prior to registering to ensure that they have met any department-specific prerequisites.

**Graduate Level Social Work Courses**

Priority for enrollment in graduate level social welfare courses is reserved for graduate students, but instructors will often consider undergraduates for enrollment when space is available. The instructor has total discretion in determining the suitability of the undergraduate for enrollment in a graduate course.

**Urban Studies Minor**

The Urban Studies minor is intended for any undergraduate student seeking to develop a multi-disciplinary but focused exploration of cities, urban life and artifacts, and the design and organization of urban space and experience. It is designed to complement pursuit of any major(s) throughout the Liberal Arts, Science and Engineering, Architecture, Public Health, and Business and offers an excellent academic supplement to pre-professional training for many areas of law, social work, and medicine.

**Requirements**

Six courses (minimum of 18 credits) are required for the minor in Urban Studies which include:

<table>

### Additional Information

Students must ensure that at least one elective course (3 credits) is at the 3000 level or higher and that elective courses are drawn from at least two departments, programs, or schools. Any course in which a student earns less than C does not count toward fulfillment of the minor program. Students must achieve a C average across all required coursework.

### US Public Policy Minor

The Tulane Summer Minor Program in Public Policy will give students a foundation for graduate school in public policy or a career in government and politics at the local, state or national level. Students complete relevant coursework and participate in service learning that together provide them with tools in the analysis of policy, knowledge in substantive policy areas, and experience in local government. Students completing the minor will fulfill one of Tulane's service learning graduation requirements.

### Requirements

A minor in public policy requires 5 courses (15 hours/credits), including:

<table>
<thead>
<tr>
<th>Course ID</th>

</table>
The one-year M.S. programs are designed to enrich and improve academic credentials of graduates and strengthen their academic foundation for further intellectual development, including entrance into medical, dental, or other health profession-related programs. These programs are offered in the Departments of Anatomy (http://medicine.tulane.edu/departments/anatomy/academic-programs), Biochemistry & Molecular Biology (http://medicine.tulane.edu/departments/biochemistry-molecular-biology/academic-programs), Medical Genetics and Genomics (https://medicine.tulane.edu/departments/medical-genetics-genomics), Microbiology & Immunology (http://medicine.tulane.edu/departments/microbiology-immunology/academic-programs), Pathology (http://medicine.tulane.edu/departments/pathology-laboratory-medicine/academic-programs), Pharmacology (http://medicine.tulane.edu/departments/pharmacology/academic-programs), and Physiology (http://medicine.tulane.edu/departments/physiology/academic-programs).

Two Year Programs (Applications open October 1st)

Two-year, research-intensive M.S. programs are designed to enhance the academic credentials and scientific research experience of graduates and prepare them for careers in academic or industrial research.

The two-year thesis-required program in Biochemistry and Molecular Biology leads to a Master of Biomedical Science in Biochemistry and Molecular Biology degree. Our distinctive program emphasizes student development in five areas to broaden and strengthen their academic foundation, and equips students with basic and advanced lab skills for a career in academic or industrial research.

The MS Clinical Anatomy degree is a 2-year non-thesis program of study of cadaveric dissection-based gross anatomy, embryology, cell biology and histology, and neuroscience leading to a MS degree in Anatomy. It is designed specifically for candidates who wish to develop careers in teaching and research in the anatomical sciences.

The MS Anatomy Research program is a 2-year thesis program of study of gross anatomy, embryology, cell biology, and histology leading to a Master of Science degree in Anatomy by research. It is designed specifically for candidates who wish to develop research careers in biomedical science and medical education.

The Masters in Molecular and Cellular Pathobiology is a full-time two-year thesis-based post-baccalaureate program leading to a Master of Science in Molecular and Cellular Pathobiology. This program is designed to enrich the scientific research experience and improve the academic credentials of students interested in careers in the biotech and pharmaceutical industries, as well as in academia.

Doctor of Medicine

The curriculum for the School of Medicine is designed to prepare future physicians with the knowledge, skills, and behaviors required for any specialty field they choose. The preclinical curriculum (years 1 and 2) is taught as a series of system-based modules that progress through two phases. In Phase I, the foundational courses of histology, physiology, biochemistry, and genetics, along with foundations in medicine are organized into system-based modules structured to provide normal structure and function, while still maintaining the identity of each course. Phase II begins in the
latter portion of Year 1 and provides the foundational knowledge and skills necessary for understanding pathophysiology and disease states, also in system-based modules containing microbiology, immunology, pathology, pharmacology, behavioral and neurosciences, and clinical medicine.

Students begin learning clinical skills early in Year 1. Specialty-based clinical training begins in May of Year 2 and continues throughout most of Year 3. The final phase of the curriculum is designed to help students choose and prepare for their residency choice while enhancing skills in emergency medicine, radiology and cultural competence. The curriculum provides enough flexibility for early and numerous opportunities in community service and service-learning, dedicated time for students interested in dual degrees (MPH, MBA), or mentored research.

**Biomedical Sciences Graduate Program - Doctor of Philosophy**

Tulane's Ph.D. Program in Biomedical Sciences takes an interdisciplinary approach to graduate education and research. There are many ways to shape your Tulane experience to fit your needs and career goals, and our program has an array of options to accelerate, customize, and enrich your education and, ultimately, your career. The program is dynamic, giving you an array of controls that allows you to heavily customize your experience here to suit you.

All PhD students receive a full tuition waiver and a stipend of approximately $30,000 per year for the entire duration of the program, usually between four and seven years.

Students undertaking work for the degree of Doctor of Philosophy should understand that this degree is awarded not for an accumulation of course credits only, but for superior attainment and accomplishment in research. Ordinarily the student is expected to finish the course requirements, 48 hours of credits at a minimum, in two full years of graduate study and complete the dissertation by the fourth year. The student must demonstrate the ability to carry out independent study and research in a chosen field, as evidenced in the dissertation. A minimum of one year of full-time study in residence at Tulane University is required.

In the first two semesters, all students take the identical core curriculum, described below. In conjunction with the course work in the first year, students rotate in 6-week blocks through three of the Program's participating research laboratories of the student's choice. This allows students to become more familiar with BMS research and faculty. Students should choose a Dissertation Advisor by the end of the second semester but must choose a Dissertation Advisor by the end of the third semester. Students may choose to further specify their study by choosing an Area of Research Emphasis (a Departmental Track in Anatomy, Biochemistry, Medical Genetics and Genomics, Microbiology and Immunology, Pharmacology or Physiology). An area of research emphasis may add further course requirements beyond those required for the Biomedical Sciences PhD degree without specialization.

**Anatomy Research, MS**

The MS Anatomy Research degree provides a program of research training for those who wish to become biomedical and medical education researchers.

This is a 2-year thesis program of study of gross anatomy, embryology, cell biology, and histology leading to a Master of Science degree in Anatomy by research. It is designed specifically for candidates who wish to develop research careers in biomedical science and medical education. In the first year, students in the program take anatomy and histology courses along with other graduate courses. All courses in the program are taught within the School of Medicine by full time faculty. In the second year, students carry out mentored research in the Department of Structural and Cellular Biology.

**Who is this program meant for?**

This is a two-year program of taught classes and laboratory research that leads to the MS Anatomy Research degree. It is designed for bachelor degree graduates and physicians who intend to follow a research career in the biomedical sciences. With a MS Anatomy Research degree, graduates can apply for laboratory research positions or to PhD programs in biomedical sciences.

**Program calendar**

The MS in Anatomy Research curriculum is designed for completion within two years. Classes start in August and end in May each year.

Anatomy, MS

The MS Anatomy degree is structured for those who wish to enhance their eligibility for entry to professional schools. This is a 1-year non-thesis program of study of cadaveric dissection-based gross anatomy, embryology, cell biology and histology, and neuroscience leading to a Master of Science degree in Anatomy. It is designed specifically for candidates who plan to attend medical school, or dental school, or enroll in other professional or advanced degree programs; it serves to improve credentials to compete for admission to a medical or dental school.

The degree program offers a carefully designed curriculum that includes taking classes with medical students, participating in a learning experience that closely models the medical school environment (small group teaching and learning, problem-based learning, team-based learning, simulation, early standardized patient experience, virtual microscopy, dissection-based anatomy). Class size is maintained at 20 students to maximize the small-group teaching environment. Students in the MS program take anatomy and histology courses alongside first year medical students at Tulane Medical School. All other graduate courses are taught within the School of Medicine by full time Medical School faculty.

Requirements

Students must take 32 credit hours of course work during the fall and spring semesters and complete the requirements for the degree.

Biochemistry, MS

Biochemistry & Molecular Biology Masters 1-Year Program

A two-semester graduate program designed to enrich and improve credentials of graduates to apply for admission to medical, dental or other healthcare-related profession programs.
Program Overview

This is a two-semester non-thesis program leading to a Master of Biomedical Science in Biochemistry and Molecular Biology degree. The program is primarily designed to enrich and improve academic credentials of graduates. Our distinctive program emphasizes student development in four areas (coursework, experiential learning, presentation skills, and personal growth), and allows students to broaden and strengthen their academic foundation for further intellectual development, such as gaining entrance into medical-, dental- or health profession-related schools.

The core curriculum emphasizes clinical applications of biochemistry and molecular knowledge. Required courses include Human Medical Cellular Biochemistry and Human Medical Metabolic Biochemistry which are equivalent to Tulane’s first-year medical biochemistry course, Medical Biochemistry Grand Rounds Externship Seminar which provides students with a unique opportunity to experience Medicine Grand Rounds from the biochemical, molecular and clinical perspectives, and the Department Seminar series exposing students to novel research in the field of biochemistry.

All students benefit from several other biochemistry- or molecular biology-related courses. Program electives range from more medically-related courses such as Chromosomal Instability and Cancer, Molecular Basis of Pediatric Disease, and Signal Transduction and Hormone Action to more research-related courses such as Biochemistry Research, Graduate-level Biochemistry, and Biomedical Statistics and Data Analysis. Additionally, the program has reciprocal relationships with certain courses in the Graduate Program in Biomedical Sciences and the Department of Microbiology and Immunology. Students may elect to take Tulane first-year medical course equivalents in Graduate Medical Microbiology and Medical Immunology, while enhancing their writing and presentation skills with Biochemistry Workshop – a journal club style course.

All courses are taught within the Tulane School of Medicine by full time faculty.

Two-Year Master’s Program in Biochemistry & Molecular Biology

A four-semester graduate program designed to provide advanced training in the biochemical sciences and prepare students for a career in research.

Program Overview

This is a two-year thesis-required program for the study of biochemistry and molecular biology leading to a Master of Biomedical Science in Biochemistry and Molecular Biology degree.

The program is designed to improve academic credentials and scientific research experience of graduates. Our distinctive program emphasizes student development in five areas (coursework, laboratory skills, independent thought, presentation skills, and personal growth), allows students to broaden and strengthen their academic foundation, and equips students with basic and advanced lab skills for a career in academic or industrial research.

Class size is limited to approximately 10 students. Students will take Graduate Biochemistry, Cell Biology, and Biostatistics courses, with a strong emphasis on research application of biochemical and molecular knowledge. These courses are taken along with first-year PhD students at the Tulane School of Medicine. Additional courses include Structure and Function of Biomolecules and Chromosomal Instability and Cancer. All students will benefit from several other Biochemistry- or Molecular Biology-related courses, including a Biochemistry and Molecular Biology Seminar series, a Biochemistry Workshop, and a course on Academic Writing and Critique. All courses are taught within the Tulane School of Medicine by full time faculty.

In year two, students will perform bench research toward the master’s thesis and experience all aspects of basic research, under supervision of a faculty advisor, from the development of an idea and scientific rationale, to experimental design and execution, data analysis, and possibly the drafting of a manuscript.

Requirements

For the one year Program, students must take 30 credit hours of coursework during the fall and spring semesters to complete the requirements for the degree. Additionally, students are required to take the NBME Shelf Exam in Biochemistry as a culminating experience. Although not thesis based, this degree does involve several written assignments and oral presentations as part of the required course work. No research is required. Therefore, this is considered a "non-thesis" degree.

For the two year Program, students must take 30 credit hours of coursework by the end of the spring semester in year two, and they must complete and defend a master’s thesis by the end of the summer in year two. Thesis research may commence at the beginning of year one, upon formation of the advisory committee. The student is expected to devote full time to research after the spring semester of year one, and until the thesis defense in the summer of year two.

Biomedical Sciences, PhD

Tulane’s Ph.D. Program in Biomedical Sciences takes an interdisciplinary approach to graduate education and research. There are many ways to shape your Tulane experience to fit your needs and career goals, and our program has an array of options to accelerate, customize, and enrich your education and, ultimately, your career. The program is dynamic, giving you an array of controls that allows you to heavily customize your experience here to suit you.

All PhD students receive a full tuition waiver and a stipend of approximately $30,000 per year for the entire duration of the program, usually between four and seven years.

Students undertaking work for the degree of Doctor of Philosophy should understand that this degree is awarded not for an accumulation of course credits only, but for superior attainment and accomplishment in research. Ordinarily the student is expected to finish the course requirements, 48 credit hours, in two full years of graduate study and complete the dissertation by the fourth year. The student must demonstrate the ability to carry out independent study and research in a chosen field, as evidenced in the dissertation. A minimum of one year of full-time study in residence at Tulane University is required.

Requirements

In the first two semesters, all students take the identical core curriculum, described below. In conjunction with the course work in the first year, students rotate in 6-week blocks through three of the Program’s participating research laboratories of the student’s choice. This allows students to become more familiar with BMS research
Students should choose a Dissertation Advisor by the end of the second semester but must choose a Dissertation Advisor by the end of the third semester. Students may choose to further specify their study by choosing an Area of Research Emphasis (a Departmental Track in Anatomy, Biochemistry, Medical Genetics and Genomics, Microbiology and Immunology, Pathology, Pharmacology or Physiology). An area of research emphasis may add further course requirements beyond those required for the Biomedical Sciences PhD degree without specialization.

</tbody>
</table>

Ideally, the student should choose a dissertation advisor at the end of the Spring semester.

Total for Second Year Fall + Spring must equal at least 21 credit hours

Coursework in the 2nd year must include at least 6 credit hours of lecture-based course work (Electives) and 11 credit hours of Independent Study (Research).

A minimum of 48 credit hours of course work and independent study is required for the PhD. All formal course work is to be completed within the first two years. Students may take Independent Study (BMSP 7990 Independent Study (1-6 c.h.) or equivalent) for 1-6 credits per semester for a maximum of 12 credits total during the first two years. The remaining hours of coursework are selected from the elective curriculum by the student in consultation with the dissertation advisor. Once coursework is completed, the student must demonstrate the ability to carry out independent study and research in a chosen field, as evidenced in the dissertation. Students ordinarily complete the requirements for the Ph.D. degree between four and seven years from the date of matriculation in the program.

**Clinical Anatomy, MS**

The MS Clinical Anatomy degree is designed to train the next generation of educators in the health sciences. This is a 2-year non-thesis program of study of cadaveric dissection-based gross anatomy, embryology, cell biology and histology, and neuroscience leading to a MS degree in Anatomy. It is designed specifically for candidates who wish to develop careers in teaching and research in the anatomical sciences. In the first year, students in the program take anatomy and histology courses along with other graduate courses. In the second year, student take courses and practicums that train them in the principles and practice of medical education and curriculum development.

Class size is small to maximize the small-group teaching environment. All graduate courses in the program are taught within the School of Medicine by full time Medical School faculty.

This is a two-year non-thesis program that leads to the MS Clinical Anatomy degree. It is designed for bachelor degree graduates and physicians who intend to follow a career in teaching the morphological sciences in colleges as well as research and scholarship in health sciences education. With a MS Clinical Anatomy degree, graduates can apply for teaching positions in anatomy, histology, embryology, neuroanatomy, biomedical sciences.

**Requirements**

Students must take 42 credit hours of course work over 4 semesters and complete the requirements for the degree.

### Clinical Research Methods, MS

This is a 32-credit, one-year curriculum is designed for the MD who seeks familiarity with the fundamentals and techniques of clinical research. The curriculum is intended to serve the recent medical school graduate who will earn the MS degree during one year of study following medical school and prior to standard graduate medical education. The program is offered in traditional lecture, seminar and tutorial format on the Tulane University School of Medicine campus; therefore the student would be a resident of the New Orleans area and pursue classes full time.

### Executive Master of Science in Clinical Research Methods

The Executive Master’s Degree in Clinical Research Methods program will permit students to complete most of the curriculum “online.”

### Clinical Research, MS

The Tulane MSCR Program is a structured program leading to a Master of Science in Clinical Research degree from the Tulane University School of Medicine. It usually requires 2 to 3 years to complete the curriculum including the mentored research requirement.

Potential trainees will be self-referred or nominated by their Program Director. After approval by the MSCR Internal Advisory Committee, the trainee will enter the MSCR program, which features four components:

1. Formal didactic training providing the tools to conduct modern clinical and translational research;
2. A clinical research and clinical medicine seminar series, providing peer interaction and mentor guidance on research topics;
3. A mentored clinical research project;
4. An annual MSCR retreat

Each Clinical Research Scholar will identify a research preceptor from the scholar's home division or department. In addition, each scholar will have a career mentor from the MSCR program.

In lieu of a thesis, the MSCR candidate is expected to prepare a grant ("K" or "R" format) and/or a paper based on the mentored research.

Clinical Fellows participating in the MSCR Program must also complete their individual clinical training program requirements.

Total Credit Hours 38

In lieu of a thesis, the MSCR candidate is expected to prepare a grant ("K" or "R" format) and/or a paper based on the mentored research.

Medical Genetics and Genomics, MS

The Hayward Genetics Center offers a 1-year, post-baccalaureate Master in Medical Genetics and Genomics. This multidisciplinary program gives graduates an in-depth understanding of the rapidly advancing field of clinical human genetics. It is designed to prepare qualified individuals for careers in the health sciences, and to provide an educational experience that will enhance the opportunity of being admitted into a postgraduate professional school such as medical school or PhD programs.

- Most of our students are pre-med, and while it varies from year to year, we estimate that over 90% of our graduates who apply to medical school or osteopathy school have been accepted in subsequent years.

- In addition to medical school, graduates from our program have also gone on to other careers including dental school, PhD programs, genetic counseling masters programs, and working with biomedical technology companies.

- The curriculum includes courses that cover the same material as the Tulane Medical School's first year Genetics course and first year Medical Biochemistry course.

- We offer clinical shadowing opportunities in the Tulane Genetics clinics

Requirements

The program begins every year in the fall semester and is a non-thesis degree. Students must complete a total of 30 hours of coursework and have a cumulative GPA of 3.0 to receive their Master's degree. Students are required to write an extensive paper on a subject in the field of human genetics during their second semester for their Special Topics course. Because our program is intradepartmental, all students will take the same courses and follow the same schedule.

Microbiology and Immunology, MS

This one-year post baccalaureate program leading to the degree of Master of Biomedical Science in Microbiology and Immunology has been designed to prepare students for careers in biomedical sciences and to provide an in-depth educational experience to improve the probability of gaining admission to a postgraduate professional school such as medical, dental, veterinary schools or Ph.D. programs. Class size is limited to 20 students. All courses are taught within the Tulane School of Medicine by full time faculty.

Upon graduation, students

- Should have developed core knowledge in Microbiology and Immunology, and the ability to apply their knowledge to problems in these and other disciplines. (Disciplinary and interdisciplinary knowledge)

- Should have developed the ability to perform basic work in a Microbiology or other research laboratory. (Professional competencies)

- Should have developed skills that transcend disciplines and are applicable in any context, such as communications, leadership, and working in teams. (Foundational and transferrable skills)

- Should have developed the ability to apply the scientific method, understand the application of statistical analysis, gain experience in conducting research and other field studies, learn about and understand the importance of research responsibility and integrity, and engage in work-based learning and research in a systematic manner. (Research)

Non-thesis Track

Total Credit Hours 30

Students must complete a minimum of 30 credit hours from the courses listed below.

Students can take as many credits as desired.

Thesis Track

- 26 credit hours of course work during Fall and Spring semesters plus 4 credits for thesis-relevant courses.
- Complete requirements for a thesis, based on library research (generate a review paper).
- At least a "B" average (3.0 GPA) has to be achieved in order to graduate.

Non-thesis Track

- 30 credit hours of course work during Fall and Spring semesters.
- At least a "B" average (3.0 GPA) has to be achieved in order to graduate.

Molecular and Cellular Pathobiology, MS

The MS Programs in Pathology at Tulane University are designed for students with a baccalaureate degree in science who are seeking advanced training in the health sciences, typically in preparation for pursuit of a professional degree (e.g. Medical, Dental, Physician Assistant, Pharmacy, Veterinary Medicine, Ph.D.) or for preparation to work in academia or biotechnology. Undergraduate courses in biology and chemistry are prerequisites. This program is also useful to individuals in academia that wish to understand recent advances in biomedical science. Foreign students with a medical degree that wish to develop research skills are also encouraged to apply to this program. We offer two different programs of study for the MS degree, a one-year program in Molecular Medicine and a two-year program in Molecular and Cellular Pathobiology.

The objective of the graduate program is to provide students with opportunities to study the cellular and molecular mechanisms of human diseases through didactic teaching and research training. We have developed two Master of Science (MS) programs, which are designed not only to enhance the academic credentials for individuals wishing to pursue a career in a health-related science, but also to ease the transition to medical/graduate school.

The Masters in Molecular and Cellular Pathobiology is a full-time two-year post-baccalaureate program leading to a Master of Science in Molecular and Cellular Pathobiology. This program is designed to enrich the scientific research experience and improve the academic credentials of students interested in careers in the biotech and pharmaceutical industries, as well as in academia. The degree requirements in this program include 30 credit hours of coursework with a cumulative GPA greater or equal to 3.0, plus preparation and successful defense of a thesis. In the second year, students will conduct mentored research in the Department of Pathology. Recipients of the Master of Science in Molecular and Cellular Pathobiology will demonstrate advanced knowledge in the molecular and cellular basis of disease and develop quantitative and qualitative research skills in data collection and analyses. Graduates of this program will possess the required skills to conduct independent research.

Questions regarding the program can be addressed to the Program Coordinator (Doreen Barrett, dbarrett@tulane.edu), Program Director (Dr. Haitao Zhang, hzhang@tulane.edu) or Co-Director (Dr. Gilbert Morris, gmorris2@tulane.edu).

Independent Study is 2 Credits for a total of 9 each semester

### Molecular Medicine, MS

The MS Programs in Pathology at Tulane University are designed for students with a baccalaureate degree in science who are seeking advanced training in the health sciences, typically in preparation for pursuit of a professional degree (e.g. Medical, Dental, Physician Assistant, Pharmacy, Veterinary Medicine, Ph.D.) or for preparation to work in academia or biotechnology. Undergraduate courses in biology and chemistry are prerequisites. This program is also useful to individuals in academia that wish to understand recent advances in biomedical science. Foreign students with a medical degree that wish to develop research skills are also encouraged to apply to this program. We offer two different programs of study for the MS degree, a one year program in Molecular Medicine and a two year program in Molecular and Cellular Pathobiology.

The objective of the graduate program is to provide students with opportunities to study the cellular and molecular mechanisms of human diseases through didactic teaching and research training. Both Master of Science (MS) programs are designed not only to enhance the academic credentials for individuals wishing to pursue a career in a health-related science, but also to ease the transition to medical/graduate school.

The Molecular Medicine Program is a full-time two semester post-baccalaureate program leading to a Master of Science degree. This program is designed to provide a solid foundation in human diseases and their molecular pathways for students considering applying to medical, dental, and other health-related professional schools. All courses in this program are taught by full-time Medical School faculty. Successful performance will significantly improve one's credentials for applying to medical or dental school.

The objective of the graduate program is to provide students with opportunities to study the cellular and molecular mechanisms of human diseases through didactic teaching and research training. Both Master of Science (MS) programs are designed not only to enhance the academic credentials for individuals wishing to pursue a career in a health-related science, but also to ease the transition to medical/graduate school.

**Objectives**

- To train students in the principles underlying the discipline of pharmacology
- To learn the approach, rationale, and methods required to design and conduct research in pharmacology

Tulane became the first national research institution to integrate public service into its core curriculum for undergraduates in 2006. Now, the entire university community, including the schools of Architecture, Business, Law, Liberal Arts, Medicine, Public Health and Tropical
Medicine, Science and Engineering and Social Work – is committed to public service.

Public service is of particular importance to those entering our one year masters program, because providing a track record of significant public or community service has become a prerequisite for admission to most US medical schools. Students are expected to move beyond the scope of academics and work in a community to improve the health of a population. This is "what medicine is all about".

As a result, a core requirement of our Masters program in Pharmacology is that students provide public or community service averaging at least 1 hour per week, or 12 hours per semester. During the 2017-18 academic year, students in our pharmacology Master's program performed over 2167 hours of public service in the New Orleans area (with an average of 68 hours per student for the academic year).

Tulane has a Center for Public Service that helps connect students with numerous community partners & outreach programs that are active in the New Orleans area. As a part of the pharmacology curriculum, students are required to document their service activities in short essays, posted photos or video clips, and reflect upon the learning garnered from such activities in an online blog or wiki page. In addition, students are also expected to reflect on what they have learned from their academic and classroom activities.

Tulane is setting the standard for public service for the next generation of universities. When you receive a Tulane education, you will get a little something extra from community service activities that most other institutions don't offer. Our students get a unique educational experience that can be found Only in New Orleans. Only at Tulane.

Requirements

Non-Thesis Track: Historically most students have selected a non-thesis track. Students in this track are required to successfully complete a minimum of 30 credit hours of course work, including 4 elective courses (8 credit hours) in the Spring semester. Students can earn up to 32 credit hours for the year by signing up for 2 credit hours in the ePortfolio course during one semester.

Thesis Track: Students are required to complete the requirements for a Master's thesis, and successfully complete a minimum of 26 credit hours of course work, plus a total of 4 credit hours of Pharmacology Masters Research (divided between Fall & Spring semesters), for a total of 30 credit hours. The thesis can be based on either laboratory or library research (the topic to be chosen by the student in consultation with the advisor and the thesis committee). Students can also earn up to 32 credit hours for the year by signing up for 2 credit hours in the ePortfolio course each semester. Students on the thesis track should also sign up for Masters Thesis Research (0 credit hours) which will be included on a student’s Transcript as evidence of having written a Thesis.

Community Service: A track record of community or public service has become a prerequisite for admission to most US medical schools. Students must complete a minimum of 1 hour of community service per week, or >12 hours per semester. Documentation & reflection on what students learn from community service activities is a component of the Pharmacology ePortfolio course. Students can also elect to perform 24 hours of community service in a semester for 2 credit hours in the ePortfolio course each semester. This can be used to complete 32 total credit hours at the end of the program.

### Physiology, MS

The Physiology Graduate Program at Tulane University School of Medicine in New Orleans, LA has developed a Master's program specifically designed to provide advanced training and understanding of the functions of the body, and to serve as the foundation for the study of medicine. Successful completion of this one-year program will increase your competitiveness for medical schools or equivalent professional programs. The program includes Advanced Medical Physiology, Neurophysiology, Molecular and Cellular Biology, and Translational Physiology. The program is open for applications all year around.

Students can participate in research, grant writing, and protocol creation. Students will have a chance to interact with faculty and researchers from Tulane School of Medicine, the VA healthcare system, and Pennington Biomedical Research Center. This program also facilitates learning the materials tested on the MCAT.

### MD Degree Program

#### Programs

- **Graduate**
  - Medicine, MD (p. 192)

#### Medicine, MD

The curriculum for the School of Medicine is designed to prepare future physicians with the knowledge, skills, and behaviors required for any specialty field they choose. The pre-clinical curriculum (years 1 and 2) is taught as a series of system-based modules that progress through two phases. In Phase I, the foundational courses of histology, physiology, biochemistry, and genetics, along with foundations in medicine are organized into system-based modules containing normal structure and function, while still maintaining the identity of each course. Phase II begins in the latter portion of Year 1 and provides the foundational knowledge and skills necessary for understanding pathophysiology and disease states, also in system-based modules containing microbiology, immunology, pathology, pharmacology, behavioral and neurosciences, and clinical medicine.

Students begin learning clinical skills early in Year 1. Specialty-based clinical training begins in May of Year 2 and continues throughout most of Year 3. The final phase of the curriculum is designed to help students choose and prepare for their residency choice while enhancing skills in emergency medicine, radiology and cultural competence. The curriculum provides enough flexibility for early and numerous opportunities in community service and service-learning, dedicated time for students interested in dual degrees (MPH, MBA), or mentored research.

Pre-clinical MD curriculum in the School of Medicine is available only to those students who have been accepted into Tulane’s MD program.

Clinical MD electives in the School of Medicine may be available to visiting students from United States medical schools who apply and
are accepted for individual electives through AAMC’s VSAS/VSLO platform. **Tulane School of Medicine does not offer electives to visiting students from international schools of medicine.**

Current MD students in the School of Medicine should log into eMedley’s eCurriculum for additional registration details, and for more details about courses and rotations, such as objectives, syllabi, permission to add, etc.

**Requirements**

**Degree requirements**

Students complete their pre-clinical curriculum (first and second years) as a cohort and are registered by the School of Medicine Office of Admissions and Student Affairs. First- and second-year students will receive information through email listservs and dean’s hours about how and when to choose their preclinical electives.

Third-year students complete their seven required clinical clerkships in a lock-step fashion. Third-year students will receive information through email listservs and dean’s hours about how and when to find information about their third-year through eMedley’s eCurriculum, and how to request a particular clinical clerkship path.

Fourth-year students select block dates for their required fourth-year rotations and electives through a lottery system. Fourth-year students will receive information through email listservs and dean’s hours about how to use eMedley’s eCurriculum’s registration and scheduling resources.

---

1. Students must record a passing USMLE Step 1 score by October of their third year or they will be placed on leave of absence. See the Tulane School of Medicine handbook and policies for more information.

2. Students must record passing USMLE Step 2 Clinical Knowledge (CK) and Clinical Skills (CS) scores to graduate. Students are encouraged to take both Step 2 CK and Step 2 CS by December of their fourth year. See the Tulane School of Medicine handbook and policies for more information.

3. Students in Tulane’s MD/MPH combined program and students who matriculated with or before the Class of 2015 are exempt from the MED4409 requirement but must complete 32 weeks’ worth of electives.

4. ACLS training is provided through Tulane University’s SIM Center. Students should consult the SIM Center for available training days/times.
Mission
SoPA offers high quality, distinctive undergraduate and graduate professional programs to a diverse student population in New Orleans and beyond.

History
Tulane University started offering courses to working adults in the 1880s in the areas of teacher preparation and the trades. In 1942, a range of programs across the University were consolidated into University College, which was renamed the School of Continuing Studies in 2006 as part of the University’s post-Hurricane Katrina Renewal Plan. The school’s name was changed to the School of Professional Advancement in 2017, to allow for a clearer focus on working adults and offering applied academic programs relevant to jobs and careers. Although the name has changed over time, the mission has remained constant: to develop and deliver distinctive undergraduate and graduate professional programs of the highest quality for a diverse student population.

Accreditation
Tulane University is accredited by the Commission on Colleges of the Southern Association of Colleges and Schools to award associate, baccalaureate, masters, doctorate and professional degrees. Contact the Commission on Colleges at:

1866 Southern Lane,
Decatur, Georgia 30033-4097
or call 404-679-4500 for questions about the accreditation of Tulane University.

Programs of Study
One of the school’s greatest strengths is the diversity of its academic offerings and the flexibility with which students may approach them. SoPA offers several undergraduate and graduate programs in applied areas that prepare students to enter the workforce, as well as in the humanities and social sciences. Undergraduate students may pursue a bachelor’s degree with a major offered by SoPA or work toward a major offered through another undergraduate division of the university, with a plan for transferring to that division. Individuals with a bachelor’s degree may enroll in a master’s degree, a graduate-level certificate program, or a post-baccalaureate certificate. Students may also prepare to transfer to a degree program at another school at the university or take miscellaneous courses that suit their personal interests or professional needs.

Bachelor Degree Programs
- Digital Design Major (p. 211)
- Exercise Science Major (p. 223)
- General Legal Studies (p. 218)
- Health and Wellness Major (p. 224)
- Homeland Security Major (p. 215)
- Humanities Major (p. 225)
- Information Technology Major (p. 219)
- Public Relations Major (p. 210)
- Social Sciences Major (p. 226)
Master’s Degree Programs
- Cyber Defense Certificate (Graduate) (p. 220)
- Cyber Leadership Certificate (Graduate) (p. 220)
- Cybersecurity Management, Master of Professional Studies (p. 222)
- Emergency Management, Master of Professional Studies (p. 215)
- Health and Wellness Management, Master of Professional Studies (p. 224)
- Homeland Security Studies, Master of Professional Studies (p. 216)
- Information Technology Management, Master of Professional Studies (p. 223)
- IT Strategic Planning Certificate (Graduate) (p. 222)
- Liberal Arts, MLA (p. 226)
- Security Management, Master of Professional Studies (p. 217)
- Technology Architecture Certificate (Graduate) (p. 222)

Minors
- Accounting and Finance Minor (p. 207)
- Accounting Minor (School of Professional Advancement) (p. 208)
- Advertising Minor (p. 208)
- Applied Business Studies Minor (p. 208)
- Applied Computing Systems and Technology Minor (p. 220)
- Digital Design Minor (p. 213)
- Exercise Science Minor (p. 224)
- General Legal Studies Minor (p. 218)
- Health and Wellness Minor (p. 225)
- Homeland Security Studies Minor (p. 216)
- Human Resource Development Minor (p. 209)
- Marketing Minor (School of Professional Advancement) (p. 209)
- Public Relations Minor (p. 211)
- Small Business Development Minor (p. 211)

Certificates
- Accounting Fundamentals Certificate (p. 207)
- Advanced Emergency Management Certificate (Graduate) (p. 214)
- Advanced Security Management Certificate (Graduate) (p. 214)
- Applied Business Certificate (p. 208)
- Cyber Security, Post-Baccalaureate Certificate (p. 220)
- Digital Design Post-Baccalaureate Certificate (p. 213)
- Digital Media and Marketing Communications Certificate (p. 208)
- Emergency Management Certificate (Graduate) (p. 215)
- Finance Certificate (p. 209)
- Health and Wellness Post-Baccalaureate Certificate (p. 225)
- Homeland Security Studies Post-Baccalaureate Certificate (p. 216)
- Human Resources Fundamentals Certificate (p. 209)
- Information Technology Post-Baccalaureate Certificate (p. 221)
- Integrated Application Development Post-Baccalaureate Certificate (p. 221)
- Marketing Certificate (p. 209)
- Paralegal Studies Post-Baccalaureate Certificate (p. 218)
- Public Relations Certificate (p. 210)
- Security Management Certificate (Graduate) (p. 217)
- Small Business Development Certificate (p. 211)
- Sport Event Security and Emergency Management Certificate (Graduate) (p. 217)
- Teacher Certification Program (p. 226)

Academic Options

Cross Registration
Undergraduate students may enroll in undergraduate courses not listed in SoPA offerings. For courses listed under the School of Liberal Arts, students need only meet the prerequisites before enrolling. The Schools of Architecture, Business, Public Health and Tropical Medicine, or Science and Engineering courses require the relevant dean’s approval for enrollment in undergraduate courses. Graduate students should check with their program director in advance of registering for courses outside of SoPA if they wish to apply those courses toward the graduate degree.

Please note that the tuition rate charged for courses taken outside of SoPA courses may be significantly higher than the SoPA course tuition rate.

Double Undergraduate Majors
Students may complete two majors by meeting the requirements established by the departments concerned. Although two diplomas are not awarded for a double major, both majors are listed on the permanent record from which transcripts are made. To undertake a double major, students must plan each major with the department concerned. Some minimal overlap may occur in cases where one course is listed by two major departments as part of the major curriculum of each. In any case, each major of a double major must show at least eight courses that do not overlap, except a double major in Cell and Molecular Biology where no more than five courses may overlap.

Dual Undergraduate Degrees
Students may earn dual degrees (a BS and a BA) by completing 150 instead of 120 and completing all the requirements of both a BS major and a BA major.

Independent Study
Some programs and departments offer independent study under the direction of a faculty member to a limited number of students of superior scholastic standing.

The work may take the form of directed readings, laboratory or library research, or original composition. Instead of traditional class attendance, the student substitutes conferences, as needed, with the faculty member. Students who wish to take an independent studies course must have the approval of the associate dean for academic affairs.

Second Undergraduate Degrees
Students already holding a baccalaureate degree may enroll in SoPA for a second baccalaureate degree. They must complete a total of 150 credits instead of 120 (60 credits must be taken at Tulane University),
satisfy the SoPA proficiency, supporting, distribution, and residency requirements for a second degree, and fulfill the requirements for the major.

Minors Offered
To be awarded an undergraduate minor, students must have a 2.00 grade-point average in all required coursework and 50 percent of the coursework must be earned at Tulane.

The School of Liberal Arts and School of Science and Engineering
SoPA students may select any major in the School of Liberal Arts or the School of Science and Engineering which offers a B.A. or B.S. or B.S.E. degree. The academic departments determine the requirements for these majors. Students electing this option must fulfill the core curriculum requirements for the major. SoPA undergraduate students who wish to major in a program not available within SoPA (i.e. a major in the School of Liberal Arts or the School of Science and Engineering) will be required to meet Newcomb-Tulane College residency requirements. Those requirements are that students must earn at least 60 credits in Newcomb-Tulane College courses (which may be cross-listed with SoPA), the last thirty of which must be earned while enrolled in Newcomb-Tulane College. In practice, this requires the student to transfer into Newcomb-Tulane College prior to earning their 90th college credit. SoPA students with a non-SoPA minor will not be required to transfer.

Students should consult with their SoPA advisor if they wish to pursue a major offered by these schools.

Majors completed in disciplines not sponsored by SoPA will likely require that the student take some courses at a significantly higher tuition rate than is available directly through SoPA.

Special Programs
Concurrent Enrollment for High School Students
SoPA offers a concurrent undergraduate enrollment program for outstanding high school students. The concurrent enrollment program offers qualified high-school students the opportunity to get an early start on their college education. Students take regular college coursework and earn credits and grades that become a part of their permanent college record. Concurrent enrollment students may apply for admission to Tulane upon graduation from high school, or they may transfer their Tulane credits to another institution, depending on the regulations in effect at that institution.

Concurrent enrollment students may enroll in either or both semesters of the regular academic year or the summer sessions. To qualify, students must have a minimum grade-point average of 3.2, and an SAT score of at least 1200, an ACT composite of at least 25, or a PSAT score of 64 (2 parts) or 94 (3 parts) or PLAN score of 24.

Students meeting these admission standards must also submit a Concurrent Enrollment application along with a $40 application fee. In addition, the student’s high school counselor must submit a letter of recommendation stating that the student has the necessary academic skills and personal development to succeed at Tulane University. SoPA will not admit any student to the Concurrent Enrollment program without all required material and records. Students are limited to two undergraduate courses per semester.

SoPA tuition rates apply to all courses.

Student Government
Student government is funded by a mandatory student fee. Part of the income goes to Tulane University student organizations and activities, and part is retained by the SoPA Student Government Association. Student activity fees are distributed by the Associated Student Body, which organizes campus activities. The SoPA Student Government Association is part of the Graduate and Professional Student Association, and requests its budget from that body.

Students interested in student government should contact the assistant dean for student support and success at 504-865-5333.

Alumni Association
All graduates of SoPA automatically become members of the Alumni Association. There are no dues. The purpose of the association is to promote the idea of higher education with emphasis on the continuing education of adults and to encourage fellowship among members. Contact with the Alumni Association may be made by calling the Office of Alumni Relations at (504) 865-5901 or online (https://alumni.tulane.edu).

Teacher Certification and Preparation
Mailing Address
Teacher Preparation and Certification
7039 Freret Street
Phone: 504-865-5342

SoPA offers an undergraduate pathway to certification as a K-12 teacher. The Teacher Preparation and Certification Program has state approval for the three programs (Secondary, Early Childhood and Dance) from the State Board of Elementary and Secondary Education and national accreditation from the Teacher Education Accreditation Council. Please see the program website or contact the Teacher Certification office for details.

Academic Policies
Academic Policies & Procedures
Academic Calendar
SoPA’s academic calendar is built on a semester framework. There are three semesters per academic year - fall, spring, and summer. The fall and spring semesters are 15 weeks long. The summer semester is 12 weeks, during which both 12-week courses and intensive six-week courses are offered.

Deadlines for adding and dropping courses may be found on the SoPA website (https://sopa.tulane.edu/student-information/academic-calendars).

Campuses
SoPA courses are offered at the Uptown and Elmwood campuses, as well as online.
**Academic Advising**

Students are assigned a SoPA academic advisor upon admission, and are encouraged to maintain regular contact with their academic advisors in matters relating to academic planning, satisfaction of degree requirements, quality of work rules, and transfer of credit from other institutions.

**Admission, Costs, and Transfer Credits**

**Undergraduate Admission**

Applicants to SoPA are not required to submit ACT or SAT test scores in order to be admitted but must hold a high school diploma or general equivalent diploma. Continued enrollment is based on satisfactory academic performance.

Individuals wishing to study through SoPA should complete the online application form (https://applysopa.tulane.edu/apply), along with a **non-refundable $40 processing fee**. Applicants who have attended college previously and plan to work toward a degree or certificate must contact all former schools and have official transcripts sent directly to SoPA. Those who have not previously attended college must submit a copy of their high school transcript (or equivalent) with their application.

Individuals desiring to attend SoPA and who do not plan to earn a degree (i.e. are “non-matriculating”) do not need to submit transcripts of previous college work. However, proof of high school graduation is still required. Individuals dismissed from, or on probation at, their last college may be admitted on probation at the discretion of the Academic Performance Committee. Conditions of probation at entry generally include a load limit of seven credits in the first semester. Continued enrollment after entering on probation is generally contingent upon the student earning grades of C or better in all courses taken the first semester.

Prior SoPA students who have been inactive for two or more years will be required to re-apply for admission to SoPA. This includes submitting a new admissions application, application fee, and transcripts. SoPA students who were not enrolled in classes the previous semester must go to the online application (https://applysopa.tulane.edu/apply) to update their contact information and their government-issued ID.

**Interdivisional Transfer**

Students in good academic standing in Newcomb-Tulane College who wish to transfer to SoPA may do so with the approval of the dean of Newcomb-Tulane College.

Students on probation in Newcomb-Tulane College who wish to improve their academic standing through part-time studies at SoPA may, with the approval of the dean of Newcomb-Tulane College, transfer to SoPA, but will be admitted on probation.

Students not eligible to return to another division of Tulane University are generally inadmissible to SoPA. These students may appeal to the SoPA Academic Petitions and Performance Committee for probationary admission.

**Transfer Credit**

**Undergraduate Students**

Students who wish to transfer credits earned at other colleges and universities must have official transcripts sent directly to SoPA. SoPA will transfer only those credits earned at another college or university that was accredited by a regional accreditation authority (such as the Southern Association of Colleges and Schools) at the time the courses were taken. Up to 60 credits may be transferred from a regionally accredited college or university. For the General Legal Studies program, only courses taken at an American Bar Association-approved paralegal program may be transferred. Coursework from foreign universities will be referred to the World Education Services for evaluation and translation, if necessary. Transfer of credit from institutions not belonging to a regional accrediting body is done at the discretion of SoPA.

Individual academic departments at Tulane outside of SoPA may have rules governing the transfer of credits from community and junior colleges that may affect students, i.e. may not accept community college transfer credits that SoPA does accept. For specifics, contact a SoPA academic advisor. No more than 27 credits of business coursework may be transferred to SoPA, and no more than 27 credits in business may be applied to any bachelor’s degree at SoPA.

Work from such regionally accredited colleges is transferred at the value in credits/hours for which it was awarded if a grade of C or higher was earned and if an equivalent Tulane course exists. Credits earned while enrolled at other schools of Tulane University may be applied toward a SoPA degree programs; consult your academic advisor to find out if this is possible for you. Students transferring from a school using a quarter, rather than the semester, system are awarded two-thirds of a semester hour for each quarter hour credit.
Students with transfer credits should see an academic advisor before the end of their first semester to have their credits evaluated. When transcripts are received, students will be notified via a receipt of transcript acknowledgement sent to their Tulane email accounts. Students who do not receive a transcript receipt within a reasonable time frame should contact the SoPA Records Manager to check the status. Transfer credit requested for academic work done more than 10 years prior to admission to SoPA is subject to review by SoPA. Courses transferred from other institutions are not included in the calculation of grade-point average.

Students wishing to take courses at another institution during the summer must first receive approval from the SoPA associate dean for academic affairs and from the appropriate department. Ordinarily, while enrolled at Tulane, SoPA students are not permitted to take credit courses at any other university and apply those credits toward a degree program at Tulane.

Graduate Students
Graduate students who wish to transfer credits earned from other other colleges and universities must have official transcripts sent directly to SoPA. SoPA will transfer only those credits earned at another college or university that was accredited by a regional accrediting authority at the time the courses were taken. Students in good academic standing may transfer up to 9 credits. Coursework from foreign universities will be referred to World Education Services for evaluation and translation, if necessary. Transfer of credit from institutions not belonging to a regional accrediting body is at the discretion of SoPA.

Coursework is transferred at the value in credits/hours for which it was awarded if a grade of B or higher was earned and if an equivalent Tulane course exists.

Credit for Life and Work Experience
SoPA recognizes that many of its students come with extensive professional and life experiences that have the potential to translate into advanced standing or exemptions from certain academic requirements and coursework in both undergraduate and graduate degree and certificate programs.

Prior Learning credit can be awarded for learning outside of the classroom, including work experience, previous education, military and other post-secondary training, or by examinations such as the College Level Examination Program (CLEP) and DANTES Subject Standardized Tests (DSST).

SoPA undergraduate students may receive up to 24 credits from portfolio assessment, examination, and military and other post-secondary training. The total of all prior learning credits, including credits transferred from other schools, cannot exceed 60 credits. Prior learning credit does not count toward the School’s residency requirement, and may not be transferable to other divisions within Tulane. SoPA graduate students may receive up to six prior learning credits through portfolio assessment. Please consult your academic advisor for additional information about this process.

Credit by Examination
SoPA accepts credits earned from successful completion of national testing programs: the College Level Examination Program (CLEP) and DANTES Subject Standardized Tests (DSST). Qualified SoPA students may receive up to 24 credits by testing out of courses through CLEP and DSST tests.

The table below lists the CLEP tests accepted by SoPA, the corresponding Tulane course, and the minimum required passing score.

**Portfolio Assessment Credit**

SoPA is dedicated to helping working adults advance their careers through flexible degree programs that align with their goals and schedules. For those who are returning to school with a repertoire of professional experience, portfolio assessment offers an opportunity to earn credit for life and work experience. The portfolios are assessed by a qualified faculty member.

SoPA will award up to 24 portfolio credits to students earning a bachelor’s degree. Graduate students may earn up to six portfolio credits. Undergraduate students may earn an additional three elective credits for completing PAPL 1000, the Prior Learning Portfolio Development course. PAPL 1000 is offered through The Council on Adult and Experiential Learning (CAEL), a nonprofit organization based in Chicago, and is graded Pass/Fail.

SoPA has partnered with CAEL to offer the portfolio course and portfolio assessment. Founded more than 40 years ago, CAEL is the most established supporter of access to postsecondary opportunities for adult students in the U.S.

Students must have approval from an academic advisor or program director in order to have a portfolio evaluated. Portfolio credit may be earned for courses within one of the SoPA applied academic programs, including:

- General Legal Studies
- Business Studies
- Emergency & Security Studies
- Kinesiology
- Digital Design
- Applied Computing

Portfolio credit will not be permitted for capstone courses, practica, internship courses, and courses with labs.

Undergraduate students must have been enrolled at SoPA for at least one semester prior to registering for the portfolio assessment course, have at least a 2.0 cumulative GPA, and have received credit for ENGL 1010 or an equivalent. Graduate students wishing to develop and have a portfolio evaluated may develop a portfolio through a self-guided process. The portfolio assessments will be conducted by SoPA full-time and adjunct faculty trained to do these assessments in their areas of expertise, or by vetted experts hired by CAEL.

* Tests taken prior to 2008 are scored on a 20 – 80 point scale. Tests taken in 2008 and later are scored on a 200 – 500 point scale.

**Military and Public Safety Training**

Up to 12 elective credits may be awarded to graduates of police officer, firefighter, and paramedic training academies. Individuals applying for these credits must be able to document their graduation from a training academy and/or certification as a firefighter, police officer, or paramedic.

**Registration Policies and Procedures**

**Registration**

SoPA students are governed by the registration policies and procedures set by the university. Consult the University Catalog Registration Policies and Procedures (p. 15) regarding the registration and confirmation process.

Students with registration holds should clear them prior to the start of the semester. Students will not be allowed to retroactively register for classes after the deadline for the last day to register/add has passed.

SoPA reserves the right to cancel any course with low enrollment.

**Tuition and Fees**

Consult the SoPA Website (https://sopa.tulane.edu/admissions/sopa-tuition-and-fees) for current tuition rates and fee schedules.

In addition to tuition, SoPA students pay university and student activity fees. Special fees are charged for laboratory and studio courses, and special examinations as specified in the Schedule of Classes (https://classschedule.tulane.edu/Search.aspx) published by the Registrar’s Office.

SoPA students may register for courses offered by other divisions at Tulane at that division’s posted tuition rate, which may be significantly higher than SoPA’s. SoPA courses are clearly marked in the Schedule of Classes (https://classschedule.tulane.edu/Search.aspx).

Tuition refunds are allowed for students who drop courses by the dates specified in the academic calendar (https://sopa.tulane.edu/student-information/academic-calendars). Application, lab, other special course fees, and university fees are non-refundable.

Failure to attend a class does not constitute a withdrawal. Students will still be held responsible for any financial obligations related to a class for which they registered and failed to properly withdraw.

No diploma or transcript will be given to a student who is in default on any payments due to Tulane University.

**Changes to Academic Records**

No changes to course enrollment status (including adding or dropping courses), grades or grade types will be made more than three years after the close of the semester in which the course was offered.

**Retention of Academic Records**

Academic records will be retained for at least eight years from the time of the student’s first enrollment at SoPA. This restriction does not apply to records kept by the registrar’s office; those records are retained permanently.

**Add/Drop Policy**

Students wishing to add or drop courses should consult the academic calendar (https://sopa.tulane.edu/student-information/academic-
calendars) for deadlines and instructions. Failure to make schedule adjustments promptly and accurately may result in financial or academic penalties.

Schedule adjustments are done online during the two weeks following the first day of the semester.

Courses may be dropped online up to the last day to drop during the semester. If a student wishes to drop all of his or her courses during a semester, he or she must submit a Withdrawal for the Term form (see Withdrawal section below.)

Withdrawal

Voluntary
A student who has registered for a semester and needs to drop all of his or her courses must complete a Withdrawal for the Term form (https://sopa.tulane.edu/sites/sopa.tulane.edu/files/SoPA_withdrawal_form.pdf) and submit it to any SoPA office. Forms may be obtained on the SoPA website or at a SoPA campus office. Students should contact their advisor if they are unable to complete the form in person.

Medical
A withdrawal from courses for medical reasons requires an official letter of recommendation from a physician in the Campus Health Center (https://campushealth.tulane.edu) and the approval of the SoPA Dean’s office. Students seeking a medical withdrawal must report to their academic advisor before going to the Campus Health Center for an evaluation. Grades of W are assigned when a student withdraws from one or more courses for medical reasons after the last day to drop without record.

A partial medical withdrawal (from some but not all courses) or incomplete grades in one or more courses may be permitted upon the recommendation of the Campus Health Center. Withdrawals from individual courses for medical reasons after the published deadline for dropping a course will require supporting justification. Partial withdrawals are not given during the last two weeks of classes. The deadline for medical withdrawals from all courses is the last day of classes each term. Requests for retroactive medical withdrawals normally are not approved.

Refunds are based on the official date of withdrawal.

SoPA may require a medical clearance before a student can continue studies in a semester that begins after administrative action has been taken on behalf of the student for medical reasons. Students should contact their academic advisor to return from medical leave.

Required
A student may be required to withdraw from any course or from the university, temporarily or permanently, for any of the following reasons: possibility of danger to the health of the student or to that of other students if enrollment is continued; refusal to obey regulations; violation of the Honor Code or other serious misconduct; unsatisfactory class attendance; or work below the required scholastic standards.

Appeals
Students who are requesting changes to their academic record outside of the current term’s academic calendar should consult with their academic advisor.

Academic Policies

Academic Performance

Credits and Grades
Undergraduate and graduate units at Tulane University are measured by credits that correspond to the number of hours the class meets per week.

Most courses meet three hours a week and are valued at three credits. SoPA, along with the other divisions of Tulane uses a plus/minus grading system. Each grade is assigned a number of “quality points” that are used in the calculation of the grade point average (GPA). Grades and quality points used at SoPA are as follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Quality Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>4.00</td>
</tr>
<tr>
<td>A-</td>
<td>3.67</td>
</tr>
<tr>
<td>B+</td>
<td>3.33</td>
</tr>
<tr>
<td>B</td>
<td>3.00</td>
</tr>
<tr>
<td>B-</td>
<td>2.67</td>
</tr>
<tr>
<td>C+</td>
<td>2.33</td>
</tr>
<tr>
<td>C</td>
<td>2.00</td>
</tr>
<tr>
<td>C-</td>
<td>1.67</td>
</tr>
<tr>
<td>D+</td>
<td>1.33</td>
</tr>
<tr>
<td>D</td>
<td>1.00</td>
</tr>
<tr>
<td>D-</td>
<td>0.33</td>
</tr>
<tr>
<td>F</td>
<td>Failing, no grade points = 0.00</td>
</tr>
<tr>
<td>WF</td>
<td>Withdrawn failing, counts in the GPA as an F = 0.00</td>
</tr>
<tr>
<td>UW</td>
<td>Unofficial withdrawal, counts in GPA as an F = 0.00</td>
</tr>
<tr>
<td>W</td>
<td>Withdrawn passing, not used in GPA computation</td>
</tr>
<tr>
<td>S</td>
<td>Satisfactory, not used in GPA computation (C- or above) but counted in earned hours</td>
</tr>
<tr>
<td>U</td>
<td>Unsatisfactory, not used in GPA computation (below C-) and earns no credit</td>
</tr>
<tr>
<td>AU</td>
<td>Audit, not used in GPA computation</td>
</tr>
<tr>
<td>I</td>
<td>Incomplete, no grade points = 0.00</td>
</tr>
</tbody>
</table>

Satisfactory/Unsatisfactory
Undergraduate students in SoPA may avail themselves of the satisfactory/unsatisfactory option. A course with the grade of satisfactory (S) typically may not be used to satisfy proficiency, major, or minor requirements, and no more than 18 credits of S will be credited toward the degree. Students should be aware that many colleges will not accept the transfer of credit with this grade.

Students may take three credits of work on a satisfactory/unsatisfactory basis per academic year (fall, spring and summer) if they have completed at least 30 credits of college work and are not on probation.

To receive a satisfactory grade, students must earn a C or higher. The grade of S is not calculated into the grade-point average. Grades below
C will be designated as unsatisfactory (U). The grade of U will not be
calculated into the grade-point average.

Audit
Any student may take a course on an audit basis. No credit is earned
for this work, but the course is entered on the official transcript with a
grade of AU. SoPA students must pay tuition for an audited course.

Incompletes
An incomplete grade is given at the discretion of the instructor. It
allows a maximum extension of 30 business days after the end of
the term for the completion of the coursework. If the work has not
been submitted by the deadline, the incomplete is converted to an
F. Extensions of the 30-day deadline may be requested in writing by
the student and must be approved by the instructor and the SoPA
associate dean for academic affairs. Extensions are approved only
when a student has made an attempt to complete the missing work
within the original 30-day period but, in the view of the instructor and
the associate dean, has been prevented from completing the work by
some special circumstance beyond the student’s control. Extensions
must be approved before the 30-day deadline expires; extensions are
not approved retroactively.

Repeated Courses
Students who do not want a grade to count in the grade-point average
may repeat the course under the following circumstances:

- the course to be repeated was completed during the student’s first
  semester (Fall, Spring, or Summer) at Tulane
- the repeated course, taken at Tulane, is identical to the one it
  replaces

If the above conditions are met, the student must meet with an advisor
and request that the first grade be dropped from computation in the
grade-point average. The grade for the repeated course, even if lower
than the first grade, will be factored into the student’s GPA. The grade
for the first course will remain on the student’s transcript.

If passing grades are recorded twice or more for the same course,
only the credit hours for one course will count towards the graduation
total. Grades assigned by a university committee, including a WF for
an Honor Code conviction, cannot be removed from the student’s
transcript or cumulative grade-point average even though the course
may be repeated.

Maximum Credits for SoPA Students
Students in good academic standing at SoPA are allowed to register
for up to 19 credits per semester. Students on probation are typically
limited to 7 credits. Undergraduate students may not enroll in 7000-
level courses. First-time undergraduates admitted to SoPA will be
limited to 11 credits in their initial fall or spring semester. Transfer
students, as defined by federal guidelines, may register for up to 19
credits starting in their first semesters.

Honors

Dean’s List
A dean’s list of undergraduate students is compiled at the end of the
fall and spring semesters. To be eligible for the dean’s list, students
classified as freshmen and sophomores (have earned 0-56 completed
credits) must earn a minimum GPA of 3.50 in at least six completed
credits. Students classified as juniors and seniors (have 57-120
completed credits) must earn a minimum GPA of 3.67 in at least six
completed credits. In all cases, satisfactory/unsatisfactory credits are
excluded from determining the dean’s list.

Latin Honors
Superior baccalaureate students are recognized at graduation by the
award of Latin Honors. To qualify, a student must have a cumulative
grade point average of at least 3.60, must have earned at least 36
credits at Tulane University excluding those earned in courses on a
satisfactory/unsatisfactory basis, and must be receiving a bachelor’s
degree. Latin Honors are awarded as follows, based on cumulative
grade point average:

- Summa cum laude = 3.900
- Magna cum laude = 3.800
- Cum laude = 3.600

Alpha Sigma Lambda Honor Society
The Theta Chapter of Alpha Sigma Lambda is a national scholastic
honor society for adult undergraduate college students who are juniors
or seniors. Invitations for membership are extended each year to
qualified students. To be eligible, students must be enrolled in a degree
program, have attended SoPA for at least three semesters, earned at
least 36 credits at Tulane, and have a cumulative grade-point average of
at least 3.200. Additional information on requirements and invitations
to membership may be obtained from the chapter advisor at SoPA.

Requirements for Graduation
Students must submit an application for degree/certificate early in the
semester in which they plan to graduate. This application must
be completed with the student’s academic advisor. Applications
for degree/certificate are available on the SoPA website (https://
sopa.tulane.edu/student-information/sopa-forms) and at each campus
location. When students apply for their degree, their work is evaluated
by the criteria in place at the start of their work towards that degree.
SoPA updates programs periodically; changes in our curriculum go into
effect for students who start the program the following semester. If you
are concerned that a change in our curriculum will affect your degree
requirements, or if you would like to take advantage of such changes,
contact your advisor.

Limitations

Leave Restrictions for Returning Students
Students who return to the SoPA after an absence of more than two
years may not be able to complete the program in which they originally
enrolled. Returning students should talk with an academic advisor to
determine possible changes in requirements or curriculum.

Business Course Restriction
Students may not earn more than 27 credits in courses under the
business studies category or apply more than 27 credits of business
courses toward any SoPA program. Business studies credits earned
at SoPA are not applicable to any AACSB-accredited business school
and may not be used toward a degree at the A.B. Freeman School of
Business at Tulane. All courses in accounting, business law, finance,
management, and marketing fall within this restriction.
**Academic Standards**

A student may be dismissed from SoPA for lack of sufficient academic progress toward fulfilling degree requirements. Through adherence to these regulations, the university seeks to ensure that its educational facilities are reserved for capable and motivated students. For continued eligibility, academic progress is measured both by minimum credit and minimum grade-point average.

**Academic Progress**

**Undergraduate Classification**

Undergraduate classification is based on cumulative earned credits:

<table>
<thead>
<tr>
<th>Classification</th>
<th>Earned Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Freshman</td>
<td>0-24 earned credits</td>
</tr>
<tr>
<td>Sophomore</td>
<td>25-56 earned credits</td>
</tr>
<tr>
<td>Junior</td>
<td>57-91 earned credits</td>
</tr>
<tr>
<td>Senior</td>
<td>over 91 earned credits</td>
</tr>
</tbody>
</table>

**Minimum Credits and Grade Point Average Quality-of-Work Rules**

Undergraduate students in SoPA are required to maintain a minimum grade-point average throughout their enrollment (see table below). Students who fail to meet this minimum standard are placed on academic probation. The cumulative grade-point average of a student is calculated by dividing the number of quality points a student has earned by the total number of quality hours (including credits with failures). Only the grades of S, U, NR, W, and grades in courses affected by SoPA "Repeated Course" policy are excluded from this calculation.

<table>
<thead>
<tr>
<th>Minimum Cumulative Attempted Hours</th>
<th>Minimum Cumulative GPA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-30</td>
<td>1.75</td>
</tr>
<tr>
<td>31-61</td>
<td>1.85</td>
</tr>
<tr>
<td>62-93</td>
<td>1.95</td>
</tr>
<tr>
<td>94-124</td>
<td>2.00</td>
</tr>
</tbody>
</table>

**Academic Enforcement for SoPA Students**

The quality of each SoPA’s work will be monitored at the end of each semester. Enforcement consists of two distinct steps: probation and dismissal.

**Undergraduate Probation**

Any student who does not meet the minimum cumulative quality of work rules will be placed on academic probation. The status of probation lasts until it is removed as a result of academic improvement or ended by dismissal. SoPA students who are placed on probation are notified in writing that their academic progress is insufficient. Students on probation may enroll in no more than seven credits. As a further condition, all coursework taken while on probation must be passed with at least a grade of C. Students on probation cannot be given a recommendation of good academic standing to another institution for the purpose of cross-enrollment or summer school admission. Transfer students admitted on probation to SoPA may enroll in no more than seven credits. In addition, they must earn at least a 1.75 grade-point average during their first term of enrollment, or they will be dismissed.

**Graduate Probation**

Graduate students admitted to study at the master’s level must maintain an overall grade point average of 3.00 or better to be considered in good academic standing. Students whose cumulative grade point average falls below 3.00 will be placed on academic probation, which will require a written academic development plan. Students will be removed from academic probation when they earn an overall grade point average of at least 3.00. Graduate students who receive a grade lower than a B- in any coursework attempted will be placed on academic probation from the program.

**Dismissal**

SoPA undergraduate students who do not meet the minimum cumulative GPA for academic good standing for three consecutive semesters, or who do not have a minimum cumulative GPA of 1.75 after attempting 24 credits, will be dismissed. Students may appeal the first dismissal. A second dismissal cannot be appealed. Coursework taken at another college or university during the dismissal period is not transferable to SoPA.

Graduate students who earn two grades below a B- will be dismissed.

**Reinstatement**

Students have the right to petition the SoPA Academic Performance and Petitions Committee after the first dismissal. Successful petitioners will be readmitted on the terms and conditions specified by the committee, which may include academic probation, specification of courses that must be taken, progress that must be achieved, the time within which terms and conditions must be met, and classification of academic standing.

Students may appeal the decision of the Academic Performance Committee in writing to the associate dean for academic affairs under the following circumstances: new evidence, or significant evidence or material that would have likely changed the outcome of the Academic Performance Committee's decision. This appeal must be submitted within five business days of transmission of the decision of the Academic Performance Committee to the student. The decision of the associate dean for academic affairs is final.

**Petitions**

Written petitions from students who have been denied registration under these regulations are evaluated by the SoPA Academic Performance Committee.

Successful petitioners will be readmitted on the terms and conditions specified by the committee, which may include limitation on the number of courses, specification of courses that must be taken, progress that must be achieved, the time within which terms and conditions must be met, and classification of academic standing.

**Class Attendance**

Regular attendance is essential to successful academic progress. Students are expected to attend all classes, laboratories, seminars, and conferences as scheduled unless they are ill or prevented from attending by exceptional circumstances.

Instructors may establish policies for attendance of their classes, which are announced at the beginning of the semester and included in the course syllabus. Students who find it necessary to miss class are responsible for obtaining notes on material covered in lectures or other class sessions. It is up to the instructor to determine whether to allow the student to make up missed quizzes, examinations, or other exercises.
Students are also responsible for notifying professors about absences that result from serious illnesses, injuries or critical personal problems. Medical excuses are not issued by the University Health Service, except in instances of illnesses or injuries that involve hospitalization, in the event of partial or complete withdrawal due to medical reasons, or in the event of a missed final examination for a medical condition being cared for by the Campus Health Center. In all of these instances, medical information will only be released with the student’s written permission. Students should be aware that instructors have the right to lower grades for excessive absence or failure to make up work missed. They may also be assigned a grade of WF (see below).

Students who find their attendance seriously interrupted by exceptional, unforeseen circumstances are encouraged to discuss their difficulties with their instructor or academic advisor.

Grades of WF are assigned by administrators and are computed in the grade-point average as if they were Fs. With the approval of the associate dean for academic affairs, at any time during the semester an instructor may have a student with excessive absences involuntarily dropped from a course with a WF grade. A written warning will be issued to the student before he or she is administratively dropped from the course. In cases where students are suspended or expelled during the semester, W or WF grades may be assigned at the discretion of the instructors and the student’s dean. A grade of W or WF also may be assigned for disciplinary penalties resulting from an honor-code or conduct-code violation. A student who ceases to attend a course but has not withdrawn officially will receive a UW [unofficial withdrawal]. After the last day to drop without record and before the last day to drop a course, students who drop courses voluntarily will have W noted on their transcripts for each course dropped.

**Code of Academic Conduct**

The integrity of all Tulane students is based on the absolute honesty of the entire community in all academic endeavors. As part of that community, students have certain responsibilities regarding all independent work that forms the basis for the evaluation of their academic achievement. Tulane students are expected to familiarize themselves with the principles of this code and to conduct themselves in a manner that complies with the code at all times. All undergraduate students at Tulane University are expected to follow the Code of Academic Conduct ([https://college.tulane.edu/code-of-academic-conduct](https://college.tulane.edu/code-of-academic-conduct)). Graduate students are expected to follow the Tulane University Unified Code for Graduate Student Academic Conduct. ([https://ogps.tulane.edu/sites/g/files/rdw1126/f/Unified-Code-of-GS-Academic-Conduct-06-18-13.pdf](https://ogps.tulane.edu/sites/g/files/rdw1126/f/Unified-Code-of-GS-Academic-Conduct-06-18-13.pdf))

**Conduct**

Responsible adult behavior is expected of students in SoPA in both scholastic and non-scholastic affairs. Violations of the rules and regulations, including those on academic honesty, lead to disciplinary action by a dean of SoPA, the office of the Vice President for Student Affairs, or other appropriate university authority. For a thorough description of expectations and procedures, please refer to the Code of Student Conduct ([https://studentaffairs.tulane.edu](https://studentaffairs.tulane.edu)) (https://conduct.tulane.edu/resources/code-student-conduct).

**Discipline**

Departures from acceptable conduct may lead to fines, disciplinary probation, suspension or expulsion. Disciplinary probation (which refers to conduct and not to academic standing) and suspension usually are imposed for a stated period. Suspension and expulsion involve exclusion from classes and from all University activities. Students suspended or expelled will receive Ws or WFs in all courses at the discretion of the dean. Expulsion is the most serious academic penalty and is permanent. It is noted on the student’s record and included on transcripts issued thereafter. Suspension is noted on the student’s record and on transcripts issued while the penalty is in effect, but the notice is removed from the transcript at the end of the suspension. Transfer credits cannot be accepted for students who attend other colleges or universities while ineligible for any reason to continue in SoPA.

**Reporting to the Dean**

All students must report to a dean of SoPA, to the Vice President for Student Affairs, to their advisor, or to their instructors, without delay, when notified to do so.

**Grievance Committee**

The SoPA Grievance Committee is composed of three faculty and two student members and the assistant dean for student support and success as a nonvoting member. One of the committee’s duties is to hear students’ grievances and complaints against Tulane University and SoPA or Tulane personnel, including the faculty. The Grievance Committee deals with issues such as the grading system, sexual harassment, and unfair treatment. Students desiring a hearing before the committee must submit their requests in writing to the associate or assistant dean.

Students may appeal the decision of the Grievance Committee in writing to the SoPA Dean under the following circumstances: new evidence or significant evidence or material that would have likely changed the outcome of the Grievance Committee’s decision. This appeal must be submitted within five business days of transmission of the decision of the Grievance Committee to the student. The decision of the Dean is final.

**Right to Privacy**

Privacy of students’ records and affairs is protected under the Federal Family Educational Rights and Privacy Act (FERPA) of 1974 as amended (P.L. 93-380) and by policies issued by the Tulane University Board of Administrators: a university must allow a student the opportunity to review and inspect his or her educational records; a university must give a student the opportunity to challenge the content of his or her records under certain circumstances; a university must not grant access to or allow disclosure of a student’s records to outside parties, unless such disclosure is specifically permitted under the law or is made with the student’s written consent; a university must notify students of their rights under the law. For further details, contact the Office of Student Affairs at 504-314-2188.

**Degree Requirements**

**Undergraduate**

**School of Professional Advancement Requirements**

Undergraduate degrees offered at SoPA provide students with a breadth of knowledge and applied skills, as relevant to their area(s) of study. Students must demonstrate proficiency in writing, oral communication, scientific inquiry, quantitative reasoning, social sciences, a foreign language or cultural knowledge, and the humanities.
Graduate degrees offered at SoPA provide students with in depth knowledge and mastery in professional disciplines and liberal arts.

Bachelor's Degree
To receive a first baccalaureate degree from SoPA, students must have a minimum of 120 credits of passing work, as follows:

**Proficiency Requirements**

</table>

Students majoring in Liberal Arts and Sciences disciplines that are outside of SoPA should refer to the Newcomb-Tulane College graduation requirements. (https://college.tulane.edu/general-education-curriculum)

**Designated Writing Requirement**

A designated writing course (may be a “Writing across the Curriculum” course, which can also be used to fulfill a major, minor, or distribution requirement).

**Major Requirements**

Undergraduate students have the opportunity to select a single area of study in which to gain deeper knowledge and mastery of a subject. SoPA undergraduate students must declare a major prior to earning 90 credit hours. This requires completion of the SoPA Major Declaration Form, which must have documented approval (i.e. a signature) from a SoPA academic advisor. Degree-seeking students who have completed 90 credit hours and have not declared a major will have a hold placed on future course registrations.

At any point, students may change their majors. However, students who change their majors should understand that previously completed coursework may not apply to the newly selected major, and that additional coursework may be necessary to meet the major requirements.

SoPA undergraduate majors require between 30 and 45 credits.

**Minor Option**
SoPA students may elect to complete one or more minors, which is indicated on the SoPA Major Declaration Form. SoPA minors are typically 15-18 credits.

**Electives**
Students will complete electives as needed to reach a total of 120 credits.

**Minimum Requirements to Graduate**
Undergraduate students must have a cumulative 2.0 grade point average to graduate. They must also have a minimum 2.0 grade point average in their major(s) and, if applicable, their minor(s). For SoPA majors, at least 60 credits must be earned in courses at the 2000 level or higher.

No more than half the credits used toward satisfying graduation requirements may be in the major. Students may take no more than 70 credits each of humanities, science, and social science. This includes credits in the major.

Up to 6 credits of electives earned in courses with designations such as Independent Study, Special Projects, Directed Study, and Practicum will count toward graduation requirements. Students who must exceed this limit are required to petition the dean’s office.

**English Writing Requirements**
ENGL 1010 Writing (4 c.h.), a 4-credit intensive writing course, is Tulane’s writing proficiency requirement. Students must demonstrate writing proficiency by the end of their first year at SoPA. Writing proficiency may be demonstrated by successful completion of ENGL 1010 Writing (4 c.h.) or ENGL 1011 Writing for Academic Purposes (4 c.h.), or a grade of C or better in a course equivalent to ENGL 1010 Writing (4 c.h.) from a regionally accredited institution, or an Advanced Placement score of 4 or better in either “English Literature and Composition” or “English Language and Composition” (or a similar A.P. exam). Students who do not demonstrate writing proficiency after their first year at SoPA will have a hold placed on future course registrations.

Students who need to review basic English skills before enrolling in ENGL 1010 Writing (4 c.h.) may wish to take PAEN 1000 Composition and Reading (3 c.h.) for elective credit. PAEN 1000 Composition and Reading (3 c.h.) does not count toward the completion of the writing requirement.

Upon completing the mandatory first-year writing course ENGL 1010, SoPA students must also complete at least one 3-credit upper-level writing course. These include intensive writing courses such as PAEN 2630 Expository Writing (4 c.h.)/ENLS 3630 Expository Writing (4 c.h.) and ENLS 3650 Persuasive Writing (4 c.h.), and designated writing courses offered within a specific SoPA discipline. These designated writing courses offer students additional opportunities for sharpening writing skills in disciplines where instructors have incorporated additional writing activities and instruction into the curriculum. Designated writing courses that satisfy this requirement are indicated in the Tulane Class Schedule.

**Quantitative Reasoning Requirement**
Students working toward a Bachelor of Arts Degree in a SoPA discipline are required to demonstrate competency in 3-4 credits of quantitative reasoning by passing any mathematics course, CPST 1070 Math For Info Technology (3 c.h.), PHIL 1060 Critical Thinking (3 c.h.) or
PHIL 1210 Elementary Symbolic Logic (3 c.h.), or BSMT 3250 Business Statistics (3 c.h.).

Students working towards a Bachelor of Science Degree in a SoPA discipline are required to demonstrate competency in 6-8 credits in mathematics courses. Students in the Applied Computing B.S. programs may take CPST 1070 Math For Info Technology (3 c.h.), or BSMT 3250 Business Statistics (3 c.h.) to fulfill this requirement.

Students majoring in Liberal Arts and Sciences disciplines that are outside of SoPA may not use CPST 1070 Math For Info Technology (3 c.h.), PHIL 1060 Critical Thinking (3 c.h.), or BSMT 3250 Business Statistics (3 c.h.) to satisfy this requirement. Please refer to the Newcomb-Tulane College graduation requirements. (https://college.tulane.edu/general-education-curriculum)

**Foreign Language/non-Western Requirement**

Students pursuing any bachelor’s degree offered by SoPA must demonstrate foreign language proficiency through successful completion of the second level in any foreign language, or complete two courses in Perspectives Outside the European Tradition/Comparative Cultures and International Perspectives (non-Western). Students may also blend one language and one non-Western course. Please consult the SoPA website for a list of possible non-Western courses.

**Supporting Requirement**

Students majoring in SoPA disciplines are required to complete one course in oral communications (Any SPEC course, BSMT 2250 Business Communications (3 c.h.) or THEA 2100 Fundamentals of Acting (3 c.h.)). Students majoring in Liberal Arts and Sciences disciplines that are outside of SoPA should refer to the Newcomb-Tulane College graduation requirements. (https://college.tulane.edu/general-education-curriculum)

**Distribution Requirement**

Students majoring in SoPA disciplines are required to complete 12 credits each of humanities/fine arts, sciences, and social sciences. In each distribution area, courses must be chosen from at least two different disciplines.

Students majoring in Liberal Arts and Sciences disciplines that are outside of SoPA should refer to the Newcomb-Tulane College graduation requirements. (https://college.tulane.edu/general-education-curriculum)

Courses taken to satisfy Proficiency and Supporting Requirements may not be used to fulfill distribution requirements for SoPA majors.

For majors in the liberal arts and sciences, courses taken to satisfy core competency requirements may not be used for distribution requirements.

**Major Requirements**

Courses taken to satisfy Proficiency, Supporting, and Distribution Requirements may be used to fulfill major and minor requirements. However, at least 24 credits in the major may not overlap with the minor. Students must have a grade point average of 2.0 in the major to receive the degree.

**Residency**

At least 60 credits of a student’s degree program must be completed at Tulane University, with the final 30 taken while enrolled in SoPA. For an associate degree, certificate, major, or minor, at least one-half of the credits required in the area of concentration must be completed while enrolled in SoPA.

**Graduate**

The School of Professional Advancement awards a Master of Liberal Arts (MLA) degree or a Master of Professional Studies (MPS) degree upon successful completion of the major course requirements for one of these programs. Please refer to the individual program for specific coursework requirements. No thesis is required. Students may not apply more than two independent study courses toward graduation requirements. In order to earn a master’s degree, a student must have a cumulative grade point average of at least 3.00. Students must also submit an application for degree (https://sopa.tulane.edu/sites/g/files/rdw866/f/ApplicationForDegree.pdf) at the beginning of the semester in which the student plans to complete all required coursework and graduate. This application must be completed with the student’s academic advisor.

**Academic Progress Requirements**

Students admitted to study at the master’s level must maintain an overall grade point average of 3.00 or better to be considered in good academic standing. Students whose cumulative grade point average falls below 3.00 will be placed on academic probation, which will require a written academic development plan. Students will be removed from academic probation when they earn an overall grade point average of at least 3.00.

Students who receive a grade lower than a B- in any coursework attempted will be placed on academic probation from the program. Students who earn two grades below a B- will be dismissed.

**Academic Departments**

- Business and Leadership Studies (p. 207)
- Digital Design (p. 211)
- Emergency and Security Studies (p. 214)
- General Legal Studies Program (p. 217)
- Information Technology (p. 219)
- Kinesiology (p. 223)
- Liberal Arts and Sciences (p. 225)
- Teacher Certification Program (p. 226)

**ROTC**

Tulane University recognizes the need for military officers with a quality education in a variety of academic specialties and highly recommends the Reserve Officer Training Corps programs as one method of meeting this need. The university maintains Air Force, Army, and Naval ROTC units which are part of the School of Science and Engineering. Their programs are open equally to men and women in all schools. Each of the programs provides an opportunity to develop leadership and management abilities, as well as to perform a valuable service to the nation. Individuals who wish to earn a commission and to serve a brief period of active duty, as well as those who are interested in a career of military service, are encouraged to participate.

A maximum of 15 credits from ROTC courses may be applied to a Tulane degree.
Air Force Reserve Officer Training Corps (AFROTC)

Air Force Reserve Officer Training Corps (AFROTC) offers three and four year programs through which students can earn a commission as a Second Lieutenant in the United States Air Force upon graduation. AFROTC is a comprehensive academic and hands-on training program. Students have the unique opportunity to enhance their interpersonal communications, teamwork, leadership, and management skills.

The curriculum is divided into two parts: the General Military Course (GMC) for freshman and sophomores, and the Professional Officer Course (POC) for juniors, seniors, and graduate law or nursing students. GMC students attend a 1-hour class and a 2-hour laboratory each week. POC students attend a 3-hour class and a 2-hour laboratory each week. Cadets compete for and must be selected to attend field training (a four-week session) between their sophomore and junior years.

LLAB cadets are classified into one of four groups with respect to field training attendance and/or commissioning. Initial Military Training (IMT) cadets are part of the General Military Course (GMC) but are not scheduled to attend field training (normally AS1000 cadets). The focus of IMT objectives/activities are to promote the Air Force way of life and help effectively recruit and retain qualified cadets. This time is spent acquainting the cadets with basic Air Force knowledge and skills to help them determine whether they wish to continue with the AFROTC program. Field Training Prep (FTP) cadets are scheduled to attend field training in the upcoming year (normally AS2000 cadets). The FTP objectives provide training to ensure every cadet is mentally and physically prepared for the rigorous field training environment. Intermediate Cadet Leaders (ICL) are cadets returning from field training (normally AS3000 cadets). ICL objectives/activities give cadets the opportunity to further develop the leadership and followership skills learned at field training.

Every cadet position should provide the ICL the opportunity to sharpen their planning, organizational, and communication skills, as well as their ability to effectively use resources to accomplish a mission in a constructive learning environment. Senior Cadet Leaders (SCL) are cadets scheduled to be commissioned in the upcoming year (normally AS4000 cadets). This time is spent on additional opportunities to develop leadership and supervisory capabilities, and prepares cadets for their first active duty assignment. Extended Cadet Leaders (ECL) are cadets whose ROTC academic requirements are complete but still have one or more terms of college left to complete. These cadets may hold special duty or regular positions within the cadet corps upon discretion of the Detachment Commander (Det CC) or Commandant of Cadets (COC).

Students may enroll in the GMC without incurring any military obligation. Entry into the POC is competitive and requires a commitment to the Air Force. Additional summer programs are available to cadets on a voluntary basis. These professional development opportunities include parachuting, soaring, language immersion, base visits and more. Textbooks and uniforms are issued to cadets without cost. Scholarship cadets qualify for yearly book allowance per year and a subsistence allowance per month during academic year.

