All of the energy flows, conversions, and transformations that occur in our environment directly or indirectly involve chemistry. This course will examine the chemistry associated with natural as well as human caused energy changes. The material will be presented at an introductory level. The only prerequisite is the first semester general chemistry (CHEM 1070). The course is designed for students with a serious interest in environmental issues. It will begin with the basic physics definitions of the different forms of energy and the conversions between forms. Next, the natural energy flows and transformations that occur in our environment will be examined with a particular emphasis on energy changes in chemical reactions. All living systems (including humans) depend on chemical energy. Finally, the human use of energy in the modern world will be explored.
CHEM 2500 Environmental Chemistry (3 Credit Hours)
An overview of the many aspects of environmental chemistry. Topics include: aquatic chemistry, including water pollution and water treatment; atmospheric chemistry, air pollution and major threats to the global atmosphere; geochemistry and soil chemistry; nature, sources, and environmental chemistry of hazardous wastes; and toxicology chemistry.

Prerequisite(s): (CHEM 1070, 1070, 1070 or 1070) and (CHEM 1080, 1080, 1080 or 1080).

CHEM 2890 Service Learning (0-1 Credit Hours)
Service learning component to CHEM courses. See Schedule of Classes each semester for offerings. 20 or 40 hours of public service with a CPS approved community partner.

CHEM 2940 Transfer Coursework (3 Credit Hours)
CHEM 3110 Physical Chemistry I (3 Credit Hours)
Elementary quantum mechanics, quantum theory of molecular structure and bonding, fundamentals of spectroscopy. Three hours of lecture per week.

Prerequisite(s): (CHEM 1080, 1080, 1080 or 1080) and (CHEM 1085, 1085, 1085, 1180, 1180 or 1180) and (MATH 2240, 2240, 2240 or 2240).

Corequisite(s): CHEM 3115.

CHEM 3115 Physical Chemistry Lab I (1 Credit Hour)
Laboratory to accompany 3110. Experiments in spectroscopy and spectroscopic analysis. One four-hour laboratory period per week. Concurrent registration in 3110 required.

Prerequisite(s): (CHEM 1080, 1080, 1080 or 1080) and (CHEM 1085, 1085, 1085, 1180, 1180 or 1180) and (MATH 2240, 2240, 2240 or 2240).

Corequisite(s): CHEM 3110.

CHEM 3120 Physical Chemistry II (3 Credit Hours)
First, Second, and Third laws of thermodynamics, thermodynamic energy state functions, phases of pure substances, properties of mixtures, chemical equilibrium, equilibrium electrochemistry, statistical thermodynamics. Three hours of lecture per week.

Prerequisite(s): (CHEM 1080, 1080, 1080 or 1080) or (CHEM 1085, 1085, 1085, 1180, 1180 or 1180) and (MATH 2210, 2210, 2210 or 2210).

Corequisite(s): CHEM 3125.

CHEM 3125 Physical Chemistry Lab II (1 Credit Hour)
Laboratory to accompany CHEM 3120. Experiments illustrate thermodynamic and statistical mechanical principles. One four-hour laboratory period per week. Concurrent registration in CHEM 3120 required.

Prerequisite(s): CHEM 1085 or 1180.

CHEM 3210 Inorganic Chemistry (3 Credit Hours)
Periodic relationships, types of bonding, coordination complexes, acid-base concepts, inorganic reaction mechanisms. Three hours of lecture per week. Concurrent registration in 3230 required.

Prerequisite(s): CHEM 3110 and 3115.

Corequisite(s): CHEM 3215.

CHEM 3215 Inorganic Chemistry Lab (1 Credit Hour)
Laboratory to accompany 3210. Synthetic methods in inorganic and organometallic chemistry. Use of instrumental methods in organic chemistry. One four hour laboratory period per week. Concurrent registration in 3210 required.

Prerequisite(s): CHEM 3110 and 3115.

Corequisite(s): CHEM 3210.

CHEM 3310 Instrumental Analysis (3 Credit Hours)
Introduction to modern methods of instrumental analysis including separation techniques and spectroscopic and electrochemical methods. Three hours of lecture per week. Concurrent registration in 3330 required. Offered in alternate years.

Prerequisite(s): CHEM 2410.

CHEM 3315 Instrumental Analysis Lab (1 Credit Hour)
Laboratory to accompany 3310. Practice of separation techniques and spectroscopic and electrochemical methods of analysis. Two four-hour laboratory periods per week. Concurrent registration in 3310 required. Offered in alternate years.

Corequisite(s): CHEM 3310.

CHEM 3660 Special Topics (1-3 Credit Hours)
Special topics in Chemistry.

CHEM 3665 Special Topics Lab (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department.

CHEM 3830 Intro To Biochemistry (3 Credit Hours)
Properties of biological compounds. Bioenergetics, basic metabolic pathways, general biochemical mechanisms. Offered jointly with the cell and molecular biology department.

CHEM 3835 Intro to Biochem Lab (2 Credit Hours)
Eight hours of laboratory per week. Offered in the Fall semester.

CHEM 3840 Intermediate Biochem (3 Credit Hours)
Intermediary metabolism with emphasis on the integration of lipid, saccharide, and amino acid metabolism. Electron transport and oxidative phosphorylation. Photosynthesis. Purine and pyrimidine metabolism. Offered jointly with the cell and molecular biology department.

Prerequisite(s): CHEM 3830.

CHEM 3890 Service Learning: CHEM 3915 (0-1 Credit Hours)
CHEM 3915 Special Topics in Chemistry (1-3 Credit Hours)
CHEM 3940 Transfer Coursework (1-4 Credit Hours)
Transfer Coursework.

CHEM 4010 Research and Seminar (1-3 Credit Hours)
Individual research supervised by the faculty. Students are expected to present a short seminar based on their research. At least 10 hours of research effort per week. A maximum of three credits may be taken.

CHEM 4020 Research and Seminar (1-3 Credit Hours)
Same as 4010 in organization. A maximum of three credits may be taken.
CHEM 4030 Research & Seminar (1-3 Credit Hours)
Individual research supervised by the faculty. Students are expected to present a short seminar based on their research.

CHEM 4660 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department.

CHEM 4890 Service Learning (0-1 Credit Hours)

CHEM 4910 Independent Study (1-4 Credit Hours)
Laboratory or library research under direction of a faculty member.

CHEM 4920 Independent Study (1-3 Credit Hours)

CHEM 4940 Transfer Coursework (1-4 Credit Hours)
Transfer Coursework.

CHEM 4990 Honors Thesis (3 Credit Hours)
Honors thesis research, first semester. Register in department.

CHEM 5000 Honors Thesis (4 Credit Hours)
Honors thesis research, second semester. Register in department.

CHEM 5380 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

CHEM 5390 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

CHEM 6150 Interm Physical Chem I (3 Credit Hours)
Elementary quantum mechanics, quantum theory of molecular structure and bonding, fundamentals of spectroscopy.

CHEM 6160 Interm Physical Chem II (3 Credit Hours)
First, Second, and Third Laws of thermodynamics, thermodynamic energy state functions, phases of pure substances, properties of mixtures, chemical equilibrium, equilibrium electrochemistry, statistical thermodynamics.

CHEM 6250 Intermediate Inorganic (3 Credit Hours)
Periodic relationships, types of bonding, coordination complexes, acid-base concepts, inorganic reaction mechanisms.

CHEM 6460 Intermediate Organic (3 Credit Hours)
Structural, chemical, and physical properties of organic compounds.

CHEM 6660 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department.

CHEM 6830 Intro To Biochemistry (3 Credit Hours)
Properties of biological compounds, Bioenergetics, basic metabolic pathways, general biochemistry mechanisms.

CHEM 6840 Intermediate Biochemistry (3 Credit Hours)
Intermediary metabolism with emphasis on the integration of lipid, saccharide, and amino acid metabolism. Electron transport and oxidative phosphorylation.

CHEM 6940 Transfer Coursework (1-4 Credit Hours)
Transfer Coursework.

CHEM 7010 Independent Study (1-3 Credit Hours)
This is a directed study course that allows a graduate student to pursue a topic of particular interest under the direction of a faculty member.

CHEM 7020 Independent Study (1-3 Credit Hours)

CHEM 7110 Intro to Quantum Mechanics (3 Credit Hours)
The classical wave equation; the Schrödinger equation; principles of quantum mechanics; harmonic oscillator; rigid rotor; hydrogen atom; approximate methods: perturbation theory, variational principle.

CHEM 7120 Statistical Mechanics (3 Credit Hours)
Review of the principles of thermodynamics; canonical and other ensembles; Bose-Einstein, Fermi-Dirac, and Boltzmann statistics; non-interacting system; Monte Carlo methods; phase transitions, classical fluids; non-equilibrium systems.

CHEM 7130 Advanced Quantum Chemistry (3 Credit Hours)
Advanced topics in quantum chemistry and dynamics.

CHEM 7140 Computational Quantum Chem (3 Credit Hours)
This introductory course in computational quantum chemistry will discuss selected topics of molecular modelling with an emphasis on quantum mechanical methods. The scope of this course incorporates ab initio methods, density functional theory, molecular mechanics, and semiempirical approaches. This course is set up for graduate-level requirements, but should be accessible to advanced undergraduates. Graduate-level quantum mechanics is not required, but a good undergraduate-level quantum chemistry background is expected.

CHEM 7150 Chemical Physics (3 Credit Hours)
Classical and quantum theory of radiation.

CHEM 7190 Selected Topics Physical Chemi (3 Credit Hours)
Selected topics in experimental and/or theoretical physical chemistry.

CHEM 7210 Inorganic Stru & Bond (3 Credit Hours)
Descriptions of bonding theories as applied to inorganic systems. The course covers symmetry and group theory, crystal field theory, and generalized aspects of molecular orbital theory. Three hours of lecture per week.

CHEM 7220 Inorganic Reaction Mechanics (3 Credit Hours)
The course discusses the primary reactions of transition metal, organometalic and main group compounds. Concepts of chemical kinetics are applied to inorganic substitution, isomerization, oxidation/reduction, catalysis and photochemistry. The theoretical framework associated with electron and atom transfer reactions is also presented.

CHEM 7230 Organomet/Trans. Metals (3 Credit Hours)
The chemistry of compounds containing transition metal-carbon bonds. A survey of major classes of organotransition metal compounds, their bonding, and their reaction chemistry. The role of transition metal organometalic compounds in homogeneous catalysis. Three hours of lecture per week.

CHEM 7240 Organomat Chem Main Grp Metals (3 Credit Hours)
The chemistry of compounds containing main group metal-carbon bonds. A survey of major classes of organometalic compounds, their bonding, and their reaction chemistry. The role of main group organometalic compounds in organic synthesis and polymer chemistry. Three hours of lecture per week.
CHEM 7430 Adv Organic Chem Natural Prod (3 Credit Hours)
Structural determination, synthesis, and biosynthesis of both classical and modern natural product target molecules.

CHEM 7440 Adv Organic Polymer Chemistry (3 Credit Hours)
This course establishes a basic fundamental background for polymer chemists, including the major synthetic techniques for preparing polymers, the strengths and weaknesses of various techniques for determining molecular weight and structure, as well as correlation between polymer molecular structure and the resultant properties (and therefore useful applications).

CHEM 7450 Adv Organic Supramolecular Chem (3 Credit Hours)
This course focuses on a variety of aspects of supramolecular chemistry. It includes the fundamental physical chemistry important to the field and a review of the current state-of-the-art. The course also includes hands-on experience with analyzing supramolecular systems using spectroscopic and/or calorimetric approaches.

CHEM 7460 Adv Organic-Synthetic Ap (3 Credit Hours)
Design of syntheses for complex organic molecules. The strategies involved for constructing molecules with complex stereo and regio chemistry, while addressing issues of efficiency and yield.

CHEM 7470 Adv Organic Chem Nucleic Acids (3 Credit Hours)
This course provides a background to understanding the structure of nucleic acids and the forces involved in their binding and recognition. A particular focus involves the how to design sequences that enable binding, including topics such as using aptamers for selective binding and recognition.

CHEM 7490 Selected Topics Org Chem I (3 Credit Hours)
This is a survey course covering key topics in contemporary organic chemistry. The focus is on growing and far-reaching issues that are central to all forms of organic chemistry research.

CHEM 7491 Selected Topics Org Chem II (3 Credit Hours)
This is an in-depth course covering a key, topic of contemporary organic chemistry. The focus is on growing and far-reaching issues that are central to organic chemistry research in an academic or industrial setting.

CHEM 7660 Special Topics (0-4 Credit Hours)
Special Topics.

CHEM 7870 Division Seminar (1 Credit Hour)
Weekly seminars by visiting faculty and students.

CHEM 7880 Division Seminar (1-2 Credit Hours)
Weekly seminars by visiting faculty and students.

CHEM 7890 Techniques of Research (1-9 Credit Hours)

CHEM 7900 Techniques of Research (1-9 Credit Hours)

CHEM 7940 Transfer Credit-Grad (1-12 Credit Hours)

CHEM 7990 Masters Research (3 Credit Hours)
Research toward completion of a masters degree.

CHEM 9990 Dissertation Research (3 Credit Hours)
Research toward completion of a doctoral degree.
Chinese Language (ASTC)

ASTC 1010  Beginning Chinese I  (4 Credit Hours)
Designed for students to acquire a knowledge of the fundamentals of the Chinese language to be demonstrated in four areas of basic language skills: oral and listening comprehension, speaking, writing (Chinese characters), and some reading ability.

Prerequisite(s): minimum score of PASS in 'ASTC 1010 Placement'.

ASTC 1020  Beginning Chinese II  (4 Credit Hours)
A continuation of the objectives presented in Beginning Chinese I. Attention is given to practical and topics-oriented conversational skills, mood of speech, and complex level of syntax.

Prerequisite(s): minimum score of PASS in 'ASTC 1020 Placement' or ASTC 1010.

ASTC 1030  Beg Chin I: Heritage Learners  (4 Credit Hours)
This course is tailored to accommodate students who grew up in an environment in which Chinese is spoken by parents or guardians at home and for those who are familiar with the language and possess native-like abilities in comprehension and speaking. The class, conducted in Chinese, meets four times a week with a focus on reading and writing, including the correct use of grammar. The general program policy at Tulane is to teach simplified characters; yet students with traditional character background may choose to write in traditional characters in their works, but should be able to read simplified characters in which most class materials are written. Only those students who are placed in ASTC 1030 by the language learning center and who have received instructor's approval are able to take ASTC 1030.

Prerequisite(s): minimum score of PASS in 'ASTC 1030 Placement'.

ASTC 1040  Beg Chin II: Heritage Learners  (4 Credit Hours)
ASTC 1040 is tailored to accommodate students who grew up in an environment in which Chinese is spoken by parents or guardians at home and for those who are familiar with the language and possess native-like abilities in comprehension and speaking. Only those students who have taken ASTC 1030 or those who are placed in ASTC 1040 by the language learning center and who have received approval from the instructor are able to take ASTC 1040. ASTC1040 prepares students for ASTC3060.

Prerequisite(s): minimum score of PASS in 'ASTC 1040 Placement' or ASTC 1030.

ASTC 1890  Service Learning: ASTC 1020  (0-1 Credit Hours)
Service learning.

ASTC 2030  Intermediate Chinese I  (4 Credit Hours)
An intensive study of conventional Chinese characters, additional grammar, and an exposure to simplified Chinese characters. Continued emphasis on reading, writing, listening, and speaking abilities.

Prerequisite(s): minimum score of PASS in 'ASTC 2030 Placement' or ASTC 1020.

ASTC 2040  Intermediate Chinese II  (4 Credit Hours)
A continuation of the objectives presented in Intermediate Chinese I. Attention is given to improvement of the student's ability to read and write in modern Chinese.

Prerequisite(s): minimum score of PASS in 'ASTC 2040 Placement' or ASTC 2030.

ASTC 2890  Service Learning: ASTC 2040  (0-1 Credit Hours)
Service learning.

ASTC 2990  Foreign Language Exempt  (0 Credit Hours)
Foreign language exempt.

ASTC 3050  Adv Chinese Language I  (4 Credit Hours)
First semester advanced instruction in the Chinese language, including conversation, reading, and writing.

Prerequisite(s): minimum score of PASS in 'ASTC 3000 Placement', minimum score of PASS in 'ASTC 3050 Placement' or ASTC 3060.

ASTC 3060  Adv Chinese Language II  (4 Credit Hours)
This course is designed for students who have prior knowledge of Mandarin Chinese, preferably with the equivalent of two and a half years’ Chinese learning experience. The course is to advance students’ Chinese social-cultural awareness and their oral proficiency while developing reading and writing skills. Students will read a variety of viewpoints on current issues of population, education, family, gender, environment, business and technology in the rapidly changing China. By the end of the semester, students are expected to be able to read Chinese with fluency and accuracy; students are expected to be able to read simplified characters in which most class materials are written. Only those students who have taken ASTC 3050, ASTC1030, or ASTC 1040 at Tulane or those who are placed in ASTC 3060 by language learning center can take ASTC 3060.

Prerequisite(s): minimum score of PASS in 'ASTC 3000 Placement' or ASTC 3060.

ASTC 3070  Business Chinese  (3 Credit Hours)
This course is for students who have achieved intermediate-low/mid Chinese language proficiency. The goal is for students to acquire the necessary linguistic competence and understand the business culture in China to function effectively in a business setting. At the end of the semester, students are expected to the proficiency level of intermediate-mid to advanced low in listening, speaking, reading and writing (based on ACTFL foreign language proficiency guidelines).

Prerequisite(s): ASTC 3050 or 1040.

ASTC 3910  Special Topics  (1-3 Credit Hours)
Special topics in Asian studies

ASTC 4070  Adv Chinese Read & Write  (3 Credit Hours)
ASTC 4070 is designed for students who have completed three years of mandarin Chinese learning or equivalent. The course will continue improving students' proficiency in mandarin Chinese and knowledge of Chinese culture and society. The registration of the course requires permission of the instructor.

Prerequisite(s): minimum score of PASS in 'ASTC 4000 Level Placement' or ASTC 3060.
ASTC 4080 Chinese Media Literacy (3 Credit Hours)
ASTC 4080 Chinese Media Literacy is designed for students who have completed ASTC 4070 (with a grade of B- or above) or permission from the instructor. It will focus on developing students’ advanced language skills in Mandarin Chinese as well as knowledge of contemporary Chinese culture and society. Students will be listening to, watching or reading multi-media materials from the media on modern Chinese society, including news reports on nation, business, crime, education, lifestyle, sports and entertainment and expatriate. By the end of the semester, students are expected to gain the vocabulary that will help to improve Chinese media literacy and become comfortable in understanding media Chinese in text and in audio/video format, share news stories and one’s opinion on a given piece of news, discuss the content and analyze the social impact and cultural meaning of an event reported by the media.

Prerequisite(s): ASTC 4070 or minimum score of PASS in ‘ASTC 4000 Level Placement’.

ASTC 4920 Independent Studies (3-4 Credit Hours)
Independent study in Asian studies.

City, Culture, and Community (CCCC)

CCCC 6040 Introductory Data Analysis (3 Credit Hours)
This course provides basic training in descriptive and inferential statistics with social science applications.

CCCC 7010 CCC Pro-Seminar I (3 Credit Hours)
The course covers a wide range of topics central to the professional development of CCC students

CCCC 7100 CCC Theory I (3 Credit Hours)
First course in a two-semester graduate-level introduction to key theoretical issues, debates, figures, and works in the interconnected program core

CCCC 7140 Special Topics (3 Credit Hours)
Special topics in Sociology.

CCCC 7150 CCC Theory II (3 Credit Hours)
Second course in a two-semester graduate-level introduction to key theoretical issues, debates, figures, and works in the interconnected program core areas of city, culture, and community.

CCCC 7200 Research Design (3 Credit Hours)
This course focuses on the logic and processes of research design, with emphasis on the fit between substantive research questions and empirical

CCCC 7300 Quantitative Analysis (3 Credit Hours)
This course develops in-depth knowledge of multivariate data analysis.

CCCC 7350 Qualitative Analysis (3 Credit Hours)
This course develops in-depth knowledge of, and practical experience with, the collection and analysis of qualitative data.

CCCC 7700 Teaching Seminar (3 Credit Hours)
This course is a professional development seminar in which participants explore a variety of pedagogies and gain practical experience in the mechanics of teaching

CCCC 7750 Teaching Practicum (1 Credit Hour)
Teaching/research apprenticeship in collaboration with supervising faculty member

CCCC 7800 Research Practicum I (1 Credit Hour)
First semester research collaboration with Area Exam 1 supervising faculty member.

CCCC 7850 Research Practicum II (1 Credit Hour)
Second semester research collaboration with Area Exam 1 supervising faculty member.

CCCC 7950 CCC Pro-Seminar II (3 Credit Hours)
The final academic course is led by a team of CCC program faculty and focuses on the students’ emerging dissertation projects

CCCC 7980 Independent Study (1-3 Credit Hours)
Independent Study in Sociology.

CCCC 9990 Dissertation Research (0 Credit Hours)
Dissertation Research

Classics (CLAS)

CLAS 1010 The Rise of Rome (3 Credit Hours)
This course traces the history of Rome from its earliest foundations to the fall of the Roman republic. While learning about major historical events, we will also explore various aspects of Roman cultural and social history. Topics for discussion include politics, social status, gender roles, religion, warfare, murder and conspiracy, and ancient spectacle. No prerequisites. (Note: Not open to senior history majors)

CLAS 1030 The Greeks (3 Credit Hours)
This course offers an introduction to the literature, history, culture, art and architecture of the ancient Greeks. Focusing on Greeks living throughout the Mediterranean from the Bronze Age down to the Hellenistic Period, the course is organized around targeted investigations that explore important aspects of ancient Greek civilization such as colonial expansion, the invention of alphabetic writing, the birth of drama, etc. The aim of the course is not to be exhaustive, but rather to introduce students to the study of antiquity. We will regularly delve into scholarly debate, consider what kinds of evidence underlie our knowledge, and examine the limits of interpretation all while developing our familiarity with the ancient Greeks.

CLAS 1040 Mythology (3 Credit Hours)
This course will introduce you to the gods, heroes, and monsters of Greek and Roman mythology. The focus of the course involves reading and discussing selected works of ancient Greek and Roman literature in English translation, but we will also move beyond these narratives to examine how the Greeks and Romans portrayed their myths in other media, including art and architecture.

CLAS 1290 Semester Abroad (1-20 Credit Hours)
Study abroad in Classical Studies. Department approval required.

CLAS 1940 Transfer Coursework (3 Credit Hours)
For transfer of credit. Department approval required.
CLAS 2200 New Testament Historical Intro (3 Credit Hours)
This course is a literary and historical introduction to the canonical New Testament. It will engage issues of authorship, dating, theology, genre, and special problems related to the scientific (or scholarly) study of the New Testament. There will be some engagement with literature outside of the canonical New Testament but only as it relates to special issues and topics in New Testament interpretation.

CLAS 2320 Ancient Greek Religion (3 Credit Hours)
What was the ancient Greek religion about? And how can we know about the religious experience of a population that is long gone? Both these questions are interconnected and represent the core of this course. Week after week, we will reconstruct the principles and articulation of religious beliefs and practice in ancient Greece, reflecting on the evidence we can use. We will discover the ways that religious system mirrors a specific understanding of human society and its place in the universe. And, with it, we will find that, surprisingly or not, that religious system provided a solid base to several modern religious practices.

CLAS 2330 Alexander the Great (3 Credit Hours)
This course explores the archaeology of the southern Levant from the Bronze Age to the creation of the state of Israel (ca. 3330 B.C.E. – 1948 C.E.). It provides an introduction to the methodology and theory of archaeology and an overview of the material cultures of the complex societies that inhabited the region. Special attention will be paid to cultures of the Israelites, Phoenicians, Philistines, and Arabs and the impact of external imperial rule (from the Egyptians, Assyrians, and Babylonians to the Greeks and Romans) on the life and culture of these societies. We will also investigate the transformation of the region from the rise of Christianity and the Muslim conquest through the emergence of Israel as a modern nation-state. Throughout we will focus on extant texts, inscriptions, material culture such as pottery, figurines, and sculpture, and public, religious, and domestic architecture to reconstruct a detailed picture of this region as a dynamic crossroads of civilizations.

CLAS 2340 Troy: Beyond the Myth (3 Credit Hours)
The Trojan War: famous heroes against each other, astute decoys, tragic deaths, plotting, intrigue, and the gods in the midst of it. Was it all fiction? In this class, we will use literary and archaeological evidence to answer this question.

CLAS 2390 Semester Abroad (1-20 Credit Hours)
For transfer of credit. Department approval required.

CLAS 2600 The Classical World in Film (3 Credit Hours)
This interdisciplinary course investigates the use of themes from classical history, literature, and mythology in modern cinematography. Its focal point is the artistic appropriation of these themes in service of a fresh literary and cinematic vision. Films with classical themes are viewed as a part of the process of creative imitation and reinvention of a “classic”. Each segment of the course discusses a specific theme, starting with the thorough analysis of the relative ancient texts and material culture/archaeology. Reading assignments will include selections from Greek and Roman, such as epic, tragedy, history, lyric poetry, philosophy, and novel. The readings will be flanked by a selection of movies and clips that show modern adaptations of the same theme discussed in the readings.

CLAS 2610 Special Topics (3 Credit Hours)
Special topics in Classical Studies focused on particular areas and issues in the fields of ancient culture, religion, history, and/or archaeology.
CLAS 2811 Special Topics (3 Credit Hours)
Special topics in Classical Studies focused on particular areas and issues in the fields of ancient culture, religion, history, and/or archaeology.

CLAS 2940 Transfer Coursework (0 Credit Hours)
For transfer of credit. Department approval required.

CLAS 3050 Archaeology Lab: Ashkelon (3 Credit Hours)
The field archaeology lab in Ashkelon Israel will introduce students to process of artifact analysis, cataloguing, and recording. Students will work alongside professional staff sorting, cleaning, registering, and analyzing finds from the current excavations such as pottery, figurines, glass, worked stone, faunal remains, and other objects. Students will learn how to make preliminary readings of the artifacts and will also be introduced to methods of scientific analysis, including flotation, petrography, xrf, 3d scanning, and ftir analysis.

Corequisite(s): CLAS 4050.

CLAS 3060 Greek Tragedy & Comedy (3 Credit Hours)
In this class, we will read several ancient plays (in English translation) written in 5th century Athens alongside a series of 20th and 21st century plays from Nazi occupied France, apartheid-era South Africa, and Nigeria (during the Iraq War) that draw on these ancient plays for inspiration in radically different political and cultural climates.

CLAS 3080 Inventing Socrates (3 Credit Hours)
Socrates has greater name recognition than almost anyone in antiquity and yet he left behind no record of his teachings. Instead, his legacy has been shaped by the accounts of others - former students, bemused comedians, admirers and even a few detractors. In this course, we will examine the many faces of Socrates bequeathed to us by his contemporaries, investigate the world of 5th century Athens in which he lived, and survey important moments in his posthumous reception.

CLAS 3090 Law & Society in Ancient Rome (3 Credit Hours)
In this course we will focus on the law of the Roman family, covering such topics as personal status, marriage, divorce, and inheritance, as well as the situation of women and children within the Roman family.

CLAS 3120 Etruscans & Early Rome (3 Credit Hours)
From the Late Bronze Age until their assimilation into the Roman world, the Etruscans were building cities, decorating tombs, and establishing trade networks at home and abroad. While their literature and written history are lost, their extensive material culture survives. In this course, students will learn how to examine a culture known primarily from its artifacts and discover how it influenced early Rome.

CLAS 3140 Jews in the Greco-Roman World (3 Credit Hours)
This course will explore Jewish interaction and conflict with Greeks and Romans from the Babylonian exile through the destruction of the temple in Jerusalem. We will examine the rich body of literature and material culture from this period to reconstruct the Jewish experience in both Palestine and the Diaspora communities in Egypt, Asia Minor, and Rome. The course will consider texts written by Jews as well as Greeks and Romans, representing both sides of this exchange, and archaeological evidence that sheds light on daily life in the period. Topics will include: the Maccabean Revolt, the Hasmonean dynasty, Herod the Great, the Alexandrian riots of 38 CE, Jewish religion and sectarianism, the Dead Sea Scrolls, and the Jewish Revolts.

CLAS 3160 The Aegean Bronze Age (3 Credit Hours)
The civilizations that populated the Aegean during the Bronze Age were later remembered in mythology, fabulous tales, and epic poetry. Homer sang about the cultural wealth of those earlier kingdoms, from Crete to Mainland Greece. This course offers you the chance to explore their rich and varied archaeological remains. From the majestic palaces to the elaborate frescoes, the decorated pottery, the administrative records, and other material evidence, we will reconstruct the life and activities of the populations of the Aegean from the beginning to the end of the Bronze Age. In our journey, we will also stop and discuss the archaeological methodologies and the current topics of investigation on the Aegean Bronze Age.

CLAS 3170 Greek Art & Archaeology (3 Credit Hours)
In this course, we will explore the archaeological remains and the development and use of specific artistic trends of the ancient Greek culture. Human inhabitation of Greece left the remains of a rich and complex society, with grandiose public architecture, elaborate vase painting, and a legacy that still lives on. Working together as a class, we will explore how to use these material remains to find the Greeks, interpret their lives, and understand their choices and the impact they had on their culture. By studying a variety of archaeological remains, from pottery to art and architecture, we will bring the Greeks back to life, in class, with us! We will cover aspects of Greek political organization, trade and contact with other civilizations in the ancient Mediterranean, funerary habits. At the same time, we will be discussing about our modern approach to the study of the Greeks, focusing on the use of art and archaeology in politics and propaganda, current problems and controversies in Greek archaeology, archaeological methods, and issues of archaeological ethics.

CLAS 3180 Roman Art & Archaeology (3 Credit Hours)
The Roman Empire encompassed the entire rim of the Mediterranean Sea and much of western Europe. This course will undertake an intensive analysis of the material culture of ancient Rome through its art and archaeology. In successfully completing the semester, you will gain a thorough knowledge of the art and archaeology of ancient Rome and its world, focusing especially on changes through time and on the political, social, and economic developments that are illuminated by material remains. We will also discuss current issues related to Roman antiquities and the preservation of world cultural heritage. Working together as a class, we will learn how to use the archaeological record to reconstruct the past, while at the same time examining our own culture and its role in human history.

CLAS 3190 Pompeii: Life in a Roman Town (3 Credit Hours)
The Roman city of Pompeii, utterly destroyed by the eruption of Mt. Vesuvius in 79 C.E., has captured the world's imagination for nearly three centuries. This semester, we will examine the material remains of Pompeii, analyzing how evidence as diverse as standing architecture, monumental inscriptions, portable and permanent art, and even garbage and graffiti can be used to reconstruct ancient lives. Working together as a class, we will investigate the development of Pompeian studies from the earliest systematic excavations of the 1750s to current projects utilizing groundbreaking technologies, and propose new directions for future research in a city that has many more secrets to reveal.
CLAS 3810 Ancient Christianity (3 Credit Hours)
In this course we examine the development of Christianity in the Roman Empire during the first four centuries CE. We will consider both the development of the Church from its beginnings as a religious movement to its becoming one of the dominant institutions in the Roman Empire. We will investigate how the Church gained converts, how it was structured, the relationship between orthodox Christianity and ‘heresies,’ the Church’s conflicts with the Roman Empire, and the changes in the Church resulting from the conversion of Constantine in the early fourth century.

CLAS 3320 The Greek Way of Death (3 Credit Hours)
Death-ritual was an important social institution in ancient Greece. Through their funerals and tombs, the ancient Greeks negotiated social relationships and political ideologies, celebrated the state and the legacies of individuals, and grappled with the uncertainties and fragility of life. In this course we will look at textual and archaeological evidence from the ancient Greek world as we explore attitudes toward life and death and how important customs, rituals, and traditions function in society.

CLAS 3510 The Ancient Novel (3 Credit Hours)
We are all familiar today with the literary form called the novel: a lengthy fictional narrative in prose. It was ancient Greek and Latin authors, however, who first created this form. Many of these works survive and they always intrigue and delight readers with their highly sophisticated plotting of love affairs, comical depictions of pirates, and teasing explorations of sexuality. We will closely read, in English translation, the major ancient novels and some of their literary predecessors in order to understand the originality of the form and content of the novels. The class concludes with a consideration of the ancient novel’s contribution to the development of fiction in the West.

CLAS 3810 Special Topics (3 Credit Hours)
Special topics in Classical Studies focused on particular areas and issues in the fields of ancient culture, religion, history, and/or archaeology.

CLAS 3811 Special Topics (3 Credit Hours)
Special topics in Classical Studies focused on particular areas and issues in the fields of ancient culture, religion, history, and/or archaeology.

CLAS 3891 Service Learning: CLAS 3090 (0-1 Credit Hours)
Service learning section accompanying CLAS 3090 Law & Society in Ancient Rome.

Corequisite(s): CLAS 3090.

CLAS 3899 Service Learning: CLAS 3090 (1 Credit Hour)
Service learning section accompanying CLAS 3090 Law & Society in Ancient Rome.

Corequisite(s): CLAS 3090.

CLAS 3940 Transfer Coursework (3 Credit Hours)
For transfer of credit. Department approval required.

CLAS 4050 Intro to Field Arch: Ashkelon (3 Credit Hours)
This is an interdisciplinary course of archaeological fieldwork based in experiential learning at a complex, multi-period Tell site on the southern Levantine coast. Students work five full days plus one half-day in the field uncovering artifacts and learning archaeological field techniques.

Corequisite(s): CLAS 3050.

CLAS 4060 Classical Epic (3 Credit Hours)
This course will offer a detailed survey of Greek and Roman epic poetry from Homer’s Iliad to Lucan’s Bellum Civile, with specific attention paid to the production and performance contexts of each text. Over the course of the semester, students will become familiar with the central themes and issues of the epic genre and consider what differentiates poems written in different times and places. Specific topics to be investigated include the role of the gods in mortal affairs, tensions between fate and human agency, how to negotiate personal tragedies within larger conflicts, the relationship between individuals and their society, and the intimate connection between poet and his subject. All texts will be read in translation.

CLAS 4080 Sem Anc Society & Econ (3,4 Credit Hours)
Seminar on topics involving ancient society and economy, for example, Slavery in Ancient Society or Family in Ancient Rome. May be repeated when the topic is different. (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive).

CLAS 4110 Leadership in Class Antiquity (3 Credit Hours)
Who is a good leader, or a bad leader? Why? How do you know? How do you become one or the other? Our answers to these questions can often be traced back to the ancient Greeks and Romans, who are not only summoned up as models for modern leaders, but who also told stories, sang songs, and debated about what leadership means. This course will combine texts and objects, ancient and modern sources, lecture and discussion in a thorough exploration of leadership in antiquity. Assignments will include readings, self-diagnostic quizzes, essays, reflective journals, and a collaborative final project.

CLAS 4170 Sem Greek Art & Archaeo I (3,4 Credit Hours)
This is a seminar featuring current topics in Greek art and archaeology that are studied through the use of primary texts ( Histories, literature, inscriptions) as well as secondary scholarship. The topics offered under this heading may include Monuments of Ancient Athens, Greece in the Archaic Age, Knossos & Its Afterlife, and Mycenaean Citadels. May be repeated when topic is different. (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive).

CLAS 4180 Sem Greek Art & Archaeo II (3,4 Credit Hours)
This seminar features topics in Greek art and archaeology where the analysis of material culture and what it can illuminate about Greek society are emphasized. Methods and scholarship from the social sciences are included. Students should expect to do close readings of second scholarship and perform independent research. Topics in this seminar may include Greek Pottery, Greece in the Iron Age, and Topics in Aegean Prehistory. (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive).
CLAS 4190 Sem Greek Art & Archaeo III (3,4 Credit Hours)
This seminar features topics in Greek art and archaeology that employ methods of art history, including the appreciation of the aesthetics of ancient art. Topics may include Greek Vase Painting, Greek Sculpture, and Classical Athens. (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive).

CLAS 4200 Sem Roman Art & Archaeo I (3,4 Credit Hours)
The seminar features topics in Roman art and archaeology that are studied through the use of primary texts (histories, literature, inscriptions) as well as secondary scholarship. The topics offered under this heading may include Monuments of Ancient Rome, Building the City of Rome, and the World of Augustus. (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive).

CLAS 4210 Sem Roman Art & Archaeo II (3,4 Credit Hours)
This seminar features topics in Roman art and archaeology where the analysis of material culture and what it can illuminate about Roman society are emphasized. Methods and scholarship from the social sciences are included. Student should expect to do close readings of secondary scholarship and perform independent research. Topics may include Gender in Roman Archaeology and Death in Roman Cities. May be repeated when topic is different. (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive).

CLAS 4220 Sem Roman Art & Archaeo III (3,4 Credit Hours)
This seminar features topics in Roman art and archaeology that employ methods of art history, including the appreciation of the aesthetics of ancient art. Topics include Ancient Painting and Mosaics and Roman Sculpture in Context. May be repeated when topic is different (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive).

CLAS 4320 War & Power in Ancient Greece (3 Credit Hours)
In this course we will look at ancient Greek warfare and state formation, including how states developed and changed, how and why the ancient Greeks interacted and fought with each other and with outsiders, and what were the immediate outcomes and long-term consequences of endogenous and exogenous power struggles. Students will gain an understanding of the particular roles played by factors such as geography, military innovations, socio-political institutions, individual leaders, ideological shifts, and specific series of decisions and events

Prerequisite(s): CLAS 3310 or HISA 3080.

CLAS 4810 Special Topics (3 Credit Hours)
Special topics in Classical Studies focused on particular areas and issues in the fields of ancient culture, religion, history, and/or archaeology.

CLAS 4811 Special Topics (3 Credit Hours)
Special topics in Classical Studies focused on particular areas and issues in the fields of ancient culture, religion, history, and/or archaeology.

CLAS 4900 Seminar in Classical Culture (3,4 Credit Hours)
The seminar features topics that examine aspects of society and culture in the Greek and/or Roman world. While these topics are approached primarily through literature in translation and historical texts, where appropriate, these topics may also include some units on material culture and art. Topics of this course may include The Age of Perikles, Individuals & Communities in Greece and Rome, Alexandria Cosmopolis, Greeks and Barbarians, and Afterlives of Antigone.

CLAS 4910 Independent Study (3 Credit Hours)
Independent study on particular areas or issues of ancient culture, religion, history, and/or archaeology. Open to superior students provided approval of department is granted and an appropriate faculty director is available.

CLAS 4920 Independent Study (3 Credit Hours)
Independent study on particular areas or issues of ancient culture, religion, history, and/or archaeology. Open to superior students provided approval of department is granted and an appropriate faculty director is available.

CLAS 4990 Honors Thesis (3 Credit Hours)
Course reserved for students writing an honors thesis for a major in classical studies. Requires approval of the department and an appropriate faculty director.

CLAS 5000 Honors Thesis (4 Credit Hours)
Course reserved for students writing an honors thesis for a major in classical studies. Requires approval of the department and an appropriate faculty director.

CLAS 5190 Semester Abroad (1-20 Credit Hours)
Study abroad in Classical Studies. Department approval required.

CLAS 5370 Washington Semester (1-20 Credit Hours)
For transfer of credit. Department approval required.

CLAS 5380 Junior Year Abroad (1-20 Credit Hours)
Study abroad in Classical Studies. Department approval required.

CLAS 5390 Junior Year Abroad (1-20 Credit Hours)
Study abroad in Classical Studies. Department approval required.

CLAS 5940 Transfer Coursework (0 Credit Hours)
For transfer of credit. Department approval required.

CLAS 6080 Sem Anc Society & Econ (3 Credit Hours)
Seminar on topics involving ancient society and economy, for example, Slavery in Ancient Society or Family in Ancient Rome. May be repeated when the topic is different. Open to Graduate Students.

CLAS 6170 Sem Greek Art & Archaeo I (3 Credit Hours)
This is a seminar featuring current topics in Greek art and archaeology that are studied through the use of primary texts (histories, literature, inscriptions) as well as secondary scholarship. The topics offered under this heading may include Monuments of Ancient Athens, Greece in the Archaic Age, Knossos & Its Afterlife, and Mycenaean Citadels. May be repeated when topic is different. (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive).

CLAS 6180 Sem Greek Art & Archaeo II (3 Credit Hours)
This seminar features topics in Greek art and archaeology where the analysis of material culture and what it can illuminate about Greek society are emphasized. Methods and scholarship from the social sciences are included. Students should expect to do close readings of second scholarship and perform independent research. Topics in this seminar may include Greek Pottery, Greece in the Iron Age, and Topics in Aegean Prehistory.
CLAS 6190  Sem Greek Art & Archaeo III (3 Credit Hours)
This seminar features topics in Greek art and archaeology that employ
texts, where appropriate, these topics may also include some units on
method of art history, including the appreciation of the aesthetics of
material culture and art. Topics may include Greek Vase Painting, Greek Sculpture,
and Classical Athens.

CLAS 6200  Sem Roman Art & Archaeo I (3 Credit Hours)
The seminar features topics in Roman art and archaeology that
are studied through the use of primary texts (histories, literature,
inscriptions) as well as secondary scholarship. The topics offered
under this heading may include Monuments of Ancient Rome, Building
the City of Rome, and the World of Augustus.

CLAS 6210  Sem Roman Art & Archaeo II (3 Credit Hours)
This seminar features topics in Roman art and archaeology where the
analysis of material culture and what it can illuminate about Roman
society are emphasized. Methods and scholarship from the social
sciences are included. Students should expect to do close readings
of secondary scholarship and perform independent research. Topics may
include Gender in Roman Archaeology and The Roman Way of Death.
Open to graduate students.

CLAS 6220  Sem Roman Art & Archaeo III (3 Credit Hours)
This seminar features topics in Roman art and archaeology that employ
texts, where appropriate, these topics may also include some units on
methods of art history, including the appreciation of the aesthetics of
ancient art. Topics include Ancient Painting and Mosaics and Roman
Sculpture in Context. Open to graduate students. May be repeated
when topic is different.

CLAS 6300  Summer Seminar in Rome (1-6 Credit Hours)
Study abroad in Classical Studies. Open to Graduate Students only.
Registration requires department approval.

CLAS 6320  War & Power in Ancient Greece (3 Credit Hours)
In this course we will look at ancient Greek warfare and state formation,
including how states developed and changed, how and why the ancient
Greeks interacted and fought with each other and with outsiders, and
what were the immediate outcomes and long-term consequences of
endogenous and exogenous power struggles. Students will gain
an understanding of the particular roles played by factors such as
geography, military innovations, socio-political institutions, individual
leaders, ideological shifts, and specific series of decisions and events

CLAS 6810  Special Topics (3 Credit Hours)
Special topics in Classical Studies focused on particular areas
and issues in the fields of ancient culture, religion, history, and/or
archaeology.

CLAS 6811  Special Topics (3 Credit Hours)
Special topics in Classical Studies focused on particular areas
and issues in the fields of ancient culture, religion, history, and/or
archaeology.

CLAS 6900  Seminar in Classical Culture (3 Credit Hours)
The seminar features topics that examine aspects of society and
culture in the Greek and/or Roman world. While these topics are
approached primarily through literature in translation and historical
texts, where appropriate, these topics may also include some units on
material culture and art. Topics of this course may include The Age of
Perikles, Communities in Greece and Rome, Alexandria
Cosmopolis, Greeks and Barbarians, and Afterlives of Antigone.

CLAS 6910  Independent Study (1-3 Credit Hours)
Independent study on particular areas or issues of ancient culture,
religion, history, and/or archaeology. Open to graduate students
provided approval of department is granted and an appropriate faculty
director is available.

CLAS 6920  Independent Study (1-3 Credit Hours)
Independent study on particular areas or issues of ancient culture,
religion, history, and/or archaeology. Open to graduate students
provided approval of department is granted and an appropriate faculty
director is available.

CLAS 7890  Thesis Research (3 Credit Hours)
Course reserved for students writing a thesis for the Master's degree
in classical studies. Requires approval of the department and an
appropriate faculty director.

CLAS 7910  Independent Study (3 Credit Hours)
Graduate-level independent study in Classical Studies. Department
approval required.

CLAS 9980  Masters Research (0 Credit Hours)
Course reserved for students writing a thesis for the Master's degree
in classical studies. Requires approval of the department and an
appropriate faculty director.

Clinical Research (MSCR)

MSCR 6420  Responsible Conduct of Resrch (1 Credit Hour)
MSCR 6430  Topics in Clinical Research (3 Credit Hours)
MSCR 6440  Protocol Design and Writing (1-3 Credit Hours)
MSCR 6450  Therapeutics Seminar (4 Credit Hours)
MSCR 7070  Molecular Medicine (4 Credit Hours)
MSCR 7080  Cultural Competence Research (3 Credit Hours)
MSCR 7090  Grant Writing (3 Credit Hours)
MSCR 7150  Journal Club (1 Credit Hour)
MSCR 7300  Clerkship (0.5-5.75 Credit Hours)
MSCR 7400  Surgical Education Conference (1 Credit Hour)
MSCR 7410  Surgical Research Consortium (0.5 Credit Hours)
MSCR 7420  Clinical Mentorships (2 Credit Hours)
MSCR 7430  Residacy Didactics (0.5-0.75 Credit Hours)
MSCR 7440  Independent Study (0-3 Credit Hours)
MSCR 7450  Practical Skills (3 Credit Hours)
MSCR 7880  Writing Intensive: MSCR 7400 (1 Credit Hour)
MSCR 9980  Mentored Research Component (2 Credit Hours)
Colloquia (COLQ)

COLQ 1010 Freshmen Colloquium Seminar (1-3 Credit Hours)
COLQ 1020 Freshman Colloquium (1-3 Credit Hours)
COLQ 1025 Freshmen Colloquium Lab (0 Credit Hours)
COLQ 1030 Quest for Answers (1.5 Credit Hours)
COLQ 1290 Semester Abroad (1-20 Credit Hours)
COLQ 1940 Transfer Coursework (0 Credit Hours)
COLQ 2010 Honors Soph Colloquium (1.5-3 Credit Hours)
COLQ 2030 Sophomore Colloquium (1-3 Credit Hours)
COLQ 2390 Semester Abroad (1-20 Credit Hours)
COLQ 2940 Transfer Coursework (0 Credit Hours)
COLQ 3010 Science & Human Values (3 Credit Hours)
Prerequisite(s): PSYC 1000, 1000, 1000, 1000, 1010 or 1010.
COLQ 3020 God(S) and Science (3 Credit Hours)
COLQ 3030 Science and Religion (3 Credit Hours)
COLQ 3040 Honors Junior Colloquium (3 Credit Hours)
COLQ 3041 Honors Junior Colloquium (1-3 Credit Hours)
COLQ 3050 Junior Colloquium (1-3 Credit Hours)
COLQ 3890 Service Learning: COLQ 3050 (0-1 Credit Hours)
COLQ 4010 Honors Humanities Colloq (3 Credit Hours)
COLQ 4011 Honors Humanities Colloq (1-3 Credit Hours)
COLQ 4012 Honors Humanities Colloq (1-3 Credit Hours)
COLQ 4013 Special Topics (1-3 Credit Hours)
COLQ 4020 Honors Humanities Colloq (1-3 Credit Hours)
COLQ 4120 The Grand Canyon (3,4 Credit Hours)
This course covers central aspects of the geology, biology, anthropology and history of the US Southwest, concentrating on the areas contiguous with the path of the Colorado River through what is today Northern Arizona. After a semester of classroom work, familiarizing the students with geography, geology, flora, fauna, peoples, cultures and histories of the region, the class will travel to Lee’s Ferry and the float for seven days on Hatch River Expeditions rafts through a natural laboratory. Those students taking this course as a capstone for elective credit in Anthropology or Geology must write their term papers on a topic in their discipline.

COLQ 4140 Nat History Arch Mesoame (3 Credit Hours)
Geologic history of Mesoamerica, archaeology of Mesoamerica, history of the conquest and colonial period, flora and economic botany of the region.

COLQ 4200 Honors Senior Colloquium (3 Credit Hours)
Prerequisite(s): PSYC 1000.

COLQ 4210 Senior Colloquium (3 Credit Hours)
COLQ 4570 Public Service Internshp (1-3 Credit Hours)
COLQ 5190 Semester Abroad (1-20 Credit Hours)
COLQ 5380 Junior Year Abroad (1-20 Credit Hours)
COLQ 5390 Junior Year Abroad (1-20 Credit Hours)
COLQ 5940 Transfer Coursework (0 Credit Hours)
COLQ 6010 Mellon Professorship-Hum (3 Credit Hours)
An interdisciplinary course offered by a scholar of notable achievements both in teaching and research in humanistic learning. This course is not assigned to any particular discipline but spans the broad area of the humanities: classical, English, foreign languages and literatures, history, history of fine arts, and philosophy.

COLQ 6020 Mellon Professorship-Hum (3 Credit Hours)
An interdisciplinary course offered by a scholar of notable achievements both in teaching and research in humanistic learning. This course is not assigned to any particular discipline but spans the broad area of the humanities: classical, English, foreign languages and literatures, history, history of fine arts, and philosophy.

Communication (COMM)

COMM 1150 Intro To Cinema (3 Credit Hours)
Historical survey of international cinema focusing on political, social, economic, technological, and aesthetic factors. Major film movements and historical developments from 1895 to the present are covered including U.S. silent cinema, Soviet montage, German expressionism, French impressionism and surrealism, the transition to sound, classical Hollywood cinema, the impact of WWII, Italian neorealism, the French New Wave, art cinema, new German cinema, and new Hollywood cinema.

COMM 2010 Public Opinion and the Media (3 Credit Hours)
Polls are considered important for the democratic system. Governments are elected for a certain period of time, and public opinion polls are often seen as necessary tools for public officials to measure the public’s pulse in the period between elections and to address their policy concerns. For generations of citizens who grew up with opinion polls, the notion of public opinion is seen a naturally existing phenomenon. But what actually is public opinion? Is there such thing as public opinion in the first place? How is public opinion produced and used by the media and the political elite? Who influences public opinion and how? What is the media's role in shaping public opinion polls? The purpose of this course is to critically examine the ways in which public opinion is 1) measured, 2) constructed and 3) used in politics.

COMM 2220 New Media & Internet Studies (3 Credit Hours)
An investigation of the histories and theories associated with the Internet and other forms of new media. The main course objectives are to learn how to analyze Internet settings and employ new media methods. Conceptions of new technologies and newness will be theorized and examined. We consider how new media technologies are identified as tools and the ways they are critiqued for producing gendered, racial, and sexual identities. Topics include Afrofuturism, cyber feminism, science fiction, the web, social networking, fan fiction, hypertext, Internet authorship, and surveillance.
COMM 2230 Interpersonal Communication (3 Credit Hours)
Introduction to theories and models of interpersonal communication, which enhance understanding, and development of interpersonal relationships. Course content covers topics such as listening behavior, intrapersonal processing, dyadic interaction, conflict management, intercultural, intimate and nonverbal communication.

COMM 2300 Political Communication (3 Credit Hours)
A survey of theories, empirical research, and critical analysis of contemporary political communication processes in the United States. Topics may include the role of the media in electoral campaigns, strategies of presidential communication, as well as the relationship between media and political institutions, including Congress and the Courts. News coverage of social movements and political protest will also be discussed. The course covers a variety of political communication genres, such as journal ism, political advertising, talk shows and political websites.

COMM 2350 Media and Criminal Justice (3 Credit Hours)
This course examines the interrelationships between crime, criminal justice, and Media. Topics may include the role of the media in electoral campaigns, strategies of presidential communication, as well as the relationship between media and political institutions, including Congress and the Courts. News coverage of social movements and political protest will also be discussed. The course covers a variety of political communication genres, such as journal ism, political advertising, talk shows and political websites.

COMM 2400 Topics in Int'l Film Movements (3 Credit Hours)
This course focuses on specific film movements in international cinema, with an emphasis on understanding stylistic and aesthetic innovations in their social-historical context. Topics may include European film movements, Chinese cinemas and others. Notes: May be repeated for credit up to 2 times if different topic with the permission of the Film Studies Director.

COMM 2450 Gender and Media (3 Credit Hours)
This course introduces students to the field of gender and media studies. Media are part of the ways in which we understand and talk about gender, and the ways in which we make sense of what it means to be a “man” and a “woman.” We encounter countless media messages in advertisements, newspapers, magazines, films, movies, television and the Internet, depicting ideal models for men and women every day. We are so accustomed to living in a media saturated world that problematic representations escape our attention and remain taken for granted. This course is an attempt to step back and critically reflect on the media representations of gender. Throughout the course, we will focus on the main issues and controversies in this field by examining a broad range of examples.

COMM 2500 Film and Society (3 Credit Hours)
This class investigates various social issues that emerge from an examination of films produced in the United States, Europe and the developing world. Students consider societal forces such as class, race, gender, youth, family, prejudice, education and homelessness. The cinematic depiction of these factors as well as the connection between cinematic language, syntax, structure and a film’s ultimate meaning or message are explored.

COMM 2550 Introduction to Television (3 Credit Hours)
This course is an introduction to the study of television as a unique audiovisual culture with its own history, aesthetics, and meaning production. Students will learn about the television industry, its audiences, and its programming. Examples from television programming from the 1950s to the present will supplement readings.

COMM 2600 Rhet Princ Media Writing (3 Credit Hours)
Applies principles of classical and contemporary rhetorical theory to problems of writing for news media. Incorporates grammar review. Writing requirements include major news story, major feature story and numerous smaller assignments. Emphasis on writing for print media, but stylistic techniques for broadcast media also covered.

COMM 2650 Mass Communication Law (3 Credit Hours)
Studies federal and state regulation of both print and broadcast media in the United States to understand how legal mandates and constraints have defined the roles of media in society. Historical and contemporary analyses include laws in areas such as libel, privacy, free press versus fair trial, access to government information, regulation of advertising and regulation of broadcasting.

COMM 2700 Visual Communication (3 Credit Hours)
This course examines the history and theory of visual communication and its application in a variety of cultural contexts. Topics include the transition from print to visual media, the development of visual literacy and the role of emerging technology. Students will complete applied projects using photography, video and electronic media, digital imaging, and web-based visual technology.

COMM 2720 Media & Reproductive Rights (3 Credit Hours)
This course focuses on the relationships between reproductive rights and justice in the United States. Students will learn key concepts and theories related to reproductive rights and justice, as well as media studies and analysis. The course covers historical and contemporary portrayals of reproduction within popular and alternative media with a focus on their racial, sexual, class, and gendered dimensions. Students will also learn about various ways in which television, film, and new media technologies function within government and nonprofit advocacy around reproductive issues. In sum, this course maps the intersections between reproductive politics and media technologies, while helping students develop their analytical prowess, communication skills, and knowledge of media, culture, and social inequity in the United States.
COMM 2750 Latin American Icons (3 Credit Hours)
This course examines the rise of political icons in modern and contemporary Latin American societies. In particular, it highlights the intersections between historical context, individual biographies and mass media. The course emphasizes how symbolic representations have been mobilized to construct and challenge the iconic status of political actors and explores some of the most important political movements and conflicts that have shaped Latin America's history, including nationalism, populism, and revolution.

COMM 2810 Special Topics (3 Credit Hours)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. May be taken twice for credit on different topics.

COMM 2811 Special Topics (3 Credit Hours)
COMM 2812 Special Topics (3 Credit Hours)
COMM 2813 Special Topics (3 Credit Hours)
COMM 2820 Special Topics (3 Credit Hours)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. May be taken twice for credit on different topics.

COMM 2890 Service Learning: COMM 2350 (0-1 Credit Hours)
Credit attached to courses with a 40-hour service learning component.

COMM 2900 Communication Studies (3 Credit Hours)
Communication Studies introduces students to the theoretical underpinnings of the Department of Communication. The course explores communication through its tri-part focus on relationships and identities (individuals), texts, and industries and structures (contexts). The course introduces key concepts and keywords for continuing in the major.

COMM 3140 Cross-Cultural Analysis (3 Credit Hours)
A critical examination of communication in intercultural, interethnic and international contexts. An overview of models and approaches designed to explain cultural differences in communication with emphasis on the dimensions of symbolization, acculturation, prejudice, stereotyping and ideology. Conceptual frameworks are applied and tested within a range of cultural populations as defined by race, ethnicity, gender, physical disability, sexuality, socio-economic class and geographic location.

Prerequisite(s): COMM 2900.

COMM 3150 Film Analysis (4 Credit Hours)
Introduction to film analysis designed to help students develop a visual literacy with regard to film and a critical understanding of how films produce meanings. Focus is on formal analysis of film including elements such as narrative, mise-en-scene, editing, camera movement, sound and on key critical and theoretical approaches such as neoformalism and psychoanalysis. Classical Hollywood cinema and avant-garde and independent filmmaking traditions are studied in order to focus on the politics of form required film journal helps students develop analytical and critical skills. Required course for the film studies minor.

Prerequisite(s): COMM 2900.

COMM 3160 Technology Analysis (3,4 Credit Hours)
The study of technology as material culture through its production, dissemination and uses. Theorizes ways of approaching technology as symbolic tools, as material goods and as part of a cultural geography. Contextualizes digitalization in terms of social, political and economic discourses. Includes research methods for analyzing technology.

Prerequisite(s): COMM 2900, 2900, 2900 or 2900.

COMM 3200 Media Literacy/Media Educ I (3 Credit Hours)
This course introduces the study of media literacy, media education, and basic media pedagogy. Students will learn the many different definitions of media literacy; grapple with the ideological and political underpinnings of literacy in general and media literacy in particular; and become familiar with the key theorists, methodologies and methodological practices.

Prerequisite(s): COMM 2900, 2900, 2900 or 2900.

COMM 3240 Interaction Analysis (3 Credit Hours)
Focus on the investigation, interpretation and critical assessment of human interaction. Emphasis is given to interaction occurring in the relational contexts of marriage, friendship and the organization. Study includes the cultural and ideological elements, the models of communication used to explain interaction and the analysis of everyday communication phenomena in each context.

Prerequisite(s): COMM 2900, 2900, 2900 or 2900.

COMM 3250 Rhetorical Criticism (3 Credit Hours)
The description, analysis, interpretation and evaluation of persuasive uses of language. Emphasis on classical, situational, generic, dramatistic and ideological methods of criticism. Judgments about aesthetic, pragmatic, logical and ethical dimensions of rhetoric.

Prerequisite(s): COMM 2900, 2900, 2900, 2900 or 1000.

COMM 3260 Media Analysis (3,4 Credit Hours)
The study of the structure of media industries and their contents based on humanistic and social science approaches. Theorizes major trends in industry ownership and practices; the effects of political economy on textual symbols, discourses and genres; the function of media programming in reinforcing or altering perceptions of ideas, events, and people. Familiarizes students with research methods for analyzing media.

Prerequisite(s): COMM 2900, 2900, 2900 or 2900.
COMM 3270  Topics in Authors and Genres  (3 Credit Hours)
Questions of authorship and of genre are two key paradigms of film criticism. This course examines the aesthetic and theoretical bases for notions of authorship and genre in the cinema including romantic theories of art, auteur criticism, structuralism and post-structuralism. It also considers the historical development of the oeuvre of individual directors as author e.g. Hitchcock) and of particular film genres both in Hollywood cinema (e.g. film noir) and in non-mainstream and non-U.S. cinema. Genres and directors studied will change. May be repeated up to two times on different topics with approval of the Film Studies Director.

COMM 3280  Media Histories  (3 Credit Hours)
This course looks at media histories, with a focus on the different kinds of stories we tell about media, its contents and contexts. The course explores historical trends, the nature of histiography (the study of history) and some fundamentals of historical research.

COMM 3300  Comparative Politic Comm  (3 Credit Hours)
Examination of the links between media and political systems, based on a comparative approach. Offers a detailed comparison of political communication processes in different regions of the world and identifies how social, cultural and economic contexts are central to understanding the role of the media in political processes.

COMM 3320  Politics of Popular Culture  (3 Credit Hours)
This course will introduce students to critical thinking through the theories of cultural studies, ranging from culturalism, Marxism, psychoanalysis, gender and sexuality, and postcolonialism to postmodernism. Theories of cultural studies critically contextualize, examine and theorize culture as it influences and shapes our everyday lives and social structures. Students will learn about the various approaches to analyzing culture based on the canonical works of cultural study theorists and how to apply their critical theories to contemporary examples.

COMM 3350  New Media Analysis  (3 Credit Hours)
In this course, we study key issues in contemporary new media studies and engage in close textual analysis. We focus on the multi-layered textual aspects of the Internet and computer. These texts are some combination of images.

Prerequisite(s): COMM 2900, 2900, 2900 or 2900.

COMM 3400  Comm & Leadership Groups  (3 Credit Hours)
Group and organizational communication analyzes how the actions of people are coordinated and controlled to achieve collective outcomes. It is also concerned with the way individuals are shaped by their interactions with the groups and organizations around them. This seminar will help you learn how communication is key to understanding how groups and organizations work.

COMM 3410  Reality TV  (3 Credit Hours)
This course is a critical examination of the ever-growing roster of reality television programs. It is impossible for us to consume and analyze every reality television show or sub-genre this term. Instead, we will study the contours of the genre and critically engage with a sample platter of reality televisual offerings. Through scholarly readings, lectures, group discussions, in-class and at-home episode screenings, and creative projects, we will study reality television's history; its deep ties to neoliberalism and surveillance culture; its role as a celebrity-making apparatus; and the voyeuristic experience of watching and being watched. Moreover, we will pay particular attention to the intersection of gender, race, class, sexuality, and citizenship in reality TV representations and reception, as well as depictions of New Orleans and Louisiana culture on reality TV.

COMM 3420  Disability & Reality TV  (3 Credit Hours)
This course examines the ever-growing roster of reality television programs focused on the disabled body and mind. Bridging critical disability studies of reality television together we will explore the politics of ability in reality televisual texts with emphasis on representations of disability and their intersection with gender, race, class, sexuality, and citizenship. This course contextualizes our analysis in a broader history of disability as a site of public spectacle and the emergency of reality television as a genre. Students will interrogate the social function and consequences of these televisual texts as well as critically consider their own relationships to them.

COMM 3440  Critical Race Theory  (3 Credit Hours)
Critical race theory was a term that was coined to refer to an area of legal studies developed by African American, Latino, and Asian American scholars to address questions of racial injustice. However, the broader field of critical race theory today incorporates multi-disciplinary scholarship that works to create critical knowledge about social inequalities and racialized power relations.

COMM 3500  British Cultural Studies  (3 Credit Hours)
This course examines British contemporary multicultural society through the field and method known as cultural studies, which also has its intellectual roots in Britain. This course will introduce students to the terms, analytical techniques, and interpretive strategies commonly employed in cultural studies. Emphasis is on interdisciplinary approaches to exploring how everyday cultural processes and cultural artifacts are produced and how meaning is shaped through contestations of race, class and gender, and national identity. Through discussion, research, and writing, class members investigate these varied dimensions of British multiculture; learn to understand them in their broader historical, aesthetic, and political contexts.

COMM 3510  Environmental Comm  (3 Credit Hours)
The purpose of this course is to provide an understanding and analysis of communication processes used in defining environmental issues and shaping environmental policies. Topics include defining nature and environment; diverse audiences and environmental messages; developing strategies for risk communication; and creating effective environmental campaigns. Case studies of successful and unsuccessful environmental communication will be examined.
COMM 3520 Topics in Cinema and Politics (3 Credit Hours)
This course focusses on the relationship between cinema and politics as it pertains to formal, historical, and institutional ways of analyzing film. Topics will include environmentalism and contemporary eco cinema, sexual representation and pornography, and social problem films during the progressive Era in the United States Hollywood, silent cinema, global and national cinemas will be included as they are relevant to the topic covered.

COMM 3550 Third World Cinema (3 Credit Hours)
This course surveys the cinematic practices of the developing nations of Africa, Asia, Latin America and the Middle East. The filmic practice, at once revolutionary and ideological, has not only produced some of the world's most striking filmic innovations, but is now recognized as having initiated a new phase and expanded definitions of the art of cinema. The issues to be addressed include: the development of a national cinema, the impact of politics on film style, video and television culture, the commonalities and differences in modes of production, the relationship of film to the societies' values and cultures and the role of cinema as a mediation of history.

COMM 3560 History of Animation (3,4 Credit Hours)
This course examines the history of animation within the field of film studies. The shift to digital cinema has encouraged historians and theorists to revise distinctions between animation and film and to reckon with the pervasiveness of moving image media created through diverse techniques. To understand the implications of this shift and the significance of animation within media history, this course analyzes animation genres, techniques, and styles and investigates theories of animation as they developed from the late 19th century up to the present.

COMM 3600 Documentary Film (3 Credit Hours)
The films to be studied in this course are selected from the spectrum of documentary film practice from the 1920s to the present. Concentration will be on specific topics as well as an historical overview. Consideration placed on the developing and shifting conception of documentary film practice, social issues, political and propagandistic values, and documenting other.

COMM 3610 Alternative Journalism (3,4 Credit Hours)
This course balances the practical development of literary journalistic skills with academic inquiry into the theorizing and development of journalism that conceptualized itself as an alternative to mainstream news content, media and practices. It will also examine the changing meaning of the word alternative in relation to journalistic genres.

COMM 3650 Feminist Doc & New Media (3 Credit Hours)
A service-learning, praxis-oriented course in which students develop analytical and reflective skills by critiquing and creating feminist documentation in various media. Study of history and theory of feminist documentary filmmaking and new media will be complemented with learning production and postproduction skills. Weekly volunteer work will be done with an organization serving women and girls in New Orleans.

COMM 3700 Digital Arc and Cult Memory (3 Credit Hours)
This course combines theory and methods in the study of media archives, cultural memory, and historiography. This course works with community partners to create digital stories and their archival repositories.

COMM 3720 Disability Media Studies (3 Credit Hours)
In this class, we will explore the relationship between disability and media. Our analyses will span film, television, advertisement, new media, social media, media technologies, and other cultural mediums across history and into the present. The beginning of the course will introduce students to the field of disability studies and its relevance to media studies. Through an interdisciplinary lens, students will consider how people with disabilities were and are represented in the media with particular attention to how disability intersects with gender, race, sexuality, and class identity. Beyond themes of representation, our course deeply interrogates disability media access. We will consider how people with disabilities have responded to inaccurate and inaccessible media and innovatively used media outlets to represent themselves and produce culture on their own terms.

COMM 3750 Digital Cinema (3 Credit Hours)
This course introduces students to the history of digital cinema and examines the cultural and political implications of our evolving digital media environment. The transition to the everyday use of digital technologies has been theorized as remediating, relocating, and converging earlier media forms. This course explores the place of film history and theory in this transition and it considers whether this transition marks the end of cinema.

COMM 3800 Cine Reception Cult Memo (3 Credit Hours)
This course investigates historical changes in film audiences, film exhibition and film reception from the silent to the contemporary period as well as the issue of cultural memory and cinema. Issues focusing on who the audience for cinema has been during different historical periods, that changes have taken place in the venues in which films have been shown and cinema reception as cultural history are explored. The course also theorizes questions of reception and memory in terms of psychoanalysis, oral history and the public sphere. This course includes an optional service learning component. COMM 3150, Film Analysis, is recommended but not required.

COMM 3810 Special Topics (3-4 Credit Hours)
A detailed study of particular issues, problems, and developments in the history, theory, and criticism of communication. Topics may be drawn from any area of communication, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture, and similar themes.

COMM 3811 Special Topics (3-4 Credit Hours)
COMM 3812 Special Topics (3-4 Credit Hours)
COMM 3813 Special Topics (3-4 Credit Hours)
COMM 3814 Special Topics (3-4 Credit Hours)
COMM 3820 Special Topics (3-4 Credit Hours)
COMM 3890 Service Learning: COMM 3200 (0-1 Credit Hours)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course.
COMM 4180 Communication and Cultural Analysis
This course focuses on three key aspects of contemporary Hollywood cinema, namely, the film industry, film form and style, and the production, distribution, and reception of films in the digital age. Key topics include conglomeratization of the film industry, the blockbuster film, films as a franchise, the rise of independent cinema, and independent films, digital distribution, the role of film festivals, and pop-up cinema. The course concludes with how the film experience is changing in the era of digital distribution and multiple screens.

COMM 4160 Contemporary Chinese Cinema (3 Credit Hours)
This course offers a survey of Chinese-language films made from mid-1980s to early 2000s. The class will focus on three aspects of contemporary Chinese cinema: its artistic features, historical context, and socio-political implications and tackle the following questions:
What is a Chinese* cinema? How do contemporary Chinese filmmakers inherit the studio system, synchronized sound. Contemporary independent production, distribution, and reception of films in the digital age. Key topics include conglomeratization of the film industry, the blockbuster film, films as a franchise, the rise of independent cinema, and independent films, digital distribution, the role of film festivals, and pop-up cinema. The course concludes with how the film experience is changing in the era of digital distribution and multiple screens.

COMM 4170 U.S. Film History (3 Credit Hours)
This course covers major formal, industrial and cultural issues in the history of cinema in the United States from 1895 to the present. Course topics include the formal distinctiveness of the early period, the emergence of continuity editing and the classical Hollywood style, post-classical cinema. Monopolistic industry practices, exhibition venues, the studio system, synchronized sound. Contemporary independent production, and the relationship between film and commodity culture. Case studies on censorship, the representation of race and black radical politics, and female spectatorship integrate formal, industrial and cultural analysis.

COMM 4180 African Cinema (3 Credit Hours)
This course will provide a critical and interdisciplinary look at the development of African cinema from its inception in the 1960s to the present. In looking at this period, we will move from the sociopolitical upheavals of late colonialism to the recent phase of introspection and diversification. The relationship of cinematic practices to transformation in the social and economic sphere will be examined, as well as the creation of distinctively African film styles based on oral traditions. In pursuing these topics, we will consider the impact of technology, history and culture, ties to the cinema of other developing nations and co-productions.

COMM 4190 Intro Latin Amer Film (3 Credit Hours)
The development of cinema in Latin America from its arrival as an imported technology to the present. Films studied in relation to the sociopolitical environment and emphasis placed on close analysis as well as a contextual understanding of the material. Topics include the struggle to create national Film industries, the art film and New Cinema movements, and recent trends in countries such as Mexico and Argentina.

COMM 4200 Media Literacy/Media Educ II (3 Credit Hours)
This is the second semester of a two-semester course that introduces students to media literacy—what it is, media education, and basic media pedagogy. In the second semester, students put to use the media literacy knowledge gained in the first semester by applying those pedagogical considerations in the classroom, assessing student outcomes, and effectively teaching media literacy concepts.

Prerequisite(s): COMM 3200.

COMM 4210 Feminism, Sci-Fi & Technology (3,4 Credit Hours)
This course considers how contemporary science fiction, new technologies and critical writings about feminism, gender, identity and the body interconnect. Topics under consideration include differently gendered worlds, horror, alien invasions, parasitical relationships, cyborg embodiment, and the gendering of computer and Internet settings.

COMM 4270 SciFi, Sex and Race (3 Credit Hours)
While science fiction forces us to see what is familiar in new and surprising ways, imagining the unfamiliar also builds upon the familiar. This makes sci-fi a good 'venue' to study the widespread assumptions about human nature in different settings. This course interrogates how we negotiate these basic human categories through various science fiction films and theoretical essays. Reflection on these topics will hopefully provoke fascinating and difficult philosophical questions about the nature of reality, the limits of human knowledge, the notions of personal (racial, ethnic, sexual) identity, and the nature and foundations of universality of these categories.

COMM 4280 Race, Ethnicity & Television (3 Credit Hours)
This course examines race and ethnicity in American television from the 1950s to the present. More specifically, it explores the social, political, historical and institutional contexts that have shaped representations of Asian/Americans, Latino/as, and African Americans on television. By analyzing racial and ethnic images within the development of television, students will gain a deeper understanding of the complex histories that shaped the formation of each ethnic group. While the focus of the course centers on the politics of representation, it moves the discussion beyond the question of stereotypes to explore how concepts such as Orientalism, whiteness, multiculturalism, and post-race contribute to our understanding of racial politics in the United States.

COMM 4300 Cultural Politics & Cinema (3 Credit Hours)
This course examines the relationship between media, society, and political discourse as they manifest in the complexities of cultural production beyond US borders. As such, it will be framed around issues pertaining to historical formation and broader political dynamics. This course presumes familiarity with methods of film or media analysis. May repeat under a different topic (COMM 4301, 4302) for credit. Notes: Fulfills capstone requirement for FMST. For capstone credit, students should register for FMST 5110 with 0 credits.

COMM 4301 Media & Democracy in Latin Am (3 Credit Hours)
This course examines the role of the mass media in contemporary Latin American democracies. In particular, it investigates whether communication institutions and practices have contributed to promote or to curb the regions' process of democratization, especially in terms of the quality of political representation and political accountability. The course also examines the impact of social and political democratization on the region's media systems.

COMM 4302 Immig Discourse in Europe (3 Credit Hours)
The course explores how immigration was conceptualized in different historical periods and the relationship between immigration debate and political discourse in particular historical contexts. The course then examines how recent immigration patterns have been conceptualized and how this conceptualization is related to the emergence of the extreme right in Western Europe.
COMM 4303 Globalization & Malaysian Film (3-4 Credit Hours)
This course engages students in cross-cultural analysis and introduces the unique postcolonial and multicultural context of Malaysian cinema. We will examine historical and current globalization through the lens of the new and acclaimed wave of independent and experimental films that have been earning accolades in international festivals around the world. The course will examine key issues pertaining to gender, ethnорacial, religious and national identities in Malaysia, as well as the cultural geopolitics of the relationship between the “West” and “East.”

COMM 4350 Gender and The Cinema (3 Credit Hours)
Explores the position of women in Hollywood and other cinemas by studying the evolution of women’s cinema and of feminist film theories from the 1920s to the present. The history of feminist film analysis, focusing on theoretical sociological, psychoanalytic, semiological underpinning of feminist critiques of both commercial and independent avant-garde film practices.

COMM 4400 Media and the Public Sphere (3,4 Credit Hours)
This course explores theories of and debates about the public sphere, with a particular focus on the role of media in shaping power and democracy. Taking canonical theorists such as Hannah Arendt and Jürgen Habermas as our starting point, we explore the rich potential and the limitations of classic conceptualizations of the public sphere for understanding contemporary politics. We consider the role played by dynamics such as public debate, gender, sexuality, race, crowds, mass culture, political paranoia, and fake news in shaping twentieth and twenty-first century political ideals and practices, examining the similarities and difference in how these dynamics work in global contexts from capitalism to state socialism, in the Global North and in the Global South. We also consider what insights might be gained by an interdisciplinary approach to questions of the public sphere.

COMM 4450 Brazilian TV & Culture (3,4 Credit Hours)
This course analyzes the dynamic interactions between television, culture and power in Brazil. It emphasizes the role of television as one of the central institutions that mediate the constitution of hegemonic values and meanings in Brazilian society, with an emphasis on the dominant media company (TV Globo) and on the most popular TV genre (telenovelas).

COMM 4450 Internship Studies (3 Credit Hours)
This course will challenge the student to apply intelligently the principles, methods, and skills that they have learned in academic settings to the practical experience of an internship with a nonprofit, social service organization. Topics include learning about communication within a complicated political and cultural context, how context affects rhetorical strategies, adaptive communication among diverse social groups, and how these experiences work to prepare the student for a career in a communication field. Provides combination of academic work, and practical experiences in communication with specific service learning organizations.

COMM 4570 Internship Studies (3 Credit Hours)
This course will challenge the student to apply intelligently the principles, methods, and skills that they have learned in academic settings to the practical experience of an internship with a nonprofit, social service organization. Topics include learning about communication within a complicated political and cultural context, how context affects rhetorical strategies, adaptive communication among diverse social groups, and how these experiences work to prepare the student for a career in a communication field. Provides combination of academic work, and practical experiences in communication with specific service learning organizations.

COMM 4570 Media Moral Panics & Crisis (3 Credit Hours)
This course will focus primarily on how fears spread, become a major public concern, and turn into a social and political crisis. We will look at controversies, panics around issues such as pedophilia, drugs and terrorism, and analyze the processes that elicit alarm about perceived threats to society and produce ‘folk devils’ (enemies of society).

COMM 4610 National Cinema Latin Am (3 Credit Hours)
A detailed historical, thematic, and stylistic analysis of individual national cinemas in Latin America (Cuban cinema, Brazilian cinema, Mexican cinema, for example). Emphasis will be placed on understanding the development of national cinema industries and movements in the context of other social, economic, political, and aesthetic forces. Notes: May be repeated for credit if the national cinema studied is different. COMM 4190, Intro to Latin American Cinema, is highly recommended, although not a prerequisite.

COMM 4670 Creative Econ Topics (3 Credit Hours)
This course explores the intersections between political economy and culture in the formation and sustainability of creative economies and creative production. Topics to be covered in this course may include: creative and cultural policy, creative classes, cultural labor, specific cultural industries, and film and media economies.

COMM 4750 New Media Theory (3 Credit Hours)
This course will explore the conceptual frameworks and theories that are essential to an understanding of modern media, a succession of new media including photography, film and digital media. We will focus on theories of semiotics, ideology, psychoanalysis, narrative, modernism, and postmodernism, which have formed the bases for analyzing forms of reproduction from the mechanical to the digital. We will consider the interrelationships, linkages and ruptures, between different media and the process of remediation in which the content of a new medium is the older medium that it has replaced. We will end by examining digital media in the context of social/cultural/political formations, gender, race, community, public sphere and global flows.