The Air Force offers excellent scholarship opportunities in a wide variety of academic majors. For additional information or to check scholarship eligibility, contact AFROTC Detachment 320, Tulane University, at (504) 865-6394, afrotc@tulane.edu, https://tulane.edu/det320 or visit www.afrotc.com (https://www.afrotc.com).

Army Reserve Officer Training Corps (AROTC)

Army Reserve Officer Training Corps (AROTC) is a comprehensive program of studies through which a student can qualify to be commissioned as an officer in the United States Army, the National Guard, or the United States Army Reserve. Students learn leadership and management skills important in any profession. The Army ROTC program consists of a two-year Basic Course, which is open to freshmen and sophomores only, and a two-year Advanced Course. Non-scholarship students participating in the first two years of AROTC do not incur any obligation to the U.S. Army. Army ROTC offers four, three, and two year scholarships that include the Guaranteed Reserve Forces Scholarship. Army scholarships provide tuition assistance, a flat rate for textbooks, and a monthly subsistence allowance (up to 10 months per year). Students may elect to use scholarships for room and board (up to $10,000 annually) in lieu of tuition and fees. Admission to the AROTC Advanced Course is conditional on meeting academic, physical, and age requirements and the approval of the Professor of Military Science. Physical training is an integral part of the AROTC program.

To be commissioned as an officer, a student must complete either the regular four-year program, a three-year program (whereby the Basic Course is compressed into one year), or a two-year program (requiring completion of the summer AROTC basic camp giving the student credit for the Basic Course). Advanced placement for AROTC training may be given to veterans and students with previous ROTC experience. In addition to these requirements, a student must complete at least one course each in the areas of written communication, human behavior, military history, computer literacy and math reasoning. Uniforms and military science textbooks are issued without cost to all students. Advanced Course and scholarship students receive a subsistence allowance. They are also paid for the summer advanced leadership camp they must attend prior to completing the Advanced Course. For further information contact the Army ROTC office at 1-800-777-ARMY or 504-865-5594.

Naval Reserve Officer Training Corps (NROTC)

The Naval Reserve Officer Training Corps (NROTC) program at Tulane University offers students the opportunity to earn a commission in the Navy or Marine Corps. Students typically earn a national scholarship out of high school. Students matriculating to Tulane University, who have not already been awarded an NROTC scholarship, may participate in the NROTC College Program and compete for a 3, 2, or 1 year scholarship. These students are selected from applicants each year by the Professor of Naval Science.

NROTC Scholarship Process

The NROTC scholarship board begins accepting applications in April for the following academic year. The deadline for applications is December 31. The scholarship board uses a “rolling” selection process. The board commences reviewing applications in August and continues into the spring. Students aspiring to serve their nation should begin the application process early and provide updates through their
The fall semester to the closing of the application deadline. The Navy encourages future officers to have backgrounds in STEM majors, but all degrees are accepted.

NROTC Scholarship rewards students with full tuition, university fees, uniforms, a textbook stipend, and a subsistence stipend. Scholarship students participate in paid summer training periods and receive commissions in the Navy or Marine Corps Reserve as Ensigns or Second Lieutenants upon graduation. They have a minimum five-year active duty obligation after commissioning.

NROTC College Program

NROTC College Program students are selected from applicants each year by the Professor of Naval Science. First-year students may apply to participate in the college program at the beginning of their first or second year. College program students compete nationally for a one, two, and three-year NROTC scholarship. During the sophomore year, non-scholarship students compete for “Advanced Standing”. “Advanced Standing” guarantees the student a commission in the service upon graduation. Students failing to attain “Advanced Standing” are dismissed from the program. Advanced Standing students participate in one paid summer training period (between the junior and senior years) and receive commissions in the Navy or Marine Corps Reserve upon graduation. They incur a minimum five-year active duty obligation, Advanced Standing students are furnished uniforms and naval science textbooks and a subsistence stipend during their junior and senior years.

NROTC Requirements

Members of the NROTC program are expected to achieve high academic standards minimum of 2.5 GPA, excel at physical training and be of sound moral judgment. All members of the program are required to enroll in Naval Science classes every semester and participate in morning drill and physical training. In addition, Navy Option scholarship recipients are required to take 2 semesters of Calculus and 2 semesters of Physics.

The NROTC Unit sponsors many teams in campus intramural sports and many specialty organizations that represent the unit on campus and throughout Louisiana and the southern United States. If you would like to schedule a visit or have any questions, please call the NROTC Unit, Tulane University at (504) 865-5104, email Navy@tulane.edu (navy@tulane.edu) or visit https://nrotc.tulane.edu/content/schedule-visit-0. Additional information may be found at https://nrotc.tulane.edu/.

Accounting and Finance Minor

A minor in Accounting and Finance teaches the fundamentals of accounting and provides an introduction to finance and investing. This minor is designed for students who may want to work in corporate finance or investing roles.

Digital Media and Marketing Communications Certificate

The Professional Certificate in Digital Media and Marketing Communications enables students to advance their skill set and understanding of digital media strategies, tactics, and best practices used in today’s Public Relations and Marketing disciplines. This 12 credit-hour undergraduate certificate focuses on the strategies used in Digital Media and Marketing Communication campaigns; digital content such as infographics, e-books, and blogs; and, SEO & SEM tactics to improve an organization’s effectiveness in communicating to their audience on digital, social media, and mobile platforms.

The certificate culminates with a capstone course where students design and implement a digital media campaign for a client, incorporating the skills learned in the previous courses. Industry
certifications, such as Google AdWords and HubSpot Inbound Marketing, are incorporated in the curriculum.

### Human Resources Fundamentals Certificate

The Professional Certificate in Human Resources Fundamentals provides students with the fundamentals of Human Resources and the education and tools needed to start their career in HR. This undergraduate certificate is comprised of five three-credit hour courses designed to provide students with a basic understanding of the following areas: employee recruitment and selection; employment law; compensation; and performance management.

#### Requirements

The certificate is 15 credits and will consist of the following program requirements:

<table>

### Marketing Certificate

A Professional Certificate in Marketing is an ideal way for students to learn about basic marketing principles and how organizations interact with their customers, competitors, and the public. The undergraduate certificate is comprised of five three-credit hour courses designed to cover core concepts in the fields of marketing, advertising, public relations and integrated marketing communication. Students learn to think strategically about marketing, from identifying a target audience and consumer behavior to developing effective communication and launching a marketing plan. The courses in this program blend theory and practice, drawing upon examples from recent and noteworthy marketing campaigns and incorporating the leading on-line and digital marketing tools.

#### Requirements

Total Credit Hours 15

### Marketing Minor (School of Professional Advancement)

The minor in marketing allows students to learn more about basic marketing principles and how organizations interact with their customers, competitors, and the public. The minor is designed for students who are interested in the disciplines of marketing and
advertising, or who wish to enhance their business communication skills.

**Public Relations Major**

The Bachelor of Arts in Public Relations degree program covers traditional and digital methods of creating a brand and public image for products, services, and organizations. Public Relations professionals influence, engage, and build relationships between an organization and the public, shaping their attitudes and perception of that organization. Students will be prepared to communicate about an organization's mission, products and services, and benefit to their customers and constituents.

The School of Professional Advancement awards the Bachelor of Arts in Public Relations following the successful completion of 120 credits, including 36 credits in the major. Within this degree, students may either choose to complete a concentration in Digital Media and Marketing Communication (DMMC), or to take "supporting courses" in public relations to complete requirements for the major. The concentration is ideal for students looking to advance their knowledge of how to leverage digital media strategies, tactics, and best practices to help organizations achieve their communication and marketing goals.

**Requirements**

All students who major in Public Relations must take the Public Relations Major Requirements comprised of six core courses, as well as either public relations supporting requirements, or courses required for the concentration in Digital Media & Marketing Communications.

Small Business Development Certificate

The Professional Certificate in Small Business Development provides a solid foundation for developing and managing small businesses. Small and Medium-sized Businesses (SMBs) are organizations with less than 500 employees. The skills needed to start and develop a small business are different from those needed to run a larger corporation. This undergraduate certificate of five three-credit hour courses teaches business fundamentals and an understanding of the special challenges and obstacles encountered by small businesses.

Certificate

- Digital Design Post-Baccalaureate Certificate (p. 213)

Digital Design Major

The mission of the Tulane School of Professional Advancement Digital Design program is to bridge the gap between art and technology by providing students with superior creative problem-solving, acute visual thinking, and cultural and socially significant design challenges while using industry-relevant and forward-thinking technology. In addition to building their professional design portfolios, students will gain experiences beyond the classroom through conferences and community networking events.

The Tulane School of Professional Advancement Awards the B.A. in Digital Design following the completion of 120 credits, which includes 42 credits in the major. All students in the digital design major take core courses in design foundations and then declare a career track (https://digitaldesign.tulane.edu/degreeinfo) to specialize in either Graphic Design, Game Art & Animation, or Interactive Design.

Requirements

Blocks

Each Digital Design track consists of “blocks” showing the required order of all coursework. All courses within each block must be completed before you may move on to the next block. For example, all courses in Block 1 must be completed before any courses may be completed without a business background who are interested in applying business fundamentals to entrepreneurial and small-business ventures.

taken in Block 2, and so on. Courses within a block may be taken at the same time.

**Reviews**

Due to the highly demanding nature of this program, students are assessed for knowledge and preparedness for further courses after both Block 2 and Block 4. The reviews include a portfolio review and a questionnaire, both of them evaluated and scored by faculty. A score of 80 or higher constitutes passing the review, which means that the student is ready to proceed in the program. Students who do not pass may resubmit their portfolios the following semester; a letter will be provided to each student with specific recommendations for how to improve their work. Students who fail the review twice may be asked to take a semester of leave to work on a portfolio, or to change majors.

**Suggested Electives**

Courses notated with an asterisk (*) are recommended by industry experts as highly valuable to your success in the specific track. These electives must be taken within the specific block noted. If you wish to take an optional elective from a different track other than your declared track, please check the block prerequisites and with your program director before registering.

2019-2020 212
Digital Design Minor

A minor in Digital Design allows undergraduate students to enhance or complement their current major(s) to more closely align with their intended career path. The minor allows for 6 courses (18 hours.) These include foundations coursework focused on design thinking, developing software skills, typography, and overall design principles.

### Digital Design Post-Baccalaureate Certificate

The Digital Design Post-Baccalaureate Certificate (PBC) is designed for individuals who have already earned a Bachelor’s degree. The three available PBCs in Digital Design align with the three tracks within the Digital Design major: Graphic Design, Game Art & Animation, and Interactive Design. These certificates are comprised of all of the coursework required for an undergraduate major, without required courses in other subjects.

#### Requirements

**Matriculation Blocks**

The blocks show the order in which coursework must be taken. All courses within each block must be completed before you may move on to the next block. For example, all courses in Block 1 must be completed before any courses may be taken in Block 2, and so on. Courses within a block may be taken at the same time.

**Lower-Level and Upper-Level Reviews**

Due to the highly competitive nature of this degree plan, students will be assessed after Block 2 and Block 3 are completed. The purpose of these reviews is to certify that students are ready to proceed on to further coursework. Each review will consist of a portfolio and questionnaire to be evaluated and scored by faculty. A score of 80 or higher constitutes passing the review. Students who do not pass may resubmit the review the following semester; a letter detailing recommendations will be provided to each student who has not passed. Students who fail a review twice may be asked to take a semester of leave to work on a portfolio or to change majors.

**Recommended Elective Courses**

Due to the in-depth nature of this career path, additional elective courses have been recommended by industry professionals. Please meet with the program director to identify elective courses that may complement your career goals.

# Emergency and Security Studies

## Programs

### Undergraduate

#### Major
- Homeland Security Major (p. 215)

#### Minor
- Homeland Security Studies Minor (p. 216)

### Certificates
- Advanced Emergency Management Certificate (Graduate) (p. 214)
- Advanced Security Management Certificate (Graduate) (p. 214)
- Emergency Management Certificate (Graduate) (p. 215)
- Homeland Security Studies Post-Baccalaureate Certificate (p. 216)
- Security Management Certificate (Graduate) (p. 217)
- Sport Event Security and Emergency Management Certificate (Graduate) (p. 217)

### Graduate
- Emergency Management, Master of Professional Studies (p. 215)
- Homeland Security Studies, Master of Professional Studies (p. 216)
- Security Management, Master of Professional Studies (p. 217)

## Advanced Emergency Management Certificate (Graduate)

The Advanced Emergency Management certificate is targeted to individuals who want a more in-depth knowledge of emergency management. This graduate level certificate consists of four courses that will provide students with a working knowledge of public sector emergency management in regard to risk and threat assessment and management, planning, business continuity and disaster communications.

## Advanced Security Management Certificate (Graduate)

The Advanced Security Management certificate is targeted to individuals who want more in-depth, complex knowledge of private sector security management, enabling them to advance in their careers.
Students completing this four course graduate level certificate will develop a deeper understanding of private sector security management through instruction in corporate security, financial security, cyber threats and homeland security, sport/event security and response.

Homeland Security Studies Minor

A minor in Homeland Security Studies allows undergraduate students to enhance or complement their current major(s) to more closely align with their intended career path. The minor consists of 18 credit hours, and provides an overview of homeland security through topics in emergency management, terrorism, and security.

Homeland Security Studies Post-Baccalaureate Certificate

A Post-Baccalaureate Certificate in Homeland Security Studies is available to students who have already earned a bachelor's degree, even in an unrelated academic discipline. The certificate program enables students to add to their existing skill set or learn skills in a discipline entirely new to them. This certificate program is designed to teach students practical application of security and emergency management. The federal government, along with every state, mid-to-large city, and county or parish have security management needs. Students will be prepared to work in the fields of emergency management, cyber security, and infrastructure management.

Homeland Security Studies, Master of Professional Studies

The MPS in Homeland Security Studies prepares students to work in the fields of emergency management, intelligence analysis, counterterrorism analysis, cyber security, border protection and security, and infrastructure protection at all levels of government and in the private sector. From courses on domestic and international terrorism and intelligence research methods to examinations of emergency management and border security, the curriculum dives deep into the policies and strategies used in today's advanced homeland security sector. Upon completion of the core courses, students may develop an individual plan of study for the remainder of their coursework with the Program Director based on their specific interests.

The School of Professional Advancement awards the MPS in Homeland Security Studies degree following the successful completion of 10 graduate courses comprised of four core 600-level courses and six 700-level courses, which may include graduate courses from other Tulane schools. No thesis is required.

Security Management Certificate (Graduate)

The Security Management certificate is designed to augment students’ current undergraduate degree, enabling them to advance an existing career in the field of security or change to a career in the private sector security field. Upon completion of the 12 credit-hour graduate level certificate, students are able to apply concepts of private sector security management in terms of physical protection systems, emergency management, risk management, threat assessment, and business continuity.

Sport Event Security and Emergency Management Certificate (Graduate)

The Sport & Event Security & Emergency Management certificate program is designed for individuals either employed or seeking employment in sport security (teams, stadiums, tournaments) or events (parades, festivals). This graduate level certificate is comprised of four three-credit hour courses that cover the following: the basics of emergency management (preparing, responding, recovering from either a human-created or natural disaster); physical security (cameras, fences, locks, and so forth, in and around a stadium or event facility); the major threats faced by sporting and other types of events (domestic and international terrorism); and sport and event security management procedures.

Security Management, Master of Professional Studies

The MPS in Security Management provides student with the practical skills required to protect businesses and corporations from terrorism, criminal acts, and disasters.

The School of Professional Advancement awards the MPS in Security Management following the successful completion of eleven graduate courses, including a capstone. The program’s nine core courses that encompass various security sector topics including: emergency and risk management; threat assessment; cyber threats and homeland security; corporate security; and financial security. Elective course options include intelligence analysis and critical thinking, homeland security and approaches to counter-terrorism, and disaster communications. The program concludes with a capstone project that synthesizes the full range of knowledge, skills, and abilities students developed over the entirety of the program. Students will develop a business-based project, creating a security proposal for a business or local government sector entity. No thesis is required.

• Paralegal Studies Post-Baccalaureate Certificate (p. 218)

General Legal Studies
The General Legal Studies Bachelor of Arts degree and accompanying Paralegal Certificate (https://sopa.tulane.edu/degrees-programs/bachelors-degrees/bachelor-arts-general-legal-studies) require 120 credits for completion, including 36 credits in the major. Coursework begins with core skills classes that emphasize legal research, writing, and analysis, along with law office technology and other practical aspects of the legal profession. In ensuing semesters, upper-level electives allow you to explore important areas of substantive law. Finally, the practicum course, with its 100-hour law office internship and classroom component, allows students to apply their skills in a professional setting while developing job search skills in the classroom.

Tulane’s General Legal Studies Program does not accept the transfer of credits for paralegal courses completed at paralegal programs that were not approved by ABA’s Standing Committee on Paralegals at the time the courses were taken.

Paralegal Studies Post-Baccalaureate Certificate
The Paralegal Studies Post-Baccalaureate (PBC) curriculum focuses solely upon legal skills and substantive law courses, culminating in the practicum course, in which students complete a 100-hour internship in a law office and develop job search skills in the classroom.
are nine three-credit hour courses required to complete the Paralegal Studies PBC.

The School of Professional Advancement's Paralegal Studies PBC has been approved by the American Bar Association (ABA) Standing Committee on Paralegals since 1981. Its curriculum reflects the rigor and quality that ABA requires and legal employers demand.

Paralegals are trained professionals who work under the supervision of licensed attorneys. Paralegals are not lawyers and are not permitted to practice law or to provide legal services directly to the public, except as permitted by law.

### Information Technology Major

#### Overview

The B.S. in Information Technology provides a base of knowledge, skills and exposure to industry practices in areas including cybersecurity, data and systems analysis, web and application development, and information technology.

The School of Professional Advancement awards the Bachelor of Science in Information Technology degree following the successful completion of 120 credits, including 18 credits in the major and 24 credits in the chosen concentration of study.

#### Requirements

All students entering the Information Technology major will take six (6) foundational technology courses together and then declare a concentration. Each concentration will require seven (7) courses and a program concentration capstone course.

Cyber Security, Post-Baccalaureate Certificate

A Post-Baccalaureate Certificate in Cybersecurity is available to students who have previously earned a bachelor's degree. The program is designed to prepare students for careers in the fields of IT Security, Cybersecurity, Information Assurance, and Information System Security.
Requirements

Note: SoPA also offers Post-Baccalaureate Certificates in Business Systems Analysis, Integrated Application Development, and Information Technology. Each requires the 6 core courses from the Applied Computing undergraduate program plus six additional concentration courses. Students seeking to earn multiple certificates (or who have earned a B.S. in Applied Computing and seek to earn a certificate in another concentration area) may not use any individual course to satisfy the requirements of more than one concentration.

Information Technology Post-Baccalaureate Certificate

The Post-Baccalaureate Certificate in Information Technology is available to students who have already earned a bachelor's degree. The certificate program is designed to give the student the knowledge and skills needed move into a career in technology through a challenging academic program of study in Information Systems and Information Technology. The program particularly emphasizes the knowledge and skills needed to manage Information Technology infrastructure in organizations.

Requirements

Note: SoPA also offers Post-Baccalaureate Certificates in Business Systems Analysis, Integrated Application Development and Cybersecurity. Each requires the 6 core courses from the Applied Computing undergraduate program plus six additional concentration courses. Students seeking to earn multiple certificates (or who have earned a B.S. in Applied Computing and seek to earn a certificate in another concentration area) may not use a single course to satisfy the requirements of more than one degree or concentration.

Cybersecurity Management, Master of Professional Studies

The MPS in Cybersecurity Management was designed to provide individuals with the deep theoretical and functional knowledge of the technical, business, and management aspects of cybersecurity. This graduate program consists of eleven three-credit courses in the cybersecurity management curriculum: 3 foundation courses, 5 required courses, 1 capstone course, and two electives. Students will be prepared to effectively envision, plan, develop, document, review, communicate and lead cybersecurity efforts for an organization. This will include in-depth study of existing and emerging cybersecurity domain technologies, and the industry’s best practices and standards for organizations in need of an effective approach to managing cybersecurity.

Information Technology Management, Master of Professional Studies

The MPS in Information Technology Management is designed for information technology and business professionals who want to combine their managerial skills and technical acumen to advance into a leadership role in the application of computing technologies. Students will acquire: a core set of technology and management knowledge; broad business and real world perspective; communication, interpersonal, and team skills; analytical and critical thinking skills; and the ability to integrate technology, business processes and people to leverage the use of computing technologies to solve critical needs of a business or organization.

The School of Professional Advancement awards the MPS in Information Technology Management degree following the successful completion of 10 graduate courses comprised of seven core courses and 3 electives.

Health and Wellness Management, Master of Professional Studies

The Master of Professional Studies (MPS) in Health & Wellness Management provides graduates with a foundation of knowledge and skills to support healthy lifestyles among individuals and within organizations. By developing their understanding of health and wellness, students can follow their passion for promoting healthy habits and turn it into a career such as a wellness coordinator or wellness consultant.

This program covers topics in leadership, legal and ethical principles, research methods, programming approaches in health and wellness, and health systems and policies for wellness managers. Students have the option of concluding the program with a three-hour internship focused on their specific areas of interest within the health and wellness sector.

Health and Wellness Post-Baccalaureate Certificate

The Post-Baccalaureate Certificate in Health and Wellness provides an opportunity for students who already have a bachelor's degree to earn a specialization or emphasis in the area of Health and Wellness. This certificate is ideal for individuals who are seeking a career change or new job opportunities. A Post-Baccalaureate Certificate is not a degree; in order to pursue a Post-Baccalaureate Certificate, students must have already earned a Bachelor's degree.

Liberal Arts and Sciences Programs

Undergraduate Majors

- Humanities Major (p. 225)
- Social Sciences Major (p. 226)

Graduate

- Liberal Arts, MLA (p. 226)

Humanities Major

The Humanities major will develop critical oral communication, analysis, and writing skills and prepare students for a wide range of contemporary work environments and professions. Humanities students gain the opportunity to engage in the interdisciplinary study of complementary fields such as English literature, religious studies, linguistics, music, visual and performing arts, and philosophy.

The School of Professional Advancement awards the Bachelor of Arts in Humanities degree following the successful completion of 120 credits, including 30 credits in the major. In order to fulfill the major core course requirements, students must complete 18 credits in 3000+ level humanities courses.

Liberal Arts, MLA

The Master of Liberal Arts (MLA) program at The School of Professional Advancement promotes the development of skills in critical thinking, reading, writing, and oral communication. The MLA degree is awarded following the successful completion of ten graduate-level liberal arts courses. These must include at least two courses designated MLAR. MLA students may be eligible to enroll in other graduate-level liberal arts courses at Tulane. Graduate level courses taken at Tulane schools outside of the School of Professional Advancement may be billed at a higher rate.

Requirements

Students are required to complete ten courses. These must include at least two courses designated MLAR, while students may be eligible to enroll in other graduate-level liberal arts courses at Tulane. MLA students who wish to write a thesis in lieu of the tenth course may petition the Director to do so. Students may not apply more than two independent study courses toward graduation requirements for the MLA. Students must also submit an application for degree, available from the School of Professional Advancement Dean’s office, at the beginning of the semester in which the student plans to complete all required coursework.

Social Sciences Major

The Social Sciences major provides students with a versatile skill set and comprehensive interdisciplinary study of human behavior. Social sciences students explore the cultural, economic, political, and historical contexts of societies, with courses available in anthropology, geography, Latin American studies, history, sociology, political science, and related fields.

The School of Professional Advancement awards the Bachelor of Arts in Social Sciences degree following the successful completion of 120 credits, including 30 credits in the major. In order to fulfill the major core course requirements, students must complete 18 credits in 3000+ level social sciences courses.

Teacher Certification Program

The Teacher Preparation and Certification Program (TPCP) is a post-baccalaureate program that offers alternative certification for teaching in Louisiana in Early Childhood Education (ECE) PK-3 and Secondary Education in specific content areas.

Students enrolled in a B.A., B.S., or B.F.A. degree at Tulane University may also pursue teacher certification in ECE PK-3 or secondary education (grades 6-12) from the Louisiana State Department of Education. Students should consider the “content teaching fields” requirements in choosing a major. For example, students may major in psychology with a coordinate major in early childhood education to earn may count towards the primary teaching certification to teach in grades PK-3. For this co-major, students will work with both an adviser in the psychology department and an adviser from Teacher Preparation and Certification to ensure that both major and certification requirements are met. Undergraduate students must fulfill all Tulane degree and major requirements, resulting in a Bachelor’s bachelors degree in their content field. However, all teacher certification coursework except for the yearlong teaching residency can be completed concurrently. The final yearlong student teaching or practitioner residency is completed after earning the baccalaureate degree.

PRAXIS Requirements
Required for licensure in Louisiana and many other states

Secondary Content Focus Area Requirements
Secondary Education 6th -12th in the following content fields: English, mathematics, social studies, science (physics, chemistry, biology), and Foreign Language (German, French, Spanish, Latin and Italian). In order to enroll in upper level coursework and progress through the program, students must:

- maintain a 3.0 GPA in education courses
- maintain a 2.75 overall GPA
- pass the Praxis I (PPST) exam (or meet SAT/ ACT requirements)
- complete an entrance interview process

PRAXIS Requirements
- Praxis I (PPST). Students who achieve a score of 22 or above on the ACT or a combined verbal and math score of 1100 or higher on the new SAT or 1030 on the SAT combined math/verbal (pre March 2016) are excused from taking the PPST.
- Praxis II (Content Area) - Complete before residency
- Praxis II (Principles of Learning and Teaching) - Complete before or during residency.

Early Childhood Education
Students who elect to earn early childhood education (ECE) certification must:

- maintain a 3.0 GPA in education courses
- maintain a 2.75 overall GPA
- pass the Praxis I (PPST) exam (or meet ACT/SAT requirements)
- complete an entrance interview process

PRAXIS Requirements
Praxis I (PPST) – Students who achieve a score of 22 or above on the ACT or a combined verbal and math score of 1100 or higher on the new SAT or 1030 on the SAT combined math/verbal (pre March 2016) are excused from taking the PPST.

Praxis II (Content Area) - Complete before residency.

Praxis II (Principles of Learning and Teaching) - Complete before or during residency.

Vision
Advancing public health for more than a century, in New Orleans, Louisiana, the World

Mission Statement
Advance global public health and decrease health disparities through excellence in education, research, and collaborative partnerships.

Introduction
Founded in 2012, Tulane University School of Public Health and Tropical Medicine (SPHTM) was the first school of public health in the US and has been a leader in the field of public health for more than 100 years. The school continues a strong presence in New Orleans, Louisiana, across the United States and Internationally. As the first school of tropical medicine in the country, SPHTM has led the field of topical medicine and vector-borne diseases. SPHTM has a focus on cardiovascular disease, health disparities, reproductive health, and public health responses to disasters. Tulane SPHTM has a strong, diverse faculty who are committed to advancing public health and educating the next generation of public health professionals.

Public health is an interdisciplinary field and Tulane SPHTM offers a full array of masters and doctoral degrees across the public health spectrum that includes study in biostatistics, epidemiology, environmental health, community health and behavioral science, health management and policy and tropical medicine. SPHTM education is applied and skills-based with developing strong analytical skills and managerial skills while focusing on their application to promote health and prevent diseases in communities and protecting the environment.

The Bachelor of Science in Public Health (BSPH) integrates the public health disciplines with undergraduate studies to produce highly sought after graduates who are prepared to address an array of problems and find solutions.

History
The study of public health in Louisiana began in the early 1800s when New Orleans suffered from epidemics of malaria, cholera and yellow fever. A group of young physicians sought to find solutions to control tropical diseases and prevent these epidemics established the Medical College of Louisiana in 1834. These insightful physicians realized the necessity of studying the many factors related to the diseases and studying the environment in which they occurred. In 1881, formal instruction in hygiene was offered for the first time. Creighton Wellman established the first School of Hygiene and Tropical Medicine in 1912 with a $25,000 gift from Samuel Zemurray's United Fruit Company. In 1947, the School of Hygiene and Tropical Medicine re-emerged as an independent school offering graduate level offering the masters of public health and a doctoral program in public health in 1950. Tulane was among the original 10 schools of public health as public health emerged as an independent field in 1947. In 1967, the school was renamed the School of Public Health and Tropical Medicine.

In December 2003, the University Senate approved the establishment of the Bachelor of Science in Public Health (BSPH) degree program in the School of Public Health and Tropical Medicine with the inaugural class beginning in fall 2005. Because of Hurricane Katrina, student began study of undergraduate public health in 2006.

Tulane University is accredited by the Southern Association of Colleges and Schools Commission on Colleges (http://www.sacs.org) to award associate, baccalaureate, masters, doctorate, and professional degrees.

Tulane School of Public Health and Tropical Medicine is accredited by the Council on Education in Public Health (https://ceph.org) to award public health bachelor’s, master’s and doctoral degrees.

Academic Policies

Academic Policies

Students in all SPHTM degree programs are required to have a grounding in public health and must either take SPHL 6020 Foundations of Public Health or pass a challenge exam. Student in the combined BSPH/MPH program attain these competencies in their public health studies and do not have to take SPHL 6020.

Master's Programs

Tulane prepares students for careers in public health domestically and internationally with study in all five areas of public health plus tropical medicine. Students can pursue the professional public health degrees (the MPH, the MSPH, and the MPH&TM), the academic (the MS), or the health administration degree (the MHA) in a total of 16 professional master’s programs, offered through six departments.

Professional Public Health Degrees (MPH, MSPH, MPH&TM)

All students in the professional master's degree programs will receive a thorough grounding in the foundational aspects of public health by taking the five courses that make up the required Foundational Curriculum (https://sph.tulane.edu/foundational-curriculum). Students
must also complete an Integrated Learning Experience and an Applied Practice Experience.

These five courses (15 credits) make up the foundational curriculum:

SPHL 6020 Foundations in Public Health (3)
SPHL 6050 Biostatistics for Public Health (3)
SPHL 6060 Epidemiology for Public Health (3)
SPHL 6070 Health Systems, Policy and Management (3)
SPHL 6080 Design Strategies for Public Health Programs (3)

Academic Masters Degrees (MS)

All students in the academic master’s degree programs develop analytical skills in Biostatistics and Epidemiology as well as study in their academic area. Student are required to complete a research project and write a Thesis.

SPHL 6020 Foundations in Public Health (3)
SPHL 6050 Biostatistics for Public Health (3)
SPHL 6060 Epidemiology for Public Health (3)

Doctoral Programs (PhD, DrPH)

Doctor of Philosophy In Public Health (PhD) (academic doctorate)
Doctor of Public Health (DrPH) (professional doctorate)

Students enter the doctoral programs with a prior master’s degree. Credits earned in a master’s degree that directly applies to the program of study may be applied toward the doctoral degree. The credits that may apply are determined by the department. At least 30 credits of advanced coursework must be taken at SPHTM. See the SPHTM Doctoral Guidelines for information on the comprehensive exam, prospectus, research and dissertation requirements.

All doctoral programs require a minimum of 72 credits beyond the bachelor’s degree, independent research, and a dissertation. Student take:

- Advanced Biostatistics course above the foundations level
- Advanced Epidemiology course above the foundations level
- Research methods course

Students enter the doctoral programs with a prior master’s degree. Credits earned in a master’s degree that directly applies to the program of study may be applied toward the doctoral degree. The credits that may apply are determined by the department. At least 30 credits of advanced coursework must be taken at SPHTM. See the SPHTM Doctoral Guidelines for information on the comprehensive exam, prospectus, research and dissertation requirements.

Joint and Combined Degrees:

SPHTM has joint or combined degrees with the Medical School, Law School, Business School and School of Social Work as well as a BSPH/MPH option for undergraduate public majors. Joint degrees allow for the sharing of 10 credits toward both degrees and the BSPH/MPH shares 12 credits.

Graduate certificate are non-degree programs composed of graduate-level for-credit courses. SPHTM has two types of graduate certificates.

Graduate certificates (secondary area of study) provide the opportunity for student professional masters programs (MPH, MSPH and MPHTM) to supplement their degree concentrations. Graduate certificates are 14-17 credits and electives may be used toward the graduate certificate. Program course requirements cannot be double counted for the certificate. If the same course is required for both a degree program and certificate, a related course may be substituted for the certificate requirement. A graduate certificate cannot be obtained in same program as the primary degree program. Only student currently enrolled in the MPH, MSPH or MPHTM may add a graduate certificate to their degree.

Standalone graduate certificates are non-degree programs that are approximately one third (15 credits) of a professional master’s degree. These available for mid-career professional in designated distance learning and executive programs. Standalone graduate certificates provide skills in the concentration and the credits earned may be applied toward the professional master’s degree. Students must apply to and be accepted in the graduate certificates.

Degree Requirements

Undergraduate

Newcomb-Tulane College Requirements

General Education Curriculum

Newcomb-Tulane College General Education Curriculum

Newcomb-Tulane College Core Curriculum allows students to explore a wide-range of disciplines and embodies the mission and values of the College by allowing students to have flexibility in their core curriculum courses while exploring a full-range of courses.

The core curriculum—which is composed of a minimum of 30 credits—is divided into two parts: proficiency requirements and a distribution of knowledge. To ensure that students experience the breadth of knowledge at the collegiate level, AP and IB courses can be used to satisfy proficiency requirements only in Formal Reasoning and Foreign Language.

Courses will be designated as satisfying the distribution requirements according to the content and methodology rather than the departmental affiliation of the course.

The new core curriculum general education requirements will go into effect with the entering class of 2018.

Courses proposed to satisfy core requirements will be ratified by the Newcomb-Tulane Curriculum Committee and the Newcomb-Tulane College faculty.

Proficiency Requirements

Writing Skills (2 courses and 6 credits)
Tulane undergraduates should be able to communicate effectively. Students completing this requirement will produce coherent texts that combine analysis, argument, and research.

- Tier 1: Freshman writing (ENGL 1010 or ENGL 1011) unless the student is exempt. Students receiving exemption from ENGL 1010/1011 are required to take an approved writing class during their freshman year. At least 1/3rd of the grade based upon writing (excluding in class exams), but no revision required.
- Tier 2: One additional writing course at the 2000 level or above taken from an approved list. At least 1/3rd of the grade based upon writing (excluding in class exams), to include revision and re-evaluation by the instructor.

Note: creative writing courses cannot be used to satisfy the writing proficiency requirement.

Formal Reasoning (1 course and 3 credits)
One course in mathematics or symbolic logic (PHIL 1210)

Foreign Language (0-3 courses)
The foreign language proficiency is achieved by a passing grade at the 2030 level, or an AP score of 4 or 5, or a Higher-Level IB score of a 5 or higher, or an SAT II achievement test of 640 or higher, or a passing grade in a Tulane administered proficiency test. This requirement is waived for students in B.S.E. programs.

Distribution Areas (A course can satisfy only one of the distribution areas.)

Mathematics and the Natural Sciences (2 courses including 1 lab science course and 7 credits)
Tulane undergraduates should understand the methods of scientific inquiry. The mathematics and natural sciences requirement will equip students to understand and assess scientific issues that affect the world today. (Those completing the B.F.A. degree need only complete 1 course with lab.)

Social and Behavioral Sciences (2 courses and 6 credits)
Tulane undergraduates should think critically about human cultures, societies, and behaviors. This requirement acquaints students with the methods of research and inquiry in the social science disciplines.

Textual and Historical Perspectives (2 courses and 6 credits)
Tulane undergraduates should evaluate literary, philosophical, and historical texts. This area of the curriculum introduces exposes students to the methods used to examine and interpret fundamental issues of human experience.

Aesthetics and the Creative Arts (3 credits)
Tulane undergraduate students should be able to understand and appreciate the creative process and various forms of artistic expression.

Additional Core Requirements

The First Year Seminar
This requirement can be satisfied by a Tulane Interdisciplinary Seminar (TIDES) course or an Honors Colloquium course (COLQ 1010 or 1020).

Public Service
All students will complete public service that is satisfied by service learning courses, an approved internship, or research experience. These courses can also be used to satisfy other areas of general education. The nature of the requirement is to be determined by the NTC faculty. Currently this is a two-tiered experience.

Race and Inclusion
One course that focuses on race and inclusion in the United States, to be completed by end of the sophomore year. Courses that fulfill this requirement will focus at least 60% of their content on race and inclusion in the United States. These courses may also be used to satisfy other general education curriculum requirements.

Global Perspectives
One course that focuses on a global-international context from a perspective outside of the U.S., with at least 60% of content with stated objectives to develop historical, cultural, and societal knowledge of an area beyond the U.S. This requirement should be completed by end of the sophomore year. These courses can also be used to satisfy other areas of general education.

School of Public Health and Tropical Medicine

Bachelor of Public Health (BSPH)
The Tulane Bachelor of Science in Public Health (BSPH) degree is an academic degree addressing the health of populations and communities through instruction, service, and community based research. Grounded in a background of humanities, social science, and the liberal arts, the degree fulfills Tulane University’s campus-wide undergraduate core proficiency while stressing an additional commitment to quantitative and scientific skills. This degree program is nationally accredited and has specific competencies, or educational targets. Competencies for the BSPH cover core concepts and structures of public health, along with university-required proficiencies, writing and math skills, and a foreign language.

Graduate

Master of Health Administration (MHA)
The Master of Health Administration trains future managers and leaders who strive to improve the delivery of health services in diverse settings. The MHA degree requires a total of 60 credits (48 credits of required coursework and 12 elective credits) plus an administrative residency (960 hours). All SPHTM student must take SPHL 6020 Foundations in Public Health or pass a challenge exam.

The program has been accredited by the Commission on Accreditation of Healthcare Management Education (CAHME) since 1971.

- Master of Health Administration
Master of Public Health (MPH)
The Master of Public Health is the recognized professional degree for leadership careers in public health. The MPH degree requires 42-45 credits consisting of:

- Five Foundational courses  
  - SPHL 6020 Foundations in Public Health (3)
  - SPHL 6050 Biostatistics for Public Health (3)
  - SPHL 6060 Epidemiology for Public Health (3)
  - SPHL 6070 Health Systems, Policy and Management (3)
  - SPHL 6080 Design Strategies for Public Health Programs (3)

- Required programmatic course work  
  - 18-21 credits

- Electives  
  - 9-12 credits

- Integrated learning experience (ILE)

- Applied Practice Experience

*Foundational courses are:

- SPHL 6020 Foundations in Public Health (3)
- SPHL 6050 Biostatistics for Public Health (3)
- SPHL 6060 Epidemiology for Public Health (3)
- SPHL 6070 Health Systems, Policy and Management (3)
- SPHL 6080 Design Strategies for Public Health Programs (3)

The MPH is offered in the following concentrations:

- MPH in Community Health Sciences
- MPH in Disaster Management
- MPH in Epidemiology
- MPH in Health Education and Communication
- MPH in Health Policy
- MPH in Health Systems Management
- MPH in International Health and Development
- MPH in Maternal and Child Health
- MPH in Nutrition

Master of Public Health and Tropical Medicine (MPH&TM)
The Master of Public Health and Tropical Medicine is a practice-oriented program that prepares students to recognize and control infectious diseases found in tropical and subtropical regions and developing countries. This degree is unique to Tulane and reflects a century of work with tropical diseases.

The MPH&TM requires 42 credits of course work composed of:

- Five Foundational courses*  
  - 15 credits

- Required programmatic course work  
  - 18-21 credits

- Electives  
  - 9-12 credits

- Integrated learning experience (ILE)

- Applied Practice Experience

*Foundational courses are:

- SPHL 6020 Foundations in Public Health (3)
- SPHL 6050 Biostatistics for Public Health (3)
- SPHL 6060 Epidemiology for Public Health (3)
- SPHL 6070 Health Systems, Policy and Management (3)
- SPHL 6080 Design Strategies for Public Health Programs (3)

The MPHTM has two tracks: Clinical track for physicians and Public Health track.

- Master of Public Health and Tropical Medicine

Master of Science (MS)
The Master of Science degree is an academic research degree. The MS requires 36 to 45 credits depending on degree area. The MS degree requires course work in Biostatistics, Epidemiology and the area of study. All SPHTM student must take SPHL 6020 Foundations in Public Health or pass a challenge exam. Student must conduct a research project and write a research thesis.

We offer the following MS programs:

- MS in Biostatistics
- MS in Epidemiology
- MS in Clinical Investigation
- MS in Tropical Medicine

Master of Science in Public Health (MSPH)
The Master of Science in Public Health is a public health professional degree with a science orientation. The MPH degree requires 42-45 credits (depending on concentration) composed of:

- Five Foundational courses*  
  - 15 credits

- Required programmatic course work  
  - 18-21 credits

- Electives  
  - 9-12 credits

- Integrated learning experience (ILE)

- Applied Practice Experience

SPHTM offers the following MSPH programs:

- MSPH in Biostatistics (BIOS)
- MSPH in Global Environmental Health Sciences
- MSPH in Industrial Hygiene

Doctor of Philosophy (PhD)
The Doctor of Philosophy in Public Health is an academic research degree that prepares students for research roles in public health and a variety of other careers. The PhD requires a minimum of 72 credits beyond the bachelor’s degree. Students enter the PhD with a master’s degree; up to 42 master’s credits directly related to the area of study may be applied toward the PhD degree. At least 30 credits of advanced course work must be completed at SPHTM. PhD student take a comprehensive exam, develop a research prospectus, conduct a major research project and defend a dissertation. The PhD program includes course work in advanced biostatistics and epidemiology beyond the foundational level and a research methods course. All SPHTM student must take SPHL 6020 Foundations in Public Health or pass a challenge exam.

The PhD in Public Health is offered with concentrations in:

- PhD in Biostatistics
- PhD in Epidemiology
- PhD in Global Community Health and Behavioral Sciences
- PhD in Global Environmental Health Sciences
- PhD in Health Policy and Management
- PhD in Tropical Medicine

Doctor of Public Health (DrPH)
The Doctor of Public Health is an applied professional doctoral degree that prepares students for leadership roles in public health practice. The DrPH builds on the foundational areas of public health. A MPH is required for entry into the DrPH and up to 42 credits may be applied to the total of 72 credits. At least 36 credits of advanced course work must be completed at SPHTM. The DrPH program includes course work in advanced biostatistics and epidemiology beyond the foundational level and a research methods course. DrPH student a
comprehensive exam, an applied practice experience and compete a dissertation. The DrPH is offered in Community Health and Behavioral Sciences.

- DrPH in Global Community Health and Behavioral Sciences

**Academic Departments**

- Department of Epidemiology (p. 232)
- Department of Global Biostatistics and Data Science (p. 237)
- Department of Global Community Health and Behavioral Sciences (p. 241)
- Department of Global Environmental Health Sciences (p. 251)
- Department of Health Policy and Management (p. 260)
- Department of Tropical Medicine (p. 266)
- Joint and Combined Degrees (p. 271)
- Undergraduate Public Health (p. 274)

**Department of Epidemiology**

**Programs**

**Graduate Certificates**

- Epidemiologic Methods Certificate (Graduate) (p. 233)

**Graduate**

- Clinical Investigation, MS (p. 232)
- Epidemiology, MPH (p. 233)
- Epidemiology, MS (p. 235)
- Epidemiology, PhD (p. 236)

**Clinical Investigation, MS**

The Master of Science in Clinical Investigation provides training in the methods and conduct of clinical investigation for future leaders in patient-oriented research. In addition to traditional instruction in biostatistics, epidemiology and study design, this program will provide students with a strong foundation in ethics and professionalism, while developing skills in critical thinking, communication of scientific findings, leadership, and study management. This one-year program begins in the Summer and is completed the following Spring.

**Program Competencies**

- Problem formulation: Define focused research questions and testable hypotheses
- Methodology: Compare and select study designs for addressing clinical or translational research questions; identify a target population with consideration of socioeconomic, ethnic and cultural diversity; identify measures to be utilized while addressing reliability and validity, data quality, and cultural diversity
- Data management and security: Manage data using computer technology; define strategies to ensure data security and protection of privacy are maintained
- Data analysis and interpretation: Generate statistics that fit the study design chosen and answer research questions; identify risk/preventive factors that may contribute to outcomes and incorporate them into a research study; interpret computer output containing results of statistical procedures and graphics
- Scientific communication: Compile statistical output into tables and figures suitable for publication; prepare and communicate research findings to different groups of individuals through oral presentations and research papers; critically appraise the existing literature
- Ethics and professionalism: Describe the fundamental principles of the protection of human subjects and voluntary informed consent; describe the authority for and professional standards for the responsible conduct of research; explain the concept of good clinical practice; explain conflict of interest management in research
- Teamwork and leadership: Demonstrate group decision-making techniques; manage conflict; lead and manage team-based and individual projects; foster innovation and creativity

**Requirements**

The MS in Clinical Investigation Degree in Epidemiology requires 36 credits that includes:

**Academic Standards**

In addition to the SPHTM academic standards, students in the MS in Epidemiology and those taking advanced epidemiology courses must demonstrate the following standards:

- All students must complete and earn a "B" or better in the prerequisite foundational course, SPHL 6060 Epidemiology for Public Health (3 c.h.), before advancing to EPID 7120 Epidemiologic Methods II (3 c.h.) or other advanced epidemiology courses.
- Any Epidemiology student receiving a grade of "C" in any required course (including any foundation course) must repeat the course.
- Epidemiology students receiving a grade of "F" in any course may not continue in the MS program (unless special extenuating circumstances can be demonstrated).
To take an advanced epidemiology course, student must have a grade of "B" or better in any prerequisite courses.

**Thesis**

Students must successfully complete a thesis (https://tulane.app.box.com/v/thesis-guidelines). The thesis is based on a supervised research project demonstrating scholarship in the area of clinical research. The results will be presented orally and in writing and reviewed by two faculty members. The master's thesis must be completed within a year of completion of the required courses. It should be an academic investigation suitable for publishing.

Elective 3

**Epidemiologic Methods Certificate (Graduate)**

The Certificate in Epidemiologic Methods provides in-depth training in epidemiologic methods for non-majors, grounding them in the basic approaches that can benefit their future endeavors in addressing public health issues. The program exposes students to the core epidemiologic methods courses. It is ideal for students who want to strengthen their ability to conduct research, which will benefit them in their future careers, whether that’s in a research setting, in academia, or in the community.

This graduate certificate serves as a second area of student for SPHTM student enrolled in the MPH, MSPH or MPHTM degrees.

**Offered by: Department of Epidemiology** (https://sph.tulane.edu/epid/home)

**Faculty Lead: Jeanette Gustat, PhD** (https://sph.tulane.edu/epid/jeanette-gustat-phd-mph)

**Purpose**

Students will acquire training in observational epidemiology and clinical trials. At the conclusion of the program, students will be able to design and implement studies, conduct basic data analysis, and interpret study findings.

**Eligible Students**

Students enrolled in a MPH, MSPH, or MPH&T&M degree program at Tulane SPHTM outside of the MPH in Epidemiology.

**Certificate Competencies**

Students who earn the Certificate in Epidemiologic Methods will be able to:

• Develop the appropriate research questions for biomedical and public health issues;

• Apply the best study design to answer important study questions; and

• Analyze and interpret study findings and critically review epidemiological literature

**Number of Credits Required for Completion: 15**

**Requirements**

*For programs requiring BIOS 6040, the student may substitute:
BIOS 7060 Regression Analysis (3) or BIOS 7150 Categorical Data Analysis (3). For students pursuing the master’s degree in biostatistics, substitute with BIOS 7220 Nonparametric Statistics (3) or BIOS 7250 Principles of Sampling.

Students should consult with their academic advisor to determine which certificate best fits their professional and academic goals and how best to plan their graduate course schedule.

**Epidemiology, MPH**

The MPH in Epidemiology is a professional degree that prepares students to serve as epidemiologists in mid-level positions in public health research or practice settings. The program appeals to
professionals currently employed in the health field and as well as those without previous training or experience in public health.

The MPH in epidemiology is highly analytical and methods-based. Students learn to apply conceptual methodology to the study of public health problems and health disparities as a means of understanding how to prevent or address them. As an MPH student in epidemiology, the knowledge base and research skills are applied within a chosen content area of current importance in the field, such as chronic or infectious disease; environmental, reproductive, molecular/cancer, or genetic epidemiology. Through coursework and other learning experiences, students gain a thorough knowledge of the sources of health data, how to collect data from original sources, how to process, analyze and effectively report findings from epidemiologic studies.

Graduates can design and carry out studies in which epidemiologic information is needed for making sound health policy decisions or for the management of research projects in both public and private agencies and institutions.

Program Competencies

- Identify characteristics of major study designs used in epidemiologic research, including assessment of the threats to validity for each design.
- Evaluate readings from the epidemiologic literature for methodologic strengths and weaknesses, including appropriateness of the study design relative to the research question, and potential threats to the validity of study findings.
- Analyze and interpret public health and epidemiologic data, using appropriate statistical software and statistical techniques.
- Write a study protocol for a specific research question, incorporating scientific rationale, study design, and details of research methods.

Requirements

The MPH Degree in Epidemiology requires 45 credits.

Descriptive Epidemiology

Select one of the following: 3

- EPID 6090 | EPID of Infectious Diseases                |
- EPID 6210 | Cancer Epidemiology                        |
- EPID 6220 | Cardio Disease Epid                        |
- EPID 6320 | Molecular Epidemiology                     |

Academic Standards

In addition to the SPHTM academic standards, students in the MPH in Epidemiology program and those taking advanced epidemiology courses must demonstrate the following standards:

- All students must complete and earn a “B” or better in the prerequisite foundational course, SPHL 6060 Epidemiology for Public Health (3 c.h.), before advancing to EPID 7120 Epidemiologic Methods II (3 c.h.) or other advanced epidemiology courses.
- Any Epidemiology student receiving a grade of “C” in any required course (including any foundation course) must repeat the course.
- Epidemiology students receiving a grade of “F” in any course may not continue in the MS MPH program (unless special extenuating circumstances can be demonstrated).
- To take an advanced epidemiology course, student must have a grade of “B” or better in any prerequisite courses.

1 Required for the MPH in epidemiology. This knowledge may be demonstrated through prior coursework or passing the challenge exam for Biological Basis of Health and Disease.
2 Selected from courses offered within the department, school, or university in consultation with an academic advisor.
3 The Applied Practice Experience (APE) (formerly practicum) is a supervised practice experience conducted in an agency or organization external to the university to gain practical experience. The APE allows students to demonstrate attainment of at least five competencies, including at least three from the foundational competencies (CEPH Criterion D2 [link]). The APE is conducted after completion of the foundational courses. After identifying the APE setting and defining the competencies, students enter the information into Terra Dotta. An APE report is required that summarizes the field experiences.
All students must complete an Integrated Learning Experience (ILE) (formerly culminating experience) that demonstrates the synthesis of foundational and concentration competencies. Students in the MPH in Epidemiology conduct a public health analysis.

### Program Competencies

- Define the concepts and contents of epidemiology.
- Formulate a research hypothesis.
- Determine study aim, objectives and appropriate study design to address the hypothesis.
- Identify risk and/or preventive factors that may contribute to outcomes and incorporate them into a research study.
- Use computers to collect, manage and analyze data for evaluation of hypotheses.
- Evaluate the use of questionnaires and measurement instruments in collection of data to maintain internal validity.
- Use existing databases to provide background or supportive data to address research questions.
- Analyze data, interpret the findings and prepare a report of study result.
- Perform ethical research.

### Requirements

The MS Degree in Epidemiology requires 42 credits that includes:

### Epidemiology, MS

The MS in Epidemiology is an academic degree that prepares students for careers in research. It serves students new to public health as well as those currently working in the field who wish to gain the quantitative skills necessary to conduct population based research. The curriculum focuses on understanding theoretical issues and applying disciplinary methods to the study of public health problems. Coursework includes learning experiences in epidemiologic methods, biostatistics, data management, analysis and interpretation of findings in content areas such as chronic or infectious disease, reproductive, molecular or genetic epidemiology. Students learn study design and implementation, from developing protocols and instruments, to the selection and recruitment of subjects, data collection and quality control. These skills prepare graduates for engaging roles in research activities that impact public health planning, control and global disparities.
Academic Standards

In addition to the SPHTM academic standards, students in the MPH in Epidemiology program and those taking advanced epidemiology courses must demonstrate the following standards:

- All students must complete and earn a "B" or better in the prerequisite foundational course, SPHL 6060 Epidemiology for Public Health (3 c.h.), before advancing to EPID 7120 Epidemiologic Methods II (3 c.h.) or other advanced epidemiology courses.
- Any Epidemiology student receiving a grade of "C" in any required course (including any foundation course) must repeat the course.
- Epidemiology students receiving a grade of "F" in any course may not continue in the MS MPH program (unless special extenuating circumstances can be demonstrated).
- To take an advanced epidemiology course, student must have a grade of "B" or better in any prerequisite courses.

Thesis

Students must successfully complete a thesis. The thesis is based on a supervised research project demonstrating scholarship in the area of epidemiology. The results will be presented orally and in writing and reviewed by two faculty members. The master's thesis must be completed within a year of completion of the required courses. It should be an academic investigation suitable for publishing.

Epidemiology, PhD

The PhD degree program prepares students for careers in epidemiologic research and teaching, usually in an academic setting. The PhD graduate is expected to have knowledge across a wide range of epidemiologic theory and methods as well as sustained experience in the conduct of research in one or more content areas. The Ph.D. program has a strong theoretical base and is focused on research. Graduates are likely to become independent researchers and faculty members. The Ph.D. is the terminal degree in epidemiology.

Program Competencies

- Demonstrate in-depth knowledge of basic and advanced concepts of Epidemiology.
- Exhibit proficiency in grant writing and protocol development.
- Exhibit proficiency in advanced data analysis skills.
- Exhibit proficiency in ethical and scientifically sound study design and conduct.
- Demonstrate mastery of critical evaluation of the scientific literature.
- Demonstrate excellence in scientific writing (Dissertation work - 3 paper format).

Requirements

Prerequisite Coursework (from prior master’s degree)

Students who do not have these prerequisites are required to take these or equivalent courses.

Total Credit Hours 30-31

Academic Standards

In addition to the SPHTM academic standards, students in the MPH in Epidemiology program and those taking advanced epidemiology courses must demonstrate the following standards:

- All students must complete and earn a “B” or better in the prerequisite foundational course, SPHL 6060 Epidemiology for Public Health (3 c.h.), before advancing to EPID 7120 Epidemiologic Methods II (3 c.h.) or other advanced epidemiology courses.
- Any Epidemiology student receiving a grade of “C” in any required course (including any foundation course) must repeat the course.
- Epidemiology students receiving a grade of “F” in any course may not continue in the MS MPH program (unless special extenuating circumstances can be demonstrated).
- To take an advanced epidemiology course, student must have a grade of “B” or better in any prerequisite courses.

Elective Courses

Selected from courses offered within the department, school, or university in consultation with an academic advisor.

Research Ethics

Students are required to take online research ethics training via CITI or another equivalent training program in research ethics. This certification must remain current throughout the program duration.

Comprehensive Exam

Students are required to pass a written comprehensive examination (https://tulane.box.com/v/epid-comprehensive-july2018) demonstrates general knowledge of epidemiologic and biostatistical methods and knowledge of the epidemiology in at least one content area. The exam will include sections on higher level epidemiologic methods, a content area and study design.

Prospectus

(See PhD handbook (https://sph.tulane.edu/doctoral-students))

Students must prepare and defend a prospectus of proposed research.

Dissertation

(See PhD handbook (https://sph.tulane.edu/doctoral-students))

Students must conduct original research and defend a dissertation based on that research.

Graduation Requirements

Students in the Epidemiology PhD program are required to maintain standards of performance that exceed the minimum required by the School. Students must earn a “B+” or better in all required coursework. Students who receive lower than a “B+” in required coursework must repeat the course at their own expense.

Department of Global Biostatistics and Data Science

Programs

Graduate Certificates
- Biostatistics Certificate (Graduate) (p. 237)

Graduate
- Biostatistics, MS (p. 238)
- Biostatistics, MSPH (p. 239)
- Biostatistics, PhD (p. 240)

Biostatistics Certificate (Graduate)

The Certificate in Biostatistics provides students with skills in applied data analysis in the areas of public health and medicine. The coursework concentrates on developing statistical skills through the use of actual data sets and computerized statistical software packages. The certificate program will benefit students who want to strengthen their public health study with strong applied data analysis skills.

Offered by: Department of Global Biostatistics and Data Science

Faculty Lead: John Lefante, PhD (https://sph.tulane.edu/gbds/john-lefante-phd)

Biostatistics Certificate Enrollment Form (https://tulane.box.com/v/gbds-certificate-enroll)

Purpose

This certificate program provides master’s level public health students with additional expertise in applied data analysis.
Eligible Students
This certificate program is designed for current MPH/MSPH/MPH&TM/ MHA students who are not pursuing the MSPH Biostatistics. The certificate is a complement to degrees in other areas.

Certificate Competencies
Students who earn then the Certificate in Biostatistics will be able to:

- Formulate appropriate linear regression models and conduct simple and multiple linear regression analysis (BIOS 6040, 7060);
- Differentiate between various analysis of variance procedures and analyze data using these procedures (BIOS 6040, 7080); and
- Distinguish between procedures for analyzing discrete data and conduct logistic regression and other categorical procedures (BIOS 6040, 7150).

Number of Credits Required for Completion: 15

Total Credit Hours 15-18

1 Students should choose these courses in consultation with their advisor.

Program Competencies

- Define and use the principles of probability and mathematical statistics to guide the selection and application of data analysis methods.
- Apply descriptive and inferential methodology based on study design in solving research questions.
- Design experimental and observational studies for research projects, addressing specific questions in statistics or in an applied field.
- Interpret and effectively communicate research results orally and in writing.

Requirements

The MS Degree in Biostatistics requires a total of 42 credits that includes:

Elective Courses

Select 12 credits of Biostatistics elective courses at the 6000 or higher level  1

Total Credit Hours 42

1 Students should choose these courses in consultation with their advisor.

Thesis

Students must successfully complete a thesis (https://tulane.app.box.com/v/thesis-guidelines). Students register in BIOS 9980 Master’s Thesis Research (0 c.h.). The thesis is based on a supervised research project demonstrating scholarship in the area of statistical methodology. The results will be presented orally and in writing. The project will be supervised by a thesis director who is a faculty member of the Department of Global Biostatistics and Data Science, and approved by at least one other member of the Biostatistics faculty. The master's thesis must be completed within a year of completion of the required courses.

MS in Biostatistics Model Schedule

*For Fall or Spring entrance
Biostatistics, MSPH

The MSPH program in Biostatistics emphasizes applied data analysis in the areas of public health and medicine, by preparing students to analyze data in a wide range of settings, including public health surveillance and research programs; local, state, and federal government agencies; pharmaceutical research divisions; university research programs; and consulting firms. Students learn to assist in selecting research design appropriate for the goals of the research, estimate sample size requirements, establish and maintain databases, select and conduct the appropriate statistical analysis, and communicate the results of the analysis orally and in writing fields of public health. Coursework concentrates on developing these statistical skills through the use of actual data sets and computerized statistical software packages.

Program Competencies

• Incorporate knowledge of the core areas of biostatistics, epidemiology, environmental health, health systems management, and the behavioral, social, and cultural aspects of health in addressing and solving problems.
• Select and conduct appropriate statistical procedures for evaluation of public health intervention and surveillance programs.
• Contribute to the design of public health programs by estimating the required sample size and power for program monitoring.

• Incorporate knowledge of databases and information systems in data collection and study management of public health intervention and surveillance programs.
• Interpret and effectively communicate statistical analysis results orally and in writing to public health investigators, collaborators, and members of general community.

Requirements

The MSPH Degree in Biostatistics requires a total of 42 credits that includes:

1 Selected from courses offered within the department, school, or university in consultation with an academic advisor.
2 The Applied Practice Experience (APE) (formerly practicum) is a supervised practice experience conducted in an agency or organization external to the university to gain practical experience. The APE allows students to demonstrate attainment of at least five competencies, including at least 3 from the foundational competencies (CEPH Criterion D2). The APE is conducted after completion of the foundational courses. After identifying the APE setting and defining the competencies, students enter the information into Terra Dotta. An APE report is required that summarizes the field experiences.
3 All students must complete an Integrated Learning Experience (ILE) (formerly culminating experience) that demonstrates the synthesis of foundational and concentration competencies. Students in the MSPH in Biostatistics conduct a public health analysis.

</table>

1. Students who do not have these prerequisites are required to take these or equivalent courses.

2. Additional credits may be needed to obtain a total of 72 credits. No more than 12 credits of special (independent) studies may be applied toward the doctoral degree.
Research Ethics
Students are required to take online research ethics training via CITI or another equivalent training program in research ethics. This certification must remain current throughout the program duration.

Comprehensive Exam
(See Comprehensive Exam Procedures (https://tulane.box.com/v/gbds-comprehensive-july2018))

Students are required to pass a written comprehensive examination (https://tulane.box.com/v/gbds-comprehensive-july2018) that demonstrates general knowledge of statistical methods and research applications. The department administers a written comprehensive examination upon completion of the required coursework. The exam is administered twice a year (October and March) and must be taken within a year after the completion of the coursework. The exam has two parts: a the applied biostatistics component; and a probability and mathematical statistics component. Candidates must pass both parts to successfully complete the comprehensive exam requirement. Students have two attempts to pass each component of the examination; the second attempt must take place within a year of the first. (See GBDS PhD guidance from department)

Doctoral Committee
(See PhD Handbook (https://sph.tulane.edu/doctoral-students))

After successful completion of the comprehensive examination, the student forms a dissertation committee and develops a prospectus. The committee must include a minimum of three members with at least two faculty from the Department of Global Biostatistics and Data Sciences and one external to the school.

Prospectus
(See PhD Handbook (https://sph.tulane.edu/doctoral-students))

Students work with their advisor and doctoral committee to determine a research hypothesis and prepare a prospectus of proposed dissertation research. The research prospectus is presented and defended at least one semester before the dissertation defense. Following the successful defense of the prospectus, students are admitted to PhD candidacy and proceed with dissertation research.

Dissertation
(See PhD Handbook (https://sph.tulane.edu/doctoral-students))

Students must conduct original research and defend a dissertation based on that research. The dissertation research demonstrates scholarly work and is the basis for the dissertation. The student defends the dissertation to their committee; the dissertation committee and SPHTM Executive Faculty approve the dissertation.

• Maternal and Child Health, MPH (p. 248)
• Nutrition, MPH (p. 250)

Community Health Sciences, MPH

The Masters of Public Health Degree in Community Health Sciences (CHS) focuses on developing knowledge and skills to work with communities in addressing health needs and health disparities, and improving quality of life. This work requires skills in social and behavioral aspects of community health, monitoring and evaluation of community-based programs, community training methodologies, and active engagement within the community to promote health and well-being. This program is well suited for students in a combined degree (e.g. MD/MPH or MSW/MPH) seeking valuable skills in community-based interventions and public health programming.

Program Competencies

Students who graduate from this degree program can expect to develop the following competencies as they successfully meet and complete the program degree requirements.

• Analyze the nature of public health issues within the context of a specific community and environment, generate solutions, and apply solutions with communities.
• Design and implement theoretically informed and culturally appropriate interventions by applying public health theory and principles to a diverse set of problems at the community level.
• Develop an effective plan to monitor and evaluate a community-based public health intervention or program based on translation of scientific evidence.
• Collaborate effectively with members of a community through engagement in the process of public health programming.
• Develop an asset-based community assessment that identifies the determinants of health, local assets, and locally-determined priority needs.
• Effectively communicate in both oral and written forms to a variety of audiences and purposes related to community health.
• Apply the CHS Essential Skills concepts to public health topics.
# Requirements

The MPH degree in Community Health Sciences requires a total of 45 credits that include:

Global Community Health Science and Behavior, DrPH

The DrPH program in Global Community Health and Behavioral Sciences is an applied professional degree that prepares leaders in applied public health program development, evaluation, and program-relevant research in promoting community health in a global context. The GCHB DrPH program has a strong focus on field applications of program planning and monitoring and evaluation and emphasizes advanced study in social determinants of health, health systems, health policy, grant writing, qualitative methods, and research methods. A focus on health disparities and cultural competence are common themes throughout the coursework. Graduates are expected to have responsibilities that would include program leadership, evaluation, applied research, and teaching.

Program Competencies

Students who graduate from this degree program can expect to develop the following competencies as they successfully meet and complete the program degree requirements.

- Incorporate knowledge of the qualitative, quantitative, mixed methods, and policy analysis research and evaluation methods to address public health issues and population health at multiple levels (individual, group, organization, community and population)
- Develop the professional leadership and management skills to coordinate community organization and mobilization, develop needs assessments and strategic plans, and design interventions in diverse global health settings
- Critically analyze the impact of social and behavioral determinants on individual, community and population health
- Demonstrate the ability to conduct and apply the interpretation of formative research to develop public health interventions in diverse contexts
- Demonstrate advanced knowledge of program planning and development of implementation plans
- Demonstrate advanced knowledge of evaluation theory and be capable of implementing monitoring and evaluation systems
- Demonstrate culturally competent capacity to understand the role of gender, culture, social, economic, and historical contexts in demonstrating and implementing global public health programs
- Demonstrate knowledge of health literacy and effective communication related to health education and messaging

Admission Requirements

To be eligible for the DrPH program, students must have completed an MPH degree or equivalent with an outstanding academic record.

Applicants must meet the school’s admission requirements, submit the application through SOPHAS and include in their application three letters of reference from individuals who are familiar with their academic and/or professional performance.

Practical experience in public health is highly preferred. A post-bachelor’s degree GPA of 3.5 or higher and GREs in the upper 50th percentiles are also preferred. All applicants will be reviewed by faculty members prior to acceptance in order to assess interest and ensure that department faculty members have the expertise to mentor applicants’ chosen areas of study.

Complete applications must be received by the priority deadline of December 1 to be considered for fellowships and other student funding. To be considered for admission to GCHB doctoral programs without funding, the completed application must be received by January 15.

A complete application includes all required documentation—career statements, letters of recommendation and verified transcripts and GRE scores. We recommend applications and required documentation be submitted in sufficient time for SOPHAS to receive and verify transcripts and GRE scores to meet the respective deadlines.

For further details regarding admissions requirements to the school, see the Tulane University School of Public Health and Tropical Medicine “Policies and Procedures for Doctoral Programs (https://tulane.app.box.com/v/doc-handbook-102015)” guide.

Requirements

The DrPH degree in Global Community Health and Behavioral Sciences requires a total of 72 post-baccalaureate credits, 36 of which must be fulfilled through advanced doctoral study at Tulane SPHTM. Up to 36 credits may be applied from a MPH or equivalent degree; however, only those that fulfill the GCHB DrPH competencies will be accepted. If a prerequisite course or equivalent has not been fulfilled, the student must take the prerequisite course.

Additional prerequisites may be required above the 36 credits of advanced doctoral study if a student has not fulfilled prerequisite requirements for the MPH degree.

Global Community Health Science and Behavior, PhD

The purpose of the PhD program in Global Community Health and Behavioral Science is to train experts who will advance the field of global community health through research, development and application of theory, and teaching. The PhD is a highly specialized training program, integrating theory and research in a focused substantive area of global importance. Graduates will have in-depth expertise necessary for a research career, and are expected to develop careers in universities, medical schools, and other higher institutions of learning as faculty members or in research organizations globally.

Program Competencies

Students who graduate from this degree program can expect to develop the following competencies as they successfully meet and complete the program degree requirements.

- Analyze major social and behavioral sciences theories for application to evidence-based research.
- Analyze qualitative and/or quantitative data in order to answer significant research questions in social and behavioral sciences.
- Synthesize the interdisciplinary perspectives within public health.
- Design, implement and evaluate independent theory-based scientific research in an academic or practice setting.
- Translate and disseminate knowledge of global community health problems in a specific area.
- Adapt a well-rounded persona with a clear research focus including demonstrating ethical conduct, cultural sensitivity, and a sense of academic integrity.

Admission Requirements

Applicants must meet the school’s admission requirements for entrance into Doctoral programs at SPHTM.

Applicants to the PhD program must have completed a master’s degree in a related field with an outstanding academic record. Applicants are interviewed by faculty members during the admission review. Acceptance will also depend on the capacity of faculty mentors to mentor additional doctoral students.

Complete applications must be received by the priority deadline of December 1 to be considered for fellowships and other student funding. To be considered for admission to GCHB doctoral programs without funding, the completed application must be received by January 15.

A complete application includes all required documentation – career statements, letters of recommendation and verified transcripts and GRE scores. We recommend applications and required documentation be submitted in sufficient time for SOPHAS to receive and verify transcripts and GRE scores to meet the respective deadlines.

Requirements

The PhD degree in Global Community Health and Behavior requires a total of 72 post-baccalaureate degree credits with at least 30 credits
of doctoral study at Tulane SPHTM. Up to 42 credits may be applied from the MPH or equivalent master’s degree. These credits will be reviewed and those that do not fulfill the PhD competencies may not be accepted. If a prerequisite course or equivalent has not been fulfilled, the student must take the course in addition to the 30 credits of advanced doctoral study but may count toward the total 72 credits.

The advisor works with the students in identifying the course of study in the doctoral program. If the doctoral student does not have a prior public health degree, they must obtain a grounding in public health. See PhD handbook (https://sph.tulane.edu/doctoral-students).

### Electives

Select 12 credits ²

| Total Credit Hours | 30 |

¹ TBD by advisor/student
² Additional credits may be needed to obtain a total of 72 credits. Electives may be selected from courses offered within the department, school, or university in consultation with an academic advisor. No more than 12 credits of special (independent) studies may be applied toward the doctoral degree.

## Research Ethics

Students are required to take online research ethics training via CITI or another equivalent training program in research ethics. This certification must remain current throughout the program duration.

## Comprehensive Exam

On completion of the coursework listed above, students will be required to pass a comprehensive examination (https://tulane.app.box.com/v/gchb-comprehensive-july2018) to demonstrate doctoral program competencies as well as knowledge related to their content area of expertise.

## Dissertation

(See PhD handbook) (https://sph.tulane.edu/doctoral-students)

PhD students must complete a dissertation that has a strong basic social science or natural science research focus, and make a unique and original contribution to the scientific literature. The dissertation should help the student prepare for a career in research through demonstrated excellence in the research methods that are used. Consistent with the purpose of the PhD program, dissertations should go beyond basic descriptive analyses of existing data sets (through novel theoretical or methodological applications are acceptable); and have greater innovation and significance than just monitoring and evaluation of an existing project.

## Health Communication and Education, MPH

The solution to many of today’s public health problems requires some type of behavioral change. Increasingly, health practitioners are looking to the field of health education and health communication for methods to adapt behavioral science principles to solve selected health problems. The program is designed to prepare graduates to work in the challenging fields of health promotion and disease prevention, with a focus on health education program planning, monitoring and evaluation, community organization, social marketing, and qualitative and quantitative community-based participatory research methodologies. An MPH in the Health Education and Communication (HEDC) concentration provides those interested in working within the United States, and in developing countries, the opportunity to develop these learning experiences.

### Program Competencies

Students who graduate from this degree program can expect to develop the following competencies as they successfully meet and complete the program degree requirements.

- Assess individual and community needs for health education/communication.
- Design a theory-based public health intervention or program.
- Apply health education communication strategies to interventions and programs.
- Develop a plan to evaluate a public health intervention or program, based on a theory of change.
- Identify health education/communication resources.

- Explain how to promote health education through advocacy campaigns and policies.

## Requirements

The MPH Degree in Health Education and Communication requires a total of 45 credits that includes:

Total Credit Hours: 45

1. Selected from graduate-level courses offered within the department, school, or university in consultation with an academic advisor.
2. The Applied Practice Experience (APE) (formerly practicum) is a supervised practice experience conducted in an agency or organization external to the university to gain practical experience. The APE allows students to demonstrate attainment of at least five competencies, including at least 3 from the foundational competencies (CEPH Criterion D2 (https://sph.tulane.edu/content/ceph-d2-mpf-foundational-competencies)). The APE is conducted after completion of the foundational courses. An APE report and poster summarizing the field experiences are required.
3. All students must complete an Integrated Learning Experience (ILE) (formerly culminating experience) that demonstrates the synthesis of foundational and concentration competencies.

## International Health, MPH

The International Health and Development (IHL) Program at Tulane provides professional public health education in the underlying causes of the major health problems facing developing societies as well as approaches to assess prevalence and consequences, address the problems, and assess the effectiveness of mitigation efforts.

Students who pursue this program of study will develop expertise in one or more of health areas, gain the methodological expertise necessary to assess and mitigate public health problems as well as evaluate program effectiveness. The curriculum and applied learning opportunities draw upon Tulane’s extensive overseas research, technical assistance work, and nearly four decades of experience in providing leadership training in international health to students from around the world.

### Program Competencies

Students who graduate from this degree program can expect to develop the following competencies as they successfully meet and complete the program degree requirements.

- Identify, assess, and prioritize key global public health problems linked to development in low-and-middle income countries and vulnerable populations.
- Describe and evaluate the roles and relationships of organizations influencing global health, and key sources of funding for global health programs.
- Select and apply public health assessment and analytical methods to evaluate and describe global health problems, policies, and programs in low-and-middle income countries.
- Describe and design a theory-based public health intervention or program.
- Identify, assess, and explain health disparities across population sub-groups; and select and justify potential interventions at the intersection of health and social structures, culture, gender, poverty, place, and power.
• Develop a plan to monitor and evaluate a public health intervention or program, based on a theory of change.
• Demonstrate proficiency in an IHL content area.

Maternal and Child Health Certificate (Graduate)

The Certificate in Maternal and Child Health provides the knowledge and skills that will prepare students to contribute to community programs, research, and other interventions aimed at improving the health and well-being of vulnerable and underserved women, children, and families. Students will gain knowledge about the basis of interventions and skills in assessment and methods for program planning. All the relevant courses are in GCHB. The MCH certificate courses prepare students for leadership roles in managing programs that serve women, infants, children, adolescents, and their families, and pairs well with other public health degrees.

This graduate certificate serves as a second area of student for SPHTM student enrolled in the MPH, MSPH or MPHTM degrees.

Offered by: Department of Global Community Health and Behavioral Sciences

Faculty Lead: Carolyn Johnson, PhD

Certificate Purpose

The courses required for the certificate provide students with a background in the biologic, sociocultural, behavioral, and policy issues that impact the health of the MCH population. Programs will be conceptualized with a sensitivity to cultural diversity within a global context. Students will be able to undertake the process of planning and evaluating community programs with a special emphasis on women and children.

Eligible Students

This certificate program is designed for current MPH/MSPH/MPH&TM/ MHA students who are not pursuing the Master of Public Health in Maternal and Child Health. The certificate is a complement to degrees in other areas.

Certificate Competencies

Students who earn the Certificate in Maternal and Child Health will be able to:

- Recognize the different strengths, needs, values and practices of diverse cultural, racial, ethnic, and socioeconomic groups and determine how these factors affect health status, health behaviors, and program design;
- Describe the historical development, scientific basis, financing and structural organization of MCH public policies and practices in the United States for federal, state, and local agencies and programs serving MCH populations;
- Evaluate and use theories and principles of individual and family growth and development from an intergenerational and lifespan perspective;
- Evaluate evidence-based methods that contribute to the translation of research into programming and practice.

Number of Credits Required for Completion: 15

Students should consult with their academic advisor to determine which certificate best fits their professional and academic goals and how best to plan their graduate course schedule.

Maternal and Child Health, MPH

The Maternal and Child Health (MCH) Program provides public health education in:

- The biologic, sociocultural, behavioral, and policy issues that impact the health of the MCH population.
- A well-grounded historical context for and current federal, state and local governmental policies and services in the MCH arena.
- Underlying causes of major health problems and disparities facing the MCH population.
Approaches to properly address these problems and the professional skills required for an MCH career whether nationally or internationally. Students will gain the skills needed to develop, implement, and evaluate interventions with a special emphasis on women, children, and families over the lifespan. Programs will be conceptualized with sensitivity to cultural diversity within a global context.

Program Competencies
Students who graduate from this degree program can expect to develop the following competencies as they successfully meet and complete the program degree requirements.

- Describe the historical development, scientific basis, financing and structural organization of MCH public policies and practices in the United States for federal, state, and local agencies and programs serving MCH populations.
- Determine how different strengths, needs, values and practices of diverse cultural, racial, ethnic and socioeconomic groups affect health status, health behaviors and program design.
- Evaluate theories and principles of individual and family growth and development from an intergenerational and lifespan perspective.
- Apply appropriate research methods to the evaluation of MCH program and practices.
- Evaluate evidence-based methods that contribute to the translation of research into programing and practice.
- Recognize principles of ethical conduct in program management, research and data collection and storage.

Identify, assess and prioritize health problems at the level of the community
Develop a plan to monitor and evaluate a public health intervention or program, based on a theory of change.

Requirements
The MPH degree in Maternal and Child Health requires a total of 45 credits that includes:

1 The Applied Practice Experience (APE) (formerly practicum) is a supervised practice experience conducted in an agency or organization external to the university to gain practical experience. The APE allows students to demonstrate attainment of at least five competencies, including at least 3 from the foundational competencies (CEPH Criterion D2 (http://sph.tulane.edu/content/ceph-d2-mph-foundational-competencies)). The APE is conducted after completion of the foundational courses. An APE report and poster summarizing the field experiences are required.

2 All students must complete an Integrated Learning Experience (ILE) (formerly culminating experience) that demonstrates the synthesis of foundational and concentration competencies. Students in the MSPH in Biostatistics conduct a public health analysis.

Nutrition, MPH

The MPH program in nutrition emphasizes the social and environmental determinants of nutrition and food security problems. Students learn ways to address these issues through nutritional assessment of populations, community nutrition actions, health promotion programs, and food and nutrition policies. Graduates leave the school with the skills to manage or participate in health programs that address nutritional issues. They also gain the tools needed to shape policies that improve the nutritional health and food security of populations. The program addresses problems and solutions across a full spectrum of contexts, including: humanitarian crises in low-income countries; sustainable development in low- and middle-income countries; and the dual burden problems of under- and over-nutrition common to middle and high-income countries.

This program is a member of the Association of Graduate Programs in Public Health Nutrition (https://agpphn.org)(AGPPHN).

Program Competencies

Students who graduate from this degree program can expect to develop the following competencies as they successfully meet and complete the program degree requirements.

- Identify the major types of food and nutrition related health problems in domestic and international settings and the factors that cause them.
- Apply various methods in order to assess the food security and nutritional status of populations, including anthropometric, biochemical, clinical, dietary, and ecological methods.
- Describe and design a theory-based public health intervention or program.
- Develop a plan to monitor and evaluate a public health intervention or program, based on a theory of change.
- Conduct analysis of nutrition and food security data using statistical software, including the interpretation and communication of results.
- Describe major policies and programs that affect food, nutrition, and health and explain the logic of their impacts.
- Demonstrate proficiency in applying the concepts of public health programming and evaluation to food, nutrition, and health problems.

Requirements

The MPH Degree in Nutrition requires a total of 45 credits that includes:

- GCHB 6760 Intl Nutr/MCH Design for Chng
- GCHB 6770 U.S. Food & Nutrition Policy

Elective Courses

Select 9-10 credits Courses selected from those offered within the department, school, or university in consultation with an academic advisor

- SPHL 9980 Applied Practice Experience 4 0
- SPHL 7950 Integrated Learning Experience 5 0

1 Foundational Requirements (https://sph.tulane.edu/foundational-curriculum)
2 May be waived if challenge exam is passed.
3 May be waived with prior nutrition course.
4 The Applied Practice Experience (APE) (formerly practicum) is a supervised practice experience conducted in an agency or organization external to the university to gain practical experience. The APE allows students to demonstrate attainment of at least five competencies, including at least 3 from the foundational competencies (CEPH Criterion D2 (https://sph.tulane.edu/content/ceph-d2-mph-foundational-competencies)). The APE is conducted after completion of the foundational courses. An APE report and poster summarizing the field experiences are required.
5 All students must complete an Integrated Learning Experience (ILE) (formerly culminating experience) that demonstrates the synthesis of foundational and concentration competencies.

- Disaster Management, MPH (p. 252)
- Environmental Health Sciences, MSPH (p. 254)
- Global Environmental Health Science, PhD (p. 255)
- Health and Safety Management, MPH (p. 256)
- Industrial Hygiene, MSPH (p. 257)
- Occupational and Environmental Health, MPH (p. 259)

Disaster Management and Resilience Certificate (Graduate)

The graduate Certificate in Disaster Management and Resilience is designed for students in other programs at Tulane SPHTM who wish to acquire a more in-depth knowledge of public health in the context of disaster preparedness and management. For example, the certificate program would appeal to an epidemiology major who has an interest in applying epidemiologic principles to the study and management of chronic disease in the aftermath of disasters; a community health sciences major who will be working on the impact of land use and built-environment on post disaster recovery; a global health systems and development major who plans to work with disaster-prone populations overseas; and an infectious disease or tropical medicine major who will address post-disaster changes in infectious disease control. Disasters are a concern globally and many public health professionals will end up dealing with the aftermath of disasters no matter their chosen field or where they travel professionally.