COMM 4770 Theories of Consum &Prod (3 Credit Hours)
This course analyzes theoretical construction of media audiences and media producers historically and in contemporary contexts. Liberal, Marxist and feminist paradigms will be explored along with a variety of research methods used in audience and producer studies.

Prerequisite(s): COMM 3260.
COMM 4810 Special Topics (3,4 Credit Hours)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. May be taken twice for credit on different topics.

COMM 4811 Special Topics (3 Credit Hours)
COMM 4812 Special Topics (3 Credit Hours)
COMM 4813 Special Topics (3 Credit Hours)
COMM 4814 Special Topics (3 Credit Hours)
COMM 4820 Special Topics (3 Credit Hours)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. May be taken twice for credit on different topics. This course satisfies the capstone requirement.

COMM 4830 Spectacular Cinema (4 Credit Hours)
This course investigates the spectacular nature of cinema and the function of spectacle and visual/special effects in the history of cinema. Filmic expressions of spectacle are studied in dialogue with philosophers and theorists equally interested in spectacular aesthetics and concepts ranging from the sublime and uncanny to commodity fetishism and attention economy.

COMM 4840 Cinema, History, Archive (3,4 Credit Hours)
This course focuses on cinema as a site for interrogating historical, textual, institutional and theoretical issues about the archive. Topics include tropes of archive, the media/ted archive, films as cultural memory, histories of cinema archives, the electronic archive, theories of the archive, and archives in relation to power and knowledge. Film examples are drawn from contemporary Hollywood cinema, silent cinema, classical Hollywood cinema, experimental documentary, and independent and avant-garde cinema.

COMM 4850 Cinema Technol Modernity (3 Credit Hours)
Focus on cinema as a cultural practice during the early and late periods especially as it has shaped perception and experience. Films are assessed for the way they reenact the logic of key technologies and for the way they represent technologies. Cinema is also viewed as a technology of vision in its own right. In particular, 19th century optical toys, the railroad, photography, the computer and cinema are assessed in relation to shifting conceptions of space and time, modes of experience, the terms of everyday life, and the status of mass culture and reproduction in the modern and postmodern periods.

COMM 4860 Film Theory (4 Credit Hours)
An advanced course focusing on contemporary French, British and U.S. film theory. Topics include realism and phenomenology, Russian Formalism, neoformalism, structuralism, narratology, Marxism and ideology, psychoanalysis, cinema semiotics, feminism and poststructuralism. Debates covered assess film as a text; the relationship between film and the spectator; and the implications of cinema as a historical phenomenon, including the status of digital cinema. Early, classical Hollywood, contemporary, and avant-garde films screened. A required film journal helps students develop analytical skills. Required for the Film Studies major or minor.

Prerequisite(s): COMM 3150.

COMM 4910 Independent Study (1-3 Credit Hours)
Open to qualified juniors and seniors only.

COMM 4920 Independent Study (1-3 Credit Hours)
Open to qualified juniors and seniors only.

COMM 4990 Honors Thesis (3 Credit Hours)
This course will enable students to integrate knowledge about the specific nature of film as a medium and the history of theoretical debates that have shaped the study of film and of cinema. It will also provide students with an opportunity to apply the formal and theoretical knowledge gained from the two required courses for the major to consider new theoretical problems about cinema, revisions, and reassessments of earlier debates in film studies and related fields, questions of national cinema, and/or new developments in filmmaking. Fulfills capstone requirement for FMST when approved as film topic. In this case, students should also register for FMST 5110 with 0 credits.

COMM 5000 Honors Thesis (4 Credit Hours)
This course will enable students to integrate knowledge about the specific nature of film as a medium and the history of theoretical debates that have shaped the study of film and of cinema. It will also provide students with an opportunity to apply the formal and theoretical knowledge gained from the two required courses for the major to consider new theoretical problems about cinema, revisions, and reassessments of earlier debates in film studies and related fields, questions of national cinema, and/or new developments in filmmaking. Fulfills capstone requirement for FMST when approved as film topic. In this case, students should also register for FMST 5110 with 0 credits.

COMM 6210 Seminar In Comm Studies (3 Credit Hours)
An intensive study of a specific issue or set of issues in rhetoric and public address, interpersonal communication, or mass communication (e.g. propaganda, legal communication research), or of an individual theorist (e.g. Aristotle. Kenneth Burke), or genre of discourse (e.g. ideological argumentation, the rhetoric of social movements). May be taken twice for credit on different topics.

COMM 6220 Seminar In Comm Studies (3 Credit Hours)
An intensive study of a specific issue or set of issues in rhetoric and public address, interpersonal communication, or mass communication (e.g. propaganda, legal communication research), or of an individual theorist (e.g. Aristotle, Kenneth Burke), or genre of discourse (e.g. ideological argumentation, the rhetoric of social movements). May be taken twice for credit on different topics. This course satisfies the capstone requirement.
Community Health Sciences (CHSC)

CHSC 6000  Reports/Publi/Proposals  (1 Credit Hour)
CHSC 6320  Intro To Research  (2 Credit Hours)
CHSC 6340  Hlth Promo & Ed/Cv Hlth  (2 Credit Hours)
CHSC 6390  Maternal & Child Hlth Ed  (2 Credit Hours)
CHSC 7400  Gender Pers In Health  (2 Credit Hours)

Computational Science (COSC)

COSC 2020  Comput Concepts & Applic  (4 Credit Hours)
This course introduces students to the foundations of algorithm development and programming, basics of matrix algebra and numerical analysis, solving ordinary differential equations.

Corequisite(s): COSC 2021.

COSC 2021  Computing Concepts & App Lab  (0 Credit Hours)
Lab for ENGP 2020

Corequisite(s): COSC 2020.

COSC 3000  C++ Prog For Sci & Engr  (3 Credit Hours)
This course begins with an introduction to C++ and will cover up to relatively sophisticated programming techniques including data structures, abstract data types, interfaces, and algorithms. The goal is for the student to get a taste of the design and implementation of large programs and to become proficient at programming in C++.

COSC 3100  Data Visualization  (3 Credit Hours)
COSC 3200  Large Scale Computation  (3 Credit Hours)
COSC 6000  C++ Prog For Sci & Engr  (3 Credit Hours)
This course begins with an introduction to C++ and will cover up to relatively sophisticated programming techniques including data structures, abstract data types, interfaces, and algorithms. The goal is for the student to get a taste of the design and implementation of large programs and to become proficient at programming in C++.

COSC 6100  Data Visualization  (3 Credit Hours)
COSC 6200  Large Scale Computation  (3 Credit Hours)
COSC 6600  Comput Model Biomed Sys  (4 Credit Hours)
The objective of this graduate course is to provide students with the skills and knowledge necessary for computational modeling of biological and physiological systems. The first half of the course will cover introduction to UNIX, elements of programming

Corequisite(s): COSC 6601.

COSC 6601  Comp Model of Biomed Sys Lab  (0 Credit Hours)
Lab section for COSC 6600

Corequisite(s): COSC 6600.

COSC 6700  Math Models Ecol & Evolution  (3 Credit Hours)
An introductory course in mathematical modeling in biology with emphasis on construction and interpretation of models in ecology. The goals of the course are to provide training in a wide variety of mathematical and computational techniques that are used

Computer Science (CMPS)

CMPS 1005  Python Programming  (3 Credit Hours)
An introductory course on computer programming, in which the students design, implement, test, and debug programs for computational problems using Python programming language. This course emphasizes program design process, object-oriented software development approach, and practical programming skills that translate to programming in other modern languages. Assignments include practical problems drawn from various fields (e.g. biology, linguistics, graphics, and games). Open to high-school students only, no prerequisites. Credits don't count toward Coordinate Major in Computer Science.

CMPS 1500  Intro to Computer Science I  (4 Credit Hours)
Computational tools are a critical part of our everyday lives. Software is the driving force behind cutting-edge scientific discovery, blockbuster entertainment, and today's fast-paced marketplace. This course is an introduction to techniques, ideas, and problem-solving approaches that are used to develop some of these tools. At a high level, we focus on developing "computational thinking", which is the practice of using abstraction to design and implement algorithms and software to solve problems that arise in many different areas of our daily lives, such as networks, social media, and scientific computing, to name just a few. At a practical level, students will design, implement, test and document their programs to learn introductory programming concepts, such as: data types and data structures (e.g. lists, dictionaries, trees); programming techniques (modular design using functions, recursion, object-oriented programming); performance analysis via theoretical estimate, profiling and timing. Most assignments in this course are programming assignments aimed to teach the students to express their ideas in efficient and elegant code; no prior programming experience is necessary to join and succeed in the course. Lecture periods are dedicated to introducing new material, discussions, individual and group activities. Lab periods are used for programming practice. CMPS 1500 is the first course for the Coordinate Major in Computer Science.

Corequisite(s): CMPS 1501.

CMPS 1501  Intro to Computer Sci I Lab  (0 Credit Hours)
Corequisite lab of CMPS 1500.

Corequisite(s): CMPS 1500.
**CMPS 1600 Intro to Computer Science II (4 Credit Hours)**
This is the second course in the introductory course sequence for Coordinate Major in Computer Science and is the continuation of CMPS 1500. While CMPS 1500 focuses on a broad array of topics in computer science and a single language (Python), this class focuses on several core topics in the design, analysis and implementation of computational tools that are drawn from the fields of data structures, software engineering, and programming languages (such as Java, C, Haskell): object-oriented programming, test-driven development; data structures and abstract data types; imperative programming and memory management; functional programming. By solving practical, real-life problems in different programming languages and in different ways, students learn to select a language and approach most appropriate for the situation, and prepare to learn new languages independently. The high-level goal of this course is to train students to be able to draw from a versatile set of skills, which in turn will provide a strong foundation for further study in computer science.

**Prerequisite(s):** CMPS 1500.
**Corequisite(s):** CMPS 1601.

**CMPS 1601 Intro to Comp Science II Lab (0 Credit Hours)**
Corequisite lab of CMPS 1600.

**CMPS 1940 Intro Topics in Computer Sci (1-4 Credit Hours)**
**CMPS 2120 Programming and Prob Solving (3 Credit Hours)**
An introductory course on computer programming and problem-solving using computers. In this course students design, implement, test and debug programs for computational problems using Python programming language. This course emphasizes program design process, object-oriented software development approach, and practical programming skills that translate to programming in other modern languages. Assignments include practical problems drawn from various fields (such as biology, linguistics, graphics, and games).

**CMPS 2170 Intro to Discrete Math (3 Credit Hours)**
This course is an introduction to several areas of mathematics that are particularly useful in computer science. The topics include an introduction to predicate and propositional logic, mathematical induction, combinatorics and counting, and discrete probability theory.

**CMPS 2200 Intro to Algorithms (3 Credit Hours)**
This course is an introduction to the design and analysis of algorithms, and covers several basic algorithmic paradigms and their application to core computational problems in graph theory and optimization, as well as analysis of time and space complexity. The primary focus of the course will be on understanding the divide-and-conquer, greedy and dynamic programming paradigms for algorithm design as well as the problem areas to which they can be applied. Example application areas include graph theory, discrete optimization, numeric and scientific computing and machine learning. Topics usually include: asymptotic analysis and big-O notation; divide-and-conquer algorithms; recurrences and the master method; greedy algorithms; graph algorithms (Breadth-First Search, Depth-First Search, Connectivity and Shortest Paths); dynamic programming; linear programming; lower bounds and computational complexity.

**Prerequisite(s):** CMPS 1600 and (MATH 2170 or CMPS 2170).
**Corequisite(s):** CMPS 2201.

**CMPS 2201 Intro to Algorithms Lab (0 Credit Hours)**
Corequisite lab of CMPS 2200.

**Prerequisite(s):** CMPS 1600 and (MATH 2170 or CMPS 2170).

**CMPS 2300 Intro to Comp Sys & Networking (3 Credit Hours)**
Modern computer systems must take advantage not only of the latest hardware technology, but also of the ability to compute and communicate over a network. In this course the students will study the principles behind the design of modern operating systems and distributed systems through theoretical study of classic solutions and hands-on programming assignments in C. The study of architecture and organization of modern operating systems focuses on the concepts of virtualization, concurrency, and persistence. In the study of distributed systems we will examine topics such as protocol design, asynchronous and synchronous communication, and layered network architecture.

**Prerequisite(s):** CMPS 1600.

**CMPS 2940 Transfer Coursework (1-4 Credit Hours)**

**CMPS 3130 Intro Comp Geom (3 Credit Hours)**
This course provides an introduction to geometric algorithms and geometric data structures. Computational Geometry is a young discipline which enjoys close relations to mathematics and to various application areas such as geometric databases, molecular biology, sensor networks, visualization, geographic information systems (GIS), VLSI, robotics, computer graphics and geometric modeling. Covered topics include fundamental geometric algorithm design and analysis paradigms, geometric data structures for planar subdivisions and range searching, algorithms to compute the convex hull, Voronoi diagrams, and Delaunay triangulation, as well as selected advanced topics.

**Prerequisite(s):** CMPS 2200.

**CMPS 3140 Intro Artificial Intelligence (3 Credit Hours)**
The aim of this course is to provide the student with an introduction to the main concepts and techniques playing a key role in the modern arena of artificial intelligence. In addition to covering the main topics that concern modern AI, particular attention will be devoted to its applications in several fields. Among the topics covered are: "What is an intelligent artificial agent?", problem solving using search and constraint satisfaction, uncertainty, Bayesian networks and probabilistic inference, supervised learning, planning, sequential decision problems, as well as several additional topics.

**Prerequisite(s):** CMPS 2200.

**CMPS 3210 Algs Comp Struct Bio (3 Credit Hours)**
Over the last few decades, as we have been able to determine whole genome sequences, structural biologists have sought to determine and catalog protein structures with an increasing reliance on computational methods. Automated methods to analyze protein structure make it possible to leverage information from previously solved structures, and to interpret experimental data in a principled way. In this course, we will focus on the myriad of algorithms for analyzing numerous aspects of protein structure and protein-protein interactions.

**Prerequisite(s):** CMPS 1500, 1600 and 2200.
CMPS 3240 Intro to Machine Learning (3 Credit Hours)
This course provides an introduction to the fundamental concepts of machine learning and statistical pattern recognition. In addition, several examples of applications will be described. The topics covered include generative/discriminative and parametric/non-parametric supervised learning, including neural networks; unsupervised learning, including clustering, dimensionality reduction and kernel methods; learning theory, including tradeoffs, large margins and VC theory; reinforcement learning, including criteria for optimality, brute force methods, value function methods and direct policy search; feedforward/feedback adaptive control, direct/indirect adaptive control methods; and various applications.

Prerequisite(s): CMPS 1500 and (CMPS 2170 or MATH 2170).

CMPS 3250 Theory of Computation (3 Credit Hours)
This course is an introduction to the theory of computation. It begins with regular languages and their representation as finite state automata, and continues with context free languages and pushdown automata. Turing machines and the Church-Turing Thesis are also considered, as well as decidability and reducibility. The basic notions of complexity theory area also covered, including P and NP for time complexity, as well as basic results about space complexity.

CMPS 3260 Advanced Algorithms (3 Credit Hours)
This course focuses on advanced techniques in the design and analysis of algorithms and illustrates how they are used in deriving a variety of new-classic results. Topics include graph algorithms, randomized algorithms, parallel computing, linear programming, and approximation algorithms.

Prerequisite(s): CMPS 2200.

CMPS 3280 Information Theory (3 Credit Hours)
This course is an introduction to Shannon's mathematical theory of information. It considers basic concepts such as information content, entropy and the Kullback-Leibler distance, as well as areas such as data compression and Shannon's Source Coding Theorem, coding, prefix codes, lossless channels and their capacity, and Shannon's Noisy Coding Theorem. Applications to various areas are also featured in the course.

Prerequisite(s): MATH 3050 or 3090.

CMPS 3300 Software Studio (3 Credit Hours)
This is a project-oriented course on fundamentals of software development and software engineering. Working in teams, students apply a recognized software engineering methodology, a modern programming language, and software development tools (including an IDE, debugger, version control system, and testing framework) to design and implement a semester-long project – a software solution for a real-world problem. The high goal of the course is to train students to function efficiently in a real-world software development environment. To help reach that goal, the students do a lot of independent learning, teamwork, documentation and public presentation of their product and design process. The particular technologies employed in the course may change in synchrony with changes in the software engineering field, currently the focus is on engineering software-as-a-service using Ruby for programming language and Rails for web development framework.

Prerequisite(s): CMPS 2200.

CMPS 3310 Logic in Computer Science (3 Credit Hours)
This course is an introduction to logic and its applications in computer science. The topics covered include soundness and completeness of propositional logic, predicate logic, linear time temporal logic and branching time temporal logics, and their expressive power, frameworks for software verification, Hoare triples, partial and total correctness, modal logics and agents, and binary decision diagrams.

Prerequisite(s): CMPS 2200 and (CMPS 2170 or MATH 2170).

CMPS 3350 Intro to Computer Graphics (3 Credit Hours)
A comprehensive introduction to the mathematics and algorithms that drive today's digital special effects, animation, and games. Designed as a hands-on course, students will gain experience in building 2D/3D interactive applications using OpenGL. Topics covered will include geometric transformations, projections, raster algorithms, 3D object models (surface and volume), visible surface algorithms, texture mapping, lighting/shading, ray-tracing, anti-aliasing, and compositing.

Prerequisite(s): CMPS 1600.

CMPS 3360 Info and Sci Visualization (3 Credit Hours)
An introduction on how graphical representations of data can be used to aid understanding. This course details the theory and practice of designing effective information or scientific visualizations. The techniques learned in this class have wide applications to all fields in engineering and science, where due to increasing sizes and complexity, data now demands effective presentation and analysis. Topics will include iso-surfacing, volume rendering, transfer functions, vector/tensor fields, topological analysis, large data visualization, and uncertainty in visualizations.

Prerequisite(s): CMPS 1600 or 1600.

CMPS 3660 Special Topics in Computer Sci (1-3 Credit Hours)
This course varies from time to time, focusing on topics of interest to the faculty and students.

CMPS 3665 Special Topics Lab (1-3 Credit Hours)
Special Topics Lab.

CMPS 3890 Service Learning: CMPS 3300 (0 Credit Hours)
An optional service learning component is included in the Software Studio (CMPS 3300/6300) course. Students work with a non-profit organization and develop a website to help them in their work. This component provides a unique experience of communicating with a non-technical customer, converting their requirements into technical specifications, working to meet those requirements, continuously refining those requirements, experiencing real-life associated technical challenges (such as environment incompatibility, difference in data formats, restricted access to data), preventing and resolving those challenges, and seeing a product come to life.

CMPS 3940 Transfer Coursework (1-4 Credit Hours)
CMPS 4010 Capstone Project I (2 Credit Hours)
This is the first semester of a two-semester course devoted to the development of the student's capstone project, a required component of the Computer Science coordinate major. Under supervision of a faculty advisor in computer science, students use the tools of computer science to solve a problem from another discipline, usually their primary major area.
CMPS 4020 Capstone Project II (3 Credit Hours)
This is the second of a two-semester course devoted to the development of the student's capstone project, a required component of the Computer Science coordinate major. Under supervision of a faculty advisor in computer science, students use the tools of computer science to solve a problem from another discipline, usually their primary major area.

CMPS 4150 Multi-agent Systems (3 Credit Hours)
This course has two main goals. The first one is to give a broad overview of the fundamentals of multi-agent systems (MAS). MAS are playing an increasingly important role in Artificial Intelligence as distributed resources push for highly distributed forms of intelligence. The second aim is to provide a more in-depth discussion of selected MAS topics: game theory and voting from a computational point of view. Situated at the nexus between economics and computer science, these research areas provide a perfect example of interdisciplinary cross-fertilization and mutual enrichment and lie at the core of multi-agent systems theory. The course will provide the student with an understanding of how self-interested behavior and coordination can be formally modeled and implemented in societies of artificial agents.

CMPS 4250 Math Found Comp Security (3 Credit Hours)
This course studies the mathematics underlying computer security, including both public key and symmetric key cryptography, crypto-protocols and information flow. The course includes a study of the RSA encryption scheme, stream and clock ciphers, digital signatures and authentication. It also considers semantic security and analysis of secure information flow.

Prerequisite(s): (MATH 1160 or 1220) and (MATH 2170 or CMPS 2170).

CMPS 4610 Algorithms (3 Credit Hours)
This course covers fundamental algorithm design principles and data structures, basic notions of complexity theory, as well as an advanced introduction to parallel algorithms, randomized algorithms, and approximation algorithms. Topics include: divide-and-conquer, dynamic programming, amortized analysis, graph algorithms, network flow, map reduce, and more advanced topics in approximation algorithms and randomized algorithms.

Prerequisite(s): (CMPS 2170 or MATH 2170) and (CMPS 2200).

CMPS 4620 Artificial Intelligence (3 Credit Hours)
This course is designed for graduate students interested in understanding the design of autonomous intelligent agents. The course will cover fundamental notions and concepts such as uninformed and informed search, local search, constraint satisfaction and constraint-based optimization, Bayesian Networks, Markov Decision Problems and a short introduction on machine learning. Furthermore, advanced topics and applications in the context of natural language processing, reasoning about time, algorithmic game theory and computational social choice will be considered as well.

Prerequisite(s): CMPS 2200.

CMPS 4630 Computational Bio & Bioinform (3 Credit Hours)
This course is an introduction to computational methods in molecular biology. Topics covered include: sequence analysis and alignment, sequencing technologies, genome and metagenomic sequencing, protein structure and structure prediction, and phylogenetic analysis. No prior background in biology is assumed.

Prerequisite(s): (CMPS 2170 or MATH 2170) and CMPS 2200.

CMPS 4640 Computational Geometry (3 Credit Hours)
This course covers fundamental and advanced principles for designing and analyzing geometric algorithms and data structures, and their application to other disciplines. Computational Geometry is a young discipline which enjoys close relations to mathematics and to various application areas such as geometric databases, molecular biology, sensor networks, visualization, geographic information systems, VLSI, robotics, computer graphics and geometric modeling. Selected topics may include: Dynamic and kinetic data structures, geometric algorithms and data structures in two and higher dimensions, shape analysis and matching, robustness and implementation issues, geometric approximation algorithms.

Prerequisite(s): CMPS 4160, 6610, 3130 or 6640.

CMPS 4660 Special Topics (1-3 Credit Hours)
Special topics in Computer Science.

CMPS 4710 Computational Complexity (3 Credit Hours)
This course is an advanced introduction to the area of computational complexity. Topics covered include: impossibility and separability results for classical computation, interactive theorem proving and the PCP theorem, derandomization and hardness of approximation, and the quantum model of computation.

Prerequisite(s): (CMPS 3260 or MATH 3260) and (CMPS 4610 or 6610) or CMPS 3250.

CMPS 4720 Machine Learning (3 Credit Hours)
This course will cover fundamental and advanced topics in machine learning. Topics will include linear and logistic regression, Lasso, perceptrons, deep neural networks, support vector machines, kernel methods, graphical models, principal and independent component analysis and Gaussian processes. In addition to thoroughly addressing theoretical aspects, several examples will illustrate the application of the different techniques.

Prerequisite(s): (CMPS 2170 or MATH 2170) and CMPS 2200.

CMPS 4730 Machine Learning and NLP (3 Credit Hours)
This course focuses on advanced machine learning techniques and their application in the domain of natural language processing (NLP). Many real world machine learning problems deal with mapping data to structured representations, and in the NLP domain the output structure represents lexical, syntactical or semantic aspects of the text. Techniques covered in this course include discriminative and generative models including Structured Perceptron and Structured SVMs, Constrained Conditional Models, Probabilistic Graphical Models as well as Deep Learning techniques.

Prerequisite(s): CMPS 4720 and 3240.
CMPS 4750 Computer Networks (3 Credit Hours)
The objective of the course is to introduce students to the core concepts and analytic techniques in the design and analysis of computer networks and network protocols. We will explain both how computer networks work using the Internet as the paradigm and why they work from an optimization and control perspective.

Prerequisite(s): (CMPS 2170 or MATH 2170) and CMPS 2200.

CMPS 4760 Distributed Systems (3 Credit Hours)
This course covers the fundamental concepts in distributed computing. The objective is to introduce students to the core notions, algorithms, and analytic tools in the design of distributed systems. Recent developments in peer-to-peer systems, cloud computing, sensor networks, etc. will be used as case studies to help students establish a firm understanding of the philosophy and pitfalls in the design of computer systems when there is no global clock and when unpredictable failures and variable latency are the norm.

Prerequisite(s): (MATH 2170 or CMPS 2170) and CMPS 2200 and 2300.

CMPS 4910 Independent Study (1-3 Credit Hours)
This is a directed study course that allows a student to pursue a topic of particular interest under the direction of the computer science faculty member. No more than three hours of 4910-4920 may be counted toward satisfying the major requirements.

CMPS 4920 Independent Study (1-3 Credit Hours)
This is a directed study course that allows a student to pursue a topic of particular interest under the direction of a computer science faculty member. No more than three hours of 4910-4920 may be counted toward satisfying the major requirements.

CMPS 4940 Transfer Coursework (1-4 Credit Hours)
CMPS 4990 Honors Thesis (3 Credit Hours)
CMPS 5000 Honors Thesis (4 Credit Hours)
CMPS 5380 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

CMPS 5390 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

CMPS 6130 Intro Comp Geom (3 Credit Hours)
This course provides an introduction to geometric algorithms and geometric data structures. Computational Geometry is a young discipline which enjoys close relations to mathematics and to various application areas such as geometric databases, molecular biology, sensor networks, visualization, geographic information systems (GIS), VLSI, robotics, computer graphics and geometric modeling. Covered topics include fundamental geometric algorithm design and analysis paradigms, geometric data structures for planar subdivisions and range searching, algorithms to computer the convex hull, Voronoi diagrams, and Delaunay triangulation, as well as selected advanced topics.

CMPS 6140 Intro Artificial Intelligence (3 Credit Hours)
The aim of this course is to provide the student with an introduction to the main concepts and techniques playing a key role in the modern arena of artificial intelligence. In addition to covering the main topics that concern modern AI, particular attention will be devoted to its applications in several fields. Among the topics covered are: “What is an intelligent artificial agent?” problem solving using search and constraint satisfaction, uncertainty, Bayesian networks and probabilistic inference, supervised learning, planning, sequential decision problems, as well as several additional topics.

CMPS 6150 Multi-agent Systems (3 Credit Hours)
This course has two main goals. The first one is to give a broad overview of the fundamentals of multi-agent systems (MAS). MAS are playing an increasingly important role in Artificial Intelligence as distributed resources push for highly distributed forms of intelligence. The second aim is to provide a more in depth discussion of selected MAS topics: game theory and voting from a computational point of view. Situated at the nexus between economics and computer science, these research areas provide a perfect example of interdisciplinary cross-fertilization and mutual enrichment and lie at the core of multi-agent systems theory. The course will provide the student with an understanding of how self-interested behavior and coordination can be formally modeled and implemented in societies of artificial agents.

CMPS 6210 Algs Comp Struct Bio (3 Credit Hours)
Over the last few decades, as we have been able to determine whole genome sequences, structural biologists have sought to determine and catalog protein structures with an increasing reliance on computational methods. Automated methods to analyze protein structure make it possible to leverage information from previously solved structures, and to interpret experimental data in a principled way. In this course, we will focus on the myriad of algorithms for analyzing numerous aspects of protein structure and protein-protein interactions.

CMPS 6240 Intro to Machine Learning (3 Credit Hours)
This course provides an introduction to the fundamental concepts of machine learning and statistical pattern recognition. In addition, several examples of applications will be described. The topics covered include generative/discriminative and parametric/non-parametric supervised learning, including neural networks; unsupervised learning, including clustering, dimensionality reduction and kernel methods; learning theory, including tradeoffs, large margins and VC theory; reinforcement learning, including criteria for optimality, brute force methods, value function methods and direct policy search; feedforward/feedback adaptive control, direct/indirect adaptive control methods; and various applications.

Prerequisite(s): CMPS 1500.

CMPS 6250 Math Found Comp Security (3 Credit Hours)
This course studies the mathematics underlying computer security, including both public key and symmetric key cryptography, cryptographic protocols and information flow. The course includes a study of the RSA encryption scheme, stream and clock ciphers, digital signatures and authentication. It also considers semantic security and analysis of secure information flow.
CMPS 6280 Advanced Algorithms (3 Credit Hours)
This course focuses on advanced techniques in the design and analysis of algorithms and illustrates how they are used in deriving a variety of now-classic results. Topics include graph algorithms, randomized algorithms, parallel computing, linear programming and approximation algorithms.

CMPS 6280 Information Theory (3 Credit Hours)
This course is an introduction to Shannon's mathematical theory of information. It covers basic concepts such as information content, entropy and the Kullback-Leibler distance, as well as areas such as data compression and Shannon's Source Coding Theorem, coding, prefix codes, lossless channels and their capacity, and Shannon's Noisy Coding Theorem. Applications to various areas are also featured in the course.

CMPS 6310 Logic in Computer Science (3 Credit Hours)
This course is an advanced introduction to the area of computational complexity. Topics covered include: impossibility and separability results for classical computation, interactive theorem proving and the PCP theorem, derandomization and hardness of approximation, and the quantum model of computation.

CMPS 6360 Info and Sci Visualization (3 Credit Hours)
An introduction on how graphical representations of data can be used to aid understanding. This course details the theory and practice of designing effective information or scientific visualizations. The techniques learned in this class have wide applications to all fields in engineering and science, where due to increasing sizes and complexity, data now demands effective presentation and analysis. Topics will include iso-surfacing, volume rendering, transfer functions, vector/tensor fields, topological analysis, large data visualization, and uncertainty in visualizations.

CMPS 6620 Artificial Intelligence (3 Credit Hours)
This course is designed for graduate students interested in understanding the design of autonomous intelligent agents. The course will cover fundamental notions and concepts such as uninformed and informed search, local search, constraint satisfaction and constraint-based optimization, Bayesian Networks, Markov Decision Problems and a short introduction on machine learning. Furthermore, advanced topics and applications in the context of natural language processing, reasoning about time, algorithmic game theory and computational social choice will be considered as well.

CMPS 6630 Computational Bio & Bioinform (3 Credit Hours)
This course is an introduction to computational methods in molecular biology. Topics covered include: sequence analysis and alignment, sequencing technologies, genome and metagenomic sequencing, protein structure and structure prediction, and phylogenetic analysis. No prior background in biology is assumed.

CMPS 6640 Computational Geometry (3 Credit Hours)
This course covers fundamental and advanced principles for designing and analyzing geometric algorithms and data structures, and their application to other disciplines. Computational Geometry is a young discipline which enjoys close relations to mathematics and to various application areas such as geometric databases, molecular biology, sensor networks, visualization, geographic information systems, VLSI, robotics, computer graphics and geometric modeling. Selected topics may include: Dynamic and kinetic data structures, geometric algorithms and data structures in two and higher dimensions, shape analysis and matching, robustness and implementation issues, geometric approximation algorithms.

CMPS 6660 Special Topics in Computer Sci (1-3 Credit Hours)
This course varies from time to time, focusing on topics of interest to the faculty and students.
CMPS 6730 Machine Learning and NLP (3 Credit Hours)
This course focuses on advanced machine learning techniques and their application in the domain of natural language processing (NLP). Many real world machine learning problems deal with mapping data to structured representations, and in the NLP domain the output structure represents lexical, syntactical or semantic aspects of the text. Techniques covered in this course include discriminative and generative models including Structured Perceptron and Structured SVMs, Constrained Conditional Models, Probabilistic Graphical Models, as well as Deep Learning techniques.

CMPS 6750 Computer Networks (3 Credit Hours)
The objective of the course is to introduce students to the core concepts and analytic techniques in the design and analysis of computer networks and network protocols. We will explain both how computer networks work using the Internet as the paradigm and why they work from an optimization and control perspective.

CMPS 6760 Distributed Systems (3 Credit Hours)
This course covers the fundamental concepts in distributed computing. The objective is to introduce students to the core notions, algorithms, and analytic tools in the design of distributed systems. Recent developments in peer-to-peer systems, cloud computing, sensor networks, etc. will be used as case studies to help students establish a firm understanding of the philosophy and pitfalls in the design of computer systems when there is no global clock and when unpredictable failures and variable latency are the norm.

CMPS 6910 Independent Study (3 Credit Hours)
This is a directed study course that allows a student to pursue a topic of particular interest under the direction of a computer science faculty member.

CMPS 6940 Transfer Coursework (1-4 Credit Hours)
CMPS 7010 Research Seminar (3 Credit Hours)
This seminar course introduces students to research methods in Computer Science and to the research conducted in the department. Students will read research papers, participate in active research projects, and practice preparing and presenting research presentations. Department faculty will present on their research in order to expose students to the research projects conducted in the department. Research methods such as literature search, experiment design, technical writing, etc. will also be covered. This course is required for all PhD students in Computer Science. The content of this course varies from semester to semester.

CMPS 7020 Research in Computer Science (3 Credit Hours)
In this course PhD students engage in a research project in Computer Science, under the direction of a faculty member, normally the student’s faculty advisor. At the beginning of the course the scope of the project will be determined by a project proposal prepared by the student. Research will be conducted on an individual basis with the faculty advisor. The student will prepare a final report that summarize the research methodologies and the research outcomes. The content of this course varies from semester to semester.

CMPS 7021 Research in Computer Science (3 Credit Hours)
In this course PhD students engage in a research project in Computer Science, under the direction of a faculty member, normally the student’s faculty advisor. At the beginning of the course the scope of the project will be determined by a project proposal prepared by the student. Research will be conducted on an individual basis with the faculty advisor. The student will prepare a final report that summarize the research methodologies and the research outcomes. The content of this course varies from semester to semester.

CMPS 7022 Research in Computer Science (3 Credit Hours)
In this course PhD students engage in a research project in Computer Science, under the direction of a faculty member, normally the student’s faculty advisor. At the beginning of the course the scope of the project will be determined by a project proposal prepared by the student. Research will be conducted on an individual basis with the faculty advisor. The student will prepare a final report that summarize the research methodologies and the research outcomes. The content of this course varies from semester to semester.

CMPS 7120 Advanced Topics in Computer Sc (3 Credit Hours)
This course varies from time to time, focusing on advanced topics of interest to the faculty and students.

CMPS 7940 Transfer Coursework (3 Credit Hours)
CMPS 7980 Independent Study (3 Credit Hours)
This is a directed study course that allows a graduate student to pursue a topic of particular interest under the direction of a computer science faculty member.

CMPS 9980 Masters Research (3 Credit Hours)
Research toward completion of a masters degree.

CMPS 9990 Dissertation Research (3 Credit Hours)
Research toward completion of a doctoral degree.

Computer Sys & Technologies (CPST)

CPST 1000 Intro To Office Applications (3 Credit Hours)
This course introduces students to the microcomputer and some popular micro applications. Special attention is given to essential concepts, word processing, spreadsheets, and database management. The course also provides a preface to operating environments such as Windows. Includes hands-on laboratory sessions; currently, Microsoft Office tools are used for this course. Note: This course does not count toward the requirements for a major or minor in Applied Computing Systems and Technology but can be used to satisfy a science distribution requirement for the School of Continuing Studies.

CPST 1070 Math For Info Technology (3 Credit Hours)
This course provides an introduction to discrete mathematical structures and themes with an emphasis on applications to computing and information technology. It develops analytical skills used to solve problems concerning the speed and logical structure of computer software, computer hardware, and computer networks. Note: This course does not count toward the requirements for a major or minor in Applied Computing Systems and Technology but can be used to satisfy one of the mathematics requirements for the School of Continuing Studies.
CPST 1200 Fund of Info Systems & Tech (3 Credit Hours)
This survey course provides a broad foundation in the concepts of modern information systems, information processing, and information technologies. It provides an overview of the key technology components that make up modern information systems and the processes and issues involved in the development of information systems.

CPST 1400 Internet Collaboration (3 Credit Hours)
This course acquaints the students with the Internet, its uses and history, and a wide variety of tools and applications for effectively accessing information. Students will have the opportunity to learn classic text-based Internet applications, as well as graphical and multimedia capabilities of the World Wide Web. Coverage of basic technologies (e.g., hardware, protocols, authoring software) is included. Note: This course does not count toward the requirements for a major or minor in Applied Computing Systems and Technology but can be used to satisfy a science distribution requirement for the School of Continuing Studies.

CPST 1880 Writing Intensive: CPST 1400 (1 Credit Hour)
CPST 2200 Application Dev Fundamentals (3 Credit Hours)
This course presents a structured approach to problem analysis, algorithm design and solution implementation in a high level computer language. Students will learn how to analyze problems and represent solutions in pseudo-code. Students will study the basic concepts of programming, internal representation of data, simple data types, searching and sorting techniques.

CPST 2300 Database Fundamentals (3 Credit Hours)
Introduction to database management systems with an emphasis on relational database concepts, database processing, data modeling, database design, development and implementation. Includes implementation of current DBMS tools and SQL.

Prerequisite(s): CPST 2200*.  
* May be taken concurrently.

CPST 2400 Webpage Design & Develpm (3 Credit Hours)
This course goes beyond mere use of the Internet into the tools and techniques needed to successfully publish digital media. Through lectures, class discussions, and hands-on lab work, you will become acquainted with the hardware, software (on workstations, on servers, and on the Internet), and tool management techniques needed to create and maintain web documents and sites. The course includes coverage of HTML and CSS.

CPST 2500 IT Infrastructure Fundamentals (3 Credit Hours)
This course covers the basic principles and applications of technology architecture including hardware, software, virtualization of servers, storage, and networking. Utility servers/appliances, server environments, and Cloud architecture will be presented in the course. Software to be studied includes Operating Systems, virtualization software, application software, and hardware appliance management software. Key concepts such as security, redundancy, reliability, maintainability, and availability will be discussed. Students will be provided with an overview of technology architectures, data systems, and the applications that manage system resources.

CPST 2600 Networking Fundamentals (3 Credit Hours)
This course covers topics related to wired/wireless connectivity and data exchange between digital devices. In addition to learning common networking terminology, students will examine and perform hands-on exercises using existing and emerging networking standards and architectures. Also covered are network operating systems, topologies, structured cabling, communications protocols, LAN-to-LAN interconnectivity and WAN fundamentals. This course is intended to provide a solid foundation for further study of IT networking connectivity principles.

CPST 2700 Fund of Cybersecurity (3 Credit Hours)
This course provides the student with an overview of the field of cybersecurity and assurance, and a foundation for understanding the key issues associated with protecting information assets, and designing a consistent, robust cybersecurity posture. Students will be exposed to the spectrum of cybersecurity activities, devices, methods, methodologies, and procedures. Coverage will include inspection and prevention, detection, and response to cybersecurity threats, and an overview of the cybersecurity planning and staffing functions.

CPST 2910 Documentation & Tech Writing (3 Credit Hours)
This course provides a complete process for planning, creating, and editing technical content, for both internal and external audiences including assessing the needs of users, selecting appropriate formats, making effective use of media, and selecting the best content organization and delivery platform Students demonstrate proficiency in written content creation and presentation skills by producing different technical writing products, including formal research reports and workplace writing (e.g., technical reports, manuals, explanations of how to understand or use a product or service, proposals, etc.). Students will be exposed to software applications to architect, organize, and publish technical content and media. This course will also address the job duties of technical writers/editors. Topics include establishing positive working relationships with writers, management, and subject matter experts.

Prerequisite(s): (CPST 1200 or 1200) and (CPST 3050 or 3050).

CPST 3050 Technology & Ethics (3 Credit Hours)
This course examines the ethical and social aspects of information technology with emphasis on computing. Pertinent issues include acquisition, access, stewardship, liability, freedom, privacy, control and security. Note: This course can be used to satisfy a School of Continuing Studies? Humanities Distribution Requirement.

Prerequisite(s): CPST 1200.

CPST 3220 O-O Programming w/ Java (3 Credit Hours)
This course presents the fundamentals of the JAVA programming language. Topics include JAVA syntax, data types, design of classes, class libraries, data structures, exception handling, threads, input and output, and applet programming.

Prerequisite(s): CPST 2200.

CPST 3230 Application Development In C++ (3 Credit Hours)
This course presents the fundamentals of the C++ programming language. It covers development of computer-based solutions in C++, using object-oriented and event-driven techniques, and accessing databases with open database connectivity.

Prerequisite(s): CPST 2200.
CPST 3250 User Interface/Experience Dsgn (3 Credit Hours)
This course examines topics related to developing and evaluating user interfaces for interactive computer systems. Topics covered include usability goals and principles, user interface design principles, managing design processes, prototyping and construction, interface metaphors, interaction styles, interaction devices, software tools, user interface builders, evaluation paradigms and techniques, usability testing, user manuals, tutorials, computer-supported collaborative work.

CPST 3260 Virtualization and Cloud (3 Credit Hours)
This course focuses on the skills and knowledge necessary for provisioning and managing virtualized services in cloud infrastructure as a Services (IaaS) environments including: virtual networks, virtual machines, containers, web and mobile apps, and storage; planning and managing cloud resources, and configuring Azure AD integration with on-premises Active Directory domain.

Prerequisite(s): (CPST 1200 or 1200).

CPST 3270 Cloud Foundations (3 Credit Hours)
This course provides a detailed overview of cloud concepts, services, security, architecture, pricing, and support. Students will receive an overview of the fundamental concepts of cloud computing independent of specific technical roles. Students will be exposed to cloud infrastructure and will deploy basic cloud services.

Prerequisite(s): (CPST 4610 or 4610).

CPST 3280 Cloud Architecture (3 Credit Hours)
This course covers the concepts of building IT infrastructure on a public cloud service provider's infrastructure. The course is designed to teach students how to optimize the use of the cloud by understanding a variety of service solutions and how these services fit into cloud-based solutions. Because cloud-based architectural solutions, and related costs, can differ depending on environment, type of applications, and size of business, this course emphasizes best practices for cloud computing architecture, and it recommends various design patterns to help the student think through the process of architecting optimal IT solutions.

Prerequisite(s): (CPST 3270 or 3270).

CPST 3290 Hybrid Cloud Infrastructure (3 Credit Hours)
This course teaches students about the nature, benefits and drawbacks of using a Hybrid Cloud solution, in relation to other deployment models. Students will also learn to implement a hybrid cloud computing environment using industry standard cloud service provider tools. Students will learn how to install, configure, use and maintain a hybrid cloud environment. Students will be exposed to the myriad of decisions and actions required when implementing a hybrid Cloud solution. This course covers core hybrid cloud services: identity, storage, image, networking, compute, memory, and management dashboards.

Prerequisite(s): (CPST 3260 or 3260).

CPST 3310 Rel DB Design & Develpmt (3 Credit Hours)
This course covers design and development concepts for relational database systems. The students will work on the design and development of a database application by analyzing organizational data needs, model and present those needs using diagrams and specifications, exploring different database designs, and implementing the design in a working system. Topics include normalization, entity-relationship modeling, database application design, data base processing using internet technology, managing multi-user data bases, accessing the database server, and sharing enterprise data.

Prerequisite(s): CPST 2300.

CPST 3400 Website Developmnt w/ XML/XHTML (3 Credit Hours)
This course is designed to provide students with an introduction to programming using XML. Students taking this course should have a working knowledge of HTML and FTP as gained by completing the course Webpage Design and Development course. Students should have a basic understanding of programming concepts and a relational database including relationships of primary and secondary tables via keys and foreign keys. Some sample learning activities are: author XML documents using a given Document Type Definition (DTD); create a DTD; create a CSS and/or XSLT style sheet; create an XML-based information system that brings together the skills learned throughout the course.

Prerequisite(s): CPST 2200* and 2400*.

* May be taken concurrently.

CPST 3410 Website Dev w/ Javascript (3 Credit Hours)
This course provides the opportunity to obtain a solid understanding of some of the tools and techniques, beyond basic HTML, used to publish on the Internet via the World Wide Web. Through online 'lectures' and posted materials, electronic discussions, and hands-on 'lab' work you will become acquainted with the computer hardware, software (both used on your machine and the Net), and programming techniques needed to design, create and maintain fully interactive Web documents and sites. This course will focus primarily on JavaScript programming and some additional advanced techniques and concepts.

Prerequisite(s): CPST 2400* and 2200*.

* May be taken concurrently.

CPST 3500 IT Project Management (3 Credit Hours)
This course provides an introduction to the principles and application of project management techniques with an emphasis on the design and management of Information Systems. Topics include project planning, work team design, project estimation techniques, project reporting, identifying and controlling project risks, budgets, and quality assurance.

Prerequisite(s): CPST 1200.

CPST 3550 Systems Analysis & Design (3 Credit Hours)
Examines the concepts, tools, and techniques used to develop and support computer-based information systems. Systems planning, analysis, design, and implementation are covered. Techniques for studying, documenting, specifying, designing, implementing and testing small and/or enterprise-wide business systems. Analysis and design includes structured and object-oriented methods, using CASE tools.

Prerequisite(s): CPST 2300*.

* May be taken concurrently.
CPST 3610 Internet Server Admin with IIS (3 Credit Hours)
This course will provide students with a comprehensive understanding of all facets of Microsoft Windows server based Web service installation, configuration, administration, and maintenance. The course will focus on hardware, software, Internet protocols, and advanced Web server hosting and services. It provides students with the understandings and skills needed to effectively plan, implement, and deploy valuable World Wide Web services in a professional or personal capacity.

Prerequisite(s): CPST 3700.

CPST 3650 Linux Administration & Security (3 Credit Hours)
This course will provide students with a comprehensive understanding of all facets of Linux/Unix server based Web service installation, configuration, administration, and maintenance. The course will focus on hardware, software, Internet protocols, and advanced Web server hosting and services. It provides students with the understandings and skills needed to effectively plan, implement, and deploy valuable World Wide Web services in a professional or personal capacity.

Prerequisite(s): CPST 3700.

CPST 3930 Cyber Threats & Cyber Security (3 Credit Hours)
Cyberspace? has become a pervasive presence in modern society, and a healthy functioning cyberspace is essential to our economy and to national security. Along with benefits, however, there exist threats and malicious actors who seek to exploit cyberspace vulnerabilities. This course will study the nature of cyber threats, including computer and digital crimes, information warfare and cyber terrorism, and related threats to personal, organizational, economic and national security. Students will gain an understanding of the variety and nature of cyber threats including digital espionage, computer break-ins, computer hacking, viruses, communications eavesdropping, forgery, disruption to information flow, electronic bombs and the growing presence of terrorist organizations on the Internet, and how the Internet is used to further terrorist activities. The course will also cover countermeasures to cyber threats; cyber-security investigations, evidence gathering, and legal challenges; and current and national policies for securing cyberspace and the impact of cyber security on privacy and civil liberties.

Prerequisite(s): CPST 3900 or HMLS 3600.

CPST 4000 Independent Studies (1-4 Credit Hours)

CPST 4100 Special Topics (3 Credit Hours)

CPST 4101 SCRUM Development Method (3 Credit Hours)

CPST 4250 Application Dev Capstone (3 Credit Hours)
This course focuses on using tools to develop a Web based integrated business application utilizing a relational database. Based on requirements identified in a business case, database structures will be implemented and GUI web pages will be developed to satisfy the business functionality.

Prerequisite(s): CPST 3250 and 3310.

CPST 4320 Business Intelligence (3 Credit Hours)
This course introduces students to structures and techniques used to transform data into information for decision-making. Business intelligence is an increasingly important part of both small and large organizations, as well as government. Business intelligence can be used across a wide spectrum of enterprises, such as health care, exploration, security, identifying markets, predicting behavior and forecasting demand. The materials in this course are designed to give the student important new tools to assist in business decision making, whether this involves identifying new markets, extracting data to better understand current markets and forecasting demand using simple statistical methodologies.

Prerequisite(s): CPST 3310.

CPST 4340 Database Administration- SQL (3 Credit Hours)
A technical overview for SQL Server administration. SQL Server offers a platform for enterprise data management, robust development, and implementation of modern databases. Students will be exposed to how to install, administer, maintain and troubleshoot Microsoft SQL Server Databases. This course also provides students with the technical skills required to write basic Transact-SQL queries for Microsoft SQL Server. Server Students will work in a lab environment to install SQL Server 2016 and will then work through a series of various activities to learn the crucial tasks of an SQL Server administrator.

Prerequisite(s): (CPST 2300 or 2300).

CPST 4350 Database Administration-Oracle (3 Credit Hours)
This course provides the student with a fundamental understanding of the tasks and issues associated with database administration. Topics and activities include: installation and management of a database system; ensuring data integrity; managing users, privileges, and resources, implementing of basic backup and recovery procedures and identifying tuning opportunities. Students will work in a lab environment to install a database management system, and will then work their way through a series of crucial system-side activities to learn the various tasks of a database administrator.

Prerequisite(s): CPST 2300.

CPST 4500 System Reqs Devel & Testing (3 Credit Hours)
This course provides a study of concepts and techniques for planning and developing high quality information systems. Fundamentals of specification (including formal models and representations, documents, and standards) are examined. Methods of specifying and developing requirement for generating information systems are discussed. It covers the tools, methods, and current practices for assessing the quality and correctness of information systems. Topics include the roles of testing and formal verification, fundamentals and formal models of program verification, planning and documentation for quality assurance, methods of performing technical reviews, strategies of system testing and integration planning, and principles and practices used in conducting tests. Projects using these techniques are included.

Prerequisite(s): CPST 3550*.

* May be taken concurrently.
CPST 4550 Product & Program Capstone (3 Credit Hours)
This course provides for the application of Information Systems concepts to a comprehensive group project for the planning, development and implementation of an information system. Management planning, scheduling, and reporting are required. Documentation to include feasibility studies, alternative implementation strategies, programming, testing and users manuals. Appropriate computer assisted software engineering tools are used throughout the project from requirement specification to implementation and testing.

Prerequisite(s): CPST 3550.

CPST 4610 Windows Server Administration (3 Credit Hours)
This course is designed to prepare the student for the challenges faced by network administrators, helpdesk technicians, and network analysts. Individuals working in these areas have the responsibility for installing and maintaining local area networks based on Microsoft Windows and other network operating systems. This course provides hands-on experience planning, deploying, and administering a network using Microsoft Windows Server based systems.

Prerequisite(s): CPST 3600 and 3700.

CPST 4640 TCP/IP Protocol (3 Credit Hours)
This course will focus primarily on the TCP/IP protocol suite and a set of related network services. It is designed to help students understand networks that use TCP/IP, the suite of protocols that is used today for the Internet and most modern networks.

Prerequisite(s): CPST 3700.

CPST 4650 Unix System Administration (3 Credit Hours)
The Solaris Operating System (Solaris OS) is the foundation on which some of the world’s leading companies are built. Offering high levels of reliability, availability, security, and scalability, Solaris systems meet today’s demands while anticipating tomorrow’s innovation. The objective of this course is to provide a comprehensive understanding of the administrative aspects of the Solaris operating system. At the end of the course students will have the skills required to administer a Solaris system, including user management, disk management, backing up procedures, startup and shutdown procedures, and process management. The course provides students with the opportunity to integrate and apply administration in a comprehensive manner indicative of Information Technology programs of study.

Prerequisite(s): CPST 3650.

CPST 4670 Identity & Access Management (3 Credit Hours)
This course is designed to familiarize students with the skills needed to administer a Microsoft network in the enterprise. The course provides an in-depth look at the features of Active Directory, including Group Policy, scripting, replication, and disaster recovery, plus the use of Exchange Server in the enterprise for reliable messaging services.

Prerequisite(s): CPST 3700 and 4610.

CPST 4710 Network Infrastructure Capstone (3 Credit Hours)
This course is designed to help students learn how to design, implement and maintaining a network infrastructure, including topics such as the Dynamic Host Configuration Protocol (DHCP), Windows Internet Name Server (WINS), Domain Naming System (DNS), Remote Access and Virtual Private Networking (VPN).

Prerequisite(s): CPST 3700 and 4610.

CPST 4750 IP Routing & Switching (3 Credit Hours)
The TCP/IP suite of protocols is the de facto standard for multi-vendor connectivity within corporations and serves as the basis for Internet connectivity. This course focuses on Internet communications architecture and the internetworking between autonomous systems that is facilitated by IP routing. Layer 2 and Layer 3 (IP Switching) architectures will also be examined in relation to interLAN and VLAN routing.

Prerequisite(s): CPST 3700 and 4640.

CPST 4770 Advanced IP Networking (3 Credit Hours)
A comprehensive overview of networking topics, at an advanced level. Students will focus on core concepts that will allow the experienced network individual to understand the "why" behind the protocols they work with every day and see the big picture of networking. This course explores advanced switching concepts such as Spanning Tree and link aggregation. Dynamic Routing Protocols are covered in detail. Students will be exposed to advanced hands-on routing and real-world switching exercises.

Prerequisite(s): (CPST 4750 or 4750).

CPST 4800 Virtualization Administration (3 Credit Hours)
Prerequisite(s): CPST 4610.

CPST 4810 Windows Security (3 Credit Hours)
Prerequisite(s): CPST 3900 and 4610.

CPST 4850 Penetration Testing (3 Credit Hours)
Prerequisite(s): (CPST 3700 or 3700) and (CPST 3900 or 3900).

CPST 4870 Forensics, Investigate & Resp (3 Credit Hours)
Prerequisite(s): CPST 3900.

CPST 4900 Cyber Security Capstone (3 Credit Hours)
Prerequisite(s): CPST 3900.

CPST 4910 Special Topics Course (1-3 Credit Hours)
This course is an introduction to both fundamental programming concepts and the Python programming language. Students will be exposed to these concepts through the creation of a 2D game using Phyton and Pygame.

CPST 4911 Special Topics (3 Credit Hours)
This course is a special offering in the Applied Computing program.

CPST 4912 Special Topics (3 Credit Hours)
This course is a special offering in the Applied Computing program.

CPST 4913 Special Topics (3 Credit Hours)
This course is a special offering in the Applied Computing program.

CPST 4914 Special Topics (3 Credit Hours)
This course is a special offering in the Applied Computing program.

CPST 4915 Special Topics (3 Credit Hours)
This course is a special offering in the Applied Computing program.

CPST 4916 Special Topics (3 Credit Hours)
This course is a special offering in the Applied Computing program.

CPST 4917 Special Topics (3 Credit Hours)
This course is a special offering in the Applied Computing program.

CPST 4918 Special Topics (3 Credit Hours)
This course is a special offering in the Applied Computing program.
CPST 4919 Special Topics (3 Credit Hours)
This course is a special offering in the Applied Computing program.

CPST 4920 Special Topics Course (1-3 Credit Hours)
This course is designed to provide students with an introduction to website security and privacy issues. Students will understand how to identify security/privacy issues, recognize security issues involving Java, the Internet and email. Students will also explore techniques and best practices for limiting risk.

CPST 4930 Network Security (3 Credit Hours)
This course is designed to provide fundamental skills needed to analyze the internal and external security threats against a network, and to develop security policies that will protect an organization's information. Students will learn how to evaluate network and Internet security issues and design, and how to implement successful security policies and firewall strategies. In addition, they will learn how to expose system and network vulnerabilities and defend against them.

Prerequisite(s): CPST 4610.

CPST 4950 Website Security (3 Credit Hours)
This course is designed to provide students with an introduction to Website security and privacy issues. Students will understand how to identify security/privacy issues, recognize security issues involving JAVA, the Internet and email. Students will also explore techniques and best practices for limiting risk.

Prerequisite(s): CPST 2400 and 3900.

CPST 6320 Business Intelligence (3 Credit Hours)
This course is designed as an upper level undergraduate and graduate level course. This course introduces students to structures and techniques used to transform data into information for decision-making. Business intelligence is a rapidly growing area of importance to both small and large organizations, as well as government. Business intelligence can be used across a wide spectrum of enterprises, such as health care, exploration, security, identifying markets, predicting behavior and forecasting demand. The materials in this course are designed to give the student important new tools to assist in business decision making, whether this involves identifying new markets, extracting data to better understand current markets and forecasting demand using simple statistical methodologies.

CPST 6500 Systems Req Dev and Test (3 Credit Hours)
This course provides a study of concepts and techniques for planning and developing high quality requirements management processes and hardware/software testing processes. Fundamentals of requirements analysis are examined, highlighting the importance and value of good requirements. Methods of planning and implementing a practical requirements gathering approach for information systems are discussed. Testing roles, techniques, and processes will be covered and it will be shown where and how the software testing process fits into the overall development methodology. Formal models of program verification, planning and documentation for quality assurance and methods of performing technical reviews will also be detailed. Strategies of system testing and integration planning including principles and practices used in conducting tests will be covered. Subject matter experts will be brought in to share with the class project examples and how they use these requirements management and test techniques in these projects.

CPST 6501 IT Project Management (3 Credit Hours)
This course provides an exploration into the tools and techniques of project management as they relate to information technology (IT) projects and software development. The course concepts adhere to the Project Management Body of Knowledge® (PMBOK®) description of best practices, and it covers the project management life cycle with its processes of initiating, planning, executing, monitoring and controlling the project. Emphasis is placed on areas of project planning and project management that are unique to software development projects and other IT projects.

CPST 7000 IT Governance and Policy (3 Credit Hours)
The managing of information has become critical to the success of a business or enterprise and the governance of the Information Technology (IT) resource has become an integral part of most organizations and is fundamental to support, operate, sustain, innovate and grow a business. IT Governance focuses on delivering value to the business by the proper management of the IT resource. It is an integrated approach consisting of the leadership, organizational structures and processes that ensures the effective alignment of IT with the organizations strategies and objectives. This course presents an inter-disciplinary approach to IT Governance. In the course students will learn about specific objectives of IT Governance, along with standards, frameworks, tools and techniques used in the planning, deploying, managing, monitoring, measuring and sustaining a successful IT governance plan. The course leverages and integrates current and emerging industry best practices, standards, guidelines and governance case studies.

CPST 7100 Managing the IT Department (3 Credit Hours)
This course is designed for graduate students who are, or aspire to be, either business managers or Information Systems (IS) managers, as well as those who are, or aspire to be, primarily technology specialists who will work in and for different types of businesses— including consultanf firms and other firms competing in an information technology (IT) services industry. This course presents the tools necessary to best exploit information technology. By using case studies and the coverage of the key technology issues it will provide a perspective on how to evaluate the IS organization, and how to be a partner in managing data, information, and systems. It will prepare the student to be effective exploiters of computing technologies now and in the future by focusing on the information technology resources that organizations need and providing alternative approaches to managing them. Students will study the opportunities and pitfalls provided by these technologies and what they need to know to manage and make effective use of these technologies.

CPST 7150 The Business of IT (3 Credit Hours)
The goal of this course is to provide IT Management candidates with the experience in handling business processes that are necessary to successfully manage the business aspects of Information Technology. It covers business concepts and processes that are applicable to the management and use of Information Technology. These processes include Accounting and Finance, Human Capital and Payroll, Budget, Contract Management, Requests for Proposals, Statements of Work, and Service Level Agreements.
CPST 7200 Enterprise Application Arch (3 Credit Hours)
The goal of this course is to prepare Chief Information Officers and Chief Technology officers and senior managers with progressive approaches for state-of-the-art Information Technology (IT) infrastructures. IT systems exist in an abstraction of an Operating Environment with identifiable system capabilities – physical properties, characteristics, strategies, tactics, security, and sometimes luck. This course addresses Enterprise Software Architecture (ESA) and will identify multiple Systems of Interest (SOI). An analysis of two SOI fundamental types of behavior will be studied – hierarchical and peer level interactions of software. An understanding and adoption of ESA will maximize successful implementation, minimize risk, simplify operations, and insure compliance with regulatory requirements.

CPST 7250 SW Development Methods (3 Credit Hours)
A Software Development Methodology is a framework that is used to structure, plan, and control the process of developing an information system - this includes the pre-definition of specific deliverables and artifacts that are created and completed by a project team to develop or maintain an application. A wide variety of such frameworks have evolved over the years, each with its own recognized strengths and weaknesses. This course explores the many methodologies available for developing software. The business culture and requirements are presented as the center for evaluation of the most effective mix of methodologies for a specific development project. Students will study the software lifecycle from the identification of a need to the retirement of the software product that satisfies that need. They will learn about the strength and weakness of the various development methodologies and the appropriate situations in which to use them.

CPST 7600 Enterprise Infrastructure Arch (3 Credit Hours)
Enterprise Hardware Architecture (EHA) maximizes business functionality, minimizes risk, simplifies operations, and complies with regulatory requirements. This course will provide students with the knowledge to build an open/standards-based Enterprise Hardware Architecture that utilizes virtualization of servers, storage area networks (SAN), and network capabilities. Utility servers/appliances, Multi-tier server environments, and Cloud architecture will be researched and presented in the course. Key performance parameters, such as security, redundancy, reliability, maintainability, and availability, will be major considerations in the designs. A decision based approach and iterative improvement processes based on service fulfillment and technology trends will be utilized by students to design individual class projects.

CPST 7800 Cyber Law and Policy (3 Credit Hours)
This course is designed to analyze legal issues related to the management of information in contexts in which information professionals are likely to be involved. In an age defined by information, knowledge of the legal issues that establish how information is required to be protected, maintained, collected, stored, and accessed is extremely important. Information Security policies must be evaluated in light of current laws and regulations. This course will provide an overview of some of the most important legal issues in managing information so that students will be able to apply the information to particular professional situations that they may encounter. Topics will include such issues as US and international jurisdiction, computer security, intellectual property, electronic commerce, information privacy, freedom of expression, and cyber-crime. Included are analyses of significant legal case studies plus review of applicable federal and state legislation as applied to compliance of standards such as those found in the Health Insurance Portability and Accountability Act (HIPPA), Sarbanes Oxley, the Federal Information Security Management Act (FISMA), and the National Institute of Standards and Technology, Minimum Security Requirements for Federal Information and Information Systems (FIPS 200).

CPST 7850 Healthcare Informatics (3 Credit Hours)
Medical practitioners and healthcare delivery organizations face formidable administrative and technical challenges in the management of patient health and wellness, accurate and timely diagnosis of illness, and the determination and delivery of appropriate care and treatment. Information technology (IT) can play a key role in mitigating these challenges and thereby enabling healthcare performance transformation. Implementation of application and integration middleware (AIM), interoperable with analytics and accessible in real-time at the point of care and elsewhere, is the most cost-effective IT approach. This course explores the many issues and barriers faced by those IT professionals who are working to implement Health Information Systems.

CPST 7875 Independent Study (1-3 Credit Hours)

CPST 7900 Sec & Cyber Threats - IT Mgrs (3 Credit Hours)
This course provides an overview of the need for, and the technology, algorithms, and standards used in providing computer and communications security. It is concerned with the fundamentals of computer security. Topics in this class can be divided into three main parts: cryptography (with a focus on single-key and public key); computer system security (database and operating systems issues including authentication, access control, malicious software, and network security (including intrusion prevention/firewalls, intrusion detection, Denial of Service attacks, etc.); and the develop of secure programs and applications.

Cybersecurity Management (CSMT)

CSMT 7050 Leadership for CS Profnls (3 Credit Hours)
This course is designed to provide the advanced knowledge and skills for management of cybersecurity throughout the enterprise. The course examines internal and external security threats against a network, documenting and advocating for cybersecurity spending, managing resources (including vendors) and development of a security governance plan to establish standards and a framework to protect an organization's information.
CSMT 7170 Business Principles and IT Mgt (3 Credit Hours)
The goal of this course is to provide Cybersecurity Management candidates with an in-depth understanding of enterprise business management and operational concepts to prepare students to integrate and manage a cybersecurity operation within a greater organization. The course will consider core organizational management activities/business topics and relate these to the business of IT Security. Methods and approaches for performing Cost/Benefits analysis, procurement, making business cases for cybersecurity, IT budgeting and working with contractors and consultants will be reviewed.

CSMT 7300 Data & Database Security (3 Credit Hours)
This course provides in-depth study of database architecture (including Cloud based data structures and applications) and database management systems from the perspective of securing data. This course covers principles and methodologies of database design from security, and techniques for database application auditing, aggregating, reporting, analysis and response from a cybersecurity management perspective. Best practices in securing data at rest, data in transit and data in use will be reviewed in depth against the context of recent noteworthy breaches. (Virtual Lab)

CSMT 7500 IT Sec Auditing & Monitoring (3 Credit Hours)
This course will review tools and methods to audit and monitor a network, including auditing, aggregating, reporting, analysis and response from a cybersecurity management perspective. This will include in-depth coverage of System event, intrusion detection, intrusion prevention, firewalls, packet monitoring and endpoint security and detection. (Virtual Lab)

CSMT 7700 Cyber Network & Tele Security (3 Credit Hours)
This course provides in-depth technical knowledge on securing enterprise networks and telecommunications. The course examines defense and defensible architecture, along with best practice implementations of security tools and solutions, and is designed to equip the student with methods and constructs used to test network security. By the end of the course, students will be able to design a basic network from a security perspective to include tools and technologies to best secure an organization’s information.

CSMT 7750 Wireless, Mobile & Cloud Secur (3 Credit Hours)
This course reviews architecture, vulnerabilities and security methods for Wireless, Mobile and Cloud Computing technologies in the enterprise. Included topics will be reviewing these network constructs as well as vulnerabilities, and attack vectors. Also covered are best practices for implementing and securing IEEE 802.11 wireless networks, wireless access and BYOD, wireless security protocols, mobile IP communications, and cloud computing categories and services. This course also looks at current and emerging cloud services and cloud-based applications, including the "Internet of Things".

CSMT 7800 Cyber Law & Policy (3 Credit Hours)
In this course, students study existing and evolving laws, agreements, legal decisions, regulation and compliance pertaining to cybersecurity and enterprise IT. Students will also explore ethical considerations of cybersecurity practices, including social networking and privacy in the context of enterprise cybersecurity management.

CSMT 7870 Cyber Incident Res & Forensics (3 Credit Hours)
This course takes a 360 degree study of cyber incident response and investigation from the standpoint of a cybersecurity manager. This includes securing a cyber-incident scene, preserving digital evidence, establishing and maintaining chain of custody, safeguarding evidence, forensic analysis and tools as well as examination and review of evidence. As part of this review, students will consider decision matrices for notifying and working with government and law enforcement agencies. (Virtual Lab)

CSMT 7900 Sec & Cyber Threats for Mgrs (3 Credit Hours)
This course provides advanced information on current threats to IT systems including an array of current and evolving exploitation methods and vulnerabilities. Through research as well as lecture, students examine an array of attack types and goals of attackers with an analysis of the anatomy of an attack including motivation, purpose, types, and phases. This course also considers emergent technologies and technical uses (such as Blockchain, Internet of Things, and Quantum Computing) from the standpoint of threat and security.

CSMT 7920 Software and Web App Security (3 Credit Hours)
The goal of this course is to provide cybersecurity managers and practitioners with an in-depth review of the technologies, models, best implementation practices and known software and web application vulnerabilities. The course reviews activities and processes pertaining to the planning, programming, and management of software (and systems that manage software) including ways to secure applications through design and control interfaces. This includes in-depth reviews of application architecture, trust models, key management, web protocols, and digital certificates. This course also delves into means and measures to assess effectiveness of application security.

CSMT 7950 Cryptography (3 Credit Hours)
The goal of this course is to provide Cybersecurity Management candidates with an in-depth understanding of ciphers, cryptology, and encryption and their use in safeguarding information and systems in the enterprise. The course covers the standard uses of encryption including access control, authentication, data application security, and virtual private networking and examines technical direction and trends in regards to the future of cryptology. The course will also review legal decisions and implications of encryption in the debate on privacy/civil liberties versus business and security/safety goals.

CSMT 7990 Enterprise CS Mgt Capstone (3 Credit Hours)
In this Capstone course, students will apply cybersecurity management concepts, best practices, technical knowledge and principles as learned throughout the Program from the perspective of an organizational CSO/CISO. Through Case Study, students will display mastery of these through the creation of deliverables necessary to manage an effective enterprise cybersecurity program. This will include review/documentation of an IT organization’s security posture, and creation of a Risk Management structure, Security Policy/Operational Framework, and Budget. Finally, each student will produce a professional-grade White Paper on a Cybersecurity/Cybersecurity Management topic to be assessed by the MPS in Cybersecurity Management Assessment Board.

Prerequisite(s): CSMT 7050, 7900, 7700, 7800, 7500, 7950, 7300* and 7170.

* May be taken concurrently.
Dance (DANC)

DANC 1470  Transfer Coursework (1-20 Credit Hours)
Transfer Coursework.

DANC 1510  Dance Composition I (3 Credit Hours)
An introduction to dance composition with an emphasis on spatial design, sources of movement, viewing choreography, and the basic elements of space, time, shape, and motion.

DANC 1810  Tap Dance I (2 Credit Hours)
A beginning course in tap introducing basic rhythmic movement skills necessary for various tap styles.

DANC 1910  African Dance I (2 Credit Hours)
Introduction to basic technique and African ethnic dance forms including three traditional dances.

DANC 1920  Brazilian Dance (2 Credit Hours)
Introduction to Brazilian dance, focusing especially on samba, the overview of history and cultural context.

DANC 1930  Ballet I (2 Credit Hours)
An introduction to classical ballet including beginning ballet technique and application of dance as an art form.

DANC 1940  Transfer Coursework (3 Credit Hours)
Transfer coursework.

DANC 1950  Jazz Dance I (2 Credit Hours)
An introductory course to the basic foundations of jazz dance, emphasizing body placement, isolations, and rhythmic qualities of jazz.

DANC 1970  Modern Dance I (2 Credit Hours)
Introduction to modern dance technique, with emphasis on alignment and expanded jazz dance vocabulary.

DANC 2010  Performance I (3 Credit Hours)
A structured and at times spontaneous exploration of space, time, shape, sound, scenario, motion, and expenditure of energy to the end of attracting and holding the attention of the audience.

DANC 2020  Performance II (3 Credit Hours)

DANC 2210  Intro. To Dance- Ballet (3 Credit Hours)
An introduction to classical ballet including beginning ballet technique and an overview of ballet history from its inception to the present day.

DANC 2220  Intro. To Dance- Modern (3 Credit Hours)
An introduction to modern dance including beginning modern dance technique and an overview of modern dance history from its inception to the present day.

DANC 2230  Intro. To Dance- Jazz (3 Credit Hours)
An introductory course for students who seek information regarding the different aspects of the dance world, including different genres (ballet, modern, jazz, and world dance). Special emphasis is given to the role of American Vernacular dance - jazz dance and its identity in the dance scene of America.

DANC 2520  Dance Composition II (3 Credit Hours)
Continuation of DANC 2010.

Prerequisite(s): DANC 1930.

DANC 2530  Pedagogy (3 Credit Hours)
A seminar and practicum course providing opportunities for dance students to acquire skills in dance teaching methodologies and strategies. Topics include organization of subject matter, weekly and unit lesson planning, development of assessments, utilization of information technology for instruction, working with diverse populations of students. Activities include observation in college classrooms (shadowing), seminars and conferences with teachers in field, in-class/micro/peer teaching, and 50 hours of field work including observation and consultation with dance field professor and field-experience teaching of assistant teaching at NOPS in discipline-based curriculumbased programs.

Prerequisite(s): DANC 2010, 2520 and 3520.

DANC 2810  Tap Dance II (2 Credit Hours)
Continuation of Tap I.

DANC 2910  African Dance II (2 Credit Hours)
Continuation of the development of African dance skills with emphasis on understanding and demonstrating basic components necessary to choreograph traditional African dance movements.

DANC 2930  Ballet II (2 Credit Hours)
Continuation of 1930.

DANC 2940  Transfer Coursework (3 Credit Hours)
Transfer coursework.

DANC 2950  Jazz Dance II (2 Credit Hours)
A continuation of the development of movement skills with emphasis on alignment and expanded jazz dance vocabulary.

DANC 2970  Modern Dance II (2 Credit Hours)
Continuation of 1970.

DANC 3240  US/Caribe Social Dance (3 Credit Hours)
This course will study, compare selected social and vernacular dances from early American vernacular jazz dance and selected Afro-Caribbean dance idioms: Coursework includes assigned reading, lecture, research, videotape viewing and studio dancing.

DANC 3330  Pedagogy (3 Credit Hours)
A seminar and practicum course providing opportunities for dance students to acquire skills in dance teaching methodologies and strategies. Topics include organization of subject matter, weekly and unit lesson planning, development of assessments, utilization of information technology for instruction, working with diverse populations of students. Activities include observation in college classrooms (shadowing), seminars and conferences with teachers in field, in-class/micro/peer teaching, and 50 hours of field work including observation and consultation with dance field professor and field-experience teaching of assistant teaching at NOPS in discipline-based curriculumbased programs.

Prerequisite(s): DANC 2010, 2520 and 3520.

DANC 3520  Dance Composition III (3 Credit Hours)
An in-depth study of dance composition with an emphasis on choreographic design and dynamics, creating new movement materials, working with music, and choreographing complete solo works.

Prerequisite(s): DANC 1520, 1520, 1520, 1520, 2520, 2520, 2520 or 2520.

DANC 3550  Laban Movement Studies (3 Credit Hours)
Laban Movement Analysis (LMA), developed by Rudolph Laban, is a theoretical framework and language for describing movement through movement experiences, observations and theoretical discussions. It is a system of observing, analyzing, and synthesizing patterns of movement within the context of the actions. The goal of LMA is to be fully embodied, to access maximum movement potential, to find authentic movement, and to integrate the body and mind in the study of effort, shape, and space.
DANC 3700 Dance Movement Science (3 Credit Hours)
Dance Movement Science is an introduction to the field of Dance Science. This course will explore various somatic practices and benefits of cross-training. Additionally, students will learn anatomy, anatomical analysis, conditioning principals and develop applicable skills that they may apply to their studio practice and dance performance.

DANC 3710 Conditioning for Dance (3 Credit Hours)
In this course you will learn the principles of conditioning and how to use them to train, maintain and care for your body, the instrument of the art of dance. You will also build physical capacities to improve your dance performance and reduce injury. Additionally, students will be introduced to various somatic practices that support their studio work.

DANC 3800 Modern Dance III (2 Credit Hours)
Continuation of the development of modern dance skills with emphasis on alignment and an expanded movement vocabulary. Combining the different elements of dance: time, space, and motion. Includes theory of dance as an art form. Class meets 2 times per week.

DANC 3810 Tap Dance III (2 Credit Hours)
An intermediate course in tap dance with emphasis on alignment and rhythmic skills.

DANC 3820 Ballet III (2 Credit Hours)
Continuation of the development of classical ballet technique with emphasis on alignment and expanded movement vocabulary. Includes theory of ballet and appreciation of ballet as an art form. Class meets 2 times per week.

DANC 3830 Intensive Modern Dance III (3 Credit Hours)
Continuation of the development of modern dance skills with emphasis on alignment and an expanded movement vocabulary. Combining the different elements of dance: time, space, and motion. Includes theory of dance as an art form. Class meets 4 times per week.

DANC 3840 Intensive Ballet III (3 Credit Hours)
Continuation of the development of classical ballet technique with emphasis on alignment and expanded movement vocabulary. Includes theory of ballet and appreciation of ballet as an art form. Course meets 4 days per week.

DANC 3890 Service Learning: DANC 3550 (0-1 Credit Hours)
Students complete a service activity in the community in conjunction with the content of a three-credit croquets course.

DANC 3940 Transfer Coursework (3 Credit Hours)
Transfer coursework.

DANC 3950 Jazz Dance III (2 Credit Hours)
A study of jazz dance at the intermediate level, including warm-ups, isolations, and locomotor movements specific to the jazz dance style. Historical developments of jazz and musical theatre dance are emphasized.

DANC 3960 Jazz: Newc Sum Danc Fest (2 Credit Hours)
The New Orleans Jazz Project: Newcomb College Summer Dance Festival is presented for two weeks annually in June offering an intensive schedule of technique classes in jazz, African, musical theatre, tap, hip hop, and modern dance forms, with repertory classes which culminates in performance by the participants. Lecture-demonstration projects, special lectures, and professional performances complete programming for evening events. Final decision on placement of students in technique and repertory classes will be determined by the faculty at the beginning of the workshop.

DANC 3990 Dance Performance Pract (1 Credit Hour)
Practical performing experience in dance. Required for the dance minor.

DANC 4520 Dance Composition IV (3 Credit Hours)
A continuation of DANC 3520 with emphasis on group forms, sound sources for dance and development of fully designed dance pieces.

DANC 4560 Internship Studies (1-3 Credit Hours)
An experiential learning process coupled with pertinent academic course work, e.g. Internship seminars offered by the Tulane University Center for Public Service for fulfillment of second tier public service. Only one internship may be completed per semester.

DANC 4580 Dance Company (1 Credit Hour)
Performing experience, advanced-level dance techniques and practical experience in dance production.

DANC 4590 Senior Project (3 Credit Hours)
A continuation of dance composition with emphasis on development, research and production of senior concert pieces with written analysis of process.

Prerequisite(s): DANC 2010, 2520 and 3520.

DANC 4600 Choreography & Media (3 Credit Hours)
An introduction to dance for camera in its various forms. It provides a brief overview of aesthetic, historic, and cultural representations of the body through image and media and offers a context in which to explore visual imagery and narrative within the frame of camera/screen.

DANC 4650 Senior Choreographic Project (3 Credit Hours)
Advanced choreographic projects.

Prerequisite(s): DANC 3520.

DANC 4710 Dance Hist:Prim To 19 C. (3 Credit Hours)
A survey of dance, including the anthropological aspects of dance, in primitive cultures and the development of dance in the Western World.

DANC 4720 Dance Hist:20th C. & Beyond (3,4 Credit Hours)
A survey of dance in the 20th-century United States emphasizing the development of modern dance, its impact on classical ballet and on dance in the Western World.