This graduate certificate serves as a second area of student for SPHTM student enrolled in the MPH, MSPH or MPHTM degrees.

Offered by: Department of Global Environmental Health Sciences

Faculty Lead: Maureen Lichtveld, MD (https://sph.tulane.edu/gehs/maureen-litchveld-md-mph)
Disaster Management Certificate Enrollment Form (https://tulane.box.com/v/gehs-disastermang-cert-enroll)
Certificate Purpose

Students earning the certificate in Disaster Management and Resilience will be prepared to apply cross-disciplinary knowledge and skills to integrate common concepts of disaster prevention, protection, mitigation, response, and recovery by focusing on health and resilience at multiple social levels, i.e., individual, family, community, and public sector.

Eligible Students

This certificate program is designed for current MPH/MSPH/MPH&TM/MHA students who are not pursuing the Master of Public Health in Disaster Management. The certificate is a complement to degrees in other areas.

Certificate Competencies

Students who earn the Certificate in Disaster Management and Resilience will be able to:

- Apply public health, policy, practice and scientific principles to address the health threats resulting from natural and intentional disasters (GEHS 6930, GEHS 6950, GEHS 6200);
- Integrate environmental public health strategies in the development, execution, and evaluation of each core component of disaster management including: preparedness, detection, response, containment, and recovery (GEHS 6930, GEHS 6950, GEHS 6200);
- Implement population-based interventions to protect communities, particularly vulnerable populations, from natural and intentional disasters (GEHS 6930, GEHS 6430, GEHS 6950, GEHS 7100); and
- Evaluate the capacity of public health systems to effectively and efficaciously respond to natural and intentional disasters (GEHS 6930, GEHS 6430, GEHS 6950).

Number of Credits Required for Completion: 15

Apply Graduate Certificate credits toward the MPH in Disaster Management

Course credits received in the graduate certificate may be applied to the MPH in Disaster Management. Students proceeding into the MPH degree complete a total of 42 credits that include the remainder of the required Disaster Management courses and the SPHTM core. Only the MPH degree in Disaster Management is awarded. Student must have a GPA of 3.0 in coursework and meet the MPH degree admission requirements to transfer to the degree program. Contact the DL manager prior to completion of the certificate for information.

Combined Graduate Certificate in Disaster Management with a MPH degree in another area

Student in another MPH degree program seeking to add a graduate certificate in Disaster Management may use the elective credits available in the degree program, but not required courses, for the graduate certificate. Required courses cannot be double counted toward both the MPH and a graduate certificate. If there is an overlap in required courses, the student, in consultation with their advisor, selects another disaster management courses to meet the 15 credits. The combined MPH and graduate certificate may take 5 to 6 additional credits beyond the total for the degree alone. The combined MSPH in industrial hygiene and graduate certificate will take an additional 14 credits.

Disaster Management, MPH

The MPH in Disaster Management program prepares professionals to apply scientific principles to prevent, detect, and mitigate environmental public health problems and threats associated with natural and technological disasters—locally to globally. Students gain skills to implement population-based interventions to protect communities, particularly vulnerable populations, from natural, accidental, and intentional disasters. This MPH offering is intended for both pre-professionals and mid-career individuals. Students typically have a background in a life or physical science or engineering. This course is offered by Distance Learning and on campus.

Program Competency

Upon completion of the MPH degree in Disaster Management, graduates will have the following competencies:

- Apply scientific principles to prevent, detect, respond to, and mitigate local and global threats to environmental health that are associated with natural and technological disasters.
- Integrate public health strategies in each core component of disaster management: prevention, preparedness, response, mitigation, and recovery.
- Implement population-based interventions to protect communities and particularly vulnerable populations from natural, accidental, and intentional disasters that affect personal and community health.
- Evaluate the capacity of public health systems to effectively respond to natural and intentional disasters.
- Apply international, federal, and state regulatory policies, guidelines, and authorities to address public health needs during disasters.

Requirements

The Graduate Certificate in Disaster management requires 15 credits includes:

<table>
<thead>
<tr>
<th>Course ID</th>
<th>Title</th>
<th>Credits</th>

Total Credit Hours: 15

Elective courses (9 credits)

Selected from courses offered within the department, school, or university in consultation with an academic advisor.

Applied Practice Experience (SPHL 9980)

The Applied Practice Experience (APE) (formerly practicum) is a supervised practice experience conducted in an agency or organization external to the university to gain practical experience. The APE allows students to demonstrate attainment of at least five competencies, including at least 3 from the foundational competencies (CEPH Criterion D2). The APE is conducted after completion of the foundational courses. After identifying the APE setting and defining the competencies, students enter the information into Terra Dotta. An APE report is required that summarizes the field experiences.

Integrated Learning Experience (SPHL 7950)

All students must complete an Integrated Learning Experience (ILE) (formerly culminating experience) that demonstrates the synthesis of foundational and concentration competencies. Students in the MSPH in Biostatistics conduct a public health analysis.

Environmental Health Certificate (Graduate)

The Graduate Certificate in Environmental Health is designed for students in other programs at Tulane SPHTM who wish to acquire more in-depth knowledge of the relationship between the environment and public health. For example, an epidemiology major may have an interest in applying epidemiologic principles to the study and management of environmental risk factors of disease; a community health sciences major might plan to work on health problems related to the built environment; a global health systems and development major may plan to work overseas and want experience in environmental health; and an infectious disease or tropical medicine major might address the environmental influences on infectious and tropical diseases, such as the impact of climate change on vector control. Environmental health impacts nearly all areas of public health and this certificate will provide
students with that additional applied knowledge that will be useful in their future careers.

This graduate certificate serves as a second area of student for SPHTM student enrolled in the MPH, MSPH or MPHTM degrees.

Offered by: Department of Global Environmental Health Sciences

Faculty Lead: Roy Rando, ScD (https://sph.tulane.edu/gehs/roy-rando-msph-scd)

Environmental Health Certificate Enrollment Form (https://tulane.box.com/v/gehs-certificate-enroll)

Certificate Purpose

Students earning the Certificate in Environmental Health will be prepared to apply scientific principles to recognize, evaluate, prevent, and mitigate environmental public health problems and threats both locally and globally, and will gain knowledge and skills related to environmental health science, practice, and policy.

Eligible Students

This certificate program is designed for current MPH/MSPH/MPH&TM/MHA students who are not pursuing a master’s degree in any Global Environmental Health Sciences program. The certificate is a complement to degrees in other areas.

Certificate Competencies

Students who earn the Certificate in Environmental Health will be able to:

- Evaluate global, regional, community, and workplace environmental health concerns involving water quality, air pollution, food safety, waste management, and resource sustainability (GEHS 6420, GEHS 6510, GEHS 6590, GEHS 6110, GEHS 6540, GEHS 6720);
- Describe methods for assessment and management of biological, chemical, and physical contamination of the environment and environmental media (GEHS 6420, GEHS 6510, GEHS 6590, GEHS 6720); and
- Communicate environmental health concepts and concerns to peer groups, health practitioners, and the general public (GEHS 6420, GEHS 6110, GEHS 6590, GEHS 6110, GEHS 6540).

Number of Credits Required for Completion: 15

Environmental Health Sciences, MSPH

The MSPH degree in Global Environmental Health Sciences prepares students to recognize, evaluate and control global environmental health problems, use quantitative and qualitative methods to evaluate environmental data, and to manage delivery of global environmental health services. Beyond the school core requirements, students select elective coursework in consultation with their academic advisor to strengthen their knowledge, skill and competence in specific areas of environmental health. The MSPH degree is designed for both pre- and mid-career professionals.

Program Competencies

Upon completion of the MSPH degree in Global Environmental Health Sciences graduates will have the following competencies:

- Recognize, evaluate, and control global environmental health problems.
- Apply environmental health principles to solve global public health problems.
- Use quantitative and qualitative methods to evaluate environmental and health data.
- Translate research in global environmental health into practice.
- Communicate environmental health information to peer groups, environmental health practitioners, affected communities, and the public.

Requirements

The MSPH Degree in Global Environmental Health Sciences requires 45 credits that include:

Global Environmental Health Science, PhD

The PhD degree in the Global Environmental Health Sciences Department is an advanced research degree that prepares students to employ laboratory and community approaches to address adverse environmental health impacts. Students use basic and applied research methodologies to examine consequences of chemical and non-chemical stressors and disasters. Graduates of the PhD programs advance to careers at academic institutions, governmental agencies, industry and nonprofit organizations.

Program Competencies:

- Design original environmental health research.
- Collect data to address environmental health problems.
- Analyze environmental health data.
- Make recommendations based on environmental health data.
- Communicate environmental health research findings.

Requirements

The PhD program requires a minimum of 72 post-baccalaureate degree credits, with at least 30 credits of doctoral study at Tulane SPHTM. Up to 42 credits may be applied from the MPH or equivalent master's degree. Upon admission to the PhD program, faculty review the master's degree coursework to determine credits that may be applied toward the PhD degree. If a prerequisite course or equivalent has not been fulfilled, the student must take the course in addition to the 30 credits of advanced doctoral study, but may count toward the total 72 credits. All students in SPHTM without prior public health degrees are also required to take SPHL 6020 Foundations in Public Health (3 c.h.) that provides an overview of public health. [link to PhD Handbook]

The PhD must be completed within seven years of matriculation into the doctoral program.

Prerequisite Coursework (from prior master's degree)

Students who do not have these prerequisites are required to take these or equivalent courses.

</tbody>
</table>

Selected from courses offered within the department, school, or university in consultation with an academic advisor.

Research Ethics

Students are required to take online research ethics training via CITI or another equivalent training program in research ethics. This certification must remain current throughout the program duration.

Comprehensive Exam

The departmental faculty administer the comprehensive examination (https://tulane.box.com/v/gehs-comprehensive-july2018). The exam should be taken no later than a year after completing all required coursework. The comprehensive exam is offered in January, August, or by special arrangement. The exam consists of written questions from the faculty that gauge the student's ability to identify, assess, and propose approaches to study environmental health problems. Students have two attempts to pass the examination; the second attempt must take place within a year of the first. (Link to GEHS PhD guidance)

Doctoral Committee

After successful completion of the comprehensive examination, the student forms a dissertation committee and develops a prospectus. The committee must include a minimum of three members with at least two faculty from the Department of Global Environmental Health Sciences and one external to the school.

Prospectus

Students work with their advisor and doctoral committee to determine a research hypothesis and prepare a prospectus of proposed dissertation research. The research prospectus is presented and defended at least one semester before the dissertation defense. Following the successful defense of the prospectus, students are admitted to PhD candidacy and proceed with dissertation research.

Dissertation

Students must conduct original research and defend a dissertation based on that research. The dissertation research demonstrates scholarly work and is the basis for the dissertation. The student
defends the dissertation to their committee; the dissertation committee and SPHTM Executive Faculty approve the dissertation.

Please the doctoral students resources page (https://inside.sph.tulane.edu/student/doctoral_students) for handbooks, FAQs, and other tools.

### Health and Safety Management Certificate (Graduate)

The online Graduate Certificate Occupational Health and Safety Management (OHSM) provides management skills to occupational health, environmental health, industrial hygiene professionals have the technical skills and seek to further their careers through management leadership. The graduate certificate provides graduate study in the fundamentals of project management, financial management and applies systems thinking to manage health and safety programs. This graduate certificate is offered by distance learning for midcareer professionals.

The Graduate Certificate is a non-degree program designed for those who seek a graduate level study concentrated in a specialty area. A standalone certificate is used to show study in an area, but may not need a full master's degree. Students with a prior master's degree may seek additional study through a Graduate Certificate. Courses carry degree credit and may be applied toward the MPH degree in health and safety management.

### Requirements

#### The Graduate Certificate in Occupational Health and Safety Management requires 16 credits includes:

$^1$ Students who demonstrate knowledge in these areas may substitute this course with an elective course.

Graduate Certificate credits may be applied toward the MPH in Health and Safety Management.

### Health and Safety Management, MPH

The MPH in Occupational Health and Safety Management (OHSM) MPH Program is a mid-career professional program designed to enhance management skills of health and safety professional. The MPH is designed for those who already have a technical background and seek to move into leadership positions within their organizations and industries. The program provides the fundamentals of project management, financial management and budgeting, and applies systems thinking to occupational and environmental health and safety programs. Graduates improve their abilities to manage people, projects and processes. The program is offered by distance learning format only.

Typical backgrounds/experience of students in the program include: Industrial hygienists, safety engineers, environmental health & safety specialists, occupational health physicians and nurses.

#### Program Competencies

Upon completion of the MPH degree in Occupational Health and Safety Management, graduates will have the following competencies:

- Integrate the fundamentals of project management into occupational and/or environmental health and safety programs.
- Implement financial management within an occupational health and safety programs.
- Analyze safety and health investment strategies and cost/benefits of health and safety.
- Apply systems thinking to occupational/ environmental health programs and strategic management.
- Evaluate the program performance for ongoing improvement.

#### Requirements

The MPH Degree in Occupational Health and Safety Management requires a total of 42 credits that include:

$^1$ Students who demonstrate knowledge of public health biology may substitute this course with an elective course.
The Practicum (https://caeph.tulane.edu/node/3706) is designed to demonstrate application of occupational and environmental public health principles in practice. OHSMS students complete a 200 hour practicum. Midcareer students may do a leadership or quality improvement practicum. The practicum is usually competed after core courses are completed. Specific information competencies for the Practicum may be found in the Practicum Handbook (https://tulane.box.com/s/iqnu9dk4v5au4msj53ix4ivfzgc4ycv). Students should contact Kathy Carneiro (didirect@tulane.edu) to discuss practicum requirements at least one full semester prior to the semester of intended graduation.

The Culminating Experience is a public health analysis (PHA) of an occupational or environmental health issue that applies and integrates the classroom knowledge/ skills and demonstrates the competencies you have attained in your studies; see Culminating Experience Handbook (https://tulane.box.com/s/qwm11aci22gcbu6vnmkivialt29ijujuv). You select the topic in consultation with your advisor and produce a written PHA document. The advisor and student develop 3 specific objectives for the PHA that demonstrate the program competencies. Students should contact Kathy Carneiro (didirect@tulane.edu) to discuss the PHA practicum requirements at least one full semester prior to the semester of intended graduation.

Industrial Hygiene Certificate (Graduate)

The online Graduate Certificate in Industrial Hygiene prepares professionals with basic knowledge of industrial hygiene and toxicology to recognize and control workplace hazards arising from chemical and physical agents. The Graduate Certificate in Industrial Hygiene is a non-degree program with concentrated study in industrial hygiene topics. Courses carry degree credit and may be applied toward the MSPH or MPH degrees. This graduate certificate is offered by distance learning for midcareer professionals.

The Graduate Certificate program provides knowledge and skills to meet the educational requirements of the American Board of Industrial Hygiene (ABIH) certification exam. ABIH has the final determination of eligibility to sit for the CIH exam. The CIH certification is the hallmark of professional achievement and competence within the field of industrial hygiene.

Professionals who select the certificate may already have a master's degree and seek a specialization in industrial hygiene. Many who do not have a master’s degree apply the credits from the graduate certificate toward the MSPH in industrial hygiene.

Backgrounds of professionals in the industrial hygiene program include: those with experience in health and safety, occupational health, environmental public health, or science bachelor's degrees who seek careers in occupational health and safety.

Program Competencies
At the completion of the Graduate Certificate in Industrial Hygiene, the student will be able to:

- Recognize hazardous agents and the adverse effects of exposure
- Anticipate and evaluate workplace hazards using basic and applied scientific and engineering principles.
- Specify types of personal protective equipment and other controls for workplace hazards and exposures.

Requirements
The Graduate Certificate in Industrial Hygiene requires a total of 15 credits that includes:

Total Credit Hours 15

1 This course requires a one week on campus laboratory section. Dates for on campus lab posted in calendar.

Apply Graduate Certificate Credits toward the MSPH in Industrial Hygiene

IH course credits taken in the graduate certificate may be applied to the MSPH in industrial hygiene. Students proceeding onto the MSPH degree in IH complete a total of 45 credits that include the remainder of the required IH courses and the SPHTM core. Only the MSPH degree is awarded. Student must have a GPA of 3.0 in coursework and meet the IH admission requirements to transfer to the degree program. Contact the DL manager prior to completion of the certificate for information.

Combined Graduate Certificate with a MPH Degree in Another Area

Student in another MPH degree program seeking to add a graduate certificate in IH may use the elective credits available in a degree program, but not required courses, for the graduate certificate. Required courses cannot be double counted toward both the MPH and the IH graduate certificate. If there is an overlap in required courses, the student, in consultation with their advisor, selects other industrial hygiene courses to meet the 15 credits for the certificate. The combined MPH and the IH graduate certificate may take 2 to 6 additional credits beyond the total for the MPH degree alone.

Industrial Hygiene, MSPH

Industrial hygiene is the profession that anticipates, recognizes, evaluates, and controls workplace conditions to prevent injury or illness in workers. Industrial hygienists use environmental and workplace monitoring and analytical methods to identify exposures and estimate risk and use engineering, work practices, and protective equipment.
to control potential health hazards. The MSPH in Industrial Hygiene provides the knowledge and skills to identify workplace hazards, comply with government regulations, and manage occupational exposures and risk. The program is ABET-accredited and graduates receive one year of credit towards the experience requirement to sit for the exam to become a board-certified industrial hygienist (CIH, American Board of Industrial Hygiene). This program is offered on-campus and by distance learning.

The Tulane MSPH program in Industrial Hygiene is supported by a Training and Education grant awarded by the National Institute for Occupational Safety and Health (NIOSH). Students in the MSPH—IH program are eligible to apply for a NIOSH traineeship which may provide partial tuition support and stipend. For further details on the NIOSH training program, contact Program Director Dr. Roy Rando.

Program Competencies
At the completion of the MSPH degree, the student will be able to:

• Anticipate and identify hazards in the workplace using basic and applied scientific and engineering principles.
• Quantify and evaluate the hazard or risks of occupational health stressors utilizing the methods and techniques of analytical chemistry, other measurement sciences, and statistics.
• Analyze and interpret toxicology and epidemiology data and information on occupational health hazards.
• Design and evaluate engineering and administrative controls for workplace hazards, with emphasis on general and local exhaust ventilation.
• Select and specify appropriate types of personal protective equipment for control of occupational exposures.
• Demonstrate knowledge of the development, management, and evaluation of industrial hygiene programs.
• Communicate verbally and in writing, the nature, risks, and remediation of workplace and environmental hazards.

Industrial hygiene comprehensive examination

Semester subtotal: 6

Total degree credits: 46

Occupational and Environmental Health Certificate (Graduate)

The Graduate Certificate in Occupational and Environmental Health (OEH) prepares professionals to assess and manage the impact of environmental and workplace hazards on human health. The program provides the knowledge and skills to recognize and characterize chemical exposures and hazards, assess health effects, design and implement preventive measures, and promote workplace wellness. This graduate certificate is offered by distance learning for midcareer professionals.
A standalone Graduate Certificate is a non-degree program designed for those who seek a graduate level study concentrated in a specialty area. Often students with a prior master’s degree may seek additional specialization through a Graduate Certificate. Courses carry degree credit and may be applied toward the MPH degree in occupational and environmental health.

Program Competencies

At the completion of the Graduate Certificate in Occupational and Environmental Health, the student will be able to:

- Assess occupational and environmental hazards and exposure pathways and the impact on health.
- Conduct workplace and chemical exposure history and environmental exposure assessments.
- Integrate health promotion and wellness applications into occupational and environmental health programs.
- Apply best practices in developing training for occupational and environmental health professionals.

Requirements

The Graduate Certificate in Occupational and Environmental Health requires 17 credits includes:

Apply Graduate Certificate credits toward the MPH in Occupational and Environmental Health

Course credits received in the graduate certificate may be applied to the MPH in OEH. Students proceeding into the MPH degree complete a total of 42 credits that include the remainder of the required OEH courses and the SPHTM core. Only the MPH degree in OEH is awarded. Student must have a GPA of 3.0 in coursework and meet the MPH degree admission requirements to transfer to the degree program. Contact the DL manager prior to completion of the certificate for information.

Combined Graduate Certificate in Occupational and Environmental Health with a MPH degree in another area

Student in another MPH degree program seeking to add a graduate certificate in may use the elective credits available in a degree program, but not required courses, for the graduate certificate. Required courses cannot be double counted toward both the MPH and a graduate certificate. If there is an overlap in required courses, the student, in consultation with their advisor, selects another OEH courses to meet the 17 credits for the certificate. The combined MPH and graduate certificate may take 5 to 6 additional credits beyond the total for the degree alone. The combined MSPH in industrial hygiene and graduate certificate will take an additional 15 credits.

Occupational and Environmental Health, MPH

The online MPH in Occupational and Environmental Health prepares professionals to recognize and prevent the impact of environmental and occupational hazards on human health. The program provides the knowledge and skills to assess and characterize chemical exposures and hazards, assess health effects, design and implement preventive measures, conduct medical surveillance and promote healthy behaviors in the workplace.

The program follows MPH didactic requirements for the general preventive medicine and occupational medicine boards.

Typical backgrounds: physicians, nurses and other health providers in occupational and environmental medicine; public health professionals; environmental health professionals; people with biology, health and other science degrees seeking careers in public health.

Program Competencies

Upon completion of the MPH degree in Occupational and Environmental Health, graduates will have the following competencies:

- Apply scientific principles to recognize, characterize and manage the impact of environmental and occupational hazards on human health.
- Interpret the impact of chemical exposures on workers and general populations health within the frame work of the route of exposure, estimated dose, duration and frequency of exposure and the acute and chronic effects of the agent.
- Design, implement and evaluate primary, secondary and tertiary prevention applications including clinical, behavior and environmental interventions for the protection of worker health.
- Utilize population data from hazard and medical surveillance to prevent negative health effects in the work place.
- Demonstrate written and oral communication skills for reaching a variety of target audiences including workers and patients, managers and H&S professionals, and other scientists and clinicians.

Requirements

The MPH Degree in Occupational and Environmental requires a total of 43 credits that include:

Administrative Leadership Certificate (Graduate)

The Graduate Certificate in Administrative Leadership prepares current and aspiring executives to lead complex, integrated healthcare delivery systems. The program equips students with quantitative and evidence-based management and leadership skills necessary for future success. Courses carry graduate degree credit and may be applied toward a master’s degree.

Participants proceed through the certificate requirements in an executive style cohort with monthly on-site sessions with intervening distance and worksite experiential activities, supplemented with visiting scholar and leaders’ conferences. Sessions are facilitated by recognized experts with demonstrated teaching skills, knowledge and “real world” experience, and are supported by a team coordination and project management software.

Admission: Prospective student must have:
- Bachelor’s degree; an official transcript is required
- Minimum of three years of professional experience
- A statement of purpose and program fit

Competencies:
- Define the guiding principles of positive-change leadership and positive business in healthcare
- Define current business, financial and economic trends in the healthcare ecosystem and the necessary accounting and budgeting processes to assure the financial health of the organization
- List key fundamental of operational design, performance improvement, framework, strategy and innovation in healthcare
- Explain new care delivery models, human-centered innovation, organizational learning and deployment strategies in a consumer-driver healthcare market
- Identify personal skills and relational capacities for effective leadership

Requirements

The Graduate Certificate in Administrative Leadership requires 15 credits including:

The Administrative Leadership certificate enrolls cohorts that proceed through the program together. Topics the physician leadership certificate include:

- Leadership, Improvement and Innovation
- Business and Operational Strategy and Design
- Accounting and Financial Management
- Organizational and Workforce Development
- Cases in Administrative Leadership (Capstone)

Health Policy and Management, PhD

The PhD program in Health Policy and Management (HPAM) provides doctoral study in health systems research and analysis methodology, health policy planning and analysis, and management strategies. The program provides in-depth study in research approaches and methods and the application of these skills to health systems research.
highly variable character of health systems around the world demands capable researchers who are able to analyze and understand these changes and trends and to make recommendations. Graduates pursue careers in academia, health systems research and policy analysis in the health care industry.

Program Competencies

- Acquire knowledge of theories and supporting concepts pertinent to applied, multi-disciplinary, public health research.
- Outline and articulate the key elements of the research process from identifying the research question, selecting a theoretical framework, developing a study design, using appropriate methodologies, conducting the analysis, and interpreting the results.
- Compare advantages and disadvantages of different formal study designs and approaches. Provide feasible alternative standard research designs for given research.
- Develop and write an original research protocol or prospectus that includes identifying the research question, selecting a theoretical framework, developing a study design, using appropriate methodologies, conducting the analysis, and interpreting the results.
- Develop and use instruments for primary and secondary data collection and perform data analysis using correct and appropriate research methods.
- Disseminate and discuss research knowledge and findings to appropriate audiences.

Requirements

The PhD program requires a minimum of 72 post baccalaureate degree credits, with at least 30 credits of advanced courses work taken at SPHTM. Up to 42 credits of course work may be applied from a MPH or other master’s degree. The master’s courses are reviewed and those fulfilling the required competencies are applied toward the 72 credits for the PhD. If prerequisite knowledge or skills are needed for advanced PhD study, these are determined on an individual basis and theses courses do not count toward the 30 credits of advanced study. The advisor works with the student to outline a course of study in the doctoral program (See PhD handbook).

Elective Courses (13 credits)

Electives are selected from relevant advanced level courses offered within the department, school, or university in consultation with an academic advisor. Additional credits may be needed to obtain a total of 72 credits. No more than 12 credits of special (independent) studies may be applied toward the doctoral degree.

Comprehensive Exam

On completion of doctoral coursework, students will be required to pass a comprehensive examination (https://tulane.box.com/v/ghmp-comprehensive-july2018) to demonstrate global health management and policy PhD program competencies.

Students are required to pass a written comprehensive examination that tests students’ ability to demonstrate mastery of theory, research design, analytic skills; and knowledge of a substantive subject area. These skills represent the research focus of the Health Policy and Management. The exam is coordinated by the HPAM Doctoral Program Director and is offered once a year only in the spring (March/April) over four day period. If a student does not pass the exam, they have one opportunity to retake it. A retake will be offered during the fall semester of the same year, and the same HPAM Doctoral Exam Committee will preside over the retake exam.

Doctoral Committee (See PhD handbook)

After successful completion of the comprehensive examination, the student forms a dissertation committee and develops a prospectus. The committee must include a minimum of three members with at least two faculty from the Department of Global Health Management and Policy and one external to the school.

Prospectus (See PhD handbook)

Students work with their advisor and doctoral committee to determine a research hypothesis and prepare a prospectus of proposed dissertation research. The research prospectus is presented and defended at least one semester before the dissertation defense. Following the successful defense of the prospectus, students are admitted to PhD candidacy and proceed with dissertation research.

Dissertation (See PhD handbook)

Students must conduct original research and defend a dissertation based on that research. The dissertation research demonstrates scholarly work and is the basis for the dissertation. The student defends the dissertation to their committee; the dissertation committee and SPHTM Executive Faculty approve the dissertation.

Health Policy, MPH

The MPH in Health Policy provides students with a foundation in health policy processes, concepts, and issues as well as strong analytical skills to help develop and evaluate health policies. The Health Policy program offers students’ opportunities to tailor their studies in domestic and international health policy, with courses focused on foundations, methods, and a topical area of expertise.
Graduates of the program go on to work in leadership and research in the public or private sector, domestically or internationally. Employment settings include institutions involved in developing policy, evaluating of health programs and projects, or providing goods and services in support of health sector program implementation or development. Entities include both government and non-governmental organizations across a range of disciplines and development paradigms. The MPH in Health Policy can also serve as a strong academic foundation for students who may wish to pursue a doctoral degree in health policy or management.

Program Competencies
At the completion of the MPH degree, the student will be able to:

• Analyze the influence of policy mechanisms on patient and provider behavior and health systems outcomes.
• Assess health systems performance and issues of quality, access, and efficiency.
• Apply economic and legal concepts and theories to the analysis of healthcare policy and management issues.
• Apply fundamental research and analytic methods to problems in health policy and management.
• Critique the health policy literature.
• Communicate health policy issues written and orally.
• Incorporate knowledge of the public health core areas of epidemiology, biostatistics, environmental health, health systems management, and the biological, behavioral, social, and cultural aspects of health and disease in addressing and solving problems.

Health Systems Management, MPH

The Health Systems Management program prepares future managers and leaders who will improve the healthcare delivery services in diverse organizational settings worldwide. Students learn the fundamental areas of management of health services through coursework and practicum experience, preparing them for entry-level managerial roles in healthcare settings. Taking a systems approach, courses emphasize active management in planning, financing, implementing, evaluating, and maintaining complex systems.

Program Competencies
At the completion of the MPH degree, the student will be able to:

Apply population-based and public health findings and principles in assessing individuals and groups at risk of disease and injury and making recommendations for improved health in clinical practice settings. Identify the theoretical and applied bases of economics in health care in the delivery of care to populations; access to care of populations; and organization of medical service delivery organizations. Explain and analyze the issues of quality, access, and efficiency of healthcare service delivery. Identify and describe the main components of the organization, financing and delivery of health services and public health systems in the U.S. and other contexts. Describe frameworks for understanding and assessing health systems performance. Apply "systems thinking" approaches to viewing complex situations, defining problems, and formulating solutions. Apply basic managerial concepts and tools to program planning, budgeting, monitoring and evaluation of organizational and community-based initiatives. Incorporate knowledge of the public health core areas of epidemiology, biostatistics, environmental health, health systems
management, and the biological, behavioral, social and cultural aspects of health and disease, in addressing and solving problems.

Requirements
The MPH Degree in Health Systems Management requires 45 credits that includes:

Foundational Requirements (https://sph.tulane.edu/foundational-curriculum)

The Practicum or Applied Practice Experience (APE) is a supervised practice experience conducted in an agency or organization external to the university to gain practical experience. The Practicum allows students to demonstrate attainment of at least five competencies, including at least 3 from the foundational competencies (CEPH Criterion D2). The Practicum is conducted after completion of the foundational courses. After identifying the Practicum setting and defining the competencies, students enter the information into Terra Dotta. A Practicum report is required that summarizes the field experiences.

All students must complete an Integrated Learning Experience (ILE) (formerly culminating experience) that demonstrates the synthesis of foundational and concentration competencies. Students in the MPH in Epidemiology conduct a public health analysis.

Master Health Administration, MHA
The Master of Health Administration (MHA) program prepares health administrator who are able to work in a variety of settings in the United States and abroad. The MHA program is a 60 credits program of graduate coursework designed to develop management skills tailored specifically to the health care industry. A robust set of coursework provides study in management of health care organizations, organizational behavior, health care economics, financial management, population health, marketing and communications, leadership, information systems and analysis. Students receive a solid grounding in public health to address the issues of population health management. A year-long residency in a health care setting is required and provides the opportunity to apply management skills and gain practical experience. Graduates are able to address unique healthcare industry and meet the challenges of the evolving health care climate both in the United States and globally.

The MHA is the most widely accepted healthcare management degree in the United States. The MHA program at Tulane is accredited by the Commission for Accreditation of Healthcare Management Education (CAHME).

Health care is the largest industry and second largest employer in the U.S., and the anticipated growth in healthcare positions continues to outpace all other occupations. The MHA prepares graduates for careers in the healthcare industry in an array of settings, such as public and private hospitals, multi-specialty clinics, and long-term
care institutions. The MHA opens a path to leadership positions and opportunities for advancement.

**Program Competencies**

At the completion of the MHA degree, the student will be able to:

- Speak and write in a clear, concise and logical manner in formal and informal situations within healthcare settings to convey cogent business presentations and to facilitate a group. (Effective Communication)
- Demonstrate attributes necessary to influence others to achieve high performance in a healthcare setting. (Leadership)
- Continuously strive to improve oneself and to act with respect and sensitivity for others. (Professionalism)
- Consider the business, demographic, ethno-cultural, political, and regulatory factors in developing strategies that continually improve the long-term success and viability of healthcare organizations. (Strategic Management)
- Utilize data to effectively organize and coordinate the performance and activities of a healthcare organization in order to achieve defined objectives. (Management)
- Deconstruct complex problems into smaller elements and synthesizing that with other data to derive recommendations. (Critical Thinking and Analysis)
- Use financial and accounting information to assess the financial health of an organization, to inform short-term operational decisions and to assess long-term resource allocation opportunities. (Financial Skills)

**Requirements**

The MHA requires a total of 60 credits total that includes:

MHA students may select other departmental courses or other graduate-level courses with advisor approval.

**Administrative Residency**

MHA students conduct an administrative residency that fulfills provides practical experience in the field. See MHA guidance for more information about the residency requirement.

**Integrated Learning Experience**

The MHA program requires an oral comprehensive examination. The exam consists of a case study and four competency-specific questions. The case study tests the student’s ability to integrate material taken from all areas of the curriculum through the analysis of a complex situation, while the four questions assess specific knowledge in the MHA program competency domains.
**Program Management Certificate (Graduate)**

Program management is a crucial need among organizations and programs in the health services sector. Strengths in program design and implementation, managing budgets, quality, information, processes and resources, and managerial effectiveness improve an organization’s ability to accomplish program goals and mission attainment. Program managers are needed in organizations that are public or private, governmental or non-governmental, domestic or international.

This graduate certificate serves as a second area of student for SPHTM student enrolled in the MPH, MSPH or MPHTM degrees.

**Offered by: Department of Global Health Management and Policy**

Program Management Certificate Enrollment Form (https://tulane.box.com/v/gchb-program-mang-cert-enroll)

**Purpose**

The Certificate in Program Management gives students the skills to manage public health programs in a wide range of settings and is an appropriate choice for students who plan to lead or direct projects in international settings. The certificate builds skills related to management of human, financial and organizational resources.

**Eligible Students**

Students currently enrolled in an MPH, MSPH, MPH&TM, or MHA program at Tulane SPHTM.

**Certificate Competencies**

Students who earn the Certificate in Program Managment will be able to:

- Apply basic managerial concepts and tools to program planning, implementation, monitoring and evaluation of organizational and community-based initiatives.
- Engage, motivate, and empower others to act toward achievement of group or organizational goals.
- Develop, organize, prioritize, and present information clearly and concisely in both oral and written formats.

The Graduate Certificate requires 15 credits.
Department of Tropical Medicine

Methods in Monitoring and Evaluation Certificate (Graduate)

Certificate in Methods in Monitoring and Evaluation

Monitoring and evaluation (M&E) is critical as donors, governments, and other relevant stakeholders attempt to validate their investments and improve public health program performance. Students with a Certificate in Methods in M&E can expect to acquire the necessary skills to assess the performance, effectiveness, and impact of global public health programs. The courses offered will enable students to work effectively with global public health organizations involved with M&E and program implementation. The Tulane School of Public Health and Tropical Medicine is recognized for its expertise in M&E, and for producing students with strong marketable skills in this area. Students with this certificate will be prepared for jobs within the public and private sector that focus on M&E across a broad range of public health areas. Jobs in this area include M&E specialists and advisors, technical advisors, data analysts and program managers.

Certificate Purpose

Students will meet the following learning objectives to earn a certificate in M&E:

1. Utilize and apply the basic terminology and definitions of M&E including basic epidemiological measurements, impact evaluation, indicators, precision, bias, internal and external validity, logical frameworks and public health program goals, measurable objectives, inputs, outputs, outcomes and impacts;
2. Calculate basic measures commonly used in M&E;
3. Draw appropriate inferences from M&E data;
4. Work with stakeholders to conduct evaluations and improve programs; and
5. Communicate M&E information and findings to other lay and professional audiences.

Eligible Students

Students enrolled in a MPH, MSPH, MPH&TM degree program at Tulane SPHTM.

Certificate Competencies (https://sph.tulane.edu/certificate-methods-monitoring-and-evaluation)

In addition to the main requirements of the certificate as stated above, students are expected to take three additional credits in a topical area relevant to M&E. These three credits, which may be made up of one or several courses determined and documented in advance in collaboration with the certificate leader, are intended to provide deeper and/or topic specific training in an area relevant to M&E. This training might come in the form of measurement in a topical area, additional methodological training appropriate for M&E experts, or in applications of M&E approaches to specific public health problems or areas. Examples of classes include GCHB 8250 Advanced Research Methods in Global Health, TRMD 7440 Household Sampling Applications in Developing Countries, and GCHB 7140 Monitoring and Evaluation of HIV/AIDS Programs. These credits will enrich this largely methods focused certificate by providing additional training in the M&E of a topical area of interest to the student and/or by expanding their knowledge of relevant M&E methods.
Public Health and Tropical Medicine, MPHTM

The Master of Public Health and Tropical Medicine (MPHTM) is a public health degree with a specialty in infectious diseases, and especially those diseases found in tropical regions. The program prepares public health practitioners to plan and evaluate disease control and prevention programs, physicians to better treat and evaluate tropical diseases, or students to pursue medical school and other medical professions. The curriculum consists of core public health courses and specialty courses in the biological, medical, social, and epidemiological aspects of diseases that are more prevalent in tropical countries. Physicians are able to pursue a clinical focus of study and are eligible for the Certification Exam in Clinical Tropical Medicine and Traveler’s Health by the American Society of Tropical Medicine and Hygiene.

Program Competencies (https://sph.tulane.edu/trmd/mphtm)

- Assess key elements affecting the pathogenesis and transmission of infectious diseases commonly found in the tropics.
- Assess the risk factors influencing tropical disease prevention, control and diagnosis.
- Apply identification appropriate techniques, as they relate to specific tropical disease pathogen and vector.
- Critique relevant methods for planning and evaluating tropical disease control and prevention programs.
- Apply appropriate diagnostic and treatment techniques for tropical diseases (clinical track only).

Requirements

The MPH&T degree requires a total of 42 credits that include:

</tbody>
</table>

Electives (7-11 credits)

Selected from courses offered within the department, school, or university in consultation with an academic advisor.

Additional Clinical Track Recommended Coursework

Physicians and other eligible health care professionals interested in deepening their knowledge of diagnoses and treatment of tropical diseases will take additional courses on the clinical aspects of tropical diseases. To be eligible for the Certification Exam in Clinical Tropical Medicine and Traveler’s Health offered by the American Society of Tropical Medicine and Hygiene, students are required to successfully complete the courses below.

<table>
<thead>
<tr>
<th>Course ID</th>

<td>1</td>
</tr>
</tbody>
</table>

Students in the clinical track must take Tropical Medicine Seminar (TRMD-7000) at least once to fulfill the specialty requirements.

Applied Practice Experience (SPHL 9980)

The Applied Practice Experience (APE) (formerly practicum) is a supervised practice experience conducted in an agency or organization external to the university to gain practical experience. The APE allows students to demonstrate attainment of at least five competencies, including at least 3 from the foundational competencies (CEPH Criterion D2). The APE is conducted after completion of the foundational courses. After identifying the APE setting and defining the competencies, students enter the information into Terra Dotta. An APE report is required that summarizes the field experiences.

Integrated Learning Experience (SPHL 7950)

All students must complete an Integrated Learning Experience (ILE) (formerly culminating experience) that demonstrates the synthesis of foundational and concentration competencies. Students in the MSPH in Biostatistics conduct a public health analysis.

Tropical Medicine Certificate (Graduate)

This Diploma course is a non-degree certificate program designed for physicians and clinical health care providers to deal with infectious public health problems in tropical developing countries. This program prepares physicians to understand the epidemiology, biologic and social aspects of tropical diseases; it also prepares the student to evaluate and plan diseases prevention and control programs. the Diploma course is a 4 month program for health care professional intended to prepare them for the Certification Exam in Clinical Tropical Medicine and Traveler’s Health offered every other year by the American Society of Tropical medicine and Hygiene.

Graduates of the Diploma Courses program are prepared to:
• Work overseas in disease control programs with tropical developing countries
• Plan and implement disease control program at the local, provincial, national or international level
• Teach the most important diagnostic and management aspects of clinical tropical medicine, emphasizing public health issues related to the transmission of soil-borne, vector-borne, water-bor4ne and other diseases
• Provide Traveler’s health information related to clinical tropical diseases and prevention

Total Credit Hours 15

Tropical Medicine, MS

MS in Tropical Medicine

The MS in Tropical Medicine is an academic degree designed to build a strong knowledge of infectious diseases of global public health importance. Coursework provides a solid foundation in parasitology,
vector biology and other infectious diseases of public health significance. Foundational public health courses and specialty courses in biological, cellular and epidemiological aspects of pathogens and infectious disease comprise the curriculum. Students are also required to carry out original research and write a thesis based on the findings of the research project.

Graduates of the MS degree in Tropical Medicine are expected to find careers in public health, biomedical sciences, or related fields at academic institutions, governmental and non-governmental organizations, health care organizations, or biotechnology/pharmaceutical companies. Many individuals enter the program with the intention of subsequently pursuing doctoral or medical degrees.

Program Competencies (https://sph.tulane.edu/trmd/msph)

The following competencies are necessary for success in the particular branch of public health to which this degree relates. They were developed through rigorous analysis of employers, community and global needs, and the quality standards set forth by accrediting bodies.

1. Explain infectious disease including types of organisms, mechanisms or transmission, and natural history.

2. Demonstrate knowledge of the biology and immunology of host-pathogen interactions and their outcomes.

3. Interpret and effectively communicate research-based peer-reviewed literature to an academic audience.

4. Analyze research projects that address specific questions as applied to tropical medicine.

5. Identify appropriate statistical tests and research methodology for performing hypothesis-driven research that address public health problems.

6. Evaluate how biomedical methods can be applied to public health research.

Requirements

The MS degree requires a total of 42 credits that includes:

Select 9 credits

Total Credit Hours: 42

1. Selected from courses offered within the department, school, or university in consultation with an academic advisor.

**Thesis**

Students must successfully complete a thesis (https://tulane.app.box.com/v/thesis-guidelines). Students register in TRMD 9980 Master’s Thesis Research (0 c.h.). The thesis is based on a supervised research project demonstrating scholarship in Tropical Medicine research. The project will be supervised by a thesis director who is a faculty member of the Department of Tropical Medicine. The master’s thesis should be completed within a year of completion of the required courses.

**Credit Hours**: 13
Tropical Medicine, PhD

The PhD program in Tropical Medicine is an advanced degree that prepares students to pursue careers in tropical medicine. The PhD graduate is expected to have knowledge across a wide range of tropical diseases as well as sustained experience in the conduct of research in one or more content areas. Graduates of the PhD program pursue careers in basic and applied research in academic institutions, governmental agencies, industry and nonprofit organizations.

Program Competencies

- Demonstrate proficiency in an area of expertise/research specialization
- Demonstrate proficiency in the design and conduct of studies and protocol development
- Analyze collected data using appropriate techniques
- Communicate original research methods and results to peer groups, students, practitioners/industry, and the general public
- Synthesize results and knowledge to address unanswered questions to public health problems

Requirements

The PhD program requires a minimum of 72 post baccalaureate degree credits, with at least 30 credits of advanced courses work taken at SPHTM. Up to 42 credits may be applied from a MPH or other master's degree. The master's courses are reviewed and only courses fulfilling the required competencies may be applied toward the 72 credits for the PhD. Prerequisite or equivalent courses will not count in the 30 credits of advanced study, but may count toward the total 72 credits. The advisor works with the students in identifying the course of study in the doctoral program.

Advanced electives or independent studies to obtain a total of 30 credits of advanced study

1 In conjunction with a laboratory rotation (TRMD 8100 Laboratory Rotation (2 c.h.))

Comprehensive Exam

Students are required to pass a written comprehensive examination that demonstrates general knowledge of Tropical Medicine and research applications. The department administers a written comprehensive examination upon completion of the required coursework. Candidates must successfully complete the comprehensive exam requirement to move on to dissertation research.

Doctoral Committee

(See PhD Handbook)

After successful completion of the comprehensive examination, the student forms a dissertation committee and develops a prospectus. The committee must include a minimum of three members with at least two faculty from the Department of Tropical Medicine and one external to the school.

Prospectus

(See PhD Handbook)

Students work with their advisor and doctoral committee to determine a research hypothesis and prepare a prospectus of proposed dissertation research. The research prospectus is presented and defended at least one semester before the dissertation defense. Following the successful defense of the prospectus, students are admitted to PhD candidacy and proceed with dissertation research.

Dissertation

(See PhD Handbook)

Students must conduct original research and defend a dissertation based on that research. The dissertation research demonstrates scholarly work and is the basis for the dissertation. The student defends the dissertation to their committee; the dissertation committee and SPHTM Executive Faculty approve the dissertation.

Joint and Combined Degrees

Students enrolled in other Tulane professional programs may pursue a joint degree (simultaneous study) with the School of Public Health and Tropical Medicine:

- School of Medicine: MPH, MSPH, MPHTM or PhD
- School of Social Work: MSW/MPH in Community Health Sciences
Undergraduate Public Health majors (BSPH) student have the opportunity for a combined degree (sequential study) with a SPHTM professional degree (MPH, MSPH, MPHTM or MHA)

The benefit of the joint or combined degree is that student to share 10 credits (Joint) or 12 credits (Combined) that count toward both degrees. Since these the degrees are done at the same time, they must be completed without a gap between the degrees in order to take advantage of the counting of credits toward both degrees.

Undergraduate Combined Degree

BSPH degree may be combined with the MPH (all professional programs except the MPH in Community Health Sciences), MSPH, MPHTM or MHA degrees.

Graduate Joint Degrees

Medical student may enroll in a joint degree in SPHTM with study in any of the concentrations in the MPH, MSPH or MPHTM degrees. Up to 10 credits from the medical school may be applied toward the MPH, MSPH or MPHTM degrees. Students complete the same concentration requirements for the public health degrees. Students complete the MD and MPH or MSPH or MPHTM in four years.

Students enrolled in the JD degree may enroll in a joint degree in SPHTM with study in the MHA degree or the MPH in Health Systems Management. Up to 10 credits from the medical school may be applied toward the MHA or MPH degree. Students complete the same public health degree requirements for the public health degrees.

School of Social Work students in the MSW degree program may obtain a joint degree in SPHTM pursuing the MPH in Community health Sciences. Up to 10 credits from the medical school may be applied toward the MHA or MPH degree. Students complete the same public health degree requirements for the public health degrees.

Business School students in the MBA may obtain a joint degree with the MHA degree at SPHTM. Up to 10 specific credits from the MBA may be applied toward the MHA degree. Students complete the same MHA degree requirements.

Programs

- BSPH/MPH or MSPH or MPHTM or MHA Combined Degree (p. 272)
- JD/MPH or MHA Joint Degrees (p. 273)
- Master of Social Work/Master of Public Health Joint Degree (p. 273)
- MBA/MHA Joint Degree (p. 273)
- MD/MPH or MSPH or MPHTM Joint Degree (p. 274)

BSPH/MPH or MSPH or MPHTM or MHA Combined Degree

The BSPH may be combined with a professional master's degree: MPH (most concentrations), MSPH, MPHTM or MHA degrees. The combined program allows for the sharing of 12 credits toward both degrees and saves approximately 1 semester. Students fulfill the MPH, MSPH, MPHTM or MHA degree requirements.

Students submit their application to the combined degree in the second semester of their senior year (See Timeline for details) and begin graduate coursework during their senior year. After receiving the BSPH, the student continues in full-time graduate study to the professional master's degree. In order to share 12 credits for both degrees, continuous registration is required with no gap in enrollment.

The BSPH may be combined with all of the SPHTM professional master's programs in the MPH (except Community Health), MSPH, MPHTM or MHA degrees. See MHA below.

BSPH/MPH or MSPH or MPHTM Combined Degrees

Combined degree student select a specific MPH, MSPH or MPHTM program (concentration) of study. Student may select any of the MPH, MSPH, or MPHTM concentrations (except the generalist MPH in Community Health). These degrees require a total of 42 - 45 credits plus a practicum and a culminating experience: 12 shared credits (foundational courses) plus another 30-33 master's credits required for their selected MPH, MSPH or MPHTM program (concentration) (See the requirements for each program (concentration).

Combined degree students may take up to 12 credits in four foundational courses (no substitutions):
- SPHL 6050 Biostatistics for Public Health (3)
- SPHL 6060 Epidemiology for Public Health (3)
- SPHL 6070 Health Systems, Policy and Management (3)
- SPHL 6080 Design Strategies in Public Health Programs (3)

Note: the competencies for SPHL 6020 Introduction to Public Health (3) are obtained in the BSPH degree, therefore, this course is waived for Combined Degree Students. Student may substitute another course to obtain the total number of credits required for the professional master's.

The BSPH/MPH or MSPH or MPHTM combined degree may be completed in approximately 1½ - 2 years following graduation from the undergraduate BSPH, a time savings of 1 semester. A MPH or MSPH degree typically takes 2 to 2½ years to complete. Actual time depends on the number of credits students complete per semester and the time to do the practicum and integrated learning experience.

Combined Degree students should meet with their faculty advisor early in their senior year to plan study that will incorporate the goals and competencies of the MPH/MSPH/MPHTM program they intend to pursue. Please note that Combined Degree students must complete all requirements for the BSPH and graduate from the BSPH program. The professional master's require a practicum and integrated learning experience (ILE). These are done toward the end of the course work and planned with the master's advisor to fulfill the program competencies. Practical experience or internships that is not planned within MPH competencies may not count as either the practicum or ILE.

Combined BSPH/MHA

The MHA program is a 60 credit masters in health administration plus a 950-hour administrative residency. (See the MHA degree requirements) BSPH/MHA Combined Degree students may share up to 12 credits during their senior year in the BSPH program. Combined
Degree students may only begin the MHA full time in the fall semester. Students are eligible to attempt to test out of several of these classes and proceed to the next class in sequence. MHA courses that may be taken from the following courses:

- Fall Semester: Spring Semester (choose 2)
  - SPHL 6060 Biostatistics for Public Health
  - or BIOS 6040 – Intermediate Biostatistics

- Spring Semester (Chose 2)
  - HPAM 6360 Human Resource Management
  - HPAM 6050 Health Systems Concepts
  - HPAM 6210 Health Law & Regulation
  - HPAM 6710 Quantitative Decision Models
  - HPAM 6170 Quality Management in Health Care
  - HPAM 6780 Information Systems

### Requirements

**BSPH/MPH or MSPH or MPHTM or MHA Combined Degrees**

BSPH students may select any of the professional degree programs as the master’s level of specialization, except the MPH in Community Health Sciences (CHS). The CHS concentration is a generalist program that may overlap with portions of the BSPH degree.

Combined degree students complete four of the foundational courses during their senior year. The Tulane BSPH students do not take the SPHL 6020 because the competencies for this course have been obtained during undergraduate study.

In the selected area of study, combined degree students complete the MPH, MSPH, MPHTM or MHA requirements as listed for these degrees.

### JD/MPH or MHA Joint Degrees

Student enrolled in Tulane School of Law may apply for the joint JD/MHA degree. The joint degree requires student to complete all requirements in both schools; student may share 10 credits that count toward both degrees. The student should then work closely with advisors in both schools for course selection and advising.

The MHA is a 60 credit degree program plus a plus a 950-hour administrative residency. (See the MHA degree requirements).

The MPH in health policy is an option for the joint JD/MHA degree. Joint degree students complete the same requirements for the MPH in Community Health Sciences.

Contact Professor Mollye Demosthenidy for specific information.

### MBA/MHA Joint Degree

Student enrolled in Tulane School of Business may apply for the joint MBA/MHA degree. The joint degree requires student to complete all requirements in both schools; student may share 10 credits that count toward both degrees. The student should then work closely with advisors in both schools for course selection and advising.

The MHA is a 60 credit degree program plus a plus a 950-hour administrative residency. (See the MHA degree requirements). Contact Professor Mollye Demosthenidy for specific information.

### Master of Social Work/Master of Public Health Joint Degree

The joint MSW/MPH joint degree is an opportunity for student to pursue both a MSW from School of Social Work and a MPH from the School of Public health and Tropical Medicine. The joint degree requires student to complete all requirements in both schools; student may share 10 credits that count toward both degrees.

The MPH in Community Health Sciences is the concentration option for the joint degree. The joint degree allows students to count 10 credits earned in the MSW program toward the MPH degree in Community Health. These 10 credits serve as electives toward the total of 42 credits required for the MPH, MSPH or MPHTM degrees.

Student from either school may apply to the other school’s degree program under the joint degree. The student should then work closely with advisors in both schools for course selection and advising.

### Requirements

Tulane student in the MSW in Social Work may combine their studies with the MPH in Community Health Sciences. The MPH degrees requires a total of 45 credits plus a practicum and integrated learning experience. Students accepted as joint degree students may apply up to 10 credits of specific MSW courses related to public health or behavioral health toward the MPH degree. Joint degree students complete the same requirements for the MPH in Community Health Sciences.

Contact Catherine Taylor, PhD for specific requirements and scheduling.

### MBA/MHA Joint Degree

Student enrolled in Tulane School of Business may apply for the joint MBA/MHA degree. The joint degree requires student to complete all requirements in both schools; student may share 10 credits that count toward both degrees. The student should then work closely with advisors in both schools for course selection and advising.

The MHA is a 60 credit degree program plus a plus a 950-hour administrative residency. (See the MHA degree requirements). Contact Professor Mollye Demosthenidy for specific information.

### Requirements

Tulane MBA students may combine their studies with the MHA degree for health administration. The MHA degrees requires a total of 60 credits plus a 960 hour administrative residency. Students accepted as joint degree students may apply up to 10 credits of specific MBA courses related to health care toward the MHA degree.
MD/MPH or MSPH or MPHTM Joint Degree

Tulane's MD/MPH or MSPH or MPHTM joint degree programs are open to students who have been accepted to Tulane's School of Medicine and who wish to pursue both an MD from Tulane and an MPH from Tulane's School of Public Health and Tropical Medicine (SPHTM). The joint degree requires student to complete all requirements in both schools; student may share 10 credits that count toward both degrees.

The MD/MPH program is a global, integrated program in an excellent learning environment which:

• Integrates healthcare training for individuals and populations;
• Provides the foundation for a holistic approach to patient care;
• Encompasses diverse and challenged populations domestically and internationally;
• Provides in-depth training in population and public health knowledge, behaviors, and skills; and,
• Allows students to match their specific population interest with a degree concentration in the School of Public Health and Tropical Medicine.

Student in the joint degree program may select any program (concentration) in the MPH, MSPH or MPHTM degree programs. The joint degree allows students to share 10 credits earned in the Medical School to a public health degree. These 10 credits serve as electives toward the total of 42 credits required for the MPH, MSPH or MPHTM degrees.

The joint degree programs are designed so that students may complete the MD and public health degree in four years.

Requirements

MD/MPH, MSPH or MPHTM

Medical student in the joint degree program may select any of the professional degree programs as the master's level of specialization. The MPH in Health Systems Management, the MPH in Community Health Sciences (generalist) and MPH in Epidemiology are the most common areas selected, but all professional degree areas are available.

In the selected area of study, combined degree students complete the MPH, MSPH, MPHTM or MHA requirements as listed for these degrees.

Undergraduate Public Health Programs

Undergraduate Major

• Bachelor of Science in Public Health (p. 274)

Minor

• Public Health Minor (p. 276)

Bachelor of Science in Public Health

The Tulane Bachelor of Science in Public Health (BSPH) degree is an academic degree which addresses the health of populations and communities through instruction, service, and community based research. The degree is firmly grounded in a background of humanities, social science and the liberal arts. The degree fulfills Tulane University’s campus-wide undergraduate core proficiency through this background while stressing an additional commitment to quantitative and scientific skills.

Newcomb-Tulane Core Proficiencies

General Education Curriculum

Newcomb-Tulane College General Education Curriculum

Newcomb-Tulane College Core Curriculum allows students to explore a wide-range of disciplines and embodies the mission and values of the College by allowing students to have flexibility in their core curriculum courses while exploring a full-range of courses.

The core curriculum—which is composed of a minimum of 30 credits—is divided into two parts: proficiency requirements and a distribution of knowledge. To ensure that students experience the breadth of knowledge at the collegiate level, AP and IB courses can be used to satisfy proficiency requirements only in Formal Reasoning and Foreign Language.

Courses will be designated as satisfying the distribution requirements according to the content and methodology rather than the departmental affiliation of the course.

The new core curriculum general education requirements will go into effect with the entering class of 2018.

Courses proposed to satisfy core requirements will be ratified by the Newcomb-Tulane Curriculum Committee and the Newcomb-Tulane College faculty.

Proficiency Requirements

Writing Skills (2 courses and 6 credits)

Tulane undergraduates should be able to communicate effectively. Students completing this requirement will produce coherent texts that combine analysis, argument, and research.

• Tier 1: Freshman writing (ENGL 1010 or ENGL 1011) unless the student is exempt. Students receiving exemption from ENGL 1010/1011 are required to take an approved writing class during their freshman year. At least 1/3 of the grade based upon writing (excluding in class exams), but no revision required.

• Tier 2: One additional writing course at the 2000 level or above taken from an approved list. At least 1/3 of the grade based upon writing (excluding in class exams), to include revision and re-evaluation by the instructor.

Note: creative writing courses cannot be used to satisfy the writing proficiency requirement.

Formal Reasoning (1 course and 3 credits)

One course in mathematics or symbolic logic (PHIL 1210)

Foreign Language (0-3 courses)
The foreign language proficiency is achieved by a passing grade at the 2030 level, or an AP score of 4 or 5, or a Higher-Level IB score of a 5 or higher, or an SAT II achievement test of 640 or higher, or a passing grade in a Tulane administered proficiency test. This requirement is waived for students in B.S.E. programs.

**Distribution Areas (A course can satisfy only one of the distribution areas.)**

**Mathematics and the Natural Sciences (2 courses including 1 lab science course and 7 credits)**

Tulane undergraduates should understand the methods of scientific inquiry. The mathematics and natural sciences requirement will equip students to understand and assess scientific issues that affect the world today. (Those completing the B.F.A. degree need only complete 1 course with lab.)

**Social and Behavioral Sciences (2 courses and 6 credits)**

Tulane undergraduates should think critically about human cultures, societies, and behaviors. This requirement acquaints students with the methods of research and inquiry in the social science disciplines.

**Textual and Historical Perspectives (2 courses and 6 credits)**

Tulane undergraduates should evaluate literary, philosophical, and historical texts. This area of the curriculum introduces exposes students to the methods used to examine and interpret fundamental issues of human experience.

**Aesthetics and the Creative Arts (3 credits)**

Tulane undergraduate students should be able to understand and appreciate the creative process and various forms of artistic expression.

**Additional Core Requirements**

**The First Year Seminar**

This requirement can be satisfied by a Tulane Interdisciplinary Seminar (TIDES) course or an Honors Colloquium course (COLQ 1010 or 1020).

**Public Service**

All students will complete public service that is satisfied by service learning courses, an approved internship, or research experience. These courses can also be used to satisfy other areas of general education. The nature of the requirement is to be determined by the NTC faculty. Currently this is a two-tiered experience.

**Race and Inclusion**

One course that focuses on race and inclusion in the United States, to be completed by end of the sophomore year. Courses that fulfill this requirement will focus at least 60% of their content on race and inclusion in the United States. These courses may also be used to satisfy other general education curriculum requirements.

**Global Perspectives**

One course that focuses on a global-international context from a perspective outside of the U.S., with at least 60% of content with stated objectives to develop historical, cultural, and societal knowledge of an area beyond the U.S. This requirement should be completed by end of the sophomore year. These courses can also be used to satisfy other areas of general education.

**Additional BSPH Proficiencies**

- Writing Intensive Course or Writing Practicum
- Mathematics: One additional course
- Foreign Language: Complete proficiency to the 2030-level or above

**Requirements**

**Program Competencies**

- Describe the history, philosophy, core values, concepts, functions, and population-based approaches of public health.
- Explain the behavioral, environmental, biological, and socio-economic determinants that impact human health and contribute to health disparities.
- Apply data collection and analysis to develop evidence-based population approaches to public health problems.
- Discuss and apply cultural competencies and concepts of public health planning, implementation, assessment, and evaluation.
- Describe the fundamental characteristics and organizational structures of the U.S. health system as well as the systems in other countries.
- Describe the legal, ethical, economic, and regulatory aspects of public health practice and health policy.
- Demonstrate public health communication skills using oral, written, mass media, and electronic technology formats.

1. Students are eligible to complete their capstone after five semesters as an undergraduate, and with a majority of their other program requirements completed. See capstone options at tulane.edu/publichealth/bsph/bsph-internships.cfm.

**BSPH Electives**

The BSPH Electives provides the student a chance to focus on specialized knowledge which complements their core classes. In recognition of the multi-disciplinary nature of public health, students are encouraged to consider classes in other academic fields and consult with their academic and faculty advisors to discuss ways to integrate fields in the liberal arts and sciences into their curriculum.
Certain pre-medical classes, as well as a few graduate-level classes are acceptable for this requirement.

A minimum of 3 courses for a minimum of 9 credit hours must be completed in classes offered by public health faculty.

Additional classes above the 2000-level as approved by the student’s faculty advisor

Study Abroad credits as approved by faculty advisor or from pre-approved list

Graduate level Public Health classes taken as a senior or BSPH/MPH combined degree student

MATH 1150 Long Calculus I (3 c.h.) and MATH 1160 Long Calculus II (3 c.h.) count as 1 MATH class. PHIL 1210 Elementary Symbolic Logic (3 c.h.) does not count as mathematics class for BSPH requirements.

**Public Health Minor**

The Public Health Minor has been designed for students who are looking for an introduction to the field and its disciplines. This minor offers a complementary curriculum for students who are on a pre-medical track or those majoring in fields, such as environmental sciences or policy, which may incorporate a health focus. The coursework for the minor offers exposure to the concepts and applications of public health in a variety of the specific disciplines which make up the School of Public Health and Tropical Medicine.

**Requirements**

The Public Health Minor requires a minimum of 18 hours in undergraduate public health credits. See below, or check out the Minor requirements checklist, for details.

Students are required to take the following courses for a total of 9 credits:

Select three additional Public Health courses

Total Credit Hours 18

1 Students may choose from any SPHU undergraduate public health courses not listed as required courses for an additional 9 credits.

**Please note the following before applying to the Public Health Minor:**

- Applicants must be in good academic standing with an overall GPA of 2.0 or better.
- All minor courses must be taken for a letter grade.
- Completion of the minor requires a GPA of 2.0 or better in all classes taken for credit towards the minor.

Beth E. F. Wee
Ph.D., Michigan State University
Associate Dean for Undergraduate Programs

Mission Statement
The mission of the Tulane University School of Science and Engineering is to provide outstanding opportunities for learning and discovery in science and engineering and to foster an environment that is student focused, research intensive, trans-disciplinary, entrepreneurial, and responsive to the needs of society and the community.

Programs of Study
The School of Science and Engineering offers three degrees at the undergraduate level, the Bachelor of Science in Engineering (B.S.E.), the Bachelor of Science (B.S.) and the Bachelor of Arts (B.A.); and two graduate degrees, the Master of Science (M.S.) and the Doctor of Philosophy (Ph.D.). Students seeking an undergraduate degree from the School of Science and Engineering must have a primary major offered by the school. Students may have an additional major or minor in a second program. However, special programs such as teacher certification and ROTC are not major or minor programs and are undertaken in addition to a major program. To qualify for graduation, an undergraduate student must satisfy the requirements of the Newcomb Tulane College core curriculum, the school specific core, and the major program and meet the residency and quality of work requirements of Newcomb-Tulane College. To qualify for graduation, a graduate student must meet the graduate program requirements.

Degrees
The School of Science and Engineering offers the Bachelor of Science in Engineering (B.S.E.) degree in the following programs: Biomedical Engineering, Chemical Engineering, and Engineering Physics. The School of Science and Engineering offers the Bachelor of Science (B.S.) degree in the following programs: Biological Chemistry, Cell and Molecular Biology, Chemistry, Ecology and Evolutionary Biology, Environmental Biology, Environmental Science, Geology, Mathematics, Neuroscience, Physics, and Psychology. The School offers the Bachelor of Science degree (B.S.) in Computer Science as a Coordinate Major with any other stand-alone major offered by Newcomb-Tulane College. The School offers the Bachelor of Arts degree (B.A.) in Psychology and Early Childhood Development. The School offers graduate-level certificates in Geographic Information Systems (GIS), Health Psychology, and River Science and Engineering. The School offers the Master of Science (M.S.) degree in the following programs: Behavioral Health (4+1 only); Biomedical Engineering, Cell and Molecular Biology, Chemical and Biomolecular Engineering, Computational Science, Earth and Environmental Sciences, Ecology and Evolutionary Biology, Interdisciplinary, Materials Science and Engineering, Mathematics, Neuroscience, Physics (4+1 only), and Psychology (4+1 only); and Statistics. The School offers the Doctor of Philosophy (Ph.D.) degree in the following programs: Bioinnovation, Biomedical Engineering, Cell and Molecular Biology, Chemical and Biomolecular Engineering, Chemistry, Earth and Environmental Sciences, Ecology and Evolutionary Biology, Interdisciplinary, Materials Engineering and Physics, Mathematics, Neuroscience, Physics, and Psychology.

Undergraduate Degree Programs
School Specific Core Curriculum
Students seeking the B.A. should complete all the degree requirements as described in the School of Liberal Arts section. Students seeking a B.S. should satisfy all core requirements as outlined in the Newcomb-Tulane College section and meet the school-specific and major requirements in this section. Students seeking a B.S.E. should satisfy all core requirements except that of Foreign Language as outlined in the Newcomb-Tulane College section and meet the school-specific and major requirements in this section.

Mathematics and Science
Candidates for the B.S. and B.S.E. degrees in the School of Science and Engineering must take a minimum of 32 credits of science and mathematics selected from at least two different disciplines: cell and molecular biology, chemistry, ecology and evolutionary biology, earth and environmental sciences, mathematics, neuroscience, physics and psychology. At least one of these courses must include a laboratory.

A minimum of six credits of mathematics is required. Any two Mathematics courses numbered 1210 and above may be used to satisfy this requirement. However the combination of MATH 1150 Long Calculus I (3 c.h.) and MATH 1160 Long Calculus II (3 c.h.) may count as one course toward this requirement. Students may satisfy all, or part, of the requirement with the appropriate AP score(s). A score of 4 or 5 on the Advanced Placement AB Calculus exam earns credit for MATH 1210 Calculus I (4 c.h.). A score of 3 on the BC Calculus exam together with a score of 4 or 5 on the AB subsection of the BC exam earns credit for MATH 1210 Calculus I (4 c.h.). A score of 4 or 5 on the BC exam earns credit for MATH 1210 Calculus I (4 c.h.) and MATH 1220 Calculus II (4 c.h.). Departments may recommend, or require, particular mathematics or science courses for their majors, and students are advised to consult the major department’s listing in this catalog.

Candidates for the B.A. degree (Psychology and Early Childhood Education) follow the School of Liberal Arts Core.

Writing Intensive/Writing Skills Requirement
For students who matriculated fall 2018 or later: Students should satisfy the Writing Skills core requirements as outlined in the Newcomb-Tulane College section. Students may satisfy the Tier 2...
For students who matriculated prior to the fall 2018 semester: Students may satisfy this requirement by taking one course designated as "writing-intensive" in the course schedule. Alternatively, with the approval of the instructor and the Associate Dean for Undergraduate Programs of the School of Science and Engineering, a student may take a course that does not carry the "writing-intensive" designation but that fits the criteria of the requirement. The student should submit a petition to the Associate Dean and, upon approval, will be added to a writing intensive course, SCEN 3880 Writing Intensive (0 c.h.). Completion of the first-year writing competency requirement is a prerequisite to enrollment in a writing intensive course.

Additional Requirements for Engineering Majors
Students majoring in biomedical engineering, chemical engineering, and engineering physics must take an additional six credits (for a total of 18 credits) of humanities, fine arts, and social sciences. A student enrolled in the School of Science and Engineering must select a major offered by the school no later than the beginning of a student's fourth semester of college study.

Undergraduate Special Programs
Second Majors and Minors
Students in the School of Science and Engineering may elect to complete a second major. They must complete all courses for each major and a total of at least 18 different courses in the two majors. At least half of the coursework required for majors must be completed at Tulane University, and students must have a grade point average of at least 2.000 in all coursework applied to the major. Students who satisfy the requirements for two majors in the School of Science and Engineering will receive one bachelor's degree, and their transcript will reflect that a double major has been completed. Second majors from an outside division are subject to the conditions set by requirements for that major as designated by the home division or department. Science and engineering students also may pursue one or two minors. The minor is intended to give structure to the study of a secondary field of interest chosen by the student. Students must complete at least 24 credits in their major that do not overlap with the minor. Students who elect to complete the requirements for a minor must earn a grade-point average of at least 2.000 in courses counting toward that minor. No courses counting toward the student's first minor will count toward the student's second minor. Individual departments may have additional restrictions on major-minor overlap. Students should consult the department listings for additional information.

Internships for Academic Credit
Some departments offer internships for academic credit as part of the major. An internship combines a relevant academic component with experiential learning. The academic component may, for example, consist of a term paper, a number of short papers, or discussions of a number of books. Internships ordinarily are open only to those students completing a major in the department that will award the credit. Students participating in internships register for Internship Studies (course numbers vary) within the appropriate department after having made initial arrangements with a professor who will sponsor the internship.

Registration is completed in the academic department sponsoring the internship. A student may not take a salaried position outside the university while earning credit for an internship, except where such an arrangement is required by the cooperating organization for insurance purposes. If a student must take a salaried position for this reason, a letter to this effect from the cooperating organization must be filed with the chair of the sponsoring department prior to the end of the add period. Only one internship may be completed each semester. Students may earn a maximum of six credits for internships. Internships are graded satisfactory/unsatisfactory (S/U) unless they are housed in the Center for Public Service (CPS). The sponsoring professor will assign a grade for the internship at the close of the semester after evaluating its academic and experiential aspects. Internships offered through Science and Engineering departments are open only to juniors and seniors in good standing.

An alternative internship experience is offered to students through Newcomb-Tulane College. This internship was created to accommodate students seeking internships with organizations which require that interns earn credit for their experience. INTR 1990 LAS Internship (1 c.h.) carries one credit, which will apply toward the degree but will not apply toward any core curriculum, major, or minor requirement. Only one credit of INTR 1990 LAS Internship (1 c.h.) may be applied toward the degree. INTR 1990 LAS Internship (1 c.h.) must be taken on a satisfactory/unsatisfactory (S/U) basis. Students who have completed fewer than 30 credits may not register for this course. Students desiring to register for INTR 1990 LAS Internship (1 c.h.) must receive approval from the Associate Dean of the Newcomb-Tulane College before registering for the course.

Graduate Degree Programs
Students at Tulane University may pursue a Master of Science (M.S.) or Doctor of Philosophy (Ph.D.) program in the School of Science and Engineering of Tulane University. The M.S. degree is awarded with a minimum of 24 credit hours plus a thesis. With approval, a student in some disciplines may also elect to pursue a non-thesis M.S. that requires a minimum of 30 credit hours. The Ph.D. degree is awarded with a minimum of 48 credit hours plus a dissertation. Summer research work is typically required for the timely completion of the program. The 4+1 Master's program allows students in the School of Science and Engineering to complete the requirements for both the bachelor's and master's degree in five years.

Admissions
Applicants holding the equivalent of a bachelor's degree in mathematics, science or engineering or a related field from recognized institutions may be admitted to the graduate program of the School of Science and Engineering if their academic records and personal attributes indicate ability to pursue advanced study successfully. Students must present to the appropriate department satisfactory evidence of adequate preparation for the subjects in which they seek to specialize. Ordinarily, only students whose undergraduate average is B or above are admitted. Students required to make up undergraduate course deficiencies before being admitted to the graduate program of the School of Science and Engineering may be asked to enroll in an undergraduate program as special students. Graduate credit is not awarded for courses taken to make up deficiencies. A master's degree is not a prerequisite for study for the doctorate, but a student may be required to qualify for the master's degree while working toward the doctorate.
Financial Aid and Scholarships
The School of Science and Engineering awards financial support for graduate students primarily on the basis of academic merit. For full-time students, financial assistance is available in the form of teaching assistantships, research assistantships, and fellowships, as well as partial and full tuition scholarships.

Graduate Academic Regulations
Registration Requirement
To maintain full time status all graduate students must enroll for a minimum of 9 credit hours in the Fall Semester and a minimum of 9 credit hours in the Spring Semester (or equivalent). Ph.D. and M.S. with thesis students must enroll for a minimum of 3 credit hours of “Masters Research” or 3 credits of “Dissertation Research” during the Summer Semester. Ph.D. and M.S. with thesis students who have completed all of their required course work must continue continuous enrollment and enroll for 3 credit hours of “Master’s Research” or 3 credit hours of “Dissertation Research,” whichever is applicable, each semester until all degree requirements are complete.

Course Credits
Graduate work is measured in terms of credits. A credit represents a measurement of academic progress in terms of work undertaken and satisfactorily completed and is not specifically related to an hour concept for class lecture or recitation. For purposes of evaluating graduate transfer credit, in most cases a credit is equal to a semester hour.

Grades and Grade Points
The same grading system is used throughout Tulane University. A course in which a grade of C+ or less is earned cannot be counted toward a graduate degree in the School of Science and Engineering.

Conferring of Degrees
A student who has completed all of the requirements for a degree will have that degree conferred at the annual spring commencement, in May. Degrees are also conferred at the close of the fall semester in December and at the close of Summer School, in mid-August.

Transfer Credit
In general, up to 12 transfer credits may be accepted toward a master’s degree, and up to 24 transfer credits may be accepted toward a doctorate. Only grades of B or better will be considered for transfer credit. The courses must be graduate courses, which were taken while the student was classified as a graduate student and after all requirements for the bachelor’s degree have been met. The appropriate department and the Associate Dean for Graduate Programs must approve credit for graduate work done at other institutions. The decision concerning the acceptance of all transfer credit to the record of a graduate student will not be made until after the student has completed at least one semester of successful study in the School of Science and Engineering.

Students ordinarily must complete the requirements for the doctorate within seven years from the original date of registration. Only in unusual cases, and with the approval of the department chair and Associate Dean for Graduate Programs will credit be approved for courses taken more than six years before the date of the general or preliminary examination.

Credit for 6000-level courses taken by a senior undergraduate beyond the credits needed for an undergraduate degree at Tulane University and passed with a grade of B or better may be transferred to a graduate degree program in the School of Science and Engineering on the recommendation of the Department Chair and with the approval of the Associate Dean for Graduate Programs. Normally, no more than 12 credits should be earned before admission to a graduate program. These credits may not be counted toward requirements for the bachelor’s degree.

Transfer Between Programs
To transfer from one graduate program to another offered by the School of Science and Engineering, a student must submit an application for admission to the new program. Transferring students must fulfill any obligations they have incurred in the first program prior to receiving their degrees from the second programs. The Department Chair and Associate Dean for Graduate Programs will determine whether credit from the initial program can be applied toward a degree in the new program.

Required Withdrawal, Probation and Dismissal
A student may be required to withdraw from any course or from the university, temporarily or permanently, for any of the following reasons:

- Work below the standard specified by the School of Science and Engineering
- Possibility of danger to the health of the student or to other students if enrollment is continued.

A minimum grade point average of 3.00 (B) must be maintained by all students to remain in good standing in any graduate degree program. Students whose grade point average falls below 3.00 will be considered for a probationary semester in consultation with the chair of the appropriate department. Students who receive a grade below B- or two grades of B- will also be considered for probation in consultation with the chair of the appropriate department. The terms of the probation are determined by the department chair, in consultation with the Dean or designate. Students who fail to meet the terms of their probation in two consecutive semesters will be required to withdraw from the program. Students are subject to dismissal in consultation with the appropriate department if the receive two grades below B-. Two grades of B- are considered equivalent to one grade below B-. If a student becomes subject to dismissal during the semester in which other graduation requirements are met, the student will be excluded and will not receive the degree. Courses with grades below B- may not be used to meet degree requirements. It is the department’s responsibility to report to the Dean any student not making reasonable progress toward the degree. The School of Science and Engineering and the University reserve the right to deny admission to any applicant or to forbid any student’s continued enrollment without assignment of reason; to change any of its rules, courses, regulations, and charges without notice, and to make such changes applicable to students already registered as well as to new students.

Awards
Alpha Eta Mu Beta Award
This award, given by the biomedical engineering honor society, is presented to a junior for outstanding performance as a student in the biomedical engineering curriculum.

**AICHE Awards**
Several awards are offered. Two are scholastic awards, one offered by the New Orleans Section to the senior in chemical engineering with the highest scholastic average, and one by the National Society to the junior in chemical engineering who made the highest average in the freshman and sophomore years. The annual chapter award is for outstanding participation in chapter activities, particularly participation in the student paper presentation. The student chapter award is for outstanding services to the profession. American Chemical Society Prizes were established in 1930 by the Louisiana section of the American Chemical Society and are awarded for excellence in chemistry.

**Glendy Burke Medals**
Established to honor seniors in chemistry, chemical engineering, or biochemistry. Given in recognition of potential advancement of the chemical professions on the basis of a student's demonstrated record of leadership, ability, character, and scholastic achievement.

**William L. Alworth Prize in Biological Chemistry**
This award honors Professor Emeritus William L. Alworth who retired in June of 2004 and will be awarded annually to the outstanding graduating senior majoring in Biological Chemistry. It is based on academic and research performance.

**The American Chemical Society Award**
For excellence in chemistry, a senior will be honored at a dinner given by the local chapter of the American Chemical Society, and also receive a check from the department. American Institute of Chemists Award Established to honor seniors in chemistry, chemical engineering, or biochemistry. Given in recognition of potential advancement of the chemical professions on the basis of a student’s demonstrated record of leadership, ability, character, and scholastic achievement.

**William L. Alworth Prize in Biological Chemistry**
This award honors Professor Emeritus William L. Alworth who retired in June of 2004 and will be awarded annually to the outstanding graduating senior majoring in Biological Chemistry. It is based on academic and research performance.

**Stuart S. Bamforth Prize**
Awarded for excellence in environmental studies to the graduating senior in earth and environmental sciences or ecology and evolutionary biology.

**Biomedical Engineering Graduate Student Outstanding Achievement Award**
For outstanding accomplishments as a graduate student in the Department of Biomedical Engineering, Tulane University.

**Biomedical Engineering Society Scholarship Award**
This award is presented to the outstanding senior in biomedical engineering with the highest scholastic grade point average.

**Chevron Undergraduate Award**
Awarded to two students who have completed the second semester of the junior year and have the highest scholastic average.

**Glendy Burke Medals** were established in 1848 (oratory) and 1879 (mathematics) by Glendy Burke. They are awarded for excellence in the fields of speech and mathematics.

**Fred R. Cagle Memorial Prize** was established in 1981 in memory of Professor Cagle, a former chair of the Department of Zoology. The prize is awarded for outstanding achievement in ecology and evolutionary biology, taking into consideration the student’s academic record, difficulty of academic program completed, and the likelihood of a substantial contribution to scholarship in integrative biology.

**The Cell and Molecular Biology Prize**
Awarded to the most outstanding male graduating senior in Cell and Molecular Biology. The recipient is chosen based on excellence in grade point average, creativity in honors thesis research, and a demonstration of well-balanced academic achievement. The award is named in honor of the late Gerald Gussack, a Professor of Otolaryngology at Emory University School of Medicine, who was a 1975 graduate of Tulane College.

**Rosa Cahn Hartman Medal**
The award recognizes exceptional performance in academic and research activities in Psychology by a Newcomb-Tulane College senior.

**Aaron Hartman Award**
The award recognizes exceptional performance in academic and research activities in Psychology by a Newcomb-Tulane College senior.

**Honors Thesis Award in Cell and Molecular Biology**
For the student with the most outstanding thesis in Cell and Molecular Biology.

**Kenneth H. Kuhn, Sr. Memorial Award Senior**
Special recognition for interest, enthusiasm and proficiency in Biology.

**Chairman's Award**
Given to a graduating senior who is outstanding in geology or earth science.

**The Department of Chemistry Award for Excellence in Undergraduate Research**
This award is given to Juniors/Seniors who demonstrate leadership ability, character and scholastic achievement.

**Nissim Nathan Cohen Memorial Award**
This award is presented to a graduating senior in Biomedical Engineering who has contributed most to his or her class, school, and the profession of Biomedical Engineering, as voted on by the senior class.

**Elsie Field Duprã© Memorial Prize in Physics**
This award honors a female physics student for her interest, enthusiasm, and proficiency in physics.

**Liz Earley Prize in Cell and Molecular Biology**
Awarded for excellence and proficiency in laboratory science.

**Professor Erik G. Ellgaard Award for Excellence in Cell and Molecular Biology**
For the best graduating senior in Cell and Molecular Biology.

**Arnold Gerall Award in Neuroscience**
The award recognizes exceptional performance in academic and research activities in the area of Neuroscience by a Psychology major or a Neuroscience major advised by a member of the Psychology faculty.

**Kappa Kappa Gamma Prize in Mathematics**
Awarded to an outstanding undergraduate female math student.

**Gerald E. Gunning Memorial Award**
Awarded annually to an exceptional undergraduate major in ecology and evolutionary biology.

**Gerald S. Gussack Award**
Awarded to the most outstanding male graduating senior in Cell and Molecular Biology. The recipient is chosen based on excellence in grade point average, creativity in honors thesis research, and a demonstration of well-balanced academic achievement. The award is named in honor of the late Gerald Gussack, a Professor of Otolaryngology at Emory University School of Medicine, who was a 1975 graduate of Tulane College.

**Kenneth H. Kuhn, Sr. Memorial Award Senior**
Special recognition for interest, enthusiasm and proficiency in Biology.
Team Design Project 1st Place Winners The students are selected by a panel of judges as the 1st place winners of the Senior Team Design Project for their ability to integrate the scholarship of discovery, learning, and service, by applying biomedical engineering to improve the quality of life for people with disabilities in the New Orleans Metro Area.

The Joseph J. Kyame Physics Award
This award was established in 1990 by the physics faculty, and is given to a senior for excellence in physics.

Terry Lawson Prize in Mathematics
Awarded to a graduating senior for excellence in undergraduate mathematical research.

Anne M. McPherson Award in Psychology
The award recognizes junior or senior students who have demonstrated a capacity for cutting-edge research in the field of Psychology. Awardees should possess a strong overall grade point average and conduct research with a faculty member of the Department.

Merck Index Awards
This award is presented each year to an outstanding student in Chemistry.

The Barbara E. Moely Award for Application of Psychology
The award recognizes exceptional public service to the community.

National Society of Black Engineers
There are two awards. One is awarded to the Outstanding Executive Board member and the other is to the graduating senior with the highest grade point average.

The Neuroscience Faculty Award
The award recognizes exceptional performance in academic and research activities in Neuroscience by a Newcomb-Tulane College senior.

New Orleans Geological Society Memorial Foundation Scholarships
Awarded annually to the outstanding freshman, sophomore, junior, and senior geology or earth science majors, upon recommendation of the faculty of the Department of Earth and Environmental Sciences.

Omega Chi Epsilon Award
This award, presented by the biomedical engineering honor society, is awarded for scholarship and service in the Department of Earth and Environmental Science.

R. A. Steinmayer Award
Established in 1957 by the Tulane geological alumni in honor of R. A. Steinmayer, emeritus professor of geology, for the outstanding graduating student in the Department of Earth and Environmental Sciences.

Francis M. Taylor Award
Established in 1971 by chemical engineering alumni to honor Professor Emeritus Taylor. Awarded to a senior in chemical engineering for outstanding citizenship, professional attitudes, and accomplishments.

Joyous and William Van Buskirk Scholarship Award
Established in memory of W. A. Tarr by the national geology honor society, is awarded for scholarship and service in the Department of Earth and Environmental Science.

Leon H. Scherck Memorial Award
The oldest award presented by the School of Engineering was established in 1922 by the late Mrs. Albert H. Scherck of New Orleans in memory of her brother, Leon H. Scherck, class of 1894, for excellence in engineering. Awarded to a member of the senior class in an engineering program.

Sigma Gamma Epsilon Prize
Established in 1922 by the late Mrs. Albert H. Scherck of New Orleans in memory of her brother, Leon H. Scherck, class of 1894, for excellence in engineering. Awarded to a member of the senior class in an engineering program.

R. A. Steinmayer Award
Established in 1957 by the Tulane geological alumni in honor of R. A. Steinmayer, emeritus professor of geology, for the outstanding graduating student in the Department of Earth and Environmental Sciences.

Established in 1989 to honor Dr. Daniel H. Vliet who served on the faculty of Electrical Engineering for 37 years, including four years as head of the department, before his retirement in 1986. The award goes to a sophomore in an engineering program who has demonstrated superior performance in freshman physics.

Harold E. Vokes Award
Established in 1992 by the faculty of the Department of Geology in honor of Harold E. Vokes, professor emeritus of geology, for an outstanding graduating student in the Department of Earth and Environmental Sciences. Vokes Fellowship Awarded annually to the top Ph.D. candidate in the Department of Earth and Environmental Sciences.

The Zoology Prize
Awarded to a graduating senior majoring in ecology and evolutionary biology for outstanding achievement in zoology.

Academic Policies
A full description of academic policies for all students in Newcomb-Tulane College (p. 18) can be found in the college's section of this catalog. Students should review these policies thoroughly.
Degree Requirements

Undergraduate

As a student in the School of Science and Engineering, you will be offered outstanding opportunities for learning and discovery in science and engineering in an environment that is student-focused, research-intensive, interdisciplinary, entrepreneurial, and responsive to the needs of the community. The School offers a broad range of undergraduate programs in the sciences, engineering, and mathematics. The undergraduate experience is further enriched by opportunities to engage in research, internships, study abroad, and public service.

The School offers the Bachelor of Science, Bachelor of Science in Engineering, and Bachelor of Arts degrees.

To declare a major or minor in the School of Science and Engineering you must contact the appropriate departmental office. The Major/Minor Declaration Form (http://www2.tulane.edu/sse/academics/undergrad/upload/Major-Minor-Declaration-Form.pdf) requires the approval of the Department Chair. When declaring your major you will receive a Major Advisor to help schedule your Major and/or Minor required courses. The signed major/minor declaration form must be turned in to the student’s Newcomb-Tulane advisor.

Newcomb-Tulane College Requirements

General Education Curriculum

Newcomb-Tulane College General Education Curriculum

Newcomb-Tulane College Core Curriculum allows students to explore a wide-range of disciplines and embodies the mission and values of the College by allowing students to have flexibility in their core curriculum courses while exploring a full-range of courses.

The core curriculum—which is composed of a minimum of 30 credits—is divided into two parts: proficiency requirements and a distribution of knowledge. To ensure that students experience the breadth of knowledge at the collegiate level, AP and IB courses can be used to satisfy proficiency requirements only in Formal Reasoning and Foreign Language.

Courses will be designated as satisfying the distribution requirements according to the content and methodology rather than the departmental affiliation of the course.

The new core curriculum general education requirements will go into effect with the entering class of 2018.

Courses proposed to satisfy core requirements will be ratified by the Newcomb-Tulane Curriculum Committee and the Newcomb-Tulane College faculty.

Proficiency Requirements

Writing Skills (2 courses and 6 credits)

Tulane undergraduates should be able to communicate effectively. Students completing this requirement will produce coherent texts that combine analysis, argument, and research.

- Tier 1: Freshman writing (ENGL 1010 or ENGL 1011) unless the student is exempt. Students receiving exemption from ENGL

1010/1011 are required to take an approved writing class during their freshman year. At least 1/3 of the grade based upon writing (excluding in class exams), but no revision required.

- Tier 2: One additional writing course at the 2000 level or above taken from an approved list. At least 1/3 of the grade based upon writing (excluding in class exams), to include revision and re-evaluation by the instructor.

Note: creative writing courses cannot be used to satisfy the writing proficiency requirement.

Formal Reasoning (1 course and 3 credits)

One course in mathematics or symbolic logic (PHIL 1210)

Foreign Language (0-3 courses)

The foreign language proficiency is achieved by a passing grade at the 2030 level, or an AP score of 4 or 5, or a Higher-Level IB score of a 5 or higher, or an SAT II achievement test of 640 or higher, or a passing grade in a Tulane administered proficiency test. This requirement is waived for students in B.S.E. programs.

Distribution Areas (A course can satisfy only one of the distribution areas.)

Mathematics and the Natural Sciences (2 courses including 1 lab science course and 7 credits)

Tulane undergraduates should understand the methods of scientific inquiry. The mathematics and natural sciences requirement will equip students to understand and assess scientific issues that affect the world today. (Those completing the B.F.A. degree need only complete 1 course with lab.)

Social and Behavioral Sciences (2 courses and 6 credits)

Tulane undergraduates should think critically about human cultures, societies, and behaviors. This requirement acquaints students with the methods of research and inquiry in the social science disciplines.

Textual and Historical Perspectives (2 courses and 6 credits)

Tulane undergraduates should evaluate literary, philosophical, and historical texts. This area of the curriculum introduces exposes students to the methods used to examine and interpret fundamental issues of human experience.

Aesthetics and the Creative Arts (3 credits)

Tulane undergraduate students should be able to understand and appreciate the creative process and various forms of artistic expression.

Additional Core Requirements

The First Year Seminar

This requirement can be satisfied by a Tulane Interdisciplinary Seminar (TIDES) course or an Honors Colloquium course (COLQ 1010 or 1020).

Public Service

All students will complete public service that is satisfied by service learning courses, an approved internship, or research experience. These courses can also be used to satisfy other areas of general
masters degree programs are offered in:

  academics/graduate/special-students.cfm)

4+1 Master's Programs

The 4+1 Masters programs at Tulane University provide Tulane

undergraduates with the opportunity to earn a masters degree in a

single year following the completion of the bachelor's degree. Tuition

for the 4+1 masters programs in the School of Science and Engineering

is 35% of regular graduate tuition.

4+1 Masters Degree Programs are offered in the following disciplines:

- Biomedical Engineering (http://www2.tulane.edu/sse/bme/
  academics/undergraduates/current/bme-ms.cfm)
- Behavioral Health
- Chemical and Biomolecular Engineering (http://www2.tulane.edu/

- Interdisciplinary Master of Science (http://www2.tulane.edu/sse/
  academics/graduate/msinterdisciplinary.cfm)

With permission of department and instructor, students also may enroll as non-degree special students (http://www2.tulane.edu/sse/
  academics/graduate/special-students.cfm) at 50% graduate tuition.

Doctor of Philosophy

The School of Science and Engineering at Tulane University places

significant emphasis on doctoral education. Nearly all of our over

300 doctoral students are supported by assistantships or fellowships

and conduct research with over 120 faculty members. Facilities are

excellent and the close knit community of students, faculty and staff

serves to stimulate multidisciplinary collaboration. This characteristic

is reflected in the descriptions of research programs of individual

faculty.

Ph.D. programs are offered in the following areas:

- Bioinnovation Interdisciplinary Ph.D. (http://tulane.edu/
  bioinnovation-IGERT)
- Biomedical Engineering (http://www2.tulane.edu/sse/bme/
  academics/graduate/prospective/programs.cfm)

Major
• Biological Chemistry Major (p. 284)

Minor
• Biological Chemistry Minor (p. 285)

Biological Chemistry Major
A major in Biological Chemistry must include the cell and molecular biology, chemistry, physics and mathematics courses in lists I – IV below. At least two elective courses, selected from list V, also must be included. In addition, an appropriate six-credit special project (list VI) integrating the student’s biological and chemical studies is required.

Because of the interdisciplinary nature of the Biological Chemistry major, students in this program may not minor in chemistry, cell and molecular biology, or ecology and evolutionary biology.

Biomedical Engineering Major

Welcome to the Department of Biomedical Engineering at Tulane University in New Orleans, LA. Since 1977, our department has been a leader in engineering science investigations of health and medicine. As you explore this site, you will see that our curriculum and translational studies are targeted and integrated, spanning areas of biomaterials, biomechanics, device development and tissue engineering. Our team of faculty and staff members brings energy and enthusiasm towards educating future generations of biomedical engineers as we solve today's most complex and interesting basic and applied research problems relevant to healthcare. We welcome the opportunity to develop collaborations at all levels.

Tulane's Biomedical Engineering program is accredited by the Engineering Accreditation Commission of ABET (www.abet.org (https://nam03.safelinks.protection.outlook.com/?url=http%3A%2F%2Fwww.abet.org&data=02%7C01%7Cjarchibald%40tulane.edu%7C7C531a6bbeb3094e96b5da08d750de9a4b%7C9de9818325d94b139fc34de5489c1f3b%7C0%7C0%7C637066789338137647&sdata=LFI9uXulEBaiZppTTeByS%2BDou43QkJG6XGmtExe%2FxN%3D&reserved=0)).

Credit Hours 130
Biomedical Engineering, MS

A non-thesis Master of Science degree (MS) is offered by the Graduate Division of the School of Science and Engineering upon the completion of 30 semester hours of approved graduate course work. This coursework must satisfy the distribution requirement (see below). Students receiving aid in the form of a teaching assistantship or a research assistantship are generally not eligible for a Master’s degree as their terminal degree. Doctoral students that have completed 30 semester hours of approved graduate credit and who have successfully defended their research prospectus may then petition the Department for a non-thesis MS degree.

Tuition is set at 50% of regular full graduate division for students in the terminal non-thesis MS program.

Requirements

In order to prepare our students for careers in biomedical engineering, which is a rapidly evolving interdisciplinary field, we require all graduate students to complete a distribution of classes. These are:

1. **Anatomy and Physiology**

   BMEN 6030 Anatomy & Physio for Engr (3 c.h.)/BMEN 6035 Anat & Phys for Engr Lab (1 c.h.)

   BMEN 6070 Quant Physio Lec (3 c.h.)/BMEN 6075 Quant. Physiology Lab (1 c.h.)

2. **Biomedical Engineering Domains**

   One BMEN 6xxx level course in three of the following four domains: Biomedical Design, Biomaterials and Tissue Engineering, Biomechanics and Biotransport, Biosignals and Biosystems. One of these three courses may be cross-registered with a BMEN 3xxx course.

   c. **Mathematics**

   One course in advanced mathematics (e.g., various 6000-level MATH courses)

Biomedical Engineering, PhD

The Ph.D. is an academic degree that prepares students for careers in teaching and research. A Master’s degree is not required for students seeking the Doctoral degree.

Requirements

The specific requirements are as follows:

1.) **Distribution Requirements**

   a. Anatomy and Physiology

   BMEN 6030 Anatomy & Physio for Engr (3 c.h.)/BMEN 6035 Anat & Phys for Engr Lab (1 c.h.) and BMEN 6070 Quant Physio Lec (3 c.h.)/BMEN 6075 Quant. Physiology Lab (1 c.h.)

   b. Biomedical Engineering Domains

   One course in three of the four domains, as described in Table 1. Only one (1) of the domain requirements may be satisfied through the completion of a BMEN 3xxx/6xxx domain course

   c. Mathematics

   One course in advanced mathematics (e.g., various 6000-level MATH courses)

2.) **Coursework**

   The student must demonstrate superior performance while completing 48-hours of graduate study with nine in-class “didactic” classes completed (see Table 3).

Department of Cell and Molecular Biology

Programs

Undergraduate

Major

• Cell and Molecular Biology Major (p. 287)

Minor

• Cell and Molecular Biology Minor (p. 288)

Graduate

• Cell and Molecular Biology, MS (p. 289)

• Cell and Molecular Biology, PhD (p. 290)

Cell and Molecular Biology Major

The major in Cell and Molecular Biology is focused on the mechanistic study of the life of the cell at the molecular level. The curriculum is interdisciplinary and includes courses in physics, chemistry, and genetics in addition to molecular and cellular biology. Training in
these areas is beneficial for careers in biological research, a number of high tech industries, medicine, and allied health professions. This challenging major requires creativity, rigor, and the ability to analyze, distill, and interpret data. A love of living systems and a level of comfort with complexity are both essential.

Due to the extensive overlap in curricula, Cell and Molecular Biology majors cannot double major in Biological Chemistry. Students can double major in Cell and Molecular Biology and Neuroscience, but there are additional requirements that must be met beyond those requirements for most double major combinations.

**Requirements**

Students majoring in cell and molecular biology must complete a minimum of eleven courses in the biology components, totaling at least 25 credits; 16 credits in chemistry; and 8 credits of physics with laboratories. Students must also complete Calculus (MATH 1210 Calculus I (4 c.h.) or MATH 1310 Consolidated Calculus (4 c.h.)) and Statistics for Scientists (MATH 1230 Stats For Scientists (4 c.h.)) to satisfy the major and BS requirements.

**Course ID** | **Title** | **Credits**
---|---|---
**Chemistry Component**
CHEM 1070 | General Chemistry I | 3

- CELL 3030  Molecular Biology 3
- CELL 3750  Cell Biology 3
- CELL 3755  Cell Biology Laboratory 1
- or CELL 3035  Molecular Biology Lab 3
Select one additional 3 or 4 credit CELL lecture or lecture/lab course 3-4

**Biochemistry Component**
Select one of the following: 3-6
- CELL 4010  Cellular Biochemistry
- CHEM 3830  Intro To Biochemistry
- & CHEM 3840  and Intermediate Biochem
- CENG 4450  Applied Biochemistry I
- & CENG 4460  and Applied Biochemistry II

**Total Credit Hours** 51-58

---

**Elective Component**

An additional three elective courses are required, with at least two of the three being laboratory oriented. Only one laboratory elective may be satisfied by independent laboratory research (CELL 4910 Independent Study (1-3 c.h.), CELL 4920 Independent Study (1-3 c.h.), CELL 4990 Honors Thesis (3 c.h.) or CELL 5000 Honors Thesis (4 c.h.)). Students may use approved courses from other departments to fill the elective component. A list of courses which fulfill this requirement is available on the CMB Department website or from the CMB Department office.

**Capstone Component**

Finally, students must complete a capstone course. A list of courses which fulfill the capstone requirement is available on the Department website or from the CMB Department office.

**Cell and Molecular Biology Minor**

The minor in Cell and Molecular Biology introduces the mechanistic study of the life of the cell at the molecular level. Due to the extensive overlap in curricula, Biological Chemistry majors cannot minor in Cell and Molecular Biology. Neuroscience majors may minor in Cell and Molecular Biology, but the requirements are more rigorous.

**Requirements**

Students wishing to minor in cell and molecular biology must complete:

**Course ID** | **Title** | **Credits**
---|---|---
**Required Courses**
- CELL 1010  Intro to Cell & Molec Biology 3
- CELL 2050  Genetics 3
- CELL 3030  Molecular Biology 3
- CELL 3750  Cell Biology 3

**Additional Coursework**

- Select two electives in biology 6
- Select 16 credits in chemistry 16

**Total Credit Hours** 34

1 One year of both general and organic chemistry and their respective laboratories

Because of the interdisciplinary nature of the biological chemistry major, students in that program may not minor in cell and molecular biology.

**Neuroscience Majors**

Neuroscience majors wishing to minor in cell and molecular biology must complete:
**Course ID** | **Title** | **Credits**
---|---|---
**Required Courses**
CELL 3030 | Molecular Biology | 3
CELL 3750 | Cell Biology | 3
CELL 4010 | Cellular Biochemistry | 3

Select two of the following: 6-7
- CELL 3050 | Foundations of Pharmacology |
- CELL 3210 | Physiology |
- CELL 3400 | Regenerative Biology |
- CELL 4110/4111 | Human Histology |
- CELL 4130 | Embryology |
- CELL 4160 | Developmental Biology |
- CELL 4200 | General Endocrinology |
- CELL 4220 | Microbiology |
- CELL 4440 | Adv Molecular Biology |
- CELL 4710 | Molec Biology of Cancer |
- CELL 4780 | Developmental Genetics |

**Additional Coursework**
Select 16 credits in chemistry 2

Total Credit Hours 31-32

---

1. CELL 4200 General Endocrinology (3 c.h.) may not be used for the CELL minor elective if NSCI 4200 General Endocrinology (3 c.h.) is used as a major elective.
2. One year of both general and organic chemistry and their respective laboratories

---

**Cell and Molecular Biology, MS**

The Master’s in Cell and Molecular Biology program is designed to enhance the competitiveness of students applying to postgraduate professional schools, especially Medical and Dental School, but also Veterinary School, Optometry School, Business School, Law School, and Ph.D. programs.

**Requirements**

Students must complete a total of 30 credit hours, with a cumulative GPA of a 3.0 or higher on a 4.0 scale, in order to receive the MS degree.

**Required Courses**

**Course ID** | **Title** | **Credits**
---|---|---
**Required Courses**
CELL 7860 | Master’s Seminar (to be taken in both Fall and Spring) 1 | 6

**Electives**
Select 24 credits of Electives

Total Credit Hours 30

---

1. This course will include on site work experiences coupled with formal classroom presentations summarizing the work. The Experiential component includes 50 required hours per semester and will be tailored to the student’s career path which can range from traditional laboratory research to Service Learning programs in medical or professional settings.

The remaining 24 credits will consist of lecture or lab courses such as the electives listed below.

**Elective Courses**

Students may be permitted to take electives from other departments with the approval of the program’s Co-Directors.
Cell and Molecular Biology, PhD

The Department of Cell and Molecular Biology offers students the opportunity to earn Ph.D. degrees in a stimulating, dynamic research environment.

Requirements

Students will complete 48 credit hours of course work with at least a 3.0 GPA (FIRM). Credit hours should be complete by the end of second year (4th semester).

Core required courses include: Cell Biology CELL 6750, CMB Doctoral Seminar CELL 7870, Advanced Molecular Biology (CELL 6440), and a journal club course (NSCI 6040 or CELL 6840).

Department of Chemical and Biomolecular Engineering

Programs

Undergraduate

Major

- Chemical Engineering Major (p. 291)

Graduate

- Chemical and Biomolecular Engineering, MS (p. 290)
- Chemical and Biomolecular Engineering, PhD (p. 290)

Chemical and Biomolecular Engineering, MS

The Chemical and Biomolecular Engineering Department offers both a thesis and non-thesis option for obtaining a master’s degree. Graduate students receiving financial support as research or teaching assistants can earn a M.S. degree only with the approval of Department Chair and SSE Associate Dean for Graduate Studies, and in general, a written thesis is required.

Tenure is five years, although completion of all requirements for the degree for full-time students in two years is strongly encouraged.

Requirements

For the thesis option, the student must complete 24 hours of graduate course work plus conduct a research investigation under the guidance of a faculty member. Typically, two years are required to finish the course work and thesis. Upon completion, the student must defend a thesis before a faculty committee, which is chosen as described for Ph.D. students. For the non-thesis option, a total of 30 hours of course work is required. For both degree options, three core graduate chemical engineering courses are required, as outlined in the PhD course work, with up to six independent study credits toward the 24/30 credit requirement. The remainder of the credits must be made with course work.

Chemical and Biomolecular Engineering, PhD

The Chemical and Biomolecular Engineering Department offers a Doctor of Philosophy degree, in which students perform cutting edge research in advanced engineering topics. Graduate students pursuing PhD studies are supported as research or teaching assistants. The PhD degree culminates in a public defense of a written dissertation based on the original research performed by the student.
A master’s degree is not a prerequisite to the beginning of study for the Doctor of Philosophy degree. Completing the Ph.D. requirements normally requires five years of full-time study beyond the B.S. degree.

Requirements
The Ph.D. degree requires a student to reach a critical understanding of the basic scientific and engineering principles underlying their field of interest. In addition, the student must demonstrate the ability to conduct independently an intensive research project and document their results in the form of refereed publications, presentations, and a final thesis dissertation. Specifically, candidates for the Ph.D. degree must:

• Complete a minimum of 48 credit hours of approved course work;
• Pass a qualifying examination;
• Present an acceptable dissertation prospectus to a dissertation committee;
• Make an original contribution to the field of chemical engineering in the form of a dissertation suitable for publication; and
• Defend the dissertation during a public presentation.

The Ph.D. degree requires 48 hours of approved graduate course work plus a thesis. These courses must include three core graduate chemical engineering courses:

<table>

</tbody>
</table>

Ph.D. candidates are also allowed 25 independent study credits toward the 48 credit requirement. Ph.D. candidates who have completed an M.S. at another institution will be potentially allowed to transfer a small number of credit hours toward the Ph.D.

Frequently, students without an undergraduate chemical engineering degree will enroll in the graduate program. To ensure that all students are familiar with the fundamental principles required of chemical engineers, students entering the graduate program with a bachelor’s degree in an area other than chemical engineering will be required to take four undergraduate courses—Unit Operations I, II and III, and one of either Reactor Design, Process Control or Process Design. On the recommendation of the Graduate Committee, these requirements can be modified based on each student’s specific background. These undergraduate courses do not count toward the total graduate-level credit requirement for the advanced degree. Graduate students may take these courses out of sequence and/or concurrently in order to expedite completion of this requirement.

Completing the Ph.D. requirements normally requires four to five years of full-time study beyond the B.S. degree. Students already possessing an M.S. degree in chemical engineering typically require one year less time. Financial aid is given to all full time graduate students working towards the Doctoral degree.

Chemical Engineering Major
Chemical engineering combines principles of chemistry, physics, biology, and mathematics to design processes that economically and sustainably meet human needs for energy, food, healthcare, and technology. Chemical engineers are not only leaders in traditional chemical, oil and gas, and brewing industries, but they are also at the forefront of advancements in pharmaceutical discovery and production, renewable energy, biotechnology, and environmental protection. The Chemical & Biomolecular Engineering (CBE) curriculum includes basic coursework in math, physics, and chemistry, as well as advanced courses related to the design of industrial processes including fluid dynamics, thermodynamics, heat and mass transfer, computer methods, reactor design, and automatic process control. All students participate in an internship through the core curriculum. Students can readily tailor the major to their specific interests through choice of appropriate electives; synergistic focus areas include pre-medicine, biotechnology, materials science, energy, and environmental studies.

Tulane’s Chemical Engineering program is accredited by the Engineering Accreditation Commission of ABET (www.abet.org) and the Engineering Program Accreditation Committee of the Accreditation Board for Engineering and Technology. The Chemical and Biomolecular Engineering curriculum includes the University’s cultural and social science requirements and satisfies the University’s writing requirement. The coursework necessary to graduate with a B.S. degree in Chemical Engineering can be grouped in the following categories:

• The university’s cultural knowledge (humanities, fine arts, and social science) elective courses, TIDES, public service, and the writing requirement

• The basic science and mathematics sequence, which also satisfies the university’s scientific inquiry requirements

• The university’s cultural knowledge (humanities, fine arts, and social science) elective courses, TIDES, public service, and the writing requirement

*Beginning with students who declared the Chemical Engineering major in the Fall of 2014, a minimum grade of C- must be earned in each CENG required core course in order to receive credit for the Bachelor’s degree.

Undergraduate Core Requirements:

The following courses are required by the university to obtain a degree:

• Writing (ENGL 1010, 4 credits)
• Scientific Inquiry (9-12 credits): Satisfied by the basic mathematics and science sequence comprising MATH 1220, 2210, 2240; PHYS 1310, 1320; and CHEM 1070/1170, 1080/1180
• Cultural Knowledge (18 credits): Satisfied by at least 6 credit hours of Humanities/Fine Arts and at least 6 credit hours of Social Science
• Public Service (2-3 credits)
• TIDES
• Capstone Experience (9 credits): Satisfied by CENG 4310 and 4750
• Two Advanced Chemistry Electives, Two Advanced Technical electives, and Two Advanced Engineering Electives are selected in consultation with a faculty member in Chemical & Biomolecular Engineering, who is listed as your advisor, or by emailing the Chair of the Undergraduate Committee, Dr. Kyriakos Papadopoulos, at kyriakos@tulane.edu. Note that at least one of the Technical Electives must be at the 3000-level or above. The same applies the Engineering Electives.

In general, a Technical Elective is a course offered by the School of Science and Engineering. Also in general, an Engineering Elective is any non-required CENG course, a course offered by one of the engineering departments (BMEN, ENGP), or by Computer Science (COSC and CMPS). (Note that a course such as CENG 4890, for example, could count as either a Technical or Engineering elective, but no single course can be used to satisfy two requirements.) At least one member of each pair of electives must be at the 3000-level or above.

Note that, for both the Technical and Engineering Electives, the courses must be of at least the same technical rigor as the first freshman-level course we require from that department (i.e., General Chemistry for CHEM courses, General Physics for PHYS courses, Calculus I for MATH courses. CELL 1010 is the benchmark for CELL courses.) Courses for non-science majors will not fulfill the elective requirements. Consult your departmental advisor or the department’s Undergraduate Committee for official approval of electives.

Certain modifications to the freshmen program may be made by:
• Achievement of advanced standing through Advanced Placement Tests offered by the CEEB
• Use of advanced placement tests in mathematics and chemistry offered on campus during Orientation Week
• Submission of transcripts from other universities for equivalent courses taken prior to entering Tulane

New majors are assigned an individual faculty advisor based on their expected graduation year, and they should consult him or her regularly for class and career planning. Faculty members can be reached by email or in person to set up meeting times.
Class of 2019 – O’Connor, Papadopoulos
Class of 2020 – Sandoval, Mitchell
Class of 2021 – Godbey, Pesika

Special advising for transfer students, Tulane/Xavier 3-2 program, study abroad – Dr. Papadopoulos

### Department of Chemistry

#### Programs

##### Undergraduate

**Major**

- Chemistry Major (p. 293)

**Minor**

- Chemistry Minor (p. 294)

**Graduate**

- Chemistry, PhD (p. 294)

### Chemistry Major

Students majoring in chemistry must satisfy the general requirements of the B.S. curriculum. The list of elective courses is subject to periodic updating. See [http://www2.tulane.edu/sse/chem/academics/undergraduates/approved-electives.cfm](http://www2.tulane.edu/sse/chem/academics/undergraduates/approved-electives.cfm) or consult with the Chemistry Department. Students intending to pursue graduate work in chemistry or in an allied interdisciplinary graduate program should elect advanced chemistry courses, including 4010 and/or 4020. Close consultation with their department advisors will help to assure development of a program that can be recommended for graduate work.

The Department of Chemistry is fully accredited by the Committee on Professional Training of the American Chemical Society.

As an alternative to a traditional chemistry major, students can consider a major in biological chemistry ([http://www2.tulane.edu/sse/biolchem/index.cfm](http://www2.tulane.edu/sse/biolchem/index.cfm)). This program is certified by the American Society of Biochemistry and Molecular Biology (ASBMB).

Premedical students should elect Chemistry 1070 and 1075, 1080 and 1085, and 2410 and 2415 and 2420 and 2425.

### Requirements

Students majoring in chemistry must satisfy the general requirements of the B.S. curriculum.

**Electives**

Select three or more elective courses from the Chemistry list of courses

**Total Credit Hours:** 61
In order to complete the major, three additional, three-credit courses from the list of Chemistry courses above the 1000-level are required. Check with the Chemistry Department for approval of other (non-Chemistry) courses.

**Chemistry Minor**

A minor in chemistry consists of CHEM 1070 General Chemistry I (3 c.h.)/CHEM 1075 General Chemistry Lab I (1 c.h.) and CHEM 1080 General Chemistry II (3 c.h.)/CHEM 1085 General Chemistry Lab II (1 c.h.) plus four additional lecture courses that count toward the chemistry major. Only one semester of research may be counted towards the minor. For students whose major requires Chemistry 1070/1075 and Chemistry 1080/1085, at least one of the additional courses must not be required by that major. Because of the interdisciplinary nature of the biological chemistry major, students in that program may not minor in chemistry or biology.

**Chemistry, PhD**

Tulane’s graduate program in chemistry offers a balance between coursework and research. During the first two semesters, in addition to starting courses, students meet with individual faculty members and select a dissertation research advisor. After the first year, emphasis shifts towards research.

Some special areas of faculty research are bio-organic, biophysical, physical inorganic, organometallic, synthetic organic, polymer material, surface chemistry, as well as crystallography, spectroscopy, quantum theory and statistical mechanics.

**Requirements**

The minimum requirement for the PhD degree is six courses (18 course hours in total) at the 7000 level, four of which must be core courses. Out of the four core courses, up to three can be taken within one field of chemistry. The core courses, offered by division, are:

- Physical Chemistry: CHEM 7110 Intro to Quantum Mechanics (3 c.h.), CHEM 7120 Statistical Mechanics (3 c.h.), CHEM 7150 Chemical Physics (3 c.h.);
- Inorganic Chemistry: CHEM 7210 Inorganic Stru & Bond (3 c.h.) or CHEM 7220 Inorganic Reaction Mechanics (3 c.h.), CHEM 7230 Organomet/Trans. Metals (3 c.h.) or CHEM 7240 Organomet Chem Main Grp Metals (3 c.h.);

The remaining two elective courses should be selected from 7000 level chemistry courses (other than 7870 - 7900) or 7000 level courses from other SSE departments that meet the approval of the Graduate Affairs Committee. In addition, students should register for a total of six hours of seminar over the first six semesters of matriculation. In all, a total of 48 course hours are required for the Ph.D. students. Up to 24 course hours of the 48 hours required may be taken in CHEM 7890 Techniques of Research (1-9 c.h.)-CHEM 7900 Techniques of Research (1-9 c.h.) and special interest courses (6000 or above) offered by the Department of Chemistry or related departments. Students should obtain prior approval of the Graduate Affairs Committee to ensure that the courses taken in other departments will count toward the degree.

**Cumulative Exams**

Ph.D. candidates are required to pass 6 total cumulative exams, at least two by the end of their fourth semester of residence and all six by the end of the 6th semester. In addition, at least 3 of the 6 exams must be passed in the candidate’s area of concentration. Students failing to pass two cumes by the end of their fourth semester may be expelled from the program. Students unable to complete 6 cumes in 6 semesters will be automatically placed in the M.S. program and be expected to complete the M.S. thesis by the end of the seventh semester.

**Seminar**

Registration for, and attendance at, Department seminars is required. Students are required to register for Division Seminar every semester until they have been admitted to candidacy. Six (6.0) hours of credit for seminar courses may be applied to the Ph.D. degree requirements. All Ph.D. candidates must present a seminar to the Department based upon a topic from the current chemical literature. The seminar must be presented before the end of the students’ 4th semester in residence. The seminar should be scheduled with the chemistry department coordinator for seminar programs. Students presenting seminars are required to enlist two faculty to attend their seminar and provide the faculty with a Seminar Review Form (http://www2.tulane.edu/sse/chem/academics/graduate/graduate-admissions/upload/seminar-review-form-2011.pdf) for a written review of the quality of the presentation; the Seminar Review Form can be obtained from the...
Department of Computer Science

Admission to Candidacy
Prior to the dissertation, an application for admission to candidacy should be filed with the SSE. This should be done approximately one semester before the final dissertation. Deadlines are posted on the SSE website.

Dissertation
The Ph.D. dissertation must reflect the ability of the student to conduct an independent investigation which results in an original contribution to knowledge or an original interpretation of existing knowledge. The research is expected to be reported to the scientific community in the form of publications in refereed journals and/or conference presentations. The student should consult the SSE Dean’s office to determine the proper format for the Ph.D. dissertation. Upon completion of all other Ph.D. requirements, the student will give a final oral defense of their Ph.D. dissertation. A written draft of the dissertation should be available to the dissertation committee two weeks prior to the oral defense. This final examination will consist principally of the defense of the dissertation, but may be extended at the discretion of the Ph.D. examining committee to include course material. The satisfactory completion of this final requirement completes the student’s doctoral program.

Requirements
The program comprises 10 courses:

- Five introductory core courses, CMPS 1500 Intro to Computer Science I (4 c.h.), CMPS 1600 Intro to Computer Science II (4 c.h.), CMPS 2170 Intro to Discrete Math (3 c.h.), CMPS 2200 Intro to Algorithms (3 c.h.), and CMPS 2300 Intro to Comp Sys & Networking (3 c.h.).
- At least three CMPS elective classes at the 3000-level or above.
- In the senior year, a two-semester capstone project, CMPS 4010 Capstone Project 1 of 2 (2 c.h.) and CMPS 4020 Capstone Project Part 2 of 2 (2 c.h.).

These courses total 33 credit hours and can be completed over five or more semesters.

Two starting classes for the program are CMPS 1500 Intro to Computer Science I (4 c.h.) and CMPS 2170 Intro to Discrete Math (3 c.h.), CMPS 1500 Intro to Computer Science I (4 c.h.), CMPS 1600 Intro to

Tenure Requirement
The maximum time allowed by the SSE Graduate Program for completion of the Ph.D. degree is seven years. The Department, however, strongly encourages students to attempt to complete requirements in no more than five years.

Dissertation Committee
After choosing a research advisor (http://www2.tulane.edu/sse/chem/academics/graduate/graduate-admissions/upload/research-advisor-selection-form-2011.pdf) (no later than the second semester of residence), students must obtain agreements from a minimum of three chemistry faculty members (other than the dissertation advisor) to participate as members of their dissertation committee. Two members must be within the division of the research advisor and one member of the committee must be from a division in the Chemistry Department other than that of the research advisor. Students must submit to the Chemistry Department a signed and completed Thesis / Dissertation Committee Form. The form can be obtained on the department’s website.

Dissertation Prospectus
By the end of the fifth semester, students must submit a written proposal of their dissertation research project and make an oral presentation of it to their dissertation committee. The prospectus should be approximately three doubled-spaced typewritten pages in length. The cover sheet should state the student’s name, department/program, the title of the proposed dissertation, and the name of the chair and the other members of the committee. The introduction of the prospectus should contain a summary of earlier work on the problem. The body should include an orderly description of the plan for the investigation. The conclusion should clearly state the anticipated nature of the investigation results. Major sources of information should be indicated and a selective bibliography attached. The prospectus should be submitted to the SSE Graduate Programs office along with a signed copy of the prospectus approval form.

Admission to Candidacy
Prior to the dissertation, an application for admission to candidacy should be filed with the SSE. This should be done approximately one semester before the final dissertation. Deadlines are posted on the SSE website.

Dissertation
The Ph.D. dissertation must reflect the ability of the student to conduct an independent investigation which results in an original contribution to knowledge or an original interpretation of existing knowledge. The research is expected to be reported to the scientific community in the form of publications in refereed journals and/or conference presentations. The student should consult the SSE Dean’s office to determine the proper format for the Ph.D. dissertation. Upon completion of all other Ph.D. requirements, the student will give a final oral defense of their Ph.D. dissertation. A written draft of the dissertation should be available to the dissertation committee two weeks prior to the oral defense. This final examination will consist principally of the defense of the dissertation, but may be extended at the discretion of the Ph.D. examining committee to include course material. The satisfactory completion of this final requirement completes the student’s doctoral program.

Department of Computer Science

Programs
Undergraduate
- Computer Science Coordinate Major (p. 295)

Graduate
- Computer Science, PhD (p. 297)

Computer Science Coordinate Major
The Tulane Computer Science Coordinate Major program helps students develop into leaders who are able to solve interdisciplinary problems using the tools of computer science and computing technology.

What is a coordinate major?
A coordinate major is an additional major designed to complement the primary one. To earn a coordinate major in computer science, students must also complete a major in another discipline. Any undergraduate major at Tulane can serve as a primary major for the computer science coordinate major.

Upon successful completion of the coordinate major, the student’s transcript will reflect the fact that the student has completed the coordinate major in computer science with a focus on the area of application. The Department of Computer Science doesn’t currently offer a standalone Bachelor of Science in Computer Science degree or computer science minor. While this might change in the future, students should not count on the possibility of either when deciding on enrolling at Tulane or in computer science courses. The undergraduate degree (Bachelor of Science or Bachelor of Arts) received by the student is determined by his/her primary major.

Requirements
The program comprises 10 courses:

- Five introductory core courses, CMPS 1500 Intro to Computer Science I (4 c.h.), CMPS 1600 Intro to Computer Science II (4 c.h.), CMPS 2170 Intro to Discrete Math (3 c.h.), CMPS 2200 Intro to Algorithms (3 c.h.), and CMPS 2300 Intro to Comp Sys & Networking (3 c.h.).
- At least three CMPS elective classes at the 3000-level or above.
- In the senior year, a two-semester capstone project, CMPS 4010 Capstone Project 1 of 2 (2 c.h.) and CMPS 4020 Capstone Project Part 2 of 2 (2 c.h.).

These courses total 33 credit hours and can be completed over five or more semesters.

Two starting classes for the program are CMPS 1500 Intro to Computer Science I (4 c.h.) and CMPS 2170 Intro to Discrete Math (3 c.h.), CMPS 1500 Intro to Computer Science I (4 c.h.), CMPS 1600 Intro to
Academic requirements

In order to enroll in the senior capstone course, the student should achieve a cumulative GPA of 2.8 or above for the five introductory core courses. In order to graduate with the coordinate major in computer science, the student should achieve a cumulative GPA of 2.8 or above in all CMPS courses.

Academic prerequisites

The program is open to all students willing to put time and work into becoming computing professionals. It doesn’t assume that students have any previous computer science background. Many of our graduates have never programmed a computer before joining their first computer science class. The department holds several help sessions most days of the week to provide help to students when they have questions while working on computer science homework.

Prior computing experience

Advanced Placement (AP) computer science courses taken by a student in high school usually transfer toward overall college credit. (This is decided by the Tulane University Office of Undergraduate Admissions.) These courses do not have much overlap with our introductory courses and hence don’t count toward the coordinate major.

If a student can demonstrate solid knowledge of the material covered in one of the required courses, (s)he can “skip” the required course and replace it with a CMPS elective of his/her choice instead. The minimum total number of completed CMPS courses should remain 10.

Study abroad

With advanced planning, it is possible to study abroad and complete the coordinate major. Students should confirm with the Department of Computer Science whether and how the foreign courses would transfer toward overall college credit. Advanced Placement (AP) computer science courses taken by a student in high school usually transfer toward overall college credit. (This is decided by the Tulane University Office of Undergraduate Admissions.) These courses do not have much overlap with our introductory courses and hence don’t count toward the coordinate major.

Programming languages

We often get asked what programming languages we teach. In fact, we teach principles, concepts, and problem-solving approaches rather than specific languages. CMPS 1500 is in Python. CMPS 1600 uses Java, C, C++, Haskell, and a surprise language. The elective courses use a language that’s necessary to achieve the tasks of the course (e.g. Javascript, Scala, Ruby). Our successful students get used to learning new languages and are able to study the basics of any computer language on their own.

Computer specifications

Another common question is about buying a computer. It is helpful and convenient to have a laptop. We don’t have a computer lab, and students work on their own laptops to complete most programming assignments. Model and maker don’t matter; any modern laptop with WiFi and battery works. If buying or bringing a laptop is problematic, all necessary work can be done on university computers. We also have short-term loaner laptops available. It is possible to do well in all computer science courses without owning a laptop.

¹ Excluding CMPS 1600
² Excluding CMPS 1500
Earth and Environmental Sciences, MS

The geosciences aim to increase our understanding of the composition and evolution of the Earth, including its fundamental role in creating the natural environment that humans inhabit. As such, this broad field addresses problems that will likely constitute some of the premier challenges for humankind in the 21st century, given the need to feed a rapidly growing world population, the continuously increasing per capita demand for natural resources, and the associated impacts such as climate change and the vast spectrum of more regional environmental impacts.

Requirements

Applicants pursue a thesis program for a Master of Science degree. To be acceptable, the thesis must contain an original contribution to knowledge and be in form and of literary quality worthy of publication. In addition to the thesis, 24 semester hours of course work are required. Those expecting to continue into a Ph.D. program can either finish their Master degree or pass a Ph.D. qualifying exam after their fourth semester. A detailed description of the Master of Science curriculum and requirements can be found here (http://www2.tulane.edu/sse/eens/academics/graduate/interdisciplinary-phd-program.cfm).

Earth and Environmental Sciences, PhD

The geosciences aim to increase our understanding of the composition and evolution of the Earth, including its fundamental role in creating the natural environment that humans inhabit. As such, this broad field addresses problems that will likely constitute some of the premier challenges for humankind in the 21st century, given the need to feed a rapidly growing world population, the continuously increasing per capita demand for natural resources, and the associated impacts such as climate change and the vast spectrum of more regional environmental impacts.

Requirements

All students working for the Ph.D. degree must satisfy the general requirements as listed in the catalog (https://catalog.tulane.edu/graduate-degrees-professional-programs/phd-program-requirements). The master's degree is not a requirement for the Ph.D. in Earth and Environmental Sciences.

Candidates must demonstrate a high degree of creative or research ability and fulfill the following requirements:

1. Pass a qualifying examination during the fourth semester
2. Complete at least 48 semester hours of course work approved by the graduate advisor
3. Form a dissertation committee and present a dissertation prospectus that will serve as a guideline for dissertation
4. Present an original contribution in the form of a written dissertation suitable for publication in a learned journal and successfully defend it in a public oral defense of the work
Environmental Earth Science Major

The Department of Earth & Environmental Sciences offers this environmental science major, which provides students with broad exposure to environmental problems, as well as training in essential problem-solving skills, such as Geographic Information Systems (GIS). The major requires a broad background in the natural sciences and core curriculum that familiarizes students with topics, tools, and methods. Core courses cover topics in hydrology, climate, and environmental geology. Students completing the degree should be able to enter environmental scientist positions in private industry and regulatory agencies and environmental policy positions. In addition, the major provides a strong science background for individuals seeking to practice environmental law or continue on to graduate school.

Requirements

Course requirements for the environmental science major are given below:

Total Credit Hours 63

1. Math 1150 and 1160 (Long Calculus sequence) may be taken instead of MATH 1210 to complete the Calculus I requirement. MATH 1310 Consolidated Calculus (4 c.h.) may be taken instead of MATH 1210 Calculus I (4 c.h.)/MATH 1220 Calculus II (4 c.h.)
2. PHYS 1310 General Physics I (4 c.h.)/PHYS 1311 General Physics I (4 c.h.) Lab (0 c.h.) will satisfy the requirement
3. Should be taken as soon as possible after major declaration; C- or better required.
4. A minimum of three electives must be at the 3000-4000 level. Students are strongly encouraged to include Remote Sensing and Environmental Geochemistry in their electives. No capstone course is required for this major.

Environmental Earth Science Minor

The Department of Earth & Environmental Sciences (EENS) offers this environmental science minor, which provides students with broad exposure to environmental problems, as well as training in essential problem-solving skills, such as Geographic Information Systems (GIS). The minor is not unlike the GEOL minor, but emphasizes environmental courses in the department.

Requirements

Course requirements for the environmental earth science minor are given below:

Geographic Information Systems Certificate

Tulane University offers the region’s first complete certificate program in Geographic Information Systems (GIS). The Department of Earth and Environmental Sciences offer a GIS Certificate for undergraduate students and graduate students. GIS offers an integral aspect for supporting decision making in a variety of fields such as physical and environmental sciences, urban planning and management, political science, civil engineering, economy/business, education administration, real estate, public health and health care. The primary goal of the program is to ensure that students become sufficiently grounded in the concepts and theory behind GIS including organization, management, and visualization of geospatial data. Students will have the opportunity to gain valuable GIS knowledge and skills that can be applied to careers in both academia and industry. GIS certificates will provide Tulane students and professionals additional future career opportunities and enhance their present positions. The GIS certificate is a 13-hour program administered by the Department of Earth and Environmental Sciences

Requirements

Coursework consists of two core courses, and two elective courses. Students will need to complete a minimum of 13 credits while in the program. Students may transfer 6 credits of required coursework taken previously (approval needed if taken at another institution). Students cannot transfer more than 3 credits of special topics courses.

</tbody>
</table>

Total Credit Hours 44-54

1. Two of the four electives must be at or above the 3000 level.
2. MATH 1150 and 1160 (Long Calculus sequence) may be taken instead of MATH 1210 to complete the Calculus I requirement.

**Additional Information**

In the junior and senior years, students preparing to enter graduate school are strongly urged to elect additional courses in their discipline; this may result in students attaining more than the total number of credits required for graduation (see Newcomb-Tulane core curriculum for provisions for earning graduate credit in the senior year). All majors are expected to participate in certain departmental activities, including field trips (held annually or semiannually) and special lecture programs given by visiting speakers.

**Geology Minor**

A minor in geology consists of five EENS courses and accompanying laboratories as follows: EENS 1110/1115, 3060, a 2000 level course, plus two courses at or above the 3000 level.

**Requirements**

- Ecology and Evolutionary Biology, PhD (p. 302)

**Ecology and Evolutionary Biology Major**

The major in Ecology and Evolutionary Biology is an innovative program of study. Our diverse faculty offer engaging, student-centered courses with ample opportunities for hands-on learning in the lab and field in addition to research and study abroad programming in Ecuador, Australia, and Scandinavia, for example. Students are encouraged to join our labs, where they can develop a wide range of skills and expertise in areas including molecular and microbiology, physiology, animal behavior, and disease and field ecology. The EBIO major prepares students for careers in zoology, botany, conservation, science education, consulting, non-governmental organizations, as well as graduate and professional programs. Students interested in pursuing advanced study in public health, medical or veterinary school would also benefit from the breadth and depth of the major, and the unique extent of faculty-student engagement.
The major in Ecology and Evolutionary Biology is one of two majors offered by the Ecology and Evolutionary Biology Department to undergraduate students.

Requirements

The major in ecology and evolutionary biology provides understanding of the structure and function of organisms and their evolution and ecology. Majors must complete six core courses, five elective courses, and the capstone requirement.

Total Credit Hours 67-68

\(^1\) A minimum of 6 credits of mathematics is required for the Bachelor's degree. Any two Mathematics courses numbered 1210 and above may be used to satisfy this requirement. However, the combination of MATH 1150 and MATH 1160 (Long Calculus) may count as one course towards this requirement.

\(^2\) Five elective courses (see department courses (p. ___) listing) are selected according to the interests of the student in consultation with the major advisor. Two of the electives must be designated laboratory or field courses. A maximum of one course representing a special project, independent study, or honors thesis may be counted as an elective, but not as a laboratory-field course. In addition, a student may use a maximum of one course from an approved list of courses from other departments as an elective course. Courses representing internship studies and seminars may not count as elective courses.

\(^3\) This capstone requirement may be satisfied by completion of EBIO 4970 Contemp Ecol & Evol Biol I (1 c.h.)-EBIO 4980 Contemp Ecol & Evol Biol II (3 c.h.) or EBIO 5970 Capstone Research Seminars (2 c.h.). EBIO 4930 Capstone Indep Study (3-4 c.h.) is only available by departmental approval for those students who cannot take the regular courses.

Note(s):

Additional courses in biological statistics and physics are also highly recommended.

Interdepartmental Courses

Any one of these courses, which are not taught by the faculty of the Department of Ecology and Evolutionary Biology, is acceptable as one of the electives in the required program for the EE Biology major.

Ecology and Evolutionary Biology, MS

The Department of Ecology and Evolutionary Biology offers the Master of Science degree in both a Thesis and Non-Thesis model (see degree requirements for detail.) The curriculum is designed to encourage maximum student choice and independence while maintaining a close student-advisor relationship. Students are encouraged to adopt a broad, integrative view of science and biological research. Course offerings cover such areas as animal and plant physiology, plant
ecology, plant-animal interactions, population biology, structural and evolutionary biology, systematic biology, environmental toxicology, marine/estuarine ecology, and the biology of diverse groups of plants and animals. Students participate in an active departmental seminar program and informal research discussion groups.

Requirements

Thesis Model

Faculty Advisor

The student will consult his/her advisor in order to develop a course of study and to gain the advisor’s approval for course registration. The faculty advisor must be a regular (full time) member of the department.

The potential applicant should contact the professor who is desired as advisor prior to making application to the Graduate Studies Program in the School of Science and Engineering. Admission to the EEB graduate program depends upon a faculty member committing to supervise the student’s graduate program, including the thesis research and composition. Thus, each applicant must have contacted the potential advisor prior to the decision on her/his application for admission.

Entrance Interview

During the first semester of enrollment, each entering student interviews with the faculty advisor (Graduate Studies Committee Chair substitutes if an advisor has not been arranged) and two other regular faculty members. The purpose of the interview is to review prior courses taken by the student, discuss research interests and degree goals, and ensure that the student understands departmental graduate study procedures. Recommendations for coursework to address deficiencies or to enhance the student’s program may be made during the interview. Download Entrance Interview Form (http://www2.tulane.edu/sse/eebio/academics/graduate/upload/entrance_interview_form.pdf).

Course Requirements

Twenty-four semester hours of approved and graded graduate course work are required in addition to the production of an acceptable Masters of Science thesis. In general, up to 12 semester hours of transfer credit will be accepted toward the Masters of Science degree. Guidelines for acceptability of transfer credit can be found in the Graduate Catalog of the School of Science and Engineering. The Chair of the Department must approve all transfer credits. Courses taken at Tulane are usually taken in the EEB Department, but as many as nine graduate credits from other departments or divisions may be counted toward the course requirement.

Thesis

A student’s faculty advisor will also be the director of his/her thesis research. A thesis committee must approve the completed thesis. The thesis committee will consist of at least three faculty members including the student’s thesis advisor. EEB faculty must comprise a majority of the thesis committee. Each student must request approval for the composition of the thesis committee by letter addressed to the Chair of the Department. The thesis research must be presented to the Department in a public forum and defended at an oral examination conducted by the thesis committee. Specific instructions for thesis preparation are given in the Graduate Catalog of the School of Science and Engineering.

Non-Thesis Model (Terminal)

In order to earn this degree, students must have been admitted to the EEB graduate program through the regular Tulane University admissions process. Students admitted to the program must have completed the requirements for a baccalaureate degree in any discipline that includes course work in Chemistry (General Chemistry, and either Organic Chemistry or Biochemistry) and Biology (Genetics, Ecology, and Evolution). Additional coursework may be required to make up deficiencies. Students will meet with the graduate advisor prior to the beginning of his/her first semester to discuss appropriate course work for this degree.

All students seeking this degree must complete 30 credit hours of approved, graduate level coursework in EEB or other relevant departments. A maximum of 6 credits at the graduate level may be transferred to this degree program, at the discretion of the Chair of the Department. Following completion of coursework, students must take and pass the Comprehensive Examination, generally given at the end of the spring semester.

Ecology and Evolutionary Biology, PhD

The Department of Ecology and Evolutionary Biology (EEB) offers a Doctor of Philosophy degree. The curriculum is designed to encourage maximum student choice and independence while maintaining a close student-advisor relationship. Students are encouraged to adopt a broad, integrative view of science and biological research. Course offerings cover such areas as animal and plant physiology, plant ecology, plant-animal interactions, population biology, structural and evolutionary biology, systematic biology, environmental toxicology, marine/estuarine ecology, and the biology of diverse groups of plants and animals. Students participate in an active departmental seminar program and informal research discussion groups.

Students accepted into the doctoral program are informally examined in Genetics, General Ecology, and Evolutionary Biology upon entry; based upon the results of that examination, the department makes recommendations as to the student’s future course of study. By the end of the second year all formal course work is usually completed. The doctoral degree normally requires four or five years of study leading to the production of a publishable dissertation.

Requirements

In addition to university-wide requirements for the PhD, the Department of Ecology and Evolutionary Biology has the following requirements for its PhD students.

Annual Report and Progress

All graduate students who have been enrolled in the EEB Department for at least one semester must submit an annual report that briefly describes progress made during the previous calendar year (see Graduate Student Annual Report Form). Copies of this report must be submitted by January 25th to the student’s thesis or dissertation advisor and to the departmental secretary for faculty review and placement in the student’s departmental file. The Graduate Studies Committee and departmental faculty will review the annual reports to determine whether each student’s progress has been satisfactory. Continued unsatisfactory progress is sufficient cause to revoke a
teaching assistantship or terminate a student from the graduate program.

**Journal Club**

All Ph.D. graduate students must successfully complete two semesters of EBIO 6810 EEB Journal Review (1 c.h.), and all Masters degree students must complete one semester of EBIO 6810 EEB Journal Review (1 c.h.). The course is offered each fall semester. Thus, Ph.D. students are expected to complete this requirement during their first two years of study, and all Masters degree students are expected to complete the requirement during the first year of study. This requirement is revised effective 2007 fall semester; all Ph.D. students who enrolled in the graduate program prior to this time and have not completed the former four-semester requirement will be required to complete three semesters of EBIO 6810 EEB Journal Review (1 c.h.).

### Environmental Biology Major

The major in Environmental Biology is a focused course of study intended for students who are interested in conservation biology, environmental preservation, human health, education, and public policy. Our diverse faculty offer engaging, student-centered courses with ample opportunities for hands-on learning in the lab and field in addition to research and study abroad programming in Ecuador, Australia, and Scandinavia, for example. Students are encouraged to join our labs, where they can develop a wide range of skills and expertise in areas including coastal, aquatic, tropical and disease ecology. The major will prepare students who are interested in seeking employment with environmental agencies of federal, state, and municipal governments or non-governmental organizations, and in private industry, including environmental economics and environmental consulting firms. The program also may appeal to individuals planning to enter the field of environmental law. Global Change Biology and Conservation Biology are required electives for the ENVB major.

The major in Ecology and Evolutionary Biology is one of two majors offered by the Ecology and Evolutionary Biology Department to undergraduate students. The Department also offers a major in Ecology and Evolutionary Biology.

### Requirements

The major in environmental biology provides understanding of biological processes among populations, communities, and ecosystems. Majors must complete eight core courses, three elective courses, and the capstone requirement.

</table>

**Total Credit Hours**: 61-63

1. Three elective courses (see department courses (p.) list) in the department of ecology and evolutionary biology must include two laboratory-field courses.
2. A minimum of 6 credits of mathematics is required for the Bachelor’s degree. Any two Mathematics courses numbered 1210 and above may be used to satisfy this requirement. However, the combination of MATH 1150 and MATH 1160 (Long Calculus) may count as one course towards this requirement. Courses in statistics and physics are highly recommended but are not required.
3. The capstone requirement may be satisfied by completion of EBIO 4970 Contemp Ecol & Evol Biol I (1 c.h.)-EBIO 4980 Contemp Ecol & Evol Biol II (3 c.h.) or EBIO 5970 Capstone Research Seminars (2 c.h.). EBIO 4930 Capstone Indep Study (3-4 c.h.) is only available by departmental approval for those students who cannot take the regular courses.

### Marine Biology Minor for Biology Majors

In addition to the core courses and the elective courses (selected after discussion with the Marine Biology Advisor) required for either the Ecology and Evolutionary Biology (EEBI) major or the Environmental Biology (ENVB) major, students who wish to add a minor in Marine Biology will complete 16 credits (minimum) beyond those required for an EEB major. These courses cannot be counted toward either EEBI major for those students electing to complete an EEBI major and the marine biology minor. Courses to be completed at the marine field
station must be approved for transfer credit by the Marine Biology advisor before they are taken at the marine field station.

Requirements
Students majoring in ecology and evolutionary biology or environmental biology who minor in marine biology will complete a minimum of 16 credits beyond the departmental major.

<table>
<thead>

</tr>
</tbody>
</table>

Select two summer courses for no less than three credits each at an approved marine field station 2

Total Credit Hours: 16

1. Neither EBIO 2100 Marine Biology (3 c.h.), EBIO 2230 Oceanography (3 c.h.), nor EBIO 4250 Biol of Marine Invertebrates (4 c.h.) may be counted toward both the major and the minor.

2. The course to be completed at the marine field station must be pre-approved for transfer credit by the Marine Biology Advisor before students register for the course. Please contact the Marine Biology Advisor for assistance in finding and selecting an appropriate station/course.

Marine Biology Minor for Non-Biology Majors
Students majoring in departments other than EEB who wish to complete a minor in Marine Biology will need to complete both marine science coursework as well as supporting coursework totaling 22-24 credits both in and outside the department. Coursework to be completed at the marine field station must be approved for transfer credit by the Marine Biology advisor before they are taken at the marine field station.

Requirements
Students majoring in departments other than Ecology and Evolutionary Biology who minor in Marine Biology complete:

<table>
<thead>
<tr>
<th>Course ID</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>

Applied Mathematics, MS
This program is designed to provide students with the opportunity to broaden and deepen their knowledge of mathematics with an emphasis on those areas that have been most important in science and engineering. The student will also examine, through seminars and case studies, examples of significant applications of mathematics to other areas. This expanded base of knowledge, together with extensive experience in problem solving should prepare the student for further studies leading to the Ph.D. degree or for immediate employment in many areas of industry and government.

To enter the program the student should have a Bachelor's degree in mathematics, or a related field, and have completed undergraduate courses in Linear Algebra and Differential Equations. Students without these prerequisites may take them without credit toward the M.S. degree. Partial tuition waivers may be available to qualified students.

Select one of the following Statistics Courses: 3

- MATH 6020 Mathematical Statistics
- MATH 6030 Stochastic Processes
Mathematics Major

The Mathematics major provides students with the breadth of knowledge required to excel in a variety of careers including medicine, law, finance, and technology-related industries. In addition, the mathematics major also provides excellent preparation for those students who want to pursue graduate studies. The flexibility in the curriculum allows students to emphasize core math, applied math, or statistics.

Requirements

A major in mathematics consists of:

<table>
<thead>
<tr>
<th>Course ID</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 1210</td>
<td>Calculus I</td>
<td>4</td>
</tr>
<tr>
<td>MATH 1220</td>
<td>Calculus II</td>
<td>4</td>
</tr>
<tr>
<td>MATH 2210</td>
<td>Calculus III</td>
<td>4</td>
</tr>
<tr>
<td>MATH 3050</td>
<td>Real Analysis I</td>
<td>3</td>
</tr>
<tr>
<td>MATH 3090</td>
<td>Linear Algebra</td>
<td>4</td>
</tr>
</tbody>
</table>

1 Other courses not listed may be substituted with the approval of the Graduate Studies Committee. Up to six credits may be transferred from other departments or institutions with the approval of the Graduate Studies Committee.
Select four additional mathematics courses at the 3000-level or above.

**Year-Long Senior Seminar**

<table>
<thead>
<tr>
<th>Course ID</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 3980</td>
<td>Senior Seminar (Capstone)</td>
<td>1</td>
</tr>
<tr>
<td>MATH 3990</td>
<td>Senior Seminar (Capstone)</td>
<td>3</td>
</tr>
</tbody>
</table>

Total Credit Hours 35

1. MATH 1150 Long Calculus I (3 c.h.) and MATH 1160 Long Calculus II (3 c.h.) may be substituted for MATH 1210 Calculus I (4 c.h.)
2. MATH 1310 Consolidated Calculus (4 c.h.) may be substituted for MATH 1220 Calculus II (4 c.h.)
3. Four additional mathematics courses at the 3000-level or above with the following provisos:
   - one but not both of MATH 2170 Intro To Discrete Math (3 c.h.) and MATH 2240 Intro To Applied Math (4 c.h.) may be substituted for one of the 3000-level courses;
   - at least one course must be at the 4000-level or above;
   - an advanced course in another department, with a high mathematical content, may, with the approval of the departmental undergraduate studies committee, may be substituted for one of the 3000-level courses.

The year-long Senior Seminar is required of all mathematics majors who are not writing an Honors thesis within the department. Students planning to graduate in December should begin this course in the fall of the preceding year. The Senior Seminar does not count towards the additional 3000-level math courses in the previous section.

**Suggested Curriculum**

A freshman should take the appropriate calculus course. Students with no prior calculus course should normally take MATH 1210 Calculus I (4 c.h.) and MATH 1220 Calculus II (4 c.h.) during the freshman year. Students with one semester of calculus credit (or equivalent knowledge) should take MATH 1310 Consolidated Calculus (4 c.h.). Students with two semesters of calculus credit should start in MATH 2210 Calculus III (4 c.h.) and contact a mathematics major advisor during the first semester for major program planning advice. It is also recommended that a prospective mathematics major take PHYS 1310 General Physics I (4 c.h.) and PHYS 1320 General Physics II (4 c.h.) during either the freshman or sophomore year. Students should take the core courses as early as possible in their programs. After completing MATH 2210 Calculus III (4 c.h.), the most frequent courses taken next are usually selected from the core courses MATH 3050 Real Analysis I (3 c.h.), MATH 3070 Intro To Probability (3 c.h.), and MATH 3090 Linear Algebra (4 c.h.). It is generally recommended to take MATH 3090 Linear Algebra (4 c.h.) before MATH 3050 Real Analysis I (3 c.h.), but they can be taken concurrently. Both MATH 3050 Real Analysis I (3 c.h.) and MATH 3090 Linear Algebra (4 c.h.) are offered every semester. Each introduces the student to more theoretical mathematics than has been encountered in the calculus courses, and these courses provide the foundation for many advanced courses. The course MATH 2240 Intro To Applied Math (4 c.h.) gives an introduction to applied mathematics, and can be counted toward the major (although both MATH 2170 Intro To Discrete Math (3 c.h.) and MATH 2240 Intro To Applied Math (4 c.h.) cannot both count). However, majors are advised to forego MATH 2240 Intro To Applied Math (4 c.h.) and instead take MATH 4240 Ordinary Differential Equa (3 c.h.) after taking MATH 3090 Linear Algebra (4 c.h.). There is considerable overlap in MATH 2240 Intro To Applied Math (4 c.h.) and MATH 4240 Ordinary Differential Equa (3 c.h.), and both may not be taken for credit. The course MATH 3070 Intro To Probability (3 c.h.) provides an introduction to probability, and MATH 3080 Intro Statisticl Infernc (3 c.h.) provides an introduction to statistical inference. MATH 2210 Calculus III (4 c.h.) is a prerequisite for MATH 3070 Intro To Probability (3 c.h.), and MATH 3070 Intro To Probability (3 c.h.) is a prerequisite for MATH 3080 Intro Statisticl Infernc (3 c.h.). The MATH 3070-3080 sequence should be taken in the sophomore year by students interested in pursuing a concentration in statistics, which includes these four courses in addition to the core courses. All advanced probability and statistics course, including MATH 6020 Mathematical Statistics (3 c.h.), MATH 6030 Stochastic Processes (3 c.h.), and MATH 6040 Linear Models (3 c.h.) require successful completion of MATH 3070 Intro To Probability (3 c.h.) and MATH 3080 Intro Statisticl Infernc (3 c.h.).

Students considering a math major should arrange an appointment with the department chair early in their program. They will be assigned a major advisor who will advise them on course selection within the major. The major program is designed to provide the student with a solid foundation during the first two years and provide for a variety of programs of study during the junior and senior years. A major program in mathematics can provide a background for both graduate study and work in a variety of areas of the mathematical sciences such as mathematics, applied mathematics, computer science, and statistics as well as provide preparation for professional schools such as law, medicine, and business. The major program should be designed as early as possible with the student’s goals in mind and with the help of the major advisor.

**Mathematics Minor**

The Mathematics minor offers students majoring in other disciplines the opportunity to develop a strong mathematical background and increase their competitiveness for future jobs or post-baccalaureate studies.

**Requirements**

A minor in mathematics consists of:

- Select one of the following: 4-8
  - MATH 1210 Calculus I
  - MATH 1220 and Calculus II
  - MATH 1310 Consolidated Calculus
  - MATH 2210 Calculus III
  - MATH 3090 Linear Algebra

- Select two courses at the 2000-level or above 1

Total Credit Hours 18-22

1. MATH 2170 Intro To Discrete Math (3 c.h.) and MATH 2240 Intro To Applied Math (4 c.h.) cannot both count toward the minor.

**Mathematics, MS**

This program is designed to provide students with the opportunity to broaden and deepen their knowledge of core areas of mathematics. The course work is designed to provide both breadth of knowledge and depth in an area of interest to the student. This experience will
prepare the student for further studies leading to a Ph.D. degree in mathematics. Partial tuition waivers may be available to qualified students.

2. MATH 7710 Topics In Algebra (3 c.h.) - MATH 7790 Topics In Topology (3 c.h.)

Mathematics, PhD

Senior undergraduate students majoring in mathematics or other sciences with a strong interest in mathematics, and people who already hold undergraduate degrees in mathematics or other sciences, are encouraged to apply for admission to PhD program in Mathematics. Faculty in the Mathematics Department have active research in areas of Algebra, Domain Theory and Theoretical Computer Science, Geometry and Topology, Symbolic Analysis, Applied Mathematics and Partial Differential Equations, Computational Mathematics, Mathematical Biology, Probability and Statistics.

Requirements

Below is a brief outline of the requirements and further explanation of each step.

1. Complete at least 48 hours of coursework-up to two courses may be taken in another department with the approval of the Graduate Studies Committee. For advanced incoming students, limited transfer credit (http://www2.tulane.edu/sse/math/academics/undergraduates/transfer-credit.cfm) is possible.
2. Pass the Placement Exam in linear algebra and advanced calculus. It will be taken at the beginning of the fall semester (the student’s first semester). If a student fails to achieve A- in the linear algebra portion, he or she will be required to enroll in MATH 3090 Linear Algebra (4 c.h.)/MATH 6090 Linear Algebra (3 c.h.). If the student fails to achieve A- in the advanced calculus portion, he or she will be required to enroll in MATH 4060 Real Analysis II (3 c.h.)/MATH 6060 Real Analysis II (3 c.h.). Read the Placement Exam syllabus for details and previous exams.
3. Pass qualifying written exams Analysis (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/analysis.cfm) and two others chosen from among: Algebra (http://
www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/algebra.cfm), Analysis (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/analysis.cfm), Applied Mathematics (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/applied-mathematics.cfm), Differential Geometry (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/differential-geometry.cfm), Probability and Statistics (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/probability-statistics.cfm), PDE (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/pde.cfm), Scientific Computation (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/scientific-computation.cfm), and Topology (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/topology.cfm). Read the exam syllabi for qualifying exams (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams).

4. Pass an oral exam on specific topics of research interest to the student.
5. Write a dissertation.

Credit Hours
The Ph.D. program requires students to complete at least 48 credits. This is equivalent to 16 courses (math courses are 3 credits each). All 7000-level courses may count toward the Ph.D. degree. Students in need of remediation, for example whose undergraduate major was not mathematics, may be advised by the Graduate Coordinator to take some undergraduate courses as 6000-level, but these cannot count toward the Ph.D. degree. Exceptions are 6210 (Differential Geometry) and 6300 (Complex Analysis). These two can be taken for Ph.D. credit if the Graduate Coordinator approves.

It is not enough for a student to complete 48 credits to satisfy this requirement. The credits must be approved by the Graduate Coordinator and must be taken in such a way that they represent breadth and depth.

Owing to these concerns, it is important that the student work closely with the Graduate Coordinator in order to formulate a sequence of courses that will satisfy the coursework requirement. This is done on an individual basis. A student who does not consult with the Graduate Coordinator may find that not all classes taken count toward the degree.

Up to two courses may be taken in other departments when approved by the Graduate Studies Committee. At most two reading courses in total can be counted toward the required 48 credit hours.

In addition, the transfer of up to 9 credits from another graduate program is possible with the approval of the Graduate Studies Committee. Read more about transfer credit.

Placement Exam
This is a 4-hour exam on topics from undergraduate courses on Linear Algebra & Vector Calculus.

This exam is generally offered during the first week of each semester. A sign-up sheet is available in the math office near the end of the preceding semester.

Every first-year Ph.D. student has to take the placement exam prior to his/her first semester at Tulane.

The topics covered in the Preliminary Exam are:

**Linear Algebra**
- vector spaces
- inner products
- linear transformations
- linear equations
- matrix operations
- determinants
- characteristic equation
- eigenvalues and eigenvectors
- symmetric, skew-symmetric matrices
- hermitian, skew-hermitian matrices
- Jordan canonical form
- spectral theorem

**Vector Calculus**
- limits in R^n
- partial derivatives
- differentiable functions of several variables
- optimization of functions in R^n (with and without constraints)
- the implicit function theorem
- the inverse function theorem
- Taylor's theorem
- integration in several variables
- line integrals
- the theorems of Green, Gauss and Stokes

References you may want to study:

1. *Linear Algebra, Mathematica Labs* by Terry Lawson
3. Almost any textbook with Linear Algebra in its title
4. *Calculus* by Boyce and DiPrima
5. Almost any textbook with Advanced Calculus in its title

**Qualifying Exams**
These are comprehensive written exams. The student must pass three exams in Analysis and two others chosen from among:

- Algebra (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/algebra.cfm)
- Analysis (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/analysis.cfm)
- Applied Mathematics (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/applied-mathematics.cfm)
- Differential Geometry (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/differential-geometry.cfm)
- Probability and Statistics (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/probability-statistics.cfm)
- PDE (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/pde.cfm)
The topics of each exam are based on the corresponding first-year graduate course sequence. For example, the Analysis exam covers roughly the material in MATH 7210 Analysis I (3 c.h.)-MATH 7220 Analysis II (3 c.h.). Read the Qualifying exam syllabi (http://www2.tulane.edu/sse/math/academics/graduate/qualifying-exams/)

Qualifying exams are offered the first week of each semester. A sign-up sheet is available in the math office near the end of the spring semester for the following semester's exams.

Students do not have to take all three exams at the same time; however, they should complete all three exams by the beginning of the third year in the Ph.D. program.

Oral Exam

After a Ph.D. student has passed the Preliminary exam and three Qualifying exams, the student should:

• decide on the area of mathematics in which he/she would like to write a dissertation (and)
• choose an advisor in this area

The advisor and the student will decide on a reading list and topics for the oral exam.

The exam usually lasts one to two hours and consists of a committee of 5 faculty who ask questions from the list of topics.

The student and the advisor must choose the committee and set the date of the exam. This information must be communicated to the Graduate Coordinator prior to the exam for approval by the Graduate Studies Committee.

It is not necessary that the student complete all coursework before taking the oral exam.

Dissertation

The dissertation must contain original work by the student and demonstrate the student’s ability to carry on independent research that results in a genuine contribution to the field. The student must work closely with his/her advisor in order to have a clear vision of what is required of the dissertation.

The student’s dissertation committee must sign the dissertation to accept it before it can be submitted to the SSE (http://tulane.edu/sse).

The student must also give a presentation of the research in the dissertation as an oral defense.

Please contact the Graduate Coordinator if you have additional questions:
Ricardo Cortez (rcortez@tulane.edu)
Phone: 504-862-3436
Office: Gibson 410

Statistics, MS

The Master of Science degree in Statistics combines theory and application. Our program emphasizes rigorous coursework in probability and mathematical statistics in addition to training in data analysis and computational methods. Graduates from the M.S. program may either directly enter the workforce as junior level statisticians or continue their studies in pursuit of a more advanced degree.

Requirements

Course prerequisites include the equivalent of MATH 6070 Intro To Probability (3 c.h.), MATH 6080 Intro Statstcl Inference (3 c.h.) and MATH 6090 Linear Algebra (3 c.h.). Enrollment in prerequisites does not provide credit towards the M.S. degree.

Additional Requirements

A four-hour written examination to be taken upon completion of the core course work, with topics drawn from probability, linear models, and statistics. The student is given two chances to pass this exam. The Ph.D. Qualifying examination in Statistics can be substituted for the Masters exam.
MATH 7980 Reading and Research (1-9 c.h.) consists of a semester-long project completed under the supervision of a faculty member from the Mathematics Department, generally completed during the final semester of study.

**Thesis Option**

There is no thesis option for the M.S. in Statistics.

**Department of Physics and Engineering Physics**

Undergraduate Program Objectives for Engineering Physics

Our engineering physics program aims to educate students to become professionals with in-depth knowledge and skills in mathematics, science and engineering to understand physical systems; to research, design and solve problems; and to provide the foundation for graduate study and lifelong learning. Our objective is to prepare graduates who will successfully pursue:

• Advanced studies leading to research and/or professional careers in Engineering
• Advanced studies leading to research and/or professional careers in Physical Science
• Careers in Engineering Physics or related technical and professional fields.

Undergraduate Program Outcomes for Engineering Physics

Graduates of the Engineering Physics program at Tulane University will attain:

• an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
• an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
• an ability to communicate effectively with a range of audiences
• an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
• an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
• an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
• an ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Mission Statement for Engineering Physics

The mission of our program is to provide the highest quality education for students in the principles and applications of Engineering Physics. The excellence of the program is ensured by our department’s high regard for teaching, research activities and industrial ties. The program educates students to take leadership roles in industry, academia and government.

Tulane's Engineering Physics program is accredited by the Engineering Accreditation Commission of ABET (www.abet.org (https://nam03.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.abet.org&data=02%7C01%7Cjarchibald%40tulane.edu%7C531a6bbeb3094e96b5da08d750de9a4b%7C9de9818325d94b139fc34de5489c13f%7C0%7C7%7C637066789338137647%7C0%7C0%7C0%7C637066789338137647&sdata=LFI9uXuIEBaiZppTTeBySY%2BDou43OkJG6XGmtExe%2FxN%3D&reserved=0)).

Engineering Physics Major

This interdisciplinary program provides students with a broad science and mathematics background similar to that of Tulane's traditional physics major, combined with a strong grounding in engineering design and the application of physics principles to practical engineering problems. The curriculum is characterized by a strong emphasis on modern physics and its application to 21st century technology, including new materials, quantum electronics, nanofabrication, and devices. Focus areas in our department include: materials engineering, computational engineering, and nano devices. Our students will be well equipped to pursue research and development careers in new and emerging technologies that cut across traditional engineering and science disciplines, to pursue graduate studies in science or engineering, or to enter professional fields including law, management, and medicine. Graduates will have substantial experience with laboratory methods, data analysis, and computation. A centerpiece of the curriculum is the design sequence, consisting of a two-semester Introduction to Design sequence, a summer industry internship, and a two-semester capstone Team Design Project. As an intrinsic part of the curriculum, students develop strong oral and written communication skills, multidisciplinary teamwork skills, experience in public service, and knowledge about the high ethical standards of the engineering profession. The program builds on cross-cutting areas of research strength in the School of Science and Engineering, including: novel 21st century materials; materials for energy; biomolecular materials; "quantum mechanics to devices"; surfaces, interfaces, and nanostuctures; and computation.

Graduates of the Engineering Physics program at Tulane University will successfully pursue:

1. Satisfies a Broader Technical elective.
2. Satisfies a Classical Physics elective.
3. Satisfies a Contemporary Physics elective.
4. Satisfies an Engineering elective.
Our engineering physics curriculum places emphasis on:

- basic principles of engineering
- problem solving
- mathematics
- physics
- engineering design
- computer science and engineering
- chemistry
- science and scientific principles
- research
- communications
- multi-disciplinary teamwork
- continuous learning
- leadership
- ethics
- preparation for advanced degrees in engineering and science

The required curriculum for engineering physics is relatively full. Class schedules should be carefully planned. Typical of engineering in the US, some engineering physics majors may take a course overload in some semesters.

Engineering Physics Certificates

The Engineering Physics program offers optional certificates for students who are interested in specific aspects of the broader program. Completing a certificate offers several advantages: structured/guided use of electives for focusing in a particular area, providing some depth within a broad-based ENGP curriculum; additional branding that may help students attract interest in industry after graduation; and preparation for common graduate engineering programs. Certificates are optional, but if a student does complete one, this is reported on the transcript. Students may choose one of four certificates:

- Computational engineering (p. 310)
- Electrical engineering (p. 310)
- Materials engineering (p. 315)
- Mechanical engineering (p. 318)

with each having a pre-approved set of coursework that meets the requirements of that certificate. See http://www2.tulane.edu/sse/pep/academics/undergraduate/engineering-physics-program/engineering-physics-certificates.cfm for more information and an up-to date-list of pre-approved electives.

Website
tulane.edu/sse/pep/academics/undergraduate/engineering-physics-program/

Requirements

General Course Requirements for Engineering Physics

The major curriculum consists of the following requirements (94 credits total plus Tulane Core Curriculum requirements):

Tulane University's Core Requirements for Graduation

Note that Engineering Physics majors must complete six cultural knowledge electives, but are exempt from the language requirement.

Sample Schedule of Classes for Engineering Physics

### Year 1

#### Fall
- CHEM 1070 & CHEM 1075: General Chemistry I and General Chemistry Lab I 4
- PHYS 1310: General Physics I 4
- PHYS 1311: General Physics I Lab 0
- MATH 1210: Calculus I 4
- ENGL 1010: Writing 4
- TIDES Course Credits 1

#### Credit Hours
- Year 1: 17

### Spring
- PHYS 1320: General Physics II 4
- PHYS 1321: General Physics II Lab 0
- CHEM 1080 & CHEM 1085: General Chemistry II and General Chemistry Lab II 4
- MATH 1220: Calculus II 4
- ENGP 1410: Statics 3

#### Credit Hours
- Spring: 15

### Year 2

#### Fall
- PHYS 2350: Modern Physics I 3
- MATH 2210 & MATH 2211: Calculus III 4
- ENGP 2010: Electric Circuits 3
- ENGP 2011: Electric Circuits Lab 1
- ENGP 2310: Product & Experimental Design 3

#### Credit Hours
- Total Credit Hours: 210-212
Engineering Science Minor

Students not majoring in biomedical engineering, chemical engineering, or engineering physics may earn a minor in Engineering Science by completing the Engineering Science minor. Interested students should contact the Associate Dean of the School of Science and Engineering to declare the minor and discuss the requirements.