DANC 4730 Dance History (3,4 Credit Hours)
This survey course traces the development and evolution of Ballet and Modern Dance from the Renaissance through the present day

DANC 4800 Modern Dance IV (2 Credit Hours)
A kinesthetic, non-stylized approach to movement. Exploration of complex movement skills integrating alignment, dynamics, spatial design, and rhythmic structure. Includes theory and appreciation of dance as an art form. Class meets 2 days per week.
DANC 4810  Special Topics  (1-3 Credit Hours)
Specialty courses in dance techniques, projects, and dance related subjects as designed by dance faculty.

DANC 4820  Ballet IV  (2 Credit Hours)
Classical ballet technique with emphasis on alignment, complex movement combinations, and precision in execution. Includes pointe work and theory of ballet as an art form. Class meets 2 days per week.

DANC 4830  Intensive Modern Dance IV  (3 Credit Hours)
A kinesthetic, non-stylized approach to movement. Exploration of complex movement skills integrating alignment, dynamics, spatial design, and rhythmic structure. Includes theory and appreciation of dance as an art form. Class meets 4 days per week.

DANC 4840  Intensive Ballet IV  (3 Credit Hours)
Classical ballet technique with emphasis on alignment, complex movement combinations, and precision in execution. Includes pointe work and theory of ballet as an art form. Class meets 4 days per week.

DANC 4890  Service Learning: DANC 4900  (1 Credit Hour)
Service Learning.

DANC 4900  Building Comm Thru Arts  (3 Credit Hours)
This course will be taught in coordination with courses offered at Xavier and Dillard Universities. The course examines the theory and practice of community-based arts, civic engagement in higher education, and the relationship between art and community development. Students will work in teams with local artists on Home, New Orleans?, a multi-disciplinary, art-and-community-development project grounded in 4 selected New Orleans neighborhoods, the 9th Ward, the 7th Ward, Central City and Lakeview.

DANC 4910  Independent Study  (1-3 Credit Hours)
Independent projects with professors.

DANC 4950  Jazz Dance IV  (2 Credit Hours)
An advanced study of dance devoted to movement exploration involving spatial, dynamic, and rhythmic combinations of various jazz and musical theatre dance styles. Historical study of jazz dance development is emphasized.

DANC 4960  Tap Dance IV  (2 Credit Hours)
An advanced course in rhythm tap with emphasis on complex rhythm patterns requiring intricate foot articulations and stylistic dance movements.

DANC 4990  Honors Thesis  (3 Credit Hours)
Honors Thesis.

DANC 5000  Honors Thesis  (4 Credit Hours)
Honors Thesis.

DANC 5390  Junior Year Abroad  (1-20 Credit Hours)
Junior year abroad.

DANC 6010  Movement Practice  (1 Credit Hour)

DANC 6210  Sem I: Text & Movement Studies  (3 Credit Hours)
A graduate level course where choreographers work on individual and collaborative projects that examine the relationship between a variety of texts, existent and original, and communication through movement. Projects/studies are presented throughout the semester. Taught in conjunction with MFA in Playwriting, and with direct in-program experience with Performance I (DANC/THEA 2010) for undergraduate students.

DANC 6220  Sem II: Writing about Dance  (3 Credit Hours)
This seminar introduces graduate students to dance research and dance theory by examining the work of contemporary scholars/researchers, dance historians, and dance critics. The class will cover several aspects of writing about dance, including: research methods; writing a literature review; writing about live performance; writing about dance history; analyzing choreography; writing dance descriptions; writing about the dancing body; and taking theoretical approaches to create original scholarship.

DANC 6310  Creative Projects/Rehearsal  (2 Credit Hours)
Advanced level choreographic or creative projects.

DANC 6410  Choreography & Media  (3 Credit Hours)
This course provides an introduction to dance for camera in its various forms, from the video-taping and editing of dance for the purpose of documentation, to the creation of dances made specifically for the screen. It provides a brief overview of aesthetic, historic and cultural representations of the body through image and media, and offers a context in which to explore visual imagery and narrative within the frame of the camera/screen, in contrast to that of the proscenium stage. This material is intended as a springboard for further in-depth exploration.

DANC 6520  Teaching Practices  (3 Credit Hours)
Survey of teaching practices.

DANC 6820  Special Topics  (3 Credit Hours)
Special topics in Dance.

DANC 6821  Special Topics  (3 Credit Hours)
Special offering.

DANC 6822  Special Topics  (3 Credit Hours)
Special topics in Dance.

DANC 6910  Independent Study  (1-3 Credit Hours)
Independent Study in Dance.

DANC 7900  Management / Portfolio  (2 Credit Hours)
Development of electronic portfolio.

DANC 7990  MFA Thesis Project  (6 Credit Hours)
Performance and Written project.

DANC 9980  Masters Research  (3 Credit Hours)
Continuation of MFA Thesis work.
Dance - Applied (DANA)

DANA 2500 Intermediate Yoga (1 Credit Hour)
This is an intermediate level vinyasa style yoga class that places an emphasis on the yoga asanas. We will use the breath to flow through sequences of yoga postures, including sun salutations, standing asanas, balancing asanas, arm balances, back bends, and inversions. This will be a rigorous physical experience, and as the semester progresses, advanced yoga postures will be introduced. Priority is given to dance majors and minors.

Digital Design (DDSN)

DDSN 1100 Digital Design Foundation (3 Credit Hours)
This studio course involves inquiry into the nature of the graphic design, game art & animation, and interactive fields. Topics introduced in this course are color theory for print and the screen, file types, design terminology, project workflow, aesthetics, visual concepts, typography and Adobe software fundamentals. The course also introduces students to oral and written communication for design practices, presentation techniques and the client-designer relationship. Lectures, readings, class demonstrations, group exercises and writing assignments are used. Prerequisites: None.

DDSN 1101 Digital Imaging (3 Credit Hours)
This studio course explores raster image-making in the digital platform while creating historical and practical connections between technology and creative problem solving. Topics introduced in this course are the Adobe Photoshop and Lightroom interfaces, photo manipulation, historical perspectives in digital imaging, digital painting, digital darkroom techniques and preparation of digital images for various media. Additionally, students engage in written and verbal communication for ideation and presentation. Lectures, readings, class demonstrations, group exercises and writing assignments are used. Prerequisites: DDSN 1100.

Prerequisite(s): DDSN 1100 or 1100.

DDSN 1102 Digital Illustration (3 Credit Hours)
This studio course explores illustration in the digital platform while creating historical and practical connections between technology and creative problem solving. Topics introduced in this course are the Adobe Illustrator interface, illustration tools and techniques, color, photo-realism, historical perspectives in digital illustration and challenges within the digital interface. Additionally, students engage in written and verbal communication for ideation and presentation. Lectures, readings, class demonstrations, group exercises and writing assignments are used. Prerequisites: DDSN 1100.

Prerequisite(s): DDSN 1100 or 1100.

DDSN 1400 Typography Studio I (3 Credit Hours)
This studio course examines typography from historical and practical perspectives while creating connections between type as a communication tool and type as visual expression. Topics introduced in this course are the history of type, type anatomy, classifications, terminology, type setting for the screen versus print, rules of typography, hierarchy and formalism. Additionally, students engage in written and verbal communication for ideation and presentation. Lectures, readings, class demonstrations, group exercises and writing assignments are used. Prerequisites: DDSN 1100, 1101, 1102.

Prerequisite(s): (DDSN 1100 or 1100) and (DDSN 1101 or 1101) and (DDSN 1102 or 1102).

DDSN 1401 History of Graphic Design (3 Credit Hours)
This studio course examines the history of graphic design from 15,000 B.C. through the invention of writing to present day composition and strictly follows Meggs’ History of Graphic Design. Students will explore various movements in graphic design history and create design works that reflect these periods. Parallels between fine art history will be drawn. Students are expected to produce written projects in this course displaying content knowledge. Prerequisites: DDSN 1100, 1101, 1102.

Prerequisite(s): (DDSN 1100 or 1100) and (DDSN 1101 or 1101) and (DDSN 1102 or 1102).

DDSN 1500 Digital Art Studio I - 2D Imag (3 Credit Hours)
This studio course uses digital imaging software, Adobe Photoshop, to create masterfully rendered works with manipulation and realism in mind. Students will apply Photoshop knowledge to advanced imaging and rendering techniques and create digital painting and photo manipulation compositions. Prerequisites: DDSN 1100.

Prerequisite(s): DDSN 1100 or 1100.

DDSN 1501 Digital Anatomy Game Art & Ani (3 Credit Hours)
This studio course explores traditional fine art drawing paired with digital drawing techniques. Students will apply understanding of anatomy to character development for games and animation. Students will analyze landscape proportions, surface features of human figure and digital anatomic features for image making. Students will then apply digital Zbrush techniques to achieve rendering outcomes. Prerequisites: DDSN 1100, 1500.

Prerequisite(s): DDSN 1100 and 1500.

DDSN 1502 Digital Art Studio II-Concept (3 Credit Hours)
This studio course explores design intentions and execution for masterful concept art. Students will create designs for production, silhouette establishing shots, rapid idea generation, iconic characters and environments. Students will create professional written and verbal presentations for portfolio-ready printed works. Prerequisites: DDSN 1100, 1500, 1501.

Prerequisite(s): DDSN 1100, 1500 and 1501.

DDSN 1503 3D Virtual Sculpting (3 Credit Hours)
This studio course explores virtual sculpting software and techniques to create three-dimensional organic models. Students will understand and apply virtual sculpting techniques in the Zbrush interface using organic models. Prerequisites: DDSN 1100, 1500, 1501, 1502.

Prerequisite(s): DDSN 1100, 1500, 1501 and 1502.
DDSN 1504  Modeling Studio I-Envir Model (3 Credit Hours)
This studio course uses the Maya interface to master three-dimensional model techniques for hard surface and architecture using UV and texture maps. Prerequisites: DDSN 1100, 1500, 1501, 1502, 1503.

DDSN 1505  Animation Studio I-Intro to An (3 Credit Hours)
This studio course introduces animation techniques, methods and software. Students will evaluate animation methods and software and create basic animation movements and loops. Students are expected to understand and apply basic levels of rigging and weighting, basic skeleton and walk cycles. Prerequisites: DDSN 1100, 1500, 1501, 1502.

Prerequisite(s): (DDSN 1100 or 1100) and (DDSN 1500 or 1500) and (DDSN 1501 or 1501) and (DDSN 1502 or 1502).

DDSN 2100  Intro to UX Design (3 Credit Hours)
This studio course explores the field of user-experience design, empathy, user-engagement and best practices. Students will explore and evaluate case studies, create concept-driven strategies to meet the needs to of mock-clients and produce wireframes and prototypes. Prerequisites: DDSN 1100, 1101, 1102.

Prerequisite(s): (DDSN 1100 or 1100) and (DDSN 1101 or 1101) and (DDSN 1102 or 1102).

DDSN 2101  Foundation Interactive Design (3 Credit Hours)
This studio course investigates the practice of interactive design from both front and back-end perspectives. User-experience and user-interface design techniques are employed to develop online interactive content. Topics introduced in this course are image and type for the web, HTML basics, development, testing and updating of effective interfaces, visual, navigational and structural approaches to CSS, visual hierarchy, basic animation for online content, image and file preparation and historical perspectives in interactive design. Additionally, students engage in written and verbal communication for ideation and presentation. Lectures, readings, class demonstrations, group exercises and writing assignments are used. Prerequisites: DDSN 1100, 1101, 1102, 2100.

Prerequisite(s): (DDSN 1100 or 1100) and (DDSN 1101 or 1101) and (DDSN 1102 or 1102).

DDSN 2102  Digital Photography (3 Credit Hours)
This studio course will explore the history of digital photography in the context of digital design and put into practice photographic compositions and image editing. The digital camera will be used to create compelling visual compositions based on a concept, explore product photography, green screen photography and lighting scenarios. Practice and experimentation with digital image manipulation and compositional techniques is also included in this course. Prerequisites: DDSN 1100, 1101, 1102.

DDSN 2400  Digital Page Layout (3 Credit Hours)
This studio course utilizes multi-page layout software to explore long-format design challenges. Topics introduced in this course include advanced InDesign software techniques, design for publication, and file preparation for long-format printing. Students will create concept-driven works for mock clients. Printing and production techniques for long-format design will be employed. Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401.

DDSN 2401  Design Studio I (3 Credit Hours)
This studio course explores development of printed branding materials within the Adobe interface. Students will create concept-driven projects exploring execution via various media to communicate an event, promotion or series. Students will work with mock clients to create professional written and verbal presentations for portfolio-ready printed works. Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401, 2100, 2400.

DDSN 2500  Modeling Studio II Character (3 Credit Hours)
This studio course applies advanced character modeling techniques for advanced sculpting and UV and texture maps. Students will identify advanced sculpting techniques and proper topology flow for real time characters. Prerequisites: DDSN 1100, 1500, 1501, 1502, 1503, 1504, 1505.

DDSN 2501  Animation Studio II (3 Credit Hours)
This studio course examines rigging and weighting of characters within the animation interface. Scripting language is introduced. Students are expected to apply animation techniques to construct complex character rigs and techniques for advanced rigging solutions, skeleton, skinning associations with geometry. Prerequisites: DDSN 1100, 1500, 1501, 1502, 1503, 1504, 1505.

DDSN 2502  Digital Art Studio III Modular (3 Credit Hours)
This studio course explores to use of modular components to allow for efficient reuse in the game design environment. Students will understand how to create these assets with a focus on modularity. Prerequisites: DDSN 1100, 1500, 1501, 1502, 1503, 1504, 1505.

DDSN 2503  Animation Studio III (3 Credit Hours)
This studio course explores advanced animation techniques as well as motion capture technology. Students will understand and apply motion capture system and integrate motion capture within traditional animation principles. Prerequisites: DDSN 1100, 1500, 1501, 1502, 1503, 1504, 1505, 2500, 2501, 2502.

DDSN 2504  Game Engine Studio I (3 Credit Hours)
This studio course explores the Unreal Engine interface and systems with an introduction of Blueprint scripting language. Students are expected to understand and apply Unreal Engine interface for world building, interface and navigating systems and premade assets. Prerequisites: DDSN 1100, 1500, 1501, 1502, 1503, 1504, 1505, 2500, 2501, 2502.

DDSN 2505  Game Engine Studio II (3 Credit Hours)
This studio course examines the Unreal Engine for world-building, lighting and post-processing for a fully rendered scene. Students will create world building, incorporating lighting and post-processing, to assemble environment projects within a world for a fully-rendered scene within a real time environment. Prerequisites: DDSN 1100, 1500, 1501, 1502, 1503, 1504, 1505, 2500, 2501, 2502.

DDSN 2600  Interactive Design Studio I (3 Credit Hours)
This studio course explores design for mobile, display, aesthetics, UX, UI and interactive solutions. Students are introduced to the latest authoring and animation tools and learn how to apply their knowledge of the software to create dynamic and responsive interactive experiences. Students will communicate ideas via written and verbal presentation. Prerequisites: DDSN 1100, 1101, 1102, 1401, 2100, 2101, CPST 3400, CPST 3410.
DDSN 2601 Digital Narrative Studio I (3 Credit Hours)
This studio course uses story-telling techniques to communicate to an audience from a variety of platforms. Students will engage in techniques for video editing and visual storytelling through lecture and class projects. Digital editing software is introduced as well as production materials. Students will create short narrative stories to solve a problem, entertain diverse audiences, and market ideas. They will explore various formats, including film, TV, and social media, as well as how each channel has evolved and presents unique opportunities for messaging. Prerequisites: DDSN 1100, 1101, 1102, 1401, 2100, 2101, CPST 3400, CPST 3410.

Prerequisite(s): DDSN 1100, 1101, 1102, 1401, 2100, 2101, CPST 3400 and 3410.

DDSN 2602 Motion Design Studio (3 Credit Hours)
This studio course explores vocabularies and concepts of motion design while engaging in previsualization, cinematography, culture, critical studies and media theory. Software such as Adobe Muse and Animate are used to communicate ideas and concepts. Students will create concept-driven storyboarding to articulate ideas and use software to bring these ideas to life. Prerequisites: DDSN 1100, 1101, 1102, 1401, 2100, 2101, CPST 3400, CPST 3410, DDSN 2600, 2601.

Prerequisite(s): DDSN 1100, 1102, 1401, 2100, 2101, CPST 3400, 3410, DDSN 2600 and 2601.

DDSN 3100 Sound Design (3 Credit Hours)
This studio course introduces sound design principles, historical perspectives and case studies. Students are expected to story board and compose sound for characters, video, motion graphics or interactive elements. Students will create professional written and verbal presentations. Prerequisites: DDSN 1100, 1101, 1102.

DDSN 3400 Design Studio II (3 Credit Hours)
This studio course explores development of three-dimensional packaging to communicate a brand or persona paired with two-dimensional supporting materials. Students will work alone and in groups to create original works for mock clients and service-learning experiences. Students will create professional written and verbal presentations for portfolio-ready printed works. Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401, 2100, 2400, 2401.

Prerequisite(s): DDSN 2401.

DDSN 3401 Letterpress Studio (3 Credit Hours)
This studio course explores traditional letterpress techniques within a design context. Students will use their original typographic compositions and translate them to the physical letterpress printing method. Students will critique and analyze design solutions via written assignments and verbal class discussions. Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401, 2100, 2400, 2401.

DDSN 3402 Poster Design (3 Credit Hours)
This studio course uses the poster as a means for visual communication within various projects. Students will work alone and in groups to find concept-driven solutions to design problems translated into the poster medium. Students will critique and analyze design solutions via written assignments and verbal class discussions. Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401, 2100, 2400, 2401, 3400.

DDSN 3403 M. A. D. Studio (3 Credit Hours)
Marketing and advertising for designers explores the role designers play in the marketing and advertising industries. Students use marketing and advertising to better communicate a brand or persona within various media. Students will work within service-learning projects to articulate a call to action via multiple media platforms both alone and in groups. Students will critique and analyze design solutions via written assignments and verbal class discussions and presentations. Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401, 2100, 2400, 2401, 3400, 3600.

DDSN 3500 Digital Art Effects Complex (3 Credit Hours)
This studio course explores complex textures, particle systems, materials and advanced Blueprint scripting. Students will create connections between effects and systems with physics simulation. Prerequisites: DDSN 1100, 1500, 1501, 1502, 1503, 1504, 1505, 2500, 2501, 2502, 2503, 2504, 2505.

DDSN 3501 Game Engine Studio III (3 Credit Hours)
This studio course examines the Unreal Engine for the process of importing, viewing and implementation of VFX that can apply to characters, weapons, environments and beyond. Prerequisites: DDSN 1100, 1500, 1501, 1502, 1503, 1504, 1505, 2500, 2501, 2502, 2503, 2504, 2505, 3500.

DDSN 3502 Digital Art Studio IV (3 Credit Hours)
This studio course explores advanced digital art techniques with the user in mind for intuition and usability. As developers, we know that immersion is everything. When you're immersed you lose track of time and become involved in what the game is presenting. A major factor in what makes or breaks immersion is how easy it is for your player to convert an idea into an in-game action -- that is, how fluid your game's User Experience (UX) is and how well-designed its User Interface (UI) is. A game hurts itself by providing too little information or too much, requiring too many inputs, confusing the player with unhelpful prompts or making it hard for a new player to interact. Prerequisites: DDSN 1100, 1500, 1501, 1502, 1503, 1504, 1505, 2500, 2501, 2502, 2503, 2504, 2505, 3500.

DDSN 3503 Workflow Intro Deve Pipelines (3 Credit Hours)
This studio course explores the use of Scrum and Agile to aid in pipeline and team management for the unique challenges of game development. Students will learn to form successful agile teams that incorporate programmers, producers, artists, testers, and designers—and promote effective collaboration within and beyond those teams, throughout the entire process. Prerequisites: DDSN 1100, 1500, 1501, 1502, 1503, 1504, 1505, 2500, 2501, 2502, 2503, 2504, 2505, 3500, 3502.

DDSN 3504 Team Game Art i Interactive (3 Credit Hours)
This studio course uses teamwork to develop pre-production assets for a fully-interactive game concept. Students will develop their concept for the group game art senior project. Students will apply team environment skillset to character focused, VFX focused, environment focus, animator leads and develop pre-production assets for larger senior team project. Prerequisites: DDSN 1100, 1500, 1501, 1502, 1503, 1504, 1505, 2500, 2501, 2502, 2503, 2504, 2505, 3500, 3502.
**DDSN 3600 Social Media Studio (3 Credit Hours)**
This studio course examines the use of social media within the design field. Students will create graphics for various new media and social media landscapes and develop strategy for implementation. Students will recognize and evaluate social media platforms based on user interaction and outcomes, design strategic graphics for social media campaigns, develop ongoing social media and digital strategy for service-learning client and communicate project via professional written and verbal presentation. Prerequisites: DDSN 1100, 1101, 1102, 1401, 2100, 2101, 2600, 2600, 2601, 2602, CPST 3400, CPST 3410.

**DDSN 3601 SEO SEM (3 Credit Hours)**
This studio course explores search engine optimization and search engine marketing for the interactive space. Students will understand and evaluate ways to improve search engine optimization and search engine marketing, work in groups to develop creative strategy to assist a local client in improved search engine optimization and evaluate advanced search engine marketing techniques in written form. Prerequisites: DDSN 1100, 1101, 1102, 1401, 2100, 2101, 2600, 2600, 2601, 2602, CPST 3400, CPST 3410.

**DDSN 3602 Interactive Design Studio II (3 Credit Hours)**
This studio courses uses advanced UX, UI, interactive design techniques and software to communicate a concept to an audience. Students will understand advanced interactive design techniques and apply techniques to class assignments. Students will create content-rich design solutions showcased within an interactive context using working prototypes in mobile-first design. Prerequisites: DDSN 1100, 1101, 1102, 1401, 2100, 2101, 2600, 2600, 2601, 2602, CPST 3400, CPST 3410.

**DDSN 3603 Digital Narrative Studio II (3 Credit Hours)**
This studio course explores video production within a team environment to create concept-driven, strategic solutions for a real-world client. Students will work in teams to create storytelling experiences via video and motion. Students will understand and analyze advanced principles of the digital narrative, study different approaches to genre and style, develop multimodal approach to digital problem solving, create concept-driven solutions to class assignments, work in groups to develop strategy for service-learning client, communicate project via professional written and verbal presentation. They will explore platforms and brand messaging, along with creative means of achieving goals in these channels. Prerequisites: DDSN 1100, 1101, 1102, 1401, 2100, 2101, 2600, 2600, 2601, 2602, 3600, CPST 3400, CPST 3410.

**DDSN 3604 Motion Design Studio II (3 Credit Hours)**
This studio course uses advanced motion techniques to execute a strategic approach to a real-world problem. Students work in teams to create a robust deck of interactive motion elements for a local client. Students will prepare and formulate strategic approach using motion design, apply good interactive marketing, design, narrative and motion techniques to formulate a solution. Students will present this solution both in written form and verbally in project presentation. Prerequisites: DDSN 1100, 1101, 1102, 1401, 2100, 2101, 2600, 2600, 2601, 2602, 3600, 3601, 2602, 3603, CPST 3400, CPST 3410.

**DDSN 4100 Portfolio & Prof Practices (3 Credit Hours)**
This studio course prepares students for entry into the workforce. Students will create a personal brand and translate that brand into their portfolio, stationery package and other media for marketing purposes. Students will undergo rigorous self-reflection, mock interviews, presentation techniques and portfolio reworking. Students can expect to create written and verbal communication regarding their brand, personal attributes and portfolio works. Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401, 2400, 2401, 3400, 3404, 3600, 4404, 4402, 4404, 4405.

**DDSN 4400 Business of Design (3 Credit Hours)**
This studio course provides students with real-world applications of business practices within the graphic design industry, contracts, the law, business planning, strategy and marketing. Students will assemble a strategic approach to estimating and planning, project workflow in a design business environment and create original work for service-learning client. Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401, 2100, 2400, 2401, 3400, 3403, 3600.

**DDSN 4401 Design for Good (3 Credit Hours)**
This studio course explores the greater purpose of design as an agent of change. Students will create multiple projects supporting a cause with a specific call to action. 2D, 3D and interactive elements will be employed to create meaningful works based on a concept. Students will work for personal and service-learning clients and communicate projects via professional written and verbal presentation. Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401, 2100, 2400, 2401, 3400, 3403, 3600.

**DDSN 4402 Packaging Design (3 Credit Hours)**
This studio course uses good design techniques paired with visual marketing and advertising strategies to apply design to three-dimensional packaging objects. Students will work alone and in groups to create concept-driven solutions to appeal to an audience via packaging media. Students will communicate projects via professional written and verbal presentation. Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401, 2100, 2400, 2401, 3400, 3403, 3600.

**DDSN 4403 Corporate Identity (3 Credit Hours)**
This studio course greater explores the field of corporate identity and branding within a design context. Students will work alone and in groups to create concept-driven works for mock clients and service-learning projects. Students will explore logo design, branding, brand standards, brand strategy and brand application as part of this course. Students will communicate projects via professional written and verbal presentation. Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401, 2100, 2400, 2401, 3400, 3403, 3600, 4400.

**DDSN 4404 Environmental Design (3 Credit Hours)**
This studio course greater explores the field of environmental design within a design context. Students will work alone and in groups to create concept-driven works for mock clients and service-learning projects. Students will explore large-scale graphics for a variety of out-of-home media including billboards, transportation design, way finding and accessibility design. Students will communicate projects via professional written and verbal presentation. Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401, 2100, 2400, 2401, 3400, 3403, 3600 and 4400.
DDSN 4405 Design Studio III (3 Credit Hours)
This studio course explores development of multi-media works surrounding project themes. Students will use print (2D), packaging (3D) and interactive media to communicate a project solution. Students will work alone and in groups to create original works for mock clients and service-learning experiences. Students will create professional written and verbal presentations for portfolio-ready printed works.
Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401, 2100, 2400, 2401, 3400, 3403, 3600, 4400, 4402, 4404.

DDSN 4406 Designer as Author (3 Credit Hours)
This accelerated studio course explores development of a project where the student is the author of the concept, product, persona, client, research, execution and implementation from start to finish. This course is reserved for students with a 3.5 or higher GPA who can demonstrate exceptional design skills in two-dimensional, three-dimensional and interactive design techniques. Students interested in taking this course should apply the semester prior via portfolio and written proposal for the course topic. Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401, 2100, 2400, 2401, 3400, 3403, 3600, 4400, 4402, 4404.

DDSN 4500 Portfolio Studio (3 Credit Hours)
This studio course pairs students with expert faculty to further develop their portfolio for successful job placement upon graduation. This course may be taken twice for credit. Students will gain greater in-depth portfolio ready works, critique and evaluate works within dossier for improvement and apply greater focus to area of expertise. Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401, 2100, 2400, 2401, 3400, 3403, 3600, 4400, 4402, 4404.

DDSN 4501 Capstone Game Art Studio (3 Credit Hours)
This Capstone course further develops the team game art project. The teams will develop, debug and polish their interactive game and present the final work to a panel. All aspects and developmental processes of the game must be showcased in the presentation. Prerequisites: DDSN 1100, 1500, 1501, 1502, 1503, 1504, 1505, 2500, 2501, 2502, 2503, 2504, 2505, 3500, 3502, 3503, 3504.

DDSN 4600 Multi-Media Studio (3 Credit Hours)
This studio course encourages the use of multiple media to communicate to an audience. Students will use narrative, social media, motion, website design and other interactive applications per their strategy to create a multimodal user-experience. Students will present ideas both in written and verbal form. Prerequisites: DDSN 1100, 1101, 1102, 1401, 2100, 2101, 2600, 2600, 2601, 2602, 3600, 3601, 2602, 3603, CPST 3400, CPST 3410.

DDSN 4900 Special Topics (3 Credit Hours)
Special Topics in Digital Design.

DDSN 4910 Independent Study (1-3 Credit Hours)
This course explores special topics with the Digital Design filed. The student will work one-on-one with the faculty member to create portfolio ready works in a concept-driven environment. The independent study may be taken twice for credit if the topics vary.

DDSN 5050 Digital Design Practicum (3 Credit Hours)
This course assists in the student’s internship experience by providing weekly direction and feedback. The student is responsible for securing an internship during the practicum course period and completing at least 100 total hours during the semester. In addition to the contact hours, each student must maintain a PDF portfolio of works created during the semester for review during the final exam period. Both the student and employer will be given entrance and exit surveys regarding their experiences.

Digital Media Production (DMPR)

DMPR 1110 Intro Creative Industries (3 Credit Hours)
An introduction to the basic theoretical and practical techniques of audio, radio, film and television, emphasizing the processes of production in each medium. Topics include sound recording and mixing, basic script writing, storyboarding, camera operation and basic editing.

DMPR 2001 Digital Filmmaking Fund I (3 Credit Hours)
An introduction to more of the basic theoretical and practical techniques of audio, radio, film and television, emphasizing the processes of production in each medium. Topics include animation effects and compositing, lighting, makeup for TV and Film, film budgeting and scheduling and advanced editing techniques.

DMPR 2002 Digital Filmmaking Fund II (3 Credit Hours)
Professional, high quality sound design practices in narrative film are analyzed and implemented in this course. This hands-on experience will explore techniques of recording, mixing, processing, synthesis, sampling, and analysis of digital audio with emphasis on the fundamental elements of producing, designing and editing sound specifically for the moving image. Topics to be covered include microphone techniques, field and studio recording, stereo and 5.1 surround sound distribution, and Foley and ADR techniques. Students will collaborate in designing the sound for the Senior films.

DMPR 3030 TV & Film Sound Design (3 Credit Hours)
Professional, high quality sound design practices in narrative film are analyzed and implemented in this course. This hands-on experience will explore techniques of recording, mixing, processing, synthesis, sampling, and analysis of digital audio with emphasis on the fundamental elements of producing, designing and editing sound specifically for the moving image. Topics to be covered include microphone techniques, field and studio recording, stereo and 5.1 surround sound distribution, and Foley and ADR techniques. Students will collaborate in designing the sound for the Senior films.

DMPR 3040 Lighting & Cinematography (3 Credit Hours)
Techniques in the art and craft of lighting and digital cinematography are covered, from angles, frame composition, filters, and camera movement to image control through lighting, exposure, focus and lenses. Students learn from in-class demonstrations, out of class assignments, and analysis of the techniques of the masters in cinematography. The duties of camera department personnel are addressed. The class also includes instruction in the use of the dolly, slate, signal monitoring equipment, lighting styles and Steadicam.

DMPR 3001 or THEA 2070 or DMPR 2001.

DMPR 3002 THREE TV & FILM INDUSTRY (3 Credit Hours)
Professional, high quality sound design practices in narrative film are analyzed and implemented in this course. This hands-on experience will explore techniques of recording, mixing, processing, synthesis, sampling, and analysis of digital audio with emphasis on the fundamental elements of producing, designing and editing sound specifically for the moving image. Topics to be covered include microphone techniques, field and studio recording, stereo and 5.1 surround sound distribution, and Foley and ADR techniques. Students will collaborate in designing the sound for the Senior films.

DDSN 5050 Digital Design Practicum (3 Credit Hours)
This course assists in the student’s internship experience by providing weekly direction and feedback. The student is responsible for securing an internship during the practicum course period and completing at least 100 total hours during the semester. In addition to the contact hours, each student must maintain a PDF portfolio of works created during the semester for review during the final exam period. Both the student and employer will be given entrance and exit surveys regarding their experiences.

Digital Media Production (DMPR)

DMPR 1110 Intro Creative Industries (3 Credit Hours)
An introduction to the basic theoretical and practical techniques of audio, radio, film and television, emphasizing the processes of production in each medium. Topics include sound recording and mixing, basic script writing, storyboarding, camera operation and basic editing.

DMPR 2001 Digital Filmmaking Fund I (3 Credit Hours)
An introduction to more of the basic theoretical and practical techniques of audio, radio, film and television, emphasizing the processes of production in each medium. Topics include animation effects and compositing, lighting, makeup for TV and Film, film budgeting and scheduling and advanced editing techniques.

DMPR 2002 Digital Filmmaking Fund II (3 Credit Hours)
An introduction to more of the basic theoretical and practical techniques of audio, radio, film and television, emphasizing the processes of production in each medium. Topics include animation effects and compositing, lighting, makeup for TV and Film, film budgeting and scheduling and advanced editing techniques.

Prerequisite(s): THEA 2070 or DMPR 2001.

DMPR 3030 TV & Film Sound Design (3 Credit Hours)
Professional, high quality sound design practices in narrative film are analyzed and implemented in this course. This hands-on experience will explore techniques of recording, mixing, processing, synthesis, sampling, and analysis of digital audio with emphasis on the fundamental elements of producing, designing and editing sound specifically for the moving image. Topics to be covered include microphone techniques, field and studio recording, stereo and 5.1 surround sound distribution, and Foley and ADR techniques. Students will collaborate in designing the sound for the Senior films.

Prerequisite(s): DMPR 2001 or THEA 2070.

DMPR 3040 Lighting & Cinematography (3 Credit Hours)
Techniques in the art and craft of lighting and digital cinematography are covered, from angles, frame composition, filters, and camera movement to image control through lighting, exposure, focus and lenses. Students learn from in-class demonstrations, out of class assignments, and analysis of the techniques of the masters in cinematography. The duties of camera department personnel are addressed. The class also includes instruction in the use of the dolly, slate, signal monitoring equipment, lighting styles and Steadicam.

Prerequisite(s): DMPR 2002 or THEA 2080.
DMPR 3220 Digital Production Non-Profits (3 Credit Hours)
This course emphasizes the role of communication in building understanding and nurturing change. It will consider the art of expressing ideas combined with the science of transmitting information. In this hands-on experience, students will analyze a communication situation or problem and then design and implement a communication plan that will help the nonprofit community partner achieve positive social change, fulfill its mission, advance its program and policies and make its value known. Service Learning is a required element in this course. Prerequisites: DMPR 2001, junior status.

Prerequisite(s): THEA 2070 or DMPR 2001.

DMPR 3290 Digital Production Non-Profits (3 Credit Hours)
Prerequisite(s): THEA 2070.

DMPR 3880 Writing Intensive: DMPR 3910 (1 Credit Hour)

DMPR 3890 Service Learning: DMPR 3220 (0-1 Credit Hours)
Service Learning.

DMPR 3910 Special Topics (3 Credit Hours)
Specialty courses for undergraduates in Digital Media Production techniques and projects as designed by visiting or permanent faculty teaching in the program. Topics may be drawn from any area of film, television and multimedia production, for example advanced cinematography, film scoring, or documentary filmmaking and similar topics. May be repeated for credit on different topics. Prerequisites vary depending on the topic.

DMPR 3911 Special Topics (3 Credit Hours)

DMPR 3912 Special Topics (3 Credit Hours)
Specialty courses for undergraduates in Digital Media Production techniques and projects as designed by visiting or permanent faculty teaching in the program. Topics may be drawn from any area of film, television and multimedia production, for example advanced cinematography, film scoring, or documentary filmmaking and similar topics. May be repeated for credit on different topics. Prerequisites vary depending on the topic.

DMPR 3920 Special Topics (3 Credit Hours)
Specialty courses for undergraduates in Digital Media Production techniques and projects as designed by visiting or permanent faculty teaching in the program. Topics may be drawn from any area of film, television and multimedia production, for example advanced cinematography, film scoring, or documentary filmmaking and similar topics. May be repeated for credit on different topics. Prerequisites vary depending on the topic.

DMPR 4070 Contemp Film as Art & Industry (3 Credit Hours)
The Hollywood filmmaking process from conception through distribution is analyzed in this course through the critique and reflections of some of the most significant contemporary contributors to the medium including directors, writers and producers and scholars. Many critique the industry in their films as well as in writing. These films will also be analyzed.

DMPR 4910 Independent Study (1-3 Credit Hours)
A planned learning experience covering material not included in regular course offerings accomplished independent of formal classroom and/or laboratory sessions through written contract between a student and faculty member. A plan of study must be proposed by the student and approved by the faculty member who supervises and grades the project outcomes. The course is usually completed within one semester.

DMPR 4920 Independent Study (1-3 Credit Hours)
A planned learning experience covering material not included in regular course offerings accomplished independent of formal classroom and/or laboratory sessions through written contract between a student and faculty member. A plan of study must be proposed by the student and approved by the faculty member who supervises and grades the project outcomes. The course is usually completed within one semester.

DMPR 5380 Junior Year Abroad (1-20 Credit Hours)

DMPR 5390 Junior Year Abroad (1-20 Credit Hours)

DMPR 5550 Advanced Digital Filmmaking I (3 Credit Hours)
"Professional, high quality narrative film preproduction practices are analyzed and implemented in this course. Writing the script, selecting the cast, choosing locations, budgeting, financing, securing rights, art directing, and breaking the script down for scheduling the capstone film will be completed. At the completion of this two-semester course, each student will participate in a public screening of his or her film.

Prerequisite(s): DMPR 2002 or THEA 2080.

DMPR 5560 Adv Digital Filmmaking II (3 Credit Hours)
In this capstone experience, each student will produce, direct, promote and complete postproduction of the short narrative film he or she produced in Advanced Digital Filmmaking I, the prerequisite class. Crew organization, responsibilities for narrative synch-sound shooting, the management of the set and the shooting day, and script supervision will be analyzed and implemented. Editing, color correction, sound design and scoring will encompass the post-production phase. At the completion of this two-semester course, each student will participate in a public screening of his or her film.

Prerequisite(s): THEA 5550 or DMPR 5550.
Disaster Resilience Leader Sci (DRLS)

DRLS 6010 Human and Social Factors (3 Credit Hours)
Outline terminology relevant to the field of disaster resilience leadership (DRL) as it pertains to human and social factors; Understand and apply relevant global, national and state policies and legislation in the field of disaster resilience; Discuss critically the ethical considerations in disaster work (social justice, human dignity, anti-oppressive); Describe, explain and apply human and social theories for DRL (Eco-systemic; structural functionalism, social capital, conservation of resources and progression of vulnerability); Discuss critically the disaster recovery process of the individual exposed to disasters as a life event from a multi-dimensional approach; Evaluate the dynamics within the family/household affected by disasters and disaster recovery; Define and outline building disaster-resilient communities; Outline and explain the role of the media and social media in DRL; Plan intervention programs within the context of the disaster management cycle; Plan disaster-related crisis and stress management programs that promote resilience; Identify the psychosocial needs of specific populations (vulnerable populations, e.g. children, the aged, animal owners, people with disabilities, poorest of the poor, HIV/AIDS, etc.); Understand and explain disaster research.

DRLS 6015 Disaster Displace & Resilience (3 Credit Hours)
Course will provide future disaster resilience leaders with a humanistic framework for understanding the cultural dynamics of forced migration and its connection to contemporary processes of global social transformation, the proliferation of transnational communities, and emergent conceptual spaces of identity formation during exile.

DRLS 6016 Vulnerable Populations (3 Credit Hours)
The Vulnerable Populations course will provide future disaster resilience leaders with a fundamental understanding of the social constructions of human vulnerability to disasters, conceptualizing populations at risk in a disaster framework and review of best practices in vulnerability reduction through capacity-building. The course offers a cross-cultural and interdisciplinary exploration of culturally sensitive strategies responsive to the needs of vulnerable populations, a comprehensive approach to engaging communities through the use of vulnerability and capacity assessment (VCA), and the social, political, economic, and cultural inequalities that represent intersecting vulnerabilities. The study of vulnerable populations will incorporate a humanistic perspective, investigating the role of cultural competence and the need for a participatory multi-stakeholder approach in community-based disaster risk reduction and sustainable development.

DRLS 6017 Gender and Disaster Risk Red (3 Credit Hours)
This course examines the critical role that women play in strengthening community resilience to multiple disasters, the importance of women's knowledge and experience in the formulation of comprehensive adaptive strategies, and the need for their inclusion in disaster risk reduction and sustainable development planning. The course offers a cross-cultural exploration of the unique needs of women throughout the complete life-cycle of a disaster event and the advantages gained from female participation in disaster preparedness and response. The interdisciplinary study of disasters and their effects on women will investigate gender-bias in disaster practices, the cultural and organizational vulnerability of women, familial disruption and hazard perception, post-disaster domestic and sexual violence against women, and the plight of female refugees.

DRLS 6020 Disaster Operations (3 Credit Hours)
Disaster Operations is an advanced professional level examination of modern emergency management concepts, national and international trends, practical and political issues and policies, technological applications to emergency management, and the development and practical implementation of sound emergency management practices designed to protect people, communities, critical infrastructure and key assets. Included will be a brief review of the history of emergency management, legal issues, social science perspectives, planning concepts and techniques, disaster modeling, operational problems, analytical methods, special populations, and management styles. Case studies will be examined and discussed to determine the extent of effective or ineffective planning, responding, and recovering from natural and technological disasters.

DRLS 6021 Disaster & Human Assist SOP (3 Credit Hours)
DRLS 6022 Catastrophic Crises (1-3 Credit Hours)
This course will review events so dramatic and catastrophic that they leave evidence in the geologic record and can threaten life on Earth. Included will be violent volcanic eruptions, mega-earthquakes and the tsunami arising from them, rapid climatic changes and associated storms, and impacts from asteroids and comets.

DRLS 6023 Emerging Trends Res & Recovery (1 Credit Hour)
This course will review the most recent trends in resilience and recovery efforts as it relates to natural disasters and catastrophic events.

DRLS 6024 Facilitating Change Non-Profit (1 Credit Hour)
DRLS 6030 Leadership Analytics (3 Credit Hours)
DRLS 6031 Crisis Informatics & Analytics (3 Credit Hours)
DRLS 6032 Quantitative Analysis in D. R. (3 Credit Hours)
Introduces students to quantitative data principles, methods, and applications relevant to disaster resilience practice and research. It emphasizes the practical application of data to assess quality of evidence and contribute to knowledge through systematic inquiry, including comprehension of data collection and research methods relevant to disaster resilience data creation. Understanding the scope and application of data in disasters is stressed. Methods in statistics and epidemiology are foundational. The one-credit lab section builds on the lecture, introducing skills in computation for data processing and interpretation.
DRLS 6033 Quantitative Analysis D.R. Lab (1 Credit Hour)
DRLS 6035 Leadership Amidst Crisis (3 Credit Hours)
DRLS 6040 Environment and Infrastructure (3 Credit Hours)
To understand and evaluate: the risks that natural and technological disasters pose to the human environment, the ways that land use, resource use, and environmental policy affect the risks posed by natural and technological disasters, the ways in which the natural environment functions as a “public good,” providing a range of “services”—including protection from disaster-based harms—for human and non-human populations, the ways in which the built environment functions as a “public good,” providing a range of “services”—including protection from disaster-based harms—for human and non-human populations, the ways that climate change impacts affect disaster risk and how actors in the public and private sectors are seeking to reduce climate-change-based risks; To understand in general terms the history of the environmental movement, the development of modern environmental policy, and the development of modern disaster risk-reduction policy in the United States, how social vulnerability (based on factors related to wealth, race, age, sex, disability, education level, etc.) affects a community’s disaster risk in an environmental setting, and the ways that actors in the public and private sectors are addressing or might address the special risks posed by social vulnerability.

DRLS 6042 Integrating Climate Change (3 Credit Hours)
The course is an advanced professional-level examination of the fields of climate change adaptation and disaster risk reduction and ongoing efforts both domestically and internationally to integrate these two hazard mitigation efforts. Class presentations and discussions will examine the various issues relevant to the design and implementation of climate change adaptation and disaster risk reduction plans and actions including costs, benefits, legal issues, impact on development, environmental links and concerns, as well as governance issues.

DRLS 6050 Public Leadership Practice (3 Credit Hours)
This course offers a critical and reflective exploration of public leadership practices at play in communities that social researchers and practitioners encounter, and how to enhance and support these as co-leaders working with people rather than experts prescribing to, or analyzing, people. Working with communities can present critical challenges that can have an impact on leadership resilience. This course examines the interactions of academic, organizational, and community leaders through a critical and reflective exploration of public leadership practices at play in communities that social researchers and practitioners encounter, and how to enhance and support these as co-leaders working with people rather than experts prescribing to, or analyzing, people. The course combines academic, professional, and applied perspectives to create a critical lens through which students can become better prepared to enter AND ENGAGE WITH THE community IN PARTNERSHIP TO STRENGTHEN RESILIENCE. Students will connect theory to practice through a combination of academic readings, applied training sessions, and community-based participation and observation.

DRLS 6051 Special Topics (1 Credit Hour)
Topics will vary.

DRLS 6060 Disasters and Social Justice (2 Credit Hours)
"The course offers an interdisciplinary exploration of the ways in which disasters disproportionately affect different communities across the US and internationally. Why are some individuals or communities more vulnerable than others? The course will use the feminist sociological theory of "intersectionality" an underlying theory and mode of looking at the multiple identities that affect one's ability to prepare, respond or recover from disasters. We will look at what role issues of race, ethnicity, gender/gender identity, class, age, dis/ability, sexual orientation and other social categories play in disaster resilience and management. The overall objective of this course is to gain a holistic understanding of the unnatural phenomenon of environmental disasters, including the social construction of disasters, environmental justice, disaster capitalism, normalization of deviance, Black Swan theory, individual blame logic and contaminated communities. Case studies - of local, national and international disasters - will be used to illustrate the principles involved. The course will combine theory with practical approaches to the issue, drawing on resources from different disciplines with a particular focus on the fields of sociology, social work, environmental and social justice, disaster management, community psychology, health, cross-cultural studies and urban planning."

DRLS 6070 Program Dev & Grant Management (3 Credit Hours)
This course will provide future disaster resilience leaders with the knowledge and skills necessary to develop a competitive grant proposal to secure external funding from government agencies, corporations, and private foundations. Understanding the fundamental components of a grant proposal, as well as gaining familiarity with the current funding environment, and managing a successful program grant to completion will be examined. The course presents a brief overview of philanthropy while identifying potential funders, exploring how the generic structure of proposals varies according to sociocultural and institutional settings and understanding the linkages between proposal development and program implementation.

DRLS 6110 Rsh and Eval Crisis - Disaster (3 Credit Hours)
Evaluation is the key organizational tool for both accountability to affected people and those providing the funding as well as learning from individual responses to improve performance. This is a practical skills based course that will build a student’s capacity to conduct, manage, and use the results of evaluations (impacts and process evaluation methods) in emergency response and humanitarian action.
DRLS 6720 Support Children in Adversity (3 Credit Hours)
DRLS 6722 Wellbeing Measurement (3 Credit Hours)
DRLS 6310 Leadership Eval & Consulting (3 Credit Hours)
DRLS 6320 Gender Sensitive Programming (3 Credit Hours)
DRLS 6330 Program Development & Grants (3-4 Credit Hours)
DRLS 6710 Summer Instit: Special Topics (3 Credit Hours)
"Washington DC: Why does the response to some disasters succeed while others fail? What disaster recovery practices result in rebuilding a more resilient community? What are the attributes of an effective disaster operations capability? What are the legal and statutory challenges encountered in response and recovery operations? How is disaster policy developed and implemented? How do I get a job with organizations working in domestic or humanitarian disasters? This course will seek to answer these and other questions concerning disaster operations and policy development in the United States and around the world through a series of panel discussions with disaster policy makers and managers from government agencies, domestic and international NGOs, voluntary organizations, donors, and the business community. Taking full advantage of being in Washington, DC, panelists from FEMA/DHS, the American Red Cross, the US Chamber of Commerce, the United Nations, the Department of Health and Human Services, Save the Children, National Voluntary Organizations Active in Disasters (NVOAD), Resilience AmeriCorps, the World Bank, contractors, and others will be invited to discuss how they develop the policies and programs that drive their disaster response, recovery and resiliency efforts and job opportunities with their organizations. Potential Panel Topics: Voluntary agencies; INGOs; Local emergency management agencies; FEMA and other Federal agencies; State emergency management agencies; Federal humanitarian agencies; United Nations agencies; Public Health agencies; Donors and International Financial Institutions."

DRLS 6720 Summer Instit: Special Topics (3 Credit Hours)
Topics will vary.

DRLS 6730 Summer Instit: Special Topics (1-3 Credit Hours)
Topics will vary.

DRLS 6740 Summer Instit: Special Topics (3 Credit Hours)
Topics will vary.

DRLS 6910 Special Topics (1-3 Credit Hours)
DRLS 6911 Special Topics (1-3 Credit Hours)
DRLS 6940 Transfer Credit (1-12 Credit Hours)
DRLS 7000 Leadership (3 Credit Hours)
This course will dive into recent disasters as the backdrop to explore how theories of leadership ring true or are challenged in practice. Students will be invited to recognize that leaders in the disaster space must be students of people - their needs, motivations, and expectations. Students will have the opportunity to hear from a number of seasoned leaders who will speak to experiences navigating policy, power dynamics and personalities. The course will conclude with the opportunity for students to identify traits and behaviors of leaders to be emulated and to craft those into a personal development roadmap for use in their careers as leaders in the disaster space.

DRLS 7010 Sustainability and Resilience (3 Credit Hours)
DRLS 7020 Disaster Recovery & Resilience (3 Credit Hours)
The purpose of the course is to focus on the short and long-term reality of the environmental disaster facing the South Louisiana Coastal in the physical area between the mouth of the Mississippi and the Atchafalaya basin outlet. Using the tools of implementation science we will collectively segment and organize evidence to understand and chart a path to resilience for the different local populations directly impacted. Multiple pedagogical approaches including lectures, field trips, readings, interviews with local residents and outside speakers will be utilized to render the scope of the experience as inclusive as possible. The course focuses on building analytical skills and methodological tools for understanding and increasing the rate of implementation of resilience strategies for effected communities. Specific skills of implementation science will be taught which when combined with contextual knowledge of the training site will lead to the competency of being able to execute and prepare and implement a plan for assisting communities in becoming rapidly more prepared and more resilient to environmental threats. The subject will be the long term disaster of coastal degradation and global warming on the Louisiana gulf coast.

DRLS 7830 Independent Study (0-3 Credit Hours)
Independent Study courses gives graduate students an opportunity to work with a faculty advisor to pursue a personal academic interest with greater focus. Qualified students must develop a syllabus and schedule with the faculty advisor to be approved by the program directors prior to registration.

DRLS 7940 Transfer Credit-Grad (3 Credit Hours)

Earth & Environmental Sciences (EENS)

EENS 1050 Dinosaurs (3 Credit Hours)
An introduction to dinosaurs, their relatives, and the Mesozoic world. Students will examine the fossil record of dinosaurs to explore dinosaur anatomy, physiology, systematics, ecology, biogeography, behavior, and macroevolution. Course also includes overviews of plate tectonics, sedimentary environments, fossil preservation, geologic time, and biotic evolution.

EENS 1110 Planet Earth (3 Credit Hours)
The origin, nature and evolution of the Earth-Moon system and their constituent materials; development of Earth's surface features through interaction of physical, chemical, and biological processes over geologic time; considerations of interactions between Earth processes and present day human activity.

Corequisite(s): EENS 1115.

EENS 1115 Planet Earth Lab (1 Credit Hour)
A hands-on study of rocks, minerals, landforms and geologic structures using topographic maps, aerial photographs, physical models, field examination and independent research projects. One laboratory per week; field trips.

Corequisite(s): EENS 1110.
EENS 1120 Earth & Life Through Time (3 Credit Hours)
The evolution of earth and life over the past 4.54 billion years.
Corequisite(s): EENS 1125.

EENS 1125 Earth & Life Through Time Lab (1 Credit Hour)
A hands-on exploration of the rock and fossil record of planet earth.
Corequisite(s): EENS 1120.

EENS 1300 Earth as a Living Planet (3 Credit Hours)
An introduction to the interaction of earth systems and man; anthropogenic impacts of population growth and economic development; renewable and non-renewable resources, air, water and soil pollution and mitigation; ecosystems and biological diversity; and environmental problem solving using the scientific method. Students develop a holistic understanding of environmental science using class discussions and laboratories to reinforce basic scientific principles.
Corequisite(s): EENS 1305.

EENS 1305 Earth as a Living Planet Lab (1 Credit Hour)
Lab section for EENS 1300

Corequisite(s): EENS 1300.

EENS 1400 Global Climate Change (3 Credit Hours)
This course provides a broad overview of the causes of climate change and its impacts on Earth and its inhabitants. The first part of the course focuses on the climate system and its components, the second part zeroes in on climate impacts (including those in coastal Louisiana) as well as policy aspects.

EENS 1890 Service Learning: EENS 1300 (0-1 Credit Hours)
Service learning component to Earth and Environmental Sciences courses. See Schedule of Classes each semester for offerings. 20 or 40 hours of public service with a CPS approved community partner.

EENS 1940 Transfer Coursework (3 Credit Hours)

EENS 2020 Environmental Geology (3 Credit Hours)
The interaction of humans and their geologic environment. A study of Earth processes and their action on rocks, soil, fluids, and life in ways that either affect or control the human environment. The effect of humans on their environment with consideration of the feedback between Earth processes and human activities. Lectures and field trips.

EENS 2060 Introductory Geography (3 Credit Hours)
An introduction to the basic facts concerning the physical environment: landforms, climates, vegetation and soils, followed by a comprehensive survey of the relationship between the physical environment and human activity in the major geographic regions of the world. The geography of Louisiana is considered in relation to the region. Recommended to students working toward Louisiana certification in elementary education.

EENS 2070 Weather and Climate (3 Credit Hours)
An introduction to the Earth's atmosphere with particular emphasis on weather and climate. Topics covered include: heating and cooling of the atmosphere; atmospheric circulation and wind; air masses and cyclonic storms; tropical weather and hurricanes; and global climates and climatic change.

EENS 2080 Extreme Weather (3 Credit Hours)
This course is designed to give students a fundamental understanding of severe weather and its impact on man and the environment. Students focus on life cycles of thunderstorms, tornadoes, hurricanes, blizzards, and ice storms, as well as the impacts of temperature and precipitation extremes.

EENS 2090 Surface Water Hydrology (3 Credit Hours)
This course focuses on the movement of water in and among surface water systems and exchanges between the surface, atmospheric and ground water components of the hydrologic cycle. A grade of C- or better is required for the Environmental Earth Science Major.
Prerequisite(s): (MATH 1210, 1210, 1210, 1210, 1310, 1310, 1310 or 1310) and EENS 1300.

EENS 2110 Mineralogy (4 Credit Hours)
Crystallography, mineralogy, and the identification of minerals in hand specimen and using the petrographic microscope.
Corequisite(s): EENS 2111.

EENS 2111 Mineralogy Lab (0 Credit Hours)
Lab section for EENS 2110

Corequisite(s): EENS 2110.

EENS 2120 Petrology (4 Credit Hours)
The study of igneous and metamorphic rocks including their nature and origin in both hand specimen and using the petrographic microscope.
Corequisite(s): EENS 2121.

EENS 2121 Petrology Lab (0 Credit Hours)
Lab section for EENS 2120

Corequisite(s): EENS 2120.

EENS 2230 Oceanography (3 Credit Hours)
A broad survey of chemical, physical, and geological oceanography with a brief historical overview and a consideration of current concepts.

EENS 2880 Writing Practicum (1 Credit Hour)

EENS 2890 Service Learning: EENS 2090 (0-1 Credit Hours)

EENS 2940 Transfer Coursework (3 Credit Hours)

EENS 3050 Natural Hazards & Mitigation (3 Credit Hours)
The broad aim of this course is to introduce students to the processes causing volcanic eruptions, earthquakes, landslides, tsunamis, and tropical storms, and to outline the steps to their mitigation. These dynamic Earth process are placed within the general context of plate tectonics, as well as the financial, social, and political implications of these catastrophic events. All of these processes are moderated by climate change and rising sea level, which are also considered in group discussions and scenarios. In lieu of a final exam, students prepare and present a hazard case study emphasizing geologic, economic, health, or sociological implications.
In this course you will investigate the materials that comprise the Earth and how they are made. You will learn about mineral structure and chemistry and be able to relate these parameters to the physical properties of minerals. An analysis of phase stability will follow that will build towards interpreting phase diagrams. These new skills will be applied to understanding the formation of igneous and metamorphic rocks of Earth as organized by tectonic setting.

**Prerequisite(s):** CHEM 1070, 1070, 1070 or 1070 and (CHEM 1075, 1075, 1075 or 1075) and (EENS 1110 or 1110) and (EENS 1115 or 1115).

**Corequisite(s):** CHEM 1080.

**EENS 3090 Invertebrate Paleontology (3 Credit Hours)**

Principles of invertebrate paleontology; a systematic treatment of the fossil invertebrates and their living relatives. Emphasis on functional morphology, ontogeny, and paleoecology. Lectures, laboratory, field trips.

**Prerequisite(s):** EENS 1120.

**EENS 3091 Invertebrate Paleontology Lab (0 Credit Hours)**

Lab section for EENS 3090

**EENS 3150 Intro to GIS (3 Credit Hours)**

This course is designed to give students a general understanding of geographic information systems (GIS) and the Environmental Systems Research Institute (ESRI) ArcGIS software. The approach taken is detailed instruction in utilizing ArcGIS to solve problems in the earth and environmental sciences.

**Corequisite(s):** EENS 3151.

**EENS 3151 Intro to GIS lab (0 Credit Hours)**

Co-requisite lab for Intro to GIS

**Corequisite(s):** EENS 3150.

**EENS 3170 Geomorphology (3 Credit Hours)**

The study of processes leading to landform creation and development in response to climate and tectonics. Overview of fundamental and applied activities undertaken by geomorphologists.

**Prerequisite(s):** (EENS 1110, 1110, 1110 or 1110) or (EENS 1300, 1300, 1300 or 1300) and (MATH 1210, 1210, 1210, 1210 or 1210).

* May be taken concurrently.

**EENS 3171 Geomorphology Discussion (0 Credit Hours)**

A discussion section to accompany EENS 3170/6170, Geomorphology.

**EENS 3180 Making Landscapes (3 Credit Hours)**

In this course, we will explore how different "iconic" landscapes were formed such as Niagara Falls and Mount Everest. Iconic landscapes can still be awe inspiring for those who can't see them if we are creative about how we share these landscapes. We will also learn about best practices for teaching students with disabilities and different abilities. As part of the class, we will teach K-12 who are visually impaired or have autism spectrum disorder about awe-inspiring landscapes using the 3D models. Mandatory Service Learning component.

**EENS 3270 Sedimentation and Strat (3 Credit Hours)**

Composition, primary textures, and structures of sediments in major sedimentary environments. Environmental interpretation of ancient sedimentary sequences. The basic principles utilized in interpretation of the stratigraphic column. The associated laboratory focuses primarily on methods of sedimentary analysis. Mandatory field trip to Ouachita Mountains, Arkansas.

**Corequisite(s):** EENS 3271.

**EENS 3271 Sedimentation & Strat Lab (0 Credit Hours)**

Lab section for EENS 3270

**Corequisite(s):** EENS 3270.

**EENS 3410 Structural Geology (3 Credit Hours)**

Principles and mechanics of rock deformation, the evolution of geological structures, and the relations between structures and plate tectonics. Laboratory section focuses on geological problem solving. Field trip to the Southern Appalachian Mountains.

**EENS 3411 Structural Geology Lab (0 Credit Hours)**

Lab section for EENS 3410

**EENS 3550 Shark Paleobiology (3 Credit Hours)**

This course examines the processes and patterns of shark speciation, diversification, macroevolution, and extinction within the framework of developing a problem-based learning activity using shark teeth for a K-12 classroom. Particular emphasis is placed on the systematics and functional morphology of shark teeth.

**EENS 3551 Shark Paleobiology Lab (0 Credit Hours)**

Lab section for EBIO 3550

**EENS 3650 Marine Environmental Geology (3 Credit Hours)**

This course is an introduction to the aspects of coastal and marine geology and oceanography that are societally linked through environmental issues and marine resource availability. This will provide a basic science introduction to topics that include estuarine oceanography and sedimentation, eutrophication of coastal waters, primary productivity and deep sea sedimentation, waves and tides, sea level history and the evolution of coastlines, and the geology of the Gulf coastal region. However, the larger goal of the course will be to focus on a series of societally relevant environmental issues with a marine geological connection either in causation or in mitigation/adaptation/solution strategies. These issues are divided broadly into topics relevant to land-ocean connectivity, natural hazards, global climate change, and local/regional anthropogenic effects. In addition to a critical analysis of global (marine) environmental issues, another goal will be to improve presentation skills, both oral and written.

**EENS 3660 Special Topics (1-3 Credit Hours)**

Special Topics.

**EENS 3880 Writing Practicum (1 Credit Hour)**

**EENS 3890 Service Learning: EENS 3730 (0-1 Credit Hours)**

Service learning component to Earth and Environmental Sciences’ courses. See Schedule of Classes each semester for offerings. 20 or 40 hours of public service with a CPS approved community partner.
EENS 4040 and research projects in a broad range of application. Through lectures, exercises of the latest versions of ArcGIS software, students will gain deep understanding of the potential value of GIS analytical decision making techniques, and advanced spatial analysis. This course is built on the techniques learned in (EENS 3150/6150) by exposing the student to more advanced methods in developing and utilizing GIS data. Students will gain skills and fundamental knowledge is offered on the physics of remote sensing, with its wide applications in the Earth and environmental sciences. This course introduces the students to the principles of remote sensing and analysis techniques using ENVI software. The laboratory part of this course will cover digital image processing techniques for analyzing tectonic and geomorphic data, and an interplay between tectonic processes and the development and modification of landforms, from the scale of earthquake ruptures to mountain building. The course will also include an overview of plate tectonics as a current unifying theory. Lecture format, but will include a limited number of discussions of published papers; field trip component is not graded, but participation is expected.

EENS 4250 Isotopes in the Environment (3 Credit Hours)
The use of stable and radioactive isotopes as tools to trace the movement of air, water, and sediments through the atmosphere, hydrosphere, biosphere, and lithosphere.

EENS 4300 Groundwater Hydrology (3 Credit Hours)
Occurrence of water in the near-surface environment. Topics include saturated and unsaturated flow in aquifers, aquifer characterization, well hydraulics, and groundwater chemistry.

EENS 4320 Subsurface Geology (3 Credit Hours)
Principles of subsurface mapping with emphasis on 3-dimensional seismic reflection data. Utilization of geophysical data to construct subsurface maps. Students gain hands on experience with Seismic Micro-Technology’s state-of-the-art software, The Kingdom Suite, in work-station based laboratory sessions. Lectures and laboratory.

Prerequisite(s): EENS 3270*. * May be taken concurrently.

EENS 4350 Environmental Geochemistry (3 Credit Hours)
Quantitative examination of the fundamental processes that control the chemistry of natural waters. Topics will include equilibrium thermodynamics, kinetics, oxidation-reduction reactions, solution and surface complexation (adsorption), chemical weathering and biogeochemical cycling of chemical elements in the environment.

Prerequisite(s): CHEM 1070, 1080, MATH 1210, 1220 and EENS 2110.
EENS 4370 GIS Research Project (3 Credit Hours)
This course is designed to advance student’s knowledge to design, manage, and complete a research project that emphasizes the use of geographic information systems (GIS). This course will focus on the project’s methodological and organizational design, the application of appropriate GIS techniques, and proper reporting of the results. The GIS component is accomplished through independent work. The graduate student/undergraduate group has the freedom to choose their own project topic. The instructor may suggest some project ideas, but students are welcome to develop their own. If you have an idea of a project, you are encouraged to discuss it with the instructor as soon as possible to see if it is feasible and to start the process of data acquisition. Ideas may come from a variety of sources, such as a current or previous employer, work done as a volunteer, or work done in another course or on a field trip.
Prerequisite(s): (EENS 3150, 3150, 6150 or 6150) and (EENS 4030, 4030, 6030 or 6030).

EENS 4380 Remote Sensing for Env Anlyss (3 Credit Hours)
Continued advancements in remote sensing technologies have resulted in an extraordinary increase in the availability of remotely sensed data of Earth. Remote sensing data are now used in geology, hydrology, meteorology, environmental sciences, geography, urban planning, anthropology, civil engineering, and environmental monitoring. This course is built on the techniques learned in the introduction to Remote Sensing course (EENS 4180/6180) by exposing the student to more image processing and analysis for different environmental applications. Students will use the multispectral, hyperspectral, thermal, Radar, and LiDAR data for watersheds, wetlands, water quality, coastal changes, vegetation analysis, mineral resources, land use and land cover changes. Students will develop technical skills of digital image processing, analysis, and interpretation using the ENVI software.
Prerequisite(s): EENS 4180 or 6180.

EENS 4390 Geospatial Data Analysis (4 Credit Hours)
Spectrometers probe Earth’s ionosphere, atmosphere, oceans, and subsurface over periods of days to weeks, building large 4D data sets. Earth based data from the internet of things to sophisticated sensors provide data sets. The broad aims of this course are to learn theory and application of the following broad topics, and to use open source command line software (GMT, Google Earth, QGIS), or commercial (ArcGIS), and Matlab or python programming to solve geospatial data analyses problems. Prerequisites: MATH1220 and EENS1110 or equivalents, or instructor permission.

EENS 4440 Introduction to Geophysics (3 Credit Hours)
Introduction to Geophysics This course provides an introduction to applied geophysical methods, with a focus on the application of these techniques in environmental and engineering studies. The material will provide the technical foundation needed to understand the commonly used geophysical methods: gravity, magnetics, electrical resistivity, seismic, electromagnetics, and ground penetrating radar.
Prerequisite(s): (MATH 1220, 1220, 1220, 1220 or 1220) and EENS 1110.

EENS 4560 Public Service Internship (0-4 Credit Hours)
Open to sophomores, juniors and seniors having min. GPA 3.0, or 2.7 with recommendation letter. A public service learning experience provided through an internship. May fulfill the 2nd tier service learning requirement; refer to the Center for Public Service website for information on how to apply. Notes: Only one internship may be completed per semester. A maximum of six credits may be earned in two internships. Pre-requisites: Approval of department and approval of CPS if used to fulfill the 2nd tier requirement. Co-registration in SRVC 4890 if fulfilling 2nd tier service requirement. credit hours: 0-4

EENS 4570 Internship (0-4 Credit Hours)
Open to sophomores, juniors and seniors having min. GPA 3.0, or 2.7 with a recommendation letter. An experiential learning opportunity provided through an internship. Application is typically through a government agency, business or industry, or non-profit. Appropriate supervision must be provided and communication is required between the department and the internship provider in order for credit hours to be accrued. Notes: Only one internship may be completed per semester. A maximum of six credits may be earned in two internships. Pre-requisites: Approval of the department. credit hours: 0-4

EENS 4660 Special Topics (1-3 Credit Hours)
Special Topics.

EENS 4665 Special Topics Lab (0-4 Credit Hours)
Special Topics Lab.

EENS 4700 Earth & Env Sci. Field Studies (3 Credit Hours)
This course will take students into the field and provide them with their first in depth experience with earth and environmental science. Students will spend the first part of the course in a seminar type course discussing fundamental papers. The course will then culminate with an approximately week long field outing. Course location will rotate. The course will not supplant the field geology camp requirement for geology majors.

EENS 4840 Planetary Geophysics (3 Credit Hours)
The interior structure, composition, and dynamics of Earth and the terrestrial planets can be deduced from a number of different physical, chemical, and thermodynamic observations and models. Topics include: Early bombardment and formation of proto-planetary discs, core formation, Earth’s composition and age from radioactivity and thermal considerations, thermal and density structure, geomagnetic dynamo, mantle convection, and plate tectonics, and their absence on other terrestrial planets. Special topics for in-class seminars will explore the methodologies used to determine the internal structure (e.g., seismology, gravity), and the dynamics of systems (e.g., geomagnetism, plate tectonics, the water and carbon cycle). Assessment: 2 in-class quizzes, 5 problem sets, 2 class presentations, and a final critical review of 2 linked research papers on a special topic to be assigned in class.

EENS 4910 Independent Study (1-3 Credit Hours)
Laboratory or library research under direction of a faculty member.

EENS 4930 Lumcom Summer Special Topics (1-3 Credit Hours)

EENS 4990 Honors Thesis (3 Credit Hours)
Honors thesis research, first semester. Register in department.
EENS 5000 Honors Thesis (4 Credit Hours)
Honors thesis research, second semester. Register in department.

EENS 5380 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

EENS 5390 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

EENS 6030 Advanced GIS (3 Credit Hours)
An introduction to the art and science of mapmaking with the aid of state-of-the-art Geographic Information Systems (GIS), specifically Environmental Sciences Research Institute (ESRI), ArcGIS and Golden Software Surfer. An introduction to geodetic models, map projections, geographic coordinate systems, global position systems, geographic information systems, satellite photogrammetry, and database design. Practical skills will be developed through mapping projects designed to illustrate the use of contouring algorithms and other spatial analysis tools.

EENS 6040 Coastal Marine Geology (3 Credit Hours)
Geomorphic features of estuarine, coastal, and continental shelf environments: erosional, depositional, and geochemical processes; field and laboratory methods; emphasis on dynamic coastal environments of the northern Gulf of Mexico.

EENS 6050 Natural Hazards & Mitigation (3 Credit Hours)
The broad aim of this course is to introduce students to the processes causing volcanic eruptions, earthquakes, landslides, tsunamis, and tropical storms, and to outline the steps to their mitigation. These dynamic Earth processes are placed within the general context of plate tectonics, as well as the financial, social, and political implications of these catastrophic events. All of these processes are moderated by climate change and rising sea level, which are also considered in group discussions and scenarios. In lieu of a final exam, students prepare and present a hazard case study emphasizing geologic, economic, health, or sociological implications.

EENS 6060 Tectonic Geomorphology (3 Credit Hours)
The interplay between tectonic processes and the development and modification of landforms, from scale of earthquake ruptures to mountain building. The course will also include an overview of techniques for analyzing tectonic and geomorphic data, and an introduction to geochronology and thermochronology. Lecture and seminar format; mandatory field trip; optional service learning component.

EENS 6070 Independent Research (1-3 Credit Hours)
Topical and timely course, typically in a seminar format in which students lead discussions based on current scientific literature. The topics will be listed on a semester-by-semester basis in the Schedule of Classes.

EENS 6080 Special Topics (3 Credit Hours)
Special course taught by Tulane faculty or visiting faculty. The topics will be listed in the Schedule of Classes.

EENS 6081 Special Topics (1-4 Credit Hours)

EENS 6082 Special Topics (3 Credit Hours)

EENS 6090 Invertebrate Paleontology (3 Credit Hours)
Principles of invertebrate paleontology; a systematic treatment of the fossil invertebrates and their living relatives. Emphasis on functional morphology, ontogeny, and paleoecology. Lectures, laboratory, field trip.

Corequisite(s): EENS 6091.

EENS 6091 Invertebrate Paleontology Lab (0 Credit Hours)
Lab section for EENS 6090

Corequisite(s): EENS 6090.

EENS 6110 Mineralogy (3 Credit Hours)

EENS 6140 Igneous Petrology (3 Credit Hours)
An study of the origins of igneous rocks from the standpoint of experimental investigations, thermodynamics, trace elements, radiogenic isotopes, and field investigations. Includes a laboratory.

EENS 6150 Intro to GIS (4 Credit Hours)
This course is designed to give students a general understanding of geographic information systems (GIS) and the Environmental Systems Research Institute (ESRI) ArcGIS software. The approach taken is detailed instruction in utilizing ArcGIS to solve probl

Corequisite(s): EENS 6151.

EENS 6151 Intro to GIS lab (0 Credit Hours)
Co-requisite lab for Intro to GIS

Corequisite(s): EENS 6150.

EENS 6160 3D Stratigraphy (3 Credit Hours)
Study of the geomorphological, sedimentological, and stratigraphic responses of rivers to tectonics, climate, and sea-level changes. Discussion of recent scientific literature on river changes and associated stratigraphic records over time scales of 1 to millions of years Formerly Fluvial Responses to Allogenic Controls.

EENS 6170 Geomorphology (3 Credit Hours)
The study of processes leading to landform creation and development in response to climate and tectonics. Overview of fundamental and applied activities undertaken by geomorphologists.

EENS 6171 Geomorphology Discussion (0 Credit Hours)
A discussion section to accompany EENS 3170/6170, Geomorphology.

EENS 6180 Intro Remote Sensing (3 Credit Hours)
Remote sensing is a rapidly evolving science and technology with numerous contributions to the Earth, environmental, and ocean sciences, such as monitoring of natural hazards including droughts, floods, landslides, volcanic eruptions, earthquakes, and for

EENS 6230 Tectonics (3 Credit Hours)
Tectonics encompasses the processes of large-scale deformation and the formation of structures that define, or are association with, Earth's tectonic plate boundaries. The course will include the historical development and testing of plate tectonic hypotheses, as well as a detailed overview of plate tectonics as a current unifying theory. Lecture format, but will include a limited number of discussions of published papers; field trip component is not graded, but participation is expected.
EENS 6250 Isotopes In The Environment (3 Credit Hours)
The use of stable and radioactive isotopes as tools to trace the movement of air, water, and sediments through the atmosphere, hydrosphere, biosphere, and lithosphere.

EENS 6260 Paleoclimatology (3 Credit Hours)
Understanding past climate change is necessary to effectively predict the future of our planet, which is currently in a state of rapid transition. The main focus of the course is on the reconstruction and modeling of climates of the Quaternary, the past two million years of Earth's history.

EENS 6300 Groundwater Hydrology (3 Credit Hours)
Occurrence of water in the near-surface environment. Topics include saturated and unsaturated flow in aquifers, aquifer characterization, well hydraulics, and groundwater chemistry.

EENS 6310 Depositional Mechanics (3 Credit Hours)
This course emphasizes a quantitative description of the mechanics of sediment transport in steady and unsteady flows based on hydrodynamic principles. Aspects of flow and sediment-transport mechanics that are relevant to understanding the construction of landscapes and depositional systems including modes of particle entrainment and motion in turbulent shear flows will be considered. The course includes consideration of the equations of motion for particles in a turbulent flow, entrainment, bedload, and suspended load in addition to the mechanics of bedforms, ripples, and dunes, parameters responsible for channelization, erosion, and deposition of cohesive and non-cohesive sediments, and the mechanics of sediment gravity flows. Finally, quantitative methods relating properties of stratigraphy to paleo-environmental conditions are considered.

EENS 6320 Subsurface Geology (3 Credit Hours)
Principles of subsurface mapping with emphasis on 3-dimensional seismic reflection data. Utilization of geophysical data to construct subsurface maps. Students gain hands on experience with Seismic Micro-Technology's state-of-the-art software, The Kingdom Suite, in work-station based laboratory sessions. Lectures and laboratory.

EENS 6350 Geologic Dating Methods (3 Credit Hours)
Geologic Dating Methods IN this course the student will explore the development of methods used to date and establish rates of Earth and planetary processes via radiogenic isotopic methods. Students will come away with deeper understanding of age of the Universe, Solar system, and Earth and understand how radiogenic isotopic techniques can be used to study, for example, differentiation of the earth into its major components (crust, mantle, core).

EENS 6360 Environmental Geochemistry (3 Credit Hours)
Quantitative examination of the fundamental processes that control the chemistry of natural waters. Topics will include equilibrium thermodynamics, kinetics, oxidation-reduction reactions, solution and surface complexation (adsorption), chemical weathering and biogeochemical cycling of chemical elements in the environment.

EENS 6370 GIS Research Project (3 Credit Hours)
This course is designed to advance student's knowledge to design, manage, and complete a research project that emphasizes the use of geographic information systems (GIS). This course will focus on the project's methodological and organizational design, the application of appropriate GIS techniques, and proper reporting of the results. The GIS component is accomplished through independent work. The graduate student/undergraduate group has the freedom to choose their own project topic. The instructor may suggest some project ideas, but students are welcome to develop their own. If you have an idea of a project, you are encouraged to discuss it with the instructor as soon as possible to see if it is feasible and to start the process of data acquisition. Ideas may come from a variety of sources, such as a current or previous employer, work done as a volunteer, or work done in another course or on a field trip.

Prerequisite(s): (EENS 3150, 3150, 6150 or 6150) and (EENS 4030, 4030, 6030 or 6030).

EENS 6380 Remote Sensing for Env Analys (3 Credit Hours)
Continued advancements in remote sensing technologies have resulted in an extraordinary increase in the availability of remotely sensed data of Earth. Remote sensing data are now used in geology, hydrology, meteorology, environmental sciences, geography, urban planning, and environmental monitoring. This course is built on the techniques learned in the introduction to Remote Sensing course (EENS 4180/6180) by exposing the student to more image processing and analysis for different environmental applications. Students will use the multispectral, hyperspectral, thermal, and LiDAR data for watersheds, wetlands, water quality, coastal changes, vegetation analysis, mineral resources, land use and land cover changes. Students will develop technical skills of digital image processing, analysis, and interpretation using the ENVI software.

EENS 6390 Geospatial Data Analysis (4 Credit Hours)
Satellites probe Earth's ionosphere, atmosphere, oceans, and subsurface over periods of days to weeks, building large 4D data sets. Earth based data from the internet of things to sophisticated monitoring provide even denser 4D data sets. The broad aims of this course are to learn theory and application of the following broad topics, and to use open source command line software (GMT, Google Earth, QGIS), or commercial (ArcGIS), and Matlab or python programming to solve geospatial data analyses problems. Prerequisites: MATH1220 and EENS1110 or equivalents, or instructor permission.

EENS 6400 The Scientific Enterprise (3 Credit Hours)
Scientific research has evolved into a complex activity that requires numerous skills which are typically not captured by traditional curricula. This course covers such topics as science funding, publishing, misconduct, media, and politics, and is specifically intended for (aspiring) graduate students.