Requirements

Students not majoring in biomedical, chemical engineering or engineering physics may earn a minor in Engineering Science by completing the following courses:

Prerequisite Math and Science Courses

Materials Physics and Engineering, PhD

Materials Physics and Engineering PhD Program

The Tulane University graduate program in Materials Physics and Engineering (MPEN) is an interdisciplinary program that focuses on the fundamentals of material structure, material properties, material processing, and material modeling that are required to solve the complex technological problems in the 21st century, especially in the focus areas of nanotechnology, energy, environment healthcare, and homeland security/defense. The Tulane MPEN program is unique and unlike other graduate programs in materials science and engineering in that this program is based on a core foundation of physics enabling a student to appreciate the aforementioned materials interplay found in every new functional material discovered or developed. Modeling will allow students to handle “big data”, find optimized materials for new applications, and design engineering materials where the goal is integration and synthesis within and across these domains.

Requirements

Course ID    Title                                                                 Credits
---         ---                                                                 ---
At least 48 credits of graduate courses must be completed.

Required courses (30 credits, each course is 3 credits):
- MPEN 6350  Kinetics of Material Systems                                  3
- MPEN 6360  Structure of Materials                                        3
- MPEN 6760  Thermodynamics of Materials or CENG 7110 Modern Thermodynamics 3
- MPEN 7910  Research I                                                    3
- MPEN 7920  Research II                                                   3
- MPEN 7930  Research III                                                  3
- MPEN 7940  Research IV                                                   3

Students must take two of the following three “Core Physics” courses:
- PHYS 7130  Solid State Physics                                           3
- PHYS 7170  Quantum Mechanics I                                           3
- PHYS 7230  Electromagnetic Theory I                                     3

Students must take one of the following “Properties of Materials” courses:
- MPEN 6370  Processing of Biomaterials                                    3
- MPEN 6560  Photonic Materials & Devices                                 3
- MPEN 6720  Mechanic Behavior of Materials                               3
- PHYS 6210  Molec Biophysics & Polymer Phy                                3
- PHYS 6700  Electrnc Prop of Materls                                     3

Elective courses (18 credits): The remaining 18 credits should be graduate level physics or materials electives, or graduate level courses in a related field with approval of the research supervisor and graduate program advisor. One of the electives must be a computational course (PHYS 6170 Computational Physics and Engineering, MPEN 6290 Computational Materials Science and Engineering, or a computational course in another department approved by the graduate program advisor). Up to 6 credits may be fulfilled by Advanced Research I and II, with approval of the research supervisor and graduate program advisor.
The prospectus defense demonstrates to the committee that the student has acquired sufficient knowledge in the specific research area and can effectively express that knowledge orally and in writing.

A student must pass the oral qualifying exam before undertaking the prospectus defense. The prospectus defense consists of a written proposal and an oral defense:

The written research proposal (10-15 pages) contains an introduction, proposed research and justification, methods, preliminary results, and discussion. It must be reviewed and approved by the committee before the end of the sixth semester of graduate study.

The oral defense is a two-hour oral examination, including a research presentation (about 45 minutes) prepared by the student, given by the committee. The examination includes specific questions about the student's research as well as broadly focused questions on the general area of research. The oral defense must be attempted following approval of the written proposal, no later than the sixth semester of graduate study. If failed, the student is normally given a second attempt in the following semester. After two failures the student will be disenrolled from the program.

Students who are sufficiently prepared are strongly encouraged to take the prospectus defense before the end of the 4th semester of graduate study.

It is expected that, after completion of the oral prospectus defense, the Ph.D. candidate will obtain a Research Assistantship (RA) in the same research group. In order to encourage this, the faculty have adopted a policy for allocating graduate students on TA's to research groups.

Annual Report:

In April of each year, every Ph.D. student will submit a brief annual progress report (1-2 pages) to the research supervisor (and committee, when formed) summarizing research progress and accomplishments over the previous year, and future plans and milestones. This requirement is waived in the years when the prospectus and thesis defenses are completed.

Dissertation:

The final requirement for the Ph.D. degree is a written dissertation based on original research, approved by the committee, and its defense in an oral exam by the committee.

Master's Degree:

The master's degree is not a requirement for the Ph.D. in Materials Physics and Engineering. Admission with financial aid is only for doctoral students. However a graduate student may receive an M.S. in Physics based on 30 hours of approved graduate credit, or (if the research supervisor agrees to offer this option) an M.S. in Physics based on 24 hours of approved graduate credit plus a thesis deemed acceptable by the research supervisor. Research course credit does not count toward the M.S. in Physics degree.

Program Transfers:

Students in the Materials Physics and Engineering Ph.D. program cannot transfer to the Physics Ph.D. program without going through the regular admissions process.

Exceptions to the requirements, due to extenuating circumstances, may be granted by vote of the PEP faculty.
Note: the previous requirements, which apply to students who entered the program in Fall 2018 or earlier, may be found here. (http://www2.tulane.edu/sse/pep/academics/graduate/upload/MPEGradDegReq2016.pdf)

Prospective Graduate Student Admission Information

REMINDER: The application deadline for Graduate Study in Materials Physics and Engineering at Tulane is Feb. 1st.

Materials Science and Engineering, MS

Materials Science and Engineering (MSE) Masters Program
The Tulane University Master of Science Degree in Materials Science and Engineering is an interdisciplinary degree that focuses on developing the deep understanding of materials modeling, processing, structure, properties, and performance required to solve complex technological problems. The program covers both "hard" and "soft" materials along with related devices. The MSE masters program provides preparation for professional practice in modern materials science for those technologists who wish to continue their education. Participating faculty are drawn from multiple materials-oriented departments in the School of Science and Engineering, including Chemistry, Chemical and Biomolecular Engineering, Biomedical Engineering, and Physics and Engineering Physics. This rigorous program trains graduate students to become leaders in industrial, government, and university settings. The program is flexible, allowing both full-time and part-time students, along with thesis (research component) and non-thesis (coursework only) tracks. Graduates are expected to fill the growing global demand for trained materials scientists and engineers in the twenty-first century. Graduates typically find work in a number of fields, including biotechnology and health care, defense, information technologies, manufacturing, aerospace, chemical processing, and energy.

Requirements

Required and Elective Coursework

Applicants may choose one of two paths: 30 credits of coursework or 24 credits of coursework and a 6-credit written research thesis supervised by MSE faculty at Tulane (http://www2.tulane.edu/sse/academics/graduate/upload/MSE-Faculty.pdf).

The required coursework for the Tulane MSE Master's degree consists of four courses.

</table>

Other SSE courses, including ones designated as BMEN, CENG, CHEM, COSC, MATH, and PHYS, may be suitable electives for MSE Master's students, with approval from the Advisory Committee.

Admission Requirements

Applicants from all undergraduate science and engineering majors are eligible to apply.

• Applicants must have completed at least 24 credit hours in science and engineering (3.0 GPA or higher).

• Adequate background coursework in mathematics, physics, and chemistry is essential. Applicants need to have taken an undergraduate Materials Science and Engineering course at the level of the Callister textbook, equivalent to CENG/ENGP 3120
(Materials Science and Engineering) at Tulane with a minimum grade of B.

- Applicants must submit a transcript, GRE General Test scores, a personal statement, two letters of recommendation, and TOEFL scores (if required).

**Tuition**

Non-4+1 students will pay the per-credit rate for Science and Engineering

For Tuition Rates » (https://studentaccounts.tulane.edu/sites/studentaccounts.tulane.edu/files/FY19_TF_by_Special_Majors_Descriptive.pdf)

**GPA Requirement**

A GPA of 3.0 is required for the degree to be conferred. Courses receiving less than B- will contribute no credit toward the Master's degree requirements.

**Apply**

Please use the Online Application System (https://applygrad.tulane.edu/apply) to apply for the program. The application deadline is June 30th.

**Contacts**

Please contact Prof. Doug Chrisey, or any member of the MSE Master's Program Advisory Committee, if you have questions about the program.

- Prof. Doug Chrisey (dchrisey@tulane.edu), Physics and Engineering Physics
- Prof. Matthew Escarra (escarra@tulane.edu), Physics and Engineering Physics
- Prof. Vijay John (vj@tulane.edu), Chemical and Biomolecular Engineering
- Prof. Michael Moore (mooremj@tulane.edu), Biomedical Engineering
- Prof. Noshir Pesika (npesika@tulane.edu), Chemical and Biomolecular Engineering
- Prof. Russell Schmehl (russ@tulane.edu), Chemistry

**Materials Science and Engineering (MSE) Masters 4+1 Program**

In addition to the above requirements:

- Tulane 4+1 students must have a minimum grade of B in CENG/ENGP 3120, and at least one of their letters of recommendation must be from a Tulane SSE faculty member.
- 4+1 students will normally indicate their intention to pursue the program before the end of the third year at Tulane and will complete between 6 and 12 credits of coursework towards the MS degree by the end of the fourth year.
- Six of these credits can count simultaneously towards the 120 credits required for the Bachelor's degree.
- GRE and TOEFL scores are not required for Tulane 4+1 students.

**Tuition**

Students in the Tulane 4+1 programs pay only 35% of the regular graduate tuition for the 5th year.

For Tuition Rates » (https://studentaccounts.tulane.edu/sites/studentaccounts.tulane.edu/files/FY19_TF_by_Special_Majors_Descriptive.pdf)

**GPA Requirement**

A GPA of 3.0 is required at graduation. Courses receiving less than B- will contribute no credit toward the Master's 4+1 degree requirements.

**Apply**

Please use the Online Application System (https://applygrad.tulane.edu/apply) to apply for the program. The application deadline is June 30th.

**Contacts**

Please contact Prof. Doug Chrisey, or any member of the MSE 4+1 Master's Program Advisory Committee, if you have questions about the program.

- Prof. Doug Chrisey (dchrisey@tulane.edu), Physics and Engineering Physics
- Prof. Matthew Escarra (escarra@tulane.edu), Physics and Engineering Physics
- Prof. Vijay John (vj@tulane.edu), Chemical and Biomolecular Engineering
- Prof. Michael Moore (mooremj@tulane.edu), Biomedical Engineering
- Prof. Noshir Pesika (npesika@tulane.edu), Chemical and Biomolecular Engineering
- Prof. Russell Schmehl (russ@tulane.edu), Chemistry

**Mechanical Engineering Certificate**

Engineering Physics majors have the opportunity to focus their elective course work in a specific concentration area and earn a certificate if they are interested in a more focused field of study. Successful completion of an ENGP certificate requires a student to choose any four out of the seven total electives (i.e., out of the four engineering electives, one contemporary physics elective, one classical physics elective, and one broader technical elective) from within a particular concentration area.

The allowable electives for the Mechanical Engineering Certificate are listed in the Requirements.

http://www2.tulane.edu/sse/pep/academics/undergraduate/physics-program/

Overview
Physics is the most fundamental science. It is the foundation for our understanding of the world around us, spanning the ultimate depths within subatomic nuclei to distances beyond the known universe. Physics provides a basis for other sciences, including chemistry, biology, astronomy, and geology. Physics discoveries, which led to technologies ranging from energy sources to quantum information and nano-communication devices to state of the art medical diagnostics, have revolutionized our world, and will continue to do so. The physics curriculum at Tulane provides strong analytical skills and problem-solving abilities for careers ranging from academic research, to industrial development, to large government exploration, to project management, to the financial sector, to creative writing. The curriculum is unusually flexible and has successfully led to degrees with double, and even triple majors in diverse fields. The physics program also promotes and rewards creativity, stimulates intellectual development, and engages our students in life-long learning.

Mission Statement for Physics
The mission of the Physics program is to provide outstanding opportunities for learning and research in physics and teaching of the highest quality and impact, addressing needs and challenges of the 21st century. The program is designed to assist our students in developing deep understanding via powerful problem-solving skills, preparing them for a very broad range of opportunities.

Program Objectives for Physics
The Physics program aims to educate students to become professionals with in-depth knowledge and skills in science and mathematics to understand physical systems; to research, design and solve problems in physics and related disciplines; and to provide the foundation for graduate study and lifelong learning. Our objective is to prepare graduates to be able to successfully pursue:

- Advanced studies leading to research and/or professional careers in physical science;
- Careers in related technical and professional fields in industry or government.

Program Outcomes for Physics
Graduates of the Physics program at Tulane University will attain:

- an ability to apply knowledge of physics, mathematics, other sciences, and engineering;
- an ability to design and conduct experiments, as well as to analyze and interpret data;
- an ability to function on multi-disciplinary teams;
- an ability to identify, formulate, and solve problems;
- an understanding of professional and ethical responsibility;
- an ability to communicate effectively;
- a recognition of the need for, and an ability to engage in life-long learning;
- a knowledge of contemporary issues;
- an ability to apply advanced mathematics through multivariate calculus, differential equations, and/or numerical techniques;
- a knowledge of contemporary analytical and experimental techniques;
- a competence in the use of computational tools and in the use of a high-level programming language;
- a depth of knowledge in calculus-based physics at an advanced level.

Our physics curriculum places emphasis on:

- physics
- mathematics
- computer science and engineering
- problem solving
- computational skills
- science and scientific principles
- research
- communications
- multi-disciplinary teamwork
- continuous learning
- leadership
- ethics
- preparation for advanced degrees in a broad variety of fields

The basic physics requirements are flexible and accommodate degrees with majors in multiple and diverse fields. Students planning to continue on to graduate school should take more than the minimum courses required.

Requirements
General Course Requirements for Physics
The intention of Tulane's physics major program is to encourage students to continue on to graduate education in Physics and related disciplines or to pursue cross-disciplinary preparation in physics for
medical or other professional schools. Dual majors are encouraged, however students may not major in both Physics and Engineering Physics due to the substantial overlap. Students pursuing a career in physics are advised to follow the "Pre-Graduate Training" sequence. The minimum GPA for degree certification, counting all courses pertaining to Physics, Mathematics, and approved Science and Engineering electives, is 2.50.

The basic requirements for a Physics Major are as follows:

<table>
<thead>
<tr>

Total Credit Hours: 73

Notes:

- Students are encouraged to consider a bachelor of science in physics as preparation for graduate study in disciplinary and interdisciplinary sciences (physics, astrophysics, biophysics, chemistry, neuroscience, materials science, geophysics, meteorology, oceanography, and applied physics), for professional study in medicine, patent law, business, or engineering, and for careers in environmental science, in mathematical or computer modeling, in science writing, or in science and public policy.
- Within the requirements above, programs can be tailored to suit the needs of students who elect these career options. In addition, the department offers a 4+1 program that allows students to obtain a Master’s Degree in five years, by enabling them to take graduate level courses as an undergraduate. Tulane University is a member of the Oak Ridge Associated Universities (ORAU) consortium.
- Research opportunities are often available for undergraduate Physics majors in conjunction with faculty, on a case by case basis.
- Students are responsible for fulfilling all TIDES, cultural knowledge, foreign language, writing, service learning, and other requirements, required by Tulane and the School of Science and Engineering.

Sample Schedule of Classes for Physics

(This is only a suggested schedule and students should not feel compelled in any way to model their course of studies on this example. Many other options and alternatives are possible, especially when including a double major. Chemistry, for example, is not a requirement for the B.S. in Physics. The illustration of certain courses in certain semesters below does not guarantee they will be offered in the suggested semester. Many physics courses at the 3000-level and above are given only once every two years. Students should keep abreast of actual course offerings as they are published by the Registrar.)

1. At least two courses at the 2000-level or above.
2. Electives from other science departments are not normally accepted. CMPS 1500 is eligible to count as a computational elective, as an exception to the requirement that electives must be at the 2000-level or above. Students should always confirm with the Major Advisor that all their electives are acceptable. All courses or electives counting towards the requirements must be at least three credits.
Year 3

PHYS 3600 Nanoscience & Technology 3
PHYS 4650 Optics 3
Cultural Knowledge Elective 9

Total Credit Hours 73

Pre-Graduate Training in Physics

The student who intends to continue graduate work in physics should complete at least 32 credits in physics including:

Course ID  Title Credits
PHYS 1310 General Physics I 4
PHYS 1320 General Physics II 4
PHYS 2350 Modern Physics I 3
PHYS 2360 Modern Physics II 3
PHYS 3630 Electromagnetic Theory 3
PHYS 3740 Classical Mechanics 3
PHYS 4230 Thermal Physics 3
PHYS 4470 Intro Quantum Mechanics 3
PHYS 4650 Optics 3

Students are encouraged to undertake a research project and write a senior honors thesis under the supervision of a physics faculty member.

Recommended mathematics courses include:

Course ID Title Credits
MATH 3050 Real Analysis I 3
MATH 3090 Linear Algebra 4
MATH 4060 Real Analysis II 3

Courses in Scientific Computing 1

1 e.g., PHYS 3170 Computnl Physics & Engr (3 c.h.) or MATH 3310
Scientific Computing I (3 c.h.) are also recommended.

Physics Minor

The object of the Physics Minor is to provide a strong physics component to bolster students typically majoring in other STEM areas, such as Chemistry, Mathematics, Cell and Molecular Biology, and the various Engineering fields. In some cases, students from the Liberal Arts and Social Sciences pursue the Physics Minor to add STEM strength to their degrees.

Requirements

Course ID Title Credits
PHYS 1310 General Physics I 4
PHYS 1320 General Physics II 4
Select four physics courses at the 2000-level or above. At least one must be taken from the following group.
PHYS 3630 Electromagnetic Theory 3
PHYS 3740 Classical Mechanics 3
PHYS 4230 Thermal Physics 3
PHYS 4650 Optics 3
Total Credit Hours 20

It should be noted that some of the upper-level physics courses have certain mathematics prerequisites.

Physics, MS

The Tulane 4+1 Program in Physics: Current Tulane undergraduates may earn an MS degree in physics by adding one year to the four years of study usually required for the BS degree. The MS degree provides a more complete preparation for a PhD program than the BS. The MS is usually preferred by industry and business. Normally an MS degree requires at least two years of postgraduate study. In this program the time is reduced to one year by taking some graduate level courses as an undergraduate.

Requirements

The MS requires 24 hours of physics coursework at the graduate (6000-7000) level plus six additional hours of either graduate courses or research. In the 4+1 program, a student will normally take a total of twelve hours of graduate courses as a junior or senior and nine more hours each semester in the fifth year. This provides a total of thirty hours, including up to six hours of research credit. With permission of the graduate advisor, graduate courses in other departments (e.g. Chemistry, Computational Science, Math, Engineering) may count toward the MS.

A 4+1 student should begin the program in their junior year. While it may be possible to complete the requirements for the 4+1 program by starting in the senior year, this is difficult and not recommended.
Please note that some graduate courses are co-taught with similar undergraduate courses and have somewhat different requirements.

**Application:**

Application may be made using the standard form for graduate admission available on the SSE website (sse.tulane.edu). Normally an undergraduate GPA of 3.0 or higher, overall and in physics courses, is required for admission. One letter of recommendation is required. The GRE is not required.

**Physics, PhD**

The PhD degree in physics provides the academic foundation and laboratory training to conduct high quality research at the frontiers of physics. Graduate students from diverse backgrounds become creative physicists with the skills to thrive in educational, industrial or government laboratory settings.

**Requirements**

**Course Work**

At least 48 credits of graduate courses must be completed.

**Required Courses**

</table>

Select 15 credits ²

¹ Should be graduate level physics electives, or graduate level courses in a related field with approval of the research supervisor and graduate program advisor.

² Up to 6 credits may be fulfilled by Advanced Research I and II, with approval of the research supervisor and graduate program advisor. Advanced Research I and II may be taken at the same time as Research I-IV, with up to 6 credits of research allowed in one semester.

**Grades**

Per the SSE Handbook: “A course in which a grade of C+ or less is earned cannot be counted toward a graduate degree. If a student receives one B- grade, the student is immediately considered for probation by the Associate Dean for Graduate Studies in consultation with the appropriate department/program. If a student receives two grades of B-, or one grade less than B, during his/her tenure in the School of Science and Engineering, the student is placed on probation and considered for dismissal by the Associate Dean in consultation with the appropriate department/program.”

A student who does not maintain the minimum 3.0 GPA in graduate course work will be subject to disenrollment.

**Written Qualifying Exam**

The Ph.D. qualifying exam is a 6-hour written examination covering classical and modern physics, given by the department once per semester. It covers the typical U.S. undergraduate physics curriculum with an emphasis on classical electrodynamics and quantum mechanics. The qualifying exam must be attempted no later than the fourth semester of graduate study. Students who are sufficiently prepared may take it during the first year with approval of the research supervisor. The passing score is 60%. Students who fail the qualifying exam must retake it until passed. Students may attempt the qualifying exam up to three times. Any student who has not passed the qualifying exam by the end of the fifth semester of graduate study will be disenrolled from the program.

Students who have met course requirements and passed the qualifying exam may apply to become degree candidates.

**Faculty Dissertation Committee**

Prior to the prospectus defense, the student and research supervisor form the faculty dissertation committee, which consists of the research supervisor (chair) and at least two other faculty members. One member may be from another Tulane department or other appropriate institution. The faculty dissertation committee (henceforth the committee) examines the student at the prospectus defense and oral dissertation defense, and approves the final written dissertation.

**Prospectus Defense**

The prospectus defense demonstrates to the committee that the student has acquired sufficient knowledge in the specific research area and can effectively express that knowledge orally and in writing. A student must pass the written qualifying exam before undertaking the prospectus defense. The prospectus defense consists of a written proposal and an oral defense.

The written research proposal (10-15 pages) contains an introduction, proposed research and justification, methods, preliminary results, and discussion. It must be reviewed and approved by the committee before the end of the sixth semester of graduate study.

The oral defense is a two-hour oral examination, including a research presentation (about 45 minutes) prepared by the student, given by the committee. The examination includes specific questions about the student’s research as well as broadly focused questions on the general area of research. The oral defense must be attempted following approval of the written proposal, no later than the sixth semester of graduate study. If failed, the student is normally given a second attempt in the following semester. After two failures the student
will be disenrolled from the program (exceptions due to extenuating circumstances may be granted by vote of the faculty).

Students who are sufficiently prepared are strongly encouraged to take the prospectus defense before the end of the 4th semester of graduate study.

It is expected that, after completion of the oral prospectus defense, the Ph.D. candidate will obtain a Research Assistantship (RA) in the same research group. In order to encourage this, the faculty have adopted a policy for allocating graduate students on TA's to research groups.

Annual Report
In April of each year, every Ph.D. student will submit a brief annual progress report (1-2 pages) to the research supervisor (and committee, when formed) summarizing research progress and accomplishments over the previous year, and future plans and milestones. This requirement is waived in the years when the prospectus and thesis defenses are completed.

Dissertation
The final requirement for the Ph.D. degree is a written dissertation based on original research, approved by the committee, and its defense in an oral exam by the committee.

Master's Degree
The master's degree is not a requirement for the Ph.D. in physics. Admission with financial aid is only for doctoral students. However a graduate student may receive an M.S. in Physics based on 30 hours of approved graduate credit, or (if the research supervisor agrees to offer this option) an M.S. in Physics based on 24 hours of approved graduate credit plus a thesis deemed acceptable by the research supervisor. Research course credit does not count toward the M.S. in Physics degree.

Program Transfers
Students in the Physics Ph.D. program cannot transfer to the Materials Physics and Engineering Ph.D. program without going through the regular admissions process.

Exceptions to the requirements, due to extenuating circumstances, may be granted by vote of the PEP faculty.

Department of Psychology

Programs

Undergraduate

Majors

- Psychology and Early Childhood Education Major (p. 323)
- Psychology Major (p. 324)

Minor

- Psychology Minor (p. 324)

Graduate

- Behavioral Health, MS (p. 323)
- Psychology, MS (p. 325)
- Psychology, PhD (p. 325)

Behavioral Health, MS

Behavioral Health is a broad term generally understood to subsume mental health, substance use disorders, and health related behaviors. The 4+1 terminal Master's program in Behavioral Health provides qualified students earning a baccalaureate degree in Psychology or related fields (e.g., Public Health and Neuroscience) from Tulane University with graduate training in this specialty area of psychology.

Requirements

Graduate courses include health psychology, univariate statistics, research methods, and other approved courses relevant to behavioral health as outlined in the program checklist. Students in the thesis track complete 24 course credits and also produce a Master’s thesis comprising an empirical study in psychology. Students in the course-based track complete 30 course credits.

Psychology and Early Childhood Education Major

The Bachelor of Arts degree in Psychology & Early Childhood Education allows psychology students to earn certification to teach in grades Pre-kindergarten through 3rd grade. For this coordinate major, student have advisors both through Psychology as well as through the Office of Teacher Preparation & Certification.

Requirements

A major in psychology and early childhood education is possible by completing the following courses:

<table>
<thead>
<tr>
<th>Course ID</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>PSYC 1000</td>

Total Credit Hours 35
Note(s):

Students also must complete a series of education courses in early childhood education, which includes their capstone experience. Refer to the Office of Teacher Preparation and Certification (teacher.tulane.edu) for a description of these courses and other requirements. Students receive the B.A. degree and must complete the College and School of Liberal Arts core requirements.

Psychology Major

The Bachelor of Science degree in Psychology introduces students to the major theoretical perspectives and primary empirical techniques of hypothesis testing in psychological science, as well as the application of psychological principles.

Requirements

Total Credit Hours 32

Please note that ALL 3000 level courses count towards the 29 credits, including PSYC 3090 Univariate I & Lab (4 c.h.) and PSYC 3130 Experimental Psychology & Lab (4 c.h.), and the departmental distribution requirements.

In addition:

Students majoring in psychology must complete the math courses necessary for the B.S. degree, one SSE laboratory course (and its co-requisite) outside of PSYC, and one 3 credit non-laboratory SSE courses that is outside (and NOT cross-listed with) PSYC.

No more than 15 credits may be transferred to count towards the Psychology Major.

Students must earn at least a 2.0 major GPA.

At least 29 credits must be taken at or above the 3000 level.

S/U graded courses do not count towards the major requirements.

Psychology Minor

A minor in Psychology (PSYC) provides students with exposure to the breadth of the field beyond Introductory Psychology, and includes at least one course in three of the four distribution areas (below) plus one psychology elective.

- Biological Psychology
- Developmental Psychology
- Cultural, Personality, and Social Psychology
- Clinical Applications and Assessment

Students that major in neuroscience complete the psychology minor under PSYN. The PSYN minor requires the completion of PSYC 1000 Introductory Psych (3 c.h.) and four additional elective courses in Psychology which do not overlap with course requirements in Neuroscience and are not cross-listed as PSYC/NSCI.

Requirements

A minor in psychology requires:

No more than 8 credits may be transferred to count towards the Psychology Minor.

Students must earn at least a 2.0 minor GPA.

At least 12 credits must be taken at or above the 3000 level.

S/U graded courses do not count towards the minor requirements.

Specifics for each "version" of the psychology minor are the following:

**PSYC:**

5 Psychology courses and a minimum of 15 hours. These courses must include PSYC 1000 Introductory Psych (3 c.h.), at least 1 course in three of the four distribution areas (see below), and one elective psychology course.

- Biological Psychology
- Developmental Psychology
- Cultural, Personality, and Social Psychology
- Clinical Applications and Assessment

**PSYN:** (for students majoring in Neuroscience)

5 courses and a minimum of 15 hours. The PSYN minor requires the completion PSYC 1000 Introductory Psych (3 c.h.) and four additional elective courses in Psychology which do not overlap with course requirements in Neuroscience and are not cross-listed as PSYC/NSCI.
Psychology, MS

The Master of Science Program in Psychological Science provides graduate level training in psychological theories and methods. In the thesis-based track, students focus research and courses on a specific area of psychology (e.g., social psychology); this option is available to students enrolled in the Psychology PhD program as well as students enrolled in a 4+1 program. In the course-based track, which is only available to students in the 4+1 program, students take a graduate-level curriculum that covers a broad range of psychology sub-fields.

Requirements

Required graduate courses include courses in core areas of psychology (e.g., social psychology), quantitative methods, and other approved courses to provide depth and breadth. Students in the thesis track complete 24 course credits and also produce a Master’s thesis comprising an empirical study in psychology. Students in the course-based track, which is only available for students in the 4+1 program, complete 30 course credits.

Psychology, PhD

Graduate studies leading to the Ph.D. degree in psychology are designed to offer the student training in a major research area within psychology, expertise in quantitative and design methodology, and varied research opportunities. Students study either an area of Psychological Science (Cognitive/Behavioral Neuroscience, Developmental Psychology, or Social Psychology) or School Psychology (which is accredited by the American Psychological Association).

Requirements

The minimum requirements for the Ph.D. degree include:

- A total of 48 hours of graduate course credits. These credits include 3 courses in core areas of psychology (e.g., developmental psychology), 3 courses in quantitative methods (e.g., multivariate statistics), and other approved courses and research projects.
- Completion of a Master’s thesis in psychology including the production of at least one empirical study.
- Satisfactory performance on a comprehensive preliminary examination.
- Proposal and completion of an original dissertation research project.
- Successful defense of the written doctoral dissertation through an oral examination. The requirements for the degree of Doctor of Philosophy in Psychology with a specialization School Psychology are similar to those noted above except that students complete a minimum of 62 didactic hours, 24 practicum hours, and a one-year pre-doctoral clinical internship.

Department of River-Coastal Science and Engineering

Programs

Graduate Certificate

- River Science and Engineering Certificate of Completion (p. 325)

River Science and Engineering Certificate of Completion

Tulane University and the U.S. Army Engineer Corps of Engineers have partnered to provide a unique, graduate-level certificate program that focuses on teaching students both the science and engineering associated with river management. There is an emphasis on the academic underpinnings as well as pragmatic applications, and the interdisciplinary nature of rivers is stressed by including faculty who work in geology, civil engineering, geomorphology, river mechanics and engineering, biogeochemistry, ecology and numerical modeling. This program is offered fully online, combining self-taught modules with weekly Live Sessions and is available to students everywhere. This certificate program can, but does not have to, serve as a step toward a graduate degree in the subject.

Requirements

The River Science and Engineering program will consist of the completion of one required course, RCSE 6800 Intro to River Science & Eng (3 c.h.), that will be offered every Fall and Spring semester initially, and four of five additional courses (more elective course may be added in future semesters) that will begin being offered in the Fall 2018 Semester. The existing coursework in the program is:

<table>

</tbody>
</table>

Total Credit Hours 16-18

Students must complete the intro course prior to enrolling in advanced courses unless permission is obtained from the RCSE department chair (meadallison@tulane.edu) and the class instructor. This exception will be made for students who are not initially interested in completing the full certificate program and that also meet the instructor’s prerequisites for entrance into the course. Each of the courses in the program will be three credit hours. Those completing 15 credit hours of required coursework will be granted a certificate of completion.

All six courses
Interdisciplinary Graduate Degree Programs

Programs

Graduate

- Bioinnovation, PhD (p. 326)
- Interdisciplinary, MS (p. 326)
- Interdisciplinary, Ph.D (p. 326)
- Neuroscience, MS (p. 326)
- Neuroscience, PhD (p. 327)

Bioinnovation, PhD

Graduate education in the sciences and engineering rarely offers the training and experiences that fully prepare graduates to enter directly into non-academic research and leadership positions. The Interdisciplinary PhD Program in Bioinnovation at Tulane University challenges this paradigm by cultivating in its students the ability to develop clinically-relevant biomedical technologies that have the potential to evolve into marketable products. Participating fellows benefit from and expand upon an environment of translational research at Tulane that spans the School of Science & Engineering (SSE), School of Medicine (SOM) and School of Public Health and Tropical Medicine (SPHTM). Simultaneous collaborations with the Business and Law Schools, industry partners and the FDA provide fellows with a strong foundation in entrepreneurship and regulation. This program was initiated in 2012 by an NSF Integrative Graduate Education and Research Traineeship (IGERT) award.

Training within this program emphasizes bioinnovation, which we define as the development and progression to the marketplace of clinically relevant biomedical technologies and devices.

Requirements

Specific program requirements for the PhD in Bioinnovation can be found on the program website (https://bioinnovation.tulane.edu/courses).

Interdisciplinary, MS

An interdisciplinary Master of Science degree is a degree granted for a curriculum of graduate study on a coherent and definable field of science and/or engineering. Such fields of study may exist at Tulane at the doctoral level, exist at the MS-level at other major universities, or reflect an emerging discipline. Examples include Bioinnovation, Computer Science, Biology, Zoology, and Environmental Biology & Chemistry.

The M.S. is NOT awarded simply for an accumulation of credits, but for a distinct and definable program of study.

Requirements

Specific program requirements for the Interdisciplinary Master of Science degree in the School of Science and Engineering may be found on the program website (http://www2.tulane.edu/sse/academics/graduate/msinterdisciplinary.cfm).

Interdisciplinary, Ph.D

The Interdisciplinary Ph.D. through the School of Science and Engineering allows students to develop their own course of study, tailored to their specific interests. The course of study must meet the basic requirements of a Ph.D. in SSE and be approved by the Associate Dean for Graduate Programs.

Note: Students who are interested in interdisciplinary topics that primarily are not in engineering or the sciences should consult the interdisciplinary graduate programs of other schools, such as the School of Liberal Arts (http://tulane.edu/liberal-arts/interdisciplinary-phd.cfm).

Requirements

Specific requirements for the Interdisciplinary Doctor of Philosophy degree in the School of Science and Engineering may be found on the program website (http://www2.tulane.edu/sse/academics/graduate/interdisciplinary-phd.cfm).

Neuroscience, MS

Tulane University offers a master of science degree in Neuroscience for students with baccalaureate degrees from other institutions. Students in the M.S. program take 30 credits of courses relevant to their interests in Neuroscience and related fields. The mission of the M.S. program is to prepare students for admission to doctoral programs in the neurosciences, careers in neuroscience-related fields, and for admission to medical schools. Thus, students who already have received their medical training are discouraged from applying, as they are overqualified for this program. Completion of the M.S. program does not guarantee acceptance to Tulane’s Ph.D. programs or medical school.

The purpose of the 4+1 M.S. Program in Neuroscience is to provide Tulane students with training at the graduate level for one additional year beyond the baccalaureate degree. Students pursuing an advanced degree in Neuroscience benefit from a multidisciplinary education and training in the sciences of the brain and nervous system, including cell and molecular biology, neuropharmacology, neurophysiology, neuroanatomy, neuroendocrinology, and biological psychology.

Students accepted to the 4+1 program may follow one of two tracks toward completion of an M.S. in Neuroscience.

For the Thesis Track option (24 credit hours), students will take courses relevant to their interests in neuroscience or related fields and complete an empirical masters thesis under the supervision of an adviser who is a member of the Neuroscience Graduate program. Because completion of an empirical masters thesis normally requires more than one year, students accepted into the 4+1 program must be active in research at the undergraduate level. Each student will be encouraged to develop a masters thesis that is a continuation or extension of his or her undergraduate honors thesis or independent study. The thesis...
adviser will provide guidance in the selection of courses and in all aspects of the masters thesis. For the Non-Thesis Track option (30 credit hours), students will take courses relevant to their interests in neuroscience or related fields but are not required to complete an empirical masters thesis.

**Note:** Students who pursue the thesis track in the Masters Program in Neuroscience are strongly encouraged to defend and submit the masters thesis to the School of Science and Engineering within one year after entering the program. However, the masters thesis must be defended and submitted in final form to the School of Science and Engineering within two years after entering the masters program. Students who fail to meet the two-year deadline will be recommended for dismissal from the Masters Program in Neuroscience.

# Requirements

## Graduation Requirements

Students must complete 30 credits of coursework if they are pursuing the non-thesis track. If they decide to complete a Master's thesis, 24 credits of coursework must be completed.

### Neuroscience, PhD

The Neuroscience Doctoral Program is an interdisciplinary graduate program composed of doctoral students and faculty members from departments across five divisions and three campuses of Tulane University. As an educational branch of the Tulane Brain Institute, the program is administered through the School of Science and Engineering and governed by the Neuroscience Doctoral Training Committee. Appointed by the Director of the Tulane Brain Institute, the Committee is composed of a director and five faculty members representing the Main and Medical School campuses. Contributing divisions include the Schools of Science and Engineering, Liberal Arts, Medicine, Public Health and Tropical Medicine, and Primate Center. Faculty research programs are funded through grants competitively awarded by federal, state, and private agencies under four major themes: Memory and Cognition; Neurodegenerative Disease, Neural Injury and Repair; Hormone-Brain Interactions; and Brain-Body Health.

Doctoral students conduct cutting-edge research in modern laboratory environments that foster supportive instruction and intensive training in the neurosciences. The Neuroscience Doctoral Program provides graduate students with a broad education in both the theoretical and applied aspects of basic research in the neurosciences.
Through their coursework and research, students receive diversified training in neuroanatomy, neurophysiology, neuropharmacology, neuroendocrinology, molecular and cellular neurobiology, behavioral neuroscience, cognitive neuroscience, and research methods. In addition, students have opportunities to present and publish their research findings, and to gain experience in grant writing and teaching pedagogy. The objective of the Neuroscience Doctoral Program is to prepare graduate students for their future postdoctoral training and careers in academia, industry, and related professions.

All students are guaranteed to receive financial support for five years as long as satisfactory and timely progress is made toward the degree. Financial support includes a full tuition waiver and a stipend paid every other week over twelve months of the year. Students are funded during their first two years by teaching assistantships. After the first two years students are supported by research assistantships arranged though their major advisors in their permanent laboratories.

Requirements

Doctoral Degree Requirements

The pursuit of the Ph.D. degree is a journey with five major milestones. (1) Students must successfully complete a curriculum consisting of core and elective courses taken during the first two years of study. (2) Students complete three rotations in different laboratories, each 6-8 weeks in duration, during the first year of study in order to identify a permanent laboratory. (3) Students must pass written and oral components of a qualifying examination in the third year of study administered by the Doctoral Committees. (4) Students must prepare and defend a dissertation prospectus before their Doctoral Committees in the fourth year of study. (5) Students must complete their dissertation research, prepare a written form of the dissertation, orally defend the dissertation, and receive approval from their Doctoral Committees as the final step toward earning the Ph.D. within five years.

Required Course Work

A minimum of 50 course credits are required for the Ph.D. in Neuroscience. Of these 50 credits, 38 credits are fulfilled by completing core courses (20 credits), research rotations (6 credits), and elective courses (12 credits). Up to 12 additional credits may be satisfied by registration in NSCI 7980 Research In Neuroscience-PhD (1-9 c.h.). Credits earned in NSCI 9990 Dissertation Research (3 c.h.) do not count toward the 50 required credits. Course credits taken beyond the 50-credit minimum are included in the tuition waiver. Up to 15 course credits toward the final 50 required credits can be earned in Tulane's Master's Programs in Neuroscience (4+1 and M.S.). However, the following courses taken at the Master's level cannot count toward the Ph.D. degree: (Brain Institute Seminar, Trends in Neuroscience, Research in Neuroscience).

Core Courses

The completion of core courses is required of all doctoral students, which comprise 20 of the 50 total credits required for the Ph.D. in Neuroscience.

NSCI 7110 Graduate Neuroscience I (3 c.h.) – Offered only during fall semesters, this course encompasses the basic principles of neuroscience at the graduate level, focusing on cellular and molecular neurobiology, neurophysiology and plasticity, and developmental neurobiology.

NSCI 7120 Graduate Neuroscience II (3 c.h.) – Offered only during spring semesters, this course encompasses the basic principles of neuroscience at the graduate level, focusing on systems neuroscience and behavioral neuroscience as well as neuroanatomy.

NSCI 6150 Methods in Neuroscience (3 c.h.) – Offered only during fall semesters, this course encompasses experimental design as well as contemporary theories, methodological approaches, and common techniques used in neuroscience research. Basic and translational neuroscience methods are included. Approaches include molecular, cellular, genetic, biochemical, computational, and behavioral.

NSCI 6030 Brain Institute Seminar (1 c.h.) – Offered every semester, this seminar series is designed to provide students with exposure to contemporary research conducted by neuroscientists at Tulane and from other local and national institutions. Students receive academic credit for Brain Institute Seminar during their first four semesters of study in the doctoral program, but are expected to attend throughout their period of graduate training.

NSCI 6040 Trends In Neuroscience (1 c.h.) – Offered every semester, this course is designed to allow students to learn to critically read and interpret scientific literature and to present and discuss research with their peers. Students receive academic credit for Trends in Neuroscience during their first four semesters of study in the doctoral program.

PSYC 6090 Univariate I (3 c.h.) – Offered only during fall semesters, this course covers experimental design and statistical analyses used in scientific research. Topics include z-distribution, t-distribution, analysis of variance, post-hoc tests subsequent, correlation, simple and multiple linear regression, and chi-square analysis. Students may petition to substitute other graduate-level statistics courses taught at Tulane for Univariate Statistics I.

INTD 6010 Responsible Conduct of Research (0 c.h.) – Offered during the fall semesters by the Tulane University Research Compliance Office, this course is required by the federal funding agencies for students earning doctoral degrees in a biomedical-related science.

Elective Courses

A minimum of 12 course credits (4 elective courses) may be obtained for courses with numbers of 6000 or 7000. A list of some appropriate three-credit elective courses follows. Students should consult other departments and programs for other electives of potential interest, which must be approved by the Director of the Neuroscience Doctoral Program.

Neuroscience Program

Programs Undergraduate Major

- Neuroscience Major (p. 329)

Neuroscience Major

A major in Neuroscience allows a student to pursue an interdepartmental curriculum that focuses on the role of the nervous system in regulating physiological and behavioral functions. Neuroscience combines many traditional fields of study including Psychology, Biology, Chemistry, Physics, Anatomy, Pharmacology, Linguistics and Physiology. The field of Neuroscience encompasses a broad domain that ranges from the cellular and molecular control of brain cells to the regulation of responses in whole organisms. The student majoring in Neuroscience fulfills the standard requirements of a premedical curriculum, which is recommended or required for admission to graduate study in Neuroscience or related graduate programs. This curriculum also enables the student to pursue medical training, possibly specializing in an area related to Neuroscience. A Bachelor of Science in Neuroscience requires nine credits of core courses, nine credits of elective courses, three credits of laboratory courses, and 30 credits of co-requisite courses in biology, psychology, chemistry, and physics totaling 51 credits. At least six of the elective lecture credits and one of the laboratory credits must be taken from the list of Neuroscience courses. Students also must fulfill the B.S. mathematics requirement. A student majoring in Neuroscience is strongly encouraged to pursue research in laboratories on the Main Campus or at the Health Sciences Center as an independent study and/or honors thesis. An independent study or honors thesis may fulfill one of the three required laboratory courses.

Mission
The mission of the Master of Social Work Program at the Tulane University School of Social Work is to educate and inspire future social work leaders to engage in integrated clinical and community practice that is culturally responsive and relationship-centered, to enhance the well-being and equitable treatment of individuals, families, and communities."

The Tulane University School of Social Work Master of Social Work Program:
1. Trains future leaders clinically to impact communities locally, nationally, and globally in ways that enhance the well-being, capacity and resilience of individuals, families, groups, organizations and communities;
2. Helps future leaders to realize the value of human diversity and engage in inclusive, anti-oppressive practice in order to promote social and economic justice;
3. Prepares future leaders to engage in culturally responsive, evidenced informed practice and community engagement using a local/global perspective relationship centered framework that enables them to contribute to the transformation of individuals, families, and communities; and
4. Promotes social mobility, system navigation, and increased access to resources by building upon the diverse, culturally rich, inspiring, and environment of New Orleans.

History
The Southern School of Social Sciences and Public Services was the first training program for social workers in the deep South. Under the sponsorship of the Kingsley Settlement House, a group of Tulane social science faculty offered the first classes in social welfare in 1914. Sponsored by grants from the American Red Cross, a formal one-year program was implemented in 1921.

By 1927, with funding from a Rockefeller grant, the school became a separate program with a two-year curriculum qualifying students for the Master of Arts. In 1935, the University established the degree of Master of Social Work. The School has awarded the Master of Social Work degree to more than 6,000 students from all 50 of the United States and more than 30 other countries.

Since 1927, the first year of national accreditation for social work education, the School of Social Work has maintained full accreditation status. It is a charter member of the Council on Social Work Education, which is the standard-setting and accreditation body in the field of social work education. Tulane School of Social Work is accredited by the Council on Social Work Education (CSWE). TSSW was recently awarded accreditation of the Master of Social Work Degree program for the full eight-year cycle with no contingencies.

Academic Policies
Academic Policies
The integrity and reputation of the Tulane School of Social Work depends on the honesty of the entire academic community in all of its endeavors.

This implies that the School's faculty, students, administration and staff are willing to adhere to and uphold the Code of Academic Conduct. Every member of the academic community has the duty to take action by reporting any observed or suspected code violations. Under no circumstances should any member of the academic community tolerate any form of academic dishonesty. Students are expected to represent themselves honestly in all work submitted for academic purposes. When a student puts their name on any material submitted as an academic assignment, they vouch that both the content of the assignment and the process through which the assignment was produced conform to the standards of the Code of Academic Conduct. This principle applies to all forms of academic assignments including, but not limited to, papers, tests/ exams, knowledge checks, discussion boards, journals, homework assignments, artistic productions, laboratory reports, presentations (power points), and computer programs.

The authority for adopting a Code of Academic Conduct is pursuant to paragraph II (b) of the Unified Graduate Student Code of Academic Conduct for Tulane University.

Academic Rights and Responsibilities
All members of the academic community shall foster an environment that encourages adherence to the principles of honesty and integrity. Every student enrolled in a course in the School of Social Work is responsible for adhering to and upholding the Code of Academic Conduct. Every student matriculated in the Tulane School of Social Work will receive a copy of the code at or before student orientation and will sign the Academic Code of Conduct and Student Handbook Pledge which will be held in the TSSW student file. Students have the responsibility to become thoroughly familiar with the code and to conduct themselves at all times in a manner consistent with its principles. Lack of familiarity either with the code or with the application of its principles to any specific assignment does not constitute an excuse for non-compliance.

The School's faculty, administration, and staff are also responsible for adhering to and upholding the Code of Academic Conduct. Faculty, administration, and staff also have the responsibility to become thoroughly familiar with the Code and to conduct themselves at all times in a manner consistent with its principles. As in the case of students, lack of familiarity either with the code or with the application of its principles does not constitute an excuse for non-compliance.

All parties shall protect the integrity of academic materials including testing materials, software, and copyrighted documents.
A copy of the student handbook can be found at: https://tssw.tulane.edu/sites/tssw.tulane.edu/files/UPDATED%20TSSW%20Code%20of%20Academic%20Conduct_2.pdf

**Degree Requirements**

**Certificate**

**Family Practice Certificate**

Two of three of your electives (6 credits) must be chosen from the classes below.

1. 7010 Family Trauma
2. 7300 Clinical Intervention with Children and Adolescents
3. 7345 Psychopathology & DSM
4. 7360 Contemporary Practice with Couples & Families
5. 7365 Clinical Practice in Addiction and Substance Abuse
6. 7370 Introduction into Behavior Pharmacology

- This certificate is built in to the MSW program and must be completed in conjunction with the MSW program.
- Core MSW curriculum papers: One (1) major & one (1) minor assignment to include certificate related materials
- Attend each semester's Journal Club meeting or if an online student - One community meeting or educational opportunity related to the certificate (approved ahead of time) with a 1 page reflection each semester.
- Certificate related field placement with one certificate related objective included in field work plan.
- Portfolio of all your certificate related work turned in 2 weeks prior to graduation.

**Disaster Mental Health and Trauma Studies Certificate**

- Two mandatory electives
- FEMA Certification - Introduction to Incident Command Systems (required)
- Attendance at DaCT meetings
- Four disaster/collective trauma specialized trainings
- Focused field placement

**Disaster Resilience Leadership Academy (DRLS) Certificate**

The Certificate in Disaster Resilience Leadership focuses on the 5 core academic competency courses: Human and Social Factors, Disaster Economics, Disaster Operations and Policy, Environment and Infrastructure, and Leadership.

- DRLS 6010 Human and Social Factors
- DRLS 6020 Disaster Operations
- DRLS 6030 Leadership Analytics
- DRLS 6040 Environment and Infrastructure
- DRLS 7000 Leadership
- DRLS 6110 Rsh and Eval Crisisi – Disaster
- DRLA 6032 Quantitative Analysis in DR

You need to complete a total of 21 credit hours. This certificate can be taken by non-social work students.

**Graduate**

**Master of Social Work**

The full-time MSW program requires around 15 credit hours per semester over 16 consecutive months for a total of 60 credit hours. Each student completes 15-credit hours of field practicum, which equates to three semesters of 316 hours of actual field work each semester.

**Master of Science in Disaster Resilience Leadership**

To earn this degree from the School of Social Work, 36 credits must be earned. The 36 credits will consists of 21 credits DRLA Core + 9 credits from DRLA electives + 6 credits from any other electives.

**Doctor of Social Work**

During their first two years, students will take courses in social work theory, practice and methods. Each semester includes two courses and an independent study during which the student will work with an academic advisor to develop their scholarly portfolio and Advanced Practice Project.

Students are encouraged to develop a possible topic for their advanced practice project early in their doctoral study. Once a topic has been selected, a three-member committee will review a formal proposal and provide feedback to the student. Final approval of the proposal as fulfillment of a requirement for candidacy for the degree is granted only upon fulfillment of all other requirements for candidacy, including 56 hours of required courses and successful defense of the proposed project.

Director: Reggie Ferreira, PhD
Program Manager: Tona Zwanziger, MS, LMSW
Phone: (504) 247-1453
Website: tssw.tulane.edu

**Program Description**

The Disaster Resilience Leadership Academy (DRLA) is dedicated to the systematic strengthening of global humanitarian leadership, a process that integrates education, research, and application – to achieve increased resilience in communities and individuals impacted by natural and manmade disasters. Such leadership is guided by the ethics of the Triple Bottom Line: Equity, Environment, and Economy.
The Disaster Resilience Leadership Academy is part of the Tulane School of Social Work. The DRLA’s mission of strengthening leadership in communities to address root causes of vulnerability, such as chronic poverty and social inequality, is supported by the School of Social Work’s dedication to teaching students about human diversity and the importance of promoting social and environmental justice.

Although there are many graduate programs that focus on disaster and risk management, none of them specifically target the role and development of leadership and resilience in producing effective programs or outcomes, making the DRLA Academic Program the first with such a dynamic and innovative focus.

The Disaster Resilience Leadership Science (DRLS) Graduate Degree Program is a broad-based, integrative, and evidence-based graduate program that addresses relationships among the physical environment, the built environment, the social, economic, and political institutions and processes that characterize communities that are vulnerable to disasters. The program applies the knowledge of the context of disasters to leadership that leads to more resilient and sustainable post-disaster communities. The purpose of the DRL Graduate Program is to prepare students for professional careers in: (a) communities that are affected by and vulnerable to disaster destruction and disruption; (b) organizations that focus on all phases of disaster management (preparedness, response, recovery, and risk reduction); and, (c) leadership and upper level management positions within organizations and communities that require strong leadership for the promotion of an increased level of resilience.

DRLA has rolling enrollment. The Graduate Program in Disaster Resilience Leadership equips students with an interdisciplinary view of the challenges and best practice approaches to leadership in the disaster resilience and humanitarian aid fields to prepare them for careers in:

- emergency preparedness
- disaster management
- monitoring and evaluation
- nonprofit leadership
- grass-root development
- disaster risk and recovery

**Programs**

**Certificate**
- Disaster and Collective Trauma Certificate (p. 333)
- Disaster Resilience Leadership Studies Certificate (p. 333)

**Graduate**
- Disaster Resilience Leadership Studies, MS (p. 333)

**Disaster and Collective Trauma Certificate**

**Overview**
Disaster can strike unexpectedly, dramatically affecting households and families. Tulane University’s Disaster and Community Trauma Certificate prepares aspiring social workers to treat the psychological consequences of these types of crises. As one of the few disaster and collective trauma programs in the U.S., Tulane’s Disaster and Collective Trauma Certificate teaches students the skills required to make a substantial change in their own communities, assisting individuals with overcoming the trauma associated with surviving disasters large and small. Students who choose to pursue the Disaster and Collective Trauma Certificate tailor their education. The context of disaster and collective trauma uses an anti-oppressive lens with the coal of enhancing the well being of diverse individuals, families, and communities.

**Requirements**

In addition to the course requirements listed below, the following requirements must be satisfied:

- FEMA Certification in Introduction to Incident Command Systems.
- Attendance at DaCT meetings.
- Four disaster/collective trauma specialized trainings.
- Focused field placement.
- Students take specialized courses in crisis intervention, clinical treatment approaches
- Must be a Tulane MSW student in good standing.

**Course ID** | **Title** | **Credits**

**Disaster Resilience Leadership Studies, MS**

The Master’s Degree in Disaster Resilience Leadership Studies Program is dedicated to the systematic strengthening of global humanitarian leadership, a process that integrates education, research, and application to achieve increased resilience in communities.
and individuals impacted by natural and manmade disasters. Such leadership is guided by the ethics of the Triple Bottom Line: Equity, Environment, and Economy.

The program aims to advance the field of disaster resilience leadership by training and nurturing current and future leaders with various time formats, as well as promoting research and stimulating global innovation in the disaster resilience and humanitarian assistance community.

Graduate Certificate

- Family Practice Certificate (p. 334)
- Mental Health, Addiction, and the Family Certificate (p. 335)

Graduate

- Social Work, DSW (p. 335)
- Social Work, MSW (p. 336)

Family Practice Certificate

The Certificate in Family Practice centers around the evidence that healing is the most robust in a relational context. This certificate is unique to Tulane University School of Social Work. Our program is a rigorous combination of coursework, certificate related field placements, and our signature Journal Club/Community meetings component. The Journal Club/Community meetings component is designed to give the student opportunities to network and discuss certificate related topics.

The Certificate is affiliated and funded by the Porter Cason Institute (PCI). PCI is the result of a large private contribution from a Tulane MSW alumnus for the purpose of training. Funds from PCI allow us to augment training with lectures from local and national experts as well as provide advanced training of professionals in our community.

The culture of this certificate is developing creativity and courage in both your time at Tulane and in your career. Social work is both an art and a science. We teach the science and provide a place for you to come to understand and develop your own unique art within ethical and evidence based interventions. Throughout your career you will hone your understanding of the science, art and creativity required of an exceptional social worker. We view it as one of our primary objectives to give you the courage to be comfortable in uncomfortable moments and to give space for truth and healing that may emerge as you develop this comfort.

ADVANTAGE OF THE CERTIFICATE IN MENTAL HEALTH, ADDICTION, AND THE FOCUS AND REQUIREMENTS FOR THE CERTIFICATE

- Opportunities for mentorship by national experts
- Opportunities for work on community projects
- Try on your “Clinical Self” and your “Community Self”
- A laboratory for Courage and Creativity
- Mental Health, Addiction, and the Family are ALWAYS part of any Social Work career... it is inescapable!

- Core MSW curriculum papers: One (1) major & one (1) minor assignment to include certificate related materials.
- Attend each semester's Journal Club meeting or if an online student: One community meeting or educational opportunity related to the certificate (approved ahead of time) with a 1 page reflection each semester.
- Certificate related field placement with one certificate related objective included in field work plan.
- Portfolio of all your certificate related work turned in 2 weeks prior to graduation.

Mental Health, Addiction, and the Family Certificate

Overview

The Certificate in Mental Health, Addiction and the Family centers around the evidence that healing is the most robust in a relational context. This certificate is unique to Tulane University School of Social Work. Our program is a rigorous combination of coursework, certificate related field placements, and our signature Journal Club/Community meetings component. The Journal Club/Community meetings component is designed to give the student opportunities to network and discuss certificate related topics.

The Certificate is affiliated and funded by the Porter Cason Institute (PCI). PCI is the result of a large private contribution from a Tulane MSW alumnus for the purpose of training. Funds from PCI allow us to augment training with lectures from local and national experts as well as provide advanced training of professionals in our community.

The culture of this certificate centers around developing creativity and courage in both your time at Tulane and in your career. Social work is both an art and a science. We teach the science and provide a place for you to come to understand and develop your own unique art within ethical and evidence based interventions. Throughout your career you will hone your understanding of the science, art and creativity required of an exceptional social worker. We view it as one of our primary objectives to give you the courage to be comfortable in uncomfortable moments and to give space for truth and healing that may emerge as you develop this comfort.

Requirements

In addition to the course requirements below, students must complete the following:

- Core MSW curriculum papers: One (1) major & one (1) minor assignment to include certificate related material.
- Attend each semester’s Journal Club meeting or if an online student: One community meeting or educational opportunity related to the certificate (approved ahead of time) with a 1 page reflection each semester.
- Certificate related field placement with one certificate related objective included in field work plan.
- Portfolio of all your certificate related work turned in 2 weeks prior to graduation.

Social Work, DSW

The Tulane University Doctorate in Social Work is ideally suited for social work professionals seeking rigorous training in advanced practice, professional leadership, and applied research.

The DSW@Tulane prepares you to:

- Apply innovative and critical thinking to pressing social, economic and environmental problems
- Advance knowledge through research relevant to social work practice
- Collaborate with practitioners in an array of related disciplines
- Conduct action research in partnership with community organizations and groups
- Communicate evidence-informed social work knowledge through teaching and publication
- Continue the legacy of social work through research, leadership and teaching

Requirements

Program of Study

The DSW curriculum consists of six semesters of coursework over two calendar years, followed by a final semester of dedicated and independent study on the Advanced Practice.
Core Coursework
During their first two years, students will take courses in social work theory, practice and methods. Each semester includes two courses and an independent study during which the student will work with an academic advisor to develop their scholarly portfolio and Advanced Practice Project. DSW courses are be taught by Tulane School of Social Work faculty as well as select nationally prominent social work scholars. For a list of courses, please review our program of study. Classes taught by visiting professors will vary by year and their formats may be adapted to maximize offerings.

Total Credit Hours 56
Note. Schedule is based on Fall start, beginning classes in Spring or Summer will result in a slight change in the order of classes.

Immersion
As part of the DSW curriculum students will complete a 4 day immersion project in New Orleans, Louisiana. The academic residency will occur during the summer semester and provides an opportunity to network with fellow students and faculty. The residency experience is designed to emphasize applied learning and identifying program outcomes in partnership with a local social service agency. Students will require skills useful in conducting action research with community organizations and further develop a critical frame for designing real world program and clinical evaluations. The immersion program will also provide an opportunity to identify program evaluation or action research questions consistent with their Advanced Practice Project and further develop their APP proposal.

Advanced Practice Project
Students are encouraged to develop a possible topic for their advanced practice project early in their doctoral study. Once a topic has been selected, a three-member committee will review a formal proposal and provide feedback to the student. Final approval of the proposal as fulfillment of a requirement for candidacy for the degree is granted only upon fulfillment of all other requirements for candidacy, including 56 hours of required courses and successful defense of the proposed project.

Program Faculty
DSW courses are by Tulane School of Social Work professors and visiting faculty from a variety of social science disciplines, including social work, sociology, urban studies and psychology. Our visiting faculty are nationally renowned experts in their field, bringing with them expertise in grant-writing, program evaluation, academic publication and public policy.

Social Work, MSW
The mission of the Master of Social Work Program at the Tulane University School of Social Work is to educate and inspire future social work leaders to engage in integrated clinical and community practice that is culturally responsive and relationship-centered, to enhance the well-being and equitable treatment of individuals, families, and communities.

This course of study is designed to offer the best clinical and community training that addresses the unique needs of individuals, families, groups, organizations, and communities. Students in the program enjoy a variety of learning experiences, including traditional and non-traditional class experiences. Team projects, problem-based learning, creative simulation, team teaching, field work, and electronic...
learning exchanges are just some of the enriching experiences you will enjoy while fulfilling the requirements for the Master of Social Work.

**Requirements**

**MSW Curriculum: Full-Time Study Program**

The full-time MSW program requires 15 credit hours per semester over 14-16 consecutive months for a total of 60 credit hours. Each student completes 15-credit hours of field practicum, which equates to three semesters of 330 hours of actual field work each semester.

**MSW Curriculum: Part-Time Study Program**

Our part-time program requires 60 credit hours. Students can complete the program in two options:

- Eight semesters (32 months with 6 part-time field placements)
- or four part-time semesters and two full-time semesters (24 months with 2 part-time and 2 full-time field placements).

*Note: Starting Fall I, you are required to have at least one weekday each week available for field placement.*

ACCN 3100 Intermed Accounting I (3 Credit Hours)
ACCN 3100 is a concept-oriented course that introduces the intensive examination of financial reporting issues and financial statement categories, focusing on the asset side of the balance sheet. It is required for accounting majors and recommended for finance majors and others who desire advanced exposure to financial reporting issues.

Prerequisite(s): ACCN 2010, ACCT 2030, ACCN 2010 or ACCT 2030.

ACCN 3891 Service Learning: ACCN3010 (1 Credit Hour)
Corequisite(s): ACCN 3010.

ACCN 4100 Auditing (3 Credit Hours)
ACCN 4100 examines the professional auditing function, particularly emphasizing public accounting. The course is recommended for CPA examination candidates only.

Prerequisite(s): ACCN 3100, ACCT 3030, ACCN 3100 or ACCT 3030.

ACCN 4110 Interm Financial Accounting II (3 Credit Hours)
ACCN 4110 is a concept-oriented course that continues the intensive examination of financial reporting issues and financial statement categories begun in ACCN 3100, focusing on the liability side of the balance sheet.

Prerequisite(s): ACCN 3100, ACCT 3030, ACCN 3100 or ACCT 3030.

ACCN 4120 Advanced Financial Accn (3 Credit Hours)
ACCN 4120 explores complex accounting areas, including consolidations, partnerships, not-for-profit accounting, and multinational accounting. It is recommended for CPA examination candidates only.

Prerequisite(s): ACCN 3010, ACCT 3030, ACCN 3100 or ACCT 3030.

ACCN 4130 Financial Statement Analysis (3 Credit Hours)
ACCN 4130 helps students understand and analyze financial statements, prepare pro-forma statements and critically review business valuation. Financial statement analysis is used by decision-makers in a variety of settings. Managers use financial data to monitor and judge their firms’ performance relative to their competitors, communicate with external investors, select operational and financial strategies, and evaluate potential investment opportunities. Securities analysts use financial data to evaluate firms and make buy/sell recommendations to their clients. Bankers and creditors use financial information to decide whether to extend a loan to a client and to determine the terms of the loan. Financial data is also used by business consultants to carry out, among other things, competitive analyses of their clients’ businesses. ACCN 4130 emphasizes how the economics of a business situation translates into accounting data and how managerial incentives and opportunities affect accounting choices, given the competitive and regulatory environment. This course takes a user’s rather than a preparer’s perspective and does not emphasize specific accounting standards or accounting regulation. Such details are covered in other courses such as ACCN 2010 and ACCN 3100.

Prerequisite(s): FINE 3010, FINC 3010, FINE 3010 or FINC 3010.
ACCN 4140  Adv Managerial Accounting  (3 Credit Hours)
ACCN 4140 explores recent developments in managerial accounting theory and practice. The course features quantitative approaches to collecting, analyzing, and transmitting cost, revenue, and profit data for internal planning and control, and it uses readings, problems, cases, and computer exercises. The course is recommended for both accounting and finance majors.

Prerequisite(s): ACCN 3010, ACCT 3030, ACCN 3010 or ACCT 3030.

ACCN 4150  Accounting Info System  (3 Credit Hours)
ACCN 4150 integrates the concepts of accounting and computer systems to develop an understanding of computerized accounting information systems. The course involves the extensive use of computer systems, including system development and maintenance as well as output use. It is recommended for accounting and finance majors, and for others who desire exposure to this area.

Prerequisite(s): ACCN 3010, ACCT 3030, ACCN 3010 or ACCT 3030.

ACCN 4160  Equity Analysis/Burkenrd  (3 Credit Hours)

ACCN 4410  Special Topics  (1-3 Credit Hours)

ACCN 4550  Accounting Internship  (1 Credit Hour)
Freeman School majors may elect to do a Business Internship that will appear as a one-credit, 4000-level course on their transcripts; however, the credit does not apply towards the 122 minimum hours required for a BSM degree. The Internship must be related to one of the majors offered through the BSM program, and the Internship must apply (within an ongoing business organization) the intellectual capital obtained from first- through third-year Freeman School courses. To obtain approval of the Internship, the student must visit the Career Management Center for instructions. The student receives the final grade for the Internship on a Satisfactory/Unsatisfactory basis upon submitting the paper/evaluation to a supervising faculty member in the Career Management Center. This course is normally offered during the summer and fulfills the "curricular practical training" option for students with F-1 visa status.

ACCN 4560  Prof Accounting Practicum  (1-3 Credit Hours)
During the period January 1 – April 15, students participate in a "Busy Season" Internship with a "Big 4" accounting firm or large local firm approved by the director of the Joint BSM/ MACCT Program. The workload is 40 hours to 80 hours per week under the direct supervision of one or more Certified Public Accountants. It involves the same difficulty of work and training that any new/full-time, new-hire encounters when entering the firm. In addition, this course has two writing components. In the first, the student submits a five- to ten-page research paper on an auditing or tax-related topic (pre-approved by the Program Director); the topic should involve an actual problem the student encountered during the Internship. In the second writing component, the student keeps a journal of the student's work activities (without breaking the client/firm confidentiality requirements). This journal is to be a daily (preferable) or weekly (mandatory) task. It must contain a description of activities accomplished, questions raised, and conclusions reached about what the student learned for the day. The student will submit the journal to the Director of the program at the Freeman School, who will review and discuss it with the student. It must include time sheets (client info. may be blocked out) and the student must mail it to the Director at least twice a month. In addition, students in this course will give a presentation about their Internship experiences at a technical meeting of the Beta Nu chapter of Beta Alpha Psi at the Freeman School.

Prerequisite(s): (ACCN 4100, 4100, ACCT 4030 or 4030) and (LGST 4100, 4100, BLAW 4210 or 4210) and (TAXN 4100, 4100, TAXA 4100, 4100, TAXN 4250 or 4250).

ACCN 4900  Independent Study  (1-3 Credit Hours)

ACCN 4910  Independent Study  (1-4 Credit Hours)
Freeman School seniors who demonstrate academic excellence are allowed to pursue an Independent Study. The work may take the form of directed readings, laboratory or library research, or original composition. Instead of traditional class attendance, the student substitutes conferences, as needed, with the supervising faculty. An Independent Study requires the approval of the supervising instructor and the Associate Dean for Undergraduate Education. The credit does not apply towards the Accounting major requirements for a BSM degree; the independent study counts as Business elective credit only. Interested students should contact the Office of Undergraduate Education at the Freeman School.

ACCN 4920  Independent Study  (1-4 Credit Hours)

ACCN 6030  Financial Reporting I  (3 Credit Hours)
This is a concept-oriented course that introduces the intensive examination of financial reporting issues and financial statement categories, focusing on the asset side of the balance sheet.

ACCN 6040  Financial Reporting II  (4 Credit Hours)
This is a concept-oriented course that continues the intensive examination of financial reporting issues and financial statement categories begun in Financial Reporting I, focusing on the liability side of the balance sheet.

Prerequisite(s): ACCN 6030.
ACCN 6050  Acctg Measurement, Report & Ct (3 Credit Hours)
This course introduces basic concepts underlying the measurement and reporting of a business's economic activities, how to use this information to inform managerial decisions, and how accounting information is used as part of the managerial control system. The course is loosely divided into three topics: 1) The concepts and relationships underlying the income statement, balance sheet and statement of cash flows; 2) Using accounting information to make decisions about resource allocations and to evaluate the performance of firms, business units and managers; and 3) Using accounting information as part of an overall control system to ensure that the organization is meeting its goals. The course is intended as an introduction for individuals who will make business decisions, evaluate other firms, business units, or managers, or be evaluated themselves via accounting information.

ACCN 7100 Ethics In Acct & Finance (3 Credit Hours)
This course focuses on the practice of accounting and finance and what common sense morality (informed by philosophy, professional expectations, and peer conversation) says is ethical. Current ethical questions and controversies in the fields of accounting and finance are explored. Through class exercises, group discussions, presentations, lectures, and readings, students cultivate their own moral sense and improve their capacity for ethical decisions and conduct.

ACCN 7110 Auditing (3 Credit Hours)
Current professional developments in auditing are examined with particular attention given to the auditor's decision-making process. Fundamental auditing concepts are studied to provide a framework for the development and application of practical audit procedures. Note: A student who has already taken intermediate accounting I and II as an undergraduate, has a CPA, or has the consent of the instructor may take ACCN 7110.

Prerequisite(s): ACCN 6010, 6010, 6030, 6030, 6050, 6050, 2010 or 2010.

ACCN 7120 Adv Financial Accounting (3 Credit Hours)
Advanced and problem areas in financial accounting and reporting are examined. Topics include the equity method of reporting investments, accounting for mergers and acquisitions, consolidated financial statements, accounting for partnerships, foreign currency transactions, and accounting for governmental and other not-for-profit organizations.

Prerequisite(s): ACCN 6010 or 2010.

ACCN 7130 Financial Statement Analy (3 Credit Hours)
This course provides an overview of the use of financial accounting information for evaluating past performance and predicting future performance of a company or division. Managerial incentives affecting various accounting and reporting policy choices are considered, as well as the related regulatory and ethical issues. While a significant part of the course centers on estimating the value of publicly-traded common stocks, the techniques covered in the course can be used in many other settings, such as credit analysis, management consulting, and auditing.

Prerequisite(s): ACCN 6010, 2010, 6030 or 6050.

ACCN 7140 Adv Managerial Accountng (3 Credit Hours)
This course explores recent developments in managerial accounting theory and practice. The course features quantitative and qualitative approaches to collecting, analyzing, and transmitting cost, revenue, and profit data for internal planning and control, and it uses readings, problems, cases, and computer exercises.

Prerequisite(s): ACCN 6020, 6030, 6050 or 3010.

ACCN 7150 Accounting Info Systems (3 Credit Hours)
Concepts of accounting and computer systems are integrated to develop an understanding of accounting information systems. Through extensive use of computer systems, this course emphasizes the development, use, and maintenance of such systems.

Prerequisite(s): ACCN 6010, 6030, 6050 or 2010.

ACCN 7170 Advanced Auditing (3 Credit Hours)
Conceptual foundations to diverse means by which assurers improve the quality of information used by third parties for contracting purposes are explored. Emphasis is placed on credibility- and relevance-enhancement properties of assurers' services. Topics include the economics of assurance and attestation and concepts including independence, risk, evidence, and control.

Prerequisite(s): ACCN 7110 or 4100.

ACCN 7200 Accounting Research (3 Credit Hours)
This course teaches academic research skills in the accounting arena. It applies economics, finance theory, and quantitative methods to study the use of accounting information. Major topics include the evolution of accounting and finance, fundamental analysis, and practical applications of accounting analysis.

Prerequisite(s): (ACCN 6010 or 2010) and (ACCN 6020 or 3010).

ACCN 7210 Energy Acctg & Valuation (3 Credit Hours)
This course will cover the fundamentals of the upstream oil and natural gas exploration and production process (E&P or upstream) and the key financial decisions and metrics. The various operational steps and related financial decisions will be followed through to their ultimate impact to a public E&P company's external financial statements. Students will be able to understand the immediate impact of various decisions on a company's cash and non-cash financial performance which in turn lead to future financial and operational flexibility and success.

Prerequisite(s): ENRG 6000, 7100, ACCN 6010, 6030, 6050 or 2010.

ACCN 7240 Forensic Accounting (3 Credit Hours)
In the context of this course, “forensic” means “suitable for the courts.” The main areas of forensic accounting are the interpretation of financial statements, fraud, business valuation, and economic damages with specific topics including lost profits, personal injury, wrongful death, bankruptcy, divorce, lost value, embezzlement, graft, money laundering, and fraud investigation and prevention. This course will focus on the concepts and tools that extend the material covered in other accounting courses and will touch on many of the areas covered by the CPA exam.

Prerequisite(s): ACCN 7110 or 4100.
ACCN 7720 Actctg for Business & Fin Risk (3 Credit Hours)
This course explores concepts of risk and uncertainty applied to the financial management of organizations in achieving business objectives and strategies. Emphasis is placed on the role of accounting measurement and reporting in the management of such risks.

ACCN 7280 Acctg & Controls for Oper Risk (3 Credit Hours)
This course is for students who want to manage a department or start their own business. In the course, operational risk is studied with an examination of how control systems can guard against these risks. Students learn how to establish controls that will provide reasonable assurance that organizations will achieve their overall goals (i.e., strategy) in an effective and efficient manner. The course specifically focuses on employee control with an exploration of different ways to use the control system to motivate employee effort and to direct this effort towards organizational success. Students extensively analyze and discuss cases of real organizations.

Prerequisite(s): ACCN 6020, 6030, 6050 or 3010.

ACCN 7290 Accounting Analytics (3 Credit Hours)
This hands-on course exposes students to all aspects of the data analytics process, including issue identification, data preparation, data analysis, and the communication of results. The primary objective of this course is to integrate knowledge of accounting, business, and data analytics to provide evidence to help solve business problems. Students will improve their ability to communicate information clearly and persuasively using written, verbal, and visual communication strategies. Students will also develop and expand skills in computer-related technologies, using mostly accounting-based datasets, which support the analysis of the problem as well as the communication of the results.

Prerequisite(s): ACCN 6030, 6050, ENRG 7210 or ACCN 2010.

ACCN 7300 Special Topics (3 Credit Hours)
Prerequisite(s): ACCN 7200.

ACCN 7420 Govt & Not-For-Profit Accn (3 Credit Hours)
This course covers generally accepted accounting principles (GAAP) that govern the reporting of assets, liabilities, revenues, transfers, expenditures, gains, losses, and net assets of governmental and not-for-profit entities. Discussion of the theoretical underpinnings of GAAP, as well as the "disconnects" still present in governmental GAAP vs. "for profit" GAAP, will be included in this course.

Prerequisite(s): ACCN 6010, 6030, 6050 or 2010.

ACCN 7550 Public Accn Internship (3 Credit Hours)
The busy season internship is a full-time, paid internship with a major accounting firm in the spring semester. Typically, the internship takes place in the city and state in which the student plans to live and work. Students earn three graduate-level credit hours for the internship, which runs from approximately January 1 through April 15. Because this internship is full-time, students may not take coursework concurrent to the internship. Following completion of the internship, students return to campus for nine credit hours of intensive graduate-level accounting coursework until the end of May. The busy season internship provides students with a realistic introduction to the accounting profession. Since seniority in most CPA firms is primarily measured by the number of busy seasons worked, graduates who pursue the internship will have a professional advantage over students who graduated the previous May. Students should seek approval for ACCN 7550 from their MACCT faculty advisor.

Prerequisite(s): (ACCN 7110 or 4100) and (TAXN 7100 or 4100).

ACCN 7560 Prof Accn Internship (1-3 Credit Hours)
The corporate accounting internship lasts for at least 10 weeks and includes, but is not limited to, accounting-related functions in industry, banking, hospitals, government, not-for-profit, universities, CPA firms, or service organizations. The corporate internship can be part-time and may sometimes be a paid internship. The internship carries responsibilities above entry-level and involves the same difficulty of work and training that any new full-time hire experiences when entering a firm. The student and the firm agree on the schedule of hours, financial arrangements, and field supervision. Students should seek approval for ACCN 7560 from their MACCT faculty advisor.

ACCN 7900 Independent Study (1-3 Credit Hours)
Independent study: Accounting.

Accounting (BSAC)

BSAC 1110 Intro to Financial Accounting (3 Credit Hours)
An introduction to the principles of accounting. Topics include: recognition of revenue and expenses for income determination, proper classification of balance sheet items, and income statement and balance sheet preparation. Students learn to prepare adjusting entries, closing entries and worksheet presentations necessary for monthly financial statements. The principle and theories behind the proper accounting treatment of cash, accounts receivable, inventories, prepaid expenses, marketable securities and fixed assets are studied.

BSAC 1120 Intro to Managerial Accounting (3 Credit Hours)
Continuation of the study of financial accounting with a detailed study of liabilities and ownership interests for partnerships and corporations. Introduction to statements of changes in financial position, consolidated statements, cost accounting, and the effect of taxes on business decisions.

Prerequisite(s): BSAC 1110.

BSAC 1940 Transfer Coursework (3 Credit Hours)
Transfer Coursework for BSAC discipline in BSLS Programs (1000 Level).
BSAC 2210 Intermediate Accounting I (3 Credit Hours)
Study and application of accounting theory to problems of classification and valuation in preparation of the balance sheet and income statement.

Prerequisite(s): BSAC 1120.

BSAC 2220 Intermediate Accounting II (3 Credit Hours)
Continuation of the study and application of accounting theory to the balance sheet and income statement, including accounting for liabilities and corporate ownership interests, and the flow of funds. Contemporary accounting development and problems.

Prerequisite(s): BSAC 1120.

BSAC 2910 Special Topics in Accounting (1-3 Credit Hours)
Special Topics in Accounting.

BSAC 2940 Transfer Coursework (3 Credit Hours)
Transfer Coursework for BSAC discipline in BLSL Programs (2000 Level).

BSAC 3310 Cost Accounting (3 Credit Hours)
A study of the accounting methods and procedures peculiar to manufacturing activities. Emphasis is placed on product costing in accordance with generally accepted accounting principles under various costing methods.

Prerequisite(s): BSAC 1110.

BSAC 4910 Independent Study (1-3 Credit Hours)
Independent Study in the BSAC discipline for the BLSL Programs.

Admiralty Law (ADMR)

ADMR 2010 Admiralty I (3 Credit Hours)
This course will survey substantive matters, including carriage of goods by sea; charter parties; personal injury and death; collision; towage, pilotage, and salvage. Admiralty I is not a prerequisite for the course in Admiralty II; however, both Admiralty I and II are required for J.D. students prior to enrollment in any other Admiralty courses that are regularly offered. Advanced Admiralty courses may not be taken by J.D. students simultaneously with either Admiralty I or II.

ADMR 2020 Admiralty II (3 Credit Hours)
This course deals mostly with jurisdictional and procedural matters, including jurisdiction over maritime claims, considerations of federalism, forum non conveniens, choice of law, special procedures in admiralty cases, limitation of liability, and maritime liens. Admiralty II may be taken prior to Admiralty I. Both courses must be taken by J.D. students as prerequisites to any other regularly offered admiralty courses.

ADMR 6000 Admiralty Seminar (2-3 Credit Hours)
The seminar will have a common theme to be selected by the class with some suggestions from the professor. Students attending the first class should have given some thought as to what they would like to see the seminar cover. Admiralty I is a prerequisite.

ADMR 6080 Carriage of Goods By Sea (2 Credit Hours)
A course involving the legal problems arising out of damage to cargoes transported between the United States and foreign ports, and focusing on the Carriage of Goods by Sea and Harter Acts, and the Rotterdam Rules. The Hague rules and pertinent parts of the Chinese Maritime Code also are discussed. J.D. students must have taken Admiralty I and II. Graduate students have the option to write a paper or take an examination.

ADMR 6350 Collision Law & Limit of Liab (3 Credit Hours)
This course presents the general principles of maritime collision law, including causation, legal presumptions, the effect of statutory violations, apportionment of fault, damages, special evidentiary rules and an overview of navigation Rules of the Road and their interpretation. This course then provides an in-depth study of limitation of liability from a practical point of view. After study of the theory of limitation of liability, the assertion of this right will be considered in detail, as well as the content of the limitation fund and how it is distributed. J.D. students must have taken Admiralty I and II.

ADMR 6430 Marine Insurance I (2 Credit Hours)
An advanced admiralty course that focuses on the legal problems involved in insurance against physical loss or damage to maritime property (hull and cargo), against maritime liabilities (protection and indemnity), and for damage to cargo. J.D. students must have taken Admiralty I and II. Student has the option of either taking an examination or writing a paper in this course.

ADMR 6440 Marine Insurance II (2 Credit Hours)
An advanced admiralty course that focuses on the legal problems arising out of maritime insurance policies. The course examines hull, cargo, P & I, commercial marine property and liability policies. The course will also examine "cyber insurance" issues, the liability of agents, brokers and underwriters; the effect of the insolvency of an insurance company; excess and surplus line coverage; the duty to defend; reinsurance; and current problems in the law of marine insurance coverages. Grade will be based on an anonymous exam except graduate students, who may opt to write a paper. Graduate students and third-year J.D. students who have taken Admiralty I and II may enroll in the course.

ADMR 6500 Maritime Litigation Practicum (1-3 Credit Hours)
Practicum course in maritime law.

ADMR 6540 Personal Injury & Death (2 Credit Hours)
An advanced course in admiralty law concentrating on rights and liabilities arising out of the personal injury and death of seamen, longshoremen, harbor-workers, and third parties under both federal and state law. J.D. students must have taken Admiralty I and II.
ADMR 6730 Regulation of Shipping (2 Credit Hours)
This survey course addresses the regulation of domestic shipping and foreign shipping calling at United States ports. Primary emphasis is on the various governmental agencies that regulate shipping and maritime commerce with secondary emphasis on the role of international treaties and conventions. Specifically examined are the activities of agencies such as the Coast Guard, the Army Corps of Engineers, The Federal Maritime Commission, the Maritime Administration, the National Transportation Safety Board and various state agencies. Areas addressed include vessel inspections, pollution regulation, navigation rules, marine casualty investigations, vessel and waterfront facility security, merchant mariner licensing and license revocation, pilotage and ocean shipping regulation.