EENS 6410 Structural Geology (3 Credit Hours)
Principles and mechanics of rock deformation, the evolution of geological structures, and the relations between structures and plate tectonics. Laboratory section focuses on geological problem solving. Field trip to the Southern Appalachian Mountains.

EENS 6411 Structural Geology Lab (0 Credit Hours)
Lab section for EENS 6410
EENS 6420 Applied Basin Analysis (3 Credit Hours)
This course focuses on practical applications of stratigraphy, structural geology and petroleum geology. It is designed around a dataset for an individual hydrocarbon basin that will typically include seismic reflection data and well data. Datasets will vary from year to year, as the course will be coordinated with AAPG’s Imperial Barrel award program. Students work as a team, however each student has a clear role and responsibility to the ultimate goal, which is a geologically valid interpretation of the basin that makes predictions about the hydrocarbon prospectively of the study area. Emphasis is on teamwork, participation, oral and written communication of results. Practicum format (non-lecture).

EENS 6440 Introduction to Geophysics (3 Credit Hours)
Introduction to Geophysics This course provides an introduction to applied geophysical methods, with a focus on the application of these techniques in environmental and engineering studies. The material will provide the technical foundation needed to understand the commonly used geophysical methods: gravity, magnetics, electrical resistivity, seismic, electromagnetics, and ground penetrating radar.

EENS 6550 Shark Paleobiology (4 Credit Hours)
This course examines the processes and patterns of shark speciation, diversification, macroevolution, and extinction within the framework of developing a problem-based learning activity using shark teeth for a K-12 classroom. Particular emphasis is placed on the systematics and functional morphology of shark teeth.

EENS 6651 Shark Paleobiology Lab (0 Credit Hours)

EENS 6660 Special Topics (1-3 Credit Hours)
Special Topics.

EENS 6700 Earth & Env Sci.Field Studies (3 Credit Hours)
This course will take students into the field and provide them with their first in depth experience with earth and environmental science. Students will spend the first part of the course in a seminar type course discussing fundamental papers. The course will then culminate with an approximately week long field outing. Course location will rotate. The course will not supplant the field geology camp requirement for geology majors.

EENS 6840 Planetary Geophysics (3 Credit Hours)
The interior structure, composition, and dynamics of Earth and the terrestrial planets can be deduced from a number of different physical, chemical, and thermodynamic observations and models. Topics include: Early bombardment and formation of proto-planetary discs, core formation, Earth's composition and age from radioactivity and thermal considerations, thermal and density structure, geomagnetic dynamo, mantle convection, and plate tectonics, and their absence on other terrestrial planets. Special topics for in-class seminars will explore the methodologies used to determine the internal structure (e.g., seismology, gravity), and the dynamics of systems (e.g., geomagnetism, plate tectonics, the water and carbon cycle). Assessment: 2 in-class quizzes, 5 problem sets, 2 class presentations, and a final critical review of 2 linked research papers on a special topic to be assigned in class.

EENS 6930 Lumcom Summer Special Topics (1-3 Credit Hours)
EENS 6931 Lumcom Summer Special Topics (1-3 Credit Hours)
EENS 6932 Lumcon Summer Special Topics (1-3 Credit Hours)
EENS 6940 Transfer Coursework (1-4 Credit Hours)
Transfer Coursework.

EENS 7010 Techniques Geoscience Writing (3 Credit Hours)
This graduate-level course will introduce students to methods and best practices for writing scientific paper and as scientific proposal. General practices for clear and concise writing will also be discussed. Students will be required to write and rewrite either a scientific proposal (PhD students) or a thesis prospectus (MS students). Students will be required to critique classmates' writing and provide constructive feedback. Best practices for reviewing scientific writing will also be discussed. This course should be taken in a graduate student’s third or fourth semester, so that the student will have some of their own research completed.

EENS 7100 EENS Seminar (1-3 Credit Hours)
EENS 7101 EENS Seminar (1-3 Credit Hours)
EENS 7150 Adv Top Sedimentary Geol (3 Credit Hours)
EENS 7660 Special Topics (0-4 Credit Hours)
Special Topics.

EENS 7940 Transfer Credit-Grad (1-12 Credit Hours)
EENS 7990 Research In Geosciences (1-9 Credit Hours)
Individual research supervised by faculty.

EENS 9980 Masters Research (3 Credit Hours)
Research toward completion of a masters degree.

EENS 9990 Dissertation Research (3 Credit Hours)
Research toward completion of a doctoral degree.

Ecology & Evolutionary Biology (EBIO)

EBIO 1010 Diversity of Life (3 Credit Hours)
An introduction to key concepts in ecology and evolutionary biology emphasizing the diversity among individuals, population, species, communities, and ecosystems.

Prerequisite(s): EBIO 1015.
* May be taken concurrently.

EBIO 1015 Diversity of Life Lab (1 Credit Hour)
Laboratory and field exercises designed to augment the lecture material in EBIO 1010.

Corequisite(s): EBIO 1010.
**EBIO 1040 Global Environment Change (3 Credit Hours)**
An introduction to the physical and biological processes that regulate the function of the Earth system. The composition, formation, and stabilization of the Earth’s atmosphere and ecosystem will be examined, emphasizing biological processes and ecosystem ecology. With an understanding of the historical rates and mechanisms of natural global change, the means by which human activities alter Earth system function at local to global scales will be explored, along with the consequences of and solutions to human-induced global change.

**EBIO 1050 Intro to Conservation Genetics (3 Credit Hours)**
This course is designed to introduce students to the general principals behind the field of conservation genetics. We will explore evolutionary genetics, the importance of genetics in conservation, and conservation management practices. The class will cover these topics in lecture, hands-on lab activities, and field trips. Course is for high school students only.

**EBIO 1080 Intro to Plant & Human Affairs (3 Credit Hours)**
This course is designed to introduce you to plants and how different plants and plant products have shaped human existence. We will explore plant history, plant domestication, and plant products through lectures, readings, discussion, and field trips. (High School Students Only)

**EBIO 1230 Div of Animal Behavior (3 Credit Hours)**
Basic concepts in animal behavior, emphasizing diversity among animals and their behaviors and the ecological and evolutionary influences on those behaviors. Course will include discussion of how behaviors are studied, physiological mechanisms of behaviors, animal diversity, and how animals communicate, find mates, reproduce, care for their young, defend and feed themselves and move within their environment.

**EBIO 1231 Exploring Animal Behavior (3 Credit Hours)**
The goal of this course is to provide an introduction to animal behavior. The course will begin with an introduction to the application of the scientific method to the study of behavior. Topics that will follow include the ontogeny(development) of behavior, neuronal and hormonal control of behavior, migration, communication, reproductive behavior, mating systems, parental care, and the evolution of social behavior. It will involve both a lecture component as well as a hands-on laboratory component in which students will engage in activities to observe the concepts in action. This class is only open to high school students who are participating in the Tulane Science Scholars Program (TSSP). For students who pass this course with a B or higher and choose to enroll at Tulane University, this course can be applied toward three hours of general elective credit. These credits will not count towards any of the Ecology and Evolutionary Biology Department majors.

**EBIO 1240 Reptile & Amphibian Diversity (3 Credit Hours)**
The goal of this course is to provide an introduction to the field of herpetology. Students will 1) become familiar with the diversity of form and function exhibited by living reptiles and amphibians, 2) gain an introductory understanding of the evolutionary histories and relationships of reptiles and amphibians to each other and to other tetrapods, 3) follow the steps of the scientific method to design and carry out experiments to test hypotheses they devise, and 4) gain experience with field and laboratory methods used to study amphibians and reptiles. The class will involve a lecture component and a hands-on laboratory component. This class is only open to high school students participating in the Tulane Science Scholars Program (TSSP). For students who pass this course with a B or higher and choose to enroll at Tulane University, this course can be applied toward three hours of general elective credit. These credits will not count toward any of the Ecology and Evolutionary Biology Department majors.

**EBIO 1890 Service Learning: EBIO 1010 (0-1 Credit Hours)**
**EBIO 1940 Transfer Coursework (1-4 Credit Hours)**
**EBIO 2010 Evolution-Human Hlth & Disease (3 Credit Hours)**
An introduction to the study of infectious and non-infectious human diseases from an evolutionary perspective.

**EBIO 2020 Theory & Methods Eco & Evo Bio (3 Credit Hours)**
EBIO 2020 is an introduction to the fundamental theories and methods in ecology and evolutionary biology for EEBI and ENVB majors. Students will acquire the knowledge and skills needed to succeed in their major through direct, active experiences evaluating and communicating scientific evidence. The course topics are designed to reflect current research interests in the department, such as tropical ecology and behavioral evolution, as well as classic case studies in the discipline. Irrespective of topic, the course emphasizes a practical understanding of the scientific process and focuses on developing the skills needed for upper-level courses in EBIO. The course also provides opportunities for students to become familiar with the research interests of department faculty members, enabling them to identify future research opportunities.

**Prerequisite(s):** (EBIO 1010, 1010, 1010 or 1010) and (EBIO 1015, 1015, 1015, 1110, 1110, 1110 or 1110).

**EBIO 2030 History of Life (3 Credit Hours)**
A multidisciplinary introduction for majors and non-majors to the evolution of life on Earth, from its origin through the Pleistocene. The course will focus on the evolution and ecology of organisms in primitive environments, with special attention given to key taxa and events, such as the transition to land, the origin of angiosperms, the rise and fall of dinosaurs, and the origin and early evolution of reptiles, birds, and mammals. Emphasis will be placed on the reconstruction of ancient environments, using modern ecological and evolutionary principles as a guideline to the nature of early biological communities and ecosystems.
EBIO 2040  Conservation Biology  (3 Credit Hours)
A consideration of biological diversity and its persistence, threats, human value, conservation efforts, and biological bases. Specific topics include extinction, global change, population viability, habitat loss and degradation, ecosystem management, restoration, agricultural ecosystems, economic and legal considerations, and the human population.

Prerequisite(s): EBIO 1010 and (EBIO 1110 or 1015).

EBIO 2050  Global Change Biology  (3 Credit Hours)
This course explores the biological basis of environmental issues and the changes occurring at a global scale, divided approximately into halves. The first half will provide a strong foundation in the interactions among biological and physical systems. The second half will be devoted to specific issues including global climate change, atmospheric pollution, community stability, habitat fragmentation, and loss of biodiversity. Changes that have occurred over geological time will be compared with changes in the modern industrial era.

Prerequisite(s): EBIO 1010 and (EBIO 1015 or 1110).

EBIO 2070  Molec & Evolutionary Genetics  (4 Credit Hours)
This course will introduce students to fundamental principles concerning the molecular nature of DNA and chromosomes; the molecular processes of replication, transcription, translation, and mutation/repair; the transmission of genetic traits (Mendelian and non-Mendelian modes); and the application of genetic analysis to population and evolutionary biology. EBIO 2070 includes a required, no credit recitation (EBIO 2071). Students may not earn credit for both EBIO 2070/2071 and CELL 2050.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 2071.

EBIO 2071  Molec & Evol Genetics Rec  (0 Credit Hours)
This course is a required accompaniment to EBIO 2070-01 (Molecular and Evolutionary Genetics). Through readings, discussions, interactive exercises, and assignments, students will discuss the concepts and principles of genetics in an applied way, i.e. to apply genetics information to solving crosses and problems.<br/>

Corequisite(s): EBIO 2070.

EBIO 2100  Marine Biology  (3 Credit Hours)
A systematic treatment of the organisms and habitat in the marine environment.

Prerequisite(s): EBIO 1010 and (EBIO 1015 or 1110).

EBIO 2110  Tropical Biology  (3 Credit Hours)
Introduction to ecological, evolutionary, and organismal studies of living organisms in the neotropics.

EBIO 2120  Clim/Biodiv/Trop Forests  (3 Credit Hours)
This course is offered as part of the Stone Center for Latin American Studies’ Summer in Costa Rica Program. Students may not register online for this course; they must register directly with the Stone Center Summer Program office. The course will introduce students to the structure and ecology of tropical forests. Students will be expected to integrate what they learn about the real social and economic causes of deforestation and grass roots efforts to revert it with the social, political, economic and biological logic of world climate change agreements and disagreements.

EBIO 2130  Intro to Animal Behavior  (3 Credit Hours)
The goal of this course is to provide an introduction for majors and non-majors to the field of animal behavior using an evolutionary approach. The course will begin with an introduction to the application of the scientific method to the study of behavior (levels of analysis, hypothesis testing and Darwinian theory). Topics that will follow include the ontogeny (development) of behavior, neuronal and hormonal control of behavior, foraging and anti-predator behavior, habitat selection, migration, communication, reproductive behavior, mating systems, parental care, the evolution of social behavior, and the evolution of human behavior. The course emphasizes a practical understanding of animal behavior and will focus on developing the skills needed for upper-level behavior courses in EBIO.

EBIO 2210  Insect Biology  (3 Credit Hours)
This course is an introduction to the evolution, ecology and conservation of insects. The course will focus heavily on interactions between humans and insects, both historically and in modern times. A goal of the course is that you will develop the foundation and tools you need to continue learning about the importance of insects, their impacts on human society and/or other environmental issues of importance to you.

EBIO 2230  Oceanography  (3 Credit Hours)
A broad survey of chemical, physical, and geological oceanography with a brief historical overview and a consideration of current concepts.

EBIO 2240  Oceans and Human Health  (3 Credit Hours)
An overview of the relationship and interconnectivity of impacts and well-being between humans and oceans/coasts.

Prerequisite(s): CELL 1010 or (EBIO 1010 and 1015) or EBIO 1040 or (EENS 1300 and 1305) or SPHU 1020.

EBIO 2250  Vertebrate Biology  (3 Credit Hours)
An introduction to vertebrate natural history, including evolution, systematics, zoogeography, population dynamics, behavior, ecology, conservation, and extinction.

Prerequisite(s): EBIO 1010 and (EBIO 1015 or 1110).

EBIO 2330  Natural Hist Louisiana  (3 Credit Hours)
A survey of terrestrial and aquatic ecosystems of southern Louisiana. Lectures cover the ecology of regional plant and animal communities, with special emphasis on environmental issues such as invasive species, hurricane disturbance, conservation and management. The geology, geography, history, and culture that contribute to the formation and maintenance of each ecosystem will also be examined, from barrier islands to upland forests.

Prerequisite(s): EBIO 1010 and (EBIO 1015 or 1110).

EBIO 2335  Natural Hist Louisiana Lab  (1 Credit Hour)
The Natural History of Louisiana Laboratory introduces students to diverse biological communities of southern and central Louisiana, from barrier islands to upland forests. Field trips focus on the ecology of regional flora and fauna and provide opportunities to observe and evaluate the impacts of invasive species, hurricane disturbance, and restoration projects. Students will practice identification skills, maintain a field journal, and participate in local research projects.
EBIO 2600 Natural Resource Conserv (3 Credit Hours)
This course examines the theory and practice of natural resource preservation in the United States, and the agencies and organizations involved in this endeavor.

Prerequisite(s): EBIO 1010 and (EBIO 1015 or 1110).

EBIO 2660 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department.

Prerequisite(s): EBIO 1010 and CELL 2050.

EBIO 2770 Nature Study in Scandinavia (3 Credit Hours)
More than a Walk in the Park: Nature Study in Scandinavia has two components. Half of the course is a survey of the ecosystems of Scandinavia, from boreal forests to rocky intertidal zones. We will explore the diversity and ecology of regional plant and animal communities, with reference to environmental issues including non-native species, disturbance, conservation, and management. Information about the geology, history, and culture that contribute to the formation and maintenance of each ecosystem will be included. The other half of the course will involve observing, identifying, recording, and developing questions about the local diversity of the region. Be prepared to spend a considerable amount of time outside... where nature is!

EBIO 2890 Service Learning: EBIO 2040 (0-1 Credit Hours)
Students complete a service activity in the community in conjunction with the content of a three-credit corequisite course.

EBIO 2910 Independent Study (1-3 Credit Hours)
Laboratory or library research under direction of a faculty member.

EBIO 2920 Independent Study (1-3 Credit Hours)
Laboratory or library research under direction of a faculty member.

EBIO 2940 Transfer Coursework (3 Credit Hours)

EBIO 3040 General Ecology (3 Credit Hours)
A survey of the patterns and mechanisms of interaction among all organisms and their environments, including examples of human impacts on the biosphere.

Prerequisite(s): (EBIO 1010, 1010, 1010 or 1010) and EBIO 2020. Corequisite(s): EBIO 3045.

EBIO 3045 General Ecology Lab (1 Credit Hour)
Quantitative laboratory and field exercises designed to augment the lecture material. Includes data collection, sampling, experimentation, statistical hypothesis testing, modeling, discussion of research results, and writing up of results in the form of three scientific papers.

Prerequisite(s): EBIO 2020. Corequisite(s): EBIO 3040.

EBIO 3080 Processes of Evolution (3 Credit Hours)
Patterns and processes in the evolution of species and populations, including discussions of natural selection, gene flow, genetic drift, adaptation, speciation, origins of evolutionary novelty, and selected trends in the fossil record.

Prerequisite(s): EBIO 2070 and 2071.

EBIO 3150 Intro to GIS (4 Credit Hours)
This course is designed to give students a general understanding of geographic information systems (GIS) and the Environmental Systems Research Institute (ESRI) ArcGIS software. The approach taken is detailed instruction in utilizing ArcGIS to solve problems in the earth and environmental sciences. (SAME AS EBIO 6150, EENS 3150, EENS 6150)

Corequisite(s): EBIO 3151.

EBIO 3151 Intro to GIS lab (0 Credit Hours)
Co-requisite lab for Intro to GIS

Corequisite(s): EBIO 3150.

EBIO 3180 Plants & Human Affairs (3 Credit Hours)
Since ancient times, people have relied on plants for food, clothing, shelter, medicines, and more. This course investigates some of the ways in which plants support and shape human life. Topics include: early ideas about plants and the origin of plant lore; plant domestication and the rise of agriculture; plant products in commercial economies; cultural uses of plants; plants and the future of civilization.

EBIO 3185 Plants Human Affairs Lab (1 Credit Hour)
Laboratory course to accompany EBIO 3180. A survey of plant products and their sources, emphasizing the structure, chemistry, and diversity of economic plants.

Corequisite(s): EBIO 3180.

EBIO 3190 Darwin and Darwinism (4 Credit Hours)
A consideration of Charles Darwin's theory of Natural Selection, including the history of evolutionary thought before Darwin's time, the circumstances surrounding Darwin's research, and the effect of Darwin's ideas on the development of contemporary biology. Readings, discussions, and written assignments.

Prerequisite(s): (EBIO 1010, 1010, 1010 or 1010) and (EBIO 1015, 1015, 1015, 1015, 1110, 1110, 1110 or 1110).

EBIO 3290 Behavioral Ecology (3 Credit Hours)
This course addresses the ecological and evolutionary causes and consequences of animal behavior, using both proximate and ultimate approaches. Topics include sociality, mating systems, sexual selection, animal movement, signals, behavior and conservation, and cognition.

Prerequisite(s): (EBIO 1010, 1010, 1010 or 1010) and (EBIO 1015 or 1110) and (CELL 1010, 1010, 1010 or 1010).

EBIO 3320 Microbial Diversity & Ecology (3 Credit Hours)
A survey of micro-organisms and their rules in and relationships within their respective ecosystems. (Same as EBIO 6320)

Prerequisite(s): EBIO 1010 and CELL 1010. Corequisite(s): EBIO 3325.
**EBIO 3591 Plant Biology & Adaptation Lab (0 Credit Hours)**
Lab section for EBIO 3590

Prerequisite(s): EBIO 1010 and (EBIO 1015 or 1110) and CELL 1010.

**EBIO 3690 Experimental Animal Behavior (4 Credit Hours)**
This course provides students the opportunity to design, implement, write-up, and present an independent research project related to animal behavior. Research will be conducted on live animals at the Audubon Zoo or Audubon Park. The course will emphasize general principles of literature review and synthesis; experimental design; the collection; organization and analysis of data; and written and oral presentation of results. The course consists of 3 hours of laboratory per week (at the park or zoo) and 2 hours of seminar per week (on campus). This course fulfills the Newcomb-Tulane intensive writing requirement. This course serves as an elective for the SISE minor and fulfills the upper tier Service Learning Requirement.

Prerequisite(s): EBIO 2020.

Corequisite(s): EBIO 3691.

**EBIO 3691 Exper. Animal Behavior Lab (0 Credit Hours)**
Lab section for EBIO 3690

Corequisite(s): EBIO 3690.

**EBIO 3780 Tropical Field Biology (3 Credit Hours)**
This study abroad course deepens student's theoretical, factual, and hands-on understanding of biological research and conservation in the tropics.

Prerequisite(s): EBIO 2020.

**EBIO 3880 Writing Intensive (0 Credit Hours)**
Course to be attached to regular courses that incorporate a writing component within the regular course. Course added to the schedule as a regular course.

**EBIO 3890 Service Learning: EBIO 3590 (0-1 Credit Hours)**
Students complete a service activity in the community in conjunction with the content of a three-credit corequisite course.

**EBIO 3891 Service Learning: EBIO 3690 (0-1 Credit Hours)**

**EBIO 3940 Transfer Coursework (3 Credit Hours)**

**EBIO 4030 Field Botany (4 Credit Hours)**
A plant identification course focusing on terrestrial and aquatic flora of Louisiana. Lab field trips include visits to a variety of local ecosystems from coastal wetlands to upland forests. Lectures cover botany, taxonomy, and the ecological and evolutionary processes that structure plant communities, with special emphasis on how these topics apply to Louisiana ecosystems.

Prerequisite(s): EBIO 2020.

Corequisite(s): EBIO 4031.

**EBIO 4031 Field Botany Lab (0 Credit Hours)**
Lab section for EBIO 4030

Corequisite(s): EBIO 4030.
EBIO 4060 Stream Ecology (4 Credit Hours)
Ecology of freshwater stream environments, including physical forces influencing water flow, sediment and solute geochemistry, and composition and interactions of stream biota.
Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 4061.
EBIO 4061 Stream Ecology Lab (0 Credit Hours)
Lab section for EBIO 4060
Corequisite(s): EBIO 4060.

EBIO 4080 Biostat & Experi Design (3 Credit Hours)
This course will teach students how to interpret statistical data in an evolutionary and ecological context. Special emphasis will be placed on understanding the nature of ecological field experiments, and experimental design. In addition, issues regarding how ecological and evolutionary analyses are perceived in the public media will be discussed. We will cover statistical methods for dealing with such problems (regression, correlation, ANOVA, etc.), and also read papers in ecological and evolutionary journals that highlight statistical issues. The class is designed for students who have not had prior experience with statistics.
Prerequisite(s): EBIO 1010 and (EBIO 1110 or 1015) and CELL 1010.

EBIO 4090 Invertebrate Paleontology (4 Credit Hours)
Principles of invertebrate paleontology; a systematic treatment of the fossil invertebrates and their living relatives. Emphasis on functional morphology, ontogeny, and paleoecology. Lectures, laboratory, field trip.
Prerequisite(s): EBIO 1120.
Corequisite(s): EBIO 4091.
EBIO 4091 Invertebrate Paleontology Lab (0 Credit Hours)
Lab section for EBIO 4090
Corequisite(s): EBIO 4090.

EBIO 4110 Tropical Ecology (3 Credit Hours)
Advanced course focusing on terrestrial ecology covering all tropical ecosystems with an emphasis on forests. Ecological topics will be addressed at population, community, and ecosystem levels with an organismal treatment of plants, insects, birds, reptiles, fish, mammals, microbes (fungi and bacteria), and other model organisms.
Prerequisite(s): EBIO 3040.

EBIO 4200 Ornithology (4 Credit Hours)
An exploration of the biology of birds emphasizing their origin, evolution, diversity, zoogeography, functional morphology, behavior, ecology, and conservation. Weekly laboratories and field trips with occasional weekend field trips.
Prerequisite(s): EBIO 1010 and (EBIO 1110 or 1015).

EBIO 4201 Ornithology Lab (0 Credit Hours)
Lab section for EBIO 4200
Prerequisite(s): EBIO 1010 and (EBIO 1110 or 1015) and CELL 1010.

EBIO 4210 Vertebrate Morphology (4 Credit Hours)
Comparative morphology, evolution, and bionomics of representative vertebrates. Lectures supplemented by weekly labs.
Prerequisite(s): EBIO 1010 and (EBIO 1015 or 1110) and CELL 1010.
Corequisite(s): EBIO 4211.

EBIO 4211 Vertebrate Morphology lab (0 Credit Hours)
Lab section for EBIO 4210
Prerequisite(s): EBIO 1010 and (EBIO 1015 or 1110) and CELL 1010.
Corequisite(s): EBIO 4210.

EBIO 4230 Molecular Evol & Ecology (4 Credit Hours)
Molecular ecology employs principles of population genetics and phylogenetics to answer questions about organismal diversity, population dynamics, community assembly and macroecology. Having a foundation in molecular evolution and genomics allows for broad topical applications, including the study of infectious diseases, conservation of endangered species, organismal responses to global environmental change, and the evolutionary origins of biological diversity. Students will first learn the principles of molecular evolution, after which they will be introduced to the core techniques used to generate molecular data. Students will learn how molecular data can be developed and analyzed to address questions in ecology and evolutionary biology. It is strongly recommended that students also have taken CELL 2050, EBIO 3080, and EBIO 3040 or have an understanding of genetics, organismal evolution and ecological principles. This class consists of 3 lectures per week supplemented with a weekly lab.
Prerequisite(s): EBIO 2020, 2070 and CELL 1010.
Corequisite(s): EBIO 4231.

EBIO 4231 Molecular Evolution & Ecol Lab (0 Credit Hours)
Lab section for EBIO 4230
Corequisite(s): EBIO 4230.

EBIO 4250 Biol of Marine Invertebrates (4 Credit Hours)
Biology, taxonomy and distribution of the invertebrates with emphasis on the local fauna. Lectures, laboratories, and field trips.
Prerequisite(s): EBIO 1010 and (EBIO 1015 or 1110) and CELL 1010.
Corequisite(s): EBIO 4251.

EBIO 4251 Biol of Invertebrate Lab (0 Credit Hours)
Co-requisite lab for EBIO 4250
Corequisite(s): EBIO 4250.

EBIO 4270 Population Ecology (3 Credit Hours)
Principles of population dynamics in space and time, population regulation, and population interactions as determined from an integrated study of plants and animals, followed by exploration of the applicability of these principles to an understanding of the contemporary growth and control of the human population.
Prerequisite(s): EBIO 3040*.
* May be taken concurrently.
EBIO 4271 R Prog for Population Ecology (1 Credit Hour)
In this course, students will learn the basics of the R programming language and complete computer exercises relevant to the material covered in Population Ecology. The course gives students hands on experience of the workings of simple population models. Students enrolled in Population Ecology (EBIO 4270/6270) are strongly encouraged to enroll.

EBIO 4280 Ichthyology (4 Credit Hours)
Biology of fish-like vertebrates, including taxonomy, evolution, anatomy, physiology, and biogeography.

Prerequisite(s): EBIO 1010 and (EBIO 1015 or 1110) and CELL 1010.
Corequisite(s): EBIO 4281.

EBIO 4281 Ichthyology Lab (0 Credit Hours)
Lab section for EBIO 4280

Corequisite(s): EBIO 4280.

EBIO 4300 Biol of Amphibians & Reptiles (4 Credit Hours)
This course will provide an introduction to herpetology, the study of reptiles and amphibians. Topics covered will include the evolutionary history, systematics, physiology, ecology, life history, behavior and conservation of amphibians and reptiles. The course consists of two lectures and a lab or field trip each week. Occasional weekend field trips may also be scheduled.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 4301.

EBIO 4301 Biol of Amph & Reptiles lab (0 Credit Hours)
Co-requisite lab for EBIO 4300

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 4300.

EBIO 4310 Plant Systematics (4 Credit Hours)
A review of the structure and evolution of land plants and a survey of the major families of flowering plants. Laboratory emphasis on structural terminology and plant identification.

Corequisite(s): EBIO 4311.

EBIO 4311 Plant Systematics Lab (0 Credit Hours)
Lab section for EBIO 4310

Corequisite(s): EBIO 4310.

EBIO 4360 Wetlands Ecology (3 Credit Hours)
This course will introduce students to the occurrence, morphology, hydrology, soils, ecology and regulation of wetlands.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.

EBIO 4370 Aquatic Autotrophs (3 Credit Hours)
This course will survey and provide a systematic treatment of the most common autotrophic organisms found in oceanic, coastal, estuarine, and freshwater habitats with particular emphasis on those organisms along the northern Gulf of Mexico.

Prerequisite(s): EBIO 1010 and 1015.

EBIO 4430 Entomology (4 Credit Hours)
In this course we will study the organismal, ecological, and evolutionary biology of insects, while surveying recent literature. In addition to learning about insects as organisms and as integral parts of our ecosystem, we will study the scientific process. This course will discuss how scientists come to reach understanding about nature in general, using insects as our model. Insect collection required.

Prerequisite(s): EBIO 1010 and (EBIO 1110 or 1015) or CELL 1010.

EBIO 4431 Entomology Lab (0 Credit Hours)
Lab section for EBIO 4430

EBIO 4460 BiodivEnvir Informatics (3 Credit Hours)
This upper-level course explores theory and practice in biodiversity informatics, an emerging field of cyber-enabled discovery and innovation. Topics to be discussed include natural history collection databases and networks, data mining, morphological databases and ontology, digital libraries, phyloinformatics, cybertaxonomy, Georeferencing methods and algorithms, GIS and predictive niche modeling.

Prerequisite(s): EBIO 3080 and (CELL 2050 or EBIO 2070).

EBIO 4560 Internship (1-3 Credit Hours)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the academic department sponsoring the internship on BANNER.

EBIO 4660 Special Topics (1-4 Credit Hours)
Courses offered for undergraduate students by visiting professors and permanent faculty.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.

EBIO 4665 Special Topics Lab (1-3 Credit Hours)
Special Topics Lab.

EBIO 4670 Topics In Marine Science (1-4 Credit Hours)
Reserved for courses offered by LUMCON on a temporary basis or for courses taken at other marine field stations. EBIO 4680/6680 - Topics in Field Biology would be reserved for summer field courses taken at non-marine biological field stations.

EBIO 4672 Marine Field Ecology (4 Credit Hours)
Relationships of marine and estuarine organisms to environmental factors; interactions among organisms; ecological processes of energy and materials flow; field studies of communities and ecosystems of the Louisiana coastal zone.

EBIO 4673 Marine Fish Ecology (3 Credit Hours)
This course will explore the ecology of coastal marine fishes emphasizing aspects of how fish utilize coastal habitats and how environmental factors influence that distribution, movement, growth, reproduction, abundance and interspecific interactions of fishes, especially in early life history stages.

EBIO 4674 Marine Invertebrate Ecology (3 Credit Hours)
In-depth study of the interaction of marine and estuarine invertebrates with their environment. Emphasis will be placed on understanding the functional role of invertebrates and how the environment shapes morphology, physiology and behavior.
EBIO 4676 Wetland Vegetation (3 Credit Hours)
Identification, taxonomy and distribution of wetland plants. Plant adaptations, vegetation analysis methods, marsh types, community processes and coastal wetland restoration will also be discussed.

EBIO 4890 Service Learning: EBIO 4360 (0-1 Credit Hours)
Students complete a service activity in the community in conjunction with the content of a three-credit corequisite course.

EBIO 4910 Independent Study (1-3 Credit Hours)
Laboratory or library research under direction of a faculty member.

EBIO 4920 Independent Study (1-4 Credit Hours)
Laboratory or library research under direction of a faculty member.

EBIO 4930 Capstone Indep Study (3-4 Credit Hours)
A senior capstone experience for students majoring in Environmental Science-Ecology and Evolutionary Biology Track and for departmental majors unable to complete EBIO 4970/4980 due to extenuating circumstances. Under faculty supervision, students select a topic in ecology and evolutionary biology, write an expository paper on that topic and give an oral presentation of their findings. Students also attend departmental research seminars and meet to discuss contemporary issues in ecology and evolutionary biology.

EBIO 4940 Transfer Coursework (3 Credit Hours)
EBIO 4960 Special Projects (1-3 Credit Hours)
Individual studies in a selected field. Open to qualified juniors and seniors with approval of instructor and advisor.

EBIO 4970 Contemp Ecol & Evol Biol I (1 Credit Hour)
This is the senior capstone experience for departmental majors. Under faculty supervision, students select a research topic in ecology and evolutionary biology, write an expository paper on that topic, and give an oral presentation of their findings. Students also attend departmental research seminars and meet to discuss contemporary issues in ecology and evolutionary biology. EBIO 4970-4980 are required of all departmental majors, and both courses must be completed to receive credit for the capstone experience. EBIO 4970 is offered each fall, and EBIO 4980 is offered each spring. EBIO 4970 is a pre-requisite for EBIO 4980. HB5000 Honors Thesis may be substituted for or taken in addition to EBIO 4980 in the spring semester.

Prerequisite(s): EBIO 3040, 3045 and 3080.

EBIO 4980 Contemp Ecol & Evol Biol II (3 Credit Hours)
This is the senior capstone experience for departmental majors. Under faculty supervision, students select a research topic in ecology and evolutionary biology, write an expository paper on that topic, and give an oral presentation of their findings. Students also attend departmental research seminars and meet to discuss contemporary issues in ecology and evolutionary biology. EBIO 4970-4980 are required of all departmental majors, and both courses must be completed to receive credit for the capstone experience. EBIO 4970 is offered each fall, and EBIO 4980 is offered each spring. EBIO H5000 Honors Thesis may be substituted for or taken in addition to EBIO 4980 in the spring semester.

Prerequisite(s): (EBIO 3040, 3040 or 3040 and (EBIO 3045, 3045, 3045, 3140, 3140, 3140 or 3140) and (EBIO 3080, 3080, 3080 or 3080).

EBIO 4990 Honors Thesis (3 Credit Hours)
Honors thesis research, first semester. Register in department.

EBIO 5000 Honors Thesis (4 Credit Hours)
Honors thesis research, second semester. Register in department.

EBIO 5380 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

EBIO 5390 Study Abroad (1-20 Credit Hours)

EBIO 5970 Capstone Research Seminars (2 Credit Hours)
Enrollment in EBIO 5970 requires a pre-requisite or co-requisite of an approved research experience involving field, laboratory, or literature research in ecology and evolutionary biology during the junior or senior year.

EBIO 5971 Capstone Research Seminars (2,3 Credit Hours)
Enrollment in EBIO 5970 requires a pre-requisite or co-requisite of an approved research experience involving field, laboratory, or literature research in ecology and evolutionary biology during the junior or senior year.

EBIO 6030 Field Botany (4 Credit Hours)
A plant identification course focusing on terrestrial and aquatic flora of Louisiana. Lab field trips include visits to a variety of local exosystems from coastal wetlands to upland forests. Lectures cover botany, taxonomy, and the ecological and evolutionary processes that structure plant communities, with special emphasis on how these topics apply to Louisiana ecosystems.

Corequisite(s): EBIO 6031.

EBIO 6031 Field Botany Lab (0 Credit Hours)
Lab section for EBIO 6030

Corequisite(s): EBIO 6030.

EBIO 6040 General Ecology (3-4 Credit Hours)
A survey of the patterns and mechanisms of interaction among all organisms and their environments, including examples of human impacts on the biosphere. Lectures plus two field trips.

EBIO 6045 General Ecology Lab (3-4 Credit Hours)

EBIO 6060 Stream Ecology (4 Credit Hours)
Ecology of freshwater stream environments, including physical forces influencing water flow, sediment and solute geochemistry, and composition and interactions of stream biota. Class Hours: Lectures supplemented by weekly labs, some day field trips, and one weekend field trip.

Corequisite(s): EBIO 6061.

EBIO 6061 Stream Ecology Lab (0 Credit Hours)
Lab section for EBIO 6060

Corequisite(s): EBIO 6060.
EBIO 6080 Biostat & Experi Design (3 Credit Hours)
This course will teach students how to interpret statistical data in an evolutionary and ecological context. Special emphasis will be placed on understanding the nature of ecological field experiments, and experimental design. In addition, issues regarding how ecological and evolutionary analyses are perceived in the public media will be discussed. We will cover statistical methods for dealing with such problems (regression, correlation, ANOVA, etc.), and also read papers in ecological and evolutionary journals that highlight statistical issues. The class is designed for students who have not had prior experience with statistics.

Corequisite(s): EBIO 6090
EBIO 6090 Invertebrate Paleontology (4 Credit Hours)
Principles of invertebrate paleontology; a systematic treatment of the fossil invertebrates and their living relatives. Emphasis on functional morphology, ontogeny, and paleontology.

Corequisite(s): EBIO 6091.
EBIO 6091 Invertebrate Paleontology Lab (0 Credit Hours)
Lab section for EBIO 6090

Corequisite(s): EBIO 6090.
EBIO 6110 Tropical Ecology (3 Credit Hours)
Advanced course focusing on terrestrial ecology covering all tropical ecosystems with an emphasis on Neotropical forests. Ecological topics will be addressed at population, community, and ecosystem levels with an organismal treatment of plants, insects, birds, reptiles, fish, mammals, microbes (fungi and bacteria), and other model organisms.

Corequisite(s): EBIO 6150.
EBIO 6150 Intro to GIS (4 Credit Hours)
This course is designed to give students a general understanding of geographic information systems (GIS) and the Environmental Systems Research Institute (ESRI) ArcGIS software. The approach taken is detailed instruction in utilizing ArcGIS to solve problems in the earth and environmental sciences. (SAME AS EBIO 3150, EENS 3150, EENS 6150.)

Corequisite(s): EBIO 6151.
EBIO 6151 Intro to GIS lab (0 Credit Hours)
(Same as EBIO 3151, EENS 3151, EENS 6151)

Corequisite(s): EBIO 6150.
EBIO 6180 Plants & Human Affairs (3 Credit Hours)
Since ancient times, people have relied on plants for food, clothing, shelter, medicines, and more. This course investigates some of the ways in which plants support and shape human life. Topics include: early ideas about plants and the origin of plant lore; plant domestication and the rise of agriculture; plant products in commercial economies; cultural uses of plants; plants and the future of civilization.

Corequisite(s): EBIO 6190.
EBIO 6190 Darwin and Darwinism (4 Credit Hours)
A consideration of Charles Darwin’s theory of Natural Selection, including the history of evolutionary thought before Darwin’s time, the circumstances surrounding Darwin’s research, and the effect of Darwin’s ideas on the development of contemporary biology. Readings, discussions, and written assignments.

Corequisite(s): EBIO 6200.
EBIO 6200 Ornithology (4 Credit Hours)
An exploration of the biology of birds emphasizing their origin, evolution, diversity, zoogeography, functional morphology, behavior, ecology, and conservation. Weekly laboratories and field trips with occasional weekend field trips.

Corequisite(s): EBIO 6211.
EBIO 6211 Vertebrate Morphology Lab (0 Credit Hours)
Lab section for EBIO 6210

Corequisite(s): EBIO 6210.
EBIO 6230 Molecular Evol & Ecology (4 Credit Hours)
Molecular ecology employs principles of population genetics and phylogenetics to answer questions about organismal diversity, population dynamics, community assembly and macroecology. Having a foundation in molecular evolution and genomics allows for broad topical applications, including the study of infectious diseases, conservation of endangered species, organismal responses to global environmental change, and the evolutionary origins of biological diversity. Students will first learn the principles of molecular evolution, after which they will be introduced to the core techniques used to generate molecular data. Students will learn how molecular data can be developed and analyzed to address questions in ecology and evolutionary biology. It is strongly recommended that students also have taken CELL 2050, EBIO 3080, and EBIO 3040 or have an understanding of genetics, organismal evolution and ecological principles. This class consists of 3 lectures per week supplemented with a weekly lab. (Same as EBIO 6230)

Corequisite(s): EBIO 6231.
EBIO 6231 Molecular Evolution & Ecol Lab (0 Credit Hours)
Lab section for EBIO 6230

Corequisite(s): EBIO 6230.
EBIO 6250 Biol of Marine Invertebrates (4 Credit Hours)
Biology, taxonomy and distribution of the invertebrates with emphasis on the local fauna.

Corequisite(s): EBIO 6251.
EBIO 6251 Biol of Invertebrate Lab (0 Credit Hours)
Co-requisite lab for EBIO 6250

Corequisite(s): EBIO 6250.
EBIO 6270 Population Ecology (3 Credit Hours)
Principles of population dynamics in space and time, population regulation, and population interactions as determined from an integrated study of plants and animals, followed by exploration of the applicability of these principles to an understanding of the contemporary growth and control of the human population.
EBIO 6271  R Prog for Population Ecology (1 Credit Hour)
In this course, students will learn the basics of the R programming language and complete computer exercises relevant to the material covered in Population Ecology. The course gives students hands on experience of the workings of simple population models. Students enrolled in Population Ecology (EBIO 4270/6270 are strongly encouraged to enroll.

Corequisite(s): EBIO 6281.
EBIO 6280  Ichthyology (4 Credit Hours)
Biology of fish-like vertebrates, including taxonomy, evolution, anatomy, physiology, and biogeography. Class Hours: Lectures supplemented by weekly labs, some day field trips, and one weekend field trip.
Corequisite(s): EBIO 6281.
EBIO 6281  Ichthyology Lab (0 Credit Hours)
Lab section for EBIO 6280
Corequisite(s): EBIO 6280.
EBIO 6290  Behavioral Ecology (3 Credit Hours)
This course addresses the ecological and evolutionary causes and consequences of animal behavior, using both proximate and ultimate approaches. Topics include sociality, mating systems, sexual selection, animal movement, signals, behavior and conservation, and cognition.

EBIO 6300  Biol of Amphibians & Reptiles (4 Credit Hours)
This course will provide an introduction to herpetology, the study of reptiles and amphibians. Topics covered will include the evolutionary history, systematics, physiology, ecology, life history, behavior and conservation of amphibians and reptiles. The course consists of two lectures and a lab or field trip each week. Occasional weekend field trips may also be scheduled.
Corequisite(s): EBIO 6301.
EBIO 6301  Biol of Amph & Reptiles lab (0 Credit Hours)
Co-requisite lab for EBIO 6300
Corequisite(s): EBIO 6300.
EBIO 6320  Microbial Diversity & Ecology (3 Credit Hours)
A survey of microbial organisms and their rules in and relationships within their respective ecosystems. (Same as EBIO 3320)
Corequisite(s): EBIO 6325.
EBIO 6325  Microb Diversity & Ecology Lab (1 Credit Hour)
Corequisite: EBIO 3320/6320. Laboratory activities focused on observing/ascertaining microbial taxonomy (viral, bacterial, archaeal, fungal, and protistan) and methods relating to isolating/identifying microbes and measuring growth rates and metabolisms. Prerequisites: EBIO 1010/1015, CELL 1010, either EBIO 2070 or CELL 2050.
Corequisite(s): EBIO 6320.
EBIO 6340  Ecological Analysis (3 Credit Hours)
Study of powerful methods for designing ecological studies and analyzing ecological data, assuming a knowledge of basic parametric and nonparametric statistics.

EBIO 6360  Wetlands Ecology (3 Credit Hours)
This course will introduce students to the occurrence, morphology, hydrology, soils, ecology and regulation of wetlands.

EBIO 6370  Aquatic Autotrophs (3 Credit Hours)
This course will survey and provide a systematic treatment of the most common autotrophic organisms found in oceanic, coastal, estuarine, and freshwater habitats with particular emphasis on those organisms along the northern Gulf of Mexico.

EBIO 6380  Phylogenetics (3 Credit Hours)
A consideration of biological homology, species definition, problems of character data analysis, and Hennigian cladistics as a means of reconstructing the evolutionary history of life. The implications of phylogenetic hypotheses for biological classification, biogeography, paleontology, comparative ecology, and conservation biology. Seminars, readings, and projects.

EBIO 6430  Entomology (4 Credit Hours)
In this course we will study the organismal, ecological, and evolutionary biology of insects, while surveying recent literature. In addition to learning about insects as organisms and as integral parts of our ecosystem, we will study the scientific process. This course will discuss how scientists come to reach understanding about nature in general, using insects as our model. Insect collection required.

EBIO 6431  Entomology Lab (0 Credit Hours)
Lab section for EBIO 6430
Corequisite(s): EBIO 6430.
EBIO 6460  BiodivEnvir Informatics (3 Credit Hours)
This upper-level course explores theory and practice in biodiversity informatics, an emerging field of cyber-enabled discovery and innovation. Topics to be discussed include natural history collection databases and networks, data mining, morphological databases and ontologies, digital libraries, phyloinformatics, cybertaxonomy, georeferencing methods and algorithms, GIS and predictive niche modeling. A computer laboratory is a required corequisite.

EBIO 6500  Sharks and Their Relatives (3 Credit Hours)
Biology of Sharks and Their Relatives is a detailed study of the evolution, ecology, morphology, functional anatomy, physiology, and conservation of the cartilaginous fishes.

EBIO 6550  Shark Paleobiology (4 Credit Hours)
This course examines the processes and patterns of shark speciation, diversification, macroevolution, and extinction within the framework of developing a problem-based learning activity using shark teeth for a K-12 classroom. Particular emphasis is placed on the systematics and functional morphology of shark teeth.

EBIO 6551  Shark Paleobiology Lab (0 Credit Hours)
Lab section for EBIO 6550

EBIO 6580  Urban Ecology (3 Credit Hours)
Urban Ecology is the study of cities, including human inhabitants, as functioning ecosystems, supporting a complex web of life. In this course students will learn how basic ecological principles can be applied to the study of urban ecosystems and the effects of cities and urbanization on regional and global environments. Through a combination of lectures, readings and discussions, site visits and service learning, this course will provide an overview of interactions, at multiple scales, between the build environment and the natural environment with particular focus on New Orleans and the Gulf coast region.
EBIO 6590 Plant Biol & Adaptation (4 Credit Hours)
An introduction to the biology of plants, with an emphasis on the aspects of physiology, anatomy, morphology, and ecology that have resulted in their successful adaptation and diversification. Lectures supplemented by weekly labs and occasional field trips.

EBIO 6591 Plant Biology & Adaptation Lab (0 Credit Hours)
Lab section for EBIO 6590

EBIO 6660 Special Topics (0-4 Credit Hours)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department.

EBIO 6665 Special Topics Lab (1-3 Credit Hours)
Special Topics Lab.

EBIO 6670 Topics in Marine Science (1-4 Credit Hours)
Reserved for courses offered by LUMCON on a temporary basis or for courses taken at other marine field stations. EBIO 4680/6680 - Topics in Field Biology would be reserved for summer field courses taken at non-marine biological field stations.

EBIO 6672 Marine Field Ecology (4 Credit Hours)
Relationships of marine and estuarine organisms to environmental factors; interactions among organisms; ecological processes of energy and materials flow; field studies of communities and ecosystems of the Louisiana coastal zone.

EBIO 6673 Marine Fish Ecology (3 Credit Hours)
In-depth study of the interaction of marine and estuarine invertebrates with their environment. Emphasis will be placed on understanding the functional role of invertebrates and how the environment shapes morphology, physiology and behavior.

EBIO 6674 Marine Invertebrate Ecology (3 Credit Hours)
In-depth study of the interaction of marine and estuarine invertebrates with their environment. Emphasis will be placed on understanding the functional role of invertebrates and how the environment shapes morphology, physiology and behavior.

EBIO 6676 Wetland Vegetation (3 Credit Hours)
Identification, taxonomy and distribution of wetland plants. Plant adaptations, vegetation analysis methods, marsh types, community processes and coastal wetland restoration will also be discussed. Class will include lecture, labs and field collection of plants.

EBIO 6690 Experimental Animal Behavior (4 Credit Hours)
This course provides students the opportunity to design, implement, write-up, and present an independent research project related to animal behavior. Research will be conducted on live animals at the Audubon Zoo or Audubon Park. The course will emphasize general principles of literature review and synthesis; experimental design; the collection; organization and analysis of data; and written and oral presentation of results. The course consists of 3 hours of laboratory per week (at the park or zoo) and 2 hours of seminar per week (on campus). This course fulfills the Newcomb-Tulane intensive writing requirement.

Corequisite(s): EBIO 6691.

EBIO 6691 Exper. Animal Behavior Lab (0 Credit Hours)
Lab section for EBIO 6690

Corequisite(s): EBIO 6690.

EBIO 6700 Math Models Ecol & Evolution (3 Credit Hours)
An introductory course in mathematical modeling in biology with emphasis on construction and interpretation of models in ecology. The goals of the course are to provide training in a wide variety of mathematical and computational techniques that are used to describe ecological systems, to learn to construct ecological models and provide instruction in the biological interpretation of mathematical results.

EBIO 6810 EEB Journal Review (1 Credit Hour)
Discussion of significant new publications in ecology, evolutionary biology, and related fields.

EBIO 6850 Cur Top/Ecol & Evol Biol (3 Credit Hours)
In-depth examination of a selected topic in ecology and evolutionary biology.

EBIO 6910 Independent Study (1-4 Credit Hours)
Advanced independent studies in a selected field of biology.

EBIO 6911 Independent Study (1-4 Credit Hours)
This is a directed study course that allows a graduate student to pursue a topic of particular interest under the direction of a faculty member.

EBIO 6920 Independent Study (1-4 Credit Hours)
Advanced independent studies in a selected field of biology.

EBIO 6940 Transfer Coursework (3 Credit Hours)

EBIO 7010 Process of Sci Ee Bio (3 Credit Hours)
The class presents a thorough review and experimental exposure to the process of funding and disseminating results of scientific research. Students will write and submit fundable grant proposals, give research seminars, participate in the peer review process, and examine job opportunities within and outside academia.

EBIO 7150 Problems In Env Biology (3 Credit Hours)
Restricted to 5 graduate year students; Directed independent study applying field and laboratory methods to environmental problems.

EBIO 7160 Problems In Env Biology (3 Credit Hours)
Restricted to 5 graduate year students; Directed independent study applying field and laboratory methods to environmental problems.

EBIO 7660 Internship Env Biology (3 Credit Hours)
Restricted to 5 graduate year students: Experimental learning in cooperation with federal, state, municipal or private agencies and industry.

EBIO 7670 Internship Env Biology (3 Credit Hours)
Restricted to 5 graduate year students: Experimental learning in cooperation with federal, state, municipal or private agencies and industry.

EBIO 7940 Transfer Credit-Grad (1-12 Credit Hours)

EBIO 7990 Doctoral Pre-Candidacy RSH (1-9 Credit Hours)

EBIO 9980 Masters Research (3 Credit Hours)
Research toward completion of a masters degree.

EBIO 9990 Dissertation Research (3 Credit Hours)
Research toward completion of a doctoral degree.
ECON 3010 Prerequisite(s): tactics in monetary control.

structure of interest rates, United States financial institutions and their informational value of economy-wide financial markets, the term monetary systems, financial intermediation and resource allocation, 1040.

Prerequisite(s): ECON 1010 fiscal policy in economic stabilization and growth.

Economics (ECON)

ECON 1010 Intro to Microeconomics (3 Credit Hours)
An introduction to theory of prices and the allocation of resources. Topics include the pricing of goods and services, the determination of wages and returns to capital, market structure, and international trade.

ECON 1020 Intro to Macroeconomics (3 Credit Hours)
An introduction to theory of aggregate income, employment, and the price level. Topics include unemployment, alternative monetary and fiscal policies, and economic growth.

ECON 1940 Transfer Coursework (3 Credit Hours)

ECON 3010 Interm. Microeconomics (3 Credit Hours)
An exposition of modern microeconomic theory. Theory of consumer choice, firm profit maximization, product, labor, capital, and financial markets; the short-run and long-run macroeconomic models; aggregate demand and supply; and the determinants of macroeconomic policy.

Prerequisite(s): ECON 3010, 1010, 1010, 1010 or 1010.

ECON 3020 Interm. Macroeconomics (3 Credit Hours)
An exposition of modern macroeconomic theory. Theory of national income, employment, and the price level. The role of monetary and fiscal policy in economic stabilization and growth.

Prerequisite(s): ECON 3010 or 3020.

ECON 3100 Econ of Money & Banking (3 Credit Hours)
Covers both theory of monetary systems and the current structure of United States financial institutions. General topics to be included are monetary systems, financial intermediation and resource allocation, informational value of economy-wide financial markets, the term structure of interest rates, United States financial institutions and their relation to the federal reserve system, regulatory issues, and current tactics in monetary control.

Prerequisite(s): ECON 1020, 1020, 1020, 1040, 1040 or 1040.

ECON 3230 Econometrics (3 Credit Hours)
A one semester introduction to econometric theory and practice. After a brief review of probability theory and descriptive and inferential statistics, we will lay the theoretical foundation for the most commonly used tool in applied economics: linear regression. Our study of linear regression will be based on the Gauss-Markov conditions. The final portion of the course will cover applications and special cases of linear regression. The course will make extensive use of the statistical software Stata. Corequisite: ECON 3240, Econometrics Lab

Prerequisite(s): (ECON 1010, 1010, 1010 or 1010) and (MATH 1110, 1140, 1230 or 3070).

ECON 3240 Econometrics Lab (1 Credit Hour)
An introduction to the use of a statistical programming language. Students will learn skills such as graphing, regression analysis, and data manipulation. Ways to avoid common mistakes and good programming techniques are also provided.

Prerequisite(s): ECON 1010.

ECON 3320 Urban Economics (3 Credit Hours)
A review of the determinants of the location, size, growth, and form of urban areas. Study of the major issues of contemporary urban life: physical deterioration, growth of ghettos, congestion, pollution, transportation, and land use.

Prerequisite(s): (ECON 1010, 1010, 1010, 1010, 1030, 1030, 1030 or 1030).

ECON 3330 Environ & Natrl Resourc (3 Credit Hours)
An introduction to the economic theory of how and why people make decisions that have consequences for the natural environment and the availability of renewable and nonrenewable natural resources. Analysis will include valuation of pollution damages and controls, the use of environmental valuations to determine optimal rates of extraction and utilization of natural resources. The course will apply analytical results to current environmental and natural resources issues.

Prerequisite(s): ECON 1010, 1030, 1010, 1010 or 1010.

ECON 3340 Government and The Economy (3 Credit Hours)
An analysis and description of the role of government in the economy with specific applications to the United States. Sources of market failures such as public goods, externalities, and non-competitive practices are discussed. Other topics include theories of public choice, anti-trust legislation, regulation, the pricing of public sector output, and cost-benefit analysis.

Prerequisite(s): ECON 1010, 1010, 1010, 1010, 1030, 1030, 1030 or 1030.

ECON 3370 World Economy (3 Credit Hours)
This course offers a non-technical introduction to the analysis of international economic issues. While we will be primarily interested in developing standard economic approaches to these issues we will also offer a variety of other useful approaches from political science, sociology, and less mainstream parts of economics. Among specific issues to be treated: protectionism, multinational firms, debt crisis, international macroeconomic policy coordination and European integration.

Prerequisite(s): (ECON 1010, 1010, 1010 or 1010) and (ECON 1020, 1020, 1020 or 1020).
ECON 3420 EconHist of U.S. (3 Credit Hours)
A description and analysis of the principal features of the American economic experience. The colonial relationship with England. The economics of slavery. The industrialization and urbanization of America. Attention also is given to the insight into contemporary problems that can be gained by an examination of our historical experience.
Prerequisite(s): (ECON 1020, 1020, 1020, 1020 or 1040) and (ECON 1010, 1010, 1010 or 1010).

ECON 3500 Economics & Health Care Reform (3 Credit Hours)
The objective of this course is for students to examine health care issues and reforms from an economic perspective. The course will first provide students with an overview of the U.S. health care system and then discuss important problems associated with U.S. health care markets including high health care costs or the high number of uninsured. Students will use theories and concepts from economics to understand these problems and assess the impact of health reforms. Much attention will focus on various provisions of the 2010 Patient Protection and Affordable Care Act (PPACA). Topics covered will include the expansion of private and public health insurance, the individual mandate, measures to control health care costs and spending, the regulation of the health insurance industry, the politics and ongoing debates surrounding health care reform, and the impact of health care reform on the economy.
Prerequisite(s): ECON 1010, 1010, 1010 or 1010.

ECON 3530 Global Food Economy (3 Credit Hours)
We focus on the challenge of feeding a growing world population with limited natural resources. Using real-world data, we examine both demand and supply side factors that influence food security, paying special attention to food insecurity in developing nations. Prerequisites: ECON 1010 or ECON 1020.
Prerequisite(s): (ECON 1010, 1010, 1010 or 1010) or (ECON 1020, 1020, 1020 or 1020).

ECON 3540 Development Economics (3 Credit Hours)
An analysis of the problems of generating economic growth in less developed countries. Alternative strategies for promoting economic growth. The impact of the industrialized Western World on the economic development of poor countries.
Prerequisite(s): ECON 1010, 1030, 1010, 1010 or 1010.

ECON 3580 Labor & Pop In Lat Amer (3 Credit Hours)
An examination of labor markets and demographic problems in Latin America. The course explores in depth dual labor markets, labor union activity in Latin America, migration and fertility change. Basic demographic methods to analyze migration and fertility are taught and the demographic experiences of selected Latin American countries reviewed.
Prerequisite(s): ECON 1010, 1010, 1010, 1010 or 1030.

ECON 3590 Econ Devlp of Lat Amer (3 Credit Hours)
An introduction to economic issues that are of particular concern to Latin America. Emphasis is placed on understanding the position of Latin America within the world economy by studying measures of development and poverty, discussing theoretical models of structural change, and examining changes in international trading relations. As Economics 3590 is a survey course, it is best taken before ECON 4580 and ECON 4660.
Prerequisite(s): ECON 1010, 1030, 1010, 1010 or 1010.

ECON 3610 Games & Strategic Behavior (3 Credit Hours)
This course provides an introduction to game theory -- the formal study of strategic situations -- and its applications. The course will cover the basic analysis of simultaneous and sequential move games with perfect and imperfect information. This material will be followed by a number of applications which illustrate how the use of game theory can help us to improve our understanding of strategic behavior in economic, political, and social situations.
Prerequisite(s): (ECON 1010, 1010 or 1010) and (MATH 1220 or 1310).

ECON 3810 Labor Economics (3 Credit Hours)
A survey and economic analysis of some contemporary labor market issues. Topics include labor force participation and the economics of retirement, the supply and demand for labor, the demand for education and investment in human capital, unions and collective bargaining, the structure of compensation, occupational choice, job turnover and labor mobility, an introduction to theory of job search as well as various other theories of unemployment. The course focuses on theoretical and empirical aspects of labor economics and is only peripherally concerned with institutional, legal or management aspects.
Prerequisite(s): (ECON 1010, 1010, 1010 or 1010).

ECON 3890 Service Learning: ECON 3100 (0-1 Credit Hours)
Students complete a service activity in the community in conjunction with the content of the corequisite course.

ECON 3910 Independent Study (1-3 Credit Hours)
Independent Study in Economics.

ECON 3920 Independent Study (1-3 Credit Hours)
Independent Study in Economics.

ECON 3970 Special Studies (1-3 Credit Hours)
Special Topics in Economics.

ECON 3980 Special Studies (3 Credit Hours)
Special Topics in Economics.
Prerequisite(s): ECON 1010, 1030, 1010, 1010 or 1010.

ECON 3981 Special Studies (3 Credit Hours)

ECON 3982 Special Studies (3 Credit Hours)

ECON 4230 Econometrics (3 Credit Hours)
Building on the statistical techniques learned in Economics 3230, the course concentrates on the principal methods used to correct violations of the basic assumptions of ordinary least squares. ECON 6230 is the master's-level equivalent.
Prerequisite(s): ECON 3230 or MATH 3070.
ECON 4250 Decisions Under Uncertainty (3 Credit Hours)
The theory and practice of decision-making under uncertain conditions. Applications and examples are drawn from the realm of personal, business, medical and environmental decision-making. ECON 6250 is the master's-level equivalent.

ECON 4300 Regulation (3 Credit Hours)
Provides students with an overview of government regulation and the regulatory process, particularly those regulations focusing on health, safety and the environment. We will use theories and evidence from economics, law and policy to help students answer five questions relating to regulation: Why regulate? How are regulatory rules made? How are regulations enforced? How do we determine whether regulations are successful? What alternatives exist to regulation? Students will have an opportunity to apply what they have learned to a regulatory area of their own choosing. ECON 6300 is the master's-level equivalent.

Prerequisite(s): ECON 3010.

ECON 4330 Intl Trading Relations (3 Credit Hours)
An examination of the principles of international trade and the international arrangements that have been established to guide international trade. Specific topics include comparative advantage, the effects of tariffs and quotas, and the substitution of the movement of goods for the movement of capital and labor. ECON 6330 is the master's-level equivalent.

Prerequisite(s): ECON 3010.

ECON 4410 Topics-Mathematical Econ (3 Credit Hours)
A mathematical approach to microeconomic theory with an emphasis on static and dynamic optimization. ECON 6410 is the master's-level equivalent.

Prerequisite(s): ECON 3010 and (MATH 1220 or 1310).

ECON 4500 Health Econ & Policy (3 Credit Hours)
Provides an overview of the field of health economics. Economic theories and tools will be used to study behavior and outcomes in health care markets. Institutional features of the U.S. health care system will be examined. General topics include the demand for health care, determinants and consequences of health, medical technology, the role of health insurance, the behavior of health providers, managed care, comparative health care systems and health policy and reforms. ECON 6500 is the master's-level equivalent.

Prerequisite(s): ECON 3010.

ECON 4510 Adv Top In Macroeconomic (3 Credit Hours)
Structure and operation of macroeconomic system, covering both closed and open economies. ECON 6510 is the master's-level equivalent.

Prerequisite(s): ECON 3020.

ECON 4540 Public Finance & Public Policy (3 Credit Hours)
An overview of the field of public finance and public policy. Topics include the rationale for government intervention in the economy, the efficiency, distributional, and revenue effects of taxation, and the evaluation of specific public policies and tax instruments. ECON 6540 is the master's level equivalent, open to graduate students only. Prerequisite: ECON 3010 or ECON 3030.

Prerequisite(s): (ECON 3010 or 3010) or (ECON 3030 or 3030).

ECON 4560 Comparative Economic Systems (3 Credit Hours)
This is a seminar course in the comparative economic systems analysis. The course studies economic outcomes in different institutional, geographic, and political settings.

Prerequisite(s): (ECON 3010 or 3010).

ECON 4570 Internship (1-3 Credit Hours)
An experiential learning process. Open only to juniors and seniors in good standing.

Corequisite(s): SRVC 4890.

ECON 4580 Labor & Pop In L.A. (3 Credit Hours)
Writing Intensive. An analysis of the economic relation between labor markets, population movements, poverty, and human capital formation. Theoretical foundations are developed and applied in several Latin America contexts.

ECON 4600 Inequality & Poverty Latin Am (3 Credit Hours)
Latin America is the region with the highest levels of income inequality and where inequality has been most persistent. Through comparative and in-depth country studies this course analyzes the dynamics of income inequality and poverty in the region focusing on the role of markets and the state. The course includes a review of quantitative methods to measure inequality and poverty and the theories and methods to analyze their determinants. Using a qualitative scorecard, students will learn to assess government efforts to reduce inequality and poverty. The course is largely non-technical and open to graduate and undergraduate students in the social sciences. ECON 6600 is the master's-level equivalent.

Prerequisite(s): (ECON 1010, 1010, 1010, 1010, 1030, 1030, 1030 or 1030) and ECON 1020.

ECON 4610 Game Theory (3 Credit Hours)
An introduction to the use of game theory in diverse areas such as modern economic research, political science, sociology, and evolutionary processes. ECON 6610 is the master's-level equivalent, open to graduate students only.

Prerequisite(s): (ECON 3010 or 3030) and (MATH 1220 or 1310).

ECON 4660 Sem On Lat Am Countries (3,4 Credit Hours)
A complement to other courses in the Latin American economics sequence focusing on a particular country or sub-region. ECON 6660 is the master's-level equivalent.

ECON 4680 Economics of Poverty (3 Credit Hours)
This course presents an overview of inequality and poverty analysis with a focus on two main themes: measurement challenges and fiscal policy. Students will learn fiscal incidence methods and how to apply them to actual countries. Students will also learn basic inequality and poverty analysis techniques using the statistical software package Stata. Pre-requisites: ECON 3010 and ECON 3020. No prior knowledge of Stata is required.

Prerequisite(s): (ECON 3010 or 3010) and (ECON 3020 or 3020).
**ECON 4810 Economics of Slavery (3 Credit Hours)**
An analysis and description of the economic history of slavery, with particular focus on the United States. Topics include the slave trade, profitability, the efficiency of slave labor, emancipation, slavery and economic growth, the treatment of slaves (dies, housing, and medical care) and demographic effects of slavery.

**Prerequisite(s):** ECON 3010 and 3230.

**ECON 4910 Independent Study (1-3 Credit Hours)**
Independent Study in Economics.

**ECON 4920 Independent Study (1-3 Credit Hours)**
Independent Study in Economics.

**ECON 4950 Corporate Finance (3 Credit Hours)**
Study of the sources of funding, capital structure, and decision making of firms.

**ECON 4961 Senior Seminar (3 Credit Hours)**

**ECON 4962 Senior Seminar (3 Credit Hours)**

**Prerequisite(s):** ECON 3010.

**ECON 4970 Special Studies In Econ (1-3 Credit Hours)**
Special Topics in Economics.

**Prerequisite(s):** ECON 3010 and 4971.

**ECON 4971 Special Studies in Econ (1-3 Credit Hours)**
Prerequisite(s): ECON 3810*, 4980*, 4990* or 5000*.
* May be taken concurrently.

**ECON 4980 Special Studies In Econ (1-3 Credit Hours)**

**ECON 4981 Special Studies in Economics (3 Credit Hours)**

**ECON 4990 Honors Thesis (3 Credit Hours)**
Honors Thesis in Economics.

**Prerequisite(s):** ECON 3230*.
* May be taken concurrently.

**ECON 5000 Honors Thesis (4 Credit Hours)**
Honors Thesis in Economics.

**Prerequisite(s):** ECON 3230*.
* May be taken concurrently.

**ECON 5190 Semester Abroad (1-20 Credit Hours)**
Does not count toward major; must be matched with other ECON elective.

**ECON 5380 Junior Year Abroad (1-20 Credit Hours)**
Does not count toward major; must be matched with other ECON elective.

**ECON 5390 Junior Year Abroad (1-20 Credit Hours)**
Does not count toward major; must be matched with other ECON elective.

**ECON 6010 Adv Topics In Microecon (3 Credit Hours)**

**ECON 6070 Intro Mathematical Econ (3 Credit Hours)**
A presentation of the primary mathematical techniques used in modern economics: calculus, linear algebra, and set theory.

**ECON 6230 Econometrics (3 Credit Hours)**
Building on the statistical techniques learned in Economics 3230, the course concentrates on the principal methods used to correct violations of the basic assumptions of ordinary least squares. Master’s-level version of ECON 4230. Students should consult with Professor for additional assignments & different grading criteria.

**ECON 6300 Regulation (3 Credit Hours)**
This course will provide students with an overview of government regulation and the regulatory process, particularly those regulations focusing on health, safety, and the environment. We will use theories and evidence from economics, law, and policy. Master’s-level version of ECON 4300. Students should consult with Professor for additional assignments & different grading criteria.

**ECON 6330 Intl Trading Relations (3 Credit Hours)**
An examination of the principles of international trade and the international arrangements that have been established to guide international trade. Specific topics include comparative advantage, the effects of tariffs and quotas. Master’s-level version of ECON 4330. Students should consult with Professor for additional assignments & different grading criteria.

**Prerequisite(s):** ECON 3010.

**ECON 6410 Topics-Mathematical Econ (3 Credit Hours)**
A mathematical approach to microeconomic theory with an emphasis on static and dynamic optimization. Master’s-level version of ECON 4410. Students should consult with Professor for additional assignments & different grading criteria.

**Prerequisite(s):** ECON 3010 and (MATH 1210 and 1220 or MATH 1310).

**ECON 6500 Health Econ & Policy (3 Credit Hours)**
Provides an overview of the field of health economics. Economic theories and tools will be used to study behavior and outcomes in health care markets. Institutional features of the U.S. health care system will be examined. Master’s-level version of ECON 4500. Students should consult with Professor for additional assignments & different grading criteria.

**ECON 6510 Adv Top In Macroeconomic (3 Credit Hours)**
Structure and operation of macroeconomic system, covering both closed and open economies. Master’s-level version of ECON 4510. Students should consult with Professor for additional assignments & different grading criteria.

**ECON 6520 Econ Public Expenditures (3 Credit Hours)**
An examination of the economic bases for and evaluation of government expenditure programs. Topics include the rationale for government intervention into the economy, difficulties involved in setting appropriate levels of government activity. Master’s-level version of ECON 4520. Students should consult with Professor for additional assignments & different grading criteria.

**ECON 6530 Economics of Taxation (3 Credit Hours)**
An analysis of major tax structures used in or proposed for the U.S. Economy. Each tax and the system as a whole will be judged according to the criteria of economic efficiency and tax equity. Master’s-level version of ECON 4530. Students should consult with Professor for additional assignments & different grading criteria.
ECON 6540 Public Finance & Public Policy (3 Credit Hours)
An overview of the field of public finance and public policy. Topics include the rationale for government intervention in the economy, the efficiency, distributional, and revenue effects of taxation, and the evaluation of specific public policies and tax instruments. ECON 6540 is the masters level equivalent, open to graduate students only.
Prerequisite(s): (ECON 3010 or 3010) or (ECON 3030 or 3030).

ECON 6560 Comparative Economic Systems (3 Credit Hours)
This is a seminar course in the comparative economic systems analysis. The course studies economic outcomes in different institutional, geographic, and political settings.
Prerequisite(s): (ECON 3010 or 3010).

ECON 6580 Labor & Pop In L.A. (3 Credit Hours)
An analysis of the economic relation between labor markets, population movements, poverty, and human capital formation. Theoretical foundations are developed and applied in several Latin America contexts.

ECON 6600 Inequality & Poverty Latin Am (3 Credit Hours)
Comparative analysis and in-depth country studies of inequality and poverty in Latin America. Topics include measures of inequality and poverty, causes and consequences of inequality and poverty, and assessment of public policies and their effectiveness. Master's-level version of ECON 4600. Students should consult with Professor for additional assignments & different grading criteria.

ECON 6610 Game Theory (3 Credit Hours)
An introduction to the use of game theory in diverse areas such as modern economic research, political science, sociology, and evolutionary processes. Master's-level version of ECON 4610. Students should consult with Professor for additional assignments & different grading criteria. Open to graduate students only.

ECON 6660 Sem On Lat Am Countries (3 Credit Hours)
A complement to other courses in the Latin American economics sequence focusing on a particular country or sub-region. Master's-level version of ECON 4660. Students should consult with Professor for additional assignments & different grading criteria.

ECON 6680 Economics of Poverty (3 Credit Hours)
This course presents an overview of inequality and poverty analysis with a focus on two main themes: measurement challenges and fiscal policy. Students will learn fiscal incidence methods and how to apply them to actual countries. Students will also learn basic inequality and poverty analysis techniques using the statistical software package Stata. Prerequisite: ECON 3010 and ECON 3020. No prior knowledge of Stata is required.
Prerequisite(s): (ECON 3010 or 3010) and (ECON 3020 or 3020).

ECON 6810 Economics of Slavery (3 Credit Hours)
An analysis and description of the economic history of slavery, with particular focus on the United States. Topics include the slave trade, profitability, the efficiency of slave labor, emancipation, slavery and economic growth, the treatment of slaves (diets, housing, and medical care) and demographic effects of slavery.

ECON 6971 Special Topics in Economics (1-3 Credit Hours)
Special Topics in Economics.

ECON 6972 Special Topics in Economics (1-3 Credit Hours)
Special Topics in Economics.

ECON 6973 Special Topics in Economics (1-3 Credit Hours)
Special Topics in Economics.

ECON 6980 Special Studies In Econ (1-3 Credit Hours)
Special Studies in Economics.

ECON 6981 Special Studies in Economics (1-3 Credit Hours)
Special Studies in Economics.

ECON 7130 Spec Prob In Economics I (3 Credit Hours)
Special Studies in Economics.

ECON 7140 Spec Prob In Econ II (3 Credit Hours)
Special Studies in Economics.

ECON 7160 Econometrics I (3 Credit Hours)
As the first course of the econometrics sequence (the other two are Econometric II (ECON7170) and Econometrics III (ECON7175)), this course mainly aims to cover mathematical fundamentals (probability theory, distribution theory, statistical inference and asymptotic theory) and help the students to prepare for more advanced topics and econometric models for their future independent research.

ECON 7170 Econometrics II (3 Credit Hours)
This course will begin with an overview of the classic linear regression model. We will cover both finite sample and large sample properties of OLS method, as well as the hypothesis test associated with OLS. We will also discuss the maximum likelihood method (ML), generalized least squares (GLS), endogeneity problem and its solution (instrument variable (IV)), generalized method of moments (GMM), panel data model. We will also briefly introduce the popular logit/probit model and the numerical methods used to estimate them. Finally, we will introduce several useful time series model, such as moving average (MA) and autoregressive (AR) model.

ECON 7175 Econometrics III (3 Credit Hours)
This course builds somewhat on the content of PhD Econometrics I and II. The course covers methodologies that would be in any applied microeconometricians "toolbox". These include regression control, instrumental variables, experiments, panel methods, difference-in-differences, and regression discontinuity design. The course will cover the basic theory, applications, and best practices. Students put this into practice with actual data sets and applications.

ECON 7180 Mathematical Economics I (3 Credit Hours)

ECON 7460 Urban Economics (3 Credit Hours)
Introduction to the use of economical analysis tools to examine topics like crime, education, property taxation, transportation, and housing that are of particular interest to urban areas.

ECON 7510 Adv Price Theory I (3 Credit Hours)
This course presents the main theoretical tools and mathematical modeling techniques used in microeconomics, with particular focus on consumer and producer theory, partial equilibrium analysis and monopoly, and choice under uncertainty.
ECON 7520  Adv Price Theory II (3 Credit Hours)
Introduction to the main concepts and tools of game theory and mechanism design with the aim to enable students to read original game-theoretic literature and to prepare them to do research in the field.

ECON 7530  Adv Inc and Emp Theory I (3 Credit Hours)
A one-semester introduction to modern macroeconomic theory. The first part of the course will develop models of growth and optimal growth with alternative micro foundations. The second part of the course will consider models of economic fluctuations including real business cycle models and New Keynesian models. The last part of the course will focus on modern theories of consumption, investment, and unemployment.

ECON 7540  Adv Inc and Emp Theoryii (3 Credit Hours)
Advanced study of the performance, structure, behavior, and decision-making of an economy as a whole.

ECON 7670  Public Finance I (3 Credit Hours)
Advanced study of the role of government in the economy. Public finance is classically divided into taxation, expenditures, and local public finance.

ECON 7680  Public Finance II (3 Credit Hours)
This version of the course might be best described as one in “the role of government in markets.” Debates about the role of government increasingly center on the specific ways in which the four main forms of government involvement—expenditures/subsidies, regulation, mandates, and public provision—are designed and implemented. The optimal policy design (i.e., the optimal role of government in these four areas), in turn, depends on the characteristics of the good/service in question.

ECON 7710  Econ Develop.Theory I (3 Credit Hours)
This course will introduce some of the classic approaches to understanding economic development as a process and then quickly move on to examine the literature on poverty, income distribution, income determination and then look at some special issues, like education, child labor, poverty traps and structural rigidities peculiar to developing countries, and the place of women in development.

ECON 7720  Econ Develop.Theory II (3 Credit Hours)
This course covers the quantitative analysis of inequality and poverty measures; theories of income distribution; decomposition methods; and, the theory and practice of fiscal incidence analysis. Students will learn theories and methods, and apply them to a particular country.

ECON 7980  Special Studies in Econ (1-3 Credit Hours)
Special Studies in Economics.

ECON 7981  Special Studies in Econ (1-3 Credit Hours)
Special Studies in Economics.

ECON 7982  Special Topics in Econ (1-3 Credit Hours)
Special Topics in Economics.

ECON 7983  Special Topics in Econ (1-3 Credit Hours)
This course designation is reserved for topics that are not on the regular curriculum taught by regular faculty and for one-time offerings by visitors.

ECON 7990  Independent Studies (1-3 Credit Hours)
Independent Study in Economics.

ECON 9980  Masters Research (0 Credit Hours)
Masters Research in Economics.

ECON 9990  Dissertation Research (0 Credit Hours)
Dissertation Research in Economics.

Education (EDUC)

EDUC 1940  Transfer Coursework (3 Credit Hours)
Transfer Coursework.

EDUC 2940  Transfer Coursework (3 Credit Hours)
Transfer Coursework.

EDUC 3000  Emergent Literacy (3 Credit Hours)
Emergent Literacy provides an introduction to children's speech and language development, appropriate methodologies for building the communication skills of young children, the overall scope of emergent literacy issues - with a heavy emphasis on phonemic awareness/phonics, and guided practice using children's books and appropriate technology for young readers in the classroom. Evidence-based reading research will form the foundation when studying effective strategies for teaching reading. Prerequisites: EDLA 2000 and EDLA 2890 or EDUC 3250.

EDUC 3210  Methods for Teaching ESL (3 Credit Hours)
This one-credit course focuses on the pedagogy and methods of teaching various genres of writing in PK-3 grade classrooms. In addition to learning the importance of the reading/writing connection, students will learn about effective traits of writing, how to analyze and respond to early childhood writing, and how to conduct writing workshops. The class will also explore new literacies and innovative ways to integrate technology in writing. Co-requisite or Prerequisite: EDLA 2000 and EDLA 2890 or EDUC 3250.