ADMR 6800 Towage & Offshore Services (2 Credit Hours)
Tugboats, barges, offshore support vessels, and offshore petroleum and renewable energy installations like offshore wind farms provide crucial services in today’s global economy. This course examines the history, development, and current state of laws - some familiar, some quite specialized - that apply in the context of towage and offshore services. Both casualties and contracts are studied. The course focus is on U.S. law, but the laws of other countries like the U.K. are compared and contrasted when relevant, and internationally recognized contract forms are analyzed. J.D. students must take Admiralty I and II as prerequisites.

ADMR 6880 Vessel Doc & Finance (2 Credit Hours)
Students in this course work with materials concerning the documentation of vessels and financing from initial decision to construct to permanent financing. A knowledge of maritime law, commercial law and security rights is recommended. The course is conceived of as a practical course, with emphasis on the financial decisions of vessel operators and financiers. Attention is also given to maritime insurance issues affecting financiers. J.D. student must have taken Admiralty I and II.

## Aging Studies (AGST)

**AGST 7020 Interdisc Seminar on Aging I (3 Credit Hours)**
This course is the first in a two-part, team-taught seminar series designed to introduce students to the behavioral, biological, cognitive, physiological, and societal impact of aging. In particular, presenters in this course will focus on the interactive relationships between common and diverse disciplines. Special emphasis will be given to integrating knowledge and practices from across the academic community into a research approach that will serve to expand the general understanding of aging but also translate into applied practices or technologies. This course will also discuss what it means to become older within a community, what a person can expect during the aging process, and what kind of control an older person has over their aging body.

**AGST 7040 Interdisc Seminar on Aging II (3 Credit Hours)**
This course is the continuation of a two-part seminar series designed to introduce students to the behavioral, biological, cognitive, physiological, and societal changes associated with aging. In particular, presenters in this course will focus on the interactive relationships between common and diverse disciplines. Special emphasis will be given to integrating knowledge and practices from across the academic community into a research approach that will serve to expand the general understanding of aging but also translate into applied practices or technologies. This course will also discuss what it means to become older within a community, what a person can expect during the aging process, and what kind of control an older person has over their aging body.

**AGST 7060 Topics in Aging Research I (1 Credit Hour)**
This team-taught course introduces students to aging research topics and methods.

**AGST 7080 Topics in Aging Research II (1 Credit Hour)**
This team-taught course is a treatment of select topics and methods in aging research for advanced students.

**AGST 7100 Seminar in Aging (1 Credit Hour)**
This team-taught course is a treatment of advanced topics and methods in aging research for graduate students.

**AGST 7120 Independent Study/Research (0-6 Credit Hours)**
Independent Study/Research.

**AGST 7140 Dissertation Research (0-9 Credit Hours)**
Dissertation Research.

**AGST 7160 Internship (1-6 Credit Hours)**
Internship.

**AGST 9990 Dissertation Research (0 Credit Hours)**
Dissertation Research.

## American Studies (AMST)

**AMST 1290 Semester Abroad (1-20 Credit Hours)**

**AMST 1940 Transfer Coursework (3 Credit Hours)**

**AMST 2010 Issues of American Identity (3 Credit Hours)**
An exploration of one of the central themes of American studies, the American identity, through the study of selected issues arising out of the American moral, cultural, political, and religious experience.

**AMST 2390 Semester Abroad (1-20 Credit Hours)**

**AMST 2940 Transfer Coursework (0 Credit Hours)**

**AMST 3010 Special Topics In Am Std (3 Credit Hours)**
Seminar primarily for American studies majors, generally taken in the junior year, comprising a detailed exploration of some one topic or theme relevant to the American scene.

**AMST 3011 Topics in American Studies (3 Credit Hours)**

**AMST 3110 N.O. As Cultural System (3 Credit Hours)**
Analyzing the City as a cultural system, the course explores the nature of the intersections among diverse cultural phenomena such as space, ritual, food, and music.

**AMST 4560 Internship (1,3 Credit Hours)**
An experiential learning process coupled with pertinent academic coursework. Open only to juniors and seniors in good standing. Registration is completed in the academic department sponsoring the internship on TUTOR.

**AMST 4570 Internship (1,3 Credit Hours)**
An experiential learning process coupled with pertinent academic coursework. Open only to juniors and seniors in good standing. Registration is completed in the academic department sponsoring the internship on TUTOR.

**AMST 4910 Independent Study (3 Credit Hours)**
Open to qualified juniors and seniors only.

**AMST 4920 Independent Studies (3 Credit Hours)**
Open to qualified juniors and seniors only.

**AMST 4990 Honors Thesis (3 Credit Hours)**

**AMST 5000 Honors Thesis (4 Credit Hours)**

**AMST 5010 Seminar In Am Studies (3 Credit Hours)**
Seminar primarily for American studies majors, generally taken in the senior year, involving an in-depth study of a major motif, movement, or problem in American intellectual or religious thought. The production of an acceptable research paper demonstrates competence in American studies.

**AMST 5020 The 1960s and Literature (3 Credit Hours)**

**AMST 5025 Jazz, Blues and Literature (3 Credit Hours)**

**AMST 5030 Postwar America (3 Credit Hours)**

**AMST 5110 Capstone Component: AMST 5010 (0 Credit Hours)**

**AMST 5111 Capstone Component: AMST/HISU (0 Credit Hours)**

**AMST 5112 Capstone Component: AMST 5025 (0 Credit Hours)**

**AMST 5113 Capstone Component: AMST/ENLS (0 Credit Hours)**

**AMST 5190 Semester Abroad (1-20 Credit Hours)**

**AMST 5370 Washington Semester (1-20 Credit Hours)**

**AMST 5380 Junior Year Abroad (1-20 Credit Hours)**

**AMST 5390 Junior Year Abroad (1-20 Credit Hours)**

**AMST 5890 Service Learning: AMST 5010 (0-1 Credit Hours)**

**AMST 5940 Transfer Coursework (0 Credit Hours)**

To confront the challenges facing modern health care, experts and organizations are calling for an increase in leadership capabilities. The Association of American Medical Colleges (AAMC) calls for a "focus on organizational leadership in a new era of health care." The mission statement or the Tulane University School of Medicine states "...to deliver the highest quality patient care and prepare the next generation of distinguished clinical and scientific leaders. To meet this need, this course, Leadership in Health Care, will engage with leadership topics to intentionally train students in the qualities consistently demonstrated by leaders when performing at their personal best with a focus on topics particularly crucial to healthcare.

</table>

This course aims to equip students with some basic facts about the world’s languages, a fundamental prerequisite to understanding the nature of human language. We will be examining: (1) the diversity of languages across space and time, and (2) the fundamental similarities of languages. We will address a range of questions about language through an exploration of the following areas: language families and historical relationships, linguistic typology, language universals, sound and structure features of the world’s languages, and writing systems.

<td>Native America: Introduction</td>
<td>3</td>
</tr>
</tbody>
</table>

Native Americans have played and continue to play an important part in American society. Largely invisibilized by the foregrounding of other ethnic minority groups, Native Americans in the US struggle for recognition (federal, state, and local), for survival as cultural groups (cf. Ile de Jean Charles evacuation/resettlement), and for basic rights (legal protections, religious freedom, education, health services, and subsistence). While focusing primarily on Native American groups in the US, this course will explore the histories of indigenous peoples. Vignettes of the cultures, languages, philosophies and lifeways of indigenous Americans provide the backdrop for coming to know the modern autochthonous peoples.

ANTH 1940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

ANTH 2020 Visual Languages Across Cultur (3 Credit Hours)
Most research on language takes speech as the main domain of investigation. However, humans use not only speech but also meaningful hand movements called ‘gestures’ when they communicate. Furthermore, there are many communities where the speech is absent in linguistic communication. For example, deaf communities across the world use sign languages that are produced and perceived only in the visual-spatial modality. This course aims to give an interdisciplinary and state of the art overview of the role of the body in the structuring and functioning of the human language faculty. The course will present cross-cultural and cross-linguistic findings from these new fields relating them to discussions of embodied cognition and semantics, situated use of language, the link between language and action and their neural correlates. This course fulfills the departmental goal of providing its students with the knowledge of appreciation for the cultural and linguistic diversity of humanity.

ANTH 2030 Anthropology of Women and Men (3 Credit Hours)
A cross-cultural survey of women in society and culture among hunters and gatherers, pastoral nomads and agriculturalists of Oceania, the Near East, Africa, and the New World. Kinship and female symbolism in Africa, women and men in myths in traditional societies. Cross-cultural variability of women’s roles and status and the variability of women’s and men’s language and behavior.

ANTH 2340 Introduction to Archaeology (3 Credit Hours)
Introduction to basic principles of archaeological method and theory. Consideration of the history of archaeology, major paradigms in archaeological thought, basic techniques of fieldwork, basic techniques in analyzing archaeological finds, and intellectual frameworks for interpreting patterns in archaeological datasets. Consideration of selected case studies. Of interest to majors and prospective majors in anthropology, and potentially to majors in classical archaeology and related fields.

ANTH 2350 Arch & Power the Ancient World (3 Credit Hours)
This class will explore how political, religious, ideological and cultural ideas among the world’s earliest urban civilizations were inscribed in the landscape in the form of monumental construction. To achieve these objectives the class will study five different regions of the ancient world with the goal of evaluating how built space (buildings, monuments, and public plazas) helped develop and maintain socio-political hierarchy, i.e., "civilization".

ANTH 2360 Ancient Trade & Commerce (3 Credit Hours)
Introduction to the study of regional and interregional trade and exchange in ancient times based on archaeological evidence. This course considers diverse theories and methods developed to make archaeological inferences about ancient trade and exchange and examines how the study of trade and exchange informs us about sociopolitical systems and economic relations and how they vary over time and space. Of interest to majors and prospective majors in anthropology and related fields.

ANTH 2390 Semester Abroad (1-20 Credit Hours)
Semester Abroad.

ANTH 2880 Writing Intensive: (1 Credit Hour)
Writing practicum.

ANTH 2940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

ANTH 3010 Hunters and Gatherers (3 Credit Hours)
Comparative study of selected modern and past groups of hunter-gatherers. Anthropological approaches to understanding subsistence practices, social organization, and cultural change in non-agricultural societies. Both ethnographic and archaeological cases will be considered.

ANTH 3050 North American Indians (3 Credit Hours)
Native North American cultures from the time of European contact to the 20th century. Cultural variation from the Arctic to northern Mexico and the adjustments to modern life.

ANTH 3060 South American Indians (3 Credit Hours)
Ethnology of the indigenous peoples of lowland South America and adjacent southern Central America. The course examines cultural developments from prehistory to the present. Models for the classification of indigenous cultures, societies, and languages are critically reviewed.

ANTH 3090 Selected Cultural Systems (3 Credit Hours)
Systematic treatment of specific cultures of the past and present.

ANTH 3091 Selected Cultural Systems (3 Credit Hours)
Selected Cultural Systems.

ANTH 3092 Selected Cultural Systems (3 Credit Hours)

ANTH 3097 Selected Cultural Systems (3 Credit Hours)
Selected Cultural Systems.

ANTH 3098 Selected Cultural Systems (3 Credit Hours)
Selected Cultural Systems.

ANTH 3099 Selected Cultural Systems (3 Credit Hours)
Selected Cultural Systems.

ANTH 3110 Culturs Sub-Saharn Africa (3 Credit Hours)
A survey of the cultures of sub-Saharan Africa from the time of European contact to the present. A detailed study of selected African cultures, identifying, and explaining cultural diversity and unity of African cultures, and comparing African cultures with cultures of other geographic areas. Inequality, development, the family, gender roles, kinship systems, and world view are considered.
ANTH 3120  Anth of Sex & Reproductn (3 Credit Hours)
An exploration of the interrelatedness of biological, behavioral, cultural, social, and political aspects of human sex and reproduction. Current issues, such as new reproductive technologies, the biology and culture of pregnancy and childbirth, mate choice, will be examined from within an evolutionary framework and/or using a cross-cultural approach.

ANTH 3140  Primate Behav & Ecology (3 Credit Hours)
An introduction to the social and physical diversity of the Order Primates, emphasizing the biology, ecology, and behavior of living nonhuman primates. Social structure will be explored from an evolutionary perspective, and the ecological and social constraints on behavioral flexibility will be examined. Examples will cover both field and laboratory investigations of nonhuman primates.

ANTH 3160  Peoples of The Pacific (3 Credit Hours)
Introduction to the cultures of Polynesia, Micronesia, Melanesia, and Australia from the first settlement to the emergence of modern nation-states.

ANTH 3190  Economic Anthropology (3 Credit Hours)
The study of economic behavior in band, tribal, and peasant societies. Emphasis on the impact of culture and environment on economic decision-making in the Third World. Competing theoretical approaches, particularly evolutionary, ecological, substantivist and Marxist are critically reviewed.

ANTH 3195  Financial Lives (3 Credit Hours)
This course focuses on the expansion of financial services on daily life in both U.S. and non-U.S. societies. We will use ethnographic case-studies to explore different institutions and mechanisms by which people organize their debt and credit relations. The first part of the course will be an overview of anthropological concepts and frameworks for understanding debt and sociality. The second part will focus on the diverse meanings of homeownership in U.S. society, Brazil, and China.

ANTH 3200  Magic Witchcraft and Religion (3 Credit Hours)
This course is an exploration into religion and the occult. We will examine a wide range of topics, such as hauntings, spirit possession, the role of evil in the moral imagination, and the construction of symbols as well as various practices associated healing, witchcraft (or sorcery) accusations, and the experience of suffering and death. Anthropological approaches challenge the categories of "religion" and "witchcraft", which stem from Western conceptions of reality, Christianity, and ethnocentric views of the "other".

ANTH 3220  Ethnology of Insular SE Asia (3 Credit Hours)
Peoples and cultures of Island or Maritime Southeast Asia, from the Andaman Islands in the west to the Bismark Archipelago in the east. Biogeographic distinctions between Indo and Austro SE Asia; evolutionary implications for people and fauna. Paleolithic, Neolithic, bronze, and iron ages from 40 kya to 1st millennium CE. Early developments in Austro-Asiatic and Austronesian languages. Commercial contacts with ancient Rome, India, China. Impacts of Hinduism, Buddhism, Islam, and Christianity. Prehistoric and early colonial entrepôts. Colonial development of ethnicities associated with Chinese, Arabic, Malay, Tamil, Aslian, Kmer, Portuguese, Dutch, and English. Identity issues, ethnohistory and ethnobiology of Aslian (Orang Asli) peoples to the present.

ANTH 3260  Highland Mex Prehistory (3 Credit Hours)
Patterns and processes of cultural development in the highlands of central Mexico, western Mexico, and Oaxaca as known from archaeological and ethnohistorical data. Early cultures, Toltecs, Aztecs, Mixtecs, Zapotecs.

ANTH 3290  The Nature of Language (3 Credit Hours)
Language as a reflection of the human mind and the role of language in defining the essence of humanity. Language and the expression of social values. Emphasis on analysis of primary linguistic data. Critical examination of theories of linguistic structure.

ANTH 3300  History of Writing (3 Credit Hours)
This course looks at the different systems of writing which have been used in various cultures through time with attention to the materials and purpose in relation to the cultures. Orientation to and practice in decipherment are included. Finally, the issues of modern script development are introduced.

ANTH 3310  Historical Linguistics (3,4 Credit Hours)
Survey of the field of paleopathology, the study of health and disease in ancient populations. Topics include methods for identifying evidence of injury and disease in bones, teeth, and mummified tissue; ancient medicine and surgery; chemical approaches to reconstructing diet; and human health trends through time.

ANTH 3320  Archaeology of Gender (3 Credit Hours)
Gender refers to the cultural norms, ideals, expectations, and rules that shape the relationships and activities of men, women, and children. People in the present and recent past have conceptualized gender in many different ways, and there is great diversity in the range of gender roles and gender relations seen in different cultures. With ethnographic and historic evidence as interpretive guides, archaeologists can offer insights into the nature of gender roles and gender relations in past societies, and into the ways that gender norms have contributed to major trends in the history and prehistory of humankind. This course is an introduction to the archaeological study of the roles of men, women, and children in past societies; the relationships among women, men, and children in past communities; and the ideologies that have legitimized and naturalized those gender roles and gender relations. Case studies covered in the course are drawn from the archaeology of the Americas, Africa, Asia, and Europe.

ANTH 3330  Anthropology of Gender (3 Credit Hours)
A theoretical and ethnographical examination of how gender is constructed across cultures. Topics include sex and gender, gender identity, bodily experiences, masculinity and femininity, gender roles, kinship and gender, gender stratification, and gender equality, as well as gender, ethnicity, and class.

ANTH 3350  Culture and Religion (3 Credit Hours)
Religions, ideas, ritual, and organization of primitive peoples; nativistic and messianic movements; function of religion in social systems.
ANTH 3360 Anthropology of Cities (3 Credit Hours)
This course focuses on anthropological approaches to cities and urban life. Topics include the cultural meanings of public space and the built environment, processes of social differentiation and class formation, the role of capital, and the emergence of social movements. The second half of the course is organized around a comparison of four ethnographic case-studies of cities outside the United States and Europe. Throughout the semester, studies will also discuss how anthropological approaches may be applied to New Orleans.

ANTH 3370 Locating Southeast Asia (3 Credit Hours)
This course examines contemporary Southeast Asia. As one of the most diverse regions in the world, the region confounds easy characterization. The first part of the course provides students with a broad overview of the social, cultural, and political institutions of the region with a focus on Indonesia, Thailand, the Philippines, and Vietnam. The second part turns to contemporary issues including political and economic development, religious change, and cultural constructions of identity. Readings include academic essays, short stories, and full-length ethnographies.

ANTH 3385 Cultural Creolization (3 Credit Hours)
Overview of theory and ethnography of current and historic processes of sociocultural contact and comingling primarily in the New World African-European-indigenous societies that result in emergent shared group identifications. The course examines how creolization allows for cultural continuity and creativity in such new social orders where a Creole language and/or identity may be formed. Admission: anthropology and linguistics majors at level of Jr. or above; graduate students; others by permission of instructor

ANTH 3395 Cultures of NO/Fr La (3 Credit Hours)
This course focuses on symbolic meaning in the vernacular expressive culture or folkloric forms of community groups in New Orleans, French Louisiana, the Gulf South region and selected out migrant locations. It addresses differential identities of tribal, ethnic, regional, religious, linguistic, occupational, class and gender affiliations--and examines aesthetic forms as a primary means to do so. Some of these are largely intangible such as music and dance, ritual and festival, narrative and jokes; others are tangible or material culture to varying degrees such as the built environment (houses, boats, landscape use), crafts, costumes and cuisine. All are examined via ethnographic and historical writing, oral histories and documentary media as to how shared cultural knowledge is performed in an array of contexts. These include dancehalls, Carnival parades, second lines, work settings, festivals, neighborhood museums, sacred spaces and so on.

ANTH 3400 Language and Culture (3 Credit Hours)
Acquiring and using techniques of conducting linguistic field work. Investigation of one or more languages by working with native speakers. Emphasis on defining problems, developing and testing hypotheses.

ANTH 3420 Lx Semantics (3 Credit Hours)
Semantics is the study of meaning in language. As humans use language they produce meaning in any number of ways: through intonation, through body language, through contextual (in)congruities, and through the linguistic structures used. Semantiicians try to limit their study to the last of these, while always aware of other meaning-creating tools. In this course, we begin with the study of logic-based theories of meaning, examining propositional meanings. At each stage in this initial investigation, we will keep in mind how this carefully restricted corpus compares with situated language use. In the second part of the course, we will systematically build in context to approach an understanding of natural semantics, the way human beings mean.

ANTH 3430 Archaeol Cultur Landscp (3 Credit Hours)
Landscapes are outcomes of natural and cultural activity. Natural landscapes are formed by geological processes and climatic patterns. Cultural landscapes are shaped by the intentional and unintentional effects of human activity on the environment. The archaeological study of cultural landscapes, therefore, concerns both the social and symbolic dimensions of local and regional environments as well as anthropogenic effects on environments at local, regional, and global scales. Archaeologists interested in cultural landscapes study features such as earthen mounds, embankments, monumental architecture, ritual places and cemeteries, the built environment of human settlements, canals, ditches, fields, and signs of human impacts on natural environments. Archaeologists typically study specific sites, but the archaeological study of landscapes emphasizes the significance of specific sites within broader regional contexts. An archaeological perspective benefits the study of landscapes because archaeologists are inherently interested in the effects of both long-term trends and short-term changes on the ways that groups of people interact with each other and with their environment. In this course, emphasis is placed on selected case studies from Europe, the North Atlantic, the South Pacific, and the Americas, although selected comparative cases and examples shall also be drawn from Africa and Asia.

ANTH 3435 Disasters and Past Societies (3 Credit Hours)
Consideration of case studies in how past societies have prepared for or responded to disasters, critical reflection on "natural" and "cultural" forces that contribute to catastrophic events and that shape the aftermath of disasters, comparative assessment of relationships between culture and environment, and application of resilience theory and models of cultural collapse towards understanding the effects of disasters on past societies.

ANTH 3440 Dialectology (3 Credit Hours)
Introduction to language variation both geographically and socially. The course looks at the history and methods of dialectology as well as the ways speakers demonstrate identity through speech patterns.
LEXICOGRAPHY

Lexicography is the making of dictionaries. Dictionaries take many forms and fulfill many functions. Dictionaries have evolved new formats; professional lexicographers share word gleaning with internet users. Dictionaries may be monolingual, di-, tri-, or multi-lingual, etymological or encyclopedic, synchronic or diachronic, prescriptive or descriptive, terminological or generic. Dictionary construction requires a number of skills which co-vary with the type of dictionary to be produced. This course provides an overview of dictionaries, their forms, formats and histories, while fostering a basic skill set for harvesting words and compiling lexicons. Dictionaries provide a cognitive map to communities of speakers, both past and present.

METHODS OF OBSERVATIONAL RESEARCH

This course focuses on the development, design, analysis, and presentation of research on behavior using observational methods. While these methods can be used on captive populations (zoo, research center) they are also appropriate for studies of free-ranging animals, including human beings. The student will be exposed to the specific challenges of observational research, and learn appropriate levels of analysis.

MANY FACES OF ISLAM

Islam is a fundamental human experience in diverse socio-historic and cultural milieux. Ethnographies of Muslim communities highlight the heterogeneity of Islamic perspectives and traditions. Focus on culturally situated Islamic practices and belief systems fosters a critical understanding of the emergent Islamic identities and their historico-cultural underpinnings.

AFRICAN MODERNITIES

This course focuses on the problem of conceptualizing modernity in Africa. Examining cases from throughout the continent, we will consider cultural developments such as romantic love, fashion, and consumption as well as new forms of religiosity and novel developments in established religions, economic change, state corruption, and violence.

ETHNICITY, NATIONALISM

Theoretical and ethnographic examinations of race, ethnicity, and nationalism. Topics also include multiculturalism, globalization, and diasporas.

DIASPORA YORUBA

Familiarizes students with the fundamentals of Yoruba language and culture; shows students how Diaspora dynamics have changed Yoruba language and culture; uses Diaspora Yoruba to teach students the principles of language death and innovation involving tones, vowels, nasalization, word formation, and sentence structure.

NATIVE AMERICAN LANGUAGES

This course will explore the richness of the linguistic diversity still preserved in the Native American languages of this hemisphere. Two thirds of the Native American languages spoken at time of European immigration have perished. Today even languages with large communities of fluent speakers face heavy assimilatory pressures. Language loss and simplification are rapidly changing the wordscape of the Americas.

SOCIAL CHANGE, SUSTAINABILITY, AND POSTCOLONIAL IDENTITY

The St. Martin Program is an intensive, immersive service-learning program that combines a 3-credit class (ANTH 3550: Social Change, Sustainability, and Postcolonial Identity in the Caribbean) with community engagement. The course is based in the small binational island of St. Martin (Lesser Antilles). It includes a mandatory, zero-credit service-learning component, which will satisfy the 2nd tier service-learning requirement for sophomores, juniors, and seniors. The primary purpose of the program is for students to meaningfully engage with locals, work and meet with community members committed to cultural, food, and economic sustainability, as well as gain an in-depth understanding of anthropological concepts and research methodology, especially as they relate to postcolonial contexts and the shaping of cultural/linguistic identities and socio-economic/political systems.

ENVIRONMENTAL ARCHAEOLOGY

This course examines the fundamentally important relationship between human behavior and environmental change in the past. It looks at both the ways in which humans have responded to their environmental circumstances and the ways in which human activities have influenced environmental conditions at various scales. The course explores methods for learning about environmental conditions in the past and the nature of human interaction with the environment. The course also presents basic information on some particularly important topics concerning past human/environment interactions, including (1) causes of global climate change, (2) human roles in Pleistocene megafauna, (3) post-Pleistocene adaptation, (4) the origins of agriculture and animal domestication, (5) agricultural landscape modification and environmental over-exploitation, and (6) Holocene changes in human health, including the origins of modern disease epidemics.

INTRODUCTION TO SYNTAX

Introduction of transformational generative syntax, with examples from selected areas of English grammar. Formal models in grammatical description. Emphasis on the logic of linguistic argumentation.

LINGUISTIC PHONETICS

The course offers an overview of articulatory and acoustic phonetics with emphasis on matching acoustic cues closely with the articulatory gestures. The first part of the course will study the articulatory and acoustic cues to range of English and non-English speech sounds with information about the normal range of variation. The second part will focus on collecting and interpreting acoustic data, and using such data as evidence to solve phonological problems in normal and pathological speech.

PHONOLOGY

This course provides an introduction to phonological analysis and theory, with strong emphasis on description and analysis of data from a wide variety of languages. Major issues to be addressed include universal principles of human phonological systems, language-specific variation, constraints on representation of rules, the relationship of phonology to morphological and syntactic components of the grammar, and the historical underpinnings of current theoretical models.
ANTH 3650 Morphology (3 Credit Hours)
This course provides an introduction to prosodic and non-prosodic morphology with emphasis on data analysis and argumentation. With data from a variety of languages, the first part of the course will examine non-prosodic morphological processes to highlight the typology of word structure across languages. The second part will examine morphological processes conditioned by prosody, and consider the various frameworks for analyzing the data; eventually, the course will work toward a normal model like that of McCarth and Prince's Theory of Prosodic Morphology. The main objectives of the course are: (1) to learn to analyze morphological data; (2) to learn to compare alternative analysis for a given set of data and to find evidence to choose between the alternative.

ANTH 3660 Discourse Analysis (3 Credit Hours)
Study of written and spoken texts from a variety of languages and language use contexts. Focus on structural aspects of language (noun phrase construction and anaphora, topicalization, focus constructions, word order, deictics, and definite reference) as they relate to the situated use of language.

ANTH 3670 Language & Acquisition (3 Credit Hours)
This course provides an introduction to issues such as the genetic basis of language ability and acquisition; neurological aspects of linguistic knowledge; first language acquisition. Emphasis will be laid on child language data collection, description and analysis. Other issues covered are: (1) language acquisition in special populations (deaf children, blind children, children with mental retardation, children with autism and children with specific language impairment); (2) childhood bilingualism.

Prerequisite(s): ANTH 1030 or 3290.

ANTH 3680 Language and Power (3 Credit Hours)
Exploration of the ways that language indexes, reflects, and constructs power. Cross-cultural study of the interrelationship of social ascriptions, attitudes toward groups and their members, and the speech patterns of in-group/out-group members. Examination of the manipulation of power and its linguistic correlates in the domains of medicine, the media, education, and the law. Effects of language policy, especially officialization and standardization, on speakers of minority languages or codes.

ANTH 3690 Language and Gender (3,4 Credit Hours)
An exploration of the structures of language, phonological, morphological, syntactic, semantic, and pragmatic, as they index, interrelate with, and construct gender identities cross-culturally.

ANTH 3700 Environmental Anthropology (3 Credit Hours)
Critically reviews case studies of ecosystemic and energetic relations between human populations, cultures, and the environment in diverse ethnographic settings of the world, such as Amazonia, the Great Basin, New Guinea, and Southeast Asia. Examines the historical emergence of ecological paradigms in anthropology. Compares the modern contributions of cultural ecology, evolutionary ecology, ethnoecology, and historical ecology. Evaluates potential contributions of ecological anthropology to general ecology.

ANTH 3710 Hist Ecology of Amazonia (3 Credit Hours)
Interactions between local peoples and Amazonian landscapes from prehistory to the present. Amazonian landscapes as an analytic unit will be examined from the interdisciplinary perspective of historical ecology. Changes and development of forests and savannas since the arrival of human beings. Historical, ecological, cultural forces involved in biological and edaphic diversity in modern forests. Long-term effects of prehistoric and historic human occupations and manipulation of landscapes. Implications for conservation and development.

ANTH 3720 Adaptation Hum Variability (3 Credit Hours)
Biological adaptations of living human populations to their environments, and the interaction of these adaptations with cultural patterns. Relationships of body size, form, and composition to climatic and nutritional factors in various geographical groups of modern man. Major adaptive problems facing the human species are discussed and implications for the future explored.

ANTH 3730 Princ of Forensic Anthro (3 Credit Hours)
Introduction to forensic anthropology, a subdiscipline of physical anthropology concerned with the identification of human skeletal remains in medicolegal contexts. Surveys the history of the field and the techniques used to determine age, sex, and physical characteristics of an individual from skeletonized remains, as well as methods used for positive identification, estimating time since death, and determining cause and manner of death.

ANTH 3745 Bioarcheology of Mummies (3,4 Credit Hours)
Mummified human remains open a fragile window into the past. They provide unique information about the physical characteristics, health and diet of ancient peoples, as well as information on cultural modification of the body (head shaping, piercing, tattooing, hair styles), funerary practices, and cultural concepts of death and the afterlife. Mummies can be investigated from various perspectives (textual, iconographic, biomedical, ethnographical, archaeological), but are studied most effectively using a multidisciplinary approach involving archaeologists, biological anthropologists, conservators, and specialists in medical imaging, paleogenetics and geochemistry. Bioarchaeology, the application of biological anthropological methods to archaeological research questions, is a term commonly used today to describe this multidisciplinary approach to studying the dead. This course will examine preserved human bodies from around the world, with an emphasis on scientific studies that seek to reconstruct their life histories and postmortem treatment.

ANTH 3750 Bones, Bodies and Disease (3 Credit Hours)
Survey of the field of paleopathology, the study of health and disease in ancient populations. Topics include methods for identifying evidence of injury and disease in bones, teeth, and mummified tissue; ancient medicine and surgery; chemical approaches to reconstructing diet, and human health trends through time.
ANTH 3755 Human Osteology (3 Credit Hours)
The objective of this course is to learn the anatomy of the human skeleton and dentition and the techniques physical anthropologists use to excavate, identify, and analyze human skeletal remains. You will learn how to identify the various bones of the skeleton, how to distinguish human from non-human bone, how to determine sex and estimate age at death; and how to measure bones in order to reconstruct living stature and physical characteristics from skeletal remains. Examples from archaeological excavations and forensic cases will be used to illustrate the kinds of information human skeletons can provide about ancient and modern populations. Practical and written exams and laboratory exercises hone your skills at recognizing anatomical landmarks, identifying fragmentary osteological material, measuring bones, and conducting a detailed skeletal inventory.

ANTH 3760 Primate Evol & Adaption (3 Credit Hours)
This course will focus on the anatomy, evolution and adaptive radiation of the Order Primates. Basic information on living primates and detailed investigation of the primate fossil record will be presented. The dynamic nature of the field will be the subject of class discussion and investigative essays.

ANTH 3770 Global Vietnam (3 Credit Hours)
This course examines how Vietnamese-American identities are constructed and performed. The course is divided into three sections. In the first section, Diaspora and Transnationalism.

ANTH 3780 Language Death (3 Credit Hours)
Every fortnight a human language dies. Half the languages spoken in the Western Hemisphere at the turn of the 19th century have died. This course examines the forces that lead to language death, strategies that speakers whose linguistic heritage is endangered may deploy to revitalize their languages, and tools that linguists have used to preserve the knowledges of human speech communities.

ANTH 3850 The Four-Field Model (3 Credit Hours)
Philosophical underpinnings of general anthropology. Epistemological ramifications of four anthropological fields (subdisciplines) as complete coverage of the subject matter. Contingency vs. rationale in the amalgamation of the four fields, as distinctive and definitive of the holistic study of Homosapiens. Initial development of the model in the British Isles; institutionalization in 20th century North America. Connections to study of natives of the New World and salvage ethnography. Growth and specialization in subdisciplines. Debates over the logic and practicality in continuing cohesion of the model. May be taken as capstone, with ANTH 5110. Students who sign up for the capstone, will have an extra class session, times listed under ANTH 7850.

ANTH 3890 Service Learning: ANTH 3550 (0-1 Credit Hours)
Service Learning.
Corequisite(s): ANTH 3195.

ANTH 3891 Service Learning: ANTH (0-1 Credit Hours)
Service Learning.

ANTH 3899 Service Learning: ANTH 3091 (0-1 Credit Hours)
Service Learning.
Corequisite(s): ANTH 3091.

ANTH 3940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

ANTH 4060 Anthropology Proseminar (3 Credit Hours)
It is a four-field seminar course, covering archaeology, linguistics, physical anthropology and socio-cultural anthropology. Topics vary with the current research interests of the faculty presenting the course. Students do primary and secondary research, present their findings orally and in writing. This course draws together the four subdisciplines of anthropology, integrating them in the approach to a body of theory, an array of methods and an emerging set of data congruent with the topical theme.

ANTH 4080 Race and Nation Span Caribbean (3 Credit Hours)
This course provides a comparative survey of the interwoven dynamics of race, class and national formation in the making of the Spanish-speaking Caribbean. Drawing on a range of readings in history, media studies, music, fiction writing and poetry as well as anthropology, this course will explore the overlapping historical contexts of Cuba, Puerto Rico, and the Dominican Republic in addition to related impacts of Haiti and its Revolution. The focus of attention will be placed on the on-going centrality of racial dynamics in these island nations from slave-based sugar plantations to reggaetón music.

ANTH 4120 Conquest and Colonialism (3 Credit Hours)
Comparative and global perspectives on the archaeology of culture contact and colonialism.

ANTH 4130 North American Prehistory (3 Credit Hours)
A survey of the archaeology of Canada and the United States from the appearance of man in the New World to the arrival of the Europeans.

ANTH 4150 African Prehistory (3 Credit Hours)
Survey of African prehistory from the earliest tool-makers (Olduvai Gorge, etc.) to protohistoric times. Emphasis on Africa south of the Sahara for later prehistory. Africa’s role in human origins, development and spread of food-producing economies, the African Iron Age, early contacts with Arabic and European peoples.

ANTH 4210 Sem In Historicl Ecology (3 Credit Hours)
The scientific and philosophical basis of the research program. Comparisons with cultural ecology, cultural materialism, evolutionary biology, landscape ecology. Distinctions and convergences between evolution and history. Hard-core postulates. Case studies from Amazonia, tropical Africa, Southeast Asia, East Asia (especially the Japanese archipelago and the adjoining Pacific Rim). In-class assessments of current research.

ANTH 4260 Arch Us Southwest (3 Credit Hours)
This course looks at the development of prehistoric and early historic cultures of the U.S. Southwest. Both archaeological and early historical evidence of indigenous peoples and early explorers will be examined.

ANTH 4270 Roots of Western Civiliz (3 Credit Hours)
Cultural history of Southwestern Asia and Europe from the Mesolithic, through the development of food production, to the beginnings of civilization. Emphasis upon the beginnings of complex societies and urban life and their early, pre-Roman development in Europe.
ANTH 4410 Olmec & Maya Civilizations (3 Credit Hours)
Examine the development of highly advanced cultures and societies in one of the centers of native American civilization. Although the presentation stresses archaeological data, the course considers pre-Hispanic aesthetic achievements, social organization, values, written records, and adaptation to varying environments.

ANTH 4510 Spec Concpts Human Paleo (3 Credit Hours)
The number of proposed fossil hominid/hominin species has mushroomed in recent years yet the recognition of species in the human fossil record remains a daunting task. However, in order to reconstruct the phylogenetic (ancestor-descendent) relationships among humans, our ancestors, and close collateral relatives, we must group hominin fossils into meaningful taxonomic categories, ones that likely reflect truly monophyletic (shared common ancestor) descent patterns. This course explores different evolutionary species concepts and their applicability to human paleontology. Current approaches to the reconstruction of phylogenetic relationships are then discussed, and the taxonomic status of hominin species is assessed.

ANTH 4520 Diaspora Yoruba (3 Credit Hours)
Familiarizes students with the fundamentals of Yoruba language and culture; shows students how Diaspora dynamics have changed Yoruba language and culture; uses Diaspora Yoruba to teach students the principles of language death and innovation involving tones, vowels, nasalization, word formation, and sentence structure.

ANTH 4560 Internship Studies (1-3 Credit Hours)
Internships in anthropology are available to qualified juniors and seniors on a limited basis for individual projects conducted in association with various private firms, public and private organizations, or governmental institutions in New Orleans. Students will work under professional supervision at these sites, and consult with a faculty sponsor. Requirements include a written report on the experience, and an evaluation by the supervisor.

ANTH 4570 Internship (1-3 Credit Hours)
Internships in anthropology are available to qualified juniors and seniors on a limited basis for individual projects conducted in association with various private firms, public and private organizations, or governmental institutions in New Orleans. Students will work under professional supervision at these sites, and consult with a faculty sponsor. Requirements include a written report on the experience, and an evaluation by the supervisor.

ANTH 4610 Ceramic Analysis (3 Credit Hours)
A laboratory course dealing with the descriptive analysis of archaeological ceramics. Introduction to aspects of ceramic technology, classification, description, and the use of ceramics in archaeological research. Emphasis will be on practical methods and techniques for analyzing, describing, reporting, and graphically representing ceramic artifacts.

ANTH 4620 Lithic Analysis (3 Credit Hours)
A laboratory course dealing with the technological analysis of lithic artifacts. Introduction to fracture mechanics and flint napping, debitage analysis and classification. Application of principles and methods of technological classification, description, and graphical representation to archaeological specimens and modern replicates.
ANTH 6050 North American Indians (3 Credit Hours)
Native North American cultures from the time of European contact to the 20th century. Cultural variation from the Arctic to northern Mexico and the adjustments to modern life.

ANTH 6060 South American Indians (3 Credit Hours)
Ethnology of the indigenous peoples of lowland South America and adjacent southern Central America. The course examines cultural developments from prehistory to the present. Models for the classification of indigenous cultures, societies, and languages are critically reviewed.

ANTH 6090 Selected Cultural Systems (3 Credit Hours)
Selected Cultural Systems.

ANTH 6091 Selected Cultural Systems (3 Credit Hours)
Selected Cultural Systems.

ANTH 6092 Selected Cultural Systems (3 Credit Hours)
Selected Cultural Systems.

ANTH 6093 Selected Cultural Systems (3 Credit Hours)
Selected Cultural Systems.

ANTH 6094 Selected Cultural Systems (3 Credit Hours)
Selected Cultural Systems.

ANTH 6095 Selected Cultural Systems (3 Credit Hours)
Selected Cultural Systems.

ANTH 6096 Selected Cultural Systems (3,4 Credit Hours)
Selected Cultural Systems.

ANTH 6097 Selected Cultural Systems (3 Credit Hours)
Selected Cultural Systems.

ANTH 6100 South American Archaeology (3 Credit Hours)
Survey of South American archaeology with primary focus on the Andean area. Overview of culture history from the Paleoindian period through the Spanish conquest.

ANTH 6120 Anth of Sex & Reproduction (3 Credit Hours)
An exploration of the interrelatedness of biological, behavioral, cultural, social, and political aspects of human sex and reproduction. Current issues, such as new reproductive technologies, the biology and culture of pregnancy and childbirth, mate choice, will be examined from within an evolutionary framework and/or using a cross-cultural approach.

ANTH 6130 Southeast U.S. Prehistory (3 Credit Hours)
Survey of the various problems of archaeology of the Southeastern United States.

ANTH 6140 Primate Behavior Biology (3,4 Credit Hours)
This course will familiarize students with the Order Primates, with an emphasis on the rules of and constraints on nonhuman primate social structure

ANTH 6210 Devel of Anth Theory (3 Credit Hours)
Origin and development of anthropology since the Renaissance.

ANTH 6220 Material Culture (3 Credit Hours)
This course considers how objects embody social relationships and cultural meanings from a variety of perspectives. The major goal of the course is to enhance our understanding of the diversity of people's engagement with the material world to shape social relations. This course is also an attempt to re-connect sub-disciplines of anthropology (socio-cultural anthropology, archaeology, physical anthropology, and linguistics) and to build a general anthropology of material culture. The course is also relevant to students in related disciplines such as art history

ANTH 6230 Archaeological Theory (3 Credit Hours)
An introduction to theoretical basis of modern archaeology. The implications of theory for excavation, analysis, and interpretation.

ANTH 6240 Tech Analysis For Archaeology (3 Credit Hours)
A survey of scientific analytic techniques that have been adapted for application to common archaeological problems such as site discovery, dating, site formation processes, artifact source and function, and subsistence and diet. Examination of methodological literature and case studies.

ANTH 6250 Old World Paleolithic Pre (3 Credit Hours)
This course offers a synthetic review of the archaeological prehistory and biological evolution of our species. The course examines topics in paleoanthropology ranging from the ancestors of Australopithecines in the Miocene to the emergence of complex hunter-gatherer societies at the end of Pleistocene.

ANTH 6260 Highland Mex Prehistory (3 Credit Hours)
Patterns and processes of cultural development in the highlands of central Mexico, western Mexico, and Oaxaca as known from archaeological and ethnohistorical data. Early cultures, Toltecs, Aztecs, Mixtecs, Zapotecs.

ANTH 6270 Culture & Romantic Love (3 Credit Hours)
Comparative study of romantic love with a focus on non-Western societies. Topics include the debate over the universality of romantic love; cultural delineations, evaluations, and expressions of passionate love, companionate love, and sexual desire; socio-cultural regulations of love, sex, marriage, and non-heterosexual intimacy; romantic love, social change, and globalization.

ANTH 6320 Social Structure (3 Credit Hours)
History of the development of the structural/functional paradigm in social anthropology. Diachronic versus synchronic models, statistical versus normative models, decision models, networks, psychological reductionism.

ANTH 6340 Medical Anthropology (3 Credit Hours)
Survey of the relationships among disease, curing, culture and environment. Topics include problems of adapting modern medicines to diverse cultures; explication of the social and cultural correlates of physical and mental health and disease (social epidemiology); cross-cultural variation in disease concepts, medical practices, role of patients, and mental health; health and nutritional implications of planned culture change; contributions of anthropology to health-policy decisions of development organizations.

ANTH 6350 Culture and Religion (3 Credit Hours)
Religions, ideas, ritual, and organization of primitive peoples; nativistic and messianic movements; function of religion in social systems.
ANTH 6385  Cultural Creolization (3 Credit Hours)
Overview of theory and ethnography of current and historic processes of sociocultural contact and comingling primarily in the New World African-European-indigenous societies that result in emergent shared group identifications. The course examines how creolization allows for cultural continuity and creativity in such new social orders where a Creole language and/or identity may be formed. Admission: anthropology and linguistics majors at level of Jr. or above; graduate students; others by permission of instructor

ANTH 6395  Cultures of NO/Fr La (3 Credit Hours)
This course focuses on symbolic meaning in the vernacular expressive culture or folkloric forms of community groups in New Orleans, French Louisiana, the Gulf South region and selected out migrant locations. It addresses differential identities of tribal, ethnic, regional, religious, linguistic, occupational, class and gender affiliations—and examines aesthetic forms as a primary means to do so. Some of these are largely intangible such as music and dance, ritual and festival, narrative and jokes; others are tangible or material culture to varying degrees such as the built environment (houses, boats, landscape use), crafts, costumes and cuisine. All are examined via ethnographic and historical writing, oral histories and documentary media as to how shared cultural knowledge is performed in an array of contexts. These include dancehalls, Carnival parades, second lines, work settings, festivals, neighborhood museums, sacred spaces and so on.

ANTH 6400  Language and Culture (3 Credit Hours)
Acquiring and using techniques of conducting linguistic field work. Investigation of one or more languages by working with native speakers. Emphasis on defining problems, developing and testing hypotheses.

ANTH 6415  Pidgins and Creoles (3 Credit Hours)
An overview of the world's pidgin and creole languages and a survey of the theories of their origins. Capstone in Linguistics and Anthropology.

ANTH 6420  Linguistic Field Methods (3 Credit Hours)
Acquiring and using techniques for conducting linguistic field work. Investigation of one or more languages by working with native speakers. Emphasis on defining problems, developing and testing hypotheses.

ANTH 6430  Archaeol Culturl Landscp (3 Credit Hours)
Landscapes are outcomes of natural and cultural activity. Natural landscapes are formed by geological processes and climatic patterns. Cultural landscapes are shaped by the intentional and unintentional effects of human activity on the environment. The archaeological study of cultural landscapes, therefore, concerns both the social and symbolic dimensions of local and regional environments as well as anthropogenic effects on environments at local, regional, and global scales. Archaeologists interested in cultural landscapes study features such as earthen mounds, embankments, monumental architecture, ritual places and cemeteries, the built environment of human settlements, canals, ditches, fields, and signs of human impacts on natural environments. Archaeologists typically study specific sites, but the archaeological study of landscapes emphasizes the significance of specific sites within broader regional contexts. An archaeological perspective benefits the study of landscapes because archaeologists are inherently interested in the effects of both long-term trends and short-term changes on the ways that groups of people interact with each other and with their environment. In this course, emphasis is placed on selected case studies from Europe, the North Atlantic, the South Pacific, and the Americas, although selected comparative cases and examples shall also be drawn from Africa and Asia.

ANTH 6435  Disasters and Past Societies (3 Credit Hours)
Consideration of case studies in how past societies have prepared for or responded to disasters, critical reflection on "natural" and "cultural" forces that contribute to catastrophic events and that shape the aftermath of disasters, comparative assessment of relationships between culture and environment, and application of resilience theory and models of cultural collapse towards understanding the effects of disasters on past societies.

ANTH 6480  Human Functional Morph (3 Credit Hours)
This course covers the functional anatomy of the human body, with emphasis on the structure, function, evolution, and development of the musculo-skeletal and nervous systems. The principle of biological uniformitarianism is used to correlate hard tissue (i.e., teeth and bone) structure with soft tissue function, since soft tissues are only rarely recovered in archaeological or paleontological settings.

ANTH 6500  Human Evolution (3 Credit Hours)
An investigation into the evolution of modern Homo sapiens (italics) over the last ten million years. Emphasis will be placed on the fossil record of human and nonhuman primates, the role of changing environments, and migration patterns. Models from technologically simple cultures and modern nonhuman primates will be included in the consideration of developing social organizations.

ANTH 6510  Ethnicity, Nationalism (3 Credit Hours)
Theoretical and ethnographic examinations of race, ethnicity, and nationalism. Topics also include multiculturalism, globalization, and diasporas.
ANTH 6520 Ethnographic Methods (3 Credit Hours)
Theory and techniques involved in collecting, analyzing, and reporting ethnographic data. Validity, reliability, and precision of participant observation; probes and free lists; sampling frames and types of samples appropriate to the unit of analysis; surveys and questionnaires; selection of key informants; interdisciplinary methods; research design. Consideration of ethical issues, potential conflicts of interest, and university review board procedures and policies. Classroom exercises and field projects.

ANTH 6700 Spoken Nahuatl (3 Credit Hours)
The essentials of Nahuatl phonology, morphology, and syntax. Conversational practice and laboratory sessions along with emphasis on linguistic analysis of the language.

ANTH 6710 Hist Ecology of Amazonia (3 Credit Hours)
Interactions between local peoples and Amazonian landscapes from prehistory to the present. Amazonian landscapes as an analytic unit will be examined from the interdisciplinary perspective of historical ecology. Changes and development of forests and savannas since the arrival of human beings. Historical, ecological, cultural forces involved in biological and edaphic diversity in modern forests. Long-term effects of prehistoric and historic human occupations and manipulation of landscapes. Implications for conservation and development.

ANTH 6720 Spoken Yoruba (3 Credit Hours)
This course provides an introduction to the Yoruba language. Emphasis on grammar and vocabulary development, listening, speaking, reading, and writing skills. Practice in oral discussion will be enhanced by weekly dramatical presentations, poetry recitals, and story-telling.

ANTH 6745 Bioarchaeology of Mummies (3 Credit Hours)
Mummified human remains open a fragile window into the past. They provide unique information about the physical characteristics, health and diet of ancient peoples, as well as information on cultural modification of the body (head shaping, piercing, tattooing, hair styles), funerary practices, and cultural concepts of death and the afterlife. Mummies can be investigated from various perspectives (textual, iconographic, biomedical, ethnographical, archaeological), but are studied most effectively using a multidisciplinary approach involving archaeologists, biological anthropologists, conservators, and specialists in medical imaging, paleogenetics and geochemistry. Bioarchaeology, the application of biological anthropology to archaeological research questions, is a term commonly used today to describe this multidisciplinary approach to studying the dead. This course will examine preserved human bodies from around the world, with an emphasis on scientific studies that seek to reconstruct their life histories and postmortem treatment.

ANTH 6800 Spoken Yucatecan Maya (3 Credit Hours)
The essentials of Yucatecan Maya phonology, morphology, and syntax. Oral/aural exercises and conversational practice with a native speaker.

ANTH 6810 Int Mayan Hieroglyphics (3 Credit Hours)
A survey of present knowledge about the nature of the pre-Columbian Maya writing system, including calendrical notation, astronomical calculations, the structure and content of phoneticism, and its relationship to other Mesoamerican writing systems.

ANTH 6820 Classical Yucatecan Maya (3 Credit Hours)
Morphology and syntax of Classical Yucatecan Maya. Palaeography and translation of Colonial Maya documents representing the following genres: land surveys and transfers, wills, official complaints, divinatory and/or prophetic texts.

ANTH 6840 Beginning Kaqchikel Lang (3 Credit Hours)
Kaqchikel is one of the four largest Mayan groups in Guatemala, having over a million self-identified members, about half of whom speak their native mother tongue. Taught in three Kaqchikel communities in Guatemala, this six week course enables students to achieve conversational fluency and elementary reading/writing skills.

ANTH 6845 Beginning K'iche' Language (3 Credit Hours)
K’iche’ is the largest Mayan language spoken in Guatemala, with about 2.5 million speakers. Situated in Highland Guatemala, it is second only to Spanish in number of speakers. This six week summer course is taught primarily in Nahualá, a town of about 90,000 in the Department of Sololá. Students acquire basic oral and written proficiency in the language.

ANTH 6850 Intermediate K'iche' Language (3 Credit Hours)
K’iche’ is the largest Mayan language spoken in Guatemala, with about 2.5 million speakers. Situated in Highland Guatemala, it is second only to Spanish in number of speakers. This six week summer course is taught primarily in Nahualá, a town of about 90,000 in the Department of Sololá. Students acquire basic oral and written proficiency in the language.

Prerequisite(s): ANTH 6845.

ANTH 6855 Advanced K'iche' Language (3 Credit Hours)
K’iche’ is the largest Mayan language spoken in Guatemala, with about 2.5 million speakers. Situated in Highland Guatemala, it is second only to Spanish in number of speakers. This six week summer course is taught primarily in Nahualá, a town of about 90,000 in the Department of Sololá. Students acquire basic oral and written proficiency in the language.

Prerequisite(s): ANTH 6850.

ANTH 6860 Intro to K'iche' Culture (3 Credit Hours)
This course in an introduction to K’iche’ (Maya) culture for students participating in the Mayan Language Institute realized in Guatemala in the municipalities of Antigua and Nahualá. The course will cover basic issues in K’iche’ culture and society and present hands-on workshops dealing with specific aspects of the culture. Topics will include kinship patterns and relationships, social interactions, gender roles, religious practices, arts and crafts, and economic structures. Students will have direct experience learning about K’iche’ cuisine, milpa agriculture, weaving, religious ceremonies, calendrical practices, and ceremonial and ritual observances. In addition, students will study examples of contemporary art, music, and literature, including the work of K’iche’ poets such as Humberto Ak’abal and Pablo Garcia.

ANTH 6870 Kaqchikel Maya Culture (3 Credit Hours)
Contemporary culture practices of the Kaqchikel in four communities of Guatemala will be examined as exemplary of the processes of cultural revitalization, integration into national and local political arenas, participation in world markets, and interaction with world religions. Culture practitioners will participate as facilitators and guest speakers.
ANTH 7130 North American Prehistory (3 Credit Hours)
A survey of the archaeology of Canada and the United States from the appearance of man in the New World to the arrival of the Europeans.

ANTH 7150 Prehistory of Africa (3 Credit Hours)
Survey of African prehistory from the earliest tool-makers (Olduvai Gorge, etc.) to protohistoric times. Emphasis on Africa south of the Sahara for later prehistory. Africa's role in human origins, development and spread of food-producing economies, the African Iron Age, early contacts with Arabic and European peoples.

ANTH 7170 Seminar In Archaeology (3 Credit Hours)
Graduate seminar on selected topics of contemporary interest and emphasis in anthropological archaeology. Offered irregularly. Seminar topics identified by archaeology faculty members.

ANTH 7180 Adv Middle American Arch (3 Credit Hours)
Graduate seminar on selected topics of contemporary interest and emphasis in Middle American archaeology. Offered irregularly. Seminar topics identified by archaeology faculty members.

ANTH 7190 Economic Anthropology (3 Credit Hours)
The study of economic behavior in band, tribal, and peasant societies. Emphasis on the impact of culture and environment on economic decision-making in the Third World. Competing theoretical approaches, particularly evolutionary, ecological, substantivist and Marxist are critically reviewed.

ANTH 7230 Research Dsgn &Grant Wrt (3 Credit Hours)
This seminar for advanced graduate students considers strategies for designing and conducting theoretically driven research in anthropology, and it considers the principal characteristics of major paradigms and theoretical perspectives that shape anthropology in its contemporary forms. Designing research plans and making linkages between theory, strategies of inquiry, specific methodologies, and empirical datasets is both challenging and rewarding, and research design can take considerable amounts of time and effort. Crafting research proposals can also be both challenging and rewarding, especially given the need to communicate research plans to specialists in particular disciplines and proposal reviewers from fields of study and practice other than our own. Each student in this course will develop theoretical perspectives and methodological approaches that form the basis for the research she or he plans to conduct as a dissertation project. Each student will write a draft a proposal for dissertation research. Some discussion throughout the course will be devoted to professional development and to specific funding programs that support doctoral and postdoctoral research in anthropology and related fields of study.

ANTH 7250 Selected Research Topics (3 Credit Hours)
Selected Research Topics.

ANTH 7260 Prehist U.S. Southwest (3 Credit Hours)
This course looks at the development of prehistoric and early historic cultures of the U.S. Southwest. Both archaeological and early historical evidence of indigenous peoples and early explorers will be examined.

ANTH 7270 Roots of Western Civilization (3 Credit Hours)
Cultural history of Southwestern Asia and Europe from the Mesolithic, through the development of food production, to the beginnings of civilization. Emphasis upon the beginnings of complex societies and urban life and their early, pre-Roman development in Europe.
ANTH 7290 Linguistic Analysis (3 Credit Hours)
Language as a reflection of the human mind and the role of language in defining the essence of humanity. Language and the expression of social values. Emphasis on analysis of primary linguistic data. Critical examination of theories of linguistic structure.

ANTH 7300 History of Writing (3 Credit Hours)
This course looks at the different systems of writing which have been used in various cultures through time with attention to the materials and purpose in relation to the cultures. Orientation to and practice in decipherment are included. Finally, the issues of modern script development are introduced.

ANTH 7310 Prehistory of Languages (3 Credit Hours)
Historical Linguistics traces language change over time. Reconstruction through comparative method and internal paradigm examination is used to retro-project earlier stages of a language or a language family, elucidating interrelationships among languages, paths of migration, spheres of influence, and varieties of contact. Reconstructed vocabulary yields inferences about ancient homelands, social organization, and culture constructs. The processes observed in language change yield insights into human cognition and the language faculty.

ANTH 7320 Archaeology of Gender (3 Credit Hours)
Gender refers to the cultural norms, ideals, expectations, and rules that shape the relationships and activities of men, women, and children. People in the present and recent past have conceptualized gender in many different ways, and there is great diversity in the range of gender roles and gender relations seen in different cultures. With ethnographic and historic evidence as interpretive guides, archaeologists can offer insights into the nature of gender roles and gender relations in past societies, and into the ways that gender norms have contributed to major trends in the history and prehistory of humankind. This course is an introduction to the archaeological study of the roles of men, women, and children in past societies; the relationships among women, men, and children in past communities; and the ideologies that have legitimized and naturalized those gender roles and gender relations. Case studies covered in the course are drawn from the archaeology of the Americas, Africa, Asia, and Europe.

ANTH 7330 Anthropology of Gender (3 Credit Hours)
Introduction to forensic anthropology, a subdiscipline of physical anthropology concerned with the identification of human skeletal remains in medico-legal contexts. Surveys the history of the field and the techniques used to determine age, sex, and physical characteristics of an individual from skeletonized remains, as well as methods used for positive identification, estimating time since death, and determining cause and manner of death.

ANTH 7340 Dialectology (3 Credit Hours)
Introduction to language variation both geographically and socially. The course looks at the history and methods of dialectology as well as the ways speakers demonstrate identity through speech patterns.

ANTH 7360 Anthropology of Cities (3 Credit Hours)
This course focuses on anthropological approaches to cities and urban life. Topics include the cultural meanings of public space and the built environment, processes of social differentiation and class formation, the role of capital, and the emergence of social movements. The second half of the course is organized around a comparison of four ethnographic case-studies of cities outside the United States and Europe. Throughout the semester, studies will also discuss how anthropological approaches may be applied to New Orleans.

ANTH 7370 Locating Southeast Asia (3 Credit Hours)
This course examines contemporary Southeast Asia. As one of the most diverse regions in the world, the region confounds easy characterization. The first part of the course provides students with a broad overview of the social, cultural, and political institutions of the region with a focus on Indonesia, Thailand, the Philippines, and Vietnam. The second part turns to contemporary issues including political and economic development, religious change, and cultural constructions of identity. Readings include academic essays, short stories, and full-length ethnographies.

ANTH 7400 Language & Culture (3 Credit Hours)
Acquiring and using techniques of conducting linguistic field work. Investigation of one or more languages by working with native speakers. Emphasis on defining problems, developing and testing hypotheses.

ANTH 7410 Prehist East Mesoamerica (3 Credit Hours)
Examines the development of highly advanced cultures and societies in one of the centers of native American civilization. Although the presentation stresses archaeological data, the course considers pre-Hispanic aesthetic achievements, social organization, values, written records, and adaptation to varying environments.

ANTH 7420 Ling Approaches to Meaning (3 Credit Hours)
Semantics is the study of meaning in language. As humans use language they produce meaning in any number of ways: through intonation, through body language, through contextual (in)congruities, and through the linguistic structures used. Semantics tries to limit their study to the last of these, while always aware of other meaning-creating tools. In this course, we begin with the study of logic-based theories of meaning, examining propositional meanings. At each stage in this initial investigation, we will keep in mind how this carefully restricted corpus compares with situated language use. In the second part of the course, we will systematically build in context to approach an understanding of natural semantics, the way human beings mean.

ANTH 7441 Lexicography: Dictionaries (3 Credit Hours)
Lexicography is the making of dictionaries. Dictionaries take many forms and fulfill many functions. Dictionaries have evolved new formats; professional lexicographers share word gleaning with internet users. Dictionaries may be monolingual, di-, tri-, or multi-lingual, etymological or encyclopedic, synchronic or diachronic, prescriptive or descriptive, terminological or generic. Dictionary construction requires a number of skills which co-vary with the type of dictionary to be produced. This course provides an overview of dictionaries, their forms, formats and histories, while fostering a basic skill set for harvesting words and compiling lexicons. Dictionaries provide a cognitive map to communities of speakers, both past and present.
ANTH 7450  Meth Observatn Behav Rsh (3 Credit Hours)
This course focuses on the development, design, analysis, and presentation of research on behavior using observational methods. While these methods can be used on captive populations (zoo, research center) they are also appropriate for studies of free-ranging animals, including human beings. The student will be exposed to the specific challenges of observational research, and learn appropriate levels of analysis.

ANTH 7470  Many Faces of Islam (3 Credit Hours)
Islam is a fundamental human experience in diverse socio-historic and cultural milieux. Ethnographies of Muslim communities highlight the heterogeneity of Islamic perspectives and traditions. Focus on culturally situated Islamic practices and belief systems fosters a critical understanding of the emergent Islamic identities and their historico-cultural underpinnings.

ANTH 7510  Spec Concepts Human Paleo (3 Credit Hours)
The number of proposed fossil hominid/hominin species has mushroomed in recent years yet the recognition of species in the human fossil record remains a daunting task. However, in order to reconstruct the phylogenetic (ancestor-descendent) relationships among humans, our ancestors, and close collateral relatives, we must group hominin fossils into meaningful taxonomic categories, ones that likely reflect truly monophyletic (shared common ancestor) descent patterns. This course explores different evolutionary species concepts and their applicability to human paleontology. Current approaches to the reconstruction of phylogenetic relationships are then discussed, and the taxonomic status of hominin species is assessed.

ANTH 7535  Native Amer Lang and Ling (3 Credit Hours)
This course will explore the richness of the linguistic diversity still preserved in the Native American languages of this hemisphere. Two thirds of the Native American languages spoken at time of European immigration have perished. Today even languages with large communities of fluent speakers face heavy assimilatory pressures. Language loss and simplification are rapidly changing the wordscape of the Americas.

ANTH 7560  Environmental Archaeology (3 Credit Hours)
This course examines the fundamentally important relationship between human behavior and environmental change in the past. It looks at both the ways in which humans have responded to their environmental circumstances and the ways in which human activities have influenced environmental conditions at various scales. The course explores methods for learning about environmental conditions in the past and the nature of human interaction with the environment. The course also presents basic information on some particularly important topics concerning past human/environment interactions, including (1) causes of global climate change, (2) human roles in Pleistocene megafauna, (3) post-Pleistocene adaptation, (4) the origins of agriculture and animal domestication, (5) agricultural landscape modification and environmental over-exploitation, and (6) Holocene changes in human health, including the origins of modern disease epidemics.

ANTH 7570  Intermed Kaqchikel Lang (3 Credit Hours)
Kaqchikel is one of the four largest Mayan groups in Guatemala, having over a million self-identified members, about half of whom speak their native mother tongue. Taught in three Kaqchikel communities in Guatemala, this six week course enables students to achieve conversational fluency and elementary reading/writing skills.

ANTH 7580  Adv Kaqchikel Lang (3 Credit Hours)
Kaqchikel is one of the four largest Mayan groups in Guatemala, having over a million self-identified members, about half of whom speak their native mother tongue. Taught in three Kaqchikel communities in Guatemala, this six week course enables students to achieve conversational fluency and elementary reading/writing skills.

ANTH 7590  Syntactic Theory (3 Credit Hours)
Introduction of transformational generative syntax, with examples from selected areas of English grammar. Formal models in grammatical description. Emphasis on the logic of linguistic argumentation.

ANTH 7610  Ceramic Analysis (3 Credit Hours)
A laboratory course dealing with the descriptive analysis of archaeological ceramics. Introduction to aspects of ceramic technology, classification, description, and the use of ceramics in archaeological research. Emphasis will be on practical methods and techniques for analyzing, describing, reporting, and graphically representing ceramic artifacts.

ANTH 7620  Lithic Analysis (3 Credit Hours)
A laboratory course dealing with the technological analysis of lithic artifacts. Introduction to fracture mechanics and flint napping, debitage analysis and classification. Application of principles and methods of technological classification, description, and graphical representation to archaeological specimens and modern replicates.

ANTH 7630  Linguistic Phonetics (3 Credit Hours)
The course offers an overview of articulatory and acoustic phonetics with emphasis on matching acoustic cues closely with the articulatory gestures. The first part of the course will study the articulatory and acoustic cues to range of English and non-English speech sounds with information about the normal range of variation. The second part will focus on collecting and interpreting acoustic data, and using such data as evidence to solve phonological problems in normal and pathological speech.

ANTH 7640  Phonology (3 Credit Hours)
This course provides an introduction to phonological analysis and theory, with strong emphasis on description and analysis of data from a wide variety of languages. Major issues to be addressed include universal principles of human phonological systems, language-specific variation, constraints on representation of rules, the relationship of phonology to morphological and syntactic components of the grammar, and the historical underpinnings of current theoretical models.
**ANTH 7650 Morphology (3 Credit Hours)**
This course provides an introduction to prosodic and non-prosodic morphology with emphasis on data analysis and argumentation. With data from a variety of languages, the first part of the course will examine non-prosodic morphological processes to highlight the typology of word structure across languages. The second part will examine morphological processes conditioned by prosody, and consider the various frameworks for analyzing the data; eventually, the course will work toward a formal model like that of McCarthy and Prince’s “Theory of Prosodic Morphology”. The main objectives of the course are: (1) to learn to analyze morphological data; (2) to learn to compare alternative analysis for a given set of data and to find evidence to choose between the alternative, and (3) to learn to present linguistic analysis and argumentation in a coherent essay.

**ANTH 7660 Discourse Analysis (3 Credit Hours)**
Study of written and spoken texts from a variety of languages and language use contexts. Focus on structural aspects of language (noun phrase construction and anaphora, topicalization, focus constructions, word order, deictics, and definite reference) as they relate to the situated use of language.

**ANTH 7670 Language & Acquisition (3 Credit Hours)**
This course provides an introduction to issues such as the genetic basis of language ability and acquisition; neurological aspects of linguistic knowledge; first language acquisition; childhood bilingualism; language acquisition in special populations (deaf children, blind children, children with mental retardation, children with autism and children with specific language impairment). Emphasis will be on child language data collection, description, and analysis.

**ANTH 7680 Language and Power (3 Credit Hours)**
Exploration of the ways that language indexes, reflects, and constructs power. Cross-cultural study of the interrelationship of social ascriptions, attitudes toward groups and their members, and the speech patterns of in-group/out-group members. Examination of the manipulation of power and its linguistic correlates in the domains of medicine, the media, education, and the law. Effects of language policy, especially officialization and standardization, on speakers of minority languages or codes.

**ANTH 7690 Language and Gender (3 Credit Hours)**
An exploration of the structures of language, phonological, morphological, syntactic, semantic, and pragmatic, as they index, interrelate with, and construct gender identities cross-culturally.

**ANTH 7700 Ecological Anthropology (3 Credit Hours)**
Critically reviews case studies of ecosystemic and energetic relations between human populations, cultures, and the environment in diverse ethnographic settings of the world, such as Amazonia, the Great Basin, New Guinea, and Southeast Asia. Examines the historical emergence of ecological paradigms in anthropology. Compares the modern contributions of cultural ecology, evolutionary ecology, ethnecology, and historical ecology. Evaluates potential contributions of ecological anthropology to general ecology.

**ANTH 7720 Bioanthro Modern Humans (3 Credit Hours)**
Biological adaptations of living human populations to their environments, and the interaction of these adaptations with cultural patterns. Relationships of body size, form, and composition to climatic and nutritional factors in various geographical groups of modern man. Major adaptive problems facing the human species are discussed and implications for the future explored.

**ANTH 7730 Forensic Anthropology (3 Credit Hours)**
Introduction to forensic anthropology, a subdiscipline of physical anthropology concerned with the identification of human skeletal remains in medico-legal contexts. Surveys the history of the field and the techniques used to determine age, sex, and physical characteristics of an individual from skeletonized remains, as well as methods used for positive identification, estimating time since death, and determining cause and manner of death.

**ANTH 7735 Bioarcheol of Human Sacrifice (3 Credit Hours)**
This course will examine the literary, archaeological, and skeletal evidence of human sacrifice in past societies. It will critically review written accounts and physical evidence of the offering of human lives in ritual contexts, with a focus on archaeological sites that show convincing evidence of such activities. Case studies will be used to explore the question of why human lives were offered in particular places and times, while critically evaluating the evidence used to document and interpret such practices.

**ANTH 7750 Human Paleopathology (3 Credit Hours)**
Survey of the field of paleopathology, the study of health and disease in ancient populations. Topics include methods for identifying evidence of injury and disease in bones, teeth, and mummified tissue; ancient medicine and surgery; chemical approaches to reconstructing diet; and human health trends through time.

**ANTH 7780 Language Death (3 Credit Hours)**
Every fortnight a human language dies. Half the languages spoken in the Western Hemisphere at the turn of the 19th century have died. This course examines the forces that lead to language death, strategies that speakers whose linguistic heritage is endangered may deploy to revitalize their languages, and tools that linguists have used to preserve the knowledge of human speech communities.

**ANTH 7850 The Four-Field Model (3 Credit Hours)**
Philosophical underpinnings of general anthropology. Epistemological ramifications of four anthropological fields (subdisciplines) as complete coverage of the subject matter. Contingency vs. rationale in the amalgamation of the four fields, as distinctive and definitive of the holistic study of Homo sapiens. Initial development of the model in the British Isles; institutionalization in 20th century North America. Connections to study of natives of the New World and salvage ethnography. Growth and specialization in subdisciplines. Debates over the logic and practicality in continuing cohesion of the model.

**ANTH 7888 Writing Intensive: ANTH 7630 (1 Credit Hour)**
Writing Intensive.

**ANTH 7890 Service Learning: (0-1 Credit Hours)**
Service Learning.
ANTH 7930 Languages of Louisiana (3 Credit Hours)
Examines the current and historical linguistic situation in Louisiana, from indigenous languages spoken at the time of contact with Europeans to the present. Covers basic features of the languages as well as their social settings. Students will further conduct independent field research projects, alone or in small groups, focusing on languages spoken in southern Louisiana, in particular in the city of New Orleans.

ANTH 7950 Special Projects (3 Credit Hours)
Special Projects.

ANTH 7960 Special Projects (3 Credit Hours)
Special Projects.

ANTH 7961 Special Projects (3 Credit Hours)
Special Projects.

ANTH 9980 Masters Research (0 Credit Hours)
Masters Research.

ANTH 9990 Dissertation Research (0 Credit Hours)
Dissertation Research

Anthropology (PAAN)

PAAN 2911 Special Topics (3 Credit Hours)
Special topics in anthropology.

PAAN 3190 Pirate Societies (3 Credit Hours)
This course is an exploration of pirates from the perspective of the social sciences, with an emphasis on the study of traditions, values, and social statuses and relationships that were characteristic of a variety of pirate societies in historic times. Our objectives in this course will be to discover how historic pirate societies were formed in different areas of the world, how they were organized; and how and why their values and traditions differed from those of the larger societies from which they came.

PAAN 3250 Hist Anth of New Orleans (3 Credit Hours)
This course is an exploration of the historic factors that created the cultural diversity and themes which characterize New Orleans today. The course examines the cultural backgrounds of the major national and ethnic groups that came to Louisiana in the 18th, 19th, and 20th centuries. The course also examines the ongoing attempts to secure the city from risks inherent in its natural environment.

Arabic (ARBC)

ARBC 1010 Elementary Arabic I (4 Credit Hours)
Basic introduction to the Arabic language. Emphasis on listening, speaking, reading, and writing.
Prerequisite(s): minimum score of PASS in 'ARBC 1010 Placement'.

ARBC 1020 Elementary Arabic II (4 Credit Hours)
Second semester of Arabic language.
Prerequisite(s): minimum score of PASS in 'ARBC 1020 Placement' or ARBC 1010.

ARBC 1290 Junior Year Abroad (1-20 Credit Hours)
Junior year abroad.

ARBC 2030 Intermediate Arabic (4 Credit Hours)
Third semester of Arabic language. Continues development of reading and writing Arabic, but emphasis is placed on oral performance.
Prerequisites: ARBC 1020. Credit hours: 4
Prerequisite(s): minimum score of PASS in 'ARBC 2030 Placement' or ARBC 1020.

ARBC 2910 Independent Study (1-3 Credit Hours)
Independent study in Arabic.

ARBC 3010 Special Topics (3 Credit Hours)
Special topics in language, literature, and culture of the Arab world.
Prerequisite(s): ARBC 2030.

ARBC 3060 Business Arabic (3 Credit Hours)
Introduction to the vocabulary and topics related to business in the Arabic speaking world. Prerequisites: ARBC 3150, or permission of instructor.
Prerequisite(s): ARBC 2040.

ARBC 3150 Advanced Arabic (3 Credit Hours)
A continuation of skills developed in ARBC 2030, which is a prerequisite for ARBC 3150. The Arabic language is used as the medium of instruction, and in addition to the further development of reading, writing, listening, and speaking skills, a greater emphasis is placed on culture.
Prerequisite(s): ARBC 2030 or minimum score of PASS in 'ARBC 3150 Placement'.

ARBC 3170 Media Arabic (3 Credit Hours)
This course will introduce students to vocabulary and topics related to contemporary Arabic media. Prerequisite: ARBC 3150.
Prerequisite(s): ARBC 2040 or 3150.

ARBC 3220 Intro to Arabic Literature (3 Credit Hours)
A general survey of modern Arabic literature. Major trends and genres such as romanticism and realism. Focus on modern Arabic fiction, especially post-colonial period. Sample authors studied include, among others: Hanan Al-Shaykh, Bahá'í Tahir. Prerequisite: ARBC 3150.
Prerequisite(s): ARBC 2040 or 3150.

ARBC 3250 Arab Modern Culture (3 Credit Hours)
Intensive language and culture training and a "hands on" learning experience. May combine academic instruction on Contemporary Arab social and cultural issues with community service focusing on critical, reflective thinking and personal and civic responsibility. Prerequisite or Co-requisite: ARBC 3150.
Prerequisite(s): ARBC 3150 or 2040.

ARBC 3300 Arabic Intl Rela & Diplomacy (3 Credit Hours)
Introduction to vocabulary and topics related to contemporary politics, foreign service, international relations and diplomacy through Arabic media. Lexical knowledge and structures related to the topics above through authentic materials, including broadcast media. Pre-requisites: ARBC 3150.
Prerequisite(s): ARBC 2040 or 3150.

ARBC 3890 Service Learning: ARBC 3010 (0-1 Credit Hours)
Service learning.
ARBC 4910 Independent Study (1-4 Credit Hours)
Independent Study in Arabic.

ARBC 5380 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

ARBC 5390 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

Arch - Design (DESG)

DESG 1005 Fund. of Design & Making (4 Credit Hours)
Introduction to the fundamentals of iterative design process. Students will analyze design problems at three scales; human scale, building scale and urban scale and will synthesize creative solutions through two and three-dimensional medium in the intimate student learning environment.

DESG 1105 Intro Design/Creative Thinking (3 Credit Hours)

Arch - Preservation Studies (PRST)

PRST 6210 Intro Preservation Studies (3 Credit Hours)
Through this course, the history of the preservation movement in the Americas will be studied to understand the theoretical, ethical, and philosophical concepts and ideas that will render the physical activity of restoration valid. Values and attitudes of the various cultural groups and settings in the Americas will be reviewed. The role played by preservation philosophies and theories of European and Oriental context will be studied.

PRST 6220 Preservation Technology (3 Credit Hours)
This course will study the highly complex construction methods and systems ranging from traditional rammed earth systems, sun dried bricks, fired bricks, stone and wood, to the new materials developed since the industrial revolution (i.e., iron and steel, reinforced concrete, petrochemical based materials). Understanding the process of procuring construction materials and production, will allow the student to understand the process of deterioration which eventually leads to the need of understanding Preservation Technology.

PRST 6310 Env Law/Historic Preservation (2 Credit Hours)
PRST 6320 Econ & Practice of Preservation (3 Credit Hours)
PRST 6410 Field Studies - North America (3 Credit Hours)
This course will examine preservation advocacy, using field trips and guest lecturers. Students will learn about methods for the application of historic preservation law and practice within the United States and its effects. Speakers and site visits will represent a range of constituencies from citizens leading grassroots advocacy efforts to save buildings or neighborhoods to the work of local organizations, to the work of state and federal organizations. Field trips to local organizations will likely include the Preservation Resource Center, the Pitot House, Felicity Street Redevelopment, Tulane City Center, the State Historic Preservation Office in Baton Rouge, and the annual conference of the National Trust for Historic Preservation. The Field Studies in North America course requires participation at an annual national historic preservation conference in the United States or Canada such those conducted by the US National Trust for Historic Preservation, the International Association of Preservation Technology or the US/International Council on Monuments and Sites.

PRST 6420 Hist Prsrv:South America (1 Credit Hour)
PRST 6510 Bldg Preservation Studio (6 Credit Hours)
This studio is the beginning orientation course that examines all aspects of preservation concerns related to the individual building or group of buildings. The student will learn how to analyze the condition of the building(s) and its (their) context. The studio will examine the differences between building stabilization, adaptive reuse, renovation and restoration. A travel and research component will use real life experiences to illustrate the interdisciplinary nature of preservation in the Americas. An internship in an area of personal choice (such as house museum, community action organization, governmental agency, heritage education or community renewal program) will be developed during this studio.

PRST 6520 Urban Conservation Studio (6 Credit Hours)
Students will do extensive field work to learn analysis, documentation, interpretation and the techniques required for neighborhood, community and general environmental renewal. Basic land use controls, urban design and planning components and developmental alternatives as related to preservation and conservation concerns will be investigated. The role played by landscape and natural systems will be investigated as they relate to the evolution and future opportunities of both rural and urban contexts.

PRST 6610 History of American Arch (3 Credit Hours)
This course will investigate the Pre-Columbian world of the Americas through the Colonial Period. Landscape, decorative arts and furniture will be surveyed. Design, theory, and their influences will be considered. The course will utilize examples of preservation and conservation projects to illustrate the changes in architectural styles over time and the special issues and challenges that have been created. Individual and group projects and reports will develop public presentation skills.

PRST 6620 New Orleans Architecture (3 Credit Hours)
This course will focus on the natural and built world of the Americas during the 19th and 20th centuries. Pattern books, interior design, landscape, and urban design theories will be investigated through careful studies of preservation and conservation. Group discussion and individual presentation of research projects will allow the student to integrate their research findings in a public format.

PRST 6630 GIS for Historic Preservation (1 Credit Hour)
PRST 6850 Preservation Internship (1-3 Credit Hours)
A sixty hour internship with an approved preservation agency such as the Preservation Resource Center of New Orleans, the South Eastern Architecture Archive at Tulane, the NEW Orleans Historic District Landmarks Commission, the Vieux Carre Commission, the Historic New Orleans Collection or some similar entity will provide the student with hands on experience, research opportunities, archival work, public service and heritage education opportunities. The internship can be performed at anytime during the course of academic studies. It will require a contract that defines the activities of the internship and a letter of successful completion from the Director of the chosen agency. The internship will be coordinated by the Director of the Preservation Studies Program and an adviser.
PRST 6900 Preservation Practicum (6 Credit Hours)
The Practicum for the Master of Preservation Studies program is an alternative option to the Thesis requirement an important part of the MPS course of study. The Practicum is expected to be a concentrated and valuable work experience that the student chooses that must relate to the field of historic preservation. Its accomplishment must entail 480 hours (three months, full-time) unpaid work with an organization. There is wide scope with regard to the possible organizations and locations for students to pursue their practicum experience. With prior approval, students may receive a small stipend or honorarium. Organization of the Practicum experience is the student’s responsibility and must be done in cooperation with the organization that invites your participation and your advisor.

PRST 6920 Preservation Thesis (6 Credit Hours)
The Thesis for the MSP program is a major course within the MPS program since it calls upon most of what a student has learned during his or her graduate school experience. There is wide scope with regard to possible topic choices and the location of a thesis subject can be anywhere, although if your thesis is site-specific you must have some first hand knowledge of the place by the end of the preceding semester. The thesis topic must relate to the field of historic preservation and its contents should be based mostly on primary research.

PRST 9980 Thesis Research (0 Credit Hours)

Architecture (ARCH)

ARCH 1001 Tactile Design in Architecture (3 Credit Hours)
At the root of the architecture discipline is the study of design. In this two-week course, students will focus on analog techniques of design utilizing hand drawing, mixed media exploration, and physical model making. The course will allow students to embrace the tactile facets of the creative process as a foundation of Architecture and its allied fields. You will explore the city of New Orleans with your sketchbook, experiencing the spatial, environmental, and cultural context of New Orleans, while creating beautiful work that will be digitally archived for your professional portfolio.