EDUC 3250  Emergent Literacy (3 Credit Hours)
This one-credit course focuses on the pedagogy and methods of teaching various genres of writing in PK-3 grade classrooms. In addition to learning the importance of the reading/writing connection, students will learn about effective traits of writing, how to analyze and respond to early childhood writing, and how to conduct writing workshops. The class will also explore new literacies and innovative ways to integrate technology in writing. Co-requisite or Prerequisite: EDLA 2000 and EDLA 2890 or EDUC 3250.

In addition to learning the importance of the reading/writing connection, students will learn about effective traits of writing, how to analyze and respond to early childhood writing, and how to conduct writing workshops. The class will also explore new literacies and innovative ways to integrate technology in writing. Co-requisite or Prerequisite: EDLA 2000 and EDLA 2890 or EDUC 3250.

EDUC 3250  Emergent Literacy (3 Credit Hours)
This one-credit course focuses on the pedagogy and methods of teaching various genres of writing in PK-3 grade classrooms. In addition to learning the importance of the reading/writing connection, students will learn about effective traits of writing, how to analyze and respond to early childhood writing, and how to conduct writing workshops. The class will also explore new literacies and innovative ways to integrate technology in writing. Co-requisite or Prerequisite: EDLA 2000 and EDLA 2890 or EDUC 3250.
EDUC 3260 Classroom Culture & Management (1 Credit Hour)
This course provides opportunities for classroom-based experience for postgraduate students who wish to pursue eligibility for the Practitioner License (type 2) PL2. Students will complete focused observations in an early childhood or secondary classroom, participate in online discussions, and complete two classroom management-focused reflections. Co-requisite: EDUC 3410
Prerequisite(s): EDLA 2000 and (EDLA 2890 or EDUC 3250).
Corequisite(s): EDUC 3410.

EDUC 3410 The Craft of Teaching (3 Credit Hours)
This course examines (a) the process by which students learn and teachers teach including the instructional design process of Understanding by Design (UbD) and effective teaching strategies; (b) the importance of assessment and student work analysis on the learning and teaching process. Teacher candidates will learn to plan lessons and units that are focused, organized, and develop student understanding of knowledge or skills. Candidates will learn to design assessments that provide feedback to students on their learning and to teachers on the impact of their teaching. Candidates will example theories of behavior management and strategies for organizing and maintaining an optimal learning environment. Project requirements and readings will emphasize grade levels and content field for which pre-service teachers are seeking certification. The study begun in this course lays the foundation for understanding the learning and teaching process which later Methods classes will further develop. Prerequisites: EDLA 2000 and EDLA 2890 or EDUC 3250. Co-requisite: EDUC 3260
Prerequisite(s): EDLA 2000 and (EDLA 2890 or EDUC 3250).
Corequisite(s): EDUC 3260.

EDUC 3510 Teaching ECE Sci & Soc Studies (3 Credit Hours)
This course will prepare prospective teachers to teach science and social studies in the early childhood setting (preschool through 3rd grade). This course covers methods for teaching developmentally appropriate topics in science (earth space science, physical science, life science, and engineering/technology/ and social studies (civics, history, geography, and economics). Emphasis will be placed on developmentally appropriate instruction and active learning strategies, including the use of technology in instruction, and on performance-based assessment. Students work with manipulatives and technology to explore science and social studies, solve problems, and learn ways to teach this content to children. Students will also practice creating and refining age-appropriate unit and lesson plans based on Understanding by Design model (Wiggins & McTighe). Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, EDUC 3000, EDLA 3160, EDUC 3410, EDUC 3260, EDUC 3801. Co-requisite: EDUC 3892-01
Prerequisite(s): EDUC 3000 and 3400 and (EDUC 3800 or 3801) and EDUC 3810.

EDUC 3801 Methods Reading Early Child (3 Credit Hours)
This course addresses evidence-based approaches for the effective teaching of literacy. The five essential components of reading instruction, as identified by the National Reading Panel, of this class include: Phonemic awareness skills, phonics skills, reading fluency, vocabulary development, and comprehension strategies. Additionally, the concepts of reading and writing connections, assessment, and content area skills and strategies needed for reading to learn, thinking and written discourse are emphasized. This course includes a practicum placement in a school setting. The Education Candidate observes and learns to create rich literate environments which foster reading, writing, speaking, listening and technological literacies through the integration of their foundation knowledge, use of instructional practices, approaches and methods, curriculum materials, and the appropriate use of assessment. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, EDUC 3410, EDUC 3260 and EDUC 3000. Co-requisite: EDUC 3810
Prerequisite(s): EDLA 2000 and (EDLA 2890, 2890 or EDUC 3250) and EDUC 3000 and (EDUC 3400 or 3410).

EDUC 3802 Methods Reading Secondary Ed (3 Credit Hours)
This course addresses evidence-based reading research while studying the effective teaching of content area literacy. An emphasis will be placed on developing adaptations of well-known strategies in addressing disciplinary ways of thinking, reading, and writing in the content areas. Additionally, students will understand and be able to apply the disciplinary literacies associated with vocabulary and comprehension in a variety of disciplines by utilizing assessments and new literacies needed for Twenty-First Century content area instruction. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, EDUC 3410, EDUC 3260 with PSYC 3200 strongly recommended. Co-requisite: EDUC 3820 (SEC majors)
Prerequisite(s): EDLA 2000 and (EDLA 2890, 2890 or EDUC 3250) and (EDUC 3400 or 3410).

EDUC 3810 Practicum Ece Reading (0 Credit Hours)
Within course (30 hour) zero credit service learning/practicum component for EDUC 3801 Methods of Early Childhood Reading Instruction.
Prerequisite(s): EDUC 3400 or (EDUC 3410). * May be taken concurrently.

EDUC 3820 Practicum SEC Reading (0 Credit Hours)
Practicum placement in a school setting; within course for a (30 hour) zero credit service learning/practicum component for EDUC 3802 Methods of Secondary Reading Instruction.
Prerequisite(s): EDLA 2000 and (EDLA 2890 or EDUC 3250) and EDUC 3420 and (EDUC 3400 or 3410).

EDUC 3890 Service Learning: EDUC 3210 (0-1 Credit Hours)
Within course service learning/practicum component for EDUC 3000 Emergent Literacy.

EDUC 3891 Service Learning: EDUC 3810 (1 Credit Hour)
EDUC 3892 Service Learning: EDUC 3510 (0-1 Credit Hours)
Within course service learning/practicum component for EDUC 3510 Teaching ECE Science and Social Studies.
EDUC 3893 Service Learning: EDUC 3210 (0-1 Credit Hours)
EDUC 3894 Service Learning: EDUC 3230 (0-1 Credit Hours)
EDUC 3895 Service Learning: EDUC 3820 (0-1 Credit Hours)
EDUC 3911 Math in Early Child Classrooms (3 Credit Hours)
This course will prepare prospective teachers to teach mathematics in the early childhood setting (preschool through 3rd grade). This course covers both mathematical content and methods for teaching developmentally appropriate topics in arithmetic, geometry, algebra, probability and statistics, and measurement, data collection and analysis. Emphasis will be placed on developmentally appropriate instruction and active learning strategies, including the use of technology in instruction, and on performance-based assessment. Students work with manipulatives and technology to explore mathematics, solve problems, and learn ways to teach mathematics content to children. Course includes practice in creating and refining age appropriate unit and lesson plans based on Understanding by Design model (Wiggins & McTighe). Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, EDUC 3000, EDLA 3160, EDUC 3410, EDUC 3260, EDUC 3801, EDUC 3510. Co-requisite: EDUC 3890-11.
EDUC 3940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.
EDUC 4910 Independent Study (1-3 Credit Hours)
Independent Study in Education.
EDUC 5010 Secondary Methods of Teaching (3 Credit Hours)
This course focuses on prominent methodological issues and the development of core teaching skills. Students will analyze different instructional methods; design comprehensive unit and lesson plans using the Understanding by Design model; develop integrated technology strategies and develop skills in differentiated instruction. Emphasis is placed on development of skills of self-analysis, reflection, and research-based decision-making. Students will interpret, refine, and demonstrate their understanding and mastery of general teaching practices through forty hours of field experience in a middle or high school setting. The course is designed to be very practicum-oriented; therefore, it is organized to provide time for one-on-one conferences in which the professor will advise on upcoming lessons and give detailed feedback on classroom observations. The regular class sessions are designed to be experiential, in which students will learn and participate in specific lessons and activities to use for classroom teaching, employing a variety of materials. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, EDUC 3410, EDUC 3260, EDUC 3802. Co-requisite: EDUC 5890-10
Prerequisite(s): EDLA 2000 and (EDLA 2890, 2890 or EDUC 3250) and EDUC 3400 and (EDUC 3802 or 3800) and EDUC 3820.
EDUC 5090 Methods II Social Studies (3 Credit Hours)
A seminar and practicum course providing opportunities for secondary teacher candidates to acquire skills in teaching methodologies and strategies specific to secondary social studies instruction. Topics include organization of subject matter, weekly and unit lesson planning, development of assessments, utilizing information technology for instruction, and working with diverse populations of students. Course activities include professional development workshops, teaching in a secondary classroom, discussion/reflections, demonstration of effective use of standards documents, inquiry activities, and a review of effective pedagogical and school improvement literature. A total of 40 clock hours of field experiences are required in the classroom setting. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, EDUC 3410, EDUC 3260, 3802, 5010. Co-requisite: EDUC 5893-11
Prerequisite(s): EDLA 3410 and (EDLA 2890 or EDUC 3250) and (EDUC 3400 or 3410) and EDUC 3820 and 5010.
EDUC 5100 Methods II Science (3 Credit Hours)
A seminar and practicum course providing opportunities for secondary teacher candidates to acquire skills in teaching methodologies and strategies specific to the science content area in which they are seeking certification. Topics include organization of subject matter, weekly and unit lesson planning using the Understanding by Design model, development of assessments, utilizing information technology for instruction, and working with diverse populations of students. Course activities include teaching in a field-site classroom, discussion/reflections, and demonstration of effective use of standards documents, inquiry activities, and a review of effective pedagogical literature. A total of 40 clock hours of field experiences are required in the classroom setting. TWO professional development experiences are also required. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, EDUC 3410, EDUC 3260, 3802, 5010. Co-requisite: EDUC 5891-11
Prerequisite(s): EDLA 2000 and (EDLA 2890 or EDUC 3250) and (EDUC 3400 or 3410) and (EDUC 3800 or 3820) and EDUC 5010.
EDUC 5110 Methods II English (3 Credit Hours)
In this seminar and practicum course, candidates will study the various components of the English Language Arts curriculum along with a broad range of research-based instructional strategies, key theories and debates in the field of English education. Topics include strategies for integrating all language arts into the curriculum, lesson planning based on the Understanding by Design (UbD) model, and development of effective assessments. Students will learn how to utilize information technology for instruction, how to align curriculum with state and national literacy standards, and how to integrate strategies for working with diverse populations of students. Course activities include observations in secondary (6-12) English classrooms, development of lesson plans, teaching in a field-site classroom, discussion/reflections, inquiry activities, and a review of effective pedagogical literature. A total of 40 clock hours of field experiences and two professional development experiences are required. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, EDUC 3410, EDUC 3260, 3802, 5010. Co-requisite: EDUC 5892-11
Prerequisite(s): EDLA 2000 and (EDLA 2890 or EDUC 3250) and (EDUC 3400 or 3410) and (EDUC 3800 or 3820) and EDUC 5010.
EDUC 5120 Methods II Math (3 Credit Hours)
A seminar and practicum course providing opportunities for secondary teacher candidates to acquire skills in teaching methodologies and strategies specific to the math content area in which they are seeking certification. Topics include organization of subject matter, weekly and unit lesson planning using the Understanding by Design model, development of assessments, utilizing information technology for instruction, and working with diverse populations of students. Course activities include teaching in a field-site classroom, discussion/reflections, and demonstration of effective use of standards documents, inquiry activities and a review of effective pedagogical literature. A total of 40 clock hours of field experiences are required in the classroom setting. TWO professional development experiences are also required. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, EDUC 3410, EDUC 3260, 3802, 5010. Co-requisite: EDUC 5890-11

Prerequisite(s): EDLA 2000 and (EDLA 2890 or EDUC 3250) and (EDUC 3400 or 3410) and (EDUC 3800 or 3820) and EDUC 5010.

EDUC 5130 Methods II: Foreign Language (3 Credit Hours)
A seminar and practicum course providing opportunities for secondary teacher candidates to acquire skills in teaching methodologies and strategies specific to foreign language instruction (Latin, French, Spanish, Italian, or German). Topics include lesson planning based on the Understanding by Design (UbD) model, and development of effective assessments, utilizing information technology for instruction, and working with diverse populations of students. Course activities include observations in secondary (6-12) foreign language classrooms, development of lesson plans, teaching in a field-site classroom, discussion/reflections, inquiry activities, and a review of effective pedagogical literature. A total of 40 clock hours of field experiences and two professional development experiences are required. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, EDUC 3410, EDUC 3260, 3802, 5010. Co-requisite: EDUC 5894-01

Prerequisite(s): EDLA 2000 and (EDLA 2890 or EDUC 3250) and (EDUC 3400 or 3410) and EDUC 3820 and 5010.

EDUC 5380 Junior Year Abroad (1-20 Credit Hours)

EDUC 5390 Junior Year Abroad (1-20 Credit Hours)

EDUC 5890 Service Learning: EDUC 5120 (0-1 Credit Hours)
Within course service learning/practicum component for EDUC 5010 Secondary Education Methods I.

EDUC 5891 Service Learning: EDUC 5100 (1 Credit Hour)
Within course service learning/practicum component for EDUC 5100 Secondary Methods of Teaching II: Science Methods.

EDUC 5892 Service Learning: EDUC 5110 (0-1 Credit Hours)
Within course service learning/practicum component for EDUC 5110 Secondary Methods of Teaching English.

EDUC 5893 Service Learning: EDUC 5090 (1 Credit Hour)
Within course service learning/practicum component for EDUC 5090 Secondary Methods of Teaching II: Social Studies Methods.

EDUC 5894 Service Learning: EDUC 5130 (0-1 Credit Hours)
Within course service learning/practicum component for EDUC 5130 Secondary Methods of Teaching II: Foreign Language.

EDUC 5940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

EDUC 6860 Independent Study (0-3 Credit Hours)
This course will explore various curriculum models and underlying theories utilized in designing early childhood curriculum, with an emphasis on the Reggio Emilia approach. Participants will examine factors which have influenced curriculum development in Early Childhood Education and determine how such factors have influenced the development of a variety of curriculum models. Through the Reggio Emilia approach, young children are encouraged to explore their environment and express themselves through many “languages,” or modes of expression, including words, movement, drawing, painting, sculpture, shadow play, collage, and music. Additionally, students in this course will explore the latest research on Social and Emotional Learning and ways to integrate strategies into the early childhood curriculum.

EDUC 6912 Residency Student Teach PK-3 (3 Credit Hours)
The yearlong student teaching residency (2 semesters) is the culminating experience of Tulane’s Teacher Preparation & Certification Program and occurs the year following the completion of the first 27 hours of professional coursework. The candidate will blend theory and practice in the actual activity of teaching. Students will attend a series of seminars and complete assignments directly related to their teaching assignment. Candidates will be placed in a school and will be under the direct supervision of a mentor teacher at the school site as well as university faculty. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, PSYC 3210, EDUC 3000, EDLA 3160, EDUC 3410, EDUC 3260, EDUC 3801, EDUC 3510 and EDUC 3911.

EDUC 6913 Residency Student Teach PK-3 (3 Credit Hours)
The yearlong student teaching residency (2 semesters) is the culminating experience of Tulane’s Teacher Preparation & Certification Program and occurs the year following the completion of the first 27 hours of professional coursework. The candidate will blend theory and practice in the actual activity of teaching. Students will attend a series of seminars and complete assignments directly related to their teaching assignment. Candidates will be placed in a school and will be under the direct supervision of a mentor teacher at the school site as well as university faculty. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, PSYC 3210, EDUC 3000, EDLA 3160, EDUC 3410, EDUC 3260, EDUC 3801, EDUC 3510 and EDUC 3911.

Prerequisite(s): EDUC 3900 and 3500.
* May be taken concurrently.

EDUC 6914 Pract Resid Early Child PK-3 (3 Credit Hours)
The yearlong residency (2 semesters) is the culminating course of Tulane’s Teacher Preparation & Certification Program and occurs the year following the completion of the first 27 hours of professional coursework. The candidate will blend theory and practice in the actual activity of teaching all day, attend a series of seminars, and complete projects directly related to their teaching assignment. Candidate must be hired as a full-time teacher in a school system and will be under the supervision of a mentor teacher at the school site as well as university faculty. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, PSYC 3210, EDUC 3000, EDLA 3160, EDUC 3410, EDUC 3260, EDUC 3801, EDUC 3510 and EDUC 3911.
EDUC 6915 Pract Resid Early Child PK-3 (3 Credit Hours)
The yearlong residency (2 semesters) is the culminating course of Tulane's Teacher Preparation & Certification Program and occurs the year following the completion of the first 27 hours of professional coursework. The candidate will blend theory and practice in the actual activity of teaching. Candidates must be hired as a full-time teacher in a school system and will be under the supervision of a mentor teacher at the school site as well as university faculty. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, PSYC 3210, EDUC 3000, EDLA 3160, EDUC 3410, EDUC 3260, EDUC 3801, EDUC 3510 and EDUC 3911.

Prerequisite(s): EDUC 3900* and 3500.
* May be taken concurrently.

EDUC 6916 Residency Student Teach 6-12 (3 Credit Hours)
The year-long student teaching residency (2 semesters) is the culminating experience of Tulane's Teacher Preparation & Certification Program and occurs the year following the completion of the first 24 hours of professional coursework. The candidate will blend theory and practice in the actual activity of teaching. Students will attend a series of seminars and complete assignments directly related to their teaching assignment. Candidates will be placed in a school and will be under the direct supervision of a mentor teacher at the school site as well as university faculty. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, PSYC 3200, PSYC 3390, EDUC 3410, EDUC 3260, EDUC 3802, EDUC 5100 and EDUC content Methods.

EDUC 6917 Residency Student Teach 6-12 (3 Credit Hours)
The year-long student teaching residency (2 semesters) is the culminating experience of Tulane's Teacher Preparation & Certification Program and occurs the year following the completion of the first 24 hours of professional coursework. The candidate will blend theory and practice in the actual activity of teaching. Students will attend a series of seminars and complete assignments directly related to their teaching assignment. Candidates will be placed in a school and will be under the direct supervision of a mentor teacher at the school site as well as university faculty. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, PSYC 3200, PSYC 3390, EDUC 3410, EDUC 3260, EDUC 3802, EDUC 5100 and EDUC content Methods.

Prerequisite(s): EDUC 5090*, 5100*, 5110*, 5120*, 5130* or 5010*.
* May be taken concurrently.

EDUC 6918 Practitioner Residency 6-12 (3 Credit Hours)
The yearlong student teaching residency (2 semesters) is the culminating experience of Tulane's Teacher Preparation & Certification Program and occurs the year following the completion of the first 24 hours of professional coursework. The candidate will blend theory and practice in the actual activity of teaching. Students will attend a series of seminars and complete assignments directly related to their teaching assignment. Candidates will be placed in a school and will be under the direct supervision of a mentor teacher at the school site as well as university faculty. Candidates who have completed at least three years of classroom teaching may be eligible for a waiver from the residency. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, PSYC 3200, PSYC 3390, EDUC 3410, EDUC 3260, EDUC 3802, EDUC 5100 and EDUC content Methods.

EDUC 6919 Practitioner Residency 6-12 (3 Credit Hours)
The yearlong student teaching residency (2 semesters) is the culminating experience of Tulane's Teacher Preparation & Certification Program and occurs the year following the completion of the first 24 hours of professional coursework. The candidate will blend theory and practice in the actual activity of teaching. Students will attend a series of seminars and complete assignments directly related to their teaching assignment. Candidates will be placed in a school and will be under the direct supervision of a mentor teacher at the school site as well as university faculty. Candidates who have completed at least three years of classroom teaching may be eligible for a waiver from the residency. Prerequisites: EDLA 2000, EDLA 2890 or EDUC 3250, PSYC 3200, PSYC 3390, EDUC 3410, EDUC 3260, EDUC 3802, EDUC 5100 and EDUC content Methods.

Prerequisite(s): EDUC 5090*, 5100*, 5110*, 5120*, 5130* or 5010*.
* May be taken concurrently.

Education - Lib Arts (EDLA)

EDLA 1890 Service Learning -300 (1 Credit Hour)

EDLA 1940 Transfer Coursework (3 Credit Hours)

EDLA 2000 Education In A Diverse Society (3 Credit Hours)
Education in a Diverse Society is an introductory course for those preparing for certification to teach. The overarching goal is to catalyze and refine innate skills for developing social change in the context of the current educational systems locally, nationally, and internationally. This course examines the historical, philosophical, sociological, psychological, organizational, and socio-cultural bases of American education and the political influences as they relate to contemporary issues in education in the United States. It is designed to assist students in determining if they want to pursue teaching as a career and it helps prospective teachers to gain a valid and comprehensive knowledge of what is involved in a teaching career. Emphasis is placed upon reflection, inquiry, and personal involvement in planning an effective and successful career in education. Co-requisite: EDLA 2890 or EDUC 3250

EDLA 2890 Service Learning: EDLA 2000 (1 Credit Hour)
This course provides opportunities for observation and participation for students who are exploring an interest in teacher certification. Students observe and participate in a variety of school and classroom settings, including urban, suburban, and inner-city schools for a total of twenty hours. Students meet for debriefing sessions during the semester and complete a final project. (Liberal Arts). Co-requisite: EDLA 2000

EDLA 2940 Transfer Coursework (3 Credit Hours)

EDLA 3160 Child & Adolescent Lit (3 Credit Hours)
This course is designed to provide prospective teachers with an overview of the field of children's literature with a focus on works appropriate for children and young adults. The history, philosophy, significant authors and texts, and major genres of children's literature will be explored.
EMBA (EMBA)

EMBA 6120 Strategic Info Systems (2 Credit Hours)
EMBA 6130 Management Control (1 Credit Hour)
EMBA 6140 Microeconomics (2-3 Credit Hours)
Examines the key aspects of markets and economic behavior as they relate to managerial decision making. The basics of market supply and demand are developed with emphasis on applications to business decision making. The determinants and role of market structure are examined in relation to business competition, market concentration, and economic efficiency.

EMBA 6150 Financial Accounting (2 Credit Hours)
Familiarizes students with key financial accounting concepts, methods and terminology and introduces the tools of financial statement analysis. The financial reporting roles of management, auditors and regulators are studied, and students learn how accounting policy choices can influence reported performance and financial position. Students develop knowledge and skills that allow them to read, interpret and analyze financial statements at a basic level and to discuss business issues in accounting terms.

EMBA 6160 Managing People (2-3 Credit Hours)
As organizations globalize, maintaining an effective workforce internationally and working in global teams can be particularly challenging. This course will consider the critical issues necessary for effectively managing people both at home and abroad and help students understand how to effectively manage in a multicultural setting. We will discuss the critical role that culture plays in shaping the success or failure of an international organization. In addition, we will discuss how the subtle nuances of culture can lead to conflict, especially in multi-cultural teams. We will also explore critical skills for global management: problem-solving and conflict management in multicultural settings and the leadership and management of geographically dispersed teams. Finally, we will discuss the role of HR during mergers & acquisitions.

EMBA 6210 Managerial Accounting (2 Credit Hours)
Applies the accounting models that support managerial decision-making in an advanced environment. Topics include cost behavior, cost-volume profit analysis, variable costing, differential (incremental) analysis, capital budgeting (with emphasis on the sources of accounting data), and interdivisional transfer pricing. Models are applied to service and merchandising as well as manufacturing environments.

EMBA 6220 Decision Models (2 Credit Hours)
Examines the art of solving problems under uncertainty. Course topics include descriptive statistics, probability, sampling distributions, confidence intervals, hypothesis testing and simple and multiple regressions. Methods are applied to management problems drawn from marketing, finance, economics, organizational behavior, and operations management.

EMBA 6230 Marketing Management (2 Credit Hours)
Analyzes the market-driven corporation with respect to the marketing mix (product, promotion, price and distribution strategy) as it applies to consumer and industrial goods and services in the private and public sectors. Emphasis is placed on the application of the marketing mix through real-world projects.

EMBA 6240 Operations Management (2 Credit Hours)
EMBA 6260 Financial Management I (2-3 Credit Hours)
This course provides a rigorous introduction to the field of financial economics. The first section of the course develops an analytical understanding of the time value of money concept, and applies it through basic techniques for the valuation of stocks, bonds, and investment projects. Various capital budgeting rules are also discussed in this section. The second section focuses on capital markets including the statistical concepts of covariance and diversification and the capital asset pricing model. The third section introduces capital structure policy and discusses the impact of the different financing choices on risk and required return on firm’s equity. This section also introduces the notion of weighted average cost of capital.

EMBA 6270 Financial Management II (2-3 Credit Hours)
This course builds directly on the material covered in Financial Management I. The course focuses on the key policy decisions made in corporate finance and discusses their impact on firm and shareholder value. The course will include an in-depth analysis of firms’ financing choices and capital structure and their role in capital budgeting decisions. The course also introduces the different discounted cash flow valuation techniques for the valuation of corporate cash flows. The last third of the course focuses on options, option pricing, and applications of option pricing in corporate finance including warrant and convertible bond valuation.

EMBA 6280 Business Analytics (2 Credit Hours)
EMBA 6290 Exec Decision Making (2-2.5 Credit Hours)
EMBA 6300 Consumer Behavior (2 Credit Hours)
EMBA 6310 Strategy Formulation (2-2.5 Credit Hours)
Increases understanding of the functions and responsibilities of general management. It examines the problems that affect the character and success of an entire enterprise, whether an entrepreneurial venture or a multinational conglomerate.

EMBA 6410 Strategy Implementation (1-3 Credit Hours)
EMBA 6420 Leadership & Ethics (2-3 Credit Hours)
EMBA 6460 Legal Environ/Business (2 Credit Hours)
Introduces the basic concepts of contracts, labor laws, discrimination, torts, partnership, corporations, securities, and bankruptcy and gives students an understanding of the relationships between parties in a typical business setting. Tax consequences relative to various entities used in business transactions are also examined.

EMBA 6470 Investments (2 Credit Hours)
EMBA 7070 Strategic Cost Mgmt (1-3 Credit Hours)
EMBA 7090 Managing The Global Entr (2-4 Credit Hours)
Focuses on the structure and processes of management, particularly those of a global organization, and simulates upper-level management activities of the global enterprise. Course objectives include developing an integrated understanding of strategic and operational decision-making in a global enterprise from a general management perspective.
EMBA 7100 Seminar: Business Strategy (2 Credit Hours)

EMBA 7110 Macroeconomics (2 Credit Hours)
Introduces the theory of national income determination in relation to full employment, price stability, international trade, and economic growth. The emphasis is on macroeconomic issues for managerial decisions. Topics include the determination of interest rates, inflation, wage levels, real output growth, exchange rates, international trade patterns and how these variables impact business decision making.

EMBA 7120 Managerial Perspective (1-2 Credit Hours)
Provides a framework for analyzing and identifying key management issues and developing plans for action. Study focuses on identifying what managers do, what distinguishes effective management, how managers make decisions, and what makes a company excellent.

EMBA 7130 Eco Env Global Business (2-3 Credit Hours)
EMBA 7140 Interpersonal & Group Effectiveness (1-2 Credit Hours)
EMBA 7150 Special Topics Mgmt (2 Credit Hours)
EMBA 7160 Economics for Managers (2 Credit Hours)
EMBA 7240 Total Quality Management (2 Credit Hours)
EMBA 7260 Supply Chain Management (2.5-3 Credit Hours)
EMBA 7300 Corp Financial Policy (1.5-2.5 Credit Hours)
EMBA 7310 Marketing Strategy (2 Credit Hours)
EMBA 7320 Negotiations (2-3 Credit Hours)
Explores the behavioral processes and phenomena which are inherent in virtually all types of negotiations. Emphasis is on systematic preparation of a negotiating strategy. In-class negotiation exercises and extensive debriefings are used by participants to test and evaluate their strategies and tactics.

EMBA 7340 Executive Course (0 Credit Hours)
EMBA 7350 Project Finance (2-3 Credit Hours)
EMBA 7360 Financing Business (2 Credit Hours)
EMBA 7370 Cases In Finance (2 Credit Hours)

Through case analysis, this course explores ways to value different types of business enterprises. The course emphasizes discounted cash flow methods of valuation, though other methods, such as the method of multiples, the venture capital method, and real options are also introduced. Students develop and practice valuation skills, such as financial forecasting, cash flow measurement, discount rate estimation and continuing value calculation. In addition, students work with a variety of corporate situations, such as LBO’s, IPO’s, spin-offs, and mergers, in which valuation plays a key role.

EMBA 7380 Intl Business Management (1-3 Credit Hours)
EMBA 7390 Financial Statement Analysis (2 Credit Hours)
Explores the principles and techniques for understanding and interpreting financial statements, including statement comparability, income measurement and disclosure, cash flow analysis, ratio analysis and the disaggregation of ratios, quality of earnings, account analysis, and footnote disclosures. The financial relationships of the accounting model are applied to published financial statements. Cases are used extensively.

EMBA 7410 Change Management (2 Credit Hours)
Examines the key aspects of leading a successful organizational change. The course analyzes both successful and unsuccessful change management efforts, allowing students to practically apply readings and discussions to individual organizational experiences. The course will build a framework for leading a successful organizational change.

EMBA 7420 New Venture Creations (2-4 Credit Hours)
EMBA 7430 Global Strategy (2-3 Credit Hours)
Designed to integrate and summarize all core EMBA course work, this course is based on a global management simulation in which teams of students compete against each other for business success within the global market arena while utilizing “real-world” decision making, strategy formulation, problem-solving, and competitive challenges. Teams must analyze the economic conditions of the simulated global environment, insure smooth production, and understand their products relative to their customers, use accounting data to evaluate results and make decisions, finance operations, determine research and development targets, market products, manage employees and the team and respond to the global competition.

EMBA 7450 Management Communications (2-3 Credit Hours)
Focuses on the different ways managers communicate within organizations and on the different ways companies communicate with both internal and external constituencies, including employees, shareholders, regulators, the public, etc. The practical emphasis is on student exercises and includes informal individual briefings, formal group presentations, and media events during crisis situations. The course also uses video and print media extensively to illustrate good and poor communication efforts on the part of existing corporations relative to their customers, use accounting data to evaluate results and make decisions, finance operations, determine research and development targets, market products, manage employees and the team and respond to the global competition.

EMBA 7300 Corp Financial Policy (1.5-2.5 Credit Hours)
EMBA 7310 Marketing Strategy (2 Credit Hours)
EMBA 7320 Negotiations (2-3 Credit Hours)
Explores the behavioral processes and phenomena which are inherent in virtually all types of negotiations. Emphasis is on systematic preparation of a negotiating strategy. In-class negotiation exercises and extensive debriefings are used by participants to test and evaluate their strategies and tactics.

EMBA 7340 Executive Course (0 Credit Hours)
EMBA 7350 Project Finance (2-3 Credit Hours)
EMBA 7360 Financing Business (2 Credit Hours)
EMBA 7370 Cases In Finance (2 Credit Hours)

Through case analysis, this course explores ways to value different types of business enterprises. The course emphasizes discounted cash flow methods of valuation, though other methods, such as the method of multiples, the venture capital method, and real options are also introduced. Students develop and practice valuation skills, such as financial forecasting, cash flow measurement, discount rate estimation and continuing value calculation. In addition, students work with a variety of corporate situations, such as LBO’s, IPO’s, spin-offs, and mergers, in which valuation plays a key role.

EMBA 7380 Intl Business Management (1-3 Credit Hours)
EMBA 7390 Financial Statement Analysis (2 Credit Hours)
Explores the principles and techniques for understanding and interpreting financial statements, including statement comparability, income measurement and disclosure, cash flow analysis, ratio analysis and the disaggregation of ratios, quality of earnings, account analysis, and footnote disclosures. The financial relationships of the accounting model are applied to published financial statements. Cases are used extensively.

EMBA 7410 Change Management (2 Credit Hours)
Examines the key aspects of leading a successful organizational change. The course analyzes both successful and unsuccessful change management efforts, allowing students to practically apply readings and discussions to individual organizational experiences. The course will build a framework for leading a successful organizational change.

EMBA 7420 New Venture Creations (2-4 Credit Hours)
EMBA 7430 Global Strategy (2-3 Credit Hours)
Designed to integrate and summarize all core EMBA course work, this course is based on a global management simulation in which teams of students compete against each other for business success within the global market arena while utilizing “real-world” decision making, strategy formulation, problem-solving, and competitive challenges. Teams must analyze the economic conditions of the simulated global environment, insure smooth production, and understand their products relative to their customers, use accounting data to evaluate results and make decisions, finance operations, determine research and development targets, market products, manage employees and the team and respond to the global competition.

EMBA 7450 Management Communications (2-3 Credit Hours)
Focuses on the different ways managers communicate within organizations and on the different ways companies communicate with both internal and external constituencies, including employees, shareholders, regulators, the public, etc. The practical emphasis is on student exercises and includes informal individual briefings, formal group presentations, and media events during crisis situations. The course also uses video and print media extensively to illustrate good and poor communication efforts on the part of existing corporations relative to their customers, use accounting data to evaluate results and make decisions, finance operations, determine research and development targets, market products, manage employees and the team and respond to the global competition.

EMBA 7300 Corp Financial Policy (1.5-2.5 Credit Hours)
EMBA 7310 Marketing Strategy (2 Credit Hours)
EMBA 7320 Negotiations (2-3 Credit Hours)
Explores the behavioral processes and phenomena which are inherent in virtually all types of negotiations. Emphasis is on systematic preparation of a negotiating strategy. In-class negotiation exercises and extensive debriefings are used by participants to test and evaluate their strategies and tactics.

EMBA 7340 Executive Course (0 Credit Hours)
EMBA 7350 Project Finance (2-3 Credit Hours)
EMBA 7360 Financing Business (2 Credit Hours)
EMBA 7370 Cases In Finance (2 Credit Hours)

Through case analysis, this course explores ways to value different types of business enterprises. The course emphasizes discounted cash flow methods of valuation, though other methods, such as the method of multiples, the venture capital method, and real options are also introduced. Students develop and practice valuation skills, such as financial forecasting, cash flow measurement, discount rate estimation and continuing value calculation. In addition, students work with a variety of corporate situations, such as LBO’s, IPO’s, spin-offs, and mergers, in which valuation plays a key role.

EMBA 7340 Executive Course (0 Credit Hours)
EMBA 7350 Project Finance (2-3 Credit Hours)
EMBA 7360 Financing Business (2 Credit Hours)
EMBA 7370 Cases In Finance (2 Credit Hours)

Through case analysis, this course explores ways to value different types of business enterprises. The course emphasizes discounted cash flow methods of valuation, though other methods, such as the method of multiples, the venture capital method, and real options are also introduced. Students develop and practice valuation skills, such as financial forecasting, cash flow measurement, discount rate estimation and continuing value calculation. In addition, students work with a variety of corporate situations, such as LBO’s, IPO’s, spin-offs, and mergers, in which valuation plays a key role.

EMBA 7380 Intl Business Management (1-3 Credit Hours)
EMBA 7390 Financial Statement Analysis (2 Credit Hours)
Explores the principles and techniques for understanding and interpreting financial statements, including statement comparability, income measurement and disclosure, cash flow analysis, ratio analysis and the disaggregation of ratios, quality of earnings, account analysis, and footnote disclosures. The financial relationships of the accounting model are applied to published financial statements. Cases are used extensively.
EMBA 7470  Cases In Marketing  (2 Credit Hours)
EMBA 7480  Global Marketing  (2 Credit Hours)
EMBA 7490  Project Management  (2 Credit Hours)
EMBA 7510  Portfolio Theory  (1.5-2 Credit Hours)
This course examines the foundations of investment theory and practice. It begins by elaborating the concepts of risk and risk aversion, wealth allocation between risky and riskfree assets, and optimally risky portfolios. The course proceeds to develop various asset-pricing models, paying special attention to the CAPM and APT. The course will also examine the concept of market efficiency and review the empirical evidence for and against efficiency. The second half of the course examines theories and strategies for managing investment portfolios. This includes surveying how securities are actually traded and cleared. It then examines theories of active portfolio management ranging from the Peter Lynch approach to more formal models such as the Treynor-Black model. Issues of asset allocation, extended (e.g. global and real asset) diversification, and investment company organization and policy formation are studied. The course concludes with a study of portfolio performance measurement.

EMBA 7520  Leadership and Ethics  (2 Credit Hours)
This course focuses on leadership and ethics in business and society. Leadership will be analyzed in terms of personal characteristics of great leaders (what are the qualities that great leaders possess and how do we develop those qualities?) and also functional perspectives (what are the most important tasks of leaders in business?). Ethics will be examined in practical ways. Students will consider various philosophical perspectives on business ethics, but the course’s main focus will be peer group conversations about ethical issues. Students will analyze ethical dilemmas and participate in role playing exercises to provoke discussion and cultivate their common sense about ethical challenges. Students will also consider how organizations can prevent misconduct and respond to an ethical crisis. Throughout the course, cultural differences in leadership and ethics will be emphasized.

EMBA 7540  Topics In Managing People  (2 Credit Hours)
EMBA 7550  Performance Management  (2 Credit Hours)
One of the cornerstones of human resource practice in any organization, performance management shifts the common focus on an annual evaluation of employee performance to an ongoing process that includes establishing an organizational climate for success, setting and aligning goals, coaching and developing employees, formally evaluating performance, and linking performance to recognition and rewards. This course will expose students to current thinking, strategies, and evidence-based best practices in these areas of performance management by incorporating perspectives of leading practitioners, consultants, and researchers in the field. The course will be conducted in an interactive and participative manner. Learning will be facilitated through lecture and discussion, case studies, interactive exercises, and student presentations.

EMBA 7560  Pricing Strategy  (2 Credit Hours)
EMBA 7570  Global Business Envirnmt  (2-3 Credit Hours)
EMBA 7580  Topics In Adv Leadership  (2 Credit Hours)
EMBA 7590  Corporate Strategy  (2 Credit Hours)
This course is designed to provide experienced executives with practice-oriented, nuanced, in-depth knowledge of the various aspects of the corporate strategy of the firm. “Corporate strategy” means managing the firm’s scope – in other words, managing a corporation as a portfolio of businesses: What business units should the company have in order to maximize the shareholders’ value? How should it acquire new lines of business? How should it divest the units it no longer wants? What should be the extent of the units’ autonomy? In this class, students will improve their understanding of what makes a portfolio of businesses under a single corporate umbrella more or less valuable. Students will also develop and hone the decision-making tools for properly structuring and executing acquisitions and alliances under different business situations.

EMBA 7610  Options  (2 Credit Hours)
This course will develop state-of-the-art quantitative tools for evaluating large, complex investment projects that cannot be evaluated in a satisfactory manner with standard discounted cash flow techniques. Issues covered include risk-adjusted probability measures and an introduction to modeling project cash flows as financial options. The course will also address financing and distribution policies and restructuring strategies with a special focus on the energy industry. The second half of the course will include valuing capital projects using discrete time and continuous time option pricing models. Special attention will be paid to actual and strategic real option problems in energy finance such as off-shore exploration and power plant management. (2 credit hours)

EMBA 7620  Corp Risk Management  (2 Credit Hours)
Corporations face a variety of risks including interest rate risk, commodity price risk, foreign exchange rate risk, counterparty default risk and political risk in addition to the usual business risks of their chosen fields of operation. This course analyzes the corporate decision to hedge (or not to hedge) focusing on how these decisions maximize shareholder value. The course explores ways in which firms manage their exposure to product market and financial risk and provides a balanced treatment of commodity price, interest rate, and currency risks. Topics include swaps, financial futures, FRAs, options and other recent innovations in the derivatives markets. The issue of counterparty default risk and risk management approaches such as VAR (value-at-risk) are also studied.
EMBA 7630  International Finance (1-3 Credit Hours)
EMBA 7640  Service Mktg Global Econ (2 Credit Hours)
EMBA 7650  International Marketing (2-3 Credit Hours)
EMBA 7660  Managing Innovation (2 Credit Hours)
This course provides experienced executives with practice-oriented, powerful analytical frameworks for better managing their company's innovation process and increasing its success rate of bringing innovations to market. “Managing innovation” means creating effective internal processes to sense innovation trends, to invest in the “right” portfolio of innovation projects, and to better understand the factors causing innovations to succeed or fail in the market. How can companies sense future innovations and shape these innovation opportunities to their advantage? Which projects should we invest in to create a portfolio that balances our company's needs for both short-term profits and long-term growth? What implications do disruptive technologies have for our company and its industry? How likely is an innovation to restructure the basis of competition in our industry and threaten our current competitive advantage?

EMBA 7690  Int'L Business Law (2 Credit Hours)
EMBA 7920  Independent Study (2-3 Credit Hours)
EMBA 7960  Global Business Project (0-1 Credit Hours)

Emergency Management (EMMT)

EMMT 6001  Intro to Emergency Management (3 Credit Hours)
This course will be an advanced examination of modern emergency management concepts, trends nationally and internationally, practical and political issues and policies, technological applications to emergency management, and the development and practical implementation of sound emergency management practices designed to protect people, communities, critical infrastructure and key assets. Included will be a brief review of emergency management policy and procedures in the United States and other countries, legal issues, social science perspectives, planning concepts and techniques, disaster modeling, operational problems, analytical methods, special populations, and management styles. Additionally, case studies will be examined to determine the extent of effective or ineffective planning, responding, and recovering from natural and technological disasters.

EMMT 6002  Health & Med Issues in EM (3 Credit Hours)
An advanced study of the important health and medical management issues involved in crises and emergencies presented for the non-medical emergency manager. The wide range of medical and health issues inherent to a crisis including biological, radiological, nuclear events and emergencies are described. Students will focus on innovative response and recovery including long term public health recovery issues methods for integrating medical, public health, and psychological processes into emergency management.

Prerequisite(s): (EMMT 6001 or 6001) and (HMLS 6250 or 6250).

EMMT 6003  Approaches- Counter Terrorism (3 Credit Hours)
Students will employ critical analysis to examine key policy issues and balances that must be addressed in strategic counterterrorism planning, particularly in the use of applied technology within the context of civil jurisdiction and rule of law. The course will examine terrorist threats to the homeland and how these threats can be met by the application of science and technology. Policy issues that address the balance between security and civil liberties that must be resolved to effectively counter terrorism will be discussed. These issues will be addressed from the governance perspective of a liberal democracy. Strategic planning principles that integrate capabilities of current and future applied technology and the key legal and policy issues that must be resolved in order to make effective use of information as balanced against civil liberties will be explored as well.

EMMT 6004  Business Continuity (3 Credit Hours)
With global business stretched across extended supply chains, productivity has increased, but it has come at a cost of increased vulnerability. Businesses cannot afford to be unprepared for traditional and emerging threats. Business continuity is a fast-growing area of emergency and security management focused on the private sector. This specialty works to ensure continuous business operations before, during, and after disasters or other normal disruptions. It is designed to provide strategies tied to national and international standards for the development of detailed business continuity plans. Students will discuss managing disruptions, maintaining continuity of critical operations, and mitigating losses that occur when interrupted. Based on the all-hazard framework, students will learn about the current threats, including political instability and cyber attacks. Regardless of the impetus for such disruptive events, students will be prepared to train employees to both mitigate and recover from such events. Students will also discuss best practices in the ongoing recovery efforts after an event.

EMMT 6005  Risk Mgt & Threat Assessment (3 Credit Hours)
This course examines the concepts, methods, and practices associated with risk management and threat assessment from an all-hazard perspective. Students will learn how to conduct hazard and risk analysis for both the public and private sectors. This course will include identifying and profiling hazards, analyzing and assessing hazard risk developing tactics to manage risk, examining multiple risk assessment tools, and communicating risk to the public. Participants will examine critical infrastructure sectors and associated interdependencies, cascading consequences, and shared vulnerabilities. Students will perform their own risk analysis and develop recommendations for policy makers as part of this curriculum.

EMMT 6006  Emergency Planning (3 Credit Hours)
Through a whole-community approach, this course provides an in-depth analysis of the processes and methods used throughout the entire federally-designated preparedness cycle. Planning is the backbone of the emergency management process. Steps required to develop a comprehensive emergency plan from the strategic, tactical, and operational approach will be discussed. Students will learn the skills to complete plans, develop training programs, and write after action reports and improvement plans. This course prepares students to develop plans that address vulnerabilities and promote community resiliency. Students will complete a draft plan for a local community organization as part of this curriculum.
EMMT 6007 Disaster Communications (3 Credit Hours)
This is an advanced examination of modern emergency management concepts, national and international trends, practical and political issues and policies, technological applications to emergency management, and the development and practical implementation of sound emergency management practices designed to protect people, communities, critical infrastructure and key assets. Course content includes reviews of emergency management policy and procedures in the U.S. and other countries, legal issues, social science perspectives, planning concepts and techniques, disaster modeling, operational problems, analytical methods, special populations, and management styles. Case studies are used to examine examples of effective and ineffective plans, responses, and recoveries from natural and technological disasters.

EMMT 6008 Cyber Threats and Homeland Sec (3 Credit Hours)
“Cyberspace” has become a pervasive presence in modern society, and a healthy functioning cyberspace is elemental to our economy and to national security. Along with benefits, however, there exists threats and malicious actors who seek to exploit cyberspace vulnerabilities, and, in doing so, threaten critical infrastructure and threaten National Security. This course will study the nature of cyber threats, including computer and digital crimes, information warfare and cyber terrorism, and related threats to personal, organizational, economic and national security. Students will gain an understanding of the variety and nature of cyber threats including digital espionage, computer break-ins, computer hacking, malware, communications eavesdropping, forgery, disruption to information flow, electronic bombs, cyber war and the growing presence of terrorist organizations on the internet. This course will also review countermeasures and a protection methodology to cyber threats, cyber security investigations, evidence gathering, and legal challenges. Lastly, this course will review current and national policies for securing cyberspace and the impact of cyber security on privacy and civil liberties.

EMMT 6009 Emergency Management Admin (3 Credit Hours)
Modern emergency managers are required to perform an ever-increasing number of administrative tasks. Their workload exceeds activities associated with operational emergency management. This course provides students the skills required for those tasks, including grant management and principles of managing an effective staff. Students will develop the capabilities necessary to successfully complete these administrative requirements.

EMMT 7001 Sport/Event Security and Respo (3 Credit Hours)
Concerts, athletic contests, and other large-scale public events are under an increased man-made threat. Officials and first responders face the task of protecting the public while allowing for these types of events to continue. This class will examine the full range of issues that must be considered as plans for safety and security are developed. In addition, students will learn specialized planning and tactics required for coordinating a response to an emergency in this environment.

EMMT 7002 Leadership, Influence, and Dec (3 Credit Hours)
Emergency management practitioners must use leadership and influence effectively to lead organizations and their community in planning for, preventing, and responding to emergencies. This type of leadership encompasses vision, direction, coordination, and motivation toward achieving emergency management goals. Leadership skills are necessary whether dealing with senior agency officials, emergency management partners, or the public. A lack of leadership during an emergency can result in the loss of life, property, and the public trust. This course will expose students to the major factors, theories, and strategies for leadership, influence, and decision making. The traits, skills, and behaviors of effective leaders will also be discussed.

EMMT 7900 Emergency Management Capstone (3 Credit Hours)
This course synthesizes the full range of knowledge, skills, and abilities students developed over the entirety of their emergency management studies. Students will integrate and apply key concepts through a community-based project, developing a proposal and conducting this project at a public or non-profit sector entity. At the end of the semester, the project will be presented both to the chosen organization and classmates. Students will integrate critical decision-making skills with a unique and local hands-on learning experience. A written report documenting all aspects of the project will be presented for faculty approval.

Energy (ENRG)

ENRG 4001 Energy Seminar (3 Credit Hours)
The course will focus on the opportunities and challenges for businesses operating in a low carbon environment. What are the strategies that businesses will pursue and what are the consequences of those strategies? The course will examine California’s strategy to reduce carbon output by fifty percent by 2030. How does that strategy affect the state’s economy and energy companies such as Pacific Gas and Electric? Students will learn how to develop and apply these business strategies and others within the context of a case study involving Louisiana’s attempt to reduce its carbon footprint. The course will feature speakers that are C-suite corporate executives, sustainability experts, and environmental advocacy experts.

ENRG 4100 Energy Mrkts Econ & Policy (3 Credit Hours)
The course covers a range of energy-related topics including major challenges and policy issues facing the industry, history of the industry, company profiles and strategies, energy economics, energy regulatory environment, energy markets, energy technology, and the environment and sustainable development. An executive speaker series is an integral component of the course. Students must complete a group paper and presentation as well as an individual paper on energy subject jointly agreed to by the professor and the student. Prerequisites: ECON 1020, 1040 or 1040.
**ENRG 4110 Energy Financial Modeling (3 Credit Hours)**

This course makes the connection between learning textbook Finance principles and solving real-world business problems. The course translates textbook Finance into a practical set of tools for solving actual business problems. The course focuses on applications in the Energy industry, with an emphasis on financial modeling of exploration and production (E&P) companies. The course provides students a patterned map for solving common financial models with spreadsheets. Class members will examine each model and the professor will guide each student, step-by-step, through the model and show how it can be solved in MS Excel. Areas covered include financial statement analysis, cash flow analysis, and valuation for E&P companies. The applications are particularly appropriate in equity research and investment banking for energy companies. The course will cover Visual Basic applications. Students must have a good grasp of Excel before taking this class. Prerequisites: FINE 3010, MGSC 3010

**Prerequisite(s):** FINE 3010 and (INFO 3010 or MGSC 3010).

**ENRG 4200 Energy Fund & Trading (3 Credit Hours)**

This course will cover the fundamentals of energy production, transportation, refining and related marketing and trading activities. Structure of physical and financial markets, risk management practices, and portfolio modeling will be covered. The course will include interactive trading in the university’s new state-of-the-art trading facility, which will focus on the futures market of the New York Mercantile Exchange (NYMEX) to test student developed trading strategies, market-to-market models, options and risk management tactics used in today’s fast-paced energy trading environment. Prerequisites: FINE 3010, MGSC 3010; junior standing or above

**Prerequisite(s):** (INFO 3010, 3010, MGSC 3010, ISPM 3010 or 3010) and (FINE 3010, 3010, FINC 3010 or 3010).

**ENRG 4410 Special Topics (1-3 Credit Hours)**

This course provides an overview of the economic principles used in analyzing energy markets and environmental issues important to this sector. Students in this class will learn to apply fundamental tools of micro and macro-economics to study business and public policy issues involved in oil, natural gas, and electric industries including renewable energy sources. The course will cover the fundamentals of externalities in the energy industries and how to evaluate the impact of various environmental policies. They will evaluate incentives compatible mechanisms and efficient environmental regulation design. Students will study a numbers of industry specific cases and critically analyze typical problems in each industry. Students will apply economic reasoning to unravel popular fallacies and doomsday scenarios such as peak oil, fallacy of common-use resources, technical vs. economic potential of energy technologies, and others. Prerequisites: ECON 1010, ECON 1020; Corequisite: ENRG 4100

**Prerequisite(s):** (ECON 1010, 1010, 1010, 1010, 1030, 1030 or 1030) and (ECON 1020, 1020, 1020 or 1020) and ENRG 4100 .

*May be taken concurrently.

**ENRG 4610 Enrg Trd: Elec Power Markets (3 Credit Hours)**

This course covers the fundamental concepts necessary to maintain and operate an efficient, wholesale electric power market. Through in-class simulations, students will apply concepts from operations management, economics, risk management, and negotiations to manage physical and financial power portfolios. Lecture topics will include deregulation/industry segmentation, security constrained economic dispatch (including unit commitment and scheduling), locational marginal pricing, resource development (including traditional thermal and renewable resources), and contract negotiation. Instructor-led case studies will review historic successes and failures of deregulated energy firms. Successful completion of this course will provide students with a firm understanding of electric power market operations and portfolio management. Prerequisites: ENRG 4100 or ENRG 4110 or ENRG 4120 or instructor approval

**Prerequisite(s):** ECON 1010 and FINE 3010.

**ENRG 4710 Energy Portfolio Management (3 Credit Hours)**

This course teaches students how to select and analyze companies in the Energy sector and use this knowledge to study and build investment portfolios of energy assets (an Energy sector fund). After taking this course, students should be able to apply to Energy stocks the same key investment concepts and theories that asset management professionals use. Students will learn how professional equity analysts value energy companies; be able to accurately calculate and interpret key quantitative values and evaluate energy assets; apply stock selection criteria to identify investments suitable for an energy sector fund; study and build portfolios using different energy assets and investment styles; and evaluate portfolios against benchmarks and other metrics, including expected return, risk, and other financial measures. Prerequisites: FINE 4110, FINE 4120

**ENRG 4730 Energy Investment Banking (3 Credit Hours)**

Energy Investment Banking is a course that is intended for those students who wish to be introduced to, learn about, and implement the concepts and methodologies of energy investment banking as currently practiced in the investment banking industry. It builds on the core Finance topics covered in Financial Management. The course will cover corporate financial strategy in the context of capital raising alternatives available to actual E&P and Oilfield Services companies that operate in the energy industry. It will also cover key concepts and methods of valuing energy companies, and analyzing, proposing, and completing financing for energy companies. The financing types that students will examine and thoroughly discuss will include initial public offerings, follow-on equity offerings, merger and acquisition engagements, long-term debt issuance, and strategic financial advisory services. Students will be required to develop, present, and discuss financing alternatives for selected companies operating in the energy space. Prerequisites: FINE 3010, MGSC 3010

**Prerequisite(s):** FINE 3010 and (INFO 3010 or MGSC 3010).

**ENRG 4880 Writing Intensive: ENRG 4100 (1 Credit Hour)**

**ENRG 4890 Service Learning: ENRG 4411 (0-1 Credit Hours)**

**Corequisite(s):** ENRG 4411.
ENRG 4910 Independent Study (1-3 Credit Hours)

ENRG 5390 Junior Year Abroad (1-20 Credit Hours)

ENRG 6000 Intro to Energy Finance (3 Credit Hours)
This course provides an introduction to the energy industry and energy finance. A team of faculty members lecture on various topics and supervise field trips to energy facilities in southern Louisiana. The course is taught in conjunction with ENRG 7110 Energy Modeling, and the two courses are coordinated to ensure that students have a good foundation in energy industry fundamentals and financial modeling and analysis. It also includes career development workshops to help students with their preparation for job searches. An Excel/VBA lab is a required component of the course.

ENRG 7100 Energy Mkts, Inst & Pol (3 Credit Hours)
This course covers a range of energy-related topics including major challenges and policy issues facing the industry, history and structure of the industry, company profiles and strategies, energy economics, energy markets, energy regulation, energy technology, and sustainable development. Faculty associated with the Tulane Energy Institute will lecture on the history, structure, and economics of the energy sector and its importance in the growth of modern economies. The course also includes a series of presentations by industry participants including energy economists, sell-side analysts, industry regulators, upstream oil and gas operators, midstream and downstream participants, as well as representatives of the myriad companies that provide services to the direct participants.

ENRG 7110 Energy Modeling (3 Credit Hours)
This course familiarizes students with the quantitative aspect of energy fundamentals and the use of computer modeling as a tool for analyzing and solving energy-related problems. It introduces company analysis, capital structure, valuation, and portfolio management. The course also acquaints students with the job roles of an equity analyst and the discipline of analyzing and forecasting a company's financials. The goal of the course is to provide students with the skill set necessary to analyze a company, understand its business and performance from both qualitative and quantitative perspectives, value the company, and evaluate that value relative to a peer group. The oil and gas industry, specifically the exploration and production (E&P) subsector is used as a medium to give students tangible experience in company analysis and financial modeling. The course considers the subject matter from both top-down and bottom-up approaches. The course focuses on the E&P sector to introduce students to macro-analysis, industry analysis, peer analysis, and company analysis. Students learn how to analyze the qualitative aspects of analysis in terms of news flow of an industry and the individual companies within it, and the quantitative aspects of an industry, i.e., valuation techniques and relative value analysis. Excel and VBA are the primary computer tools employed in the course. Students are expected to develop proficiency in the use of Excel and VBA.

Prerequisite(s): ENRG 6000*, 6010, 7100 or 4100.
* May be taken concurrently.

ENRG 7120 Energy Data Analysis (3 Credit Hours)
This course emphasizes the analysis of different forms of quantitative data in energy markets, energy production, demand, and supply. The course introduces various interpretive analytic approaches, explores their uses, and guides students in applying them to energy data. The danger of using quantitative methods lies in the lack of fundamental understanding of the justification for the use of a procedure, how to use it correctly, and how to properly interpret results. This course addresses these pitfalls. The course covers the process of extracting meaning from data to support evaluation and decision making by using modern spreadsheet technology such as Microsoft Excel. The class explores data sets from Thomson Reuters and LIM and covers their key technical charting tools, employs statistical thinking to provide understanding of the variation in data, and draws insights into relationships that may exist among underlying factors. The course also covers the basics of cash flow analysis and introduces the elements of financial data interpretation.

Prerequisite(s): ENRG 6000 or 7100.

ENRG 7130 Energy & Environ Economics (3 Credit Hours)
This course provides an overview of the economic principles used in analyzing energy markets and environmental issues important to this sector. Students in this class will learn to apply fundamental tools of micro and macro-economics to study business and public policy issues involved in the oil, natural gas, and electric industries including renewable energy sources. The course will also cover the fundamentals of externalities in the energy industries and how to evaluate the impact of various environmental policies. They will evaluate incentive compatible mechanism and efficient regulation design. The course goal is to have students critically analyze typical problems in the energy sector. They should be able to apply these skills and economic reasoning to unravel popular fallacies and doomsday scenarios such as peak oil, fallacy of common-use resources, and technical vs. economic potential of energy technologies.

Prerequisite(s): ENRG 6000 or 7100.

ENRG 7200 Energy Fund & Trading (3 Credit Hours)
This course covers the fundamental and technical information and techniques needed to begin trading in the energy markets. Structure of physical and financial markets, electronic trading tools and techniques, and the associated risk management practices are covered. The course includes interactive trading in the Freeman School's state-of-the-art trading room, which focuses on the futures market of the New York Mercantile Exchange (NYMEX) to test student-developed trading strategies, mark-to-market models, and risk management tactics used in today's fast-paced energy trading environment.

ENRG 7210 Energy Acctng & Valuation (3 Credit Hours)
This course covers the fundamentals of the oil and natural gas exploration and production process (E&P or upstream) and the key financial decisions and metrics. The various operational steps and related financial decisions are followed through to their ultimate impact to a public E&P company's external financial statements. Students are able to understand the immediate impact of various decisions on a company's cash and non-cash financial performance which in turn lead to future financial and operational flexibility and success.

Prerequisite(s): ENRG 6000 or ACCN 6050.
ENRG 7220 Energy Accounting & Financing (3 Credit Hours)
This course covers the fundamentals of the oil and natural gas exploration and production process (E&P or upstream) and the key financial decisions and metrics. The various operational steps and related financial decisions are followed through to their ultimate impact to a public E&P company's external financial statements. Students are able to understand the immediate impact of various decisions on a company's cash and non-cash financial performance which in turn lead to future financial and operational flexibility and success.

ENRG 7300 Adv Energy Trading & Finance (3 Credit Hours)
The course covers advanced energy trading techniques, including technical analysis, electronic trading algorithms, and the trading of energy derivatives. In addition, the course considers the use of energy derivatives in the area of energy finance, valuations, planning, credit and risk management, and interactive trading in the school's state-of-the-art trading facility.

Prerequisite(s): ENRG 7200.

ENRG 7310 Adv Energy Trading & Finance (3 Credit Hours)
The course covers advanced energy trading techniques, including technical analysis, electronic trading algorithms, and the trading of energy derivatives. In addition, the course considers the use of energy derivatives in the area of energy finance, valuations, planning, credit and risk management, and interactive trading in the school's state-of-the-art trading facility.

ENRG 7500 Energy Risk Management (3 Credit Hours)
The course balances both the qualitative and the quantitative aspects of the risk in energy markets. The course begins with a broad qualitative look at risk scenarios. For a qualitative perspective, the course draws heavily from Foundations of Energy Risk Management (FERM) and from Managing Energy Risk (MER). For the quantitative aspects such as forwards, MR Models and options, the course relies primarily on Energy and Power Risk Management (EPRM) and Energy Risk (ERVN). Topics covered include the economic impacts of pricing and investment decisions in these industries, privatization of publicly-owned energy assets, regulation of monopolies and antitrust, the transportation and storage of energy commodities, and the economics of renewable energy sources. Major policy trends related to energy production and use, such as deregulation, climate change, and environmental impacts, are critically analyzed. The course focuses on risk management applications from the perspective of an energy company.

Prerequisite(s): ENRG 7110.

ENRG 7610 Trading: Wholesale Elec Mkts (3 Credit Hours)
This course covers the fundamental concepts necessary to maintain and operate an efficient wholesale electric power market. Through in-class simulations, students will apply concepts from operations management, economics, risk management, and negotiations to manage physical and financial power portfolios. Lecture topics will include deregulation/industry segmentation, security constrained economic dispatch (including unit commitment and scheduling), locational marginal pricing, resource development (including traditional thermal and renewable resources), and contract negotiation. Instructor-led case studies will review historic successes and failures of deregulated energy firms. Successful completion of this course will provide students with a firm understanding of electric power market operations and portfolio management.

ENRG 7730 Energy Investment Banking (3 Credit Hours)
Energy Investment Banking is intended for students who wish to be introduced to, to learn about, and to implement the concepts and methodologies of energy investment banking as currently practiced in the investment banking industry. It builds on the core finance topics covered in financial management. Corporate financial strategy will be covered in the context of capital raising alternatives available to actual E&P and oilfield services companies operating in the energy industry. Concepts and methods of valuing energy companies and analyzing, proposing, and completing financing for energy companies will be covered. The financings that will be examined and thoroughly discussed include initial public offerings, follow-on equity offerings, merger and acquisition engagements, long-term debt issuance, and strategic financial advisory services. Students will be required to develop, present, and discuss financing alternatives for selected companies operating in the energy space.

Prerequisite(s): ENRG 7110, FINE 6020 or 6050.

ENRG 7820 Energy Projects II (3 Credit Hours)
Students work in teams on energy projects sponsored by faculty and energy industry executives. Each team is expected to analyze and research an energy industry issue and to prepare written project reports, presentations, or cases. The final project reports, presentations, and cases are evaluated by the project sponsors. This course is offered during the spring semester.

Prerequisite(s): ENRG 6000.

ENRG 7920 Energy Seminar (3 Credit Hours)
This course focuses on the role of sustainable development in energy use and its impact on the electric power industry. The first part of the class looks at what the trend of energy use means and how it might transition to a more sustainable pattern of use. The second part of the class provides an in-depth analysis of the power sector and how the demand for renewable power is changing the way the industry operates. Particular attention will be paid to alternative methods of dispatch, pricing, and regulatory strategies in ISO/RTO markets to better integrate renewable power. Students will gain exposure to current power industry developments including: generation and operation planning models, renewable mandates, transmission planning issues, smart grid devices, market rule differences among various power markets, and rate design for demand side programs. Students will research opportunities and challenges for sustainable development in energy use and present case studies in class.

ENRG 7960 Independent Study (1-3 Credit Hours)
Independent study. Energy.

ENRG 8010 Energy Economics and Markets (3 Credit Hours)
This course discusses global and national markets for oil, natural gas, coal, and renewable energy; examines public policies affecting energy markets including taxation, price regulation and deregulation, and investigates energy efficiency and energy security. Its objective is to help students to develop an understanding of the underlying economics of energy demand, energy supply, energy market structure, energy price mechanisms, and the relationships among energy and politics.
ENRG 8020 Economics of Energy, Env & Mkt (3 Credit Hours)
The curriculum is aimed to enable students to systematically grasp basic concepts, basic principles and basic analysis methods of climate economics, environmental economics, and energy economics. Keep abreast of the latest developments and major research directions in the current economics on energy, environment and climate change, new ideas, new methods and new dynamics in various relevant directions; develop the ability to solve practical problems to some extent, and lay a solid foundation for future research and innovation in the field of energy and environmental management.

ENRG 8030 China Eng System & Transition (3 Credit Hours)
This course aims to help students understand the changing trends of the energy sector, the transformation of the energy system and the logic of the evolution of China’s energy system by learning basic concepts, theories and methods of energy transition and energy systems. It also aims to provide the “big energy” system thinking and analytical framework for students to understand the trends of China’s energy industry in the process of technological change and energy transition.

Engineering Physics (ENGP)

ENGP 1005 Intro Electronics with Lab (3 Credit Hours)
Introductory course designed for high school students enrolled in the TSSP summer program.

ENGP 1010 Intro to Maker Space (3 Credit Hours)
The course will focus on practical application and a “hands-on” lab approach to learning design software and creating working models using the tools of the MakerSpace. Limited to high school students.

ENGP 1015 Intro to Engineering Design (3 Credit Hours)
The objective of this courses is to introduce high school students to the product design process. Through team projects geared toward creating physical solutions for real world problems, students will be challenged to begin thinking critically and applying physical fundamentals to complex systems. Weekly lectures will highlight phases of the design process, including problem identification, conceptual design, and early prototyping. Additionally students will gain experience with computer-aided design and be provided an introduction to rapid prototyping. This will be a 2 week course, and will only be open to high school students.

ENGP 1410 Statics (3 Credit Hours)
Statics of particles and rigid bodies. Concepts of force, moments, free body diagrams, equilibrium and friction with engineering applications. Prerequisite(s): PHYS 1310.

Prerequisite(s): PHYS 1310, 1310, 1310 or 1310.

ENGP 1940 Transfer Coursework (3 Credit Hours)

ENGP 2010 Electric Circuits (3 Credit Hours)
A fundamental course dealing with electric charge, current, voltage, power, energy, and passive and active circuit elements. Response of linear circuits to steady state and time dependent signals, differential equations, circuit laws, network analysis, frequency response, phasors, and transfer functions. Prerequisite(s): MATH 1220, PHYS 1320.

Prerequisite(s): (PHYS 1320, 1320, 1320 or 1320) and (MATH 1220, 1220, 1220, 1220, 1310, 1310, 1310 or 1310).

Corequisite(s): ENGP 2011.

ENGP 2011 Electric Circuits Lab (1 Credit Hour)
This course is intended to provide an understanding of the basic principles of electronics, including the design and application of electronic projects to real-world objectives. The course will focus on practical application and a “hands-on” lab approach to electronics. Some computer programming will also be included.

Prerequisite(s): ENGP 2010.*
* May be taken concurrently.

ENGP 2020 Computing Concepts & App. (4 Credit Hours)
This course introduces students to the foundations of algorithm development and programming, the basics of matrix algebra, numerical analysis, and solving ordinary differential equations.

Corequisite(s): ENGP 2021.

ENGP 2021 Computing Concepts & App. Lab (0 Credit Hours)
Lab for ENGP 2020

ENGP 2310 Product & Experimental Design (3 Credit Hours)
The objective of this course is to introduce students to the design process as they are starting their engineering studies. Through team projects geared toward translating bench research into product development, students will be challenged to begin thinking critically and applying physical fundamentals to complex systems. Weekly lectures will highlight phases of the design process, including problem identification, conceptual design, and early prototyping. Additionally, in the context of product and experimental design, students will gain experience with computer aided design and be provided an introduction to statistics. Course restricted to ENGP and PHYS majors, or by permission of the instructors.

Prerequisite(s): (PHYS 1220 or 1320) and (MATH 1220 or 1310).
Corequisite(s): ENGP 2311.

ENGP 2311 Product & Experimtntl Dsgn Lab (0 Credit Hours)
Lab section for ENGP 2310

Corequisite(s): ENGP 2310.

ENGP 2420 Engineering Dynamics (3 Credit Hours)
Kinematics and kinetics of particles and rigid bodies. Work-energy and impulse-momentum methods applied to particles and rigid bodies. Mechanical vibrations. Prerequisites: MATH 1220 and ENGP 1410

Prerequisite(s): (MATH 1220, 1220, 1220, 1220, 1310, 1310, 1310 or 1210) and (ENGP 1410, 1410, 1410 or 1410).

ENGP 2430 Mechanics of Materials (3 Credit Hours)
Concepts of stress and strain. Generalized Hooke’s Law. Mohr’s circle. Formulations for axial, shear, bending, torsion, and combined stresses applied to tension members, pinned points, symmetric and unsymmetric beams, and shafts. Euler buckling criteria for columns. Prerequisite(s): ENGP 2410, MATH 1220.

Prerequisite(s): (ENGP 1410, 1410, 1410 or 1410) and (MATH 1220, 1220, 1220, 1220, 1310, 1310, 1310 or 1310).

ENGP 2890 Service Learning: ENGP 2430 (0-1 Credit Hours)
This course fulfills the lower division service learning requirement. See the advisor for Engineering Physics. PHYS 2910 may be substituted for this.
Computational Materials Science and Engineering: This course will cover theories, implementations, and applications of common quantum mechanical software for computational study of materials. State-of-the-art computational methods will be introduced for materials research with emphasis on the atomic and nano scales and hands-on modeling on PCs and supercomputers. The class is aimed at beginning graduate students and upper level undergraduate students, and will introduce a variety of computational methods used in different fields of materials science. The main focus is quantum mechanical methods with a short overview of atomistic methods for modeling materials. These methods will be applied to the properties of real materials, such as electronic structure, mechanical behavior, diffusion and phase transformations. Computational design of materials using materials database via high-throughput and machine learning methods will also be covered.

Prerequisite(s): PHYS 2350 and (MATH 2210 or 2240).

ENGP 3230 Quantum information Sci & Eng (3 Credit Hours)
This course is intended for advanced undergraduates and beginning graduate students in physics, mathematics, and computer science. The course is placed on common industrial materials. Thermodynamics and kinetics aspects of material science are discussed. Prerequisite(s): CHEM 1070, CHEM 1080, PHYS 1310, PHYS 1320, MATH 2210.

Prerequisite(s): (CHEM 1080, 1080, 1080 or 1080) and (PHYS 1320, 1320, 1320 or 1320) and (MATH 2210, 2210, 2210 or 2210).

ENGP 3170 Computnl Physics & Engr (3 Credit Hours)
An introduction to the use of computational methods in physics and engineering. Writing computer code and using data visualization techniques to solve experimental and theoretical problems. Data analysis and modeling, Monte Carlo simulations, numerical differentiation and integration, ordinary and partial differential equations, electrostatics, nonlinear dynamics and chaos, fast Fourier transform, noisy signal processing, quantum spectra, thermodynamics. Prerequisites: PHYS 2350 and MATH 2210 or 2240.

Prerequisite(s): PHYS 2350 and (MATH 2210, 2210, 2210, 2210 or 2240).

ENGP 3230 Quantum information Sci & Eng (3 Credit Hours)
This course introduces students to the new world of quantum information, quantum communication, and quantum computing. The course is intended for advanced undergraduates and beginning graduate students in physics, engineering, and mathematics. Topics include: Quantum states, operators, and linear algebra; Bits and qubits; Ensembles and density operators; Unitary transformations; Gates and circuits; Information and entropy; POVM measurement; Multipartite systems; Bell inequality, Bell states, and non-locality; Measures of entanglement; Quantum communication and cryptography; Teleportation; Superdense coding; Quantum noise and error correction; Classical and quantum computational complexity; Quantum algorithms: Deutsch-Jozsa, Grover, Shor; DiVincenzo criteria; Physical realizations of quantum computers: trapped ions, solid state qubits; Quantum optics and quantum internet; Topological quantum computation; Quantum biology.

Prerequisite(s): PHYS 2350 and (MATH 2210 or 2240).

ENGP 3540 Prof Develop Engineers I (2 Credit Hours)
This course is designed to inform students in engineering physics of the wide variety of career paths available in engineering and related fields, and help with development of professional skills essential for building a productive and fulfilling career. Overview of career profiles, portfolio building, elements of project management, economic analysis, professional certifications, intellectual property, entrepreneurship, ethics, research and professional communication.
ENGP 3440 Prof Develop Engineers II (1 Credit Hour)
This course is designed to inform students in engineering physics of the wide variety of career paths available in engineering and related fields, and help with development of professional skills essential for building a productive and fulfilling career.

Prerequisite(s): ENGP 3430.

ENGP 3530 Advanced Laboratory I (3 Credit Hours)
Advanced experiments in modern physics and engineering, particularly nuclear physics and engineering, emphasizing research techniques and analysis of data using computers. Prerequisites: PHYS 2350 or approval of instructor.

Prerequisite(s): PHYS 2350, 2350, 2350 or 2350.

ENGP 3560 Photonic Materials & Devices (3 Credit Hours)
This course will cover the theory, design, fabrication, characterization, and application of photonic materials and devices. The course will start with a review of the fundamentals of photonics, including ray optics, wave optics, and nanophotonics/quantum optics. The course will then focus on light-matter interactions and photonic materials, including dielectrics, semiconductors, metals, metamaterials, and photonic crystals. Using these principles and materials, we will explore a number of device architectures, including LEDs, lasers, photodetectors, photovoltaics, etc. We will then discuss fabrication methods for making these materials and devices and common optoelectronic characterization techniques. The course will conclude with exploration of cutting edge topics in photonics research. Prerequisites: PHYS 2350 and PHYS 2360 (or equivalent) or instructor approval.

Prerequisite(s): PHYS 2350 and 2360.

ENGP 3600 Nanoscience & Technology (3 Credit Hours)
Nanoscience and technology is often branded the science of the 21st century. It has been promised that nanotechnology will have similar stimulating effects on the world’s economy and society as the industrial-and microelectronics-revolution. Nanoscience is an interdisciplinary effort with the aim to manipulate and control matter at length scales down to single molecules and atoms and thus to create materials and devices with novel properties. With diminishing dimensions material properties are being governed by quantum mechanics. The description and exploitation of quantum phenomena in novel devices is the quintessence of nanophysics. Consequently, the main emphasis of this course is to give an overview of the physics of low dimensional solid state systems. This course is supplementary to courses in solid state physics and surface science but can be taken independently. Prerequisites: PHYS 2350.

Prerequisite(s): PHYS 2350, 2350, 2350 or 2350.

ENGP 3620 MicroFab and Nanotech (3 Credit Hours)
Nano/micro-electromechanical devices (N/MEMS) require knowledge of a broad range of disciplines, from the fundamental physics of mechanics and electromagnetism to practical nano/microfabrication processes and techniques. This course is opened for the introduction of this interdisciplinary engineering field, using examples and design projects drawn from real-world N/MEMS applications. Lectures will cover nano/micro-fabrication technologies, material properties at different scaling, physical principle and behaviors of nano/microstructural behavior, piezoresistive and capacitive-sensing, electrostatic actuation, fluid damping, noise, and feedback systems.

Prerequisite(s): PHYS 2360.

ENGP 3660 Special Topics (1-3 Credit Hours)
Special Topics.

ENGP 3665 Special Topics Lab (1-3 Credit Hours)
Special Topics Lab.

ENGP 3700 Electnc Prop of Materls (3 Credit Hours)
Quantum physics, electronics and energy bands in crystals, electronic transport in materials, photoconductivity, Hall effect, quantum Hall effect, superconductors and their applications, magnetic properties of material and their applications, thermal properties of materials and dielectric properties of materials. Prerequisites: PHYS 2350, 2360 or instructor approval.

Prerequisite(s): (PHYS 2350, 2350, 2350 or 2350) and (PHYS 2360, 2360, 2360 or 2360).

ENGP 3720 Mechanic Behavior of Materials (3 Credit Hours)
The course covers the general foundations of elasticity and plasticity theory, dislocation theory, and strengthening mechanisms. Basics of materials forming processes are studied. An overview for non-destructive testing of materials is taught. The course emphasis is on destructive mechanical testing of materials including: tension, torsion, hardness, fatigue and creep tests, in addition to fracture mechanics and failure analysis.

Prerequisite(s): (ENGP 3120 or 3120) and (ENGP 2430 or 2430) and (MATH 2210 or 2210).

ENGP 3760 Thermodynamics of Materials (3 Credit Hours)
The course covers the general foundation of both statistical thermodynamics and classical thermodynamics, including thermodynamics laws, auxiliary functions, and behavior of gases and solutions. In addition, special attention is dedicated to equilibria of reactions and phase diagrams of materials. Computer-based programs will be used to solve thermodynamics problems for complicated materials.

Prerequisite(s): ENGP 3120 and (MATH 2210, 2210, 2210 or 2210).

ENGP 3890 Service Learning: ENGP 3950 (0-1 Credit Hours)

ENGP 3940 Transfer Coursework (3 Credit Hours)

ENGP 3950 Engineers for Int’l Deve (1 Credit Hour)
Engineers for International Development at Tulane University exists for students to participate in community-driven development programs worldwide through the design and implementation of sustainable engineering projects, while fostering responsible leadership. We work both internationally and locally to build and educate communities about their basic infrastructure systems such as drinking water, sanitation, and safe homes.

ENGP 4310 Team Dsgn Proj &Prf Pr I (3 Credit Hours)
Design project taken in the fourth year of study with student teams. Advanced treatment of engineering design principles and an introduction to manufacturing processes. Students are presented with a product specification, and they must prepare a preliminary proposal, form a project team and develop a suitable design. Prerequisites: ENGP 2020, 2310, or approval of instructor.

Prerequisite(s): (ENGP 2020, 2020, 2020 or 2020 and ENGP 2310, 2310, 2310 or 2310).
ENGP 4320  Team Dsgn Proj &Prf P II (3 Credit Hours)
Design project taken in the fourth year of study with student teams. Continuation of ENGP 4310. Notes: Capstone requirement for majors. Prerequisite(s): ENGP 4310 or approval of instructor.

Prerequisite(s): ENGP 4310.

ENGP 4660  Special Topics (1-3 Credit Hours)
Special Topics.

ENGP 4880  Writing Intensive: ENGP 4320 (1 Credit Hour)
Course to be attached to regular courses that incorporate a writing component within the regular course. Register within department.

ENGP 4890  Service Learning: ENGP 4320 (0-1 Credit Hours)

ENGP 4910  Independent Study (1-3 Credit Hours)
Independent Studies. Prerequisite(s): Approval of instructor and chair of department.

ENGP 4940  Transfer Coursework (3 Credit Hours)

ENGP 4990  Honors Thesis (3 Credit Hours)
Honors Thesis. Notes: Open only to candidates for honors degrees with departmental approval.

ENGP 5000  Honors Thesis (4 Credit Hours)
Honors Thesis. Notes: Open only to candidates for honors degrees with departmental approval.

ENGP 5380  Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

ENGP 5390  Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

ENGP 6660  Special Topics (1-3 Credit Hours)
Special Topics.

ENGP 6940  Transfer Coursework (1-4 Credit Hours)
Transfer Coursework.

English (ENGL)

ENGL 1010  Writing (4 Credit Hours)
ENGL1010 is a 4-credit course that satisfies the freshman writing requirement and should be taken in the fall or spring of the first year. The purpose of English 1010 is to teach students to write clearly and to organize complex arguments that engage in a scholarly way with expert knowledge. Students learn to conduct independent bibliographic research and to incorporate that material appropriately into clear, complex, coherent arguments that characterize academic discourse. Students with an AP credit score of 4 or 5 or an IB credit score of 6 or 7 in English do not have to take ENGL 1010. Questions should be directed to the student advisor and the Director of Freshman Writing in the Department of English.

ENGL 1011  Writing for Academic Purposes (4 Credit Hours)
ENGL1011 is a 4-credit hour course that satisfies the freshman writing requirement and must be taken in the fall or spring of the freshman year. It introduces students to the writing of academic arguments, including analytic reading and research techniques for a variety of disciplines in the humanities, sciences, and social sciences, including business. Some entering students will be required to take CESL 1000 before taking ENGL 1011. Focus on the goals and skills appropriate to international students and speakers of other languages. Questions should be directed to the student advisor and the Director of English for Academic and Professional Purposes, Robert Connor, in the Center for Global Education.

ENGL 1890  Service Learning: ENGL 1010 (0-1 Credit Hours)
Service Learning.

ENGL 2390  Semester Abroad (0 Credit Hours)
Study Abroad.

ENGL 5380  Junior Year Abroad (0 Credit Hours)
Junior Year Abroad.

ENGL 5390  Junior Year Abroad (1-10 Credit Hours)
Junior Year Abroad.

English (ENLS)

ENLS 1290  Semester Abroad (1-20 Credit Hours)
Semester Abroad.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020 or 1011.

ENLS 1940  Transfer Coursework (3 Credit Hours)
Transfer Coursework.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020 or 1020.
ENLS 2000 Literary Investigations (3 Credit Hours)
An introduction to the analysis and interpretation of literary texts; the relevance of literature to individuals, communities, and nations; and the critical thinking, writing, and research skills used in literary study. Topics include critical approaches to interpretation; formal qualities of texts; historical, political, and social contexts; and relationships to other forms of expression. Each section investigates literature through specific issues, themes, or topics. 4000-level courses assume familiarity with skills, methods, and terms of literary analysis covered in ENLS 2000.

Prerequisite(s): ENGL 1010*, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.
* May be taken concurrently.

ENLS 2010 Intro To British Literature I (3 Credit Hours)
An introduction to the history of British literature from the Anglo-Saxon and medieval periods through the 18th century. Emphasis on the development of genres, literary conventions, and the relations between historical conditions and literary production.

ENLS 2020 Intro To British Literature II (3 Credit Hours)
An introduction to the history of British literature from the 19th century to the present. Emphasis on the development of genres, literary conventions, and the relations between historical conditions and literary production.

ENLS 2030 Intro To American Literature (3 Credit Hours)
An introduction to the history of American literature from the colonial period to the present. Emphasis on the development of genres, literary conventions, and the relations between historical conditions and literary production.

ENLS 2100 Special Topics (3 Credit Hours)
Specific topics announced each semester, such as science fiction, literature and war, etc.

ENLS 2101 Special Topics in English (3 Credit Hours)
Specific topics announced each semester, such as science fiction, literature and war, etc.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020 or 1011.

ENLS 2102 Special Topics in English (3 Credit Hours)
Specific topics announced each semester, such as science fiction, literature and war, etc.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020 or 1011.

ENLS 2103 Special Topics in English (3 Credit Hours)
Specific topics announced each semester, such as science fiction, literature and war, etc.

ENLS 2104 Special Topics in English (3 Credit Hours)
Specific topics announced each semester, such as science fiction, literature and war, etc.

ENLS 2110 Introduction to the Novel (3 Credit Hours)
A study of novels written in English representing the variety of fictional techniques and structures.

ENLS 2120 Intro to the Short Story (3 Credit Hours)
A study of the short story as a genre. Some attention to theories of the short story and to the elements that distinguish it from other forms of narrative prose.

Prerequisite(s): ENGL 1010.

ENLS 2130 Introduction to Drama (3 Credit Hours)
A study of plays written in English representing the variety of dramatic types and forms.

Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 2140 Introduction to Poetry (3 Credit Hours)
A study of poems, selected from the whole range of poetry in English representing the variety of poetic techniques and structures.

ENLS 2150 Intro Fiction:Race & Inclusion (3 Credit Hours)
A study of U.S. fiction, including short stories and novels, with an emphasis on race and inclusion.

ENLS 2155 Literatures of Tourism (3 Credit Hours)
This course examines novels, performances, films, and short stories that offer a critical take on tourism, arguably one of the most influential industries that shape the way we understand the rest of the world. These texts we read will become the interpretive lens through which we analyze commodified representations of the places we visit for pleasure.

ENLS 2230 Introduction to Shakespeare (3 Credit Hours)
A study of plays in a variety of genres, including tragedy, history, comedy, and romance.

ENLS 2390 Semester Abroad (1-20 Credit Hours)
Study Abroad.

ENLS 2400 Topics: Lit, Race & Inclusion (3 Credit Hours)
Special topics in literary and cultural studies, with an emphasis on race and inclusion in the US.

ENLS 2450 Intro Postcolonial Lit (3 Credit Hours)
This course offers an introduction to postcolonial literature and theory through a variety of geo-political contexts, including the Caribbean, Asia, Africa, Latin America, and the Pacific.

ENLS 2730 Intro to African American Lit (3 Credit Hours)
The historical development of literary traditions of African-American writing from slave narratives through contemporary authors. Emphasis on a variety of oral and written genres.

ENLS 2890 Service Learning (0-1 Credit Hours)
Service Learning.

ENLS 2920 Intro to Women's Literature (3 Credit Hours)
A study of the representation of women in 19th-, 20th-, and 21st-century literature in a variety of genres, with emphasis on texts written by women.

ENLS 2940 Transfer Coursework (3 Credit Hours)
Transfer Credit.
ENLS 3010 Spec Topics: Writing Intensive (4 Credit Hours)
A course in written analysis, focused on specific topics announced each semester. Includes emphasis on revision. Fulfills Writing Intensive/Tier-2 requirement.
Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 3011 Spec Topics: Writing Intensive (4 Credit Hours)
A course in written analysis, focused on specific topics announced each semester. Includes emphasis on revision. Fulfills Writing Intensive/Tier-2 requirement.
Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 3012 Spec Topics: Writing Intensive (4 Credit Hours)
Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 3013 Spec Topics: Writing Intensive (4 Credit Hours)
Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 3014 Spec Topics: Writing Intensive (4 Credit Hours)
Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 3015 Spec Topics: Writing Intensive (4 Credit Hours)
Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 3016 Spec Topics: Writing Intensive (4 Credit Hours)
Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 3017 Spec Topics: Writing Intensive (4 Credit Hours)
Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 3610 Creative Writing (3 Credit Hours)
A craft class in the writing of short fiction and poetry. Exercises to develop each student's personal voice. Group criticism of student work.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 3620 Workshop Creative Writing (3 Credit Hours)
Intensive workshop in creative writing, usually with a visiting professor.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 3630 Expository Writing (4 Credit Hours)
A course in written analysis on social and cultural concerns.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 3635 Writing, Race, & New Media (4 Credit Hours)
A writing course focused on methods of written analysis of social and cultural concerns, with an emphasis on racial politics in literary and new media contexts. Fulfills the Writing Intensive/Tier 2 requirement, Textural and Historical Perspectives distribution requirement, and the Race and Inclusion requirement.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 3640 Screenwriting (3 Credit Hours)
Expressive strategies and formal considerations relevant to writing for television and cinema. Workshop format requires sustained analysis of professional screenplays as well as student work.
Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 3650 Persuasive Writing (4 Credit Hours)
Emphasis on principles of reasoning and strategies of written argument. This course satisfies the Louisiana State Department of Education's requirement of advanced composition for certification in English.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 3670 Technical Writing (3 Credit Hours)
Communicating technical information in abstracts, executive summaries, technical memoranda, process descriptions, amplified technical definitions, progress reports, feasibility studies and proposals. Major emphasis given to research reports and editing procedures.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 3880 Writing Intensive: ENLS 3670 (1 Credit Hour)
Writing Intensive Practicum: ENLS 3670 Technical Writing.
Corequisite(s): ENLS 3670.

ENLS 3890 Service Learning: ENLS 3610 (0-1 Credit Hours)
Service Learning.

ENLS 3891 Service Learning: ENLS 3650 (0-1 Credit Hours)
Service Learning.

ENLS 3892 Service Learning: ENLS 3620 (0-1 Credit Hours)
Service Learning.

ENLS 3940 Transfer Coursework (3 Credit Hours)
Transfer Credit.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010 or 1020.

ENLS 4010 Special Topics (3 Credit Hours)
Specific subjects are announced each semester.
Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 4011 Special Topics (3 Credit Hours)
Specific subjects are announced each semester.
Prerequisite(s): ENGL 1010, 1010, 1010 or 1011.

ENLS 4012 Special Topics (3 Credit Hours)
Specific subjects are announced each semester.
Prerequisite(s): ENGL 1010, 1010, 1010 or 1011.

ENLS 4013 Special Topics (3 Credit Hours)
Specific subjects are announced each semester.
Prerequisite(s): ENGL 1010 or 1011.

ENLS 4014 Special Topics (3 Credit Hours)
Specific subjects are announced each semester.
Prerequisite(s): ENGL 1010 or 1011.

ENLS 4030 Literary New Orleans (3, 4 Credit Hours)
A study of literary works which are set in New Orleans or otherwise have connections with the city.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.
ENLS 4040 Early Modern Transatlantic Lit (3 Credit Hours)
Early Modern Transatlantic Literature focuses on the literature and cultural history of the Early Modern English Atlantic (1492-1800), inclusive of England, New England, Africa, South America, and the Caribbean. The course also considers the English Atlantic in the context of other European colonial projects across the globe. The course will typically involve archival works and make use of Tulane's special collections as well as the resources of The Historic New Orleans Collection.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4050 History of the Language (3 Credit Hours)
Consideration of general linguistic processes and the social history of the language in the earlier periods.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4070 Intro To Old English (3 Credit Hours)
A brief introduction to the grammar of Old English and a study of Old English poetry and prose in their cultural contexts. Readings in both Old English and translations.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4080 Modern Literature (3 Credit Hours)
Study of poets, novelists, and dramatists writing in English since 1900.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4090 Contemporary Literature (3 Credit Hours)
British, American, and continental poetry, prose, and drama since 1945.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4100 Literature and Film (3 Credit Hours)
Study of the relationship between written narratives (principally short stories and novels) and film, with special attention to the distinctive effects and limitations of each medium and to the problems that screenwriters and directors encounter in adapting a written work to a visual form. Consideration of theoretical literature on the problem of adaptation.

Prerequisite(s): ENGL 1010.

ENLS 4110 Middle English Literature (3 Credit Hours)
Major works of Middle English literature 1100-1500, exclusive of Chaucer, from The Owl and the Nightingale through the works of Sir Thomas Malory. Readings in Middle English.

ENLS 4120 Medieval Literature (3 Credit Hours)
Major works in Old and Middle English literature, as well as relevant continental literature. Readings in translation.

ENLS 4130 Renaissance Literature (3 Credit Hours)
British poetry, prose, and drama of the 16th and early 17th centuries.

Prerequisite(s): ENGL 1010, 1010, 1010, 1011.

ENLS 4135 Early Women Writers (pre-1700) (3,4 Credit Hours)
This course focuses on 16th and 17th century women writers -- martyrs, prophets, translators, poets, dramatists, and polemicists. The recovery of women's writing from the early modern period has posed a significant challenge to notions of canonicity while at the same time providing a fuller understanding of gender, class, religion, and politics in the early modern period.

Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 4140 17th-Century Literature (3 Credit Hours)
British poetry, prose, and drama to 1660.

ENLS 4150 Early Modern Drama (3 Credit Hours)
Study of drama, one of the chief genres of the period, from late medieval to late 17th century.

Prerequisite(s): ENLS 2000.

ENLS 4160 Restoration & 18th-C Drama (3 Credit Hours)
This course will cover some of the major works in British drama written between 1660 and 1780.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1010.

ENLS 4170 18th-Century Novel (3 Credit Hours)
The novel from Defoe through Austen.

Prerequisite(s): ENGL 1010 or 1011.

ENLS 4190 Restoration & 18th-C Lit (3 Credit Hours)
British poetry, prose, and drama from 1660 through 1800.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010 or 1011.

ENLS 4210 19th-Century Novel (3 Credit Hours)
The major authors of the 19th-century British novel, including Austen, Scott, Dickens, Collins, Eliot, Thackeray, Hardy, and Conrad. The course emphasizes the invention and transformation of genres (domestic, Gothic, historical sensation, realist) in historical and cultural context.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010 or 1011.

ENLS 4220 19th-Century Literature (3 Credit Hours)
Emphasizes the dominant literary modes of the period, including cross-cultural and transnational relationships contributing to their development.

ENLS 4230 Romantic Literature (3 Credit Hours)
Representative works of the period from the French Revolution to the ascension of Queen Victoria by major authors such as Radcliffe, Blake, Paine, Austen, Wollstonecraft, Wordsworth, Coleridge, Edgeworth, Keats, Percy Shelley, Mary Wollstonecraft Shelley, Byron, and Scott in historical and cultural context.

ENLS 4240 Victorian Studies (3 Credit Hours)
British poetry, prose, and drama from 1830-1914. Representative works treated in the historical and cultural context of the Victorian expansion of the British Empire and its aftermath.

ENLS 4250 Modern British Literature (3 Credit Hours)
Twentieth-century British fiction, poetry, and drama.
ENLS 4260 Modern Irish Literature (3 Credit Hours)
This course will concentrate for about half the semester on the poetry and plays of W.B. Yeats and the fiction of James Joyce. The remainder of the term will be devoted to the plays of J.M. Synge, Lady Gregory, and Sean O'Casey as well as one or two other writers, such as George Bernard Shaw, James Stephen, Samuel Beckett, or Seamus Heaney. Attention will be given not only to the works themselves but also to their cultural and historical contexts.

ENLS 4300 African Literature (3 Credit Hours)
A study of the literatures from Africa, primarily Anglophone, with some texts in translation included.

Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 4310 American Literature to 1820 (3 Credit Hours)
Representative works from the colonial period to 1820.

Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 4320 Jewish-American Literature (3 Credit Hours)
An in-depth inquiry and analysis into the nature of the Ashkenazi Jewish-American experience from the early period of immigration to the present through literature and history, and as contextualized by popular culture, sociology, and theories of race, ethnicity, and gender.

Prerequisite(s): ENGL 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4324 Jews and Race (3 Credit Hours)
The experience of the Jewish people in Europe and America provides the best historical example for understanding the effect of racial frameworks on a single social group. The Jews were the first people in history to be treated by Europeans as a distinct, inferior group – as a race – and to suffer racial oppression. The keywords "ghetto" and "diaspora" both originate in the Jewish experience; in fact, Jews have often defined themselves as a race. The course begins with "the Jew" as Europe's racial Other in the early modern era then moves to a comparative analysis of Jewish experience in the nineteenth century during a period of white racial pride in Europe and America. This course will then interrogate the concepts of race, ethnicity, and nationality, as they continue to impact Jewish thought, contemporary society, and American culture.

Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 4360 Antebellum American Lit (3 Credit Hours)
American literature of the mid-19th century.

ENLS 4370 19th-C American Literature (3 Credit Hours)
American literature of the 19th century.

Prerequisite(s): ENGL 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4375 19th Century US Poetry/Poetics (3,4 Credit Hours)
A study of 19th-century US poetry and poetics. Topics may include the transcendentalists(Emerson and Margaret Fuller); poetic responses to slavery, racism, and the Civil War (George Moses Horton, Frances Ellen Watkins Harper, Herman Melville, etc.); the circulation of poetry in media and manuscript; Walt Whitman's Leaves of Grass; Emily Dickinson's unpublished corpus of poems; Reconstruction poetics; and late-19th-century proto-modernisms(Sarah Piatt, Stephen Crane, Paul Laurence Dunbar). The course emphasizes both the sociopolitical work of 19th-century poetry and the skill of reading poetry.

Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 4380 Asian American Literature (3 Credit Hours)
A study of Asian American literature from the late-19th century to the present.

Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 4390 Topics: Race & Inclu in US Lit (3 Credit Hours)
Special topics in literary and cultural studies, with an emphasis on race and inclusion in the US. May be repeated for credit with different subjects.

Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 4391 Topics: Race & Inclu in US Lit (3 Credit Hours)
Special topics in literary and cultural studies, with an emphasis on race and inclusion in the US. May be repeated for credit with different subjects.

Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 4392 Topics: Race & Inclu in US Lit (3 Credit Hours)
Special topics in literary and cultural studies, with an emphasis on race and inclusion in the US. May be repeated for credit with different subjects.

Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 4400 Modern American Literature (3 Credit Hours)
Representative works of the 20th century. May be repeated for credit with different content.

Prerequisite(s): ENGL 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4410 Topics: Contemp American Lit (3 Credit Hours)
Major tendencies in American poetry, fiction, and drama since 1945.

Prerequisite(s): ENGL 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4411 Topics: Contemp American Lit (3 Credit Hours)
Major tendencies in American poetry, fiction, and drama since 1945.

ENLS 4420 Southern Literature (3 Credit Hours)
A survey of Southern writers and their works from the period of exploration and settlement to the present.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.
ENLS 4430 Caribbean Literature (3 Credit Hours)
A study of the literatures from the Caribbean, primarily Anglophone, although texts from other areas of the Caribbean may be studied in translation. The Caribbean will be explored as part of the Americas, and connections will be made with New Orleans in particular and the American South in general.
Prerequisite(s): ENGL 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4440 African-American Literature (3 Credit Hours)
Analysis of specific issues in relation to works by African-American writers, such as: questions of audience, the relation between literary production and its political context, the representation of relations between African-American men and women, the reception and influence of African-American works in American culture.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4450 Chaucer (3 Credit Hours)
A study of Chaucer’s major works, with emphasis on The Canterbury Tales.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4460 Shakespeare I (3 Credit Hours)
Treatment of plays from different genres and in different historical, literary, and cultural contexts.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4470 Shakespeare II (3 Credit Hours)
Treatment of plays from different genres and in different historical, literary, and cultural contexts.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4475 Topics in Shakespeare Studies (3 Credit Hours)
Sustained study of topics related to Shakespeare such as "Shakespeare and Gender Studies," "Global Shakespeare," or offerings from the Summer Shakespeare Festival.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4480 Milton (3 Credit Hours)
A study of Milton’s major works in poetry and prose.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4490 Early Major Authors (3 Credit Hours)
Study of one or two major authors of the period, such as Malory, Spenser, Pope, Fielding, and Austen.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4500 Later Major Authors (3 Credit Hours)
Study of one or two major authors of the period, such as Wordsworth, Dickens, Dickinson, Melville, Eliot, Yeats, Woolf, Faulkner, and Morrison.
Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 4501 Later Major Authors (3 Credit Hours)
Study of one or two major authors of the period, such as Wordsworth, Dickens, Dickinson, Melville, Eliot, Yeats, Woolf, Faulkner, and Morrison.
Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 4502 Later Major Authors (3 Credit Hours)
Study of one or two major authors of the period, such as Wordsworth, Dickens, Dickinson, Melville, Eliot, Yeats, Woolf, Faulkner, and Morrison.
Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 4503 Later Major Authors (3 Credit Hours)
Study of one or two major authors of the period, such as Wordsworth, Dickens, Dickinson, Melville, Eliot, Yeats, Woolf, Faulkner, and Morrison.
Prerequisite(s): ENGL 1010.

ENLS 4560 Internship (1-3 Credit Hours)
An experiential learning process coupled with pertinent academic coursework. Open only to juniors and seniors in good standing. Contact the Director of Undergraduate Studies in English for registration and coursework information.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4570 Internship (1-3 Credit Hours)
An experiential learning process coupled with pertinent academic coursework. Open only to juniors and seniors in good standing. Contact the Director of Undergraduate Studies in English for registration and coursework information.
Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4610 Adv Fiction Wrtg Workshop (3 Credit Hours)
A seminar focused on production and criticism of student work, including reading and analysis of fictional models.
Prerequisite(s): ENLS 3610.

ENLS 4620 Adv Poetry Wrtg Workshop (3 Credit Hours)
A seminar focused on production and criticism of student work, including reading and analysis of poetic models.
Prerequisite(s): ENLS 3610.

ENLS 4660 Topics in Adv Creative Writing (3 Credit Hours)
A workshop emphasizing the writing of creative nonfiction, biography, autobiography, screenplays, long poems, or novels. The class is designed to allow students to work in genres not emphasized in ENLS 4610 Advanced Fiction Writing or ENLS 4620 Advanced Poetry Writing.
Prerequisite(s): ENLS 3610.

ENLS 4670 Topics in Adv Creative Writing (3 Credit Hours)
A workshop emphasizing the writing of creative nonfiction, biography, autobiography, screenplays, long poems, or novels. The class is designed to allow students to work in genres not emphasized in ENLS 4610 Advanced Fiction Writing or ENLS 4620 Advanced Poetry Writing.
Prerequisite(s): ENLS 3610*

* May be taken concurrently.
ENLS 4665 Art & Artifact: Jewish Life & Lit (3 Credit Hours)
Advanced creative writing workshop focused on the way that personal archives -- souvenirs, letters, photographs, and other personal artifacts -- are valuable memento mori that can serve as pathways for both creative writing and guideposts for historical research. The reading material focuses on the experience of Jewish immigration in the 20th century and includes texts by notable Jewish authors. Students will write a critical paper, but most of the student writing will be creative non-fiction explorations of personal history and the objects that have survived the past.

Prerequisite(s): ENGL 1010.

ENLS 4710 Intro To Literary Theory (3 Credit Hours)
Investigation of assumptions and methods of selected ancient and modern critics. Some practical criticism to allow the students to become more aware of the implications of their own assumptions about literature and criticism.

ENLS 4720 Feminist Literary Theory (3 Credit Hours)
An examination of the major projects of feminist literary theory, uncovering or rediscovering women's literature; engaging in feminist re-readings of canonical texts; describing a feminist poetics. Attention to the history of feminist criticism.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010 or 1011.

ENLS 4750 New Media Theory (3 Credit Hours)
This course will explore the conceptual frameworks and theories that are essential to an understanding of modern media, including photography, film, and digital media.

ENLS 4760 Topics In Literary Theory (3 Credit Hours)
Sustained study of topics such as representation, interpretation, intention, theories of language, and literary theory and philosophy. May be repeated for credit with different content.

Prerequisite(s): ENLS 2000.

ENLS 4810 Cultural Criticism (3 Credit Hours)
Examination of the major concepts of culture from the late 19th century to the present as they relate to the analysis of cultural practices and literary texts. Specific emphasis on the interdisciplinary nature of cultural analysis, the relation between elite and popular cultures, dominant formations and the resistance to them, and intercultural encounters.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4820 Col/Postcolonial Discourse (3 Credit Hours)
Methods of analysis appropriate to the study of the literature produced by intercultural exchanges between Western and non-Western cultures. Specific emphasis on the Anglophone literature of the Caribbean, Africa, and India.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4840 Performance Studies (3 Credit Hours)
Study of the various categories that encompass performance, such as dance, drama, ritual, festival, and parade, and of texts that embody, describe, or enact performances.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4850 Cultural Politics & Practice (3 Credit Hours)
Study of the intersections and negotiations between cultural production and political institutions. Specific topics include literary representations of disease or poverty, and literature and the law.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4854 The History of Cool (3 Credit Hours)
The concept of cool is arguably America’s most influential cultural export in globalization and is inextricable from our understanding of popular music, Hollywood film, celebrity, marketing, and iconography. This course explores the roots, origins, and contemporary resonance of cool through a range of literature and media texts: detective novels, Beat Generation writers, song lyrics, memoirs of jazz, rock and hip hop, and theories of popular culture.

ENLS 4855 Literature and the Environment (3 Credit Hours)
Study of ecocritical theory; analysis of representations of environments in literature and film; topics include climate change, sustainability, posthumanism, animal studies, environmental justice, science fiction, and environmental precarity in Southern Louisiana.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4857 Literature and Technology (3 Credit Hours)
A study of the relationship between literature and technology. Topics may include writers’ responses to technological change; science fiction; the relationship between literature and media technologies; reading technologies; or games and other forms of electronic fiction/storytelling.

Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 4860 Topics in Cultural Studies (3 Credit Hours)
Sustained study of topics such as nationality, popular culture, cultural institutions, and postmodernism. May be repeated for credit with different content.

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1020, 1020, 1011 or 1011.

ENLS 4861 Topics: Cultural Studies (3 Credit Hours)
Sustained study of topics such as nationality, popular culture, cultural institutions, and post-modernism.

ENLS 4870 Global Literatures (3 Credit Hours)
The Global Literatures course explores several major literary traditions as they come in contact with one another: the course typically includes Western, Arabic-Islamic, Chinese, and Latin American Literatures in historical and cultural context.

Prerequisite(s): ENGL 1010.

ENLS 4890 Service Learning: ENLS 4870 (0-1 Credit Hours)
Service Learning.
ENLS 4891  Service Learning: ENLS 4030 (0-1 Credit Hours)
Service Learning.

ENLS 4910  Independent Study (1-3 Credit Hours)
Independent Study.

ENLS 4920  Independent Study (1-3 Credit Hours)
Independent Study.

ENLS 4940  Transfer Coursework (3 Credit Hours)
Transfer Credit.

ENLS 4990  Senior Honors Thesis (3 Credit Hours)
Senior Honors Thesis.

ENLS 5000  Senior Honors Thesis (4 Credit Hours)
Senior Honors Thesis.

ENLS 5010  Capstone Seminars (4 Credit Hours)
Specific subjects are announced each semester.

ENLS 5190  Semester Abroad (1-20 Credit Hours)
Semester Abroad.

ENLS 5380  Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

ENLS 5390  Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

ENLS 5890  Service Learning: ENLS 5010 (0-1 Credit Hours)
Service Learning.

Corequisite(s): ENLS 5010.

ENLS 7050  Bibliography & Research Method (3 Credit Hours)
Seminar in bibliography, methods of literary research, history of the
book, and archival methods.

ENLS 7060  Pro British Lit to 1660 (3 Credit Hours)
Proseminar in British literature to 1660.

ENLS 7070  Pro British Lit since 1660 (3 Credit Hours)
Proseminar in British literature after 1660.

ENLS 7080  Pro American Lit to 1865 (3 Credit Hours)
Proseminar in American literature to 1865.

ENLS 7090  Pro American Lit since 1865 (3 Credit Hours)
Proseminar in American literature since 1865.

ENLS 7100  Pro Modern & Contemp Lit (3 Credit Hours)
Proseminar in Modern and contemporary literature.

ENLS 7110  Pro Anglophone Literature (3 Credit Hours)
Proseminar in Anglophone literature.

ENLS 7120  Pro African-American Lit (3 Credit Hours)
Proseminar in African-American literature.

ENLS 7130  Sem: Cross-Cultural Lit Study (3 Credit Hours)
Topics in cross-cultural literary study.

ENLS 7140  Seminar: Anglophone Literature (3 Credit Hours)
Topics in Anglophone literature and culture.

ENLS 7150  Theories of Rhetoric & Comp (3 Credit Hours)
Theories of rhetoric and composition, including composition pedagogy.

ENLS 7170  Sem: Comparative Literature (3 Credit Hours)
Topics in comparative literary studies.

ENLS 7180  Sem: Interdisciplinary Study (3 Credit Hours)
Topics in interdisciplinary literary study.

ENLS 7250  Seminar: Medieval Literature (3 Credit Hours)
Topics in Old and Middle English literature and culture.

ENLS 7260  Seminar: Medieval Literature (3 Credit Hours)
Topics in Old and Middle English literature and culture.

ENLS 7350  Seminar: Renaissance Lit (3 Credit Hours)
Topics in Renaissance literature and culture.

ENLS 7360  Sem: Renaissance Literature (3 Credit Hours)
Topics in Renaissance literature and culture.

ENLS 7450  Seminar: 18th-C Literature (3 Credit Hours)
Topics in 18th-century literature and culture.

ENLS 7460  Seminar: 18th-C Literature (3 Credit Hours)
Topics in 18th-century literature and culture.

ENLS 7550  Seminar: 19th-C Literature (3 Credit Hours)
Topics in 19th-century literature and culture.

ENLS 7560  Seminar: 19th-C Literature (3 Credit Hours)
Topics in 19th-century literature and culture.

ENLS 7650  Language, Writing & Rhetoric (3 Credit Hours)
Topics in language, writing, & rhetoric.

ENLS 7660  Language, Writing & Rhetoric (3 Credit Hours)
Topics in language, writing, & rhetoric.

ENLS 7710  Seminar: American Literature (3 Credit Hours)
Topics in American literature and culture.

ENLS 7720  Seminar: American Literature (3 Credit Hours)
Topics in American literature and culture.

ENLS 7730  Seminar: Colonial Amer Lit (3 Credit Hours)
Topics in colonial American literature and culture.

ENLS 7740  Seminar: Central American Lit (3 Credit Hours)
Topics in early-19th-century American literature and culture.

ENLS 7750  Sem: Late-19th-C American Lit (3 Credit Hours)
Topics in late-19th-century American literature and culture.

ENLS 7760  Seminar: Modern American Lit (3 Credit Hours)
Topics in Modern American literature and culture.

ENLS 7770  Seminar: Contemporary Amer Lit (3 Credit Hours)
Topics in contemporary American literature and culture.

ENLS 7780  Seminar: African American Lit (3 Credit Hours)
Topics in African-American literature and culture.

ENLS 7790  Seminar: Southern Literature (3 Credit Hours)
Topics in Southern US literature and culture.
ENLS 7810 Seminar: British Literature (3 Credit Hours)
Topics in British literature and culture.

ENLS 7820 Seminar: British Literature (3 Credit Hours)
Topics in British literature and culture.

ENLS 7850 Seminar: Modern Literature (3 Credit Hours)
Topics in Modern literature and culture.

ENLS 7860 Seminar: Modern Literature (3 Credit Hours)
Topics in Modern literature and culture.

ENLS 7890 Fundamentals: Literary Theory (3 Credit Hours)
Seminar in the fundamentals of literary theory.

ENLS 7900 Seminar: Advanced Theory (3 Credit Hours)
Topics in advanced theory.

ENLS 7920 Independent Study (0-3 Credit Hours)
Independent Study.

ENLS 7990 Research (3 Credit Hours)
Research.

ENLS 9980 Masters Research (0 Credit Hours)
Masters Research.

ENLS 9990 Dissertation Research (0 Credit Hours)

English (PAEN)

PAEN 1000 Composition and Reading (3 Credit Hours)
This course covers the fundamentals of academic reading and writing, including communicating clearly on the page and over the internet, both in college and beyond.

PAEN 2630 Expository Writing (4 Credit Hours)
This course situates the critical skills and strategies of expository writing within the larger framework of academic writing. The course builds on the concepts and approaches to argumentation that students have learned from PAEN or ENGL 1010.

Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

PAEN 3010 Special Topics (3 Credit Hours)
Special topic in English.

PAEN 3020 Special Topics (3 Credit Hours)
Special topics in English.

PAEN 3310 Business Report Writing (3 Credit Hours)
This course addresses skills for writing in the business environment. Students learn to differentiate various styles and voice and the documents and occasions appropriate for them.

Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

PAEN 3349 Mad Men A Critical Analysis (3 Credit Hours)
Students will use the first season of the critically acclaimed AMC television series Mad Men as a springboard for imaginative critical analysis. Additionally, students will reflect on the larger critical issues explored within the show, such as the changing gender politics of the 1960s, the emerging sexual revolution, and the conflict that arises from the cultural expectations and identities that many Americans adopted for themselves in the early 1960s. We will also study basic cinematic elements, as Mad Men is obviously more visual than a standard literary text. Altogether, Mad Men is worth studying because it is a well-made, intricately designed piece of art that rewards in-depth analysis as it keenly attempts to document modern life in America.

English for Acad/Prof Purposes (EAPP)

EAPP 1000 Composition and Reading (3 Credit Hours)
This course prepares students to subsequently master their college writing requirements. In addition to developing an advanced understanding of English syntax, morphology, and semantics, students explore the process of composing, revising, and editing in English and the expectations of academic writing to different audience expectations in Global Perspectives.

EAPP 1050 Multicultural Speech (3 Credit Hours)
This course prepares students to master public speaking and interpersonal dynamics with a focus on Race & Inclusion in the USA. In addition to developing an advanced understanding of English phonology, semantics, and pragmatics, students focus on the communication strategies that make presentations and interpersonal interactions memorable and smooth.

Environmental Health Sciences (ENHS)

ENHS 6110 Glob Clim Chg Iss Ph Pol (3 Credit Hours)
ENHS 6910 Environmental Asp of Dis (3 Credit Hours)
ENHS 6950 Psych/Soc Asp Disaster (3 Credit Hours)
ENHS 7440 Environ Cancer Risk Asse (3 Credit Hours)
ENHS 7480 Indus Waste Treatment (3 Credit Hours)

Environmental Studies (EVST)

EVST 1010 Intro To Enviromentl Stu (3 Credit Hours)
This course introduces students to the field of environmental studies and the diverse topics of environmental research being conducted at Tulane. This interdisciplinary area of study explores environmental problems through a multitude of perspectives and complementing scientific analyses with considerations of philosophical, historical, economic, political, and cultural factors. Major concepts to be examined include: the state of scientific research, the role of the natural and social sciences in environmental decision-making, and the importance of history, ethics and justice in approaches to addressing contemporary environmental issues, such as biodiversity loss, global climate change, and natural resource depletion.
EVST 1890  Service Learning: EVST 1010  (0-1 Credit Hours)
Optional Service learning component sometimes offered with EVST 1010.

EVST 1940  Transfer Coursework  (3 Credit Hours)
Transfer Coursework.

EVST 2940  Transfer Coursework  (3 Credit Hours)
Transfer Coursework.

EVST 3310  Approaches to Environ Studies  (3 Credit Hours)
Approaches in Environmental Studies is a required core course for all EVST majors. The interdisciplinary nature of Environmental Studies requires the ability to understand the complex interrelationships between human society and natural ecosystems. Throughout this course we will focus on how to identify research questions, design research methodologies, carry out research, and analyze research findings. Students will gain competency in the four levels necessary for environmental analysis (data, methods, theories, and frameworks), skills that are key to doing environmental research and analysis. This course will enable students to build both empirical (data-based) and conceptual (idea-based) tools to shed scholarly light on environmental issues.

EVST 3880  Writing Intense: EVST 4400  (1 Credit Hour)
Optional writing intensive component with EVST 4400 Urban Political Ecology.

EVST 3890  Service Learning: EVST 3930  (0-1 Credit Hours)
Service Learning component with EVST 3930.

EVST 3930  Spec Topics Problems  (3 Credit Hours)
Special Topics in Environmental Studies.

EVST 3940  Transfer Coursework  (3 Credit Hours)
Transfer Coursework.

EVST 3950  Spec Topics Enviro Thought  (3 Credit Hours)
Special Topics in Environmental Studies.

EVST 3951  Spec Topics Enviro Thought  (3 Credit Hours)
Special topics in Environmental Studies.

EVST 4190  Environmental Crime & Security  (3 Credit Hours)
Students will learn about environmental crime, green criminology, and environmental security in our society, including key concepts and definitions, theoretical foundations and approaches, and how those concepts and theories can be - or are being - applied to a range of environmental crime and security issues. We will examine social interactions and activities associated with these issues and explore various policy approaches used to address them.

EVST 4400  Urban Political Ecology  (3 Credit Hours)
The primary objective of this course is to provide students with an understanding of urban political ecology and the study of environmental issues from an interdisciplinary perspective. Additionally we will explore the practices of inquiry and analysis associated with environmental studies from a liberal arts perspective.

EVST 4410  Seminar-Environmental Studies  (3,4 Credit Hours)
This is the capstone course required of all environmental studies majors. The course will emphasize three main areas: an overview of the fundamental contemporary environmental themes, issues, theories, concepts, and methods within the field of environment.

Corequisite(s): EVST 4890.

EVST 4510  Environ Justice in Action  (4 Credit Hours)
This service-learning course enriches student understanding of doing environmental justice in the local community. Students will sharpen their environmental activism and advocacy skills in collaboration with environmentally focused organizations and nonprofits in the greater New Orleans area. May be repeated once for credit.

Corequisite(s): SOCI 4610.

EVST 4560  Enviro Stud Internship  (0-4 Credit Hours)
Internship.

EVST 4890  Service Learning: EVST 4010  (0-1 Credit Hours)
Service Learning component with EVST 3930.

Corequisite(s): EVST 4410.

EVST 4910  Independent Study  (1-3 Credit Hours)
Independent Study.

EVST 4940  Transfer Coursework  (3 Credit Hours)
Transfer Coursework.

EVST 4990  Honor’s Thesis  (3 Credit Hours)
Honor’s Thesis.

EVST 5000  Honors Thesis  (4 Credit Hours)
Honor’s Thesis.

EVST 5380  Junior Year Abroad  (1-20 Credit Hours)
Junior Year Abroad.

EVST 5390  Junior Year Abroad  (1-20 Credit Hours)
Junior Year Abroad.

**Epidemiology (EPID)**

EPID 6030  Epidemiologic Methods I  (3 Credit Hours)
The Epidemiology course is designed to give students a general introduction to epidemiologic theory, methods and practice. The purpose of this core area is to enable the student to interpret epidemiologic data and understand and apply epidemiologic approaches to the investigation of infectious disease, chronic disease, and other health outcomes. The student will acquire the basic tools needed to understand and address threats to global health at the population level.
EPID 6090  EPID of Infectious Diseases  (3 Credit Hours)
This course focuses students on the knowledge needed for the investigation, control, and prevention of a variety of infectious diseases. Students will explore the characteristics of a range of specific disease agents, compare their impact on populations, review approaches used to investigate disease outbreaks, and examine local and global efforts to monitor, control, and eradicate selected infectious diseases. Zoonotic and human-reservoir diseases are included in the course content.

Prerequisite(s): (EPID 6030 or SPHL 6060 and BIOS 6030 or SPHL 6050).

EPID 6210  Cancer Epidemiology  (3 Credit Hours)
This course will explore current and historical trends in cancer incidence and mortality and evaluate the current state of the science regarding cancer etiology, detection, and treatment. Students will critically evaluate the methodological tools commonly employed in the practice of cancer epidemiology, and explore current controversies in the field, including the relative contributions of genes and the environment in cancer susceptibility, and the tradeoffs associated with cancer screening decisions. Students will develop an understanding of the known contributors to cancer risk and progression, and will appreciate the barriers to progress in cancer prevention and control.

Prerequisite(s): EPID 6030.
* May be taken concurrently.

EPID 6220  Cardio Disease Epid  (3 Credit Hours)
This is an introductory course designed to provide the student with a summary of the present knowledge of distribution, natural history, and risk factors for major cardiovascular diseases. Also, methodologic issues in epidemiologic studies unique to cardiovascular diseases will be discussed. The course format consists of lecture, discussion of current literature and the epidemiologic constructs as they are applied to population-based research of cardiovascular diseases.

Prerequisite(s): (EPID 6030 or SPHL 6060).  
* May be taken concurrently.

EPID 6230  Computer Packages Epid  (2 Credit Hours)
This course consists of data management and data analysis using SAS and STATA. The students will learn how to get data into SAS and STATA, manipulate the data, run basic analyses, and interpret the output. This course will prepare the students with the technical skills necessary to complete subsequent quantitative courses such as EPID7120, 7130, and 7220.

EPID 6290  Genetic Epidemiology  (3 Credit Hours)
This introductory course will cover fundamental concepts, terminologies and principles of human population genetics and molecular biology relevant to understanding approaches in genetic epidemiology. Study designs and analytical methods for genetic epidemiological studies of human disease in families and unrelated individuals will be discussed in detail. Issues related to genetic studies, such as genetic heterogeneity, population stratification and multiple testing will also be covered.

Prerequisite(s): (EPID 6030 or SPHL 6060 and BIOS 6030 or SPHL 6050).
* May be taken concurrently.

EPID 6320  Molecular Epidemiology  (3 Credit Hours)
The course introduces the concepts, principles, and molecular tools used in epidemiologic research to evaluate both genetic susceptibility and the effects of environmental exposures underlying human disease. Class topics include: introduction to biomarkers of exposures, etiology and effect (including those used in infectious diseases) the theoretical advantages and limitations of biomarkers, criteria for evaluating and selection of potential markers, biological sample collection and storage (banking), methods for evaluation of gene-environment interactions, laboratory quality control considerations, issues in epidemiologic study design and analysis, ethical/legal concerns. Current methods and newly emerging technologies ('omics) will also be discussed.

Prerequisite(s): (EPID 6030 or SPHL 6060).

EPID 6340  Clinical & Trnsltnl Rsrch Mthds  (3 Credit Hours)
This course is an introduction to clinical and translational research methods. Emphasis is placed on maximizing study internal and external validity for observational cohort studies, case-control studies and clinical trials. Selected topics covered include study design options, sources of bias, confounding, effect modification, data analysis techniques, measures of disease frequency, association, and causal inference, sampling methods, design, conduct, analyses, and interpretation of clinical trials, preparation and submission of manuscripts, and funding opportunities for support of clinical and translational research.

Prerequisite(s): (EPID 6030 or SPHL 6060 and BIOS 6030 or SPHL 6050).

EPID 6420  Clinical Epidemiology  (3 Credit Hours)
This course will help students learn or refine the skills of clinical epidemiology, defined as the study and management of illness in individuals as well as populations using population methods. Individual and group sessions will develop techniques of constructive critical appraisal of the medical literature, illustrated by examples from general health, cardiovascular disease and diabetes. Students will learn how to assess studies of prognosis or outcomes of illness, treatments, diagnostic tests, and screening programs, as well as the basic requirements for randomized clinical trials.

Prerequisite(s): (EPID 6030 or SPHL 6060 and BIOS 6030 or SPHL 6050).

EPID 6480  Reproductive Epid  (3 Credit Hours)
This course provides students analytical skills necessary to conduct epidemiological studies in reproductive health in human populations. Reproductive Epidemiology covers broad reproductive health issues from the pre-conception, prenatal, delivery and post-natal periods, and emphasizes health issues affecting both women and infants. Relevant methodological, clinical, policy and programmatic issues will be presented with practical illustrations from domestic and international settings. Students will be able to design a reproductive epidemiology study, discuss relevant methodological issues in reproductive health epidemiology studies, and apply reproductive/perinatal health data to improve reproductive programs and policy.

Prerequisite(s): (EPID 6030 or SPHL 6060 and BIOS 6030 or SPHL 6050).
EPID 6500 Nutr Epid (3 Credit Hours)
Nutritional Epidemiology is a rapidly evolving field of epidemiologic research that utilizes highly specialized epidemiological methods to identify dietary and lifestyle factors that are related to human diseases especially non-communicable, chronic diseases such as obesity, diabetes, cardiovascular disease and cancer. This introductory course will cover fundamental concepts, terminologies and principles in Nutritional Epidemiology and analytical approaches particularly used in studying relations of dietary factors with human health. The lectures include study designs, nutritional assessment, and analytical methods for nutritional epidemiological studies in population-based settings such as case-control studies, cohort studies, and randomized clinical trials (RCTs). The course will also cover new advances in the fields of Nutritional Epidemiology, such as gene-diet interactions, metabolomics, epigenomics, and microbiome research.
Prerequisite(s): (EPID 6030* or SPHL 6060*).

May be taken concurrently.

EPID 6750 Outbreak Epidemiology (3 Credit Hours)
This course is designed to provide students with the knowledge and skills required for the investigation, control and prevention of disease outbreaks in a variety of settings and due to a variety of infectious agents. Students will explore and practice the approaches used to investigate disease outbreaks, and examine local and global efforts to monitor, control and mitigate the effects of infectious disease outbreaks.
Prerequisite(s): (EPID 6030 or SPHL 6060 and BIOS 6030 or SPHL 6050).

EPID 6910 Clin Trials Des,Cond,& Intrprt (3 Credit Hours)
Prerequisite(s): EPID 6030 and BIOS 6030.

EPID 7000 Departmental Seminar (0-1 Credit Hours)
The Epidemiology Seminar Series provides a forum in which faculty, guest faculty, and doctoral students present their research on topics relevant to epidemiologic principles, methods, and applications. Students who take this course for one credit will need to write a review article on one of the research topics presented during the semester. The review article should follow a scientific journal format (abstract, introduction, methods, results, discussion, tables, figures, and references).

EPID 7090 Epid of Infectious Disea (3 Credit Hours)
The Epidemiology Seminar Series provides a forum in which faculty, guest faculty, and doctoral students present their research on topics relevant to epidemiologic principles, methods, and applications. Students who take this course for one credit will need to write a review article on one of the research topics presented during the semester. The review article should follow a scientific journal format (abstract, introduction, methods, results, discussion, tables, figures, and references).
Prerequisite(s): EPID 6030.

EPID 7120 Epidemiologic Methods II (3 Credit Hours)
This course is intended to enhance student understanding of observational epidemiologic research methods. The course emphasizes critical thinking and approaches to design, analysis and interpretation of observational studies. Emphasis is placed on maximizing study internal validity. Selected topics covered include measures of disease frequency, association, and impact; study design options, sources of bias, and data analysis techniques.
Prerequisite(s): (EPID 6230, SPHU 4160, BIOS 6230 or 6280 and EPID 6030 or SPHL 6060 and BIOS 6030 or SPHL 6050).

EPID 7130 Observational Epidemiolo (3 Credit Hours)
The goal of this course is to present the conceptual basis for the design, conduct, and analysis of cohort and case-control studies. The course will review the application of case-control and cohort studies in the context of epidemiological research and public health. Students will gain hands-on experience in designing and analyzing observational studies through classroom sessions and homework assignments. By the completion of the course, each student will have the skills to design, develop data collection methods for, and analyze data from case-control and cohort studies.
Prerequisite(s): (EPID 6230, BIOS 6230, 6280 or SPHU 4160 and EPID 6030 or SPHL 6060 and BIOS 6030 or SPHL 6050) and EPID 7120 and BIOS 6040.

EPID 7160 Survey Methodology (3 Credit Hours)
This course is designed to prepare the student to undertake survey research addressing a wide variety of public health topics in national and international settings. Focus is on the collection of information from primary sources such as individuals or groups. Survey approaches include questionnaires for mail or group administration and personal interviews in institutional and household settings. Although attention is given to principles of overall research design, the major emphasis is on principles and techniques of data collection procedures including instrument design and preparation for analysis.
Prerequisite(s): (EPID 6030 or SPHL 6060 and BIOS 6030 or SPHL 6050).

EPID 7170 Clinical Trials: Dsgn, Cndct (3 Credit Hours)
This course covers various topics in the design, conduct, analysis and interpretation of clinical trials and uses published and on-going studies to illustrate these issues. Topics include the definition and history of clinical trials; trial designs, including phase I-IV, parallel, crossover, factorial, and large multicenter trials; internal and external validity; selection of intervention, control, and study population; randomization and masking; selection of trial outcome variables; data collection and quality control; ethical issues; data analysis principles; and issues related to publication and dissemination.
Prerequisite(s): (BIOS 6030 or SPHL 6050 and SPHL 6060 or EPID 6030).
EPID 7210 EPID of STIs/HIV (3 Credit Hours)
This course is designed to provide students with the skills to conduct
epidemiologic research in HIV and other sexually acquired infections.
This course will cover the biology of these infections, methodological
issues of surveillance, clinical and behavioral research and ethical
aspects of the epidemiology of HIV/STI. Students meet experts in
the field and learn of the most up-to-date issues and state-of-the-art
epidemiologic methods surrounding HIV and other STIs.
Prerequisite(s): (EPID 6030 or SPHL 6060 and BIOS 6030 or
SPHL 6050).

EPID 7220 Analytic Epidemiology (3 Credit Hours)
This course is designed for doctoral students and advanced master
students to help them develop data analysis, interpretation, and
presentation skills. The course covers common statistical models for
continuous, categorical and count data from both cross-sectional and
longitudinal studies. Both parametric and semi-parametric models
are covered. The statistical models are illustrated by case studies
throughout the class. During this course, students will analyze data
from several different studies and discuss advanced epidemiologic
methods issues that one may encounter during data analysis with
guidance from the professor. After successfully completing the course,
students are expected to be able to conduct statistical analysis
independently based on the type of outcome and study design, and
interpret the results and present the findings.
Prerequisite(s): (EPID 6030 or SPHL 6060 and SPHL 6050 or BIOS 6030
and BIOS 6040, EPID 6230, 7120 and 7130').
  * May be taken concurrently.

EPID 7310 Meta-Analysis (3 Credit Hours)
This course is designed to provide students with qualitative and
quantitative skills to conduct meta-analysis. The course covers the
formulation of study hypothesis, literature search, evaluation of study
quality, and statistical methods for meta-analysis. In addition, the
potential problems and biases in meta-analysis will be addressed.
Prerequisite(s): (EPID 7120' and BIOS 6030 or SPHL 6050 and
EPID 6030 or SPHL 6060).
  * May be taken concurrently.

EPID 7410 Pharmacoepidemiology (2 Credit Hours)
This course provides a one-week, intensive introduction to the concepts
and methods of pharmacoepidemiology. It begins with an overview
of how epidemiology is applied to study the safety and effectiveness
of drugs, medical devices, and vaccines in academia, industry, and
regulatory agencies. Epidemiologic study designs, methodologies, and
techniques for pharmacoepidemiologic research, including commonly
used data sources, are discussed. Finally, methodological challenges
encountered in pharmacoepidemiology and approaches for addressing
these issues, are illustrated through case studies and computer
laboratories.
Prerequisite(s): (EPID 6030, BIOS 6030 and EPID 7120).

EPID 7810 Human Molecular Genetics (3 Credit Hours)
This course is designed to prepare students for the study of human
health in the post-genome era. The goal of the course is
to provide students the fundamental skills and knowledge on the
molecular aspects of human genetics, the most current technologies,
experimental design, interpretation of genetic data and the use of
genomic information for the study of human disease. The information
will be integrated into a big picture of how each component relates to
human health both individually (precision medicine) and in a population
perspective, relating genetic instability to genetic variation and disease
risk. Cancer, gene therapy and stem cell research will be used as an
eample of disease-related questions.
Prerequisite(s): (EPID 6030 or SPHL 6060).

EPID 7990 Master's Independent Studies (1-3 Credit Hours)
Masters students and advisor select a topic for independent study and
develop learning objectives and the expected written final product.

EPID 8000 Doctoral Journal Club (0 Credit Hours)
This course is required for all doctoral students in the Department of
Epidemiology until successful completion of the comprehensive exam
and optional for the duration of their tenure as doctoral candidates. It is
intended to increase students' knowledge in design, conduct, analysis,
interpretation, and dissemination of epidemiologic studies. In journal
club, students develop critical evaluation and discussion skills as they
become familiar with epidemiologic literature. These discussions are a
great way of preparing students for their comprehensive exam and to
create an active research environment.

EPID 8300 Advanced Epid Methods (3 Credit Hours)
This course covers a wide variety of topics in epidemiological
methodology. Topics will include concepts of epidemiological study
design, causality in biomedical research, bias, confounding, interaction,
and statistical modeling of epidemiology data. In addition, students
will learn how to develop and critically review a research proposal and
scientific articles.
Prerequisite(s): (EPID 6030 or SPHL 6060 and EPID 7120 and 7130).

EPID 8990 Doctoral Independent Study (1-3 Credit Hours)
Doctoral students and advisor select a topic for independent study and
develop learning objectives and the expected final written product.

EPID 9910 MS Epidemiology Rsrch Exp (0 Credit Hours)
MS students engaging in epidemiology research experience.

EPID 9970 Dissertation (0 Credit Hours)
Doctoral candidates who have defended their prospectus and are
engaged in research.

EPID 9980 MS Thesis Research (0 Credit Hours)
MS Students engaging in thesis research.

EPID 9990 Dissertation Research (2 Credit Hours)
Doctoral students who have completed course work but not defended
their prospectus.

BSFN 3540 Intermediate Investment (3 Credit Hours)
A continuation of Intro to Investing. This course explores investment topics as they relate to individual investors and professionals. Risk and return principles on securities and portfolios are studied as well as valuation techniques and analysis of fixed income securities, equities, and options. Financial statements, futures markets, portfolio theory, and capital market theory are also covered. The course assumes the student has a basic understanding of investment vehicles and their characteristics.

BSFN 3560 Personal Financial Planning (3 Credit Hours)
While laws and values continue to change, the abilities to analyze, evaluate, and make decisions remain central to building financial security. The course develops these abilities and considers the skills to look for in selecting competent bankers, brokers, accountants, insurance and real estate professionals.

BSFN 4910 Independent Study (1-3 Credit Hours)
Independent Study in the BSFN discipline for the BSLS Programs.

Finance (EFIN)
EFIN 6100 Financial Accounting (2 Credit Hours)
Familiarizes students with key financial accounting concepts, methods and terminology and introduces the tools of financial statement analysis. The financial reporting roles of management, auditors and regulators are studied, and students learn how accounting policy choices can influence reported performance and financial position. Students develop knowledge and skills that allow them to read, interpret and analyze financial statements at a basic level and to discuss business issues in accounting terms. (2 credit hours)

EFIN 6110 Accounting for Managers (2 Credit Hours)

EFIN 6120 Fincl Statement Analysis (2 Credit Hours)
Explores the principles and techniques for understanding and interpreting financial statements, including statement comparability, income measurement and disclosure, cash flow analysis, ratio analysis and the disaggregation of ratios, quality of earnings, account analysis, and footnote disclosures. The financial relationships of the accounting model are applied to published financial statements. Cases are used extensively. (2 credit hours)

EFIN 6200 Decision Models (2 Credit Hours)
Examines the art of solving problems under uncertainty. Course topics include descriptive statistics, probability, sampling distributions, confidence intervals, hypothesis testing and simple and multiple regressions. Methods are applied to management problems drawn from marketing, finance, economics, organizational behavior, and operations management. (2 credit hours)
EFIN 6300 Financial Management I (2 Credit Hours)
This course provides a rigorous introduction to the field of financial economics. The first section of the course develops an analytical understanding of the time value of money concept, and applies it through basic techniques for the valuation of stocks, bonds, and investment projects. Various capital budgeting rules are also discussed in this section. The second section focuses on capital markets including the statistical concepts of covariance and diversification and the capital asset pricing model. The third section introduces capital structure policy and discusses the impact of the different financing choices on risk and required return on firm’s equity. This section also introduces the notion of weighted average cost of capital. (2 credit hours)

EFIN 6310 Financial Management II (2 Credit Hours)
This course builds directly on the material covered in Financial Management I. The course focuses on the key policy decisions made in corporate finance and discusses their impact on firm and shareholder value. The course will include an in-depth analysis of firms’ financing choices and capital structure and their role in capital budgeting decisions. The course also introduces the different discounted cash flow valuation techniques for the valuation of corporate cash flows. The last third of the course focuses on options, option pricing, and applications of option pricing in corporate finance including warrant and convertible bond valuation. (2 credit hours)

EFIN 7100 Options (2 Credit Hours)
EFIN 7110 Portfolio Theory (2 Credit Hours)
This course is concerned with the choice of investment strategies with differing risk/return characteristics, in the presence of uncertainty. We will examine the risk/return characteristics of both equities and fixed-income instruments. We will begin by looking at the market structure within which equities are traded, how market indexes are derived, and the various styles of professional asset management. Within the context of fixed-income investments, we will discuss the various theories of the term structure of interest rates, how to derive implied forward rates, and how to measure and manage interest rate risk using duration and convexity. Interest rate futures, options and swaps will also be discussed as instruments for managing interest rate risk in a fixed-income portfolio. Finally, we will discuss several equity valuation measurements and the concept of market efficiency. Empirical evidence for and against efficient markets will be examined, and the basic tenants of Behavioral Finance will be introduced. (2 credit hours)

EFIN 7120 Cases In Finance (2 Credit Hours)
Through case analysis, this course explores ways to value different types of business enterprises. The course emphasizes discounted cash flow methods of valuation, though other methods, such as the method of multiples, the venture capital method, and real options are also introduced. Students develop and practice valuation skills, such as financial forecasting, cash flow measurement, discount rate estimation and continuing value calculation. In addition, students work with a variety of corporate situations, such as LBO’s, IPO’s, spin-offs, and mergers, in which valuation plays a key role. (2 credit hours)

EFIN 7130 Fixed Income Analytics (2 Credit Hours)
This course examines the pricing and yield determinants of various fixed income securities including Treasury bills, notes and bonds, strips, corporate bonds, munis, mortgages, and asset-backed securities. Topics include the term structure of interest rates, duration, convexity, immunization, and the various types of risk that can affect the pricing of fixed income securities. Arbitrage-free pricing methods are explained. The course is designed to give students the quantitative tools they need to evaluate streams of fixed-income cash flows.

EFIN 7140 International Finance (2 Credit Hours)
International Finance is the sub-area of finance that studies the international investment decisions concerning real and financial assets. This course considers the concepts and theories of modern multinational financial management and gives participants a solid theoretical and practical background that serves to better understand the importance of risk management in a Multinational Corporation (MNCs) and the particularities of corporate finance and corporate governance in a global context.

EFIN 7150 Behavioral Finance (2 Credit Hours)
EFIN 7160 Corporate Risk Management (2 Credit Hours)
EFIN 7170 Energy Acct & Finance (2 Credit Hours)
This course will cover the fundamentals of the upstream oil and natural gas exploration and production process (E&P or upstream) and the key financial decisions and metrics. The various operational steps and related financial decisions will be followed through to their ultimate impact to a public E&P company's external financial statements. Students will be able to understand the immediate impact of various decisions on a company's cash and non-cash financial performance which in turn lead to future financial and operational flexibility and success.

EFIN 7180 Energy & Env Economics (2 Credit Hours)
In the past 50 years, the largest industries involved in the energy sector (oil, gas, and electric) have undergone profound changes and have had a large impact on the economy. Managers in the oil, natural gas, and electric industries have had to devise strategies to cope with changes in the marketplace and ever-changing governmental regulations. The energy industries feature a complex mix of regulation and market-driven incentives. Students in this class will learn to use fundamental tools of economics and finance to study the business and public policy issues involved in these energy markets from the exploration, production, distribution, and ultimate sale to consumers. Students will study a number of cases from each of these industries, critically analyzing positions and evidence and formulating recommendations by applying the economic concepts they have learned in the class.

EFIN 7190 Energy Investment Banking (2 Credit Hours)
EFIN 7200 Game Theory & Finance (2 Credit Hours)
This course is an introduction to strategic models of decision-making and equilibrium with applications to economics and finance. Topics to be covered are: Nash Equilibrium, game theory, auctions, dominant strategies, coordination games, extensive form applications, subgame perfection, mixed strategies, applications of mixtures, asymmetric information, moral hazard, evolutionary games and dynamics. The use of critical thinking skills and mathematical analysis will be at the master’s-level. Students completing this course will be able to understand the current issues in game theory and finance.
EFIN 7210 Financial Engineering (2 Credit Hours)
This course is designed to introduce students to financial innovation and strengthen the ability to tackle more structured financial problems. While the course is grounded solidly in theory, it also provides a thoroughly applied perspective of the topics: equity and debt, default and credit derivatives and interest rate models.

EFIN 7220 Financial Modeling (2 Credit Hours)
This course is about financial models and their use and simulation using Microsoft Excel. The models covered include Fixed Income Securities, Portfolio Optimization, and Option Pricing. The course content consists of a mix of theoretical models and model application.

EFIN 7300 Sas & Databases (2 Credit Hours)
Topics covered include econometrics basics, regression, formulas, statistics, variable bias, models, multicollinearity, hypothesis testing, binary variables heteroskedasticity, endogeneity, instrument variables, forecasting and speculation.

EFIN 7400 Statec Fin Plan &Cntrl (2 Credit Hours)

EFIN 7500 Venture Cap & Private Equity (2 Credit Hours)
The number of players in power markets, competing interests, and evolving regulatory policy gives electricity markets a unique niche in the world of commodity trading. The unique physical characteristics of its product, coupled with the nature of its delivery (and associated constraints,) have created opportunities for trading shops and major corporations to rise and fall in a little more than a decade. As this market (slowly) matures, and regulation continues to improve market transparency and efficiency, it will be a bumpy ride. To better understand where these markets are going and where they have been, we shall first obtain a historical perspective. With a concrete understanding of the market evolution, we will then investigate what variables (both physical and political) influence market prices on a long term, day ahead, and real time basis. We will also study the infamous market failures, and how regulators have responded to eliminate opportunities for indiscretion. The course will conclude with a brief look at several recent regulatory enactments to more closely align the interests of all market participants and stakeholders (and perhaps make the invisible hand seem more human!) This course will include market simulation exercises which will give students the opportunity to experience Power Marketing from the perspectives of a pure-marketer, independent power producer, and regulated utility.

EFIN 7570 Entrepreneurial Real Estate (2 Credit Hours)

EFIN 7590 Advanced Topics In Finance (2 Credit Hours)
This course is divided into three parts. The first is a continuation of the game theory course with particular attention to topics to be covered elsewhere in the course. The second part of the course is introduction to business ethics with an emphasis on finance. Cases will come from the Giving Voice to Values (GVV) curriculum. The third part of the course addresses financial crises, with particular attention to the current financial crisis.

EFIN 7910 Executive Finance Internship (1-3 Credit Hours)
FINE 4100 Adv. Financial Management (3 Credit Hours)
This course is intended for students who wish to learn and analyze the concepts, theories, and applications of modern corporate finance. The course builds on the topics of FINE 301, and covers a wide range of topics related to corporate finance. Specific topics include in-depth analyses of firms’ financing choices and their impact on value, advanced capital budgeting, agency costs, dividend policy, stock splits and repurchases, institutional and legal aspects of corporate restructuring, mergers and acquisitions, corporate risk-management basics, and financial distress. The course will also cover stock option characteristics, valuation, and applications. Prerequisites: FINE 3010, MGSC 3010

Prerequisite(s): (FINE 3010, 3010, FINC 3010 or 3010) and (INFO 3010, ISPM 3010, MGSC 3010 or ISPM 3010).

FINE 4110 Investments in Equities (3 Credit Hours)
This course focuses on equity investing. The major topic areas are equity markets, valuation, and portfolio management. Course content consists of descriptive material, theoretical models, and the practical application of theory. Topics include stock market exchanges, indexes, risk and return, diversification, market efficiency, portfolio theory and management, portfolio evaluation, mutual funds, and fundamental market, industry, and company analysis. Prerequisites: FINE 3010, MGSC 3010

Prerequisite(s): (FINE 3010, 3010, FINC 3010 or 3010) and (INFO 3010, 3010, ISPM 3010 or 3010) or MGSC 3010.

FINE 4120 Analysis of Fixed Income Securities (3 Credit Hours)
This course deals with the analysis of fixed income securities. Topics include valuation of different bond types, calculation of yield to maturity and total returns, accrued interest, day-counting rules, measurement of interest rate risk (duration and convexity), term structure of interest rates, money markets, mortgages and the concept of pass-through securities, and management of interest rate risk through fixed income derivatives. Students will explore theoretical aspects and applications of theory. The professor may also introduce spreadsheet modeling in the above areas. Prerequisites: FINE 3010, MGSC 3010

Prerequisite(s): (FINE 3010, 3010, FINC 3010 or 3010) and (INFO 3010, 3010, ISPM 3010 or 3010) or MGSC 3010.

FINE 4130 Venture Cap & Privt Eqty (3 Credit Hours)
This course analyzes the concepts and theories of entrepreneurial finance, which includes venture capital and private equity. The course builds on the core finance topics covered in FINE 3010 and covers a wide range of topics related to entrepreneurial finance. Apart from an in-depth analysis of new venture financing, the course also covers the financial aspects of strategic and business planning, financial forecasting, valuation, organization design and financial contracting, and financing and harvesting choices. Prerequisites: FINE 3010

Prerequisite(s): (FINE 3010, 3010, FINC 3010 or 3010).

FINE 4140 Risk Management (3 Credit Hours)
This course focuses on 1) identifying financial risks associated with interest rates, currencies, and commodities; 2) measuring risk exposure; 3) making the corporate hedging decision; 4) selecting risk-management strategies; 5) using risk-management tools, including forwards, futures, options, and swaps; and 6) integrating risk-management and innovative financing techniques. Prerequisites: FINE 4100, FINE 4110, FINE 4120

Prerequisite(s): (FINE 4100, 4100, FINC 4510 or 4510) and (FINE 4110, 4110, FINC 4540 or 4540) and (FINE 4120, 4120, 4550 or 4550).

FINE 4145 Advanced Trading (3 Credit Hours)
This course is about trading financial assets. It is intended for students who expect to take trading jobs, but is also relevant for all students who expect to trade securities. The course examines the application of technology to implement financial theories and models. It uses a combination of lectures and exercises conducted in the school's state-of-the-art trading facility to make students comfortable with how to construct trading strategies and how to use contemporary models to price and hedge derivative securities. Pre- or Co-require: FINE 4140

Prerequisite(s): FINE 4140.

FINE 4150 International Finance (3 Credit Hours)
This course provides an integrated view of international financial markets and the management of multinational firms. It introduces students to markets for spot currency transactions, currency forwards, options, and swaps. Students are familiarized with tools for valuing instruments traded in these markets. The course then focuses on the opportunities and challenges these markets present to multinational managers attempting to manage exposure to exchange rates, raise capital in international capital markets, and evaluate international capital budgeting projects. Prerequisites: FINE 4100, FINE 4120

Prerequisite(s): (FINE 4100 or FINC 4510) and (FINE 4120 or FINC 4550).

FINE 4160 Equity Analys/Burkenroad (3 Credit Hours)
Students must apply to Burkenroad Reports, and enrollment is by invitation only. Enrollment is limited to Finance majors who are in the second semester of their junior year or first semester of their senior year, and who have minimum 3.000 cumulative and business grade-point averages. In this valuable hands-on course, teams of three or four students meet with top management, visit company sites, develop financial models, and publish in-depth investment research reports on public companies. The reports become available at www.burkenroad.org and are distributed to more than 20,000 institutional and individual investors. Students are also responsible for introducing company management at the Burkenroad Reports Investment Conference each spring. The companies are located in Alabama, Florida, Georgia, Louisiana, Mississippi, and Texas. Prerequisites: ACCN 3100; Corequisite: FINE 4110

Prerequisite(s): ACCN 3100 and FINE 4110*.  
* May be taken concurrently.
FINE 4170 Financial Modeling (3 Credit Hours)
This course makes the connection between studying textbook Finance theory and solving real-world business problems. The course provides students with a “nuts and bolts” guide to solving common financial problems by building financial models in spreadsheets. Topics include pro-forma financial forecasts, modeling stock prices, user-defined functions in VBA, and Monte-Carlo simulation. In addition, the professor may explore other Finance problems. Prerequisites: FINE 3010, MGSC 3010
Prerequisite(s): FINE 3010 and (INFO 3010 or MGSC 3010).
FINE 4190 Commercial Bank Mgmt (3 Credit Hours)
FINE 4190 explores emerging institutional changes as they relate to the structure of commercial banks. Topics include asset and liability management, loan evaluations and policies, investment policies and management, and financial analysis of banks. Prerequisite: FINE 3010
Prerequisite(s): FINE 3010 or FINC 3010.
FINE 4210 Real Estate Planng &Devl (3 Credit Hours)
FINE 4210 places the student in the role of real estate project manager, using the tools of the developer, entrepreneur, and business person. The primary responsibility of the principal or consultant in a real estate venture is to manage all resources efficiently and effectively. The course will examine current professional development in real estate and the decision-making process under changing economic conditions, environmental expectations, and federal and state tax legislation. Prerequisites: FINE 4100; senior standing
Prerequisite(s): (FINE 3010 or 3010) and (INFO 3010 or MGSC 3010).
FINE 4240 Special Offering (1-3 Credit Hours)
This is a topics-oriented approach to the history of pre-industrial, industrializing, and industrialized economies with a focus on the United States and Western Europe. Particular emphasis is placed on the historical conditions that caused major changes in financial markets. Topics covered include the roles of elites in the development of new mediums and mechanisms of exchange; the evolution of modern fiscal systems to finance territorial expansion, geopolitical strategies, subsequent military operations; the articulation of new financial networks in the wake of the world wars of the twentieth century; and the deployment of globalized systems of finance and trade at the conclusion of the Cold War and at the start of the new century. This course discusses who, what, where, when and how various financial instruments evolved, ranging from clay tablet receipts for grain in ancient Sumer, to the deployment of government bonds in England during the Napoleonic Wars and includes the birth of statistics based insurance markets in 18th century Scotland. We will place particular emphasis on assessing the historical conditions that caused these major additions to the portfolio of available financial instruments. Prerequisite(s): ECON 1010 and 1020.
FINE 4250 Applied Portfolio Management (3 Credit Hours)
The course provides a practical introduction to applied portfolio management and trading, using a combination of lectures and the software platform, ALPHABETA. The software has been developed to provide a common platform for students and professionals, and everything students will learn in this course is used by leading real-world portfolio managers. Portfolio managers make their decisions based on strong academic theory and research. In this sense, the course is for students who wish to learn modern and real world portfolio management strategies. Prerequisites: FINE 4100, FINE 4110
Prerequisite(s): FINE 4110 and 4110.
FINE 4260 Financial Intermediaries (3 Credit Hours)
This course is designed to give students a thorough understanding of the financial intermediaries that allow capital markets to function efficiently. Topics will include (but may not necessarily be limited to) the Federal Reserve, commercial banking, insurance companies, mutual funds, ETFs, hedge funds, and investment banking. Students who meet the course requirements will leave with a clear understanding of what intermediaries do, how to evaluate or value intermediaries, and what issues they currently face. Prerequisites: FINE 3010, FINE 4110; junior standing and above
Prerequisite(s): FINE 3010 and 4110.
FINE 4350 Aaron Selber Jr on Hedge Funds (3 Credit Hours)
This course introduces students to the broad field of alternative investing through an in-depth analysis of hedge fund investments. As part of the course, students will study a variety of applied case studies and relevant academic research papers in the subject. Leading practitioners in the hedge fund investment industry will visit the class as guest lecturers and mentors to students to help them build their foundations of knowledge. Ultimately, students will work in teams to develop a prospectus for a hypothetical new hedge fund. Students will compete in a simulated conference to raise committed capital for their newly created hedge fund. Prerequisites: FINE 4110, senior standing
Prerequisite(s): FINE 4110.
FINE 4411 Aaron Selber Jr- Alt Investest (1-3 Credit Hours)
This course introduces students to the broad field of alternative investing through an analysis of hedge funds and their strategies. Specifically, the course focuses on an in-depth exploration of the strategy of investing in distressed debt. As part of the course, students will study a variety of applied case studies and leading-edge academic research papers on the subject. Leading practitioners in the alternative investment industry will visit the class as guest lecturers and mentors to the students to help them build their foundation of knowledge. Ultimately, students will work in teams to develop a pitch book that will analyze a distressed company and “pitch” an idea for investment in that company’s debt and/or equity through a variety of strategies that students will discuss during the course. Note: Students must apply for enrollment in this course. Prerequisites: FINE 4100 and FINE 4110
FINE 4550 Finance Internship (1 Credit Hour)
Freeman School majors may elect to do a Business Internship that will appear as a one-credit, 4000-level course on their transcripts; however, the credit does not apply towards the 122 minimum hours required for a BSM degree. The Internship must be related to one of the majors offered through the BSM program, and the Internship must apply (within an ongoing business organization) the intellectual capital obtained from first- through third-year Freeman School courses. To obtain approval of the internship, the student must visit the Career Management Center for instructions. Students receive a grade of Satisfactory/ Unsatisfactory for the Internship upon submitting a paper/ evaluation to a supervising faculty member in the Career Management Center. This course is normally offered during the summer and fulfills the “curricular practical training” option for students with F-1 visa status.

FINE 4600 Cases In Valuation & Financing (3 Credit Hours)
An applications-oriented course, FINE 4600 typically deals with cases involving working capital, mergers, corporate valuation, and capital budgeting analysis and planning. The course reinforces and applies concepts and techniques from Accounting and Financial Economics in a practical setting. It also includes credit analysis for bank lending. Prerequisites: FINE 4100, FINE 4110; senior standing

Prerequisite(s): (FINE 4100 or FINC 4510) and (FINE 4110 or FINC 4540).

FINE 4610 Darwin Fenner Mangd Fund (3 Credit Hours)
This course satisfies the upper level honors course requirement for students in the honors program. This course combines academic study with actual investing. As part of the course, students manage a portfolio of stocks called the Darwin Fenner Student Managed Fund. Students study academic research papers and classic writings that have influenced equity investing. Through reading and discussing academic research papers, students develop a critical thinking process and proprietary investment models. Working in groups, students analyze all stock in their assigned sector of the stock market and make buy, sell, and hold recommendations to the class. In addition, the class evaluates the historic performance of the fund. Prerequisites: FINE 4100, FINE 4110; FINE 4120; Invitation by Finance faculty; senior standing and Finance major – invitation only

Prerequisite(s): (FINE 4100 or FINC 4510) and (FINE 4110 or FINC 4540) and (FINE 4120 or 4550).

FINE 4620 Invest Banking-Financial Firms (3 Credit Hours)
This applications-oriented course builds upon the valuation concepts students learned in FINE 4100 (Advanced Financial Management) and applies them to investment-banking-style analysis for financial firms. Financial firms have unique asset, liability, risk, and regulatory attributes that make them fundamentally different from other firms; as a result, they are often challenging to value. In this course, students will construct financial firm valuation models to later integrate into full-scale merger and acquisition analyses. Additionally, the instructor will use case studies based on banks, insurance companies, real estate investment trusts (REITs), asset management companies, and other financial services companies to demonstrate varying business models, proper valuation, and the overall acquisition and integration of financial firms. The course will be particularly helpful for students with an interest in working as buy-side or sell-side financial analysts covering the financial sector. It will also provide insights into understanding the business models of financial firms, which should be valuable to students who aspire to work for firms in the financial sector.

Prerequisites: FINE 4100; junior standing

Prerequisite(s): FINE 4100.

FINE 4890 Service Learning: FINE 4100 (0-1 Credit Hours)
Students may elect to fulfill their upper-level Newcomb-Tulane public service requirement through this service learning option that functions an add-on component to FINE 4100 or FINE 4600. This added one-hour component supplements the finance curriculum and gives students the opportunity to research, prepare and teach core elements of financial literacy to high school students who live in the New Orleans community. Students required to fulfill 40 hours of public service. The 40 hours of public service includes preparation of lesson plans, lab meetings with reflection, and classroom experiential teaching to high school class environment. Prerequisites: FINE 3010; senior standing; Corequisite: FINE 4100 or FINE 4600

Prerequisite(s): FINE 3010.

FINE 4910 Independent Study (0.5-3 Credit Hours)
Freeman School seniors who have demonstrated academic excellence are allowed to pursue an independent study. The work may take the form of directed readings, laboratory or library research, or original composition. Instead of traditional class attendance, the student substitutes conferences with the supervising faculty, as needed. An Independent Study requires the approval of the supervising instructor and the Associate Dean for Undergraduate Education. The credit does not apply towards the Finance major requirements for a BSM degree; the Independent Study counts as Business elective credit, only. Interested students should contact the Office of Undergraduate Education at the Freeman School. Prerequisites: Minimum cumulative GPA of 3.333 or higher; senior standing

FINE 4990 Finance Honors Thesis (3 Credit Hours)
This course is the traditional thesis option for the Finance area. Students enrolled in this course will begin their theses in the fall semester. They will conclude their theses in FINE 5000 in the spring semester.