ARCH 1002 ARCH 1002 (3 Credit Hours)
This two-week course will focus on visual and spatial communication through digital media. Students will learn the Adobe Creative Suite (Photoshop, Illustrator, InDesign) as well as 3d modeling software to express their design ideas. We will explore the realms of digital design, representation, and production as a means of communicating information in a visual and compelling way. Students will have also the opportunity to create within our digital laboratory that includes laser cutters, 3d printers, a CNC router, and 3d scanner. You will work with innovative digital tools to compile a portfolio of work that is lively, relevant and professional.

ARCH 1011 Architecture Studio (6 Credit Hours)

ARCH 1012 Architecture Studio (6 Credit Hours)
Prerequisite(s): ARCH 1011.

ARCH 1110 Intro to Architecture (3 Credit Hours)

ARCH 1121 Hist/Theory of Arch & Urb I (3 Credit Hours)

ARCH 1940 Transfer Coursework (0 Credit Hours)

ARCH 2021 Architecture Studio (6 Credit Hours)
Prerequisite(s): ARCH 1012 or DSGN 1200.

ARCH 2022 Architecture Studio (6 Credit Hours)
Prerequisite(s): ARCH 2021.
Corequisite(s): ARCH 2322.

ARCH 2122 Hist/Theory of Arch & Urb II (3 Credit Hours)
Prerequisite(s): ARCH 1221 or 3010.

ARCH 2211 Site Strategies (3 Credit Hours)

ARCH 2212 Materials and Methods (3 Credit Hours)

ARCH 2213 Building, Climate, Comfort (4 Credit Hours)
Prerequisite(s): PHYS 1050, 1210 or 1310.
Corequisite(s): ARCH 2223.

ARCH 2223 Building, Climate, Comfort Lab (0 Credit Hours)
Corequisite(s): ARCH 2223.

ARCH 2311 Digital Media (3 Credit Hours)

ARCH 2322 Digital Media Workshop I (1 Credit Hour)
Each one-credit course in the digital media workshop series provides intermediate and/or advanced instruction in digital media tools and techniques in coordination with its co-required second or third-year architectural design studio course.

Corequisite(s): ARCH 2022.

ARCH 2327 Intro to Spatial Painting (3 Credit Hours)

ARCH 2710 The City I (3 Credit Hours)

ARCH 2720 The City II (3 Credit Hours)

ARCH 2882 Writing Intensive: ARCH 2122 (1 Credit Hour)

ARCH 2890 Service Learning: ARCH 2710 (0-1 Credit Hours)

ARCH 2892 Service Learning: ARCH 2022 (0 Credit Hours)
Service learning component for ARCH 2022, Architecture Studio.

Corequisite(s): ARCH 2022.

ARCH 2940 Transfer Coursework (0 Credit Hours)

ARCH 3031 Architecture Studio (6 Credit Hours)
Prerequisite(s): ARCH 2022 or DSGN 2200.
Corequisite(s): ARCH 3331.

ARCH 3032 Architecture Studio (6 Credit Hours)
Prerequisite(s): ARCH 3031.*
* May be taken concurrently.
Corequisite(s): ARCH 3332.

ARCH 3130 Architectural Research Methods (3 Credit Hours)
This course introduces students to various research paradigms to engage and produce architectural scholarship. Architectural Research Methods will include weekly readings and written responses, a literature review of relevant texts, and a proposal for a research topic. Students will develop skills necessary to support their work in research-based Option Studios and other courses with expectations of scholarly outputs.

ARCH 3214 Structural Systems (4 Credit Hours)
Prerequisite(s): PHYS 1050, 1210 or 1310.

ARCH 3215 Integrated Building Systems (4 Credit Hours)
Prerequisite(s): (ARCH 2211* or ATCS 3010) and (ARCH 2212* or ATCS 3020) and (ARCH 2213* or ATCS 3030) and (ARCH 3214* or ATCS 4010).*
* May be taken concurrently.
ARCH 3239 Space Arch/Walking Cities/Fut. (3 Credit Hours)
ARCH 3331 Digital Media Workshop II (1 Credit Hour)
Each one-credit course in the digital media workshop series provides intermediate and/or advanced instruction in digital media tools and techniques in coordination with its co-required second or third-year architectural design studio course.

Corequisite(s): ARCH 3031.
ARCH 3332 Digital Media Workshop III (1 Credit Hour)
Each one-credit course in the digital media workshop series provides intermediate and/or advanced instruction in digital media tools and techniques in coordination with its co-required second or third-year architectural design studio course.

Corequisite(s): ARCH 3032.
ARCH 3335 Computational Design (3 Credit Hours)
Prerequisite(s): ARCH 2311.
ARCH 3351 Digital Fabrication (3 Credit Hours)
Prerequisite(s): ARCH 2311 or ADGM 3100.
ARCH 3360 Cinematic Architecture (3 Credit Hours)
ARCH 3363 Theories in Digital Media (3 Credit Hours)
Prerequisite(s): ARCH 2311 or ADGM 3100.
ARCH 3511 Professional Concerns I (3 Credit Hours)
ARCH 3525 Making Cities: Intro Real Est (3 Credit Hours)
ARCH 3530 Ethics, Efficacy & Arch (3 Credit Hours)
ARCH 3620 CONTEXT: Dsgn & Existing Bldgs (3 Credit Hours)
Prerequisite(s): AHST 1121 or 3010.
ARCH 3630 Housing and the City (3 Credit Hours)
Prerequisite(s): ARCH 1121 or AHST 3010.
ARCH 3640 Contemporary Swiss Arch (3 Credit Hours)
Prerequisite(s): ARCH 2122 or AHST 3020.
ARCH 3644 Philosophies of Architecture (3 Credit Hours)
Prerequisite(s): ARCH 2122 or AHST 3020.
ARCH 3731 Urban Geograph & NO Case Study (3-4 Credit Hours)
ARCH 3742 Design in Public Interest (3 Credit Hours)
Prerequisite(s): ARCH 1110 or AHST 1110.
ARCH 3764 NOLA Geography for Architects (3 Credit Hours)
ARCH 3771 Latin Amer. Urban Experience (3 Credit Hours)
ARCH 3880 Writing Intensive: ARCH 3731 (1 Credit Hour)
ARCH 3890 Service Learning: ARCH 3031 (0-1 Credit Hours)
ARCH 3940 Transfer Coursework (0 Credit Hours)
ARCH 4041 Advanced Studio Elective (6 Credit Hours)
Prerequisite(s): ARCH 3032 or DSGN 3200.
ARCH 4042 Advanced Studio Elective (6 Credit Hours)
Prerequisite(s): ARCH 4041.
ARCH 4252 Urbanbuild Technology (3 Credit Hours)
ARCH 4253 Advanced Tech Fabrication (3 Credit Hours)

Corequisite(s): ARCH 6332.
ARCH 6041 Advanced Studio Elective (6 Credit Hours)
ARCH 6042 Advanced Studio Elective (6 Credit Hours)
ARCH 6051 Advanced Studio Elective (6 Credit Hours)
Advanced level graduate studio design courses, characterized by architectural problems of varying scale and complexity, require solutions that are thorough in their conception, development, and execution. Approximately 4-8 studio sections are offered each semester, each with a unique focus as determined by individual faculty teaching these studios. These various sections offer a range of topics and projects which explore a variety of architectural issues and areas of research. Examples include: aesthetic, cultural, and symbolic issues, housing, community design, urban design, historic preservation, and design/build. Students choose elective studios that suit their interests, needs, and goals, in order to focus their studies while gaining experience within a broader cultural and disciplinary field. This concentration develops areas of expertise beneficial to future professional growth.

Architecture (PAAR)

PAAR 1230 New Orleans Architecture (3 Credit Hours)
This illustrated course examines New Orleans architecture from the city's founding in 1718 to the present time, as well as its historic neighborhoods. The city's architectural legacy will be explored from the standpoint of broad architectural stylistic trends, their relationship to national and international trends, the forces and architects that helped shape the styles, and local building types. Thirty-eight architectural styles will be examined, including Colonial, Revivals, Aesthetic, Eclectic, Arts and Crafts, and Modern Movement. Identifying characteristics and materials of each style will be discussed through numerous illustrations of demonstrating the variety of each style based on the most current research. Historic interiors and landscapes will be perfunctorily addressed. Field observations of historic architecture will be included, as well as urban history of New Orleans.

PAAR 2600 Old & Green Restoration (3 Credit Hours)
The purpose of this class is to provide an introduction on where Historic Preservation and Environmental Conservation overlap in practice and theory. Topics include sustainability, preservation and environmental planning, rural preservation, easements and transfer of development rights, Smart Growth, adaptive reuse, green building, heritage eco-tourism, historic places and global climate change, and interior environmental health.

PAAR 2910 Special Topics (3 Credit Hours)
Special topics in architecture.

Art History (ARHS)

ARHS 1010 Art Survey I: Prehist-Mid Ages (3 Credit Hours)
An introduction to the history of painting, sculpture and architecture from the Old Stone Age through the ancient Mediterranean world to the end of the medieval period in Western Europe. Considers issues including technique, style, iconography, patronage, historical context, and art theory.

ARHS 1020 Art Sur II: Renaiss to Present (3 Credit Hours)
An introduction to the history of Western European and American painting, sculpture and architecture from the Renaissance through the baroque, rococo, and early modern periods to the late 20th century. Considers issues including technique, style, iconography, patronage, historical context, and art theory.

ARHS 1290 Semester Abroad (1-20 Credit Hours)
ARHS 2910 Spec Topics Hist of Art (3 Credit Hours)
Special topics in the history of art. Subjects will vary and may not be available every semester. Individual topics will be listed in the Schedule of Classes.

ARHS 3111 Tombs & Temples Prior to 1300 (3 Credit Hours)
"An introduction to the art, architecture and visual culture of China, Korea and Japan from the beginnings to about 1200 CE. The course considers technique, iconography and style and will approach art works in theoretical contexts such as social functions and aesthetic discourses of art."

ARHS 3112 Monks & Merchants after 1100 (3 Credit Hours)
"An introduction to the art, architecture and visual culture of China, Korea and Japan from about 1100 CE. The course considers technique, iconography and style and will approach art works in theoretical contexts such as social functions and aesthetic discourses of art."

ARHS 3200 Early Christ/Byzant Art (3 Credit Hours)
A survey of art and architecture in the Mediterranean from the third through the fourteenth centuries, with a focus on the rise of Christian art in the late Roman world and the art of the Byzantine state.

ARHS 3210 Art & Experence Mdle Ages (3 Credit Hours)
A survey in which both modern and historical categories of experience are used to understand the art of the Middle ages, especially as it manifested itself in the most characteristic of all medieval forms, the church. Along a chronological and geographical trajectory from Early Christian Rome to Gothic Paris this course will move through topics such as memory, poetry, pilgrimage, the body, gesture, devotion, narrative and liturgy.
ARHS 3220 Romansque & Gothic Art (3 Credit Hours)
This course will examine painting, sculpture, architecture, mosaics, tapestries, metalwork, ivories, and stained glass windows of the late Middle Ages in Europe. Through weekly readings and discussions will also explore themes such as religion, women, the Classical tradition, and cross-cultural contact. Various critical and theoretical approaches to art history will be considered.

ARHS 3230 Visual Cult G.A. Spain (3 Credit Hours)
This course will study the cultural role of images, largely painting, in Spain during the period 1500-1700. Topics to be explored include: the pictorial use of mythological themes in the projection of imperial power, the importance of portraiture in the legitimization of the Spanish monarchy, the art market and the social status of the artist. While painting will be our main focus, we will examine other visual documents such as maps and read literary works that illuminate the functions of images in the period.

ARHS 3360 Renaissance Courts (3 Credit Hours)
An overview of the art and culture of the European courts between about 1300 and 1700, with a particular focus on the themes of love and eroticism. Artists to be discussed include Mantegna, Raphael, Titian, and others.

ARHS 3380 Italian Renaissance Art (3 Credit Hours)
This course introduces students to the study of the visual culture of Renaissance Italy (1350–1600). By examining how artists, architects, critics, and patrons used and discussed artworks including paintings, prints, sculpture, and architecture, students explore themes such as the revival of antiquity, the study of nature, the training of the artist, the role of competition, and the public and private display of art.

ARHS 3410 Theaters of the Baroque (3 Credit Hours)
This course surveys the visual and material culture of the Baroque world, roughly the period 1575-1750, considering the diverse locales, styles and objects of Baroque artistic production, as related to early modern notions of theatricality. The course is composed of two acts. First, we will investigate the visual culture of several key cities (Rome, Antwerp, Madrid, Mexico City, Munich and Versailles). In the second half of the course will focus on diverse spaces of baroque theatricality (churches, theaters, palaces, civic spaces and the art collection itself). Through these case studies, the course aims to explore how the local economic, religious, political and social contexts for artistic production interact with global networks of exchange and the performance of individual and national artistic identity.

ARHS 3420 Van Eyck to Bruegel (3 Credit Hours)
This course explores the artistic production of the Low Countries, Germany and France in the fifteenth and sixteenth centuries, including painting sculpture, manuscripts, metalwork, tapestries and printmaking. The course will focus on a range of topics, including: technical and iconographic innovations in artistic production, art's devotional function, the changing market for art in this period as well as the early impact of the Reformation on the visual arts in the Low Countries and Germany.

ARHS 3430 Rubens to Rembrandt (3 Credit Hours)
This course explores the artistic production of the early modern Spanish Netherlands and the Dutch Republic, focusing on key artists (including Rubens, Anthony Van Dyck, Frans Hals, Rembrandt, Vermeer), as well as emerging critical literature on the function and value of art/artist. This course will consider how art was bought and sold; how art was evaluated for its commercial and aesthetic value.

ARHS 3510 Rococo To Romanticism (3 Credit Hours)
In this course we will explore art produced in Europe from the early 18th century through the mid-19th century. We will consider the work, careers, and reputations of key artists such as Fragonard, David, Friedrich, Turner, Ingres, and Delacroix, among others, situating their work in relation to the political, socio-economic, and intellectual developments of the period.

ARHS 3540 Impressionism/Postimpressionism (3 Credit Hours)
This course will analyze art produced in Europe from the mid-19th century through the early 20th century, with a particular emphasis on French painting. We will consider the work and reputations of key artists such as Manet, Monet, Cassatt, Seurat, and Cézanne, situating their work in relation to the political, socio-economic, and cultural changes that took place during this period.

ARHS 3600 American Art 1700-1950 (3 Credit Hours)
An analysis of visual and material culture from the first European artists in the colonies to the onset of World War II. Considers the transformation of cultural forms from the old world to the new in developments such as the formation of a national iconography as seen in portraiture, genre painting, landscape painting and the development of a distinctive modernist tradition specific to the United States. This course will examine the ways in which art and material culture reflect the social, intellectual, and political life of the nation up to World War II.

ARHS 3620 Contemporary Art 1950- (3 Credit Hours)
Explores the developments in the visual arts in the U.S. and Europe since 1950. Concentrates upon the social historical formation of artistic development beginning with the aftermath of World War II, and continuing to the present. Emphasizes movements such as Pop, Minimalism, Earth art and Postmodernism. Issues surrounding the objects will include poststructuralism, post-colonialism as well as African-American, feminist, and gay and lesbian strategies for self-representation.

ARHS 3650 Early 20th C Euro Modrns (3 Credit Hours)
This course will explore the developments in the visual arts in Europe from 1890 to 1945. We will concentrate upon the social-historical formations of artistic production beginning in the late-nineteenth century with Post-Impressionism and continuing into the first half of the twentieth century examining movements such as Fauvism, Cubism, Dada, Surrealism, Russian Suprematism.

ARHS 3700 Pre-Columbian Art (3 Credit Hours)
An introduction to the art and architecture of Pre-Columbian Mesoamerica (Mexico and Central America) with an emphasis on Mexico. The course focuses on the historical, political, and religious contexts of the visual arts and addresses the function of these artworks as ideological statements.
ARHS 3710 Colonial Art of Latin America (3 Credit Hours)
Renaissance and baroque architecture, painting and sculpture of the metropolitan centers of the Spanish and Portuguese colonies from the 16th to the early 19th century with a major emphasis on Mexico.

ARHS 3760 Art In Latin America 1900-1950 (3 Credit Hours)

ARHS 3770 Art In Lat. Am Since 50s (3 Credit Hours)

ARHS 3871 Intro Af Amer Art and Vis Cult (3 Credit Hours)
This course explores the production of visual and material culture related to the African American presence in what is now the United States from the eighteenth century through the mid twentieth century. The course considers visual materials made by African American artists and artisans as well as materials by non-African Americans that feature African American subject matter (and the relationship between these two types of visual production). We will work to understand the objects featured in this course within both the specific context of the history of African American art and visual culture and the larger context of American art history in general. Arranged roughly chronologically but more strongly guided by a thematic and topical approach, the course aims to communicate basic content information while providing students with an understanding of the kinds of dominant questions and concerns engaged by current African American art scholarship.

ARHS 3872 Art of Af Diaspora 1925 to Pre (3 Credit Hours)
Does it necessarily make sense to consider the work of artist of African descent together as a unit (in other words, should this course exist)? What persistent themes, issues, and debates inform the work by African diaspora artist? What makes art “Black” (or “African” or “African American”)? Is an artist of African descent necessarily a “Black artist”? Do artist of African descent have a particular obligation to make artwork that advances a black cultural or political agenda? Is not doing so in and of itself a political statement? How might a landscape or Abstract Expressionist work be racially charged? How do vectors of identity other than race inform the work of African diaspora artist? How does the artwork studied in this course fit into the context of other art histories? Through these questions and others, this course explores the major themes and issues that have occupied artists of African descent as well as examines individual artists’ motivations and intentions.

ARHS 3910 Spec Topics Hist of Art (3 Credit Hours)
Special topics in the history, criticism, or theory of art. The subjects will vary and may not be available every semester. Individual topics will be listed in the Schedule of Classes.

ARHS 3911 Special Topics Art History (3 Credit Hours)

ARHS 3912 Special Topics Art History (3 Credit Hours)

ARHS 3913 Special Topics in Art History (3 Credit Hours)

ARHS 3915 Special Topics Art History (3 Credit Hours)

ARHS 3916 Special Topics Art History (3 Credit Hours)

ARHS 4560 Museum Internship (3 Credit Hours)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing.

ARHS 4890 Service Learning: ARHS 4560 (1 Credit Hour)

ARHS 4910 Independent Study (3 Credit Hours)
Open to qualified juniors and seniors with approval of instructor and chair of department.

ARHS 4920 Independent Study (1-3 Credit Hours)
Open to qualified juniors and seniors with approval of instructor and chair of department.

ARHS 4990 Honors Thesis (3 Credit Hours)

ARHS 5000 Honors Thesis (4 Credit Hours)

ARHS 5190 Semester Abroad (1-20 Credit Hours)

ARHS 5380 Junior Year Abroad (1-20 Credit Hours)

ARHS 5390 Junior Year Abroad (1-20 Credit Hours)

ARHS 6040 Spaces of Art (3 Credit Hours)
This course will provide a capstone experience for undergraduate majors in art history through an investigation of the various places Western art has been made, exchanged and critically evaluated, from the late medieval period to today. Each week, students will consider distinct space—for example, the studio, the academy, the auction house—its definition, history and conceptual impacts on the history of Western art. Students will analyze the material and intellectual culture of each of these spaces, utilizing key case studies drawn from the fifteenth to the twenty-first centuries.

ARHS 6050 Scandals of Modern Art (3 Credit Hours)
In this capstone seminar, we will examine key works of controversial modern art from the 19th century to the present. Over the course of the semester, we will explore the scandals that surrounded the work of Edouard Manet, Henri Matisse, Marcel Duchamp, Constantin Brancusi, Richard Serra, Maya Lin, and Sally Mann, among others.

ARHS 6060 Capstone: Gender, Race & Body (3 Credit Hours)

ARHS 6090 Intersect Art & Science (3 Credit Hours)
This seminar explores key moments in the relationship between art and science in Europe and the United States from the Renaissance to the present. We will analyze a range of topics that span time and place, such as Leonardo de Vinci’s anatomical drawings and interest in optics. Enlightenment theories of perception, Impressionist and neo-Impressionist painting, and abstraction in the 20th century, among others.

ARHS 6210 Medieval Pilgrimages (3 Credit Hours)
This course will examine some of the most popular medieval Christian pilgrimage centers of Europe. We will focus mostly on Santiago de Compostela and Rome, with brief looks at other pilgrimage centers such as Jerusalem, Assisi, and Canterbury. Topics to be covered include the cult of the saints, the pilgrimage roads, architectural settings and their decoration as well as reliquary shrines and related works of art, images and their use in imaginary or mental pilgrimage.

ARHS 6220 Gender In Medieval Art (3 Credit Hours)
This seminar will focus on the relationships between gender and the production and reception of medieval European art and architecture. Topics to be explored include images of women, works of art commissioned by women, images made for women, architectural spaces designed for women and/or men specifically (i.e. monastic architecture), women as artists, etc. Comparative material known to have been made for/by men specifically will also be explored as we consider the meaning of the concept of gender. Feminist theory and various contemporary critical approaches to gender and medieval art will enhance our exploration of specific works.
ARHS 6230 Art & Arch Medievl Italy (3 Credit Hours)
This course will examine the art and architecture of the late Middle Ages and early Renaissance in Italy from approximately 1250 to 1350 A.D./C.E. We will focus particularly on the rise of the mendicant orders in the thirteenth century and their impact on art and the narrative of the Renaissance.

ARHS 6310 Global Renaissance (3 Credit Hours)
ARHS 6410 Amsterdam Dutch Golden Age (3,4 Credit Hours)
This course examines the visual and material culture of the Dutch Golden Age, centered in Amsterdam, as the product of global forces. Rather than solely tracing the domestic consumption of international goods or the ways in which Dutch demands shaped artistic production in Batavia (Indonesia), Brazil, South Asia and North America, this seminar critically examines concepts of influence, exoticism and cross-cultural exchange. We will focus on objects and art works produced in , imported and exported through Amsterdam. By investigating the economic realities that enabled the flourishing of Amsterdam as cultural center, this course seeks to complicate readings of seventeenth-century Dutch visual culture (particularly genre scenes and still-lifes) as culturally retrospective.

ARHS 6510 Seminars in the History of Art (3 Credit Hours)
ARHS 6511 Seminars in the History of Art (3 Credit Hours)
ARHS 6512 Seminars in the History of Art (3 Credit Hours)
ARHS 6513 Seminars in the History of Art (3 Credit Hours)
ARHS 6514 Seminars in the History of Art (3 Credit Hours)
ARHS 6515 Seminars in History of Art (3 Credit Hours)
ARHS 6520 Seminars In Hist of Art (3 Credit Hours)
ARHS 6525 Social Practice Art (3 Credit Hours)
This Art History course examines the history and theory of Social Practice art, a recent mode of artmaking in which artists and art institutions collaborate with individuals and organizations to create community-specific works of art. Classroom readings and discussions will examine forms of Social Practice in relation to histories and theories of participatory, political, and activist art since the 1960s. This course includes a 20 hour service learning component with Prospect New Orleans, a citywide triennial of contemporary art with the social mission of connecting &high art& to the larger cultural landscape of New Orleans through community-specific works.<br/>

ARHS 6530 Degas (3 Credit Hours)
In-depth examination of Degas' works and career in light of various historical and critical approaches, ranging from formalism and iconography to sociopolitical and cultural studies, Marxism, psychoanalysis, and feminism. Attention will be paid to male and female spectatorship and to relevant works by Degas' Impressionist contemporaries, including Cassatt, Gonzales, Manet, Morisot, and Whistler, as well as other artists including Daumier, Delacroix, Ingres, Tissot, and Toulouse-Lautrec. Additional comparative topics include academic art, photography, journalistic illustration, and Japanese prints.

ARHS 6540 Paris: Capital of 19th Cent (3,4 Credit Hours)
This seminar explores the transformation of Paris during the second half of the nineteenth century into a great modern metropolis. Throughout the course we analyze the ways that the architecture, painting, photography, literature, and visual culture of the era shaped and reflected various facets of this modern city.

ARHS 6550 Van Gogh (3 Credit Hours)
ARHS 6620 Abstract Expressionism (3 Credit Hours)
Examines the ways in which Abstract Expressionism has been interpreted, both from the view of American critics and historians and their European counterparts. Emphasizes the extent to which formalist criticism evolved around Abstract Expressionism, and that only recently have scholars challenged those apolitical reading of this art, considering the political and economic factors which contributed to its international predominance on the global stage. Artists will include De Kooning, Frankenthaler, Hofmann, Krasner, Newman, Pollock, and Still.

ARHS 6650 Postmodernism Since 1980 (3 Credit Hours)
Examines both European and American conceptions of postmodernism, as it originated in post-structural and psychoanalytic theory. Emphasis will be place upon artists working since 1980, including Basquiat, Jenny Holzer, Barbara Kruger, Mapplethorpe, Cindy Sherman, Warhol and the politically based art project of Gran Fury, the Guerrilla Girls and the Names Project. Interpretive strategies will be taken from readings in European literary theory, with emphasis place upon the shift in criticism in art-making, away from Europe, toward an ideology formed around the issues of racial, sexual, and gender performance of identity.

ARHS 6720 Seminar On Aztec Arts (3,4 Credit Hours)
Intensive investigation of Aztec arts as fundamental manifestations of Aztec imperial ideology (especially political and religious). The course concentrates on the urban iconographic programs developed in sculpture and architecture and considers the role of ritual and performance within these programs. It also reviews the sixteenth century sources (pictorial and alphabetic) that are used to understand Aztec culture.

ARHS 6730 Mexican Manuscript Paint (3,4 Credit Hours)
Detailed investigation of the pictorial codices painted in Mexico in the 15th and 16th centuries. The course examines the pictorial conventions and grammar used by the Mexican scribes to record knowledge. It analyzes the tradition of manuscript painting as it developed in Pre-Columbian Mesoamerica and then as it adapted to new functions and changed audiences in the early colonial period. Specific topics will vary from time to time.

ARHS 6740 Images and Meaning (3 Credit Hours)
This seminar examines the meanings conveyed by visual images, both those that are usually conceptualized as art as well as those that are not.

ARHS 6810 Seminars In Hist of Art (3,4 Credit Hours)
Advanced topics in the history, criticism, or theory of art. The subjects of the seminars vary according to the needs of the students and the scholarly interests of the individual instructor. Specialized topics are listed in the Schedule of Classes.
ARHS 6811 Seminars in Hist of Art (3,4 Credit Hours)
ARHS 6812 Seminars in Hist of Art (3,4 Credit Hours)
ARHS 6813 Seminars in Hist of Art (3,4 Credit Hours)
ARHS 6814 Seminars in Hist of Art (3,4 Credit Hours)
ARHS 6815 Seminars in Hist of Art (3 Credit Hours)
ARHS 6820 Seminars In Hist of Art (3 Credit Hours)
Advanced topics in the history, criticism, or theory of art. The subjects of the seminars vary according to the needs of the students and the scholarly interests of the individual instructor. Specialized topics are listed in the Schedule of Classes.

ARHS 6830 Seminars In Hist of Art (3 Credit Hours)
Advanced topics in the history, criticism, or theory of art. The subjects of the seminars vary according to the needs of the students and the scholarly interests of the individual instructor. Specialized topics are listed in the Schedule of Classes.

ARHS 6840 Seminar In Hist of Art (3 Credit Hours)
Advanced topics in the history, criticism, or theory of art. The subjects of the seminars vary according to the needs of the students and the scholarly interests of the individual instructor. Specialized topics are listed in the Schedule of Classes.

ARHS 6875 Race and Nati Myth Amer Art (3,4 Credit Hours)
How does American art and visual culture implicitly and explicitly reify notions of America as a "white" nation, and how has this changed over time? How have images shaped and been shaped by historic moments of racially-implicated upheaval or conflict (e.g. Westward Expansion; the abolition movement, the Civil War and Emancipation; periods of mass immigration)? How has the idea of what it means to be "American" been defined against the racialized images of American "Others"? Can contemporary artists of color successfully appropriate and re-deploy racist imagery? This seminar considers these and other questions in investigating constructions and representations in American art and visual culture from the 16th century to the present. We will explore the ways in which these images are implicated as both products and producers of fundamental mythologies about the United States as a nation and about what it means to be "an American" (and who gets to be one). (Counts as Capstone)

ARHS 6876 Interracial Themes Western Art (3 Credit Hours)
This course investigates the depiction of interracial contact and the mixed-race body in modern Western art, primarily American and British. (Counts as Capstone)

ARHS 6877 Contested Vision Civil War I (3 Credit Hours)
Exploring a wide range of art and visual culture including painting, sculpture, photography, film, performance and popular culture, this course explores contested visions of the Civil War from before the firing of the first shot at Fort Sumter to the present. In addition to the period of the war itself, our study will necessarily look both backward and forward, including consideration of the art and visual culture surrounding slavery and abolition, emancipation, and Reconstruction and reunion, as well as narratives romanticizing the culture of the Old South.

ARHS 6878 Contested Vision Civil War II (4 Credit Hours)
In the first semester of this 2 part course (ARHS 6877) we investigated a wide range of art and visual culture including painting, sculpture, photography, film, performance, and public history sites to explore contested visions of the Civil War and related issues including slavery and abolition, Emancipation, Reconstruction and reunion, and narratives romanticizing the culture of the Old South. This semester, you will use that foundational knowledge to work with your peers to develop an online exhibition of art and material culture that engages these concerns.

ARHS 6891 Service Learning: ARHS 6515 (0-1 Credit Hours)
ARHS 6900 Approaches To Histry Art (3 Credit Hours)
ARHS 6910 Independent Study (3 Credit Hours)
ARHS 7920 Spec Research Art Hist (3 Credit Hours)
ARHS 9980 Master's Research (0 Credit Hours)
ARHS 9990 Dissertation Research (0 Credit Hours)

Art History (PAAH)

PAAH 3910 Special Topics (1-3 Credit Hours)
Special topics in art history.

Art Studio (ARST)

ARST 1050 Beginning Drawing I (3 Credit Hours)
For majors and non-majors. In this course we will be working from life. The goal is to acquire and develop conceptual and technical skills necessary to translate three dimensional forms to a two dimensional surface.

ARST 1060 Beginning Drawing II (3 Credit Hours)
This course further explores the primary elements of drawing: line, form, value, and texture as a means of perception, understanding, representation, and communication. Emphasis will be placed on creating a correspondence between subject, method, and intent.

Prerequisite(s): ARST 1050, 1050, 1050 or 1050.

ARST 1130 Found of Art: Ceramics (3 Credit Hours)
This course focuses on design elements and principles of organization within the context of contemporary ceramic art. Students will be introduced to a variety of ceramic materials, processes and aesthetic concerns. Emphasis is given to the relationships between ceramics and other art mediums.

ARST 1170 Found of Art: Glass (3 Credit Hours)
This course focuses on the history and theory of glass art, and also introduces basic techniques with attention given to issues of composition, perception, communication, and expression. Emphasis also will be placed on the relationships between glass art, other art mediums, and the history of art.

ARST 1250 Found of Art: Painting (3 Credit Hours)
An introduction to color and color theory in painting. Since color constitutes a major means of expressive communication in the visual arts, the painting projects encourage personal responsiveness to color and explore how it enriches our understanding of the natural world.
ARST 1350  *Found of Art: Photography* (3 Credit Hours)
This course focuses on the history and theory of photography, and also introduces basic techniques, with attention given to issues of composition, perception, communication, and expression. Emphasis also is placed on the relationships between photography, other art mediums, and the history of art.

ARST 1370  *Found of Art: Printmaking* (3 Credit Hours)
This course is designed as an introduction to a wide range of techniques in printmaking. It is developed to give the student an overview of the possibilities with the processes of relief and intaglio printing. Through a series of demonstrations, projects, critiques, and slide lectures the student will explore the rich diversity of the medium and become exposed to the strong tradition of printmaking. Areas covered include: linoleum cuts, woodcuts, collagraph, mono type, dry point, engraving, and etching.

ARST 1490  *Found of Art: Sculpture* (3 Credit Hours)
An introductory study of three-dimensional form and spatial relationships making use of a variety of media and processes. Slide lectures supplement studio work and present examples of contemporary sculpture within a historical context.

ARST 1550  *Foundations: Digital Arts I* (3 Credit Hours)
This course introduces students to different aspects of design in the digital realm from digital imaging to time-based media. Visual skills, critical voice and basic computer skills are necessary for this class.

ARST 1940  *Transfer Coursework* (3 Credit Hours)

ARST 2050  *Intermed Drawing: Color* (3 Credit Hours)
Incorporating color theory and experimentation, the course will explore the expressive and conceptual potential of color use in drawing media.

Prerequisite(s): ARST 1050, 1050, 1050, 1050, 1060, 1060 or 1060.

ARST 2060  *Life Drawing Composition* (3 Credit Hours)

ARST 2070  *Descriptive Drawing* (3 Credit Hours)
An exploration of drawing in both an historical and contemporary context as a means of perception, analysis, representation, and communication. Coursework investigates the relationships of the subject to technique and the visual to conceptual. Emphasis is placed on providing a systematic analysis of each subject through the use of multiple approaches.

Prerequisite(s): ARST 1050 or 1060.

ARST 2080  *Life Drawing* (3 Credit Hours)
A study of the anatomy and structure of the human form with a view toward understanding and employing the human image in its historical, humanistic function as a vehicle of expression.

Prerequisite(s): ARST 1050.

ARST 2130  *Intermediate Ceramics* (3 Credit Hours)
The course focuses on the use of the potter’s wheel in developing ceramic forms. A variety of techniques and forms will be covered with emphasis on their aesthetic and conceptual potential in the field of ceramic art. Historical and contemporary approaches are presented in slide lectures and demonstration.

Prerequisite(s): ARST 1130.

ARST 2140  *Intermediate Ceramics* (3 Credit Hours)
The course focuses on hand working processes with plaster molds and use of extruded elements in the development of original works. Press molding and slip casting will be covered. Students participate in developing clays, glazes and firing procedures.

Prerequisite(s): ARST 1130, 1130, 1130 or 1130.

ARST 2150  *Intermediate Photography* (3 Credit Hours)
This course introduces students to issues and formats in contemporary ceramic sculpture. Students will develop original works in clay within the formats of wall platters, figurative sculpture and site specific installations. The course will make use of skills developed in ARST 1130 with some new construction, glazing and firing processes introduced, and students sharing responsibility for clay making and firing of the finished pieces. The development and articulation of original ideas will be emphasized through and studio work time, demonstrations, discussions, slide lectures and critiques.

Prerequisite(s): ARST 1130.

ARST 2170  *Intermediate Glass* (3 Credit Hours)
The goal of this class is to achieve a functional understanding of glass art. This general course focuses on blowing, casting, and forming glass. Attention is given to using the approaches to glass for individual expression.

ARST 2180  *Intermediate Glass* (3 Credit Hours)
The goal of this class is to achieve a functional understanding of glass art. This general course focuses on blowing, casting, and forming glass. Attention is given to using the approaches to glass for individual expression.

Prerequisite(s): ARST 1170.

ARST 2270  *Intermediate Painting* (3 Credit Hours)
This course focuses on the formal and expressive qualities of both nature-based and pure abstraction. Abstraction is investigated through historic and contemporary ideologies, technical issues and the use of nontraditional materials. Systematic exploration of a variety of approaches will serve as a structure for development of the student’s own goals and sensibility.

ARST 2280  *Intermediate Painting* (3 Credit Hours)
An exploration of basic visual and philosophical concepts involved in creating paintings with an introduction to the technical aspects of painting in oils, i.e., preparing a canvas, media, and mixing and applying paint.

Prerequisite(s): ARST 1050 and 1250.

ARST 2350  *Intermediate Photography* (3 Credit Hours)
continuation of traditional photographic procedures exploring more complex visual and technical issues, augmented by the employment of supplementary imaging tools and alternative processes.

Prerequisite(s): ARST 1350, 1350, 1350 or 1350.

ARST 2370  *Intermediate Printmaking* (3 Credit Hours)
An in-depth exploration of the printmaking medium covering technical, historical, and conceptual issues. A strong emphasis is placed on students developing a personal voice through their work. An intensive study in the art of stone and plate lithography.

Prerequisite(s): ARST 1370.
ARST 2380 Intermediate Printmaking (3 Credit Hours)
An in-depth exploration of the printmaking medium covering technical, historical, and conceptual issues. A strong emphasis is placed on students developing a personal voice through their work. An intensive study on fine art silk screen.
Prerequisite(s): ARST 1370.

ARST 2490 Intermediate Sculpture (3 Credit Hours)
This course explores and expands on the basic concepts, techniques, and processes of sculpture. Students work with projects that develop understanding of both sculptural ideas and materials. A wide variety of media and approaches are explored in this course, including wood, plaster, welding and casting metals, mixed media, and working from the figure.
Prerequisite(s): ARST 1490, 1490, 1490 or 1490.

ARST 2500 Intermediate Sculpture (3 Credit Hours)
This course explores and expands on the basic concepts, techniques, and processes of sculpture. Students work with projects that develop understanding of both sculptural ideas and materials. A wide variety of media and approaches are explored in this course, including wood, plaster, welding and casting metals, mixed media, and working from the figure.
Prerequisite(s): ARST 1490, 1490, 1490 or 1490.

ARST 2550 Digital Arts II (3 Credit Hours)
This course emphasizes interactivity and interface design with respect to multimedia and the World Wide Web. Students will create interactive based projects that combine visual and textual elements in creative, critical and innovative ways. Questions of navigation, functionality, usability, and interaction will be technically and theoretically addressed.
Prerequisite(s): ARST 1550.

ARST 2890 Service Learning: ARST 2380 (0-1 Credit Hours)

ARST 2940 Transfer Coursework (3 Credit Hours)
Coursework for additional credit in conjunction with 2000- or 3000-level studio courses.

ARST 3010 Special Courses (1-3 Credit Hours)
Coursework for additional credit in conjunction with 2000- or 3000-level studio courses.

ARST 3011 Special Courses (1-3 Credit Hours)

ARST 3020 Special Courses (1-3 Credit Hours)
Coursework for additional credit in conjunction with 2000- or 3000-level studio courses.

ARST 3130 Advanced Ceramics (3 Credit Hours)
Further examination of the aesthetic and conceptual applications of the ceramic medium. The development of individual concerns and vocabulary of form will be stressed. Clay and glaze formulation will be covered. Students are responsible for developing clays and glazes and firing their work.
Prerequisite(s): ARST 2130, 2140 or 2150.

ARST 3140 Adv Ceramic - Wheel Throwing (3 Credit Hours)
Development of advanced throwing techniques and concepts related to creating original works on the potter's wheel. More complex forms, as well as glazing and firing processes will be covered. Lectures, demonstration and critiques will supplement studio work time.
Prerequisite(s): ARST 2130 or 2140.

ARST 3170 Advanced Glass (3 Credit Hours)
This class further develops the student's ability to study methods and processes for forming molten glass into sculpture. Instruction in glass casting and blowing are taught with a focus on creating specific ideas.
Prerequisite(s): ARST 1170 and 2170.

ARST 3180 Advanced Glass (3 Credit Hours)
This class further develops the student's ability to study methods and processes for forming molten glass into sculpture. Instruction in glass casting and blowing are taught with a focus on creating specific ideas.
Prerequisite(s): ARST 2170 or 2180.

ARST 3250 Advanced Painting (3 Credit Hours)
Principles of picture building and creative composition with a study of media and methods that best stimulate individual expression and predilections.

ARST 3260 Advanced Painting (3 Credit Hours)
Principles of picture building and creative composition with a study of media and methods that best stimulate individual expression and predilections.
Prerequisite(s): ARST 2270 or 2280.

ARST 3350 Adv Photo Chem Processes (3 Credit Hours)
Emphasis will be placed on advanced exposure and developing controls and printing techniques. Non-traditional and non-conventional image-making processes will be explored, such as multiple printing, tinting, toning, non-silver techniques, and the Sabattier effect. The use of medium and large-format equipment will be introduced, as will advanced studio lighting techniques.
Prerequisite(s): ARST 2350.

ARST 3360 Adv Photo: Digital Proc (3 Credit Hours)
Building on a foundation of traditional photography, students will be involved with digital imaging as another tool in the process of fine art photographic printmaking. Digital capturing, editing, and outputting will be explored.
Prerequisite(s): ARST 2350.

ARST 3370 Advanced Printmaking (3 Credit Hours)
A detailed study of the variety of printmaking methods, exploring conceptual and/or personal visions. A strong emphasis is placed on combining techniques, expanding material vocabulary, and experimenting with new processes. Seminars covering both historical and contemporary issues of printmaking will be presented to broaden the student's critical dialogue.
Prerequisite(s): ARST 1370.

ARST 3380 Advanced Printmaking (3 Credit Hours)
A detailed study of the variety of printmaking methods, exploring conceptual and/or personal visions. A strong emphasis is placed on combining techniques, expanding material vocabulary, and experimenting with new processes. Seminars covering both historical and contemporary issues of printmaking will be presented to broaden the student's critical dialogue.
Prerequisite(s): ARST 1370, 1370, 1370 or 1370.
ARST 3400 Printmaking: The Art of the Book (3 Credit Hours)
This Course is an in-depth exploration into the Art of the Book and Book Arts. The course will incorporate various binding techniques with conceptual and formal projects. A History of Book Arts will be presented as well as examples of popular trends in hand made books. Instruction will be given on setting type and using the letterpress. Also covered will be page design, page flow, and digital development of images and text. Readings will accompany slide lectures and demonstrations.

Prerequisite(s): ARST 1370.

ARST 3490 Advanced Sculpture (3 Credit Hours)
Further exploration of metals fabrication and casting, carving techniques, additive processes, and environmental art. Seminars, field trips, and slide lectures will supplement the course.

ARST 3500 Advanced Sculpture (3 Credit Hours)
Further exploration of metals fabrication and casting, carving techniques, additive processes, and environmental art. Seminars, field trips, and slide lectures will supplement the course.

Prerequisite(s): ARST 2490 or 2500.

ARST 3550 Time-Based Media (3 Credit Hours)
This is a class with an emphasis on digital video, animation and image sequencing. Students will be expected to create time-based projects that combine visual and temporal elements in creative, critical and innovative ways.

Prerequisite(s): ARST 1550.

ARST 3560 Print-Based Media (3 Credit Hours)
This is a class with an emphasis on book design, multi-page documents, and large scale print graphics. Students will be expected to create print-based projects that combine visual and typographic elements in creative, critical, and innovative ways.

Prerequisite(s): ARST 1550.

ARST 3890 Service Learning: ARST 3020 (0-1 Credit Hours)
ARST 3891 Service Learning: ARST 3650 (0-1 Credit Hours)
ARST 3900 Studio Internship (3 Credit Hours)
Studio internships are available for individual projects done in association with various firms and institutions in New Orleans. Students will work under professional supervision at these sites, and consult with an art studio faculty member. Requirements include a written report on the experience, and an evaluation by the supervisor.

ARST 3940 Transfer Coursework (3 Credit Hours)
ARST 4130 Studio: Ceramics (3 Credit Hours)
Advanced level work for ceramics majors, emphasizing individual expression and development of ideas. Independent project work within a class situation.

ARST 4140 Studio: Ceramics (3 Credit Hours)
Advanced level work for ceramics majors, emphasizing individual expression and development of ideas. Independent project work within a class situation.

Prerequisite(s): ARST 3130 and 3140.

ARST 4170 Studio: Glass (3 Credit Hours)
Continuing instruction in glass casting and forming techniques. The emphasis will be on professional presentation of specific ideas.

ARST 4180 Studio: Glass (3 Credit Hours)
Continuing instruction in glass casting and forming techniques. The emphasis will be on professional presentation of specific ideas.

Prerequisite(s): ARST 3170 or 3180.

ARST 4250 Studio: Painting (3 Credit Hours)
Advanced work for majors.

Prerequisite(s): (ARST 1250 or 1250) and (ARST 2270, 2270, 2280 or 2280).

ARST 4260 Studio: Painting (3 Credit Hours)
Advanced work for majors.

Prerequisite(s): ARST 3250 and 3260.

ARST 4350 Studio: Photography (3 Credit Hours)
Individual projects in a class situation. Each student explores special interests with the opportunity of working with other advanced students doing diverse projects arrived at in consultation with faculty.

ARST 4360 Studio: Photography (3 Credit Hours)
Individual projects in a class situation. Each student explores special interests with the opportunity of working with other advanced students doing diverse projects arrived at in consultation with faculty.

Prerequisite(s): ARST 3350 and 3360.

ARST 4370 Studio: Printmaking (3 Credit Hours)
Personal exploration into the expansive world of printmaking. Emphasis is placed on personal growth and development both on the conceptual and technical level. The course consists of individual and group projects in a class setting.

Prerequisite(s): ARST 3370 or 3370.

ARST 4380 Studio: Printmaking (3 Credit Hours)
Personal exploration into the expansive world of printmaking. Emphasis is placed on personal growth and development both on the conceptual and technical level. The course consists of individual and group projects in a class setting.

Prerequisite(s): ARST 3370 or 3380.

ARST 4490 Studio: Sculpture (3 Credit Hours)
Individual exploration within a cooperative format. Attention given to the development of personal style with seminars supplementing studio research.

Prerequisite(s): ARST 3490 and 3500.

ARST 4500 Studio: Sculpture (3 Credit Hours)
Individual exploration within a cooperative format. Attention given to the development of personal style with seminars supplementing studio research.

Prerequisite(s): ARST 3490 and 3500.

ARST 4910 Independent Study (3 Credit Hours)
Open to especially qualified juniors and seniors with approval of instructor and chair of department.
Asian Studies (ASTA)

ASTA 1800 Intro to Asian Studies (3 Credit Hours)
This course is designed to provide a general introduction to the field of Asian Studies and to familiarize students with its primary regions: East Asia, South Asia, and Southeast Asia. Each of these regions is complex, rich in history and diverse cultures, and important in the global community. Introduction to Asian Studies provides students with a framework with which they can understand each major area in terms of aesthetic expression, cultural and linguistic groups, economics, geography, history, politics, philosophy, and religion.

ASTA 2940 Transfer Coursework (0 Credit Hours)
Transfer coursework.

ASTA 3180 Peoples of South Asia (3 Credit Hours)
A survey of the peoples and cultures of India, Pakistan, Nepal, Bangladesh, Bhutan, Sikkim, and Sri Lanka. Emphasis is placed upon the social organization and cultural history of the diverse peoples who have inhabited the Indian Triangle.

ASTA 3511 Intro to Chinese Linguistics (3 Credit Hours)
Introduction to Chinese Linguistics is designed to help Chinese learners understand Chinese grammar in a systematic manner as well as gain a theoretical perspective on Chinese language structure, give linguistic students a sense of how Chinese languages, in particular, Mandarin Chinese works and help (future) Chinese instructors gain the meta-linguistic knowledge in teaching Mandarin language. This course will be conducted in the form of lectures and student-led discussions. At the end of this course, students are expected to build a schema on Chinese language structure, gain a better pragmatic knowledge of Chinese language and have a better understanding of Chinese socio-cultural conventions in its language usage.

ASTA 3520 Modern Japanese Culture (3 Credit Hours)
Study of contemporary Japanese culture and society.

ASTA 3550 Feudal Japan- Samurai Era (3 Credit Hours)
Shogun & Samurai examines Japanese culture, history, and society from the dawn of the Samurai class until its demise in the last half of the nineteenth century. During this period, Japan evolved from a highly warlike society to one in which peace prevailed for more than 250 years. Topics to be covered include geography, prehistory, class/caste development, religion, warfare, urban development, theatre, fine arts, social control, and western contact. No prerequisites.

ASTA 3810 Modern Chinese Lit and Society (3 Credit Hours)
This course is a general introduction to the modern Chinese fiction, poetry, and prose from the early twentieth century to the present.

ASTA 3910 Spec offer. In Asian Stu (3 Credit Hours)
Courses offered by visiting professors.

ASTA 4500 Special Topics (3 Credit Hours)
Special topics in Asian studies

ASTA 4880 Writing Intensive: ASTA 4500 (1 Credit Hour)
Writing intensive.

Corequisite(s): ASTA 4910.

ASTA 4910 Independent Study (1-3 Credit Hours)
Independent study in Asian studies.

ASTA 4990 Honors Thesis (3 Credit Hours)
Honors thesis.

ASTA 5190 Semester Abroad (1-20 Credit Hours)
Semester abroad.

ASTA 5380 Junior Year Abroad (1-20 Credit Hours)
Junior year abroad.

ASTA 5390 Junior Year Abroad (1-20 Credit Hours)
Junior year abroad.

ASTA 5940 Transfer Coursework (0 Credit Hours)
Transfer coursework.
Astronomy (ASTR)

ASTR 1000 Descriptive Astronomy (3 Credit Hours)
A one-semester survey of astronomy for the liberal arts student. The solar system, properties and evolution of stars and galaxies, and cosmology. Recent discoveries in astronomy are emphasized.

ASTR 1010 The Solar System (3 Credit Hours)
The organization and origin of the solar system, the earth in motion, the sun, the moon, the planets, comets, and meteors.

ASTR 1020 Stellar Astronomy (3 Credit Hours)
The stars, their distances, spectra, magnitudes. Stellar atmospheres and interiors, stellar evolution. Variable and collapsing stars, nebulae, galaxies and cosmology.

ASTR 1100 Observational Astronomy (4 Credit Hours)
Activities, readings, and projects in observational astronomy. This course provides students with practical experience in observational techniques, while guiding them to an understanding of the role of measurement in the scientific method.

ASTR 1940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

ASTR 2940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

ASTR 5380 Study Abroad (1-20 Credit Hours)
Semester abroad.

ASTR 5390 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

Biochemistry & Molecular Biol (GBCH)

GBCH 4060 Topics in Pediatric Research (2 Credit Hours)

GBCH 6010 Graduate Biochemistry (4 Credit Hours)

GBCH 6020 Biochem & Molec Bio Seminar (1 Credit Hour)

GBCH 6110 Basic Medical Biochemistry (3 Credit Hours)

GBCH 7090 Seminar (1 Credit Hour)

GBCH 7100 Seminar (1 Credit Hour)

GBCH 7110 Selected Topics (1-4 Credit Hours)

GBCH 7120 Special Problems (1-6 Credit Hours)

GBCH 7130 Selected Topics (1-4 Credit Hours)

GBCH 7140 Selected Topics (1-3 Credit Hours)

GBCH 7150 Tutorial Topics (1-6 Credit Hours)

GBCH 7160 Tutorial Topics (1-6 Credit Hours)

GBCH 7170 Principles of Genetics (4 Credit Hours)

GBCH 7180 Chromosome Instabil in Cancer (4 Credit Hours)

GBCH 7190 Seminar Presentation (2 Credit Hours)

GBCH 7220 Structure/Function Biomo (4 Credit Hours)

GBCH 7230 Intro to Bioinformatics (3 Credit Hours)
Prerequisite(s): GBCH 6010.

GBCH 7250 Biomed Stats & Data Analysis (2 Credit Hours)

GBCH 7500 Human Medical Cellular Biochem (5 Credit Hours)

GBCH 7520 Metabol Biochem Human Disease (5 Credit Hours)

GBCH 7540 Med Biochem Grand Rnds Externs (3 Credit Hours)

GBCH 7550 Med Biochem Grand Rounds Exter (3 Credit Hours)

GBCH 7560 Academic Writing & Critique (2 Credit Hours)

GBCH 7570 Signal Transduction/Hormone Ac (2 Credit Hours)

GBCH 7580 Methods in Biochemistry (2 Credit Hours)

GBCH 7590 Cases Research Ethics (2 Credit Hours)

GBCH 9980 Master's Research (0 Credit Hours)

GBCH 9990 Dissertation Research (0 Credit Hours)

Bioinformatics (BINF)

BINF 6010 Prin of Bioinformatics (3 Credit Hours)

Biology (PABI)

PABI 1200 Humanistic Biology (3 Credit Hours)
An investigation of all of the systems of the human body as well as an overview of common abnormal conditions associated with each system. Case studies of the effects of external influences on human biology will also be investigated.
Biomedical Engineering (BMEN)

BMEN 1940 Transfer Coursework (0 Credit Hours)
BMEN 2020 Comput Concepts & Applic (4 Credit Hours)
This course introduces students to the foundations of algorithm development and programming, basics of matrix algebra and numerical analysis, solving ordinary differential equations.

Corequisite(s): BMEN 2021.

BMEN 2021 Computing Concepts & App. Lab (0 Credit Hours)  Lab for ENGP 2020

BMEN 2310 Product & Experimental Design (3 Credit Hours)
The objective of this course is to introduce students to the design process as they are starting the BMEN Curriculum. Through team projects geared toward translating bench research into product development, students will be challenged to begin thinking critically and applying physical fundamentals to complex systems. Weekly lectures will highlight phases of the design process, including problem identification, conceptual design, and early prototyping. Additionally, in the context of product and experimental design, students will gain experience with computer aided design and be provided an introduction to statistics. Course restricted to BMEN majors, or by permission of the instructors.

Corequisite(s): BMEN 2311.

BMEN 2311 Product & Experimntl Dsgn Lab (0 Credit Hours)  Lab section for BMEN 2310

BMEN 2600 Intro Organic & Biochem (3 Credit Hours)
This course introduces the main principles of Organic Chemistry and Biochemistry, preparing the student for BMEN 3030/3040. Topics include nomenclature of organic compounds and bio-molecules, major reactions of organic chemistry, relationship between chemical structures and biological functions, and the reaction pathways of major metabolic processes. Students will be introduced to the three-dimensional structure of organic compounds and biomolecules using molecular models and software tools.

Prerequisite(s): (CHEM 1080, 1080, 1080 or 1080) and (CHEM 1180, 1180, 1180, 1180, 1085, 1085, 1085 or 1085).

BMEN 2730 Biomedical Electronics (4 Credit Hours)

Prerequisite(s): ENGP 2010, 2010, 2010 or 2010.
Corequisite(s): BMEN 2731.

BMEN 2731 Biomedical Electronics Lab (0 Credit Hours)  Lab section for BMEN 2730

Corequisite(s): BMEN 2730.

BMEN 2890 Service Learning (0-1 Credit Hours)
Service learning component to BMEN courses. See Schedule of Classes each semester for offerings. 20 or 40 hours of public service with a CPS approved community partner.

BMEN 2940 Transfer Coursework (0 Credit Hours)
BMEN 3010 Physical Dimen of Aging (3 Credit Hours)
This course is designed to introduce students to the physiological, behavioral, and socio-economic changes associated with aging. In particular, we will focus on what physiological and structural changes are typical for an aging human body focusing on the brain, cardiovascular and musculoskeletal systems. We will also discuss what it means to become older within a community, what can a person expect during the aging process, and what kind of control a person has over his/her aging body. Course participants travel to local aging centers and continuing care facilities as part of the learning process.

Corequisite(s): BMEN 3035.

BMEN 3035 Anat & Phys for Engr Lab (1 Credit Hour)
This single-semester laboratory coordinates hands on learning in human structural anatomy. Course participants will dissect and examine both typical and pathological examples for the various subsystems including body tissues; the musculoskeletal; neurological; cardiovascular; respiratory; digestive; and reproductive systems.

Corequisite(s): BMEN 3040.

BMEN 3040 Biomedical Acoustics (3 Credit Hours)
Introduction to sounds in the physiological and medical arena. Topics include: physics of sound propagation, sources and mechanisms of cardiac and respiratory sound production, sound transmission, auscultation and stethoscope evaluation, psychoacoustics and human structural anatomy. Course participants will examine both typical and pathological examples for the various subsystems including body tissues; the musculoskeletal; neurological; cardiovascular; respiratory; digestive; and reproductive systems.

Corequisite(s): PHYS 1310 and 1320.

BMEN 3045 Anatomy & Physio Lab II (1 Credit Hour)
This single-semester laboratory coordinates hands on learning in human structural anatomy. Course participants will examine both typical and pathological examples for the various subsystems including body tissues; the musculoskeletal; neurological; cardiovascular; respiratory; digestive; and reproductive systems.

Corequisite(s): BMEN 3075.

BMEN 3075 Quat. Physiology Lab (1 Credit Hour)
Subject matter will include blood, nutrition, and metabolism; and the cardiovascular, lymphatic, digestive, respiratory, urinary, and reproductive systems.

Corequisite(s): BMEN 3075.
BMEN 3300 Biomechanics (3 Credit Hours)
This course introduces students to the various interdisciplinary fields in biomechanics. Specific topics include: kinematics during human activity; the analysis of forces and stresses/stains in biological structures under loading; models for biological materials; the relationship between structure and function in orthopedic tissues and continuum mechanics. Fulfills departmental "domain" requirement. An additional non-graded once a week lab section to accompany lectures.

Prerequisite(s): (ENGP 2430, 2430, 2430 or 2430) and (BMEN 2600, 2600, 2600 or 2600).

BMEN 3301 Biomechanics Lab (0 Credit Hours)
Lab section for BMEN 3300

BMEN 3400 Biomaterials & Tissue Engr (3 Credit Hours)
This course will focus on fundamental materials science and biological principles that impact the engineering design of biomaterials and tissue-engineered products. Topics addressed will include structural hierarchies of materials and tissues, physical and chemical properties of surfaces, degradation of materials, and cell-surface, cell-cell, and cell-matrix interactions. The course will conclude with inflammatory, immunological, and pathological events associated with responses to such products. Laboratory exercises will be utilized to illustrate selected concepts, introduce assessment methods, and provide hands-on experiences with cells and materials. Fulfills departmental "domain" requirement. An additional non-graded once a week lab section to accompany lectures.

Corequisite(s): BMEN 3401.

BMEN 3401 Biomaterials & Tissue Engr (0 Credit Hours)
Lab section for BMEN 3400

BMEN 3420 Transport in Cells and Organs (3 Credit Hours)
Fundamental principles of Fluid mechanics and mass transport will be applied to biological systems at the cellular, tissue, and organ levels. The topics of this course will be the cardiovascular, respiratory systems and cell adhesion, drug transport and pharmacokinetics, and transport-related pathophysiological conditions (inflammation, atherosclerosis, thrombosis, sickle cell disease, cancer metastasis). The lab session will provide training in measurement and analysis of cell transport in parallel-plate flow systems. Fulfills departmental "domain" requirement.

BMEN 3421 Transport in Cells&Organs Lab (0 Credit Hours)
Lab section for BMEN 3420

BMEN 3440 Biofluid Mechanics (3 Credit Hours)
This class focuses on fundamental concepts and properties of fluid mechanics with applications to the body. Topics to be covered include basic equations of fluid statics, dynamics and mass transport in differential and integral form using both system and control volume viewpoints. Rheological properties of biological fluids are studied as well as dimensional analysis and similitude. Advanced applications are investigated using the finite element method.

BMEN 3650 Biomechanics and Biotransport (3 Credit Hours)
This course introduces students to biomechanics and biotransport. Specific topics include: the analysis of forces and stresses/stains in biological structures under loading; constitutive models for biological materials; the relationship between structure and function in tissues and organs. These topics will be related to fundamental principles of fluid mechanics and mass transport of biological systems at the cellular, tissue, and organ levels including cell adhesion and migration; intracellular, transmembrane and transvascular transport; drug transport and pharmacokinetics. Fulfills departmental "domain" requirement.

Corequisite(s): BMEN 3651.

BMEN 3651 Biomechanics & Biotrans Lab (0 Credit Hours)
Lab section for BMEN 3650

Corequisite(s): BMEN 3650.

BMEN 3730 Biomedical Signals and Systems (3 Credit Hours)
Fundamentals of biomedical Signals and analysis and introduction to control systems. Topics include Laplace and Fourier transforms, the convolution theorem, time- and space-frequency-domain analysis, signals and noise, the mathematics of imaging, and examples and applications to biomedical signals. The use of MATLAB and Simulink to analyze biomedical systems will be reinforced.

BMEN 3820 Math Analysis Bio Systms (3 Credit Hours)
The objective of this course is to teach basic mathematical modeling constructs and analysis techniques that are used for studying biological processes. Topics to be covered include ordinary differential equations, compartment systems, basics of dynamic systems, stability, statistical inference and model construction. These will be applied to study models of chemical kinetics, physiological control, AIDS transmission, population dynamics, and growth. Students will use Mathematica to develop and analyze models.

Prerequisite(s): MATH 2240, 2240, 2240 or 2240.

BMEN 3890 Service Learning (0-1 Credit Hours)
Students complete a service activity in the community in conjunction with the content of a three-credit corequisite course.

BMEN 3932 Elements of BMEN Design (3 Credit Hours)
This course develops the fundamental aspects of the mechanical performance of devices and components. Topics include a review of stress analysis, failure criteria, fatigue analysis and stress concentrations, as well as the mechanical behavior of fasteners, welded joints, spring selection, bearing design, and introduction to finite element analysis; with applications to biomedical engineering.

Prerequisite(s): ENGP 2430.
BMEN 3940  Transfer Coursework  (3 Credit Hours)
BMEN 4030  BMEN Team Dsgn Project I  (2 Credit Hours)
Techniques and experience in the solution of constrained and open-ended design problems. Lecture topics include all aspects of the design process, including goal setting, idea generation, prototyping, fabrication, and product and evaluation. Also included are technical presentation, project planning and management. Included as needed are other topics such as standards, fastening and joining, motors and control, esthetics and finish. Each team will design and construct a device or system to assist an individual with a disability. These designs are presented in a public show during the second semester.

BMEN 4031  BMEN Team Design Project I Lab  (0 Credit Hours)
Lab section for 4030

BMEN 4040  BMEN Team Dsgn Proj II  (3 Credit Hours)
Techniques and experience in the solution of constrained and open-ended design problems. Lecture topics include all aspects of the design process, including goal setting, idea generation, prototyping, fabrication, and product and evaluation. Also included are technical presentation, project planning and management. Included as needed are other topics such as standards, fastening and joining, motors and control, esthetics and finish. Each team will design and construct a device or system to assist an individual with a disability. These designs are presented in a public show during the second semester.

BMEN 4090  Spec Prob In Biomed Engr  (1-4 Credit Hours)
Independent study and investigation of special problems in biomedical engineering. Details can be arranged with individual biomedical engineering faculty members.

BMEN 4100  Spec Prob In Biomed Engr  (1-4 Credit Hours)
Independent study and investigation of special problems in biomedical engineering. Details can be arranged with individual biomedical engineering faculty members.

BMEN 4310  Continuum Models in BMEN  (3 Credit Hours)

BMEN 4560  BME Professional Internship I  (1-3 Credit Hours)
Internship relevant to professional practice in biomedical engineering, 1-3 letter-graded credits (no S/U option), may count as credits towards graduation. May only be taken once.

BMEN 4570  BME Professional Internship II  (1-3 Credit Hours)
Internship relevant to professional practice in biomedical engineering, 1-3 credits graded S/U, may NOT count as credits towards graduation. May only be taken once.

Prerequisite(s): BMEN 4560.

BMEN 4660  Special Topics  (1-3 Credit Hours)
Special Topics.

BMEN 4890  Service Learning  (0-1 Credit Hours)
The required BMEN 4030/4040 design sequence is centered on the design and construction of a device or system to assist an individual with a disability or a group servicing such individuals. As an option, students may choose to supplement their interaction with their clients with a service learning component that follows Tulane's guidelines for service learning courses and specifically requires: Completing at least 40 hours in a community setting during the semester; keeping a journal of weekly activities that will allow the student to describe and evaluate his/her experiences with the activity; and creating a product that can be evaluated as part of the course grade (e.g., a review paper on an issue relevant to the service activity, or some product of value to the site).

BMEN 4900  Art of Professional Eng  (1 Credit Hour)
Research and Professional Practice (RPP) is a 2-semester sequence beginning in Spring of the Junior year. It satisfies the University’s "Writing Intensive" requirement. A lecture series in the Spring semester, called "Art of Professional Engineering" includes economic analysis, ethics, professional communication including writing and oral presentation, research techniques including literature searching, citation, and the structure of a scientific paper. Students must also register for either 4901 or 4902 in the Spring semester, and continue the sequence with 4911 or 4912/4930 in the following Fall semester.

BMEN 4901  Grand Challenges I  (2 Credit Hours)
The 2-semester sequence presents a group of upper division undergraduates with a very difficult problem in biomedical engineering that will require creative invention, innovation, laboratory hard skills, and unique design methodologies to address. Though the problem is tractable, is not expected that the GC problem will be completely solved. Rather, the intent is that the GC group of students will push forward a developed "good solution" to the point where the need to protect intellectual property arises, and where market value and potential venture investments is apparent.

Prerequisite(s): BMEN 4900.

BMEN 4902  SR Research Prof Experience I  (2 Credit Hours)
This two-course sequence is designed to facilitate an individual biomedical research or design experience in a laboratory. Students will be introduced to the tools, techniques, and rules necessary to function independently and professionally as a researcher or engineer. Topics include thesis writing, technical communication, and time management. The main component of the course is a two semester long research or design project under the direction of a faculty member, scientist or other professional. The course sequence culminates in a formal Senior Thesis and Research Conference presentation. Students participating in the 5th year BSE-MS program should not register for BMEN 4912 in the Fall of the Senior year, registering instead for BMEN 4930.

Prerequisite(s): BMEN 4900.
BMEN 4911 Grand Challenges II (2 Credit Hours)
The 2-semester sequence presents a group of upper division undergraduates with a very difficult problem in biomedical engineering that will require creative invention, innovation, laboratory hard skills, and unique design methodologies to address. Though the problem is tractable, it is expected that the GC problem will be completely solved. Rather, the intent is that the GC group of students will push forward a developed “good solution” to the point where the need to protect intellectual property arises, and where market value and potential venture investments is apparent.

Prerequisite(s): BMEN 4901 or 4910.

BMEN 4912 SR Research Prof Experience II (2 Credit Hours)
This two-course sequence is designed to facilitate an individual biomedical research or design experience in a laboratory. Students will be introduced to the tools, techniques, and rules necessary to function independently and professionally as a researcher or engineer. Topics include thesis writing, technical communication, and time management. The main component of the course is a two semester long research or design project under the direction of a faculty member, scientist or other professional. The course sequence culminates in a formal Senior Thesis and Research Conference presentation. Students participating in the 5th year BSE-MS program should not register for BMEN 4912 in the Fall of the Senior year, registering instead for BMEN 4930.

Prerequisite(s): BMEN 4902.

BMEN 4930 Bs-Ms Thesis (2 Credit Hours)
In order to meet undergraduate degree requirements, this course will allow fifth year students to more effectively concentrate on their research projects in lieu of completing the course requirements of BMEN 4912. The grade for BMEN 4930 will be listed as In Progress (IP) until such time as the master's thesis is completed, whereupon the student's advisor and thesis committee will assign a grade necessary to fulfill bachelor's degree requirements.

BMEN 4940 Transfer Coursework (3 Credit Hours)

BMEN 5380 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

BMEN 5390 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

BMEN 6010 Physical Dimen of Aging (3 Credit Hours)
This course is designed to introduce students to the physiological, behavioral, and socio-economic changes associated with aging. In particular, we will focus on the effects of exercise on the aging human system. We will also discuss what it means to become older within a community, what can a person expect during the aging process, and what kind of control a person has over his/her aging body.

Prerequisite(s): CELL 1010, 1010, 1010, 1010, EBIO 1010, 1010, 1010 or 1010.

BMEN 6020 Biosystems (3 Credit Hours)
This course gives students the skills to interpret or predict the behavior of physiologic systems in order to study normal and pathologic phenomena. The body uses many feedback control mechanisms to maintain homeostasis, the keeping of a constant interior environment (e.g. pH, temperature, blood pressure, balance, bone stress, muscle length). Transfer functions characterize organ physiology. These functions are the building blocks of an organ system model. By studying these models, complex behavior can often be easily interpreted. Further, these models often suggest ways to make noninvasive physiologic measurements. Applications include: vicious cycles, such as hyperventilation syndrome, and how to break them; hierarchical, parallel, and other redundant systems; causes of instabilities such as Cheyne-Stokes breathing; open and closed loop control of anesthesia and artificial organs. Reference will be made to several common mechanisms such as the thermostat. Lecture demonstrations include pulmonary and cardiovascular measurement. A term paper on a topic of the student's choice is required.

BMEN 6030 Anatomy & Physio for Engr (3 Credit Hours)
This is a single-semester course in human structural anatomy. Course participants will examine both typical and pathological examples for the various subsystems including, body tissues; the musculoskeletal, neurological, cardiovascular, respiratory, digestive and reproductive systems.

Corequisite(s): BMEN 6035.

BMEN 6035 Anat & Phys for Engr Lab (1 Credit Hour)
This single-semester laboratory coordinates hands-on learning in human structural anatomy. Course participants will dissect and examine both typical and pathological examples for the various subsystems including, body tissues; the musculoskeletal, neurological, cardiovascular, respiratory, digestive and reproductive systems.

BMEN 6040 Anatomy & Physiology II (3 Credit Hours)
Corequisite(s): BMEN 6045.

BMEN 6045 Anatomy & Physio Lab II (1 Credit Hour)
Corequisite(s): BMEN 6040.

BMEN 6060 Biomedical Acoustics (3 Credit Hours)
Introduction to sounds in the physiological and medical arena. Topics include: physics of sound propagation, sources and mechanisms of cardiac and respiratory sound production, sound transmission, auscultation and stethoscope evaluation, psychoacoustics and auditory perception, speech production and structure of the speech signal, medical ultrasound applications and safety.

Prerequisite(s): PHYS 1310 and 1320.

BMEN 6070 Quant Physio Lec (3 Credit Hours)
Tulane University Health Sciences Center Staff. This course places emphasis upon the chemical basis of life; cells and cellular metabolism; histology and tissues; the endocrine, skeletal and nervous systems; respiratory, digestive, cardiovascular, lymphatic and reproductive systems; nutrition and metabolism; water, electrolyte and acid-base balance, and human growth and development.

Corequisite(s): BMEN 6075.
BMEN 6075 Quant. Physiology Lab (1 Credit Hour)
Subject matter will include blood, nutrition, and metabolism; and the cardiovascular, lymphatic, digestive, respiratory, urinary, and reproductive systems.

Corequisite(s): BMEN 6070.

BMEN 6080 Tech Invent &Commercialization (3 Credit Hours)
This course models innovation and entrepreneurial theory and practices from across a range of commercial size-scales, from small startup companies to intrapreneurial units within large, established companies. The twin poles of theory and practice are balanced through classroom lectures and experiential training. Weekly lectures furnish students with effective and portable theoretical frameworks for identifying, selecting and executing opportunities for technological innovations in healthcare, energy, water and the environment. In the experiential training, students will apply their classroom learning to targeted innovation and entrepreneurship opportunities within these sectors. Completion of this course will supply students with intellectual groundwork and practical experience in advancing inventive technological ideas towards commercialization and ultimately public benefit.

BMEN 6170 Biomedical Optics (3 Credit Hours)
The field of biophotonics is a rapidly-expanding re-search area in which the interactions of photons with matter are leveraged to increase our understanding of biology and to improve the outcomes in human medicine. The objectives of this course are to familiarize students with the fundamental interactions between light and biological samples, and how these are implemented in an array of technologies that are finding successful application in biomedical research and clinical application. Topics will include fundamentals of photon transport in turbid media; optical spectroscopy variants (reflectance, fluorescence, Raman; steady-state and time-resolved); diffuse optical imaging; biological microscopy; coherence techniques; hybrid technologies (e.g. photo-acoustic imaging); and optical molecular imaging. Special attention will be paid to quantitative methods for spectroscopy and imaging in solid tissues. The class will be composed of lectures, and interactive discussions on recent papers representing the state of the art in the field.

BMEN 6220 Neural Microengineering (3 Credit Hours)
In recent years, a number of technologies have been developed and utilized for probing the nervous system. This course will focus on microscale tools, technologies, and techniques employed for the control, manipulation, and study of the nervous system in vitro. Course material will be presented primarily by students who prepare presentations from extensive background literature review. A number of projects will be assigned as design challenges in which multiple interdisciplinary groups will research and present proposed solutions to the same challenge. Background in neuroscience not required. Generally offered every other Spring.

BMEN 6260 Molec Princ Funct Biomatr (3 Credit Hours)
Functional biomaterials are non-viable materials that have been designed or modified in order to elicit specific biological responses when interacting with human fluids, cells, tissues, or organs. This course will focus on chemical principles utilized in endowing polymeric materials with biological functionality for medical applications. Following a brief review of polymer principles with a focus on hydrogels, topics addressed will include attachment of proteins to materials, induction of cell-binding and differentiation, responsive polymers, and spatial and temporal control of material properties for biological signaling. Unifying concepts will be introduced by directed reading and discussion of landmark papers in the biomaterials literature. Supplemental laboratory exercises will be utilized to illustrate selected concepts and introduce experimental procedures.

Prerequisite(s): BMEN 3400 or 3400.

BMEN 6310 Continuum Models in BMEN (3 Credit Hours)
The course begins with a presentation of the kinematics of continuous media and elementary tensor manipulations. We will then cover the conservation principles of mass, linear momentum, angular momentum, and energy. Additional topics will include the formulation of constitutive laws, continuum models in electrodynamics, and simple descriptions of piezoelectric materials. These concepts will be applied to fundamental problems in bio-solid mechanics, bio-fluid mechanics, and bio-electromagnetism.

BMEN 6330 Advanced Biofluid Mech (3 Credit Hours)
This course will cover general intermediate/advanced fluid mechanics, and will provide a foundation from which to base one’s studies of biofluid mechanics. Issues pertinent to the study of biofluid mechanics will be emphasized. Topics to be studied include kinematic principles, the Navier-Stokes equations, boundary conditions for viscous flows, basic solutions to steady and unsteady Navier-Stokes equations, turbulence, analysis of the vorticity equation, and interfacial phenomena. Whenever possible, problems of a biological nature will be used as examples.

BMEN 6340 Soft Tissue Mechanics (3 Credit Hours)
This course provides an introduction to the various approaches used in modeling soft tissues, with particular attention paid to those of the musculoskeletal system (e.g. ligament, tendon, cartilage). Particular emphasis will be placed on the theoretical and experimental consequences of the large deformation behavior of these tissues. An important objective of this class is to enable the student to develop a sense for the physical and mathematical relationships between the many types of models (and the associated experiments) currently being utilized in soft tissue mechanics.

BMEN 6350 Adv Soft Tissue Mech (3 Credit Hours)
This course covers special topics in soft tissue biomechanics, such as numerical implementation of porous medium models for soft tissues and the nonequilibrium thermodynamics principles with chemical potential and Donnan osmotic swelling behaviors of hydrated soft tissues. The course will also include various contemporary research topics in soft tissue biomechanics.
BMEN 6360 Intro to Finite Element Method (3 Credit Hours)
Matrix structural analysis techniques as applied to frames, problems in plane strain, plane stress, and axisymmetric and 3-D structures. Development of the isoparametric family of finite elements. Use of user written and packaged software.

BMEN 6400 Biomaterials & Tissue Engr (3 Credit Hours)
This course will focus on fundamental materials science and biological principles that impact the engineering design of biomaterials and tissue-engineered products. Topics addressed will include structural hierarchies of materials and tissues, physical and chemical properties of surfaces, degradation of materials, and cell-surface, cell-cell, and cell-matrix interactions. The course will conclude with inflammatory, immunological, and pathological events associated with responses to such products. Laboratory exercises will be utilized to illustrate selected concepts, introduce assessment methods, and provide hands-on experiences with cells and materials. An additional non-graded once a week lab section to accompany lectures.

Corequisite(s): BMEN 6401.

BMEN 6401 Biomaterials & Tissue Engr Lab (0 Credit Hours)
Lab section for BMEN 6400

BMEN 6420 Transport in Cells and Organs (3 Credit Hours)
Open only to graduate students. Fundamental principles of fluid mechanics and mass transport will be applied to biological systems at the cellular, tissue, and organ levels. The topics of this course will be the cardiovascular and respiratory systems; and cell adhesion and migration, intracellular, transmembrane and transvascular transport: drug transport and pharmacokinetics, and transport-related pathophysiological conditions (inflammation, atherosclerosis, thrombosis, sickle cell disease, cancer metastasis). The lab sessions will provide training in measurement and analysis of cell transport in parallel-plate flow systems.

Corequisite(s): BMEN 6425.

BMEN 6421 Transport in Cells&Organs Lab (0 Credit Hours)
Lab section for BMEN 6420

BMEN 6430 Vascular Bioengineering (3 Credit Hours)
The objectives of this graduate-level course are to familiarize students with contemporary research areas that cover the field of vascular biology, and to provide an understanding of bioengineering principles related to physiological function and therapeutic modalities. Example topics include smooth muscle cell and endothelial cell lineage, leukocyte-endothelial cell interactions, angiogenesis, drug targeting via the microcirculation, neural vascular control, atherosclerosis, and hypertension. These topics will be presented in the context of four overarching sections: 1) Vascular Cell Biology; 2) Principles of Vascular Function and Design; 3) Vascular Pathophysiology, and 4) Therapeutic Design. For each section of the course students will be required to read, critically analyze, and present relevant articles. As indicated by the section titles, the course will culminate by highlighting how our basic understanding of physiological function/dysfunction can be translated to therapeutic design.

BMEN 6460 Cell Mechanotransduction (3 Credit Hours)
This course reviews cellular mechanotransduction in a variety of tissues that adapt to physiological loading. A partial list of mechansensing cells sells in these tissues include hair cells in inner ears, chondrocytes in cartilage, osteocytes in bone, endothelial cells in blood vessels, etc. In particular, this course emphasizes the role of mathematical modeling in solving biological problems. Hands-on mathematical modeling will be assigned as homework and projects.

BMEN 6600 Comput Model Biomed Sys (4 Credit Hours)
The objective of this graduate course is to provide students with the skills and knowledge necessary for computational modeling of biological and physiological systems. The first half of the course will cover introduction to UNIX, elements of programming (Matlab and FORTRAN), and numerical methods commonly used in biomedical research. The second half will immerse the students in specific biomedical applications including hemodynamics, respiratory flow, cellular mechanobiology, and neural dynamics. Most lectures will be accompanied by computer labs.

BMEN 6601 Comp Model Biomed Sys Lab (0 Credit Hours)
Lab section for BMEN 6600

Corequisite(s): BMEN 6600.

BMEN 6610 Intro Comp Biomechanics (3 Credit Hours)
This course covers fundamentals of computational methods with the emphasis in biomechanics applications. The computational methods include finite element methods and finite difference methods at the introductory level. The course will use MATLAB to implement these methods. The underlying theories of these numerical methods will be taught, and example problems will be discussed during the lecture. Example problems will include those from implant design, bone biomechanics, soft tissue biomechanics, etc. in static and dynamic conditions. The course will also discuss some special issues such as the stability/convergence criteria and the error estimation. The student will work on a term project to exercise these issues on a biomechanics problem of his/her choice.

BMEN 6630 Cell Mechanics (3 Credit Hours)
Fundamental principles of continuum mechanics will be applied to problems of biomechanics at the cellular level. Topics covered include structure of mammalian cells, cell membrane mechanics, mechanics of the cytoskeleton, models of cell viscoelasticity, cell adhesion, active cell processes, flow-induced deformation of blood cells, and experimental techniques (micropipette aspiration, biointerface probe, atomic force microscopy, magnetic twisting cytometry, optical tweezers, and flow chamber assays).

BMEN 6650 Biomechanics and Biotransport (3 Credit Hours)
This course provides a review of the mechanics of finitely deformable structures and thermomechanics with applications to the study of biological tissues. The focus of the course will be on the development of mathematical models describing fluid-solid interactions in biological tissues, nutrient transport, damage repair, and discontinuities. In particular, we will cover mixture theory, poroelasticity, microstructural models of cortical and cancellous bone, tendon, ligament, and other tissues, transient and steady-state nutrient transport, and continuum damage theories.

Corequisite(s): BMEN 6651.
BMEN 6651  Biomechanics and Biotrans Lab (0 Credit Hours)
Lab section for BMEN 6650

Corequisite(s): BMEN 6650.

BMEN 6660  Special Topics (1-3 Credit Hours)
Special Topics.

BMEN 6670  Pulmonary Mechanics (3 Credit Hours)
This is a survey course in which mechanical models of the pulmonary system are discussed. Topics to be addressed include mucus transport, airflow/diffusion in the pulmonary airways, ventilation/perfusion relationships, flow through collapsible airways and interfacial phenomena.

BMEN 6680  Orthopaedic Bioengineer (3 Credit Hours)
Concentration on various engineering aspects of the human knee and the treatment of its common orthopaedic pathologies. Topics include histophysiology of wound healing, synovial joint anatomy and tissue biomechanics, knee biomechanics, osteochondral and ligamentous graft reconstruction, prosthetic ligaments, and knee arthroplasty with emphasis on the design issues involved and the integration of clinical practice.