FINE 5000 Finance Honors Thesise (4 Credit Hours)
This course is the traditional thesis option for the Finance area. Students enrolled in this course will conclude their theses in the spring semester. They will start the theses in FINE 4990 in the fall semester. Prerequisites: FINE 4990
This course provides an introduction to the discipline of finance and gives students the tools they need to make capital budgeting decisions for firms. It begins with the study of the time value of money and how to value stocks and bonds. From there, it moves into capital budgeting techniques including net present value and internal rate of return. Students will learn how to evaluate an asset's risk and expected return within the context of a portfolio, leading to the fundamentals of asset pricing theory. Cash flow analysis, inflation, and a firm’s cost of capital are all topics that are covered. The course concludes with a discussion of market efficiency and its implications. By the end of the course, students will be familiar with the basic tools used to analyze the investment and financing decisions made within firms.

This course examines the field of corporate finance. Initially the valuation of stocks and bonds and basic capital budgeting techniques are studied in detail. Options are then examined. The course then focuses on incorporating risk into the firm’s weighted average cost of capital and the cost of equity. The firm’s use of debt is then examined in detail, and then included in analyses of capital structure. Valuation is then taken up. The firm’s long term financing activities, that include raising debt, equity, preferred stock and convertible bonds, are examined. Though there are no formal prerequisites for this course, we will move very quickly through concepts relates to the time value of money and basic statistics.

This course examines the U. S. and world economy in relation to national income, international trade, and patterns of international investment. The emphasis is on open economy macroeconomic issues for managerial decisions. Topics include the determination of interest rates, inflation, foreign investment, wage levels, real output growth, exchange rates, and international trade patterns in the world economy. Also included is a study of the global institutions of world commerce — the WTO and the Bretton Woods institutions of the World Bank and the International Monetary Fund — as well as a study of regional and bilateral trade agreements and of governmental controls of capacity and currency flow.

The purpose of this course is to apply the economic theory of the firm and consumer behavior to management decision making. This involves the development of a conceptual framework to analyze household and firm decisions related to product and factor markets and the application of that framework to managerial decisions. Applications focus on market demand analysis and marketing strategy, production and cost efficiency, pricing, product quality and other competitive strategies, optimization under regulatory constraint, optimal employment decisions, and incentive structures. The applications are developed with cases and problems.

This course covers the pricing and use of derivative securities, including forward contracts, swaps, futures, and options. The course emphasizes the role of derivatives in managing risks.

Fine 6020 Analysis for Financial Mgmt (3 Credit Hours)
Fine 6050 Corporate Finance (3 Credit Hours)
Fine 6060 Economic Environ of Business (3 Credit Hours)
Fine 6470 Managerial Economics (3 Credit Hours)
Fine 7080 Options & Other Derivatv Secur (3 Credit Hours)

Prerequisite(s): FINE 6110.

Fine 7110 Investments (1-3 Credit Hours)
The first half of this course takes students through an in-depth study of portfolio theory. The foundations of modern portfolio theory are rigorously developed and its principles are used to create mean/variance efficient portfolios. Students critically examine the assumptions of modern portfolio theory and its implications. Alternative multifactor pricing models including the Fama/French Three-Factor Model are also explored. The second half of the course focuses on fixed income analytics. Students learn how to price various types of fixed income securities and how to measure their interest rate risk. They learn how to hedge interest rate risk for fixed income portfolios, and how to incorporate call and conversion features into the price of a bond. Students learn how to derive implied forward interest rates, how to bootstrap a yield curve, and the implications of various theories of the term structure. Finally, students will have the opportunity to conduct an event study, learn the basics of options, and discuss how behavioral finance is changing the way asset pricing is viewed. Case studies will be used to learn how hedge funds, mutual funds, exchange-traded funds, and various other investment managers operate. Note: This course is a prerequisite for students who wish to apply for participation in Aaron Selber Jr. Course on Distressed Debt (FINE 7340) or Darwin Fenner Student-Managed Fund (FINE 7610), and a co-requisite for participation in Aaron Selber Jr. Course on Hedge Funds (FINE 7350).

Prerequisite(s): FINE 6020.

Fine 7130 Advanced Financial Management (3 Credit Hours)
This course builds on the topics covered in Financial Management. The course will cover advanced corporate finance theory and how one translates theory into financial decisions. Topics include firm capital structure, including Jensen’s free cash flow (moral hazard), pecking order (adverse selection), and agency conflicts between stockholders and bondholders; capital budgeting when financing considerations are included; external financing, including leasing and security issuance to the public; working capital management, including cash, credit, and inventory management; dividend policy and share repurchases; mergers and acquisitions; corporate governance; options valuation in the context of convertible bonds and warrants; the valuation of real options; and corporate risk management. Special topics such as international finance may also be covered.

Fine 7140 Venture Cap & Private Equity (3 Credit Hours)
Entrepreneurial firms face financial issues that are significantly different from those facing established companies. This course focuses on analyzing the special finance issues faced by such companies and on the knowledge and tools needed by managers of these firms. Topics covered will include stages of venture capital development, start-up financing (venture capital, leasing, bank loans), financial management of rapidly growing firms, deal structuring for entrepreneurial firms, and financial distress issues and concerns. Initial public offerings will also be examined as a culminating event for entrepreneurial firms. The course also covers the broader topic of private equity. The course investigates why firms seek private rather than public equity and identifies differences between private and public equity investments. The recent trend of investment in emerging economies by private equity funds is also examined. Students will create a deal or pitch book as part of the class.

Prerequisite(s): FINE 6020, 6050 or ENRG 6000.
FINE 7150 International Finance (3 Credit Hours)
This course provides students with a solid understanding of the basic principles of international finance. Emphasis will be placed on understanding the roles of trade and exchange rates in the global economy as well as how individual firms can obtain financing, make capital budgeting decisions, and minimize risk in a global environment. The first half of the course will be largely lectures which are designed to acquaint students with these fundamental principles. The second half of the course will be primarily case-oriented.

FINE 7160 Investments & Asset Pricing (3 Credit Hours)
This course covers portfolio theory and practice, equity valuation (behavioral versus market efficiency), and asset pricing models. The course also provides an introduction to derivatives (futures and options) and discusses basic hedging.

Prerequisite(s): FINE 6010, 6050 or 6020.
FINE 7180 Financial Modeling (3 Credit Hours)
This hands-on course focuses on the applications of quantitative models in finance. Course topics include: mathematical and computational models of stock price movements involving stochastic processes; applications of probability theory to portfolio risk analysis; modeling of cash flows and valuation; Monte Carlo simulation applied to both investments and cash flow modeling; applications of numerical optimization in finance; and use of Excel and Python for computation, statistics, and graphics in finance.

Prerequisite(s): FINE 6010, 6050 or 6020.
FINE 7210 Real Estate PIn,Finc,Dev (3 Credit Hours)
This course focuses on the real estate development process including: land acquisition, zoning, environmental impacts, valuation, financing alternatives, risk assessment, construction, management, leasing, and sale. Real estate decision making under changing economic conditions, environmental expectations, and tax legislation is also discussed.

Prerequisite(s): FINE 6020 or 6050.
FINE 7250 Real Estate Indus Sem (3 Credit Hours)
FINE 7310 Cases In Real Estate (3 Credit Hours)
This course explores the real estate development process in detail, from inception of an idea through construction completion and property management. Real-life case studies, group discussion, and lectures are the primary teaching methods. Student teams present development proposals at the conclusion of the course.

FINE 7340 A Selber Jr on Distressed Debt (3 Credit Hours)
This course introduces students to the broader field of alternative investing through an in-depth analysis of distressed debt investment opportunities. As part of the course, students will study a variety of applied case studies as well as relevant academic research papers on the subject. Leading practitioners in the alternative investment industry will visit the class as guest lecturers and mentors as students build their foundation of knowledge. Ultimately, students will work in teams to develop a pitch book that will analyze a distressed company and "pitch" an idea for investment in that company's debt and/or equity through a variety of strategies that will be discussed during the course.

Note: Students must apply for enrollment in this course.

FINE 7350 Aaron Selber Jr on Hedge Funds (3 Credit Hours)
Prerequisite: FINE 7130 and concurrent enrollment in FINE 7110. This course introduces students to the broader field of alternative investing through an in-depth analysis of hedge fund investments. As part of the course, students will study a variety of applied case studies as well as relevant academic research papers on the subject. Leading practitioners in the hedge fund investment industry will visit the class as guest lecturers and mentors as students build their foundation of knowledge. Ultimately, students will work in teams to develop a prospectus for a hypothetical new hedge fund. Students will compete in a simulated conference to raise committed capital for their newly-created hedge fund. Note: Students must apply for enrollment in this course.

Prerequisite(s): (FINE 7110 and 7130) or FINE 7160.
* May be taken concurrently.
FINE 7360 Hospitality Real Estate Dev (3 Credit Hours)
FINE 7510 Econometrics and Forecasting (3 Credit Hours)
This course covers advanced regression techniques. The basic regression model is reviewed in the first week, and then more advanced techniques are covered. Topics include testing the assumptions of the regression model, multicollinearity, serial correlation, heteroskedasticity, endogeneity, stability, instrument variables, binary variables, ARCH, forecasting, and basic time-series regression models for both stationary and nonstationary data.

FINE 7530 Burkenroad Rpts for Fin Analys (3 Credit Hours)
In this course, students will review the fundamentals of equity valuation, including dividend discount and discounted cash flow models, rational analysis of performance, and evaluating future growth prospects. The course provides students with a valuable opportunity to gain hands-on experience in equity analysis by participating in Burkenroad Reports. Student analysts work in small teams, visiting company sites, meeting with top management, conducting financial analysis, and preparing an in-depth investment research report on selected under-followed companies in the region. Students also participate in a weekend analyst workshop and the annual Burkenroad Reports Investment Conference. Note: Students must apply for enrollment in this course.

FINE 7600 Valuation & Financing Enterpri (3 Credit Hours)
This course studies advanced corporate valuation using discounted cash flow, comparables, and option techniques. The focus first is on valuation methods that include net present value/weighted average cost of capital, adjusted present value, capital cash flow, option value, equity cash flow, multiples, and comparables. The valuation methods will be applied to various forms of corporate investment, including new investment decisions, acquisitions, restructuring transactions including mergers and acquisitions, divestitures, and LBOs/MBOs. Examination of valuation in an international/cross-border setting, in a project finance setting, and of real options may also be examined.

Prerequisite(s): FINE 6010.
FINE 7610  
Dawn Fennr Student Fund  (3 Credit Hours)  
This course combines academic study with actual investing. As part of the course, students manage a small-cap portfolio of stocks for the University endowment. The following topics are discussed: market efficiency, abnormal returns, factor models, interpretation of multiple regression outputs, relative valuation applied to industry and company analysis, portfolio theory, portfolio performance evaluation, and portfolio mean-variance optimization. State-of-the-art academic research papers and classic writings that have significantly influenced equity investing are studied. The assigned readings focus on empirical evidence regarding security and portfolio risk and returns. Through reading and discussing research papers and classic writings, students develop a critical thinking process and build proprietary investment models. Using their models, students analyze the S&P 600 stocks in their assigned sector and give a buy, do not buy, hold, or sell recommendation on each stock. Students are also free to develop market-wide investment models to use across market sectors. Note: Students must apply for enrollment in this course.  
Prerequisite(s): FINE 7160.  
FINE 7630  
Equity Analysis/Freeman Report  (3 Credit Hours)  
Teams consisting of four students will create a sell side analyst report for a firm. This will include building a proforma model of the financial statements of a firm in Excel. The firms that are chosen will be in the energy industry or the financial industry. Students will have an opportunity to pose questions to management of the firms they cover. Students must attend a mandatory modeling weekend program run by an industry leader in such training. Burkenroad Reports does NOT serve as a substitute for this course.  
Prerequisite(s): FINE 7160.  
FINE 7640  
Valuation  (3 Credit Hours)  
This course is designed to teach students the important elements of corporate valuation using discounted cash flow, comparables, and option techniques. The focus is on valuation methods that include various discounted cash flow models, adjusted present value, economic value added model, relative valuation, and real option valuation. Through case studies, students will learn to apply these valuation skills under different settings, such as evaluating new investment decisions, IPOs, mergers and acquisitions, divestitures, and LBOs. This class will also advance students’ knowledge on the latest academic research in corporate finance, and bridge the gap between academic studies and business practices. Problem-solving skills are emphasized throughout the course in keeping with the Freeman School’s “learning by doing” mission. Students will work on various cases and analyze real life companies.  
Prerequisite(s): FINE 6050.  
FINE 7650  
Fixed Income Analytics & Model  (3 Credit Hours)  
This course will cover the following topics: (1) Surveys of markets (money market, fixed income, repos, federal funds), (2) Fixed income analytics (yield curves, term structure, spot and forward curves), (3) Models of term structure (such as Gauss X model, Nelson Siegel model), (4) Analytical models (1 factor, multi-factor), and (5) Credit derivatives (swaps, structured products, and credit derivatives).  
Prerequisite(s): FINE 6050.  
FINE 7660  
Risk Mgmt and App Finan Firms  (3 Credit Hours)  
This course includes the key elements of classic corporate risk management and covers the pricing and use of derivative securities to manage corporate risk. Applications of the use of derivative securities to manage risk will have an emphasis on the use of derivative securities to manage the corporate risk of financial institutions. Business cases and simulations reinforce key concepts and focus on the practical application of risk management tools. This course is timely due to the recent Dodd-Frank Act and Basel 3. Topics will include Value-at Risk (VaR), sensitivity analysis (and its connection to regulatory capital requirements), stress testing, and credit risk management. Students will complete an empirical project that will include a VaR Analysis Report utilizing stress testing.  
Prerequisite(s): FINE 7160.  
FINE 7670  
Risk Mgmt and App to Enrg Firm  (3 Credit Hours)  
This course includes the key elements of classic corporate risk management and covers the pricing and use of derivative securities to manage corporate risk. Applications of the use of derivative securities to manage risk will have an emphasis on the use of derivative securities to manage the corporate risk of energy firms. Business cases and simulations reinforce key concepts and focus on the practical application of risk management tools. Topics will include derivatives pricing, hedging, volatility and correlation modeling, Value-at-Risk (VaR), and stress testing. Students will complete an empirical project using various risk management tools.  
Prerequisite(s): FINE 7160.  
FINE 7690  
Topics In Int’L Finance  (3 Credit Hours)  
FINE 7900  
Assessment of Program Learning  (0 Credit Hours)  
During the spring semester, all MFIN students are required to take an assessment exam, which is administered by the Freeman School Graduate Programs Office. The exam is designed to measure the level of MFIN program content mastery, as defined by the assurance of learning standards set by the MFIN Curriculum Committee.  
FINE 7950

French (FREN)

FREN 0100  France Summer Program, Paris (0 Credit Hours)
France Summer Program, Paris.

FREN 1010  Elementary French I (4 Credit Hours)
An introduction to the five skills of language acquisition: reading, writing, listening, speaking, and cultural understanding.
Prerequisite(s): minimum score of PASS in 'FREN 1010 Placement'.

FREN 1020  Elementary French II (4 Credit Hours)
A continuation of the objectives presented in French I.
Prerequisite(s): minimum score of PASS in 'FREN 1020 Placement', FREN 1010, 1010 or 1010.

FREN 1290  Semester Abroad (1-20 Credit Hours)
Semester abroad.

FREN 1890  Service Learning: FREN 1010 (0-1 Credit Hours)
Service Learning FREN 1010.

FREN 1891  Service Learning: FREN 1020 (0-1 Credit Hours)
Service Learning FREN 1020.

FREN 1940  Transfer Coursework (3 Credit Hours)
Transfer Coursework.

FREN 2030  Intermediate French (4 Credit Hours)
Intermediate French language with emphasis on reading, conversation, and composition.
Prerequisite(s): minimum score of PASS in 'FREN 2030 Placement', FREN 1020, 1020 or 1020.

FREN 2130  Inter French Conversat (2 Credit Hours)
Intermediate French conversation.

FREN 2990  Foreign Language Exemption (0 Credit Hours)
Foreign Language Exemption.

FREN 3010  Topics French Cultr Stud (3 Credit Hours)
Topics in French Cultural Studies.

FREN 3011  Topics French Cultr Stud (3 Credit Hours)
Topics in French Cultural Studies.

FREN 3030  French/Franco Women Tran (3 Credit Hours)
Introduction to works by major French and/or Francophone women writers in translation. The course may focus on works by contemporary women writers, or examine texts from a range of historical periods. The issues raised in this course may include: the material conditions in which women have written; problems of publication; the specificity of women's writing; the conceptualization of gender: gender, race, and class.

FREN 3040  African & Caribbean Lit (3 Credit Hours)
An introduction to African and Caribbean literature, cinema, and other forms of cultural production and an exploration of movements and concepts such as Nègritude, Créolité, diaspora, and hybridity. Readings and discussion entirely in English.

FREN 3050  Literature In Exile (3,4 Credit Hours)
A presentation of recent works by writers born in the French-speaking former colonies of Africa and the Caribbean, but living and writing elsewhere (e.g., Paris, Montreal, Brooklyn). Some of the questions the course will endeavor to answer are: What happens to cultures when they are displaced? How does one conceive of home when in exile, and is it possible to return? Is rootlessness a source of creativity, or a detriment to it? Reading and discussions entirely in English.

FREN 3060  Business French (3 Credit Hours)
Practical reading, writing, speaking, and listening comprehension skills at an advanced level will be developed toward use of French for business purposes. Emphasis will be placed on oral and written communication in simulated business situations. (Prerequisite: FREN 3150 Advanced French Grammar and Composition or equivalent).
Prerequisite(s): FREN 3150 or minimum score of PASS in 'FREN 3000 Level Placement'.

FREN 3110  The French Cinema (3 Credit Hours)
French film from its origins in 1895 to the present. Early film, technology, and physiology: the Lumière, Marey, Méliès; classic French cinema: Renoir, Gance. The French New Wave: Resnais, Truffaut, Godard, and others. Avant-garde, surrealism, and science.

FREN 3140  French Phonetics (3 Credit Hours)
The study of the sound system of French for improving pronunciation. Students learn the fundamental concepts of phonetics, phonemics, and contrastive analysis while also practicing French pronunciation and learning to convert French spelling into phonetic transcription using the International Phonetic Alphabet. Independent work in the language laboratory is an important component of the course.
Prerequisite(s): FREN 3150, 3150, 3150 or minimum score of PASS in 'FREN 3000 Level Placement'.

FREN 3150  Adv French Through Media I (3 Credit Hours)
French 2030 may be taken concurrently. A thorough and comprehensive review of French grammar, including principles and distinctions not usually covered in lower and intermediate courses. Mastery of principles will be reinforced through oral and written class drill, frequent testing, and directed composition.
Prerequisite(s): minimum score of PASS in 'FREN 3150 Placement', minimum score of PASS in 'FREN 3000 Level Placement', minimum score of PASS in 'Greater than FREN 2030', FREN 2030, 2030 or 2030.

FREN 3160  Adv French through Media II (3 Credit Hours)
This course is a continuation of the objectives set in FREN 3150: it is designed to reinforce communicative skills in French at the advanced level through exposure to authentic written, visual, and oral documents dealing with French and Francophone cultures. The course offers a thorough review of French grammar, vocabulary, and pronunciation, while further developing students' media analysis skills.
Prerequisite(s): FREN 3150 or minimum score of PASS in 'FREN 3160 Placement'.
FREN 3170 Francophone Visual Cultures (3 Credit Hours)
Students will improve their listening comprehension of French, improve their oral performance, and gain familiarity with aspects of contemporary French society through the study of film, television, the news media, etc. Students will acquire an active knowledge of new vocabulary and develop a greater sensitivity to the distinctions between various levels of language.

Prerequisite(s): FREN 3150 or minimum score of PASS in 'FREN 3170 Placement'.

FREN 3210 Intro To Lit Analysis (3 Credit Hours)
The course provides students with the requisite tools of literary interpretation and analysis. By reading closely a variety of literary texts drawn from different periods and genres, students will become familiar with the fundamentals of criticism and poetics.

Prerequisite(s): FREN 3150, minimum score of PASS in 'FREN 3000 Level Placement', minimum score of PASS in 'FREN 3210 Placement', FREN 3150 or 3150.

FREN 3250 Fren Society & Inst (3 Credit Hours)
An introduction to French society and the institutions that shaped it. Using periodization to define particular historical movements such as the Gallo-Roman period, the Middle Ages, the Renaissance, Enlightenment, revolutionary France, and the Third Republic, the course focuses on historical and architectural sites in Paris and the provinces to consider issues of French identity.

Prerequisite(s): minimum score of PASS in 'FREN 3250 Placement', minimum score of PASS in 'FREN 3000 Level Placement', FREN 3150, 3150 or 3150.

FREN 3330 Spec Top Fr Lit In Trans (3 Credit Hours)
Subject varies with instructor. May treat a particular literary period, a genre, or a subject, e.g., fatal love in French literature.

FREN 3890 Service Learning: FREN 3150 (0-1 Credit Hours)
Service Learning FREN 3150.

FREN 3891 Service Learning: FREN 3170 (0-1 Credit Hours)
Service Learning FREN 3170.

FREN 3940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

FREN 4010 French Short Story (4 Credit Hours)
Selected stories by some of the masters of the genre: Marie de France, Bonaventure des Periers, Charles Perrault, Voltaire, Guy de Maupassant, Albert Camus. The emphasis in this course will be placed on reading comprehension, vocabulary building, and development of oral and written proficiency as well as on the application of the analytic skills learned in French 3210.

Prerequisite(s): FREN 3210 *, 3210 * or 3210 *.

May be taken concurrently.

FREN 4050 Teaching French (3 Credit Hours)
“Teaching French” is a seminar and practicum course providing opportunities for Teaching Assistants (TAs) and advanced undergraduates considering a career in teaching to acquire skills in teaching methodologies and strategies specific to teaching French.

Prerequisite(s): FREN 3210, 3210, 3210 or 3210.

FREN 4060 Professional French (3 Credit Hours)
FREN 4060-01 is an advanced course in professional French. It is designed for French majors or for students in the 5-year combined B.A. and M.A. program in French. Prerequisite: FREN-3150. Course cross-registered with this course: FREN-6060-01. To gain further professional experience, students at the 6000 level have the possibility to undertake an optional 60-hour, 3-credit internship (FREN-6560-01) with a local French or French-related company.

FREN 4080 French Around the World (3 Credit Hours)
A linguistic survey of the Francophone world, with particular focus on French outside of France. The course begins with a historical look at the spread of French within and beyond Europe, then examines in turn the major French-speaking populations of Europe, North America, the Caribbean, Africa, the Indian Ocean, Southeast Asia, and the Pacific. While linguistic variation in each region will be considered, the main emphasis will be on sociolinguistic issues such as bilingualism and language contact, language politics and planning, linguistic insecurity, and language in education. Option for the major and minor in French.

Prerequisite(s): minimum score of PASS in 'FREN 4000 Level Placement' or FREN 4010.

FREN 4100 French In Louisiana (3 Credit Hours)
An introduction to the French-related language varieties spoken in Louisiana: Cajun, Creole and Colonial French. Examines the history of their implantation and development in Louisiana, their basic structural features, and the main sociolinguistic issues surrounding their use. Attention will also be given to language planning measures currently being taken to revitalize the French language in the state.

Prerequisite(s): FREN 3210, 3210 or 3210.

FREN 4110 Fld Res on French in LA (3 Credit Hours)
Students will interview and record speakers of Cajun, Creole, and Colonial French in various parts of Louisiana. Working individually and in groups, they will then transcribe the recordings for purposes of linguistic description and analysis.

Prerequisite(s): FREN 3140.

FREN 4160 Translation Thy & Prac (3 Credit Hours)
This course will provide students with the tools to translate a variety of types of texts (mostly literary, but also legal, journalistic, commercial, etc.) and to introduce them to translation theory as it relates to the problem of translating cultural difference and to the issues of originality, authorship, and the ownership of the text. Students will translate from French to English as well as from English to French. Course taught principally in English. Reading knowledge of French required.

Prerequisite(s): FREN 3210, 3210, 3210 or 3210.

FREN 4180 French Poetry (3 Credit Hours)
Develop literacy in poetic genres, historical movements, figurative language, and interpretation.

Prerequisite(s): FREN 3210, 3210 or 3210.

FREN 4210 History of French Language (3 Credit Hours)
This course traces the history of the development of the French language from Latin into francien of the 12th and 13th centuries. It also serves as an introduction to Old French (francien).

Prerequisite(s): FREN 3150.
FREN 4220 Medieval Frn Literature (3 Credit Hours)
Readings in modern translation of such works as La Chanson de Roland, the lais of Marie de France, Chrétien de Troyes' Lancelot, Béroul's Tristan, Aucassin et Nicolette and the poetry of François Villon.
Prerequisite(s): FREN 3210, 3210 or 3210.

FREN 4320 Renaissance Literature (3 Credit Hours)
A survey of representative works of outstanding authors of the period: Marot, Rabelais, Ronsard, Du Bellay, Montaigne, and D'Aubigné. Both poetry and prose will be studied against the backdrop of the history and civilization of the Renaissance in France.
Prerequisite(s): FREN 3210, 3210 or 3210.

FREN 4410 17th Century French Lit (3 Credit Hours)
Currents of French Classicism, with particular emphasis on Moralists and aesthetics. Authors include Boileau, Descartes, Pascal, La Bruyère, La Fontaine, and La Rochefoucauld.
Prerequisite(s): FREN 3210, 3210 or 3210.

FREN 4420 17th Century Drama (3 Credit Hours)
Corneille, Molière, Racine. Utilizes videos of Comédie-Française performances. Development of critical sense through discussion.
Prerequisite(s): FREN 3210, 3210 or 3210.

FREN 4510 Topics In 18th Cent Lit (3 Credit Hours)
Advanced study of 18th-century literature and culture focusing on a specific theme, genre, or problematic. In addition to addressing a specific theme or area of study, this course offers fairly broad coverage of the canonical works of the period. A writing practicum is available in conjunction with this course. Taught in French unless otherwise noted in the Schedule of Classes.
Prerequisite(s): FREN 3210, 3210 or 3210.

FREN 4520 Eighteenth-Century Lit (3 Credit Hours)
An introduction to the Enlightenment through readings in the experimental genres developed in the 18th century. Authors include Marivaux, Prévost, Montesquieu, Rousseau, Voltaire, Diderot, and Beaumarchais.
Prerequisite(s): FREN 4010.

FREN 4560 Internship (1-3 Credit Hours)
An experiential learning process coupled with pertinent academic course work. Registration is completed in the academic department sponsoring the internship on TUTOR.

FREN 4570 Internship (1-6 Credit Hours)
An experiential learning process coupled with pertinent academic course work. Registration is completed in the academic department sponsoring the internship on TUTOR.

FREN 4620 19th Century Novel (3 Credit Hours)
Representative novels of such authors as Chateaubriand, Constant, Stael, Stendhal, Balzac, Sand, Hugo, Nerval, Flaubert, the Goncourt, Zola.
Prerequisite(s): minimum score of PASS in 'FREN 4000 Level Placement' or FREN 4010.

FREN 4720 20th Century French Lit (3 Credit Hours)
An exploration of the prose and poetic inventions of the 20th century, read within the contexts of contemporary literary and art movements (modernisms surrealisms, formalisms), political and social history, and French post-structuralist theory.
Prerequisite(s): FREN 4010.

FREN 4740 20th Century Drama (3 Credit Hours)
An exploration of French theater writing and practice from the turn-of-the-century avant-garde through the new theater forms invented across the century, including the so-called Theater of the Absurd, film scenarios, and post-modern. Readings include works by Jarry, Artaud, Cocteau, Sartre, Ionesco, Beckett, Genet, Duras, and Cixous.
Prerequisite(s): FREN 3210, 3210 or 3210.

FREN 4750 The Avant-Garde (3 Credit Hours)
The history and theory of the avant-garde, from the movements of the early 20th century to today. We will explore the art, performances, poetics and manifestos of the so-called "historic" avant-gardes of a century ago, including the well-known antics of Dada (Zurich and Paris), Surrealist practices based first in Paris and eventually all over the world, Italian Futurism, visual arts and cinema (Cubism, etc.) and the London-based groups of writers working in Imagism and Vorticism.
Prerequisite(s): FREN 3210, 3210 or 3210.

FREN 4800 Survey of Francophone Lit (3 Credit Hours)
A lecture and discussion course on the historical and aesthetic evolution of the Francophone literature of Africa, the Maghreb, and the Caribbean. The creative works will be explored in the socio-political framework of colonization and decolonization as well as in terms of their own intrinsic qualities.
Prerequisite(s): FREN 3210, 3210 or 3210.

FREN 4810 Special Topics (3 Credit Hours)
Special Topics in French. Note: A writing practicum is available. French majors may use it to fulfill the college intensive-writing requirement.
Prerequisite(s): FREN 4110 Special Topics (3 Credit Hours)
Special Topics in French

FREN 4820 Special Topics (3 Credit Hours)
Special topics in French

FREN 4840 Phil Francoph Litr Pol (3 Credit Hours)
This course examines the role of the imagination in the constitution and renewal of institutions as those modalities of institutions are represented in Francophone literature and in postcolonial politics. The course draws on literary, philosophical, and political texts.
Prerequisite(s): FREN 3210, 3210 or 3210.

FREN 4890 Service Learning: FREN 4110 (0-1 Credit Hours)
Service Learning for FREN 4110

FREN 4891 Service Learning: FREN 4050 (1 Credit Hour)
Service Learning for FREN 4050.

FREN 4910 Independent Study FREN Ling (1-3 Credit Hours)
Subject varies with instructor. Principally reading and research.

FREN 4920 Independent Studies (3 Credit Hours)
Subject varies with instructor. Principally reading and research.
FREN 6110  Honors Thesis (3 Credit Hours)  
Honors Thesis.

FREN 5000  Honors Thesis (4 Credit Hours)  
Honors Thesis.

FREN 5190  Semester Abroad (1-20 Credit Hours)  
Semester abroad.

FREN 5380  Junior Year Abroad (1-20 Credit Hours)  
Junior year abroad.

FREN 5390  Junior Year Abroad (1-20 Credit Hours)  
Junior year abroad.

FREN 5940  Transfer Coursework (0-4 Credit Hours)  
Transfer Coursework.

FREN 5950  Senior Seminar (3,4 Credit Hours)  
Content is consistently broad in scope and either thematic or generic in orientation, e.g., theme of the quest from the Middle Ages to the 20th century; the evolution of genre, i.e., the lyric poem, from its medieval beginnings to the present. Offered each fall. Required for the major.

FREN 5990  French For Reading Knowledge (0 Credit Hours)  
French for Reading Knowledge.

FREN 6010  Graduate Writing Workshop (3 Credit Hours)  
This 3-credit course helps students enrolled in the graduate program of the Department of French and Italian sharpen their skills in academic writing by studying the argumentation and style of French- and English-language critical texts, independently developing an article-length scholarly work of publishable quality for a specific journal, and working drafts of this project.

FREN 6050  Teaching French (3 Credit Hours)  
See FREN 4050 for course description.

FREN 6060  Professional French (3 Credit Hours)  
FREN 6060-01 is an advanced course in Professional French. It is designed for French majors or for students in the 5-year combined B.A. and M.A. program in French. Prerequisites: FREN 4010.

FREN 6070  Survey of French Linguistics (3 Credit Hours)  
This course introduces students to the field of linguistics as applied to French. Taking a broad approach, we will examine the major structural components of the language—phonological, morphosyntactic, and lexical—as well as sociolinguistic matters such as variation in the language (based on region, social group, style, or other factors), French speakers' attitudes towards their language, and the question of a linguistic norm in French. No prior study of linguistics is required for this course.

FREN 6085  Pidgins and Creoles (3 Credit Hours)  
An overview of the world's pidgin and creole languages and a survey of the theories of their origins.

FREN 6100  French in Louisiana (3 Credit Hours)  
See FREN 4100 for course description.

FREN 6110  Fld Res on French in LA (3 Credit Hours)  
See FREN 4110 for course description.

FREN 6150  Intro. Critical Theory (3 Credit Hours)  
Exploration of some of the principal linguistic, anthropological, psychoanalytic, philosophical, and sociological currents informing recent approaches of literature and culture.

FREN 6160  Translation Thy & Prac (3 Credit Hours)  
See FREN 4160 for course description.

FREN 6180  French Poetry (3 Credit Hours)  
Develop literacy in poetic genres, historical movements, figurative language, and interpretation. In French.

FREN 6210  History of French Language (3 Credit Hours)  
The development of Latin into French and subsequent evolution of the latter through the Old French period.

FREN 6220  Medieval French Lit (3 Credit Hours)  
See FREN 4220 for course description.

FREN 6310  Eighteenth-Century Lit (3,3 Credit Hours)  
See FREN 4320 for description.

FREN 6320  Renaissance Prose (3 Credit Hours)  
See FREN 4420 for description.

FREN 6410  17th Cent French Lit (3 Credit Hours)  
See FREN 4410 for description.

FREN 6510  Topics in 18th Cent Lit (3 Credit Hours)  
See FREN 4510 for course description.

FREN 6520  Eighteenth-Century Lit (3 Credit Hours)  
See FREN 4520 for course description.

FREN 6610  19th Century Prose I (3 Credit Hours)  
Prose writers of the first half of the 19th century. Emphasis on the social and political context of post-revolutionary France, theories of fiction and the concurrent rise of the novel, history, and autobiography.

FREN 6620  19th Century Prose II (3 Credit Hours)  
See FREN 4620 for course description.

FREN 6630  19th Century Poetry (3 Credit Hours)  

FREN 6650  Romanticism (3,3 Credit Hours)  
Study of the Romantic Movement and authors such as Bernardin de Saint-Pierre, Stael, Chateaubriand, Desbordes-Valmore, Laurantine, Balzac, Tristan, and Sand.

FREN 6720  20th Century French Lit (3 Credit Hours)  
See FREN 4720 for course description.
FREN 6750 The Avant-Garde (3 Credit Hours)
The history and theory of the avant-garde, from the movements of the early 20th century to today. We will explore the art, performances, poetics and manifestos of the so-called "historic" avant-gardes of a century ago, including the well-known antics of Dada (Zurich and Paris), Surrealist practices based first in Paris and eventually all over the world, Italian Futurism, visual arts and cinema (Cubism, etc.) and the London-based groups of writers working in Imagism and Vorticism.

FREN 6800 Survey Francophone Lit (3 Credit Hours)
See FREN 4800 for course description.

Gender and Sexuality Studies (GESS)

GESS 1900 Sex, Power and Culture (3 Credit Hours)
This course invites students to learn the skills necessary to identify, analyze, and ultimately transform the cultural, social, and political forces that shape and are shaped by sex and sexuality. Approaching sexuality as a system of norms, values, beliefs, and patterns of interaction, students will learn how sexuality intersects with gender, race, age, ethnicity, religion, ability, and other axes of power and privilege. Students will be introduced to the current body of empirical data and theory to identify how these intersecting systems of power take shape in patterns of human interaction such as forming relationships, dating rituals and sexual scripts, and interpersonal conflict and violence. In sum, students will develop the skills to 1) analyze how their own interpersonal and intimate relationships are embedded within and constitutive of broader systems of power and 2) how to work individually and collectively to change them.

GESS 2190 Special Topics (3 Credit Hours)
Covers topics pertaining to the study of gender and/or sexuality

GESS 2900 Intro to Gender & Sex Studies (3 Credit Hours)
This course is an interdisciplinary introduction to gender and sexuality studies. Its primary focus is critical perspectives on the social construction of gender and sexuality, inequalities on the basis of gender and sexuality, activism around issues of gender and sexuality, and how gender and sexuality shape and are shaped by other systems of inequality such as race, ethnicity, class, religion, nation, region, and age.

GESS 3500 ID, Difference & Inequality (3 Credit Hours)
This course invites students to learn the skills necessary to identify, analyze, and ultimately transform the cultural, social, and political forces that shape and are shaped by sex and sexuality. Approaching sexuality as a system of norms, values, beliefs, and patterns of interaction, students will learn how sexuality intersects with gender, race, age, ethnicity, religion, ability, and other axes of power and privilege. Students will be introduced to the current body of empirical data and theory to identify how these intersecting systems of power take shape in patterns of human interaction such as forming relationships, dating rituals and sexual scripts, and interpersonal conflict and violence. In sum, students will develop the skills to 1) analyze how their own interpersonal and intimate relationships are embedded within and constitutive of broader systems of power and 2) how to work individually and collectively to change them.

Prerequisite(s): GESS 2900.

GESS 3890 Service Learning: GESS 3500 (0-1 Credit Hours)
Students complete a service activity in the community in conjunction with the content of a three-credit core course.
Independent studies may be applied toward the major in Gender and Sexuality Studies and three credits toward the minor. Cultural contexts, how those constructions have transformed over time, and what factors account for those changes. All of our critical inquiries will attend to the ways in which race, class, gender, religion, market and market and power intersect with the history of sexuality. Exploring theories and practices of archives, the course takes students through the history of archives, with special attention to women as keeping, and represented in, scholarly collections.

**Prerequisite(s):** GESS 2900.

**GESS 4950 Gender & Sexuality Theory I (3 Credit Hours)**
This course is the first in a sequence of two courses (see GESS 4/6950) on feminist and queer theory. The primary goals of this course are 1) to provide an introduction to early feminist theories of patriarchy, women's oppression, and gender inequality, 2) to map the emergence of subsequent theories of the social construction of gender and gender difference including the sources, causes, and effects of gender inequality and strategies for reducing or eradicating inequality, and 3) identify how intersectional, postmodern, and queer thinkers enter into dialogue with and critique early feminist theorizing. <br/>

**Prerequisite(s):** GESS 3500 or 3500.

**GESS 4960 Gender & Sexuality Theory II (3 Credit Hours)**
This course is the second in a sequence of two courses on feminist and queer theory. The primary goals of this course are 1) to map the expansion of feminist and queer theory in recent decades, 2) critically engage with theories of gender, sexuality, race, and class to gain understanding of inequality and social change.

**Prerequisite(s):** GESS 4940 or 4940.

* May be taken concurrently.

**GESS 4990 Honors Thesis (3 Credit Hours)**
Honors Thesis.

**GESS 5000 Honors Thesis (4 Credit Hours)**
Honors Thesis.

**GESS 6940 Gender & Sexuality Theory I (3 Credit Hours)**
This course is the first in a sequence of two courses (see GESS 4/6950) on feminist and queer theory. The primary focus is critical engagement with social, political, and cultural theories of the social construction of gender and gender difference, and of the sources, causes, and effects of gender inequality and strategies for reducing or eradicating inequality. While emphasis will be placed on gender difference and inequality, substantial time will be spent on theories of how gender is implicated in and supported by other forms of inequality such as sexuality, race, ethnicity, and class.

**GESS 6950 Adv Sexuality & Queer Theory II (3 Credit Hours)**
This course is the second in a sequence of two courses on feminist and queer theory. The primary goals of this course are 1) to map the expansion of feminist and queer theory in recent decades, 2) critically engage with theories of gender, sexuality, race, and class to gain understanding of inequality and social change.

**Prerequisite(s):** GESS 6940 or 6940.

### General Legal Studies (GLSP)

**GLSP 2010 Intro to the Legal System (3 Credit Hours)**
Introduces students to the American legal system, including both civil and common law, and focusing upon the practical aspects of legal services. The course provides basic training in necessary skills, including vocabulary, interviewing and investigation, law office administration, legal document drafting, and litigation support. The course also addresses professional ethics, including but not limited to the unauthorized practice of law. Pre-requisite: ENGL 1010.

**Prerequisite(s):** (ENGL 1010, 1010, 1010 or 1010).
GLSP 3020  Legal Research (3 Credit Hours)
Provides hands-on training in the use of the law library, Westlaw, and other online and print resources for research; and teaches students to develop efficient, effective legal research strategies. Pre-requisite: ENGL 1010.

Prerequisite(s): ENGL 1010*, 1010, 1010 or 1010.

* May be taken concurrently.

GLSP 3030 Legal Writing (3 Credit Hours)
Builds upon the research and analytical skills developed in GLSP 3020 - Legal Research. Through written assignments, students are trained to draft motions, pleadings, correspondence, and other necessary legal documents. Pre-requisite: GLSP 3020.

Prerequisite(s): PARA 3020 or GLSP 3020.

GLSP 3050 Litigation I (3 Credit Hours)
Introduces students to litigation in the U.S. federal and state courts, including both the civil and common law systems. In addition to learning applicable terminology and analyzing jurisdiction and venue, students perform client interviews and investigations; draft initial pleadings; plan for motion practice; and develop skills in calendaring, file management, document production, depositions, and other aspects of discovery. Lectures are supplemented with practical exercises in the drafting of legal documents, including pleadings, motions, memoranda, and discovery documents. Pre-requisite: ENGL 1010.

Prerequisite(s): ENGL 1010*, 1010, 1010 or 1010.

* May be taken concurrently.

GLSP 3060 Litigation II (3 Credit Hours)
Develops knowledge of the U.S. state and federal court systems in greater depth, using the theory-of-the-case approach to train students in the procedural, evidentiary, and substantive rules governing civil litigation. Students develop skills in legal analysis, critical thinking, formal and informal advocacy, legal writing, rules of evidence, investigative techniques, post-trial rules and procedures. Lectures are supplemented with practical exercises in the drafting of effective pleadings, motions, memoranda, and discovery documents. Pre-requireit: GLSP 3050.

Prerequisite(s): PARA 3050 or GLSP 3050.

GLSP 3070 Legal Technology (3 Credit Hours)
Through hands-on exercises and tutorials, students develop skills and knowledge in the use of the software applications and methods that firms use to support litigation and transactional practices, discovery and due diligence, case management, time-keeping, billing, and other vital law office functions. Pre-requisites: CPST 1000 or approval of Director.

Prerequisite(s): CPST 1000.

GLSP 4010 Busn & Corporate Practice (3 Credit Hours)
Students are introduced to business organizations and relationships, including sole proprietorships, agencies, partnerships, and corporations; and learn how paralegals function in corporate and business transactions. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

GLSP 4030 Louisiana Succession Practice (3 Credit Hours)
Through lectures and practical exercises, students develop knowledge of Louisiana's substantive law of successions and donations and the role of the paralegal within a successions practice. Students learn to draft simple wills and the pleadings necessary to probate wills, appoint executors, pay estate debts, sell or lease estate property, and transfer possession of inheritance to heirs; to perform the actions necessary to estate administration, including collection, legal description, appraisal of assets, and preparation of documents to transfer estate assets; and preparation and filing of Louisiana Inheritance Tax and Federal Estate Tax Returns. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

Prerequisite(s): (PARA 3030 or GLSP 3030) and (PARA 3060 or GLSP 3060) and (PARA 3070 or GLSP 3070).

GLSP 4040 Real Property Practice (3 Credit Hours)
Through lectures and practical exercises, students learn the basics of real estate practice and the role of the paralegal in real estate transactions, including retrieving and compiling property information; performing title searches; preparing preliminary abstracts and opinions of title, mortgages and transfer of ownership; requisitioning deeds and leases; and other paralegal functions associated with real estate negotiations and closings. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

Prerequisite(s): (PARA 3030 or GLSP 3030) and (PARA 3060 or GLSP 3060) and (PARA 3070 or GLSP 3070).

GLSP 4050 Family Law (3 Credit Hours)
Introduces students to current and projected issues in family law and the role of the paralegal in cases arising from marriage, children, and property. Through lectures and practical exercises, students learn to perform client interviews; analyze child support obligations, prepare pleadings for dissolution, support, and division of property; prepare cases for trial; supervise case progress; draft property settlements; trace assets; and other tasks. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

Prerequisite(s): (GLSP 3030 or PARA 3030) and (GLSP 3060 or PARA 3060) and (GLSP 3070 or PARA 3070) and (ENGL 1010, 1010, 1010 or 1010).

GLSP 4070 Immigration Law Practice (3 Credit Hours)
Through practical exercises and online discussions, this participative asynchronous online course introduces students to the development and enforcement of immigration law in the U.S., based upon the Constitution, federal laws, and social policies; the social institutions involved in immigration; and the administration of immigration benefits, including determination of citizenship, naturalization, and other types of immigration status. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

Prerequisite(s): GLSP 3030 or PARA 3030 and (GLSP 3060 or PARA 3060) and (GLSP 3070 or PARA 3070) and (ENGL 1010, 1010, 1010 or 1010).

GLSP 4080 Criminal Law (3 Credit Hours)
Provides an overview of the practice of criminal law, including criminal procedure and court rules, prosecutorial functions, probation, juvenile courts, mental commitment procedures, bail, and sentencing, with practical exercises to develop skills in performing investigations, discovery, alternative dispositions, and trial preparation. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

Prerequisite(s): GLSP 3030, 3060 and 3070.
GLSP 4090 Administrative Practice (3 Credit Hours)
Introduces students to governmental agencies and their promulgation and enforcement of the rules through which state and federal statutes have practical application. Through lectures and practical exercises, students learn to identify and analyze applicable rules, investigate relevant facts, draft responses and inquiries, submit requests under the Freedom of Information Act, review agency files, and perform other paralegal functions. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

Prerequisite(s): (PARA 3030 or GLSP 3030) and (PARA 3060 or GLSP 3060) and (PARA 3070 or GLSP 3070).

GLSP 4100 Advanced Legal Technology (3 Credit Hours)
Develops skills and knowledge regarding the paralegal's role in the organization and efficient operation of law offices, including accounting and billing procedures; hiring, scheduling, and managing non-attorney personnel; operating information storage and retrieval systems; maintaining office equipment; fostering client relations; and performing other necessary functions. Pre-requisite: GLSP 3070.

Prerequisite(s): (PARA 3030 or GLSP 3030) and (PARA 3060 or GLSP 3060) and (PARA 3070 or GLSP 3070).

GLSP 4120 Admiralty Practice (3 Credit Hours)
Explores the substantive laws governing maritime matters, as applied through federal and state regulations. Through lectures and practical exercises, students develop skills to assist in matters involving marine insurance; personal injury rights and liabilities; salvage, ship mortgages, and domestic and foreign towage regulations; and the drafting of bills of lading, limitations of liability, and other documents. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

GLSP 4140 Oil and Gas Law (3 Credit Hours)
Through lectures, introduces students to the state and federal laws governing the fossil fuel industry and other forms of regulated energy, addressing drilling, storage, transportation, and environmental and societal impacts. Practical exercises focus upon the role of the paralegal in the litigation, transactional, and regulatory matters that arise under energy laws. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

GLSP 4150 Commercial Law (3 Credit Hours)
Through lectures and practical exercises, students learn the role of the paralegal in the drafting, execution, and enforcement of contracts, mortgages, pledge assignments, and other security devices; allocation of liability; procedures for enforcement and collection; and other skills necessary to perform functions necessary to excel in a commercial practice. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

Prerequisite(s): GLSP 3030, 3060 or 3070.

GLSP 4160 Interviewing & Investigation (3 Credit Hours)
Through practical exercises, students learn principles, methods, techniques for identifying, obtaining, documenting, and disseminating information in civil and criminal actions; and develop the interviewing skills necessary to communicate effectively while avoiding ethical pitfalls. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

Prerequisite(s): (PARA 3030 or GLSP 3030) and (PARA 3060 or GLSP 3060) and (PARA 3070 or GLSP 3070).

GLSP 4170 Advanced Legal Technology (3 Credit Hours)

GLSP 4180 Bankruptcy (3 Credit Hours)
Through practical exercises and online discussions, this participative asynchronous online course introduces students to the U.S. Bankruptcy system, including the development of the U.S. Bankruptcy Code, Federal Rules of Bankruptcy Procedure, the Bankruptcy Court, and the U.S. Trustee system. Assignments focus upon the practical role of the paralegal in cases arising under Chapter 7, Chapter 13, and Chapter 11 of the Bankruptcy Code, including the drafting of pleadings and use of the electronic filing system. The course also explores ethical issues, such as a debtor's right to a fresh start versus a creditor's right to a meaningful distribution. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

Prerequisite(s): (PARA 3030 or GLSP 3030) and (PARA 3060 or GLSP 3060) and (PARA 3070 or GLSP 3070).

GLSP 4190 Legal Ethics (3 Credit Hours)
Through practical exercises and online discussions, this participative asynchronous online course examines the professional and ethical dilemmas legal professionals face and compares the ethical rules and professional standards developed by the American Bar Association, adopted by Louisiana and presented as guidelines by the two major paralegal associations. The course contrasts the real–life expectations and responses of legal professionals with fictional scenarios portrayed in the media and explores the impact of movies and television upon public perception. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4220 Insurance Law Practice (3 Credit Hours)
This participative asynchronous online course introduces students to the laws governing and legal actions arising under various types of insurance contracts in Louisiana and other states. Through practical exercises and online discussions, students learn to perform the paralegal tasks necessary to the claims process, litigation, defense, and case management; and to identify the issues of ethics and professionalism that arise in an insurance practice. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

GLSP 4230 Pro Bono Practice (3 Credit Hours)
Through lectures and on-site interviews, students are introduced to the governmental and private agencies that provide legal services free of charge to disadvantaged persons, while practical exercises develop the skills necessary for the tasks typically assigned to paralegals in pro bono practice. Pre-requisites: GLSP 3030, 3050 and 3060 or approval of Director.
GLSP 4280 Personal Injury - Malpractice (3 Credit Hours)
Through practical exercises and online discussions, this participative asynchronous online course addresses the prosecution and defense of personal injury and medical malpractice actions under tort and insurance laws, the Louisiana Medical Malpractice Act, and other applicable laws. Practical exercises develop the skills necessary for assisting in personal injury law practice, including organizing and maintaining files, drafting pleadings, obtaining and summarizing medical records, performing factual investigations and other necessary functions. Pre-requisites: GLSP 3030, 3050 and 3060 or approval of Director.

Prerequisite(s): (GLSP 3030 or PARA 3030) and (GLSP 3060 or PARA 3060) and (GLSP 3070 or PARA 3070) and (ENGL 1010, 1010, 1010 or 1010).

GLSP 4290 Medical Records Analysis (3 Credit Hours)
Lectures and hands-on exercises provide students with the skills and substantive knowledge necessary to obtain, review, summarize, and prepare medical records for use as evidence in litigation. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

GLSP 4300 Louisiana Notary Law Paralegal (3 Credit Hours)
Through lectures and practical drafting exercises, students learn the broad duties and powers of the Notary Public in Louisiana, focusing upon the laws governing and documents drafted and/or authenticated by notaries in adoptions, emancipations, tutorships, interdictions, successions, wills, real estate transactions, mortgages, security interests, and other legal actions. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

GLSP 4310 Employment Law (3 Credit Hours)
Lectures and in-class discussions explore the state and federal laws governing employment in the U.S., focusing upon the disputes that may arise in the workplace. Through practical exercises, students learn best practices for establishing, maintaining and terminating the employment relationship; evaluating employment claims; and identifying ethical practices. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

GLSP 4320 Health Care Compliance (3 Credit Hours)
Through lectures, students develop an understanding of the interaction among insurance, physician-patient relationships, medical records, bioethics, privacy and security, ethical issues, Medicare, and other state and federal laws governing the healthcare industry. Practical exercises develop the skills necessary for employment in law firms, governmental agencies, healthcare corporations, and other businesses in the healthcare industry.

GLSP 4330 White Collar Crime (3 Credit Hours)
Lectures and reading assignments explore white collar crime and enforcement in depth, focusing upon federal laws and the nature of corporate, federal and state governmental, environmental, and economic crimes and their economic and sociological impacts. Practical exercises detail the inter-related roles of prosecutors, defense attorneys, and paralegals in the investigation and prosecution of white collar crime. Pre-requisites: GLSP 3030, 3060 and 3070 or approval of Director.

Prerequisite(s): (PARA 3030 or GLSP 3030) and (PARA 3060 or GLSP 3060) and (PARA 3070 or GLSP 3070).

GLSP 4340 Social Security Practice (3 Credit Hours)
Lectures and practical exercises develop a broad knowledge of social security disability laws and legal actions, including the claims evaluation process, the claimant's right to representation, disability benefits for children, SSI benefits during the application process, proof of disability, the duties and responsibilities of Administrative Law Judges (ALJs), and the paralegal's role in preparing applications and assisting clients throughout the disability claims process. Pre-requisites: GLSP 3030, 3060 and 3070 or approval of Director.

Prerequisite(s): (PARA 3030 or GLSP 3030) and (PARA 3060 or GLSP 3060) and (PARA 3070 or GLSP 3070).

GLSP 4350 Law in American Society (3 Credit Hours)
Through practical exercises and online discussions, this participative asynchronous online course introduces students to the interplay between America's legal system and social structure, providing a detailed analysis of the impact of the legal system upon social, economic, and political relationships. Via interactive assignments, students analyze the functions of the federal and state courts and the availability of justice to citizens of varying socioeconomic means. Pre-requisite: ENGL 1010.

Prerequisite(s): ENGL 1010.

GLSP 4370 Workers Compensation (3 Credit Hours)
This course provides students with knowledge of the basic structure of Workers Compensation Law, hearings and appeals system, the nature and types of litigation arising from Workers Compensation claims, and the role of the paralegal in assisting clients in submitting applications for Workers Compensation benefits and participating in other aspects of the claims process.

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4380 Evidence Law (3 Credit Hours)
This course provides an overview of the Federal Rules of Evidence and related common law rules, along with the underlying constitutional provisions and evolving caselaw addressing the procurement, development, and admissibility of evidence in civil and criminal matters. Pre-requisites: GLSP 3030, 3060 and 3070 or approval of Director.

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 5500 Selected Topics (3 Credit Hours)
These upper level General Legal Studies courses introduce new legal specialty courses to the curriculum. Courses are chosen based upon levels of legal activity, interest in the practice areas, and new trends in law practice. Topics previously presented in this format and recently added to the course inventory include White Collar Crime, Social Security Disability Practice, Workers Compensation, and Evidence. Pre-requisites: GLSP 3030, 3060 and 3070, or approval of Director.

Prerequisite(s): (PARA 3030 or GLSP 3030) and (PARA 3060 or GLSP 3060) and (PARA 3070 or GLSP 3070).
**Prerequisite(s):**

Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

**GEOL 2060  Introductory Geography  (3 Credit Hours)**

An introduction to the basic facts concerning the physical environment: landforms, climates, vegetation and soils, followed by a comprehensive survey of the relationship between the physical environment and human activity in the major geographic regions o

**GEOL 2890  Service Learning  (0-1 Credit Hours)**

Service learning component to GEOL courses. See Schedule of Classes each semester for offerings. 20 or 40 hours of public service with a CPS approved community partner.

**GEOL 3890  Service Learning  (0-1 Credit Hours)**

Service learning component to GEOL courses. See Schedule of Classes each semester for offerings. 20 or 40 hours of public service with a CPS approved community partner.

**German (GERM)**

**GERM 1010  Elementary German I  (4 Credit Hours)**

Development of basic language skills (listening, reading, speaking, and writing) with particular emphasis on the active use of present-day German. Cultural exploration of the German-speaking countries.

Prerequisite(s): minimum score of PASS in 'GERM 1010 Placement' or GERM 1010.

**GERM 1020  Elementary German II  (4 Credit Hours)**

Continuation of GERM 101. Continues the development of basic language skills (listening, reading, speaking, and writing) with particular emphasis on the active use of present-day German. Further exploration of the German-speaking countries.

Prerequisite(s): minimum score of PASS in 'GERM 1020 Placement' or GERM 1010.

**GERM 1120  Elem German Grammar Revw  (4 Credit Hours)**

In place of GERM 1010 and GERM 1020. Accelerated development of basic language skills (listening, reading, speaking, and writing) with particular emphasis on the active use of present-day German. Cultural exploration of the German-speaking countries.

**GERM 1190  Freshman Writing Seminar  (4 Credit Hours)**

Freshman Writing Seminar on varying topics. Consult department for details.

**GERM 1290  Semester Abroad  (1-20 Credit Hours)**

Semester Abroad.

**GERM 1470  German For Beginners  (1-4 Credit Hours)**

An Introduction to the fundamentals of the German language.

**GERM 1940  Transfer Coursework  (3 Credit Hours)**

Transfer Coursework.

**GERM 2030  Intermediate German  (4 Credit Hours)**

Continues to develop proficiency in the four language skills (listening, reading, speaking, and writing) at the intermediate level. Further introduces students to contemporary German culture.

Prerequisite(s): GERM 1020 or minimum score of PASS in 'GERM 2030 Placement'.

**GERM 2040  Intermed German II  (4 Credit Hours)**

German 204 is the fourth semester of intermediate language study, following 203, and is the first required course for German majors and minors. Advanced practice in all discourse skills. Conducted entirely in German. Class discussion of readings, grammar review, composition, theatrical exercises. Student-driven communicative approach.

**GERM 2390  Semester Abroad  (1-20 Credit Hours)**

Semester Abroad.

**GERM 2890  Service Learning: GERM 2030  (0-1 Credit Hours)**

Service Learning in conjunction with GERM 2030.

**GERM 2893  Service Learning: GERM 2030  (1 Credit Hour)**

Service Learning in conjunction with GERM 2030.

Corequisite(s): GERM 2030.

**GERM 2940  Transfer Coursework  (3 Credit Hours)**

Transfer Coursework.

**GERM 2990  Foreign Language Exemption  (0 Credit Hours)**

**GERM 3030  Intro To Literature  (3 Credit Hours)**

Conducted in German. An introduction to representative works of prose, drama, and poetry of the German-speaking world.

**GERM 3040  Intro To Literature  (3 Credit Hours)**

Conducted in German. An introduction to representative works of prose, drama, and poetry of the German-speaking world (follows GERM 3030).

**GERM 3050  Adv Grammar & Compositn  (3 Credit Hours)**

Course combines language acquisition with content-based instruction for varying topics. With respect to language learning, the course aims at reinforcing and expanding students’ proficiency primarily in writing.

Prerequisite(s): minimum score of PASS in 'GERM 3050 Placement' or GERM 2890.

**GERM 3160  Readings In German Lit  (3 Credit Hours)**

Conducted in German. Reading of representative works of German prose, drama, and poetry. Designed to introduce the student to fundamentals of literary analysis and to strategies for enhanced reading comprehension.

Prerequisite(s): minimum score of PASS in 'GERM 3000 Level Placement' or GERM 3050.
GERM 3250  German Lang & Culture I (3 Credit Hours)
Conducted in German. Survey of German history from its beginning through the Age of Enlightenment, with emphasis on cultural and social aspects unique to Germany. Significant emphasis on the continued development of linguistic skills.

Prerequisite(s): minimum score of PASS in 'GERM 3000 Level Placement' or GERM 3050.

GERM 3260  German Lang & Culture II (3 Credit Hours)
Conducted in German. Survey of German history from the end of the 18th century to the present including a discussion of institutions and problems of contemporary German life and civilization. Significant emphasis on the continued development of linguistic skills.

Prerequisite(s): GERM 3050 or minimum score of PASS in 'GERM 3000 Level Placement'.

GERM 3270  German Lit & Culture 1871-pres (3 Credit Hours)
This course traces significant events and developments in Germany from its beginning as a nation to its reunification at the end of the Cold War. Through close examination and discussion of selected literary, documentary, and filmic texts.

Prerequisite(s): minimum score of PASS in 'GERM 3000 Level Placement' or GERM 3050.

GERM 3360  Translatn:Theory & Pract (3 Credit Hours)
Proficiency in German required. Course introduces students to both practical and theoretical problems posed by translation in general and by English-German translation in particular. This class will learn by practicing translation and by reading theoretical texts about translation. Texts will include literature, news reports, and film subtitles.

GERM 3440  Representing Holocaust (3 Credit Hours)
This course examines the Holocaust from various perspectives, disciplines, and media (including history, literature, and film) to investigate the conditions and limitations of representations of the Holocaust.

GERM 3510  Ger Cult & Civilization (3 Credit Hours)
The emergence of art, music, and philosophy of the German-speaking peoples, primarily as reflected in their national literatures.

GERM 3530  Rehearsing Revolution (3 Credit Hours)
The course examines major turning points in German history. How have German writers represented political revolutions and social upheavals from the French Revolution, the weavers’ revolt of 1844, to the peaceful revolution of 1989? Conversely, to what extent has literature, especially drama, had an impact on revolutionary events? Authors and theorists considered include such classics as Goethe, Schiller, Kleist, Büchner, Marx, Hannah Arendt, Brecht, Müller, and Weiss. Films by Riefenstahl, Fassbinder, and Becker.

GERM 3540  Marx, Nietzsche, & Freud (3 Credit Hours)
Course introduces three philosophical revolutionaries who have exerted enormous influence on literature, philosophy, psychology, and politics. With its intellectual-historical approach, the course will examine key terms and analytical models in these thinkers as well as the intersection points among them.

GERM 3550  Germ Lit In Translation (3 Credit Hours)
Subject varies and is announced each semester. Typically a study of literary movements, genres, individual authors, or themes, e.g., the treatment of the Faust theme in German literature.

GERM 3560  The Devil’s Pact (3 Credit Hours)
The Devil's Pact in Literature, Film, Music.

GERM 3660  Love, Death & Sexuality (3 Credit Hours)
The focus of this course will be the representation of love, death and sexuality in German culture from the Middle Ages to the Thirty Years War. Selected works of literature, music and art will be examined.

GERM 3670  Grimm: Devel German Fairy Tale (3 Credit Hours)
This course will examine the Brothers Grimm and the classic fairy tales: their origins, development and later adaptations (and will include tales from other cultures and traditions as well).

GERM 3710  Intro To German Film (3 Credit Hours)
This course explores the trajectory of German film from its Expressionist beginnings to the present. How do the narratives presented aid in understanding the specific historical, social, cultural, and political moments in which they were produced?

GERM 3720  Weimar Cinema (3 Credit Hours)
This course traces the development of the filmic production of Weimar Germany, as well as its influence on classic and contemporary Hollywood film noir. Analyzing significant films from the era, we trace the stylistic, generic, and thematic trends.

GERM 3730  Nazi Cinema (3 Credit Hours)

GERM 3880  Writing Intensive: GERM 3660 (1 Credit Hour)
Writing Intensive course in conjunction with GERM 3660.

Corequisite(s): GERM 3160.

GERM 3890  Service Learning: GERM 3050 (0-1 Credit Hours)
Service Learning in conjunction with GERM 3050.

GERM 3891  Service Learning: GERM 3050 (1 Credit Hour)
Service Learning in conjunction with GERM 3050.

GERM 3940  Transfer Coursework (3 Credit Hours)
Transfer Coursework.

GERM 4250  Adv Comp Convr Phonetics (3 Credit Hours)
Advanced Composition, Conversation, and Phonetics for advanced German students.

GERM 4400  Advanced Undergrad Sem (3 Credit Hours)
Advanced Undergraduate Seminar on varying topics. For course description, consult department.

GERM 4410  The German Novella (3 Credit Hours)
GERM 4430 German Drama (3 Credit Hours)
A study of the German dramatic tradition through close analysis of representative plays by such writers as Lessing, Schiller, Goethe, Kleist, Hebbel, Grillparzer, and Büchner.

GERM 4490 Shorter Forms Ger Prose (3 Credit Hours)
Shorter forms of German prose, including essays and short stories from different time periods

GERM 4710 Special Topics (3, 4 Credit Hours)
Special Topics in German Literature. Consult course schedule for current topic.

GERM 4720 Special Topics (3 Credit Hours)
Special Topics in German. For description, consult department.

GERM 4800 Advanced Undergrad Sem (3 Credit Hours)
Topics vary from year to year. Typically an intensive study of an individual writer, a limited genre, a literary movement or a thematic problem. The Experience of War; Germany's Roaring 1920s; German Culture after WW II; Youth and the German Nation; Post-1989 Literary and Visual Culture; Travels to Foreign Lands; Early Modern Maps and Images.

GERM 4810 Special Topics Germn Lit (3 Credit Hours)
Special Topics in German Literature. Consult course schedule for current topic.

GERM 4820 Special Topics Germn Lit (3 Credit Hours)
Special Topics in German literature. For description, consult department.

GERM 4890 Service Learning: GERM 4710 (0-1 Credit Hours)
Service Learning in conjunction with GERM 4710.

GERM 4910 Independent Study (1-3 Credit Hours)
An independent research project in any advanced area of German language, literature or culture. Open to superior students with the approval of the department.

GERM 4920 Independent Study (1-3 Credit Hours)
An independent research project in any advanced area of German language, literature or culture. Open to superior students with the approval of the department.

GERM 4990 Honors Thesis (3 Credit Hours)
Research and writing in conjunction with Honors Thesis (first semester).

GERM 5000 Honors Thesis (4 Credit Hours)
Research and writing in conjunction with Honors Thesis (second semester).

GERM 5190 Semester Abroad (1-20 Credit Hours)
Semester Abroad.

GERM 5380 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

GERM 5390 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

GERM 5940 Transfer Coursework (0 Credit Hours)
Transfer Coursework.

GERM 6030 Survey of German Lit I (3 Credit Hours)
Literary documents from the Middle Ages through the 17th century. Selected readings and study of early literary movements.

GERM 6040 Survey of German Lit II (3 Credit Hours)
Readings and study of literary history from the Enlightenment to the present day.

GERM 6150 Studies In 19th Cen Lit. (3 Credit Hours)
Topic varies and is announced each semester. Study of a genre, a literary movement, or an author.

GERM 6180 Age of Goethe & Schiller (3 Credit Hours)
The literature of German classicism.

GERM 6400 Advanced Undergrad Sem (3 Credit Hours)
Advanced Undergraduate Seminar on varying topics. For course description, consult department.

GERM 6800 Advanced Undergrad Sem (3 Credit Hours)
See GERM 4800 for description.

GERM 6880 Writing Intensive: GERM 6800 (1 Credit Hour)
Writing Intensive in conjunction with GERM 6800.

GERM 6881 Writing Intensive: GERM 6800 (1 Credit Hour)
Writing Intensive in conjunction with GERM 6800.

GERM 6910 Independent Study (3 Credit Hours)
Open to superior students with the approval of the department.

GERM 6940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

GERM 7030 Seminar (3 Credit Hours)
Graduate seminar on varying topics. For course description, consult department.

GERM 7130 Old High German (3 Credit Hours)
Graduate course on Old High German, with emphasis on the history of the German language.

GERM 7190 Reformation & Ren Lit (3 Credit Hours)
Graduate seminar on the Reformation and on German Renaissance Literature.

GERM 7980 Research (1-6 Credit Hours)
Graduate-level research in German. For description, consult department.

GERM 7990 Research (1-6 Credit Hours)
Graduate-level research in German. For description, consult department.

GERM 9980 Masters Research (0 Credit Hours)
Masters Research for M.A. candidates.

GERM 9990 Dissertation Research (0 Credit Hours)
Dissertation Research for Ph.D. candidates.
Global Business (GMBA)

GMBA 7110 Intl Leadership & Team Building (1-3 Credit Hours)
GMBA 7120 Intl. Lead., Ethics, & Teambuilding (3 Credit Hours)
GMBA 7210 Global Environment of Business (3 Credit Hours)
GMBA 7220 Strategy for Emerging Markets (3 Credit Hours)
GMBA 7310 Global Strategy & Compet (3 Credit Hours)
GMBA 7400 Entrepreneurship (3 Credit Hours)
This course is designed to help students develop insights on what it takes to be a successful entrepreneur. Entrepreneurship can be defined as the discovery, enactment, and pursuit of new business opportunities. Students will learn how all the major functions of a business come together in a new venture. Discussion will include how to generate new ideas, recognize opportunities, form a venture team, evaluate opportunities, and design a firm to bring the ideas to life.

GMBA 7410 Intl Entrepreneurship (3 Credit Hours)
GMBA 7420 Global Negotiations (3 Credit Hours)
GMBA 7430 Entrepreneurial Finance (3 Credit Hours)
GMBA 7440 Healthcare in Central America (3 Credit Hours)
GMBA 7500 Business Modeling & Marketing (3 Credit Hours)
GMBA 7510 International Finance (2-3 Credit Hours)
GMBA 7610 Global Supply Chains (3 Credit Hours)
GMBA 7710 International Marketing (3 Credit Hours)
GMBA 7720 New Venture Creations (3 Credit Hours)
GMBA 7730 Negotiations (3 Credit Hours)
GMBA 7740 Cross-Cultural Management (3 Credit Hours)
GMBA 7750 Intl Business Management (1-4 Credit Hours)
GMBA 7760 Global Consulting (1-4 Credit Hours)
GMBA 7950 Independent Study (1-4 Credit Hours)
GMBA 7960 Global Business Project (0-3 Credit Hours)

Global Comm Hlth Sci & Beh (GCHB)

GCHB 6030 Soc & Beh Aspects of Global Health (3 Credit Hours)
This course covers the behavioral, social and cultural aspects of health and disease. Students learn how behavioral and social theories are relevant to health promotion and disease prevention efforts. Factors that protect or erode health operate at multiple levels (including individual, community, societal and global levels) will be discussed. The development of interventions to improve health by addressing critical factors at these levels will be presented.

GCHB 6140 Dev Leadership & Comm Sk (3 Credit Hours)
This course combines practical, skills-based exercises with strategic thinking approaches to personal, professional, and organizational leadership development. Leadership: The ability to create and communicate a shared vision for a changing future; champion solutions to organizational and community challenges; and energize commitment to goals.

GCHB 6150 Taiwanese Community Health Str (3 Credit Hours)
This course is designed to provide a field study opportunity for learning global public health practices, cross-culture communication and interaction, and alternative community health strategies. About 10 students each from Asia University and from Tulane University will be paired to form cross-culture teams to research and solve community health problems identified in the field study. In this course students will be housed at the Asia University campus and will be led to visit health organizations at national, provincial, city, county and community levels. Lectures and discussions will be provided by experienced faculty from both universities and from practitioners in Taiwan. At the end of the course the cross-culture student teams will be required to submit written and present in class project papers.

GCHB 6200 Eval of Pgrm Intrvtn in Global (3 Credit Hours)
This course introduces students to the basic concepts, principles, and practices for the impact evaluation of public health programs and interventions. It focuses primarily on impact evaluations for sexual and reproductive health interventions. Lectures, discussion and assignments will emphasize impact evaluation strategies for health promotion and disease prevention in international settings.

GCHB 6240 Hlth Prblms of Devlping Societ (2 Credit Hours)
Health Problems of Developing Societies is tailored to students entering the International Health and Development program within the Department of Global Community Health and Behavioral Sciences at Tulane University’s School of Public Health and Tropical Medicine. The course provides an overview of the major health problems facing resource-poor or “developing” societies; the divergent historical patterns of public health in rich versus poor societies; the links among public health, development, and culture; and strategies for improving public health in poor societies. There is no prerequisite for the course.

GCHB 6310 Pubic Nutr & Hlth in Emergenci (2 Credit Hours)
This course is designed to familiarize students with methods and approaches for coping with public nutrition and health problems in complex emergencies. It addresses the control of malnutrition (general and micronutrient) through general ration distribution and selective feeding programs, emergency public health measures, and key policy issues. Outside speakers with recent experience in this field contribute to specific topics and with illustrative case studies.

GCHB 6340 M&E of Global Health Programs (3 Credit Hours)
This course provides students with an introduction to monitoring and evaluation, a widely valued set of skills in public health program, in both the domestic and international contexts. Students will learn to develop a conceptual framework, write goals and measurable objectives, develop appropriate indicators (of input, process, output, and outcome). Students will gain practical experience in translating concepts into applications for actual programs.

Prerequisite(s): SPHL 6080.

GCHB 6360 Sexual Health: A PH Perspectiv (3 Credit Hours)
Sexual health is a growing component of public health outreach. The goal of this course is to provide students with a foundational understanding of sexual health from a public health perspective.
GCHB 6370 Grant Writing for Hlth and Dev (3 Credit Hours)
This course is an intensive workshop-style class designed to teach students how to identify, research, and prepare grant proposals in the fields of public health, focusing on key areas of research and program development in GCHB. Specific emphasis is given to the idiosyncrasies of developing proposals for federal funding agencies and foundations. By the end of the course students will know how to identify prospective funders, conduct proposal research, and develop and write a full proposal, evaluations, devising budgets, and providing supplementary material.

GCHB 6470 Child Hlth & Development (3 Credit Hours)
This course covers child health and development, addressing important health issues in each stage of childhood, the biologic, genetic, psychosocial, and environmental influences upon these issues, medical aspects of their management and most importantly, fundamental public health approaches to intervention. Population based approaches to elimination of disparities in the maintenance of health and access to primary and secondary care of children will be presented with a focus on children with special health care needs, children within immigrant families, children with developmental and psycho-social challenges, and other groups of children who carry a disproportionate burden of disease.

GCHB 6460 Issues in Adol Hlth (3 Credit Hours)
Issues in Adolescent Health is designed to describe and compare both mortality and major morbidity in adolescence with a focus on domestic U.S. populations. Adolescent development and culture are considered as they relate to the specific health issues causing morbidity and mortality in adolescence. The course emphasizes critical-thinking skills and is oriented toward those interested in considering service delivery in adolescence.

GCHB 6490 Key Policies & Programs in MCH (3 Credit Hours)
This course examines maternal and child health policy in the US, with a focus on the history, organization, delivery, and financing of maternal and child health, and related public health and social services at the national, state and local levels. This course will emphasize the evolving Maternal and Child Health (MCH) Title V Block Grant program legislative mandates; the national, state and local structures and roles; and how MCH fits into the overall US public and private health systems.

GCHB 6500 Violence as a Pub Hlth Problem (3 Credit Hours)
This course is designed to give an overview of the problem of violence as viewed from a public health perspective. We will look at the epidemiology of violence (scope, causes, risk factors, and consequences) along with public health approaches to the problem. The course aims to balance a review of the problem with ideas and evidence for solutions. Local academics in other relevant disciplines, including social work, psychology, law, and pediatric psychiatry, and community leaders working in the field of violence prevention will lend their expertise to help students understand and address violence as a public health problem.

GCHB 6510 Essential Issues in MCH (3 Credit Hours)
This course is designed to present current issues and trends in maternal and child health. The course offers an introduction to MCH-related issues primarily in the United States from a multidisciplinary perspective. The purpose of the course is to provide students with an overview of the health, social, economic, and environmental issues currently affecting women of reproductive age, infants, and children. This course is unique in that it relies on the expertise of guest lecturers whose work is germane to the field of maternal and child health. Discussion and debate with fellow students, the professor, and the guest lecturers is integral to the class. Critical thinking and writing across scientific, clinical, social and political aspects of each issue is essential.

GCHB 6610 Community Nutrition (2 Credit Hours)
Community nutrition is a discipline that strives to prevent disease and to improve the health, nutrition, and well-being of individuals and groups within communities. Nutritional problems in communities range from obesity to food insecurity in units from families to governments. The causes of poor nutrition are multiple and complex, involving biological, economic, social, cultural, and policy issues. This course explores various communities and the influences on their eating habits and nutritional status, as well as programs and policies designed to address nutritional problems in certain communities.

Prerequisite(s): GCHB 6690*
* May be taken concurrently.

GCHB 6690 Intro to Nutrition (2 Credit Hours)
This course is designed to provide students with an introduction to the basic principles of nutrition. It is recommended for graduate students who have not had a prior course in nutritional science. Subjects include basic nutrients with emphasis on their sources, function, and metabolism in the human body. Other topics include food selection for optimal health, energy balance and weight control, and lifecycle nutrition. An emphasis will be placed on the major nutrition-related problems in the world today and strategies to address them.

GCHB 6700 Social Innovation for PH Profe (3 Credit Hours)
This course offers MPH students a toolkit of human-centered design (HCD), systems-led leadership, complex systems thinking, and related social innovation to prepare the graduates to address complex societal problems while working together with others, and in domestic or international settings. Training in design-thinking for social impact is offered via hands-on workshops, complemented by a theoretical framing and examples from public health. Students gain a deeper understanding of how change happens, and skills for understanding and addressing “wicked” problems. Students learn to map complex systems, identify entry-points, and reframe problems to work more creatively with community stakeholders. Students are required to attend the Fast 48 weekend workshop http://taylor.tulane.edu/activities/design-thinking/. An additional $60 fee covers workshop food and materials.

GCHB 6750 Nutr. Assess & Monitorin (2 Credit Hours)
This course offers a thorough review of the tools used for the assessment of nutritional status of populations. Topics include anthropometric, biochemical, and socioeconomic indicators of nutritional status; methods for the collection, analysis, and interpretation of dietary data; measurement of household food security; and the use of data from nutrition monitoring and surveillance sources.
The purpose of this course is to introduce students to methods for contributing to the design of programs and supporting policies for improving health and reducing malnutrition in populations in developing countries. This means learning about experiences in specific countries, and generalizations from these, in recent successful efforts to reduce malnutrition and improve health. Students will also learn how public health and nutrition programs are set up to address key child health issues in resource poor areas through both preventive services and disease management programs.

GCHB 6870 Dble Burden of Malnutrition (2 Credit Hours)
The purpose of the course is to familiarize students with the concepts of the Double Burden of Malnutrition (DBM); the co-existence of over- and under-nutrition, both contributing to disease, and acting as risk factors for each other, as well as to engage them in understanding how to prevent it and mitigate its consequences across the life course, especially in Low and Middle Income Countries (LMICs). Students will learn the various definitions of the DBM, how to measure the problem, as well as to understand its causes and consequences from a life-course perspective. Students will also explore ways to resolve DBM problems through developing case studies on specific aspects of the DBM in selected LMICs.