BMEN 6710  Departmental Seminar (1 Credit Hour)
Each week, a one-hour seminar on research within or outside the department is presented. During the Spring semester, all seniors are required to give a presentation on their project or internship. Attendance of all seniors and graduate students is required in the Fall semester.

BMEN 6720  Departmental Seminar (0 Credit Hours)
Each week, a one-hour seminar on research within or outside the department is presented. During the Spring semester, all seniors are required to give a presentation on their project or internship.

BMEN 6730  Biomedical Signals and Systems (3 Credit Hours)
Fundamentals of biomedical Signals and analysis and introduction to control systems. Topics include Laplace and Fourier transforms, the convolution theorem, time- and space-frequency-domain analysis, signals and noise, the mathematics of imaging, and exam

BMEN 6760  Biomedical Microdevices (3 Credit Hours)
This graduate level course will focus on design and fabrication of biomedical microdevices for basic biomedical research and clinical diagnostics. Students will learn from examples in recent medical literature how to approach the design of biomedical devices. The course will emphasize two basic engineering concepts - simplicity and biomimetics. It often pays (figuratively and literally) to spend the time to engineer the simplest device with needed functionality, because simple devices are often more robust, inexpensive and user-friendly, and therefore are easier to commercialize. The biomimetic approach to engineering of devices could save a lot of effort simply because nature has already spent the time to try out nearly every possible design, and has often (but not always) arrived at the optimal solution. As an exercise in this course, students will be asked to propose a solution to a medical problem of their choice (from contemporary literature) and explain why they chose the specific design. A goal of this course will be to stimulate students to think creatively and to integrate their knowledge across a wide spectrum of subjects in BMEN curriculum for solving real problems related to human health. This course will specifically emphasize the development of point-of-care diagnostic devices for remote, rural areas, developing world and other resource-limited settings.

BMEN 6790  Design Studio (3 Credit Hours)
This course is intended to provide students with a realistic design experience from virtual design, to rapid prototype fabrication, to testing, through redesign. It will focus on the practical application of leading commercial design software, including the creative extension of this software to innovate research applications. The course will be project intensive with commensurate report submissions and future design recommendations. Projects will include analyses of existing clinical problems, as well as research development of cell scaffolds and cell mechanotransduction.

Corequisite(s): BMEN 6791.

BMEN 6791  Design Studio Lab (0 Credit Hours)
Lab for BMEN 6790

Corequisite(s): BMEN 6790.

BMEN 6820  Math Analysis Bio Sysytems (3 Credit Hours)
The objective of this course is to teach basic mathematical modeling constructs and analysis techniques that are used for studying biological processes. Topics to be covered include ordinary differential equations, compartment systems, basics of dynamic systems, stability, statistical inference and model construction. These will be applied to study models of chemical kinetics, physiological control, AIDS transmission, population dynamics, and growth. Students will use Mathematica to develop and analyze models.
BMEN 6830 Intro Biomed Imaging & Process (3 Credit Hours)
The objective of this course is to teach graduate students the concepts, algorithms and programming of image analysis techniques and apply them to address real world biomedical imaging challenges. The physics of medical imaging modalities including x-ray, MRI, CT, PET and microscopic imaging will be introduced. The basic underlying mathematical signal processing techniques such as Fourier analysis and linear system theory will be studied to model and process biomedical images. Finally, students will learn how to use MATLAB as a tool and apply the image processing techniques to solve some medical imaging problems such as image enhancement, segmentation and pattern classification.

BMEN 6840 Medical Imaging Physics (3 Credit Hours)
This course will introduce imaging methods in medicine, including radiography, computed tomography (CT), magnetic resonance imaging (MRI), nuclear medicine (PET and SPECT), and ultrasound imaging. The basic physical principles of each imaging modality will be introduced, including the imaging energy source, properties and interaction with tissue. Basic concepts of image reconstruction will be discussed. This course will include laboratory visits to the School of Medicine Department of Radiology to explore real world uses of medical imaging systems. A course project will be assigned for students to assess new and emerging medical imaging systems.

BMEN 6860 Sem In Biofluid Mechanic (0 Credit Hours)
BMEN 6900 Medical Imaging (3 Credit Hours)

BMEN 6932 Elements of BMEN Design (3 Credit Hours)
This course develops the fundamental aspects of the mechanical performance of devices and components. Topics include a review of stress analysis, failure criteria, fatigue analysis and stress concentrations, as well as the mechanical behavior of fasteners, welded joints, spring selection, bearing design, and introduction to finite element analysis; with applications to biomedical engineering.

BMEN 6940 Transfer Coursework (3 Credit Hours)
BMEN 7030 Anatomy &Physio For Engr (3 Credit Hours)

BMEN 7130 Anat & Phys For Engr Lab (1 Credit Hour)

BMEN 7210 Direct Reads In BME Engr (1-6 Credit Hours)
Taught on a tutorial basis, this course allows a student to make an in-depth study in an area of expertise of members of the department. Some recent and current topics include non-Newtonian fluid mechanics; the mechanics of the inner ear; the mechanics of bone; the mechanics of soft tissue; ceramics engineering; physical metallurgy; laser applications in medicine; and modeling of neural networks.

BMEN 7220 Direct Reads In BME (1-6 Credit Hours)
Taught on a tutorial basis, this course allows a student to make an in-depth study in an area of expertise of members of the department. Some recent and current topics include non-Newtonian fluid mechanics; the mechanics of the inner ear; the mechanics of bone; the mechanics of soft tissue; ceramics engineering; physical metallurgy; laser applications in medicine; and modeling of neural networks.

BMEN 7320 Research In BME (1-6 Credit Hours)
Individual research supervised by faculty.

BMEN 7410 Research Methods (3 Credit Hours)
Methods and resources for experimental studies in engineering science are introduced. Topics include the nature of scientific inquiry, literature search and writing techniques, experimental design and control, data analysis and presentation, and statistical methods. An original proposal is required.

BMEN 7660 Special Topics (0-4 Credit Hours)
Special Topics.

BMEN 7940 Transfer Credit-Grad (1-12 Credit Hours)

BMEN 7990 Research in BME (1-9 Credit Hours)
Individual research supervised by faculty.

BMEN 9980 Master's Research (3 Credit Hours)
Research toward completion of a masters degree.

BMEN 9990 Dissertation Research (3 Credit Hours)
Research toward completion of a doctoral degree.

Biomedical Sciences (BMSP)

BMSP 6050 Advanced Cell Biology - MS (3 Credit Hours)
BMSP 6070 Advanced Cell Biology (3 Credit Hours)
BMSP 6800 Technology Commercialization (3 Credit Hours)
BMSP 7100 Biomed Sciences Workshop (1 Credit Hour)
BMSP 7110 Workshop (1 Credit Hour)
BMSP 7120 Research Methods (2-4 Credit Hours)
BMSP 7130 Research Methods (2-4 Credit Hours)
BMSP 7140 Biomedical Sci Seminar (1 Credit Hour)
BMSP 7150 Seminar (1 Credit Hour)
BMSP 7500 Special Topics (1-6 Credit Hours)
BMSP 7770 Systems Biology (3 Credit Hours)
BMSP 7990 Independent Study (1-6 Credit Hours)
BMSP 9980 Masters Research (0 Credit Hours)
BMSP 9990 Dissertation Research (0 Credit Hours)

Biostatistics (BIOS)

BIOS 6030 Introductory Biostat (3 Credit Hours)
Introduction to statistical methodology in the health field. Topics include presentation of data (graphs and tables), descriptive statistics, concepts of probability, estimation of parameters, hypothesis testing, simple linear regression, correlation, and the analysis of attribute data. It is recommended for students with any mathematical or statistical background and those needing a firm foundation in statistical methods either for their careers or preparation for further quantitative courses.
BIOS 6040 Intermediate Biostat (3 Credit Hours)
This is an intermediate course in applied biostatistics. The course covers Analysis of Variance and Multiple Regression and Correlation Analysis, and Logistic Regression. The focus will be on numerical computation and interpretation of results of statistical application using statistical packages. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030 or SPHL 6050).

BIOS 6220 Database Management (3 Credit Hours)
An introduction to the principles and application of data management, techniques in data collection, data cleaning, data reporting, database design, and implementing databases for managing large data systems. After taking the course, students will be able to create databases with applications to public health intervention and surveillance, use SQL to administrate, manage, and retrieve data for statistical analysis.

Prerequisite(s): Basic knowledge of MS Office.

BIOS 6240 Computer Packages-Spss (1 Credit Hour)
Prerequisite(s): BIOS 6030*
* May be taken concurrently.

BIOS 6300 Introduction To Arcgis (1 Credit Hour)
This course covers the elementary concepts and applications for mapping using the ArcGIS software. The course focuses on a wide variety of public health applications and is applicable to virtually all academic and professional settings where mapping is used. Each lecture begins with a PowerPoint presentation to introduce fundamental mapping concepts and is followed with in-class exercises to reinforce hands-on application. Two in-class, paper-based exams are given to monitor and assess students' understanding of the course concepts.

Prerequisite(s): (BIOS 6030* or SPHL 6050*).
* May be taken concurrently.

BIOS 6800 Intro To Pub Hlthgis (3 Credit Hours)
The course is an introduction to desktop mapping and spatial analysis. The first part of the course covers geographic information systems (GIS) concepts and mapping using the ArcGIS software. The second part of the course covers introductory spatial analytical techniques, including spatial autocorrelation quantification, cluster analysis, and spatial modeling. The student will develop a public health GIS project that requires the synthesis of mapping and spatial analysis.

BIOS 7040 Statistical Inference I (3 Credit Hours)
The course is the first of a sequence in the theory of statistical interference and probability. The first part of the course covers probability theory; discrete, continuous, and exponential distribution functions; moment generating functions; and differentiation. The latter part of the course covers joint and marginal distributions and concepts of random samples. Students taking this course need to have completed at least one year of college calculus. Students will develop a project that synthesizes the course learning objectives through an applied course project. The course focuses on the theoretical underpinnings of biostatistics and improving understanding of statistical application and problem solving approaches.

BIOS 7050 Statistical Inference II (3 Credit Hours)
The course is the second part of a sequence for introduction to statistical inference and probability. The first part of the course covers data reduction, point estimation, hypothesis testing, and interval estimation. The latter part of the course covers asymptotic evaluations, analysis of variance, and regression modes. The student will develop a project that synthesizes the course learning objectives through an applied course project. The course focuses on the theoretical underpinnings of biostatistics and improving understanding of statistical application and problem solving approaches.

Prerequisite(s): BIOS 7040.

BIOS 7060 Regression Analysis (3 Credit Hours)
This is an advanced course on selected statistical techniques for analyzing data on multiple variables, both continuous and categorical. This course ultimately provides the student with insight into the application of regression techniques to the medical and health sciences. It focuses on statistical methodology with emphasis on selection of appropriate applications and interpretation of results. Elementary knowledge of the use of statistical computing package is needed.

Prerequisite(s): (BIOS 6030 or SPHL 6050) and BIOS 6040.

BIOS 7080 Design of Experiments (3 Credit Hours)
This course deals with fundamental topics in design of experiments including principle theory of experimental designs (randomization, replication, and balance). It focuses the main elements of statistical thinking in the context of experimental design such as completely randomized design, randomized complete block design, experiments with two factors, factorial design, Latin Square, nested designs, repeated measurement design, and split-pot designs. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030 or SPHL 6050) and BIOS 6040.

BIOS 7150 Categorical Data Analysis (3 Credit Hours)
Fundamental concepts and methods for analysis of categorical outcomes. Topics include analysis of 2-way tables, unconditional and conditional logistic regression, power and sample size computation, and modeling of dependent categorical outcomes via mixed models and GEE methods. Course covers the mathematical basis of the statistical procedures but the emphasis is on application of the methods using statistical software and interpretation of results. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030 or SPHL 6050) and BIOS 6040.

BIOS 7220 Nonparametric Statistics (3 Credit Hours)
Nonparametric inferential statistical methods are introduced. Topics include single, paired, independent, and multiple sample hypothesis testing and confidence interval methods; non parametric regression and correlation methods; categorical data and measures of concordance. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030 or SPHL 6050) and BIOS 6040.
Biostatistics and Bioinformatics Research

Prerequisite(s): Elementary knowledge of the use of statistical computing packages is needed.

BIOS 7250 Principles of Sampling (3 Credit Hours)
This course introduces core principles of survey sampling, with emphasis on sampling plans, methods of estimating unknown parameters of population and subdomain, and techniques for calculating precisions of the estimators. Topics include: basic concepts in survey sampling, simple random sampling; stratified random sampling; systematic sampling; one-, two-, and multi-stage cluster sampling; probability proportionate to size sampling. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030 or SPHL 6050).

BIOS 7270 Asymptotic Inference (3 Credit Hours)
This course provides an introduction to the fundamental tools and concepts of asymptotic statistics, or the large sample theory, without requiring measure theory. Students who take this course should have the general knowledge of statistical inference and working knowledge of statistical software such as SAS or R. The course includes and introduction on the limit theory of random variables, classic likelihood-based asymptotic theory and the asymptotic theory of nonparametric statistics, including the theory of U-statistics and smoothing methods. It also covers resampling methods, including permutation tests, bootstrap, and Jackknife.

Prerequisite(s): MATH 6070 and 6080.

BIOS 7300 Survival Data Analysis (3 Credit Hours)
Topics include analysis of survivorship data including estimation and comparison of survival curves, regression methods in the analysis of prognostic and etiologic factors, concepts of competing risks, and the analysis of clinical trial data. Software used for problem solving. Emphasis placed on the application of methods to the analysis of public health data with examples of clinical trials, cancer survivorship, and other data sets for which there is partial follow-up of subjects. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030 or SPHL 6500) and BIOS 6040.

BIOS 7380 Bayesian Inference (3 Credit Hours)
This course examines theoretical foundations and applications of Bayesian paradigm, including Bayes’ theorem, prior distribution, likelihood function, deriving posterior distributions, and point and interval estimations. A variety of topics are covered, which encompass Bayesian inference for single- and multi-parameter models, linear regression, hierarchical models, and commonly used Gibbs sampler and Metropolis-Hastings algorithm. Assessment of convergence, the evaluation of models, and the presentation of the results are also illustrated. Real world examples drawn from medical research are used to show practicality of Bayesian approach, particularly how to update beliefs and make inferences from observed data. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030 or SPHL 6500) and BIOS 6040.

BIOS 7400 Clinical Trials (3 Credit Hours)
Covers design, implementation, analysis and reporting of clinical trials. Topics encompass trial design, hypothesis formulation and testing, methods of randomization, ethics, sequential trials, sample size determination, blinding, subject recruitment, data collection and management, quality control, monitoring outcomes and adverse events, interim analysis, statistical methods in analyzing trial data, and addressing scientific issues in reporting and interpreting trial results. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030* or SPHL 6050*) and BIOS 6040. * May be taken concurrently.

BIOS 7550 Epigenetics and Epigenomics (3 Credit Hours)
This course exposes students to the underlying biological basis behind current research in the area of epigenetics and epigenomics. Students will review the principles and recent progresses in epigenetic regulation of physiology and patho-physiology, along with current and emerging techniques and methodologies for assessing epigenomic features. Students will present and discuss recent cutting-edge and epigenetic and epigenomic studies.

Prerequisite(s): TRMD 6010*.
* May be taken concurrently.

BIOS 7650 Stat Learning in Data Science (3 Credit Hours)
This course provides detailed overviews over the evaluation and application of statistical learning theories and techniques for inference and prediction in data science, particularly for biological and public health data. Topics include linear and nonlinear models, resampling techniques, tree-based methods, unsupervised learning such as clustering, support vector machine, graphical models, etc. Working on real and/or simulated data through assignments, students will apply the knowledge learned and practice their skills in solving various biological and public health problems, such as sequence alignment, gene prediction, subtype identification and classification, and disease risk and prognosis prediction. Discussion on model assessment and selection are also included. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030 or SPHL 6050) and BIOS 6040.

BIOS 7990 Masters Independent Studies (1-3 Credit Hours)
Masters students and advisor select a topic for independent study and develop learning objectives and the expected written final product.

BIOS 8000 Doctoral Journal Club (0 Credit Hours)
This course is intended to improve students’ ability in interpreting, evaluating, critiquing, presenting, and communicating the elements, concepts, findings, and implications from current Biostatistics and Bioinformatics research literatures in a seminar setting. All enrolled students will be expected to give at least one oral presentation and participate in the student-led discussions. Feedback to each presenter will be given orally, in writing and/or through e-mails by faculty and peer students. At the end of the course, students will gain experience in assessing the value of research findings from selected publications to biostatistics and bioinformatics research.
BIOS 8200  Causal Inference for Biomedical Informatics (3 Credit Hours)
This course covers basic concepts and selected state-of-the-art statistical methods and theory of causal inference for biomedical informatics. It will empower students to draw causal conclusions and make predictions by mining data from observational and experimental studies. Topics include: targeted machine learning, structural equation modeling, Mendelian randomization, and heteroskedastic genomic prediction. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030 or SPHL 6050) and BIOS 6040, 7060 and MATH 6080.

BIOS 8270  Asymptotic Inference (3 Credit Hours)
Prerequisite(s): BIOS 7040* and 7050*.

BIOS 8350  Clustered and Longitudinal Data Analysis (3 Credit Hours)
This is an advanced course in analysis of clustered and longitudinal data, with or without missing values. Students will compute power and sample size for clustered and longitudinal data using generalized linear mixed effect models and estimating equations. Class discussion, lecture, and assignments emphasize application of methods to the analysis of public health data with examples of clinical trials and epidemiological observational studies. Use of standard statistical software and methods required. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030 or SPHL 6050) and (BIOS 6040 or 7060).

BIOS 8500  Monte Carlo and Bootstrapping (3 Credit Hours)
This hands-on course introduces the methods used for Monte Carlo simulations and nonparametric bootstrapping. Students learn how to design, program, and interpret a simulation study, uses of bootstrapping for estimation and inference, jackknife, and other resampling methods. Monte Carlo Markov Chain methods and Bayesian inference in Monte Carlo methods will be introduced. This is an advanced, computer-intensive course, so knowledge of programming language (SAS or R preferred) as well as ability to work independently are required.

Prerequisite(s): (BIOS 7060, 7080, 7150, 7220 or 7300).

BIOS 8800  Applied Data Analysis (3 Credit Hours)
This is an advanced methods course for hands-on data analysis and management. Students use real datasets to formulate testable hypotheses, interrogate and clean data, implement appropriate strategies for missing data, design and perform appropriate analyses, and keep written documentation of their analyses. Students also learn how to interpret and effectively report the results of statistical analyses, both orally and in writing. Use of a statistical software package is required.

BIOS 8820  Multivariate Methods (3 Credit Hours)
This is a doctorate level course that covers techniques used to conduct analysis with more than one outcome variable. The focus will be on association methods and predictive models between multiple independent and multiple dependent variables. Additionally, the students will learn techniques for variable reduction, path models, and factor analysis. Students will conduct numerical computation and interpretation of results of statistical application using statistical packages.

BIOS 8990  Doctoral Independent Study (1-3 Credit Hours)
Doctoral students and advisors select a topic for independent study and develop learning objectives and the expected final written product.

BIOS 9970  Dissertation (0 Credit Hours)
Doctoral candidates who have defended their prospectus and are engaged in research.

BIOS 9980  Master's Thesis Research (0 Credit Hours)
MS Students engaging in thesis research.

BIOS 9990  Dissertation Research (2 Credit Hours)
Doctoral students who have completed course work but not defended their prospectus.

Business & Leadership Studies (BSLS)

BSLS 4100  Internship & Professional Development (1-3 Credit Hours)
This course is designed to prepare students for success in the career development process by gaining work experience in their chosen field of study, developing a portfolio of their work and accomplishments, and networking with industry professionals. Students will complete a minimum of 100 hours of field experience in an organization and attend classroom sessions that focus on career choices, job searching skills, and portfolio development. The course is to be taken during the student's last semester of study or with the approval of their program director. All internships must be approved by the program director or internship instructor.

Business Doctoral Courses (BUSN)

BUSN 7010  Financial Economics Theory (3 Credit Hours)
This is the first doctoral course on financial economics theory.

BUSN 7020  Investments and Asset Pricing (3 Credit Hours)
This course is designed for doctoral students who intend to research in financial accounting, finance, or economics. The course will cover important and recent empirical papers in the investments area.

BUSN 7030  Empirical Research Acct/Finc (3 Credit Hours)

BUSN 7040  Optimization Theory (3 Credit Hours)

BUSN 7050  Micro-Economic Theory I (3 Credit Hours)

BUSN 7060  Micro-Economic Theory II (3 Credit Hours)

BUSN 7070  Incentives & Asymmetric Information (3 Credit Hours)

BUSN 7080  Econ Theory of Organizations (2-3 Credit Hours)

BUSN 7110  Analytical Accounting Theory (3 Credit Hours)

BUSN 7120  Empirical Methods in Finance (3 Credit Hours)

BUSN 7130  Corporate Finance Theory (3 Credit Hours)

BUSN 7140  Empirical Research Paper I (3 Credit Hours)

BUSN 7141  Empirical Research Paper II (3 Credit Hours)

BUSN 7150  Empirical Research in Acctg Seminar (3 Credit Hours)

Dissertation Research (0 Credit Hours)

Dissertation (0 Credit Hours)

Doctoral Independent Study (1-3 Credit Hours)

Doctoral Students who have completed course work but not defended their prospectus.

Doctoral Dissertation Research (2 Credit Hours)

Doctoral students who have completed course work but not defended their prospectus.

Doctoral Independent Study (1-3 Credit Hours)

Doctoral students and advisors select a topic for independent study and develop learning objectives and the expected final written product.
BUSN 7160  Empirical Acctg Research (3 Credit Hours)

BUSN 7170  Empirical Research in Acct II (3 Credit Hours)
This course provides an introduction to and overview of selected topics in financial accounting research. We will cover a broad area of research. Papers will be a mix of classic, contemporary, and review papers. Our main objective is to continue building your research skills, so that you will become a productive researcher in accounting.

BUSN 7210  Empirical Finance Research I (3 Credit Hours)
This is a doctoral seminar course on topics in empirical research, primarily in the area of corporate finance.

BUSN 7220  Empirical Finance Research II (3 Credit Hours)
This is a doctoral course on topics in empirical finance research, primarily in the area of corporate finance.

BUSN 7230  Selected Topics in Fin and Acc (3 Credit Hours)
This seminar covers selected topics in empirical Finance and Accounting research. The objectives of this course are to (i) provide an introduction to the basic building blocks of market-based research (ii) enable an understanding of the economic theory-based motivation for empirical hypotheses, and (iii) provide an introduction to, and evaluation of the empirical methods employed to test those hypotheses. The course seeks to prepare students for research careers in archival-empirical research.

BUSN 7300  3rd YR Empirical Paper & Pres (3 Credit Hours)

BUSN 7330  Seminar: Mgmt Commun (0 Credit Hours)

BUSN 7410  Seminar On Acct & Econ (3 Credit Hours)

BUSN 7510  Seminar In Org Beh I (2-3 Credit Hours)

BUSN 7520  Sem Organiza Behavior II (3 Credit Hours)

BUSN 7530  Seminar Org Behavior III (3 Credit Hours)

BUSN 7540  Group Dynamics (3 Credit Hours)

BUSN 7810  Strategic Management (3 Credit Hours)

BUSN 8010  Studies In Account I (1-3 Credit Hours)

BUSN 8020  Studies In Account II (1-3 Credit Hours)

BUSN 8030  Studies In Account III (1-3 Credit Hours)

BUSN 8040  Studies In Account IV (1-3 Credit Hours)

BUSN 8310  Studies In Org Behav I (1-3 Credit Hours)

BUSN 8320  Studies In Org Behav II (1-3 Credit Hours)

BUSN 8330  Studies In Org Behav III (1-3 Credit Hours)

BUSN 8340  Studies In Org Behav IV (1-6 Credit Hours)

BUSN 8510  Studies In Finance I (1-3 Credit Hours)

BUSN 8520  Studies In Finance II (1-3 Credit Hours)

BUSN 8530  Studies In Finance III (1-3 Credit Hours)

BUSN 8540  Studies In Finance IV (1-3 Credit Hours)

BUSN 8550  PhD Investment Seminar (3 Credit Hours)

BUSN 9950  Independent Study (1-6 Credit Hours)

BUSN 9960  Thesis Development (3 Credit Hours)

BUSN 9980  Advanced Financial Semina (3 Credit Hours)

BUSN 9990  Dissertation Research (0-3 Credit Hours)

Business Law (BSBL)

BSBL 1940  Transfer Coursework (3 Credit Hours)
Transfer Coursework for BSBL discipline in BSLS Programs (1000 level).

BSBL 2910  Special Topics in Business Law (1-3 Credit Hours)
Special Topics in Business Law.

BSBL 2940  Transfer Coursework (3 Credit Hours)
Transfer Coursework for BSBL discipline in BSLS Programs (2000 level).

BSBL 3400  Legal Aspects of Business (3 Credit Hours)
A practical approach to law as it affects the business person and the consumer. The primary focus is on the laws of contracts; the requirements and the rights and obligations they create. The relief granted to debtors through bankruptcy and the resulting detriment to creditors are studied with emphasis on precautionary measures. Finally, the consequences of willful or negligent acts are carefully treated.

BSBL 4910  Independent Study (1-3 Credit Hours)
Independent Study in the BSBL discipline for the BSLS Programs.

Business of Real Estate (RESM)

RESM 3010  Principles of Real Estate I (3 Credit Hours)
Corequisite(s): RESM 3020, RESM 3030, RESM 3040 and RESM 3060.

RESM 3020  Principles of Real Estate II (3 Credit Hours)
Corequisite(s): RESM 3010, RESM 3030, RESM 3040 and RESM 3060.

RESM 3030  RE Market Analysis & Finance (3 Credit Hours)
Corequisite(s): RESM 3010, RESM 3020, RESM 3040 and RESM 3060.

RESM 3040  Fundamentals Real Estate Devel (3 Credit Hours)
Corequisite(s): RESM 3010, RESM 3020, RESM 3030 and RESM 3060.

RESM 3060  Sustainable Urban Development (4 Credit Hours)
Corequisite(s): RESM 3010, RESM 3020, RESM 3030 and RESM 3040.

Career Devel & Mgmt (CDMA)

CDMA 1010  Career Dvlp & Mgmt I (0.5 Credit Hours)
In this course, students will complete an online Career Interest Inventory before class and will receive feedback on how their academic interests will support their future professional careers. They will learn how to take stock of the skills they already have, and will use them to create effective resumes and to plan their career paths. A representative from the Turchin Library at Freeman will discuss the importance of doing research and targeting future employers. Guest speakers from a variety of academic and career backgrounds will visit each class to share their personal career journeys and answer student questions. Please note that this course is for BMSI students only, and the Freeman School offers the course only in the summer.
CDMA 1110 Career Dvlp & Mgmt II (0.5 Credit Hours)
In this course, students will learn about networking, building an effective social media presence, and identifying the different kinds of interviews as preparation for an eventual career search. They will have an opportunity to practice networking and interviewing in peer groups, and guest speakers from a variety of academic and career backgrounds will visit each class to share their personal career journeys and answer student questions. Please note that this course is for BMSI students only, and the Freeman School offers the course only in the summer.
Prerequisite: CDMA 1010

Prerequisite(s): CDMA 1010.

CDMA 1201 Career Dvlp & Mgmt I (1.5-2 Credit Hours)
This course assists students with career exploration and prepares them to be competitive candidates during the internship and job search processes. Student preparation includes learning how to write an effective resume and cover letter, researching job opportunities, and refining interview performance. The course will also provide students with knowledge of how to transition successfully into the work place and perform well in a professional environment. Students will develop Career Toolkits that will serve as a resource for piloting their career progressions.

Career Development (CRDV)

CRDV 1090 Majors, Internships & Jobs (1 Credit Hour)
Using four phases of career development, students will explore the importance of developing a professional identity and concretely identify avenues to achieve career related goals such as major declaration, securing internships, and preparing for a successful transition from college post-graduation.

Cell & Molecular Biology (CELL)

CELL 1010 Intro to Cell & Molec Biology (3 Credit Hours)
A study of phenomenology and fundamental concepts that apply to all living systems. Major topics include: cell biology, cellular respiration, photosynthesis, physiology, genetics, and development. For biological science majors.

CELL 1030 Heredity and Society (3 Credit Hours)
The nature, scope, and implications of recent accomplishments in genetics, including consideration of human birth defects, hereditary diseases, and the potential of the human species to manipulate its own genes. For non-majors.

CELL 1035 Heredity & Society Lab (1 Credit Hour)
Laboratory and computer exercises to reinforce concepts discussed in CELL 1030. Students will learn basic laboratory skills, including microscopy and molecular biological techniques. For non-majors.

Prerequisite(s): CELL 1030*, 1030, 1030 or 1030.
* May be taken concurrently.

CELL 1040 Forensic Biology (3 Credit Hours)
Lectures, readings, and discussion of the literature in the fields of forensic biology. For non-majors.

CELL 1500 Biology Lecture (3 Credit Hours)
CELL 1505 Biology Lab (1 Credit Hour)
CELL 1890 Service Learning (0-1 Credit Hours)
CELL 1940 Transfer Coursework (3-99 Credit Hours)
CELL 2050 Genetics (3 Credit Hours)
The principles of genetic analysis and the nature of genes. Discussion of DNA, chromosomes, and molecular mechanism of replication, mutation, expression, and transmission of heritable characteristics.

Prerequisite(s): CELL 1010, 1010, 1010 or 1010.

CELL 2115 General Biology Lab (1 Credit Hour)
Laboratory exercises emphasizing concepts in cell, molecular, and developmental biology. Designed for majors in the biological sciences.

Prerequisite(s): (CELL 1010, 1010, 1010 or 1010) and (CHEM 1080, 1080, 1080 or 1080) and (CHEM 1180, 1180, 1180, 1180, 1085, 1085, 1085 or 1085).

CELL 2220 Careers in Cell & Molec Biol (1 Credit Hour)
This course will examine different careers in medicine, the distribution of hours spent in practice each week, and some of the disease processes and treatments seen by physicians. It will be taught from a practical, clinical point of view and is intended to help students identify their areas of interest in medicine or medical research. Does not count toward the requirements for a major or minor in cell and molecular biology.

CELL 2660 Special Topics (0-4 Credit Hours)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department.

CELL 2665 Special Topics Lab (0-4 Credit Hours)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department.

CELL 2710 Intro to Clinical Cancer (3 Credit Hours)
Learn how complex clinical decisions are developed and evaluated. Apply your knowledge of Cell and Molecular Biology in ac clinical laboratory setting to diagnose cancer, develop patient-specific treatment options, evaluate treatment outcomes, predict and counter life-threatening therapeutic resistance. Students will appraise their newly acquired clinical oncology skills by attending the multidisciplinary Tulane Cancer Center tumor board meetings. Prerequisites: CELL 2050 and CELL 2115 or permission from instructor. Does not count toward CMB major.

Prerequisite(s): CELL 2050 and 2115.

CELL 2890 Service Learning (0-1 Credit Hours)
Service learning component to CELL courses. See Schedule of Classes each semester for offerings. 20 or 40 hours of public service with a CPS approved community partner.
**CELL 2940** Transfer Coursework (1-4 Credit Hours)

**CELL 3030** Molecular Biology (3 Credit Hours)
The course is designed to provide basic knowledge of molecular biology. Topics covered include DNA replication, gene structure and regulation, transcription, translation, and protein structure and regulation. Basic laboratory techniques and experimental design in molecular biology are emphasized.

Prerequisite(s): CELL 2050, 2050, 2050 or 2050.

**CELL 3035** Molecular Biology Lab (1 Credit Hour)
Laboratory experience in molecular biology techniques. Students will learn to analyze DNA via gel electrophoresis; isolate, detect, and quantitate RNA and/or protein; and use plasmids to clone and express a gene. Prerequisites: CELL 2115, CELL 3030.

Prerequisite(s): (CELL 3030*, 3030, 3030 or 3030) and (CELL 2115*, 2115, 2115 or 2115).
* May be taken concurrently.

**CELL 3050** Foundations of Pharmacology (3 Credit Hours)
This course explains cellular mechanisms by which drugs act in the body. Specific topics include basic pharmacokinetics, drug receptor interactions, drug tolerance, toxicity and drug interactions. The course integrates biology and chemistry by using examples of drug action on the autonomic and central nervous systems, cardiovascular and endocrine systems as well as the treatment of infections. Concepts from cell biology, anatomy, biochemistry, neurochemistry and physiology are covered.

Prerequisite(s): CELL 1010 and CHEM 2420.

**CELL 3210** Physiology (3 Credit Hours)
This course is a survey of the organ systems of the human body. The cellular and molecular mechanisms of organ function are discussed. Emphasis is placed on clinical implications.

**CELL 3230** Virology (3 Credit Hours)
In the virology lecture course you will learn about the structural and reproductive cycles for the major classes of viruses. You will gain an understanding of the structural and genetic factors involved in the virus-host cell interaction. You will also learn about the techniques used to study viruses. You will be using all this knowledge to identify new viruses, solve case studies, hypothesize how specific features of viruses evolved, and propose experiments to study the virus life cycle.

Prerequisite(s): CELL 2050 or EBIO 2070.

**CELL 3310** Cellular Neuroscience (3 Credit Hours)
In-depth coverage of the basic principles of cellular neuroscience, including the biophysical basis of the membrane potential, action potential generation and propagation, and synaptic signaling. Students will be introduced to the synaptic organization of higher neural systems, such as the visual system and somatic sensory system.

Prerequisite(s): CELL 1010, 1010, 1010 or 1010.

**CELL 3315** Cellular Neuroscience Lab (1 Credit Hour)
This is an interactive lab class giving students hands-on experience working with techniques used in the study of cellular neuroscience. Techniques include: behavioral testing using invertebrates, tissue staining, immunocytochemistry, and intracellular electrophysiological recordings.

Prerequisite(s): CELL 3310, 3310, 3310, 3310, NSCI 3310, 3310, 3310 or 3310.

**CELL 3320** Systems Neuroscience (3 Credit Hours)
The subject of this course is the human nervous system, its anatomy, connectivity and function. Discusses the normal structure of the nervous system and the relationship of that structure to physiological function. The course is taught from a practical, clinical point of view and is intended to prepare students for further study in the neurosciences.

Prerequisite(s): CELL 3310 or NSCI 3310.

**CELL 3325** Neuroanatomy Lab (1 Credit Hour)
The subject of this course is the anatomy of the human nervous system. Students will learn to identify and map the structure and position of nuclei, pathways, and anatomical divisions of the brain and spinal cord. The course is a practical correlate to Systems Neuroscience, and is intended to prepare students for further study in the neurosciences.

Prerequisite(s): CELL 3320*, 3320, 3320, 3320, NSCI 3320*, 3320, 3320 or 3320.
* May be taken concurrently.

**CELL 3400** Regenerative Biology (3 Credit Hours)
This course encompasses the mechanisms of natural regeneration that occurs in both invertebrates and vertebrates and little bit about the application to the development of therapies to restore tissues and organs damaged by injury or disease. This course focuses mainly on the vertebrate regeneration and the primary objective of this course is to introduce students to regeneration mechanism in tissue, cellular and molecular level.

Prerequisite(s): CELL 3750 or 3010.

**CELL 3560** Pathophysiology (3 Credit Hours)
This course focuses on the molecular pathophysiology of infectious disease, immunopathology of the cardiovascular system and skin disorders. The impact of a diseased cardiovascular system will be examined. Concepts from cell biology, anatomy, biochemistry, and physiology are covered.

Prerequisite(s): CELL 3210.

**CELL 3750** Cell Biology (3 Credit Hours)
An examination of the structure and function of eukaryotic cells. Emphasis is placed on mechanisms of intracellular and transmembrane transport, cellular control, and intercellular and intracellular signaling. Experimental methods and applications will be emphasized.

Prerequisite(s): CELL 3030 or 3110.
Prerequisite(s): CELL 3750 or 3030^* and (CELL 3110 or 3030).
^* May be taken concurrently.

CELL 3890 Service Learning: CELL 3750 (0-1 Credit Hours)
Students complete a service activity in the community in conjunction with the content of a three-credit corequisite course.

CELL 3891 Service Learning: CELL 3210 (0-1 Credit Hours)

CELL 3940 Transfer Coursework (1-4 Credit Hours)

CELL 4010 Cellular Biochemistry (3 Credit Hours)
An examination of the structure and function of biological molecules, energetics of biological reactions, enzyme kinetics, metabolism, synthesis of macromolecules, and assembly of structures. Emphasis is placed on mammalian metabolism and mechanisms of control used to regulate metabolic pathways. Detailed explorations into the chemical function of biomolecules lay the foundation for the course.

Prerequisite(s): (CELL 2050, 2050, 2050 or 2050) and (CHEM 2420, 2420, 2420 or 2420) or (CHEM 2460, 2460, 2460 or 2460).

CELL 4110 Human Histology (4 Credit Hours)
Descriptive study of mammalian microscopic anatomy in a physiological context. Lectures and laboratory.

Prerequisite(s): CELL 1010.
Corequisite(s): CELL 4111.

CELL 4111 Human Histology Lab (0 Credit Hours)
Lab section for CELL 4110

Prerequisite(s): CELL 1010.
Corequisite(s): CELL 4110.

CELL 4130 Embryology (3 Credit Hours)
Anatomical study of developmental processes in humans. Lectures and online laboratory.

Prerequisite(s): CELL 3750.

CELL 4160 Developmental Biology (3 Credit Hours)
The origin and development of form and patterns in organisms. Recent investigations and research methodology on the processes of growth and differentiation are stressed.

CELL 4180 Biomedical Research in Animals (3 Credit Hours)
Lectures, readings, presentations, and discussion of the use of animal models in biomedical research. Prerequisites: CELL 3750 or CELL 4010 or approval from instructor

Prerequisite(s): CELL 3750 or 4010.

CELL 4200 General Endocrinology (3 Credit Hours)
This course explains the basics of hormone action and hormone interactions with their receptors, with an emphasis on the molecular mechanisms by which homeostasis is maintained in multicellular organisms. Physiological outcomes of hormone actions on different organs, as well as aberrant hormone action will be covered.

Prerequisite(s): CELL 3030, 3010, 3110 or 3750.

CELL 4220 Microbiology (3 Credit Hours)
Taxonomy, physiology, genetics and ecology of microorganisms. This course will cover the role of microbes in medicine and industry, and as model systems for research.

CELL 4225 Microbiology Laboratory (1 Credit Hour)
Laboratory studies of microbial taxonomy, physiology, biochemistry, and genetics.

Prerequisite(s): CELL 4220, 4220, 4220 or 4220^*.
^* May be taken concurrently.

CELL 4240 Sem In Morbid & Mortality (3 Credit Hours)
This is a seminar course that will focus on recent reports of bacterial or viral diseases in the Morbidity and Mortality Weekly Report^* (MMWR) published by the Centers for Disease Control and Prevention. Students will read selected reports each week that will be analyzed in detail in class.

CELL 4250 Principles In Immunology (3 Credit Hours)
An introduction to the biology of the human immune system with review of relevant literature. Students will learn to critically read scientific articles and analyze experimental data.

Prerequisite(s): CELL 3750 or 3010.

CELL 4260 Princ of Biomed Write Capstone (3 Credit Hours)
An examination of various types of scientific literature, scientific writing and presentation. Exploration of scientific databases such as PubMed. Emphasis on critical reading of scientific literature and writing in a scientific style. Also satisfies writing intensive requirement.

CELL 4340 Neurobiology of Disease (3 Credit Hours)
This is an advanced course which reviews the physiology of the nervous system and the various pathologies that attack the system. The course focuses on the cellular mechanisms of the pathology, what treatments are available, and what the current research literature has to say about the diseases. Emphasis is placed on readings from original clinical and research papers. Pathologies discussed range from motor control and neuromuscular diseases to high cognitive function, autism, and dementia.

CELL 4350 Developmental Neurobiol (3 Credit Hours)
A broad overview of the different stages of neural development. Examination of the molecular aspects of developmental neurobiology, with reference to some important signaling pathways involved in neural growth and specification. Particular attention will be given to those active research fields, such as growth cone guidance and collapse, activity-dependent development, and applications of these to injury and disease.

Prerequisite(s): CELL 3750, 3010, 3030, 3310 or NSCI 3310.

CELL 4370 Molecular Neurobiology (3 Credit Hours)
Introduction to the molecular biology of neurons and neuronal functions. Topics of study will include: the molecular composition of nerve cells, and how this provides a basis for their functional properties; their synaptic connectivity, how they receive, transmit, and retain information at a molecular level. Studies will focus on current research in the field of molecular neurobiology.

Prerequisite(s): CELL 3310, 3320, NSCI 3310 or 3320.
CELL 4440 Adv Molecular Biology (3 Credit Hours)
Current topics in molecular biology with emphasis on higher-order chromatin structure and transcription, mutability, and DNA repair mechanisms in prokaryotes and eukaryotes. Other topics include: nuclear hormone receptors, HOX gene activation in development, RNAi, and genome organization.

Prerequisite(s): CELL 3030, 3030, 3030, 3110, 3110, 3110, 3110, 6030 or 6030.

CELL 4450 Genome Biology (3 Credit Hours)
Genome-level science is changing the pace of biomedical research and medicine. This course will examine how whole genomes, transcriptomes, and proteomes are studied, and what we are learning about the biology of multiple organisms using these novel techniques. Epigenetics, genomics, and proteomics will be covered in the context of disease and the development of novel therapeutics.

Prerequisite(s): CELL 3030 or NSCI 4370.

CELL 4480 Head and Neck Anatomy (3 Credit Hours)
This 3 credit lecture and laboratory course focuses on the gross anatomy of the head and neck, as well as central nervous system anatomy. This includes cadaver dissection of the head, neck, cranial nerves, and brain. This class mirrors dental and medical school anatomy courses and will prepare students to succeed in medical school, dental school, or allied health professions. Prerequisite: CELL 6490/4490. Does not count toward CMB major.

Prerequisite(s): CELL 4490 or 6490.

CELL 4490 Anatomy (4 Credit Hours)
An exploration of the back, upper and lower extremities with an emphasis on bones, muscles, arteries, nerves, and veins in these regions of the human body. Does not count toward CMB major.

Corequisite(s): CELL 4491.

CELL 4491 Anatomy Lab (0 Credit Hours)
Co-requisite lab for CELL 4491 Anatomy. Does not count toward CMB major.

Corequisite(s): CELL 4490.

CELL 4500 Adv Molec Neurobiology (3 Credit Hours)
This course provides detailed description and in-depth discussion of current techniques and experimental topics in the field of molecular neurobiology.

Prerequisite(s): CELL 4370 or NSCI 4370.

CELL 4560 Internship (1-3 Credit Hours)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the CMB Department.

CELL 4570 Internship (1-3 Credit Hours)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the CMB Department.

CELL 4660 Special Topics (0-4 Credit Hours)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department.

Prerequisite(s): CELL 3030 and 3750.

CELL 4665 Special Topics Lab (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department.

CELL 4710 Molec Biology of Cancer (3 Credit Hours)
The complex multistep process which transforms a normal cell into a cancer cell, carcinogenesis, will be examined with emphasis on current molecular insights.

Prerequisite(s): CELL 3750.

CELL 4780 Developmental Genetics (3 Credit Hours)
This course examines the genetic pathways regulating development and the underlying molecular mechanisms by which these pathways are regulated. The goal of the course is to expose students to topics and techniques shaping the field of development biology.

CELL 4880 Writing Intensive: (0-1 Credit Hours)
Course to be attached to regular courses that incorporate a writing component within the regular course. Register within department.

CELL 4890 Service Learning: CELL 4340 (0-1 Credit Hours)
Students complete a service activity in the community in conjunction with the content of a three-credit corequisite course.

Corequisite(s): CELL 4560.

CELL 4910 Independent Study (1-3 Credit Hours)
Laboratory or library research under direction of a faculty member.

CELL 4920 Independent Study (1-3 Credit Hours)
Laboratory or library research under direction of a faculty member.

CELL 4940 Transfer Coursework (1-4 Credit Hours)
Transfer Coursework.

CELL 4990 Honors Thesis (3 Credit Hours)
Honors thesis research, first semester. Register in department.

CELL 5000 Honors Thesis (4 Credit Hours)
Honors thesis research, second semester. Register in department.

CELL 5110 Capstone Component: CELL 4910 (0 Credit Hours)
Corequisite(s): CELL 4910.

CELL 5111 Capstone Component: CELL 4920 (0 Credit Hours)
Corequisite(s): CELL 4920.

CELL 5112 Capstone Component: CELL 4950 (0 Credit Hours)
Corequisite(s): CELL 4930.

CELL 5113 Capstone Component: CELL 4960 (0 Credit Hours)
Corequisite(s): CELL 4960.

CELL 5380 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

CELL 5390 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.
CELL 6000 Biomedical Ethics (3 Credit Hours)
An interdisciplinary course that examines the moral principles that apply to biology and medicine. Ethical principles will be analyzed in relation to such topical issues as informed consent, abortion, death and dying, allocation of scarce resources, personhood, AIDS, risk, human experimentation, and public policy. Case studies and class discussion will complement lectures and video presentations.

CELL 6010 Cellular Biochemistry (3 Credit Hours)
An examination of the structure and function of biological molecules, energetics of biological reactions, enzyme kinetics, metabolism, synthesis of macromolecules, and assembly of structures. Emphasis is placed on mammalian metabolism and mechanisms of control used to regulate metabolic pathways. Detailed explorations into the chemical function of biomolecules lay the foundation for the course. In addition, a term paper or oral presentation is required.

CELL 6030 Molecular Biology (3 Credit Hours)
The course is designed to provide basic knowledge of molecular biology. Topics covered include DNA replication, gene structure and regulation, transcription, translation, and protein structure and regulation. Basic laboratory techniques and experimental design in molecular biology are emphasized.

CELL 6035 Molecular Biology Lab (1 Credit Hour)
Laboratory experience in molecular biology techniques. Students will learn to analyze DNA via gel electrophoresis; isolate, detect, and quantitate RNA and/or protein; and use plasmids to clone and express a gene.

CELL 6040 Trends in Neuroscience (1 Credit Hour)
Students select, analyze, present, and discuss recent empirical articles in the field of Neuroscience.

CELL 6050 Foundations of Pharmacology (3 Credit Hours)
This course explains cellular mechanisms by which drugs act in the body. Specific topics include basic pharmacokinetics, drug receptor interactions, drug tolerance, toxicity and drug interactions. The course integrates biology and chemistry by using examples of drug action on the autonomic and central nervous systems, cardiovascular and endocrine systems as well as the treatment of infections. Concepts from cell biology, anatomy, biochemistry, neurochemistry and physiology are covered.

CELL 6070 Neurobiology of Aging (3 Credit Hours)
This course will survey the current literature in clinical and research journals regarding the Neurobiology of the aging process. Emphasis is placed on the state of research in aging, looking at experimental design issues as well as published results. Connections will be drawn between the research literature and current clinical practice, as well as what the research literature says regarding aging and lifestyle.

CELL 6080 Adv Dev & Cell Biol II (3 Credit Hours)
Lectures, readings, and discussion of the literature in the fields of cellular, developmental, and molecular biology.

CELL 6110 Human Histology (4 Credit Hours)
Descriptive study of mammalian microscopic anatomy in a physiological context. Lectures and laboratory. In addition, a term paper is required.

Corequisite(s): CELL 6111.

CELL 6111 Human Histology Lab (0 Credit Hours)
Lab section for CELL 6110

Corequisite(s): CELL 6110.

CELL 6130 Embryology (0-4 Credit Hours)
Anatomical study of developmental processes in humans. Lecture. In addition, a term paper is required.

Prerequisite(s): CELL 3750.

CELL 6131 Embryology Lab (0 Credit Hours)
Lab section for CELL 6130

CELL 6150 Methods in Neuroscience (3 Credit Hours)
A lecture course exposing students to contemporary theories and techniques used in cellular and behavioral neuroscience by Tulane neuroscientists in their own research programs. The course is taught by faculty members representing several departments from both the uptown and downtown campus and the Health Sciences Center.

CELL 6160 Developmental Biology (3 Credit Hours)
The origin and development of form and patterns in organisms. Recent investigations and research methodology on the processes of growth and differentiation are stressed. In addition, a term paper is required.

CELL 6180 Biomedical Research in Animals (3 Credit Hours)
Lectures, readings, presentations, and discussion of the use of animal models in biomedical research. A term paper is required. Prerequisites: CELL 3750 or CELL 4010 or approval from instructor

CELL 6200 General Endocrinology (3 Credit Hours)
This course explains the basics of hormone action and hormone interactions with their receptors, with an emphasis on the molecular mechanisms by which homeostasis is maintained in multicellular organisms. Physiological outcomes of hormone actions on different organs, as well as aberrant hormone action will be covered.

CELL 6210 Physiology (3 Credit Hours)
This course is a survey of the organ systems of the human body. The cellular and molecular mechanisms of organ function are discussed. Emphasis is placed on clinical implications. Oral presentations are required.

CELL 6220 Microbiology (3 Credit Hours)
Taxonomy, physiology, genetics and ecology of microorganisms. This course will cover the role of microbes in medicine and industry, and as model systems for research. In addition, a term paper is required.

CELL 6225 Microbiology lab (1 Credit Hour)
Laboratory studies of microbial taxonomy, physiology, biochemistry, and genetics.

CELL 6230 Virology (3 Credit Hours)
In the virology lecture course you will learn about the structural and reproductive cycles for the major classes of viruses. You will gain an understanding of the structural and genetic factors involved in the virus-host cell interaction. You will also learn about the techniques used to study viruses. You will be using all this knowledge to identify new viruses, solve case studies, hypothesize how specific features of viruses evolved, and propose experiments to study the virus life cycle. A mock research proposal is required.
CELL 6310 Cellular Neuroscience (3 Credit Hours)
In-depth coverage of the basic principles of cellular neuroscience, including the biophysical basis of the membrane potential, action potential generation and propagation, and synaptic signaling. Students will be introduced to the synaptic organization of higher neural systems, such as the visual system and somatic sensory system. Corequisite: CELL 6360.

CELL 6320 Systems Neuroscience (3 Credit Hours)
The subject of this course is the human nervous system, its anatomy, connectivity, and function. Discusses the normal structure of the nervous system and the relationship of that structure to physiological function. The course is taught from a practical, clinical point of view and is intended to prepare students for further study in the neurosciences. In addition, a term paper is required.

Prerequisite(s): CELL 3310, NSCI 3310, CELL 6310 or NSCI 6310.

CELL 6325 Neuroanatomy Lab (1 Credit Hour)
The subject of this course is the anatomy of the human nervous system. Students will learn to identify and map the structure and position of nuclei, pathways, and anatomical divisions of the brain and spinal cord. The course is a practical correlate to Systems Neuroscience, and is intended to prepare students for further study in the neurosciences.

Prerequisite(s): CELL 3320, 3320, 3320, NSCI 3320, 3320 or 3320.

CELL 6340 Neurobiology of Disease (3 Credit Hours)
Advanced course on the higher neural functions of the nervous system and neurological diseases resulting from disruption of these functions. An emphasis is placed on the physiology of the nervous system and neural dysfunction caused by inherited and acquired diseases. Topics range from motor control and neuromuscular diseases to high cognitive function and dementia. In addition, a term paper is required.

Prerequisite(s): CELL 3320, 3320, 3320, 3320, NSCI 3320, 3320 or 3320.

May be taken concurrently.

CELL 6350 Developmental Neurobiology (3 Credit Hours)
A broad overview of the different stages of neural development. Examination of the molecular aspects of developmental neurobiology, with reference to some important signaling pathways involved in neural growth and specification. Particular attention will be given to those active research fields, such as growth cone guidance and collapse, activity-dependent development, and applications of these to injury and disease. In addition, a term paper is required.

CELL 6360 Topics in Cellular Neuroscience (0 Credit Hours)
Journal club course intended as a supplement to Cellular Neuroscience in order to receive graduate credit for Cellular Neuroscience. Meets once a week for one hour. Students prepare and give oral presentations of topical papers from literature. Grade received contributes to final grade in Cellular Neuroscience.

CELL 6370 Molecular Neurobiology (3 Credit Hours)
Introduction to the molecular biology of neurons and neuronal functions. Topics of study will include: the molecular composition of nerve cells, and how this provides a basis for their functional properties; their synaptic connectivity; how they receive, transmit, and retain information at a molecular level. Studies will focus on current research in the field of molecular neurobiology. In addition, a term paper is required.

CELL 6400 Regenerative Biology (3 Credit Hours)
This course encompasses the mechanisms of natural regeneration that occurs in both invertebrates an vertebrates and a little bit about the application to the development of therapies to restore tissues and organs damaged by injury or disease. This course focuses mainly on the vertebrate regeneration and the primary objective of this course is to introduce students to regeneration mechanism in tissue, cellular and molecular level. In additions, either a term paper or additional oral presentations are required.

CELL 6440 Adv Molecular Biology (3 Credit Hours)
Current topics in molecular biology with emphasis on higher-order chromatin structure and transcription, mutability, and DNA repair mechanisms in prokaryotes and eukaryotes. Other topics include: nuclear hormone receptors, HOX gene activation in development, RNAi, and genome organization. In addition, a term paper is required.

CELL 6450 Genome Biology (3 Credit Hours)
Genome-level science is changing the pace of biomedical research and medicine. This course will examine how whole genomes, transcriptomes, and proteomes are studied, and what we are learning about the biology of multiple organisms using these novel techniques. Epigenetics, genomics, and proteomics will be covered in the context of disease and the development of novel therapeutics.

Prerequisite(s): CELL 3030 or NSCI 4370.

CELL 6480 Head and Neck Anatomy (3 Credit Hours)
This 3 credit lecture and laboratory course focuses on the gross anatomy of the head and neck, as well as central nervous system anatomy. This includes cadaver dissection of the head, neck, cranial nerves, and brain. This class mirrors dental and medical school anatomy courses and will prepare students to succeed in medical school, dental school, or allied health professions. Prerequisite: CELL 6490/4490

Prerequisite(s): CELL 6490.

CELL 6490 Anatomy (0-4 Credit Hours)
An exploration of the back, upper and lower extremities with an emphasis on bones, muscles, arteries, nerves, and veins in these regions of the human body.

Corequisite(s): CELL 6491.

CELL 6491 Anatomy Lab (0 Credit Hours)
Co-requisite lab for CELL 6491 Anatomy

Corequisite(s): CELL 6490.

CELL 6500 Adv Molec Neurobiology (3 Credit Hours)
This course provides detailed description and in-depth discussion of current techniques and experimental topics in the field of molecular neurobiology. A term paper is required.

CELL 6550 Syn Org of the Brain (3 Credit Hours)
To discuss and understand functional connections within and between areas of the brain to lead to a greater understanding of brain function and behavior.
CELL 6560 Pathophysiology (3 Credit Hours)
This course focuses on the molecular pathophysiology of infectious disease, immunopathology of the cardiovascular system and skin disorders. The impact of a diseased cardiovascular system will be examined. Concepts from cell biology, anatomy, biochemistry, and physiology are covered. Oral presentations are required.

CELL 6660 Special Topics (0-4 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult department.

CELL 6665 Special Topics Lab (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department.

CELL 6710 Molec Biology of Cancer (3 Credit Hours)
The complex multistep process which transforms a normal cell into a cancer cell, carcinogenesis, will be examined with emphasis on current molecular insights. In addition, a term paper is required.

CELL 6750 Cell Biology (3 Credit Hours)
An examination of the structure and function of eukaryotic cells. Emphasis is placed on mechanisms of intracellular and transmembrane transport, cellular control, and intercellular and intracellular signaling. Experimental methods and applications will be emphasized. A term paper is required as part of this course.

CELL 6755 Cell Biology Lab (1 Credit Hour)
Laboratory experience in in vitro methodologies. Students will learn to maintain and manipulate mammalian cell cultures.

CELL 6840 Current Topics Dev Biol (2 Credit Hours)
Reports and discussions of current literature on developmental processes.

CELL 6940 Transfer Coursework (1-4 Credit Hours)

CELL 7110 Research Rotations (1-3 Credit Hours)
Individual research supervised by faculty.

CELL 7120 Research Rotations (1-3 Credit Hours)
Individual research supervised by faculty.

CELL 7130 Research (2-10 Credit Hours)
Individual research supervised by faculty.

CELL 7260 Graduate Communications (3 Credit Hours)
In today’s competitive science market place, effective communication can be the deciding factor in obtaining postdoctoral fellowships, faculty positions or alternative career options, as well as in getting grants funded and manuscripts published. Deliberate practice of these skills is therefore critical for graduate level science trainees. This course will involve extensive discussion and practice of oral and written communication. By the end of the semester, students will have prepared a draft of their proposals required for qualifying exams and will receive input on the clarity, rigor, format, grammar, and writing style of this document. This course is open to Ph.D. students only, and is recommended to students in their 4th semester of graduate study.

CELL 7450 Genome Biology (3 Credit Hours)
Genome-level science is changing the pace of biomedical research and medicine. This course will examine how whole genomes, transcriptomes, and proteomes are studied, and what we are learning about the biology of multiple organisms using these novel techniques. Epigenetics, genomics, and proteomics will be covered in the context of disease and the development of novel therapeutics.

CELL 7860 Master's Seminar (3 Credit Hours)

CELL 7870 Doctoral Seminar (1 Credit Hour)

CELL 7940 Transfer Credit-Grad (1-12 Credit Hours)

CELL 7990 Research (1-9 Credit Hours)
Individual research supervised by faculty.

CELL 8000 Research (3 Credit Hours)
Individual research supervised by faculty.

CELL 9990 Dissertation Research (3 Credit Hours)
Research toward completion of a doctoral degree.

Chemical Engineering (CENG)

CENG 1100 Innovations in Chem Eng w/ Lab (3 Credit Hours)
This course will introduce students to the basic concepts and calculations in the field of chemical engineering. In addition to lectures, students will gain hands-on experience utilizing modern techniques and exposure to real-world applications through labs and activities. This course is limited to high school students.

CENG 1940 Transfer Coursework (0 Credit Hours)

CENG 2110 Matl & Energy Balances (3 Credit Hours)
Basic concepts in mass and energy balances are presented in this introduction to chemical process engineering. Properties of pure materials and relevant equations of state are reviewed in illustrative examples.

Prerequisite(s): (CHEM 1080, 1080, 1080 or 1080) and (MATH 1220, 1220, 1220, 1220, 1310, 1310, 1310, 1310 or 1310).

CENG 2120 Thermodynamics I (3 Credit Hours)
Concepts of energy, equilibrium, and reversibility are presented in the setting of the theoretical development of classical thermodynamics. Energy conversion cycles and elementary fluid mechanics are used to illustrate applied thermodynamics in chemical process technology.

Prerequisite(s): (MATH 2210*, 2210, 2210 or 2210) and (CHEM 1080*, 1080, 1080 or 1080 or MATH 1080) and (PHYS 1310, 1310, 1310 or 1310). * May be taken concurrently.

CENG 2230 Prof Dev for Chem Engr (3 Credit Hours)
This course is designed for students who wish to enhance the soft skills necessary for life-long success as a professional engineer. Topics include effective written and oral communication, resume building, networking, employment search strategies, the interview process, teamwork and critical thinking. Learning will be reinforced through practical activities including a mock interview, a staged networking event and oral presentations with class discussion and feedback.
CENG 2320 Transport Phenomena I (3 Credit Hours)
Principles of hydrostatics and fluid mechanics. Emphasis is on mass, energy and momentum balances. Fluid flow through pipes and other types of chemical engineering equipment are considered in detail. The fundamental operations of vector analysis and the development of basic differential equations that govern fluid flow are used to solve representative problems in which viscosity is important.

Prerequisite(s): CENG 2110 and (MATH 2210*, 2210, 2210, 2210 or 2210).
* May be taken concurrently.
Corequisite(s): CENG 2120.

CENG 2500 Intro To Biotechnology (3 Credit Hours)
This course begins with an introduction to physical and biological properties of cells through cell and molecular biology teachings, and then expands with the application of these principles to the realm of biotechnology. Theory and practice of specific laboratory techniques will be covered and demonstrated, and typical data sets will be interpreted. Applications of biotechnology in the business and medical communities will be discussed.

Prerequisite(s): CENG 2500.

CENG 2505 Intro Biotech Lab (1 Credit Hour)
This course is designed to introduce students to essential laboratory skills and modern techniques utilized in the field of biotechnology. These include aseptic technique, microbial and mammalian cell culturing, flow cytometry, and engineering and analysis of genes in E. coli. Laboratory notebook maintenance, executing protocols, analyzing data and teamwork are emphasized. This course is intended for students without any prior research experience.

Corequisite(s): CENG 2500.

CENG 2780 Special Topics (1-3 Credit Hours)
Prerequisite(s): CHEM 1070, 1070, 1070 or 1070.

CENG 2890 Service Learning (0-1 Credit Hours)
Service learning component to CENG courses. See Schedule of Classes each semester for offerings. 20 or 40 hours of public service with a CPS approved community partner.

CENG 2940 Transfer Coursework (0 Credit Hours)

CENG 3020 Chem & Eng Sci in Community (1 Credit Hour)
This course satisfies the university’s public-service requirement. Topics include public outreach, application of engineering principles to community issues, and educating the community on scientific and engineering issues.

CENG 3110 Thermodynamics II (3 Credit Hours)

Prerequisite(s): CENG 2120.

CENG 3120 Materials Science & Engr (3 Credit Hours)
The structure and properties of engineering materials are considered. Coverage includes basic atomic and microscopic structure, testing methods, phase relationships, and strengthening techniques. Emphasis is placed on common industrial materials. Thermodynamics and kinetics aspects of material science are discussed.

Prerequisite(s): CHEM 1080 and PHYS 1320 and (MATH 2210*, 2210, 2210 or 2210).
* May be taken concurrently.

CENG 3230 Numerical Methods for Chemical Engineering (3 Credit Hours)
Numerical solution of linear and nonlinear algebraic equations, and ordinary and partial differential equations. Numerical differentiation and integration. Linear and nonlinear regression analysis. Optimization methods. Applications to chemical and biomolecular engineering design-oriented problems. Excel spreadsheets are used for all computations. An introduction to Visual Basic for Applications programming is included. All applications and homework problems are related to Chemical and Biomolecular Engineering. A brief introduction to MatLab is included.

Prerequisite(s): MATH 2240, 2240, 2240 or 2240.

CENG 3340 Unit Operations Lab (4 Credit Hours)
Bench scale laboratory experiments in Unit Operations. Report writing, safety, oral presentations, ethics and group activities are emphasized.

Prerequisite(s): CENG 3110 and 3390.

CENG 3390 Separation Processes (3 Credit Hours)
The analysis and design of mass-transfer based separation processes. Fundamental concepts are derived and applied to representative industrial process configurations. Subject area coverage includes the fundamentals of mass transfer, as well as the design of countercurrent operations such as gas-liquid absorption, distillation, liquid-liquid extraction and leaching.

Prerequisite(s): CENG 3390.

CENG 3390 Separation Processes II (3 Credit Hours)
The analysis of problems in conductive, convective, and radiative heat transfer. The formulation and solution of heat and mass transfer problems by means of shell balances. Exact and numerical solutions to heat and mass transfer problems. Correlations for convective heat transfer. Analogies between heat and mass transfer. The application of basic principles of heat/mass transfer to heat exchange, evaporation, condensation, boiling and drying operations.

Prerequisite(s): CENG 2320 and (MATH 2240*, 2240, 2240 or 2240).
* May be taken concurrently.

CENG 3420 Transport in Cells & Organs (3 Credit Hours)
Fundamental principles of fluid mechanics and mass transport will be applied to biological systems at the cellular, tissue, and organ levels. The topics of this course will be the cardiovascular and respiratory systems, transmembrane and transvascular transport, cell adhesion and intracellular transport, drug transport and pharmacokinetics, and transport-related diseases (atherosclerosis, sickle cell disease, embolism, cancer metastasis).

CENG 3890 Service Learning: CENG 3020 (0-1 Credit Hours)

CENG 3940 Transfer Coursework (1-4 Credit Hours)
Transfer Coursework.
CENG 4130 Surf. & Colloid Phenomenon (3 Credit Hours)
A study of surface and colloid chemistry. Topics include characterization of particles and surfaces, stability of colloidal systems, interactions of charged particles, and electrokinetic phenomena.

Prerequisite(s): CHEM 1080 and PHYS 1320.

CENG 4150 Reactor Design (3 Credit Hours)
The design and analysis of chemical, biological, and polymerization reactor systems are achieved by application of the principles of chemical kinetics and equilibrium coupled with mass and energy transport. Specific areas of study include kinetics, ideal reactors, multiple reactor systems, nonideal flow and mixing, and catalysis.

Prerequisite(s): (MATH 2240, 2240, 2240 or 2240) and CENG 2120.

CENG 4160 Heterogeneous Catalysis (3 Credit Hours)
A study of the fundamental concepts underlying catalytic processes in the petroleum processing industry and in synthetic fuels research. Topics include molecular theories of adsorption and catalysis, catalyst design and formulation, instrumental methods of catalyst characterization, transport in catalysts, shape-selective catalysis, etc. Applications discussed include catalytic cracking, reforming, hydrodesulfurization, Fischer-Tropsch synthesis, direct and indirect coal liquefaction, etc.

CENG 4310 Chemical Process Design (3 Credit Hours)
The elements of industrial design and supporting economics are presented in the context of a representative design project. Extension of the student’s early background in unit operations through practical design considerations including materials of construction is accomplished. Methods are presented for capital and operating cost estimation, raw materials and utilities pricing, and assembly of investment costs, taxes, environmental and other site requirements. Realistic design constraints are included; e.g., economic factors, safety, reliability aesthetics, ethics, and social impact.

Prerequisite(s): CENG 4150.

CENG 4400 Intro. To Gene Therapy (3 Credit Hours)
A survey into the fundamental aspects of gene delivery and their application to gene therapy. Topics include various gene carriers, carrier/DNA interaction and complex formation, complex interactions with cells and cell structures, targeting, gene therapy applications, host response. A knowledge of cell and molecular biology is not required.

Prerequisite(s): CENG 4150.

CENG 4420 Survey Contemporary Poly Rsh (3 Credit Hours)

CENG 4450 Applied Biochemistry I (3 Credit Hours)
Biochemistry is the study of the chemistry and chemical processes involved with the molecules that are utilized by living organisms. This two-semester series will provide an in-depth coverage of carbon- and nitrogen-containing molecules such as proteins and DNA and certain cofactors. In the first semester enzyme kinetics and catalysis will be covered, along with carbohydrates and their metabolism. The metabolic pathways and associated bioenergetics of glycolysis and the TCA cycle will be examined in detail. The material will be related to everyday life, diet, nutrition, and exercise performance.

Prerequisite(s): CHEM 2420.

CENG 4460 Applied Biochemistry II (3 Credit Hours)
This course is a continuation of CENG 4450 (please refer to the related course description). Principles taught in CENG 4450 will be extended as they are applied to lipids and nitrogen-containing molecules, and the metabolism of each. Example molecules include fats, triglycerides, DNA, amino acids, heme, and urea. The interplay of biochemistry and molecular biology will also be examined.

Prerequisite(s): CENG 4450.

CENG 4500 Chemical Process Control (3 Credit Hours)
An introduction to linear control theory is presented in which processes are described mathematically through transfer functions and conventional three-mode controllers are specified. Other topics are introduced including inverse response, cascade control, feedforward control, dead-time compensation, and multivariable control. Automatic control systems are designed for a number of actual non-linear processes described by computer software.

Prerequisite(s): (MATH 2240, 2240, 2240 or 240) and CENG 4310 and 4150.

CENG 4710 Biochemical Engineering (3 Credit Hours)
An advanced course in biochemical engineering. Topics include enzyme catalyzed and cell-associated reactions, engineering aspects of recombinant DNA technology, cell culture, bioreactors and tissue engineering.

CENG 4750 Practice School (6 Credit Hours)
Students are placed in groups of three or four and are assigned to a project at a local industrial facility, hospital, or government agency. The project is one of current concern to the organization and may range from a study of an operating process to the development of a new process. The projects are open ended and the students are expected to apply the principles of good design practice involving realistic constraints such as economics, safety, reliability, aesthetics, ethics, and social impact. Students normally are assigned to a project which fulfills certain career goals. This internship, under the direction of a faculty member, utilizes engineers and other personnel at the host site. Students are required to submit interim and final written and oral reports.

Prerequisite(s): CENG 3240, 3340 and 4150*.

* May be taken concurrently.

CENG 4770 Advances In Biotechnolog (3 Credit Hours)
The objectives of the course are to enhance understanding of the basic principles of biotechnology and to introduce the most current biotechnology research. Topics include gene therapy, microbial pesticides, genetically engineered food, stem-cell technology and tissue engineering.

CENG 4780 Special Topics (3 Credit Hours)

CENG 4781 Special Topics (3 Credit Hours)

CENG 4810 Independent Study (2-4 Credit Hours)
Under special circumstances, course credit is granted to students undertaking independent research studies. A project adviser should be identified and permission for enrollment filed with the department chair prior to registration.
Tulane GPA.
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

CENG 4870  Biomolecular & Cellular Engr (3 Credit Hours)
Introduction to genetic and environmental manipulation of cells for production of proteins and other bioproducts. Topics include biomolecular interactions (protein energetics, binding equilibria, association kinetics), protein aggregation, cloning and gene expression in different host systems, posttranslational processing, and protein engineering. Will include case studies ± class discussions of primary literature

Prerequisite(s): CENG 2500, 2500, 2500, 2500, 4450 or GBCH 6010.

CENG 4890  Polymer Engr & Science (3 Credit Hours)
Fundamentals of polymer science and engineering, including synthesis, characterization, properties and processing of polymeric materials. An overview of polymer structure, including classification, tacticity, conformation and configuration will be given. Synthetic techniques will be reviewed, including addition and condensation polymerization and copolymerization. Polymer thermodynamics will be described, including an introduction to Flory-Huggins theory, as well as polymer-polymer miscibility and blends. A brief overview of characterization will be given, including molecular weight and glass transition temperature determination. Properties will be discussed, including mechanical properties of semi-crystalline polymers and elastomers. The temperature superposition principle will be described, as well as a brief introduction to processing techniques.

CENG 4891  Service Learning: CENG 4750 (0-1 Credit Hours)

CENG 4910  Independent Study (1-3 Credit Hours)
Under special circumstances, course credit is granted to students undertaking independent research studies. A project adviser should be identified and permission for enrollment filed with the department chair prior to registration.

CENG 4920  Independent Study (1-4 Credit Hours)
Under special circumstances, course credit is granted to students undertaking independent research studies. A project adviser should be identified and permission for enrollment filed with the department chair prior to registration.

CENG 4930  Independent Studies (1-3 Credit Hours)

CENG 4940  Transfer Coursework (3 Credit Hours)

CENG 4990  Honors Thesis (3 Credit Hours)
Honors thesis research, first semester. Register in department.

CENG 5000  Honors Thesis (4 Credit Hours)
Honors thesis research, second semester. Register in department.

CENG 5380  Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

CENG 5390  Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

CENG 6000  Chemical Eng. Seminar (0 Credit Hours)
Students are exposed to the important research findings, presented by invited speakers as well as by professors and advanced PhD candidates of our own department.

CENG 6010  Math Meth For Engineers (3 Credit Hours)

CENG 6130  Surf. & Colloid Phenomen (3 Credit Hours)
A study of surface and colloid chemistry. Topics include characterization of particles and surfaces, stability of colloidal systems, interactions of charged particles, and electrokinetic phenomena.

CENG 6150  Reactor Design (3 Credit Hours)
The design and analysis of chemical, biological, and polymerization reactor systems are achieved by application of the principles of chemical kinetics and equilibrium coupled with mass and energy transport. Specific areas of study include kinetics, ideal reactor systems, interactions of charged particles, and electrokinetic phenomena.

CENG 6160  Heterogeneous Catalysis (3,4 Credit Hours)
A study of the fundamental concepts underlying catalytic processes in the petroleum processing industry and in synthetic fuels research. Topics include molecular theories of adsorption and catalysis, catalyst design and formulation, instrumental methods of catalyst characterization, transport in catalysts, shape-selective catalysis, etc. Applications discussed include catalytic cracking, reforming, hydrodesulfurization, Fischer-Tropsch synthesis, direct and indirect coal liquefaction, etc.

CENG 6210  Molec Biophysics & Polymer Phy (3 Credit Hours)
An introduction to the physics of polymers and the physical bases underlying the biofunctionality of macromolecules in living systems. Themes of molecular self-organization, conformation, complementarity, and information content are emphasized and related

CENG 6390  Transport Phenomena II (3 Credit Hours)
The analysis of problems in conductive, convective, and radiative heat transfer. The formulation and solution of heat and mass transfer problems by means of shell balances. Exact and numerical solutions to heat and mass transfer problems. Correlations for

CENG 6400  Intro. To Gene Therapy (3 Credit Hours)
A survey into the fundamental aspects of gene delivery and their application to gene therapy. Topics include various gene carriers, carrier/DNA interaction and complex formation, complex interactions with cells and cell structures, targeting, gene therapy applications, host response. A knowledge of cell and molecular biology is not required.

CENG 6420  Survey Contemp Polymers Rsh (3 Credit Hours)
Fundamentals of condensed matter are elaborated upon, namely bonding, structure, physical properties, phase equilibria and thermodynamics of solids. Characterization of condensed phases as it reviewed. Manipulation of material properties for specific applications is discussed.
CENG 6450  Applied Biochemistry I (3 Credit Hours)
Biochemistry is the study of the chemistry and chemical processes involved with the molecules that are utilized by living organisms. This two-semester series will provide an in-depth coverage of carbon- and nitrogen-containing molecules such as proteins and DNA and certain cofactors. In the first semester enzyme kinetics and catalysis will be covered, along with carbohydrates and their metabolism. The metabolic pathways and associated bioenergetics of glycolysis and the TCA cycle will be examined in detail. The material will be related to everyday life, diet, nutrition, and exercise performance.

CENG 6460  Applied Biochemistry II (3 Credit Hours)
This course is a continuation of CENG 6450 (please refer to the related course description). Principles taught in CENG 6450 will be extended as they are applied to lipids and nitrogen-containing molecules, and the metabolism of each. Example molecules include fats, triglycerides, DNA, amino acids, heme, and urea. The interplay of biochemistry and molecular biology will also be examined.

CENG 6710  Biochemical Engineering (3 Credit Hours)
An advanced course in biochemical engineering. Topics include enzyme catalyzed and cell-associated reactions, engineering aspects of recombinant DNA technology, cell culture, bioreactors and tissue engineering.

CENG 6770  Advances in Biotechnology (3 Credit Hours)
The objectives of the course are to enhance understanding of the basic principles of biotechnology and to introduce the most current biotechnology research. Topics include gene therapy, microbial pesticides, genetically engineered food, stem-cell technology and tissue engineering.

CENG 6780  Special Topics (3 Credit Hours)
CENG 6781  Special Topics (3 Credit Hours)
CENG 6800  Special Topics (1-3 Credit Hours)
CENG 6860  Readings and Research (2-4 Credit Hours)
CENG 6870  Biomolecular & Cellular Engr (3 Credit Hours)
Introduction to genetic and environmental manipulation of cells for production of proteins and other bioproducts. Topics include biomolecular interactions (protein energetics, binding equilibria, association kinetics), protein aggregation, cloning and gene expression in different host systems, posttranslational processing, and protein engineering. Will include case studies and class discussions of primary literature

Prerequisite(s): CENG 2500.

CENG 6890  Polymer Engr & Science (3 Credit Hours)
Fundamentals of polymer science and engineering, including synthesis, characterization, properties and processing of polymeric materials. An overview of polymer structure, including classification, tacticity, conformation and configuration will be given. Synthetic techniques will be reviewed, including addition and condensation polymerization and copolymerization. Polymer thermodynamics will be described, including an introduction to Flory-Huggins theory, as well as polymer-polymer miscibility and blends. A brief overview of characterization will be given, including molecular weight and glass transition temperature determination. Properties will be discussed, including mechanical properties of semi-crystalline polymers and elastomers. The time-temperature superposition principle will be described, as well as a brief introduction to processing techniques.

CENG 6940  Transfer Coursework (1-3 Credit Hours)
CENG 7010  Graduate Mentoring Seminar I (1 Credit Hour)
The graduate mentoring seminar will provide students an opportunity to improve their communication skills, develop a basic appreciation of the science of learning, and engage with faculty on a variety of professional development topics. Class Hours: (Lecture 1)

CENG 7020  Graduate Mentoring Seminar II (1 Credit Hour)
The graduate mentoring seminar will provide students an opportunity to improve their presentation skills, provide basics in lab safety, and engage with faculty on a variety of professional development topics. Class Hours: (Lecture 1)

CENG 7110  Modern Thermodynamics (3 Credit Hours)
CENG 7120  Thermo of Macromolecules (3 Credit Hours)
Thermodynamics is applied to macromolecules. Fundamentals of the thermodynamics of polymers in solution and in the melt. Topics of polymer self-assembly, polymer-surfactant interactions, and polymer nanocomposites are incorporated in the course. Students will learn methods of characterization of polymer thermodynamics using spectroscopy, microscopy and scattering techniques.

CENG 7150  Advanced Reactor Design (3 Credit Hours)
Coupled reaction and transport phenomena as they are involved in major reactor configurations are studied with attention to data resources and computational capabilities.

CENG 7320  Advanced Transport Phenomena (3 Credit Hours)
CENG 7520  Applied Statistical Mech (3 Credit Hours)
The course covers the fundamental principles and methods of statistical mechanics. Emphasis is placed on applications to thermodynamics, phase behavior, polymer science and self-assembly phenomena.

CENG 7780  Special Topics (3 Credit Hours)
CENG 7810  Adv Independent Research (1-9 Credit Hours)
Research studies performed under faculty tutelage by prior arrangement.

CENG 7820  Adv Independent Research (1-9 Credit Hours)
Research studies performed under faculty tutelage by prior arrangement.
CHEM 2310 Preparatory Chemistry (3 Credit Hours)
An introduction to chemical principles. Stoichiometry, thermochemistry, states of matter, periodic relationships, atomic structure and bonding. Three hours of lecture per week. Concurrent registration in 2330 required. Offered by arrangement.

CHEM 2315 Quantitative Analysis Lab (1 Credit Hour)
Laboratory to accompany 2310. Practice of gravimetric, volumetric and selected instrumental methods of analysis. Two four-hour laboratory periods per week. Concurrent registration in 2310 required. Offered by arrangement.

CHEM 2400 General Chemistry I (3 Credit Hours)
An introduction to chemical principles. Stoichiometry, thermochemistry, states of matter, periodic relationships, atomic structure and bonding. Three hours of lecture per week. Concurrent registration in 2330 required. Offered by arrangement.

CHEM 2410 Organic Chemistry I (3 Credit Hours)
An introduction to organic reaction mechanism and organic spectroscopy. Three hours of lecture per week. Concurrent registration in 2415 required.

Prerequisite(s): (CHEM 1080, 1080, 1080 or 1080) and CHEM 1085 or (CHEM 1085, 1085, 1085, 1180, 1180, 1180 or 1180).
Corequisite(s): CHEM 2415.

CHEM 2415 Organic Chemistry Lab I (1 Credit Hour)
Laboratory to accompany 2410. Laboratory techniques in organic chemistry. Synthesis of organic compounds. One four-hour laboratory period per week. Concurrent registration in 2410 required.

Prerequisite(s): (CHEM 1080, 1080, 1080 or 1080) and (CHEM 1085, 1085, 1085, 1180, 1180 or 1180).
Corequisite(s): CHEM 2410.

CHEM 2420 Organic Chemistry II (3 Credit Hours)
A continuation of 2410 with emphasis on mechanisms of organic reactions based on functional group reactivity. Three hours of lecture per week. Concurrent registration in 2440 required.

Prerequisite(s): (CHEM 2410, 2410, 2410 or 2410) and (CHEM 2430, 2430, 2430 or 2430) or CHEM 2415, 2415, 2415 or 2415.
Corequisite(s): CHEM 2425.

CHEM 2425 Organic Chemistry Lab II (1 Credit Hour)
Laboratory to accompany 2420. A continuation of 2415. Includes identification of unknown organic compounds. One four-hour laboratory period per week. Concurrent registration in 2420 required. Credit will not be given for both 22425 and H2480.

Prerequisite(s): CHEM 2415, 2415, 2415, 2415, 2430, 2430, 2430 or 2430.
Corequisite(s): CHEM 2420.

CHEM 2480 Chemistry of Energy (3 Credit Hours)