GCHB 6790 Food Security & Resil. - Italy (3 Credit Hours)
Students will examine the impacts of rapidly globalizing food systems on food and nutrition security at local, household, and intra-household levels in this course. This topic is especially relevant now because of the increased policy attention and resources for programming that are focused on promoting improved food security, nutrition and sustainability. This course will provide students with the analytical skills for identifying the elements of resilient food systems and the outcomes of food and nutrition security, access to organizations prominent in international food security policy discussions, and a background in readings relative to this debate.

GCHB 6800 Community Training Methodologies (2 Credit Hours)
This course introduces students to the concepts and methods which will enable them to effectively train adults to perform health care functions in the community. Knowledge about how adults learn coupled with attitudes toward participatory learning methods will be presented in a way which will permit the students to exhibit behaviors which will enable them to in effect "train trainers" to multiply themselves and to multiply healthy practices in a community. Emphasis will be placed upon developing a positive attitude toward interactive learning and combining this with a variety of training methodologies which will together help to create an atmosphere where communities are empowered to improve their health.

GCHB 6830 Internatl Hlth Policy (3 Credit Hours)
This course examines the process of designing and implementing health policy, mainly focusing on developing countries. The diversities of policies are illustrated using case studies, group debates and in-class lectures. Constraints such as lack of resources, multiple stakeholders, corruption and historical conditions will be discussed and analyzed with both the practical and the ethical considerations of how the policy process operates in different culture. This course helps students develop their own capacities to analyze, criticize, evaluate, and construct policy-oriented arguments.

GCHB 6860 Public Health in Cuba (3 Credit Hours)
The course addresses how the Cuban government has prioritized the development of universal health care in the last five decades, with a special emphasis on the efforts to strengthen primary health care (PHC) and to articulate PHC with more complex levels of care. The course contextualizes and analyzes the programs to prevent infant mortality and to prevent and control infectious diseases such as polio, malaria, tuberculosis, dengue, and HIV, as well as the economic and political context in which these public health initiatives developed. The course takes place in Havana and in rural areas in partnership with the National School of Public Health of Cuba.

GCHB 6870 Adolescnt Hlth Policies & Prgrm (3 Credit Hours)
This course provides students with an understanding of the context, design, and effectiveness of the main interventions to prevent and reduce adolescent health risk-taking and develops students' professional skills in the use of quantitative methodologies to determine the health needs and problems of adolescents in developing countries and the formulation of workable strategies for responding to identified needs. The course begins with a discussion of major policy issues and controversies surrounding specific program approaches to reducing adolescent health risk-taking. Students will compare interventions for addressing common health problems in adolescence as well as services for meeting the needs of special youth populations in emerging and developed countries. The key components of successful and unsuccessful programs in specific health areas will be addressed.

Prerequisite(s): BIOS 6030*. May be taken concurrently.

GCHB 7010 Hlth Cmmuicatn Theory and Prac (3 Credit Hours)
This course is designed to examine research and practice in the area of health communication, with a special focus on how health media campaigns are planned and executed in order to stimulate change in knowledge, attitudes, behavior, and subsequent health outcomes. This examination will include the review of the history of health communication campaigns, selected case studies of campaigns, and the theoretical foundation for the design and implementation of campaigns.

Prerequisite(s): GCHB 6030*. May be taken concurrently.
GCHB 7020 Commncts Rsch for Fmly Plnig (3 Credit Hours)
This course constitutes a practical introduction to the research methodologies used in planning a communication program for promoting desirable health behaviors, designing appropriate messages, pre-testing communications and evaluating program effectiveness. Most examples and data sets will involve international family planning and sexual risk behaviors, but will be applicable to other areas of public health. Lectures will be combined with exercises in which students carry out communication pretests, conduct and analyze the results of focus groups and do secondary analysis of existing communication data sets using statistical software. These skills are basic to the systematic approach in designing, implementing, and evaluating a health communication program.

GCHB 7070 Scial Impct of HIV/AIDS (3 Credit Hours)
The goal of this course is to provide students with the skills to critically reflect on current strategies to stem the epidemic through a sociological approach to understanding epidemiological patterns. Students will participate in group work and individual assignments that apply concepts discussed in class. The course format combines presentations and small group activities to highlight the complexities of the epidemic and equip students with the skills, resources, and agency to become active participants in the global response.

GCHB 7100 Public Health Policy and Pract (3 Credit Hours)
This course introduces students to the broad context of public health practice, including the mission, core functions, structure, policy role, program activities, cultural competency, ethics, and collaborative endeavors of public health agencies, as well as the value conflicts inherent in public health leadership works at the local, state, national, and global levels through non-profits and governmental agencies.

GCHB 7120 Mntng and Eval of Maternal (3 Credit Hours)
This course focuses on the monitoring and evaluation of HIV/AIDS program. The course is intended to: (1) provide an introduction to HIV/AIDS prevention, care and treatment programs; (2) strengthen skills in the application of tools for global- and national-level monitoring of the HIV epidemic and response; (3) provide a foundation for monitoring and evaluating specific HIV/AIDS programmatic areas (prevention, testing and counseling, treatment, community and home-based care, tuberculosis/HIV integration, orphans and vulnerable children, key populations, and behavior change communication); and (4) demonstrate how M&E findings are used to prioritize options for improving the national HIV/AIDS response.

Prerequisite(s): (BIOS 6030* or SPHL 6050*).

GCHB 7140 Montrg/Eval of HIV/AIDS Prgrms (3 Credit Hours)
This course focuses on the monitoring and evaluation of HIV/AIDS program. The course is intended to: (1) provide an introduction to HIV/AIDS prevention, care and treatment programs; (2) strengthen skills in the application of tools for global- and national-level monitoring of the HIV epidemic and response; (3) provide a foundation for monitoring and evaluating specific HIV/AIDS programmatic areas (prevention, testing and counseling, treatment, community and home-based care, tuberculosis/HIV integration, orphans and vulnerable children, key populations, and behavior change communication); and (4) demonstrate how M&E findings are used to prioritize options for improving the national HIV/AIDS response.

Prerequisite(s): (BIOS 6030* or SPHL 6050*).

GCHB 7160 HIV Srvlnce in Hard2Reach Pop (2 Credit Hours)
In the context of health sciences, sex workers, people who inject drugs, men who have sex with men, transgender persons, migrants, homeless persons, youth living on the streets and other stigmatized and vulnerable populations, are at higher risk for HIV, TB, hepatitis, and other infections. Measuring the behavioral and biological risks affecting these populations is essential to creating effective prevention programs, allocating funding and modeling future epidemic scenarios. Respondent driven sampling (RDS) is a highly robust and effective method to recruit samples of ‘hard-to-reach’ populations that are connected through social networks. This course will provide participants with practical and relevant up-to-date information about the methodological and theoretical issues and analytical concerns from one of RDS’s world-leading practitioner. It will draw on a variety of lectures, presentations of actual field research, hands-on analysis and practical experience in designing surveys using RDS.

Prerequisite(s): BIOS 6030*.

GCHB 7200 Dvlpent Issues: Thry and Msrem (3 Credit Hours)
This course critically reviews major theories, concepts and debates about social, human and economic development in the developing world. These concepts are useful to public health researchers and practitioners aiming to advance human well-being. We compare and contrast major development theories: economic growth, modernization, dependency, neoliberalism, sustainable development, human development, and human rights approaches. Then we address contemporary, critical perspectives that are reshaping development practice: the Capabilities Approach, Human Rights, and Post-Development thought. These challenge notions of: poverty, participation, gender, culture, technology, globalization, and sustainability, foreign aid, and development actors/institutions.
Insights from critical research on development agencies and projects show how theories, worldviews and assumptions translate into real “development” programs and projects that have often unexpected, unintended outcomes.
GCHB 7210  Srvy Data Analysis in Fmly Plng  (3 Credit Hours)
This course is intended for advanced Masters students and doctoral students. The course will introduce students to a number of key concepts and measures used in the monitoring and evaluation of family planning and reproductive health programs. Students will gain an understanding of a variety of reproductive health and health service indicators, data sources and their strengths and limitations. This course also provides basic hands-on quantitative skills that are essential in conducting monitoring and evaluation exercises in family planning and reproductive health programs. Students will learn how to use the STATA statistical software package to manage and analyze survey data and to construct reproductive health indicators. Students will also learn to interpret and present quantitative data, using graphs and tables, in ways that are suitable for scientific manuscripts.

Prerequisite(s): (BIOS 6030 or SPHL 6050 and EPID 6030 or SPHL 6060 and GCHB 6340, GHSD 6270, GCHB 6200 or TRMD 6200).
* May be taken concurrently.

GCHB 7220  Community Organization  (3 Credit Hours)
This course emphasizes community organization as a major approach to social change and community participation in addressing health problems. The course will explore concepts relevant to community practice. We will discuss methods for identifying and analyzing community health problems, their causes and solutions. We will examine roles of community residents, public health practitioners, and others in improving and degrading community health. The course stresses a theoretical foundation and application of community organization skills with an emphasis on community assessment, group process for partnership development and evaluation of community-level programs. Common strategies for community-level change will be discussed in the context of case study reviews.

GCHB 7250  Evdnc Bsed Mthds Scial & Beh  (3 Credit Hours)
The purpose of this course is to train students in how to collect and analyze data on social phenomena in a rigorous and scientific manner through 1) inquiry and research design, 2) data collection, and 3) data analysis. Topics will include focus groups and in-depth interviewing, transcribing and reporting, survey design and modes of collection, descriptive statistics and quantitative methods. Students will learn the basic concepts and techniques that are used in social science research. Above all else, this course will prepare students to better understand the limits and potential of social science research, to understand the content of future classes in the social and behavioral sciences, and to perform your own inquiries into social and behavioral phenomena.

GCHB 7260  Social Marketing  (3 Credit Hours)
This introductory course provides an overview of the concepts and strategies used in social marketing and public information campaigns in the U.S. and other countries. The course outlines basic principles and methods followed by social marketers and provides a framework for carrying out social marketing. Contributions of commercial marketing will be discussed and real world applications of the approach will be integrated into the course.

GCHB 7280  Qual Mthds: Basic Foundations  (2 Credit Hours)
Qualitative methods can be highly useful in the conduct of community-based population health research and evaluation. This course, part of a two course sequence, will provide introductory classroom and field-based learning experience in qualitative methods research and evaluation. Students will receive foundational training in the design, implementation, analysis, and synthesis of qualitative methods. Emphasis will be given to the appropriate uses of commonly-used methods in community-based health research and evaluation. This course is for graduate students in the SPHTM.

GCHB 7290  Qual Mthds II - Theory and Mth  (2 Credit Hours)
This course builds on Qualitative Methods I to provide students hands-on experience conducting a qualitative rapid assessment on a topic of their choice and to complete a qualitative research proposal. In addition to enhancing in-depth interviewing and textual data management skills, students will be exposed to theories of qualitative research, social network research and the use of formal methods in rapid assessment research, as well as the digital tools that are used to facilitate this research. Class time will be divided into lecture, discussion, computer lab, and fieldwork. The course is designed to permit the student to use the skills and knowledge developed in the two courses to produce a final report of substance on a health related topic.

Prerequisite(s): GCHB 7280.

GCHB 7510  MCH:Lifecourse Perspective  (3 Credit Hours)
In this course students are taught to use a life course perspective to approach important issues of public health. Over the semester, basic principles of human development, from preconception to end of life, are explored and examined through the conceptual framework provided by life course theory. Particularly, students will learn about the mechanisms, timing and dynamics of health as a developmental process, which can inform development of early interventions. In addition to providing a conceptual framework for understanding public health issues, the course will illustrate the application of this framework to gain practical insight into maternal and child health.

Prerequisite(s): GCHB 6510 and (GCHB 6030 or SPHL 6080).

GCHB 7800  Intro to Population Studies  (3 Credit Hours)
This course introduces students to key concepts and measures; major theoretical perspectives and central debates; empirical material on population size, distribution, and trends; and basic methodological tools used in the field of demography, the study of population processes. There is no prerequisite for the course, but much of the material is quantitative in nature and so students considering taking the course should be comfortable performing computations and comfortable with basic algebra. Familiarity with a spreadsheet package such as Excel will be helpful for completing the homework problem set assignments.

Prerequisite(s): BIOS 6030* and EPID 6030*.
* May be taken concurrently.

GCHB 7910  ISPP Dietetic Intrnship Part 1  (3 Credit Hours)

GCHB 7950  Dietetic Internship Pt 1  (6 Credit Hours)
Supervised practice for dietetic intern students with DPD Verification statements. Experiences are provided in food service management, medical nutrition therapy, and community nutrition at various facilities in Southeast Louisiana.
GCHB 7960 Dietetic Internship II (0-6 Credit Hours)
Supervised practice for dietetic intern students with DPD Verification statements. Experiences are provided in food service management, medical nutrition therapy, and community nutrition at various facilities in Southeast Louisiana

Prerequisite(s): (GCHB 7950 or CHSC 7950).

GCHB 7990 Master's Independent Study (1-3 Credit Hours)
Masters students and advisor select a topic for independent study and develop learning objectives and the expected written final product.

GCHB 8200 Evaluation Theory (3 Credit Hours)
This course presents the theory of evaluation, and the theoretical assumptions that underlie evaluation organized around the five components that Shadish, Cook, and Leviton consider to be important in evaluation theory; theories of knowledge, value, use, social programming and practice. The course is a seminar course that will focus on the key figures in the field and exemplary evaluations. This is an active learning course applying evaluation principles. Students will be required to participate actively in class discussions and write critiques of evaluator's work.

Prerequisite(s): (GCHB 6120 or CHSC 6120 and GCHB 6130 or CHSC 6130).

GCHB 8250 Advanced Research Methods in GH (3 Credit Hours)
This course is intended for upper-level masters students interested in applied research methods and doctoral students working towards their dissertations. The focus is on providing skills for conducting program, impact or other forms of evaluation using econometric methods to analyze health, population and nutrition data. Of particular focus will be analyses of population-based household surveys using the Stata 9.0 statistical software package. Key topics that will be covered are: research methods and designs, linear regression models with their assumptions and limitations, limited dependent variable models (logit, probit tobit, multinomial logit), instrumental variables and two-stage least squares, sample selection and censored regression models, multilevel models, propensity score matching, applications of program evaluations, and time series analysis with pooled and longitudinal data.

GCHB 8750 Soc Determ of Hlth I: Concep (3 Credit Hours)
There are four overarching objectives for this course: 1) To synthesize knowledge about the empirical etiologic relationship between social determinants and health outcomes. 2) To hypothesize causal chains linking social determinants to health outcomes through the application of relevant social theories. 3) to examine and critique various approaches to addressing the social determinants of health. 4) to plan an investigation of at least one social determinant of health within research.

Prerequisite(s): SPHL 6020.

GCHB 8760 Social Determinants of Hlth II (3 Credit Hours)
This course prepares students for practical applied research on the social determinants of health. The first half of the course will focus on 1) measurement of key constructs 2) common study designs. The second half of the course will focus on 1) common biases and limitations to social determinants research and methods to address limitations and 2) analytic strategies and interpretation. Students will gain hands-on experience in analyzing and interpreting data. Students will also review and critique empirical applications in the public health field. By the completion of the course, the student will have the skills necessary to design, analyze and present data from a range of studies that consider social determinants of health.

Prerequisite(s): (BIOS 6030 or SPHL 6050 and EPID 6030 or SPHL 6060).

GCHB 8800 Senior Grad Rsch Seminar I (1 Credit Hour)
This course is required for all doctoral students in the GCHBS department for the duration of their tenure as doctoral students. It is intended to increase student's proficiency in 1) analyzing and interpreting current public health research, as represented in peer review journals; 2) determining how to apply research findings to the practice of public health, especially by developing community-based programs for disease prevention; and 3) presenting and discussing research-related topics. These objectives will be attained through a variety of activities, including faculty-and student-led discussions of required readings; faculty and student oral presentations of ongoing research projects (including the prospectus and dissertation research), and small group projects. All doctoral students will be expected to make a research-related oral presentation at least once.

Prerequisite(s): (CHSC 7130 or GCHB 7130).

GCHB 8820 Adv Pro Plan:Grant Writing:Res (3 Credit Hours)
This is a "skills" course for the purpose of which is to guide students through the process of planning, developing, and evaluating the major components of a research proposal. Students will develop the skills needed to write a successful research grant proposal focused on a significant public health topic. They will identify an idea for a prevention programs for disease prevention; and 3) presenting and discussing research-related topics. They will plan, develop, and write the major sections of the proposal. The instructor will guide the students through the grant writing process, help them to plan and develop their ideas, provide personal tutorials as needed, and provide individual feedback and support.

Prerequisite(s): (GCHB 6030, 7110 and 6120).
GCHB 8830  Senior Grad Rsch Seminar II  (0 Credit Hours)
This course is required for all doctoral students in the GCHBS department for the duration of their tenure as doctoral students. It is intended to increase student’s proficiency in 1) analyzing and interpreting current public health research, as represented in peer review journals; 2) determining how to apply research findings to the practice of public health, especially by developing community-based programs for disease prevention; and 3) presenting and discussing research-related topics. These objectives will be attained through a variety of activities, including faculty- and student-led discussions of required readings; faculty and student oral presentations of ongoing research projects (including the prospectus and dissertation research), and small group projects. All students will be expected to make a research-related oral presentation at least once.
Prerequisite(s): (GCHB 7130 or CHSC 7130).

GCHB 8990  Doctoral Independent Study  (1-3 Credit Hours)
Doctoral students and advisor select a topic for independent study and develop learning objectives and the expected final written product.

GCHB 9970  Dissertation  (0 Credit Hours)
Doctoral candidates who have defended their prospectus and are engaged in research.

GCHB 9990  Dissertation Research  (2 Credit Hours)
Doctoral students who have completed course work but not defended their prospectus.

Global Development (GDEV)

GDEV 7990  Independent Study  (1-6 Credit Hours)
Directed Research for Global Development.

GDEV 9990  Dissertation Research  (0 Credit Hours)
Research topics for Global Development PhD students.

Global Environmental Hlth Sci (GEHS)

GEHS 6030  Survey of Environ Hlth  (3 Credit Hours)
This course is designed as a survey course which introduces students to basic environmental health topics and it fulfills the school core requirement. The course focuses on environmental factors impacting human health and the environment. Sources of these factors, methods of identification, recognition, evaluation and regulatory framework control are discussed. Factors might include health hazards associated with contaminated water, food and air, vectors of disease, exposure to toxic chemicals, environmental justice, regulations, and safety in the workplace.

GEHS 6110  Glob Clim Chg Iss Ph Pol  (3 Credit Hours)
The objective of the course is to provide students with a thorough understanding of global climate change phenomenon, the public health issues associated with it, and the role of policy and governance in tackling this problem. In line with this objective, the course examines the scientific, political and socioeconomic factors influencing public health policy development, adaptation and compliance in response to the global climate change problem. The course also analyzes the current policy and governance intervention models, and sheds light on direction for the future.

GEHS 6150  Occupational Health Services  (2 Credit Hours)

GEHS 6220  Elem Hlth Safety & Trn Ev  (2 Credit Hours)
This course addresses a systems approach to developing and evaluating health and safety training programs. Principles and techniques are presented for effectively assessing training needs, developing learning objectives, designing training programs, identifying and developing training evaluation measures and designing evaluation studies. Practical experience with the topics is encouraged by case studies and class exercises involving health and safety training program development and evaluation. Computer-based training issues are emphasized.

GEHS 6300  Radiological Health  (3 Credit Hours)
This course is an introductory course in health physics, medical uses and university uses of ionizing radiation. The course includes radiation protection for both workers and general public. The course is designed to meet the needs Industrial Hygienists. Topics include nuclear reaction terminology, the interaction of alpha particles, electrons, and photons with matter, basic instrumentation for radiation protection, and the use of Poisson counting statistics, radiation medicine issues including radiation epidemiology, internal dissymmetry, use of the LLNL code Hotspot for dispersion calculations, and various advanced topics, including nuclear weapons effects.

GEHS 6320  Workplace Wellness  (3 Credit Hours)
Health, as it relates to the workplace, is created by two major forces; what employees bring with them into the workplace (e.g. personal resources, health practices, beliefs and attitudes) and the impact of the workplace on employees (e.g. organization of work in both a physical and psychological sense). Health promotion focuses on the elements that make up a healthy workplace and includes the physical environment, health practices and social environment & personal resources. This course focuses on the total well-being of individuals and groups within a corporate and community context. It emphasizes a holistic approach to achieving workplace, community, and personal wellness.

GEHS 6420  Global Food Safety and PH  (3 Credit Hours)
This course is designed for students who are interested in local, national, and international food safety. Food resources, production, biological, chemical and radiological contaminants are discussed. Focus will be on health effects resulting from exposure to contaminated food. Sanitary regulations/codes addressing food safety including inspection of food establishments, investigation of food outbreak diseases will also be discussed. Genetically modified foods will also be addressed. Site visit(s) to food establishments could be arranged (when possible) with Louisiana Sanitarian Services.

GEHS 6430  Disaster and Emer Communicatio  (3 Credit Hours)
The course is a fast-paced, interactive course that focuses on the essential knowledge and tools needed to navigate the harsh realities of communicating to the public, media, and stakeholders during an intense public emergency, including terrorism. The course content will meet the crisis communication training needs of distinct groups (e.g., public health professionals, medical and health professionals, emergency response officials, community and civic leaders, the private business sector and volunteer organizations) at the community, regional and national level.
GEHS 6510 Water Quality Management (3 Credit Hours)
The course presents the basic concepts concerning policy, evaluation, and implementation of pertinent water quality management issues. Topics of focus include: water quality standards and criteria; principles of water quality management; regulatory considerations; immunological aspects; eutrophication; ecotoxicology; diffuse pollution and global aspects of sustainable water quality control strategies.

GEHS 6540 Occupational Health (3 Credit Hours)
This course targets mid-career professionals who work in occupational health and safety programs. The course addresses the occupational medicine aspects of health and safety programs including the leading occupational disease hazards, their evaluation and control. Concepts of exposure in the workplace and related evaluation and control by engineering and physical health hazards such as noise, heat, and radiation are included. The course uses an interactive format and case studies.

GEHS 6550 Envir Health Management (3 Credit Hours)
This course explains the fundamentals of environmental health and how they fit into the larger context of public health security. It highlights the elementary science of environmental exposure of humans to toxic chemicals and microbes, and in this way provides a context and basis for preventative policy and management responses to issues, policy development processes, policy tools and environmental laws-their weaknesses and strengths. It also introduces students to environmental management systems and practices. Students are given case-study based assignments to encourage their skill development in applied environmental health management.

GEHS 6560 Env Health Microbiology (3 Credit Hours)
This course is designed to provide understanding about microbial pathogens of public health concern and the role of the environment, including water, waste, air and food, in the transmission of infectious diseases. We will explore specific pathogens that cause environmentally transmitted diseases, their detection using both conventional and advanced molecular methods, their prevention and control by technological and other measures, and how the health risks posed by these pathogens are assessed. This course focuses on emerging issues of pathogens in the environment at both local and global levels.

**Prerequisite(s):** GEHS 6030.

GEHS 6590 Air Pollution I (3 Credit Hours)

GEHS 6600 Principles of Toxicology (3 Credit Hours)
This course focuses on the fundamentals of toxicology and the mechanisms by which environmental and occupational chemical agents affect human health. The principles and mechanisms will be approached in three areas: General principles: Route of exposure; dose response; absorption, distribution, storage, metabolism and excretion; Effects on target organs: liver, kidney, blood, respiratory system and nervous system; and Application of the principles of toxicology using: solvents, pesticides and metals. At the end of this course, the student will be able to apply the principles of toxicology for compounds found in the environment and workplace.

GEHS 6610 Toxicology of Envir Agent (3 Credit Hours)
The classes of toxicants and their actions are studied in detail in Toxicology of Environmental Agents. Mechanisms and targets of the general classes of toxicants are emphasized. Students are expected to demonstrate ability to use and interpret the current toxicological literature in this course.

**Prerequisite(s):** GEHS 6600 or ENHS 6600.

GEHS 6620 Phy Agents & Erg Haz/Workplace (3 Credit Hours)
This course addresses occupational exposures and health effects of physical agents. The course covers methods for evaluation and control of exposure to ultraviolet, infra-red, laser, microwave irradiation, noise, heat, and abnormal pressures in detail.

**Prerequisite(s):** GEHS 6720 or ENHS 6720.

GEHS 6700 Principles of Safety (2 Credit Hours)
This course is designed to give the student an introduction in the field of safety and prevention management. Broad areas and topics that are covered are management and accountability, policy development and evaluation, hazard identification, job safety analysis, safety training, applied engineering principles (slips, falls, cuts, electrocution, material handling, excavations, confined spaces crane use), emergency operations planning and social-behavioral aspects of safety.

GEHS 6720 Principles Indus Hygiene (3 Credit Hours)
This course provides the student with an introduction into the field of Industrial Hygiene. Topics covered include an overview and historical perspective of Industrial Hygiene, anatomy and physiology of the skin and lungs, occupational diseases and inhalation toxicology, chemical agents, biohazards, ergonomics, indoor air quality, ventilation systems, lab safety, personal protective equipment, Hazard Communication and other OSHA standards. Examples from case studies work experience will be discussed. The course also allows for discussion of topics of interest to the class.

GEHS 6900 Pub Hlth Threat Suriname (3 Credit Hours)
The course examines key public health issues affecting the health of Suriname's ecosystem and its population. Through a series of lectures and fieldtrips, students will learn about the role of the ecosystem as a vital component of community health. Special area of focus will be the medicinal characteristics of plants. The course examines the risks posed by environmental contamination, specifically those risks related to mercury released from some small-scale gold mining operations. Students will employ community-based participatory research strategies to assess, manage, and communicate those risks. The course will also examine the leading causes of morbidity and mortality in Suriname.

GEHS 6910 Environmental Asp of Dis (3 Credit Hours)
This course examines the fundamentals of the environmental health and consequence management infrastructure through the lens of a disaster situation. Environmental health challenges that arise during emergencies are explored and operational models unique to disasters are developed.
GEHS 6920  Env Mon/Samp & Analy in a Disa (3 Credit Hours)
This course is designed to provide students with necessary knowledge and tools for sampling and monitoring of the environment following a disaster such as floods, hurricanes, earthquakes, explosions, etc. During this course, students will also be exposed to field sampling and become familiar with laboratory instruments used for chemical, biological, and physical sample analysis.

GEHS 6930  Pop Issues During Disast (3 Credit Hours)
The United States is among other global communities that attempt to prepare its citizens for potential mass casualty events such as natural disasters, terrorism, or a pandemic flu outbreak. This course introduces disaster theory and overviews the United States' National Response Framework. Core population health issues that present during the management of disasters are examined. Developing preparedness at the local level is emphasized. Fundamental concepts of emergency management and leadership are discussed.

GEHS 6950  Psych/Soc Asp Disaster (3 Credit Hours)
The course covers the theoretical development, history, and empirical studies of the psychosocial dynamics and sequelae of disasters. Characteristics of environmental health disasters, reactions and risk factors, as well as trends in disaster mental health are examined. Emphasis is placed on inclusion of psychosocial considerations in the planning, preparation, and very early intervention phases of a disaster. Vulnerable populations are of particular interest in highly interactive case-based learning through reflection labs for application in situations such as natural disaster, environmental health crises, pandemic illness, or threats to national security. Baseline resilience planning is required of all students planning to work in disaster or emergency response fields.

GEHS 6960  Public Health Law (3 Credit Hours)
Population-based preventative health intervention is a major focus of public health. Public health law speaks to the legal aspects of delivering this intervention to the society. This course introduces students to the functions and outcomes of public health protection and practice. It covers a variety of topics such as the public health powers of the federal, state and local governments; civil liberties in matters such as quarantine, isolation and mandated medical testing; access to healthcare; liability of healthcare workers; and international law on the duties and rights of countries to control the spread of infectious diseases.

GEHS 7100  Community Reslence PH Discrse (3 Credit Hours)
This course examines community resilience (CR) in terms of a community's ability to absorb, recover from, and adapt to natural, technological, and man-made disasters. Community resilience is analyzed across four major dimensions of environmental, social, political, and economic factors. Students are expected to integrate and discuss the intersecting nature of the four dimensions in articulating and writing about their knowledge of CR. The primary focus is that of being able to locate and analyze CR indicators in collaboration with EM personnel, community citizens, and other leaders in emergency planning, preparedness, response and recovery efforts.

Prerequisite(s): GEHS 6030*

GEHS 7110  Industrial Ven & Chem Haz Cont (3 Credit Hours)
Fundamentals of design and operation of ventilation systems as a means for controlling airborne toxic materials in the workplace are discussed. Basic air flow, dilution ventilation, hood design, duct design, and balancing, fans, air cleaners, and testing of ventilation systems are discussed in detail. Emphasis is on design principles for local exhaust systems. Students are expected to complete a design project.

Prerequisite(s): GEHS 6720 or ENHS 6720.

GEHS 7230  Fundmntls of Prjt Mgmt for ES&H (3 Credit Hours)
This course focuses on management of environmental health and safety risks, as well as measurement and evaluation of industrial hygiene and safety performance. Specific course topics include environmental and hazardous materials management, emergency planning and response, crisis communication, accident investigation, the development and interpretation of risk assessments, risk perception and communication, economics and risk/benefit analysis, comparative risk assessment, laws and regulations pertaining to risk assessment, and management and the design of risk management plans. Report writing and interpretation are emphasized.

GEHS 7240  Applyng Systms Thnking to EH&S (3 Credit Hours)
This course complements and supplements GEHS 7230, Fundamentals of Project Management for EH&S. It is an introduction to methods of systematically integrating health and safety programs into standard management systems used by organizations. Topics emphasized include leadership, strategic planning, project management, management of multidisciplinary teams, regulatory affairs management, voluntary standards systems, professional ethics, labor relations, and "selling" health and safety initiatives to all levels of the organization and the public. Systems thinking is emphasized throughout the course. No prerequisites required.

GEHS 7260  Fin Aspects Env Hlth Saf (3 Credit Hours)

GEHS 7270  Practicl Applictns in EHS Rash (3 Credit Hours)
This course is designed to provide students an approach to the conceptualization, design, and operational logistics for planning and implementing studies and responses to environmental health problems and field studies. The course will focus on applied public health problems and situations that may challenge an environmental health professional in determining studies that can be implemented. The course is applicable to environmental health students focusing on epidemiology, health education, environmental sciences, or other field application of environmental public health practice. Students are expected to develop and present a study proposal applicable to their specific area of environmental health. The methods described are the conceptual approach to problem solving in environmental health practice. Problems discussed will apply to many environmental health issues including environmental assessment and health studies.

Prerequisite(s): EPID 6030*, BIOS 6030* and GEHS 6030*.

* May be taken concurrently.
GEHS 7310  Occ Laws and Compliance  (2 Credit Hours)
This course is designed to introduce the most important EHS management systems for multinational companies from the US and other countries. The course introduces students to ISO-harmonized management systems. Students gain skills in making the transition from traditional numeric specifications of governmental command-and-control regulations to ISO-harmonizing auditing systems, involving root cause analyses of system requirements.

GEHS 7430  Survey of Methods in EHS  (3 Credit Hours)
Utilizing a practice-oriented case-study approach, students will apply public health skills and techniques such as environmental mapping, sampling, and analysis to investigate, evaluate, analyze, and resolve realistic environmental public health issues.

Prerequisite(s): GEHS 6030 and 6600 and (BIOS 6030 or SPHL 6050).

GEHS 7431  Srvy of Mthds in EHS Prac LAB  (1 Credit Hour)
Prerequisite(s): GEHS 6030 and 6600 and (BIOS 6030 or SPHL 6050) and GEHS 7430*. May be taken concurrently.

GEHS 7500  Air Samp & Analysis  (3 Credit Hours)
Principles and techniques for evaluating exposure to airborne contaminants are presented in lectures, and practiced in two-hour laboratory sessions per week. Topics covered include air flow measurement, generation of controlled test atmospheres, total and respirable dust sampling, determination of particle size distribution, optical and electron microscopy, sampling of gases and vapors, and chemicals.

Prerequisite(s): (BIOS 6030* or SPHL 6050*). May be taken concurrently.

GEHS 7620  Health Risk Assessment  (3 Credit Hours)
Principles of quantitative human health risk assessment. This course develops the qualitative and quantitative skills necessary to evaluate the probability of health effects from exposure to environmental contaminants. Basic concepts of qualitative and quantitative risk assessment are demonstrated with practical case studies. Emphasis placed on hazard identification, dose-response evaluation, exposure assessment, and risk characterization. Integration of risk assessment with risk management and communicating risks to the public are discussed. Regulatory aspects of risk assessment in the promulgation of environmental standards are presented.

Prerequisite(s): (GEHS 6600 or ENHS 6600).

GEHS 7750  Environmental Policy  (3 Credit Hours)
GEHS 7750 introduces students to the concepts of public health policy with an emphasis on environmental health. The course describes the relationship among public science, policy, and practice and demonstrates the application of this relationship through a series of real cases in environmental health laws, polices, regulations and statutes in the context of public health. Through "hands-on" experience, students examine the policy implications of contemporary environmental public health problems.

GEHS 7910  Env. Dis Resp Plan & Imp  (3 Credit Hours)
This is an elective course that teaches students how to identify the critical public health system infrastructure that is likely to be affected during and following a natural and human made disaster. Environmental health issues can arise in the wake of a disaster. Systematic planning and post disaster implementation of the plan can be effective in mitigating the problems that arose in the face of these disasters. This is an advanced course designed to be the culminating course in the Disaster Management Track integrating previous courses within the track. The course is aimed at advancing the student’s knowledge of disaster management gained through 600 level courses to the actual application of those principles using real life, frontline scenarios.

Prerequisite(s): (GEHS 6030 or ENHS 6030 and GEHS 6600 or ENHS 6600).

GEHS 7950  Psych/Soc Intrv Dis or Crisis  (3 Credit Hours)
The course covers the history, development, and application of both brief solution-focused and crisis intervention within the context of biopsychosocial resolution in healthy human development and social functioning. Emphasis is placed on practical application of techniques in situations such as natural disaster, death, traumatic injury or illness, PTSD, ATSD, violent crime, terrorism, suicide, chronic physical and mental conditions, and severe family dysfunction. The clinical-community approach is demonstrated through case-based learning and simulations.

Prerequisite(s): (GEHS 6950, SOWK 7070 or ENHS 6950).

GEHS 7990  Master's Independent Study  (1-3 Credit Hours)
Masters students and advisor select a topic for independent study and develop learning objectives and the expected written final product.

GEHS 8850  Meth in Toxicological Reseach  (3 Credit Hours)
This course is made available for students pursuing doctoral studies. A suitable research problem is identified by the student after consultation with the mentor. This should be done prior to starting the course. Modern experimental techniques are used. Research methods are discussed, demonstrated, and then carried out by the student. The student prepares a research project report to successfully complete the course. Ideally this report will be published as a manuscript.

Prerequisite(s): GEHS 6600, 6610 and 7620.

GEHS 8860  Genetic Molecular Toxicology  (3 Credit Hours)
Genetic and Molecular Toxicology is a doctoral level course that addresses the causes and effects of alterations to the hereditary material and the elucidation of fundamental mechanisms of toxicity. Spontaneous and chemically induced mutations are covered in depth in this course. The roles of cellular and genetic regulation in the induction of responses to DNA damage are explored. Merits of various experimental systems for the detection and analysis of DNA damage and mutations are examined. Effects of mutations, polymorphisms, and epigenetic factors on human disease (cancers, aging, and other chronic diseases) and health maintenance are discussed in this course.

Prerequisite(s): GEHS 6600, 6610 and 7620.

GEHS 8990  Doctoral Independent Study  (1-3 Credit Hours)
Doctoral students and advisor select a topic for independent study and develop learning objectives and the expected written final product.

Global Finance (GFIN)

GFIN 7010 Corporate Finance (2-3 Credit Hours)
GFIN 7020 Intl Financial Management (1-3 Credit Hours)
GFIN 7030 Investments (3 Credit Hours)
GFIN 7040 Fixed Income Analytics (3 Credit Hours)
GFIN 7050 Options, Futures & Deriv (3 Credit Hours)
GFIN 7060 Valuation & Finc Enterpr (3 Credit Hours)
GFIN 7110 Financial Institutes & Markets (3 Credit Hours)
GFIN 7120 Cases in Financial Management (3 Credit Hours)
GFIN 7130 Financial Law & Regulation (3 Credit Hours)
GFIN 7140 Portfolio Management (3 Credit Hours)
GFIN 7660 Risk Management (3 Credit Hours)
This course includes the key elements of classic corporate risk management and covers the pricing and use of derivative securities to manage corporate risk. Applications of the use of derivative securities to manage risk will have an emphasis on the use of derivative securities to manage the corporate risk of financial institutions. Business cases and simulations reinforce key concepts and focus on the practical application of risk management tools. This course is timely due to the recent Dodd-Frank Act and Basel 3. Topics will include Value-at risk (VaR), sensitivity analysis (and its connection to regulatory capital requirements), stress testing, and credit risk management. Students will complete an empirical project that will include a VaR Analysis Report utilizing stress testing.

Global Health (GHCP)

GHCP 6030 Pers Glob Hlth & Soc Jus (3 Credit Hours)
The study of ancient Greek language offers students an exciting opportunity to gain a nuanced sense of how language works as well as develop the skills to read Homer, Plato, the New Testament, etc. without the filter of translation. Designed to get students reading Attic Greek with facility, this course follows a grammar-based approach that moves students from learning the alphabet to reading real Greek as quickly as possible. This course requires no language background.

**Prerequisite(s):** minimum score of PASS in 'GREK 1010 Placement'.

**GREK 1010 Elementary Greek (4 Credit Hours)**
The study of ancient Greek language offers students an exciting opportunity to gain a nuanced sense of how language works as well as develop the skills to read Homer, Plato, the New Testament, etc. without the filter of translation. Designed to get students reading Attic Greek with facility, this course follows a grammar-based approach that moves students from learning the alphabet to reading real Greek as quickly as possible. This course requires no language background.

**Prerequisite(s):** minimum score of PASS in 'GREK 1010 Placement'.

**GREK 1020 Intermediate Greek (4 Credit Hours)**
This course is a continuation of GREK 1010 in which students will continue to acquire greater facility in reading unabridged passages of ancient Greek. Prerequisite: GREK 1010 or equivalent.

**Prerequisite(s):** minimum score of PASS in 'GREK Quantitative Code' or GREK 1010.

**GREK 1290 Semester Abroad (1-20 Credit Hours)**
Study abroad course in ancient Greek language. Department approval and an appropriate faculty supervisor.

**GREK 2030 Attic Prose (4 Credit Hours)**
This course focuses on reading selections from a range of prose authors, e.g., Plato, Herodotus, Xenophon. In addition to improving their proficiency in reading Greek, students develop further familiarity with prose styles and begin to acquire skills in literary, historical, or philosophical analysis. Prerequisite: GREK 2010 or equivalent.

**Prerequisite(s):** minimum score of PASS in 'GREK 2030 Placement' or GREK 2010.

**GREK 2390 Semester Abroad (1-20 Credit Hours)**
Study abroad in ancient Greek language. Department approval required.

**GREK 2940 Transfer Coursework (0 Credit Hours)**
For transfer of credit in Ancient Greek language. Department approval required.

**GREK 2070 Greek Lyric Poetry (3 Credit Hours)**
Greek Lyric includes a wide range of non-hexameter poetry composed throughout the ancient Greek world in a variety of genres and dialects from the 7th century onward. This category of poetry includes laments and celebrations for every occasion from war to love. Major authors include Alcman, Sappho, Theognis, Solon, and Pindar.

**GREK 3070 Select Authors (3 Credit Hours)**
This course focuses on reading selections from a range of authors in prose and/or poetry. In addition to improving their proficiency in reading Greek, students develop further familiarity with prose styles and begin to acquire skills in literary, historical, or philosophical analysis. Prerequisite: GREK 2030 or equivalent.

**GREK 3910 Independent Study (1-3 Credit Hours)**
Students wishing to maintain and improve their skill in reading Greek may enroll in a reading course for one, two, or three credits. Requires departmental approval and an appropriate faculty supervisor.
GREK 4920 Independent Study (1-3 Credit Hours)
Students wishing to maintain and improve their skill in reading Greek may enroll in a reading course for one, two, or three credits. Requires departmental approval and an appropriate faculty supervisor.

GREK 4990 Honors Thesis (3 Credit Hours)
Course reserved for students writing an honors thesis for a major in Greek. Requires approval of the department and an appropriate faculty director.

GREK 5000 Honors Thesis (4 Credit Hours)
Course reserved for students writing an honors thesis for a major in Greek. Requires approval of the department and an appropriate faculty director.

GREK 5190 Semester Abroad (1-20 Credit Hours)
Study abroad course in ancient Greek language. Requires department approval.

GREK 5370 Washington Semester (1-20 Credit Hours)
For transfer of credit. Department approval required.

GREK 5380 Junior Year Abroad (1-20 Credit Hours)
Study abroad course in ancient Greek language. Requires department approval.

GREK 5390 Junior Year Abroad (1-20 Credit Hours)
Study abroad course in ancient Greek language. Requires department approval.

GREK 5940 Transfer Coursework (3 Credit Hours)
For transfer of credit in Ancient Greek language. Department approval required.

GREK 6030 Greek Tragedy (3 Credit Hours)
This course offers students the opportunity to study Athenian tragedy through an in-depth study of the work of Aeschylus, Sophocles, and/or Euripides. Seminars will usually focus on a single author and work, but in some instances will investigate important themes across multiple works to give students a nuanced understanding of Athenian tragedy in comparative perspective.

GREK 6040 Greek Comedy (3 Credit Hours)
Comedy of the fifth century B.C.E., known as Old Comedy, focused on political issues, while Greek comedy of the fourth century B.C.E., known as New Comedy, focused on domestic entanglements. Eleven plays of Aristophanes survive from Old Comedy, and large fragments of seven plays by Menander survive from New Comedy. Several comedies of Aristophanes and selected fragments of Menander will be read in this course in the original Greek.

GREK 6050 Plato (3 Credit Hours)
In this course students will study one or more works of Plato to gain a sense of his style and argumentation, as well as his place in ancient literary, cultural, political, and/or philosophical traditions. Work(s) read will be chosen at the discretion of the instructor.

GREK 6060 Greek Historians (3 Credit Hours)
This course offers students an in-depth study of one or more major figures in the Greek historiographical tradition, e.g., Herodotus, Thucydides, Xenophon.

GREK 6070 Greek Lyric Poetry (3 Credit Hours)
Greek Lyric includes a wide range of non-hexameter poetry composed throughout the ancient Greek world in a variety of genres and dialects from the 7th century onward. This category of poetry includes laments and celebrations for every occasion from war to love. Major authors include Alcman, Sappho, Theognis, Solon, and Pindar.

GREK 6080 Greek Orators (3 Credit Hours)
Greek orators of the fifth and fourth centuries B.C.E. wrote speeches for the law courts, for political assemblies, and for display. Readings for this course will be selected from the speeches of Gorgias, Antiphon, Andocides, Lysias, Isokrates, Demosthenes, and Aischines.

GREK 6090 Greek Epic Poetry (3 Credit Hours)
Greek Epic originated in the archaic period and is the oldest surviving Greek poetry (e.g., Homer, Hesiod, and the Homeric Hymns). It remained one of the most influential genres through to the Byzantine period. Students in this seminar will investigate the epic tradition through the careful study of one or more text.

GREK 6110 Special Authors (3 Credit Hours)
Readings from ancient Greek authors not covered in other courses.

GREK 6910 Independent Study (1-3 Credit Hours)
Students wishing to maintain and improve their skill in reading Greek may enroll in a reading course for one, two, or three credits. Requires departmental approval and an appropriate faculty supervisor.

GREK 6920 Independent Study (1-3 Credit Hours)
Students wishing to maintain and improve their skill in reading Greek may enroll in a reading course for one, two, or three credits. Requires departmental approval and an appropriate faculty supervisor.

GREK 7040 Selected Readings (1-9 Credit Hours)
Students wishing to maintain and improve their skill in reading Greek may enroll in a reading course for up to nine credits. Requires Graduate Student Status, departmental approval, and an appropriate faculty supervisor.

GREK 9980 Masters Research (0 Credit Hours)
Course reserved for students writing a thesis for the Master's degree in ancient Greek. Requires approval of the department and an appropriate faculty director.

Haitian Creole (HACR)

HACR 1010 Elementary Haitian Creole I (4 Credit Hours)
Designed for students with little or no knowledge of Haitian Creole, this class introduces students to the language and the culture of the creole speech community of the francophone Caribbean region, with emphasis on the Haitian speech community. Students will acquire competencies in Haitian Creole that prepare them for more advanced studies in Haitian language and culture. The course emphasizes the development of multiple language skills (listening, speaking, reading, writing, as well as interacting).
HACR 1020  Elementary Haitian Creole II  (4 Credit Hours)
This class is intended for students who have taken HACR 1010 (Elementary Haitian Creole I) or who have already acquired competencies in Haitian Creole (e.g. high school, junior college, or exposure to Creole at home or abroad). Students will be exposed to more complex linguistic forms and longer texts. They will develop skills to participate in conversation related to real events in Haiti, and they will improve their ability to work on longer writing assignments. Communicative contexts and grammatical guides are introduced in class through a variety of activities, and acquisition is reinforced by interactive use of new structures and vocabulary.

Prerequisite(s): HACR 1020 or 1120.

HACR 2810  Special Projects  (3 Credit Hours)
This course will provide students with a broader knowledge of Haitian language and culture. Emphasis will be placed on research, essays, and discussion.

HACR 2820  Special Projects  (3 Credit Hours)
This course will provide students with a broader knowledge of Haitian language and culture. Emphasis will be placed on research, essays, and discussion.

Prerequisite(s): HACR 1130.

Health Communication/Education (HCED)

HCED 6050  Media and Health Educ  (3 Credit Hours)
HCED 6140  Principles of Hlth Ed  (3 Credit Hours)
HCED 6310  Case Studies In Hced  (2 Credit Hours)
HCED 6350  Comm Health Prob Models  (2 Credit Hours)
HCED 6570  Appl Prin/Psychol Lrng  (2 Credit Hours)
HCED 6830  School Health  (2 Credit Hours)
HCED 7840  Community Hlth Educ  (2 Credit Hours)
HCED 7970  Field Ex Health Educatio  (0 Credit Hours)
HCED 7980  Capstone Exp In Hlth Edu  (0 Credit Hours)

Health Policy and Management (HPAM)

HPAM 6010  Comparative Health Systems  (2 Credit Hours)
Health systems around the world face the dual challenge of ensuring continued improvement in population health in an environment of rapidly increasing demand with limited availability of resources. Despite these common concerns about health systems worldwide, no two healthcare systems are identical. This course introduces an approach for comparative analysis, focusing on assessing diverse health systems and their performance. The conceptual basis for the course is the World Health Organization’s health systems building block framework, which will facilitate understanding of the inter-linkages among different components of the system and the effects of reforms on system-wide outcomes. We also briefly review other frameworks for comparison. A set of common indicators for benchmarking health systems will be discussed.

HPAM 6050  Health Systems Concepts  (3 Credit Hours)
This course introduces students to the historical development, current structure, operation, and future direction of the U.S. health care system. The primary topics include public health activity and health care delivery systems, the factors that determine allocation of health care resources, and the relationship of health care costs to benefits. Students learn to assess organized efforts to influence health delivery and policy formulation, the impact of these efforts on leaders of health care organizations, and the role of societal values and individual behaviors on health system performance, reform efforts, and the health status of our population. Class time is devoted to open discussion of these complex and value-laden issues.

HPAM 6120  Foundations of Management  (2 Credit Hours)
HPAM 6140  Leadership for Clin Improve  (3 Credit Hours)
The course offers students the knowledge, skills, and personal mastery tools that are a prerequisite to assuming leadership positions in the delivery of health services that improve the health status of the individuals and populations. Building on the perspective of clinical education and practice, the student begins his or her leadership journey, integrating and implementing the key structures and processes leading to clinical process improvement and the improvement of health outcomes. By grounding fundamental principles of organizational learning in experimental activities, this course enhances the student’s mastery of the core competencies: setting direction, enrolling participation, quality measurement and improvement, personal and team learning, effective health care design, clinical change and organizational design.
HPAM 6170 Qual Mgmt in Health Care (3 Credit Hours)
This course introduces students to the concept of continuous process improvement and to the discipline of healthcare quality management. This practical course also introduces the tools to examine, evaluate, and implement the key structures and processes of quality management programs in health care organizations. An integrative approach to improvement and organizational learning is taken, combining topics and methods from diverse improvement approaches in the development of an organization-wide commitment to continuous improvement. Through case analysis and experiential learning, the course emphasizes practical applications that prepare the participants to use the theory and techniques of quality management in situations with complex clinical and managerial implications. Course topics include measurement systems, quality improvement tools, and the design of programs for change management.

HPAM 6190 Eth Conc of Hlth Care Managers (2 Credit Hours)
This course introduces students to ethical problems in the context of health care management. Special emphasis will be placed on managerial dimensions of the discipline as well as bioethical applications. The course is organized by three principal components. The first addresses professional codes of ethics and how they relate to personal and professional integrity. The second addresses corporate ethics including duties to patients and stakeholders, social responsibility, and disclosure. The final section addresses issues traditionally associated with bioethics and medical treatment decision-making. Each of these components are grounded in analysis of ethical principles related to healthcare.

HPAM 6200 Intro to Healthcare Analytics (3 Credit Hours)
Vast amounts of diagnostic, procedural, pharmacy, administrative and financial data are collated and generated within the health care system. To support the financial health, operational efficiency and quality of care, stakeholders must transform this data into actionable information to support decision-making. Students in this introductory graduate-level course will utilize industry standard analytical tools, particularly Microsoft Excel© to analyze large institutional data commonly found in health care.

HPAM 6210 Health Law and Regulation (3 Credit Hours)
This course is a graduate-level course that introduces students to a wide range of topics in the area of health law and regulation including a number of relevant statutes. Students learn to recognize potential legal problems in various health care settings, identify the issues and rights that are implicated, and propose solutions or plans of action. They also learn to differentiate between legal problems and problems which can more appropriately be solved in other ways. There is an emphasis on formulating analyses clearly, both orally and in writing.

HPAM 6270 Monitoring for Prgrm Mgmt in GH (3 Credit Hours)
This course provides students with an introduction to program monitoring, a widely-valued skill set for managing and tracking results in public health programs in both the domestic and international context. Focus will be placed on programs across a wide spectrum of public health activities, including those related to behavior change, health services utilization, health education and communication, population-based services, primary and secondary prevention, and capacity building. Students will learn to develop a conceptual framework, write goals and measurable objectives, develop appropriate indicators and work with health information systems. This course is designed for students that (1) intend to work primarily in program design and implementation, or (2) wish to master these introductory concepts as a building block to further evaluation coursework.

HPAM 6320 Managerial Communications (2 Credit Hours)
The purpose of Managerial Communications is to develop the written and oral communication skills that students will need as leaders in healthcare-related organizations. To function effectively in complex professional environments, leaders must understand and use different communication behaviors and strategies to accomplish organizational objectives. This course will provide both the underlying concepts and the skill-building exercises to allow the student to build, improve, and perfect their oral and written communications.

HPAM 6360 Human Resource Management (3 Credit Hours)
This course combines Organizational Behavior and HR Management theory and practices for managers of health care organizations. By integrating the content areas of both subjects, this course allows students to learn organizational theory and then to apply it to human resource issues. Broad topical areas include psychological and cultural processes affecting recruitment and selection, factors influencing training and development, the scientific method as applied to health care organizations, theories and practices influencing employee performance, effective management theory and practice, engaging and involving employees in organizational processes, employee well-being, and managing change.

HPAM 6380 Organizational Behavior (3 Credit Hours)
HPAM 6450 Health Economics (3 Credit Hours)
This course introduces basic economic concepts and analytical tools used to address questions concerning the efficient and effective production of health and health services in the context of a market economy. The course emphasizes the application of economic tools of analysis to the management of health-related organizations and to health policy development. Students will study current research on the health care industry and the ways in which economic analysis is employed in the development of public policy on issues related to population health and healthcare.

HPAM 6490 Pol Options Med Prod and Tech (2 Credit Hours)
The aim of the course is to give participants insight into and understanding of current developments affecting pharmaceutical policy making today. The course also aims to give participants a better understanding of the theories and methods available for analyzing the effects of policy interventions.
Introduction to Health Care Accounting is an applied financial accounting course. Principles of financial accounting are developed and used to examine the difficult strategic and operational decisions existing for health care providers. The general objective of this course is to provide the health care decision maker with the financial accounting theory, concepts, and tools necessary to make better financial management decisions as well as enable the student to make sound judgments regarding financial analyses performed by others.

This class is designed to expose students to managerial accounting within healthcare organizations. The course will cover fixed and variable costs, cost allocation, price setting strategies, budgeting, and revenue cycle management.

This course introduces students to the ways providers of health care services have been, are, and will be paid for the services by private-sector payers and public-sector programs. Knowledge of economic concepts and of financial/managerial accounting will be used to analyze public policy issues as well as implementation and reporting issues. Topics include (1) the macro-economic environment within which current payment systems have evolved and continue to evolve; (2) payment mechanisms for institutionally based care, both acute and sub-acute, and for ambulatory care over a range of settings; (3) regulatory processes determining payment for services in entitlement programs; (4) the policy objectives furthered or impeded by public-sector and private-sector payment mechanisms; and (5) analysis of provider responses to payment systems incentives.

This course encompasses a body of knowledge, a set of quantitative skills, and an orientation towards managerial situations which provide managers greater insight and analytic opportunities for improving the managerial process. Focuses on the systematic planning, direction, and control of the organizational processes that turn resources such as labor, equipment, and materials into services and the quantitative analysis that supports these decisions. In this environment, the processes involve allocation, scheduling, and procedural decisions that result in the effective and efficient utilization of resources for the delivery of health care services.

This course is designed to introduce the health administration student to the rapidly evolving discipline of health informatics in the complex and diverse world of healthcare. The course will review the history, current applications, and the potential future of information, information management and information technology, including: data acquisition, storage and processing; information systems (clinical and administrative); standards; security; decision support; and an understanding of medical/health informatics methods and principles.

Health Market Analysis introduces students to the concepts of market analysis, marketing, strategic planning, and research presentation management; all of which are vital to successful health care organizations. This course integrates knowledge of marketing, statistics and planning. The course also incorporates understanding of the health care environment in the United States and its effect on the development, presentation and use of a strategic plan. This integration is accomplished through the use of cases and the performance of a strategic assessment and plan for a health care delivery organization.

Administrative Internship (I) combines didactic and field sessions to introduce students to the operational management of public and private components of the health care delivery system. Students will be exposed to the planning, delivery, and financing of health services in organizations including acute care hospitals, long-term care facilities, multi-institutional systems, not-for-profit entities and others. Furthermore, students may have contact with individual patients and patient information during this experience and appropriate professional confidentiality is required.

Within the context that the healthcare ecosystem is undergoing a profound transformation towards a new consumer-driven market, often with increasingly constrained resources, this course offers students an open learning and design space to foster positive healthcare businesses through human-cantered design of the work of care, while improving patient experience, health outcomes, workforce engagement, and revenue. This leadership focus is on successfully reaching key performance metrics and goals through innovation and improvement, while restoring humanity to healthcare.

This course offers physician leaders an introduction to strategic thinking within a business planning framework using a case-based and experience based analysis of environmental trends, business models and payment systems. The course helps the student understand and prepare for the continuously changing health care business environment in the US and prepares the student for future strategic planning responsibilities.
HPAM 6980 Hlth Sys China: Applied Persp (3 Credit Hours)
This course introduces students to various aspects (epidemiology, social, economic, cultural) of China's healthcare system. The course will be delivered in China so that the materials learned in the classroom can be observed in the real world through field visits and field observations. Health reform strategies of China in recent years will be critically examined through directed readings, seminar lectures, and a number of sites including primary care centers, tertiary hospitals, public health entities, and research organizations. Financing of health care and system for paying the providers will also be evaluated and analyzed.

HPAM 7170 Strategic Mgmt & Plan for Hlth (3 Credit Hours)
Strategic Management of Health Care Organizations will introduce you to strategic thinking, strategic planning and strategic management, which are vital to successful health care organizations. This course integrates students' knowledge of management, marketing, organizational behavior, human resources, finance, accounting, health policy, and economics. The course also incorporates your grasp of the health care environment in the United States and its effects on the development of a strategic plan. Integration is accomplished through the use of cases and the performance of a strategic assessment and plan for a health care related organization.

HPAM 7330 Negotiation Analysis (2 Credit Hours)
Strategic Management of Health Care Organizations will introduce you to strategic thinking, strategic planning and strategic management, which are vital to successful health care organizations. This course integrates students' knowledge of management.

HPAM 7580 Financial Management (3 Credit Hours)
This is a course on financial management focused on making good decisions at the institutional level about investments/divestments (primarily real assets) and about the financing choices (raising and servicing capital).

Prerequisite(s): GHSD 6500, 6540 and 6450.

HPAM 7660 Health Policy Analysis (3 Credit Hours)
The primary aim of this elective course is to present an overview of health policy in American government, its scope, dynamics, and conceptual and practical dilemmas. It is designed to acquaint students with major issues involved in formulating, implementing, and assessing patterns of decisions established by government. Because the study of policy is essentially interdisciplinary, readings for the course have been drawn from several fields, including sociology, political science, and economics. Specific areas of consideration will be addressed during the seminar through analysis and discussion of the functions of state and local government and various stakeholder groups that attempt to influence governmental action.

HPAM 7740 Econ. Eval. and Modeling (3 Credit Hours)
This course introduces economics concepts and modeling tools applied to economic evaluation in health care. Topics include: cost analysis, effectiveness measures, cost-effectiveness, cost-utility analysis, and cost-benefit analysis. The course will use case studies to illustrate the use of economic evaluation. Students will develop skills in software to build decision tree models, and Markov models for economic evaluation. There are no prerequisites but the students should be familiar with basic geometry, algebra and statistics.

HPAM 7990 Master's Independent Study (0-3 Credit Hours)
Masters students and advisor select a topic for independent study and develop learning objectives and the expected written final product.

HPAM 8050 Doctoral Seminar (0 Credit Hours)
This seminar will complement formal academic coursework with discussion on topics related to professionalization, research process, collaboration, cutting edge global health topics, teaching pedagogy, and other domains which merit discussion within the department. Doctoral students will work with faculty sponsors each semester to organize regular panels, lectures, brown-bag seminars, reading club, and similar activities as needed to facilitate learning around themes of writing grant proposals, co-authorship, and publication of results. Students will be expected to make formal presentations. Doctoral students are expected to attend events regularly each semester. Students will be assessed and given feedback via self-report, peer evaluation, and faculty observation. The class meets weekly over eight weeks, or biweekly over both fall and spring semesters.

HPAM 8310 Org Theory And Assessment (3 Credit Hours)

HPAM 8350 Policy Analysis Natural Experi (3 Credit Hours)
This course is intended for doctoral students interested in policy analysis. It will focus on when to apply the various econometric methods to panel data. Discussion will focus on how each technique is applied in practice. Techniques will include differences-in-differences, synthetic controls, regression discontinuity, and quantile regression.

Prerequisite(s): (GCHB 8250 or ECON 7170).

HPAM 8410 Cost Benefit/Effective Analysi (3 Credit Hours)
The purpose of the course is to introduce techniques of economic evaluation applied to health interventions and clinical decision making. Topics covered include: cost analysis, effectiveness measures, cost-effectiveness, utility measures and cost-utility analysis, benefits of health interventions and cost-benefit analysis. The course will discuss a number of case studies in clinical health economics to illustrate the use of economic evaluation techniques in the health sector. There are no prerequisites for the course but eh student should be familiar with basic geometry, algebra and statistics.

HPAM 8770 Health Services Rsrch Mthds (3 Credit Hours)
This course develops theoretical knowledge and applied skills in designing and conducting research in health systems. You will utilize and build upon knowledge gained in prerequisite courses as you learn to carry out each step of the research process. You will study textbooks, and articles, present reports to the class in a seminar setting, and complete a number of assignment with contribute to the experience of research design and analysis. You will develop and understanding of factors which, unless planned and accounted for, sometimes result in serious flaws in the research project.

HPAM 8990 Doctoral Independent Study (1-3 Credit Hours)
Doctoral students and advisor select a topic for independent study and develop learning objectives and the expected final product.

HPAM 9970 Dissertation (0 Credit Hours)
Doctoral candidates who have defended their prospectus and are engaged in research.

HPAM 9990 Dissertation Research (2 Credit Hours)
Doctoral students who have completed course work but not defended their prospectus.
Health Systems Management (HSMG)

HSMG 6110 Foundations of Management (3 Credit Hours)
HSMG 6340 Group Behav In Organiztn (1 Credit Hour)
HSMG 6820 Aging, Hlth & Built Env (3 Credit Hours)
HSMG 7330 Negotiations In Hlth Car (2 Credit Hours)

Hebrew (HBRW)

HBRW 1010 Elementary Hebrew I (4 Credit Hours)
An introduction to the Hebrew language.
Prerequisite(s): minimum score of PASS in 'HBRW 1010 Placement'.

HBRW 1020 Elementary Hebrew II (4 Credit Hours)
A continuation of Hebrew 1010.
Prerequisite(s): minimum score of PASS in 'HBRW 1020 Placement' or HBRW 1010.

HBRW 1100 Readings In Hebrew (1 Credit Hour)
This course allows students with a background in Hebrew to read texts from their current JWST class in the original language.

HBRW 1290 Semester Abroad (1-20 Credit Hours)
Semester Abroad.

HBRW 1940 Transfer Coursework (0 Credit Hours)
Transfer Coursework

HBRW 2030 Intermediate Hebrew I (4 Credit Hours)
An introduction to Hebrew prose and poetry. A continuation of 1020 with emphasis on reading and Hebrew conversation.
Prerequisite(s): minimum score of PASS in 'HBRW 2030 Placement' or HBRW 1020.

HBRW 2130 Intermediate Hebrew II (3 Credit Hours)
A continuation of Hebrew 2030 with an emphasis of reading and discussion of texts in Hebrew.
Prerequisite(s): minimum score of PASS in 'HBRW 2130 Placement' or HBRW 2030.

HBRW 2140 Reading In Hebrew (1 Credit Hour)
This course allows students with a background in Hebrew to read texts from their current JWST class in the original language. Texts read will vary according to the concurrent course. For example, a student enrolled in JWST 4110 Rabbinic Judaism would read

HBRW 2230 Biblical Hebrew I (3 Credit Hours)
This course will involve reading various texts of the Hebrew Bible (Old Testament) and the study of biblical Hebrew.

HBRW 2390 Semester Abroad (1-20 Credit Hours)
Semester Abroad.

HBRW 2940 Transfer Coursework (0 Credit Hours)
Transfer Coursework.

HBRW 2990 Foreign Language Exempt (0 Credit Hours)
Foreign Language Exempt.

HBRW 3100 Advanced Hebrew I (3 Credit Hours)
An advanced class for students interested in pursuing further Hebrew studies. Class will read and discuss modern Hebrew literature as well as study advanced grammar and syntax.
Prerequisite(s): minimum score of PASS in 'HBRW 3100 Placement' or (HBRW 2130, 2130 or 2130).

HBRW 3110 Advanced Hebrew II (3 Credit Hours)
A continuation of Hebrew 3100 with emphasis on deepening and expanding oral, aural, reading and writing skills in modern conversational Hebrew making extensive use of content and culture to develop language skills.
Prerequisite(s): minimum score of PASS in 'HBRW 3110 Placement' or HBRW 3100.

HBRW 3230 Biblical Hebrew II (3 Credit Hours)
This course is a continuation of Hebrew 2230 Biblical Hebrew I and involves reading various texts from the Hebrew Bible. Biblical Hebrew grammar will be reviewed as appropriate.

HBRW 4910 Independent Study (1-3 Credit Hours)
Independent Study.

HBRW 4920 Independent Study (1-4 Credit Hours)
Independent Study.

HBRW 5190 Semester Abroad (1-20 Credit Hours)
Semester Abroad.

HBRW 5380 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

HBRW 5390 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

HBRW 5940 Transfer Coursework (0 Credit Hours)
Transfer Coursework.

History (HIST)

HIST 1500 Special Topics (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HIST 1520 Pain & Torture Through History (3 Credit Hours)
A seminar course for first year students designed to introduce college level reading, discussion and writing. The UN Convention against Torture and Other Cruel and Inhuman or Degrading Treatment or Punishment in 1987 unequivocally banned the use of torture. Nevertheless torture still occurs, even in the 130 countries that ratified the agreement. There is a great deal of controversy about what constitutes torture and some claim that it is justified in special situations like the War on Terror. This course will examine the goals and methods of torture through history, as it moved from a focus of inflicting pain to the use of psychological torture and sensory deprivation. We will explore how to study pain in history - does pain exist as an entity; unravel the changing relationships between the state, law, and torture; look at the torturers themselves - who they are, how they learn the techniques, and the effects on them. We will also consider what it says about us when we pursue "enhanced" quasi-torture interrogation techniques.
**HIST 1910** Disasters in History (3 Credit Hours)
Disasters have taken many forms in human history, from earthquakes, fires, tsunamis and hurricanes to famine and epidemic disease. Nor should we forget manmade tragedies such as the terrorist attacks on 9/11 or the devastation produced by a combination of human and technological failures, such as the explosions at Chernobyl and Bhopal or the more recent BP oil spill just off of our own coast. Disasters are an important focus for historical inquiry for quite varied reasons. This is a unique course. It will be team-taught by 12 professors. Each professor will teach a 1-week unit on a historical disaster related to their area of specialization. In addition to an excellent learning experience, you will get to sample the teaching of more than half of the faculty members in the History Department.

**HIST 1970 Disasters in History (3 Credit Hours)**
Disasters have taken many forms in human history, from earthquakes, fires, tsunamis and hurricanes to famine and epidemic disease. Nor should we forget manmade tragedies such as the terrorist attacks on 9/11 or the devastation produced by a combination of human and technological failures, such as the explosions at Chernobyl and Bhopal or the more recent BP oil spill just off of our own coast. Disasters are an important focus for historical inquiry for quite varied reasons. This is a unique course. It will be team-taught by 12 professors. Each professor will teach a 1-week unit on a historical disaster related to their area of specialization. In addition to an excellent learning experience, you will get to sample the teaching of more than half of the faculty members in the History Department.

**HIST 1910 Eating & Drinking in History (3 Credit Hours)**
Eating and Drinking are part of our everyday lives and experiences, and in that respect, these processes can seem natural rather than historical. However, if we stop and think about it, the politics, economics, and culture of food production and consumption have shaped communities and cultures in specific, and often divergent, ways. In this course, we will take the overarching rubric of eating and drinking to explore the multiple ways in which studying food can illuminate our understanding of the past. This course will include units on food, war, and hunger; commodity chains and trade; cultural relationships with alcohol; and labor and food production in the pre-industrial, industrial and post-industrial era. This is a team taught class taught by the History faculty. Each professor will teach a 1-week unit on eating and drinking related to their area of specialization.

**HIST 1911 Eating & Drinking in History (3 Credit Hours)**
Eating and Drinking are part of our everyday lives and experiences, and in that respect, these processes can seem natural rather than historical. However, if we stop and think about it, the politics, economics, and culture of food production and consumption have shaped communities and cultures in specific, and often divergent, ways. In this course, we will take the overarching rubric of eating and drinking to explore the multiple ways in which studying food can illuminate our understanding of the past. This course will include units on food, war, and hunger; commodity chains and trade; cultural relationships with alcohol; and labor and food production in the pre-industrial, industrial and post-industrial era. This is a team taught class taught by the History faculty. Each professor will teach a 1-week unit on eating and drinking related to their area of specialization.

**HIST 1912 Eating & Drinking in History (3 Credit Hours)**
Eating and Drinking are part of our everyday lives and experiences, and in that respect, these processes can seem natural rather than historical. However, if we stop and think about it, the politics, economics, and culture of food production and consumption have shaped communities and cultures in specific, and often divergent, ways. In this course, we will take the overarching rubric of eating and drinking to explore the multiple ways in which studying food can illuminate our understanding of the past. This course will include units on food, war, and hunger; commodity chains and trade; cultural relationships with alcohol; and labor and food production in the pre-industrial, industrial and post-industrial era. **HIST 2910 Special Topics (1-3 Credit Hours)**
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

**HIST 2911 Special Topics (1-3 Credit Hours)**
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

**HIST 2912 Special Topics (1-3 Credit Hours)**
Courses offered by visiting professors or permanent faculty. For description, consult the department.

**HIST 2940 Transfer Coursework (3 Credit Hours)**
Transfer coursework. Consult the department.

**HIST 3210 Visual History & Filmmaking (3 Credit Hours)**
In this course students will explore the relationship between history and documentary filmmaking through parallel practices: the critical analysis of historical documentaries and the creation of short historical documentaries as members of small production teams. We will explore questions of narrative form, visual and aural evidence, expertise and authority, and the ethics of representation. Collaboration will also be a central theme of this course since students will have to work together to determine their research subject, carry out research, shoot video, and edit together the final cut.

**HIST 3230 Art and Craft of History (3 Credit Hours)**
Introduction to researching and writing history. We will develop these skills by studying scholars' investigations of the past, conducting archived research, and writing original essays.

**HIST 3880 Writing Intensive: (1 Credit Hour)**
Writing Intensive. For description, consult department.

**HIST 3890 Service Learning: HIST 3910 (0-1 Credit Hours)**
Academic Service Learning is an educational experience based upon a collaborative partnership between the university and the community. For Service Learning, see the Schedule of Classes. For description, consult department.

**HIST 3910 Special Topics (1-3 Credit Hours)**
Courses offered by visiting professors or permanent faculty. For description, consult the department.

**HIST 3911 Special Topics (1-3 Credit Hours)**
Courses offered by visiting professors or permanent faculty. For description, consult the department.

**HIST 3920 Special Offerings: History (3 Credit Hours)**
Courses offered by visiting professors or permanent faculty. For description, consult the department.

**HIST 4004 Mkts Money Trde PreIndust Econ (3 Credit Hours)**
This course takes a comparative approach to major issues in the economies of imperial Rome, and the Early Modern European overseas empires. The topics include an introduction to the main features of the these two pre-industrial macro-economies, and then a series of topics that are of interest to both students of history and business majors. Students will also gain knowledge of the sources and historical methods for the study of these economies, many of which differ from those of the modern era. Stress is on analysis and writing, and so the ability of a student to assimilate and synthesize data into coherent essays.

**HIST 4560 Internship & Independent Study (1-3 Credit Hours)**
Students will complete a 60-70 hour internship with a community partner. In addition, the student will work with a faculty member in the History Department who will advise the student and provide pertinent academic course work to complement the student's experiential learning. Pre-requisites: Approval of instructor.

**HIST 4570 Internship & Public Hist Sem (1-3 Credit Hours)**
What is public history? What do public historians do? What does history look like outside of the classroom? What are the public debates about the telling of history, and what are the consequences? This is a hands-on course which requires both an internship and seminar participation. Students will have an internship with a community partner and intern for 60-70 hours for the course of the semester. In addition, we will have regular seminar meetings as well as guest lectures and field trips. This course does have a Co-Requisite for service learning – it is SRVC 4890.

**HIST 4880 Writing Intensive: HIST 4920 (1 Credit Hour)**
Writing Intensive. For description, consult department.

**HIST 4881 Writing Intensive: HIST 4920 (1 Credit Hour)**
Writing Intensive. For description, consult department.

Corequisite(s): HIST 4920.
HIST 4910 Special Topics (1-3 Credit Hours)
Qualified students may arrange for independent study with approval of an instructor (dependent upon area of study) and their faculty adviser. Details of each student's program will vary, but all will involve some combination of readings, oral reports, and written work.

HIST 4920 Independent Study (1-4 Credit Hours)
Qualified students may arrange for independent study with approval of an instructor (dependent upon area of study) and their faculty adviser. Details of each student's program will vary, but all will involve some combination of readings, oral reports, and written work.

HIST 4990 Honors Thesis (3 Credit Hours)
Intensive reading, research, and writing in a selected field of history. Students should discuss their honors thesis with a prospective director during the semester prior to that in which they take 4990.

HIST 5000 Honors Thesis (3-4 Credit Hours)
Intensive reading, research, and writing in a selected field of history. Students should discuss their honors thesis with a prospective director during the semester prior to that in which they take 4990.

HIST 6660 Photography & Historical Persp (3 Credit Hours)
This class aims to explore the relationship between historical memory and photographic practice.

HIST 6910 Special Offerings: History (3 Credit Hours)
For specific offering, see the Schedule of Classes. For description, consult department.

HIST 7001 Seminar in Historical Practice (3 Credit Hours)
This course serves as an introduction for History graduate students to historical practice and the Department of History.

HIST 7003 Historiography & Methods I (3 Credit Hours)
Historiography tutorial in the major field of study for M.A. and Ph.D. students in History.

HIST 7005 Historiography & Methods II (3 Credit Hours)
Historiography tutorial in the minor field of study for M.A. and Ph.D. students in History.

HIST 7006 Intermediate Hist. Writing (3 Credit Hours)
Required writing course for doctoral students leading to a substantive dissertation prospectus.

HIST 7007 Advanced Hist. Writing (3 Credit Hours)
Required writing course for doctoral students leading to a substantive dissertation prospectus.

HIST 7008 Prof. Deve. and Documentation (3 Credit Hours)
Required course for doctoral students leading to the creation of a successful doctoral portfolio.

HIST 7210 Visual History & Filmmaking (3 Credit Hours)
In this course students will explore the relationship between history and documentary filmmaking through parallel practices: the critical analysis of historical documentaries and the creation of short historical documentaries as members of small production teams.

HIST 7900 Directed Readings (1-3 Credit Hours)
Focused readings and weekly meetings with a qualified instructor, tutorial-style.

HIST 7901 Directed Readings (1-3 Credit Hours)
Focused readings and weekly meetings with a qualified instructor, tutorial-style.

HIST 7910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HIST 7920 Independent Study (3 Credit Hours)
Qualified students may arrange for independent study with approval of an instructor (dependent upon area of study) and their faculty adviser. Details of each student's program will vary, but all will involve some combination of readings, oral reports, and written work.

HIST 7930 Special Topics (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HIST 9980 Master's Research (0 Credit Hours)
Master's Research. Consult Department.

HIST 9990 Dissertation Research (0 Credit Hours)
Dissertation Research. Consult Department.

History (PAHS)

PAHS 2910 Special Topics (3 Credit Hours)
Special topics in history.

PAHS 2911 Special Topics (3 Credit Hours)
Special topic in history.

PAHS 3750 History of Rock & Roll (3 Credit Hours)
The purpose of this course is to examine the place that rock 'n' roll has occupied in American culture. The central question is why a musical and cultural form once dismissed as a "passing fad" has been a very visible (and audible) part of our culture for over sixty years, despite considerable resistance.

PAHS 3830 Special Topics (3 Credit Hours)
Special topics in history.

PAHS 3831 Special Topics (3 Credit Hours)
Special topics in history.

PAHS 3930 Special Topics (3 Credit Hours)
Special topics in history.

PAHS 4010 Special Topics- History (3 Credit Hours)
Special topics in history.

History-Africa (HISB)

HISB 1140 Freshman Seminar-Africa (3 Credit Hours)
Freshman seminar. For description, consult the department.

HISB 1290 Semester Abroad (1-20 Credit Hours)
Semester abroad. For description, consult the department.

</thead>
<tbody>
<tr>
<td>HISB 1300</td>
<td>African Hist To 1800 (3 Credit Hours)</td>
<td></td>
<td>This course examines selected topics in the history of sub-Saharan Africa from antiquity to the period immediately preceding colonial conquest. It provides an overview of historical developments in particular regions, considers the implications of Africa as a unit of analysis, and provides a point of departure for more specialized courses in African history.</td>
</tr>
<tr>
<td>HISB 1310</td>
<td>Africa Since 1800 (3 Credit Hours)</td>
<td></td>
<td>This course considers the history of sub-Saharan Africa under colonialism and after: the responses of people to governments very different from those they had previously, changes in African societies, the challenges of the postcolonial period. Topics covered include gender relations, peasant agriculture, wage labor, politics, and development.</td>
</tr>
<tr>

<td>Transfer Credit (3 Credit Hours)</td>
<td></td>
<td>Transfer credit. Consult the department.</td>
</tr>
<tr>
<td>HISB 2120</td>
<td>History of Western Africa (3 Credit Hours)</td>
<td></td>
<td>This course is a historical introduction to the themes and events in western and northern Africa from prehistoric times and the peopling of Africa through the advent of Islam; North and West African empires and states in the medieval period; the arrival and departure of European colonial powers; and the re-emergence of independent African states. We will trace topical themes through case studies, exploring the political, cultural, social aspects and the inter-regional dynamics of Saharan Africa.</td>
</tr>
<tr>
<td>HISB 2130</td>
<td>History of Southern Africa (3 Credit Hours)</td>
<td></td>
<td>This course examines southern African history from 1652 to the present. It explores the particular political and cultural patterns which arose in the region as a result of contact and conflict between indigenous African societies and European settler communities.</td>
</tr>
<tr>
<td>HISB 2140</td>
<td>History of Eastern Africa (3 Credit Hours)</td>
<td></td>
<td>This course provides an historical survey of eastern Africa which examines the role of bantu migrations, the rise of state-building in the 17th and 18th centuries and a primary emphasis on the 19th and 20th centuries. The course highlights the social, cultural and economic dynamics of both African and settler societies as it explores the historical processes of slavery, migrations in the region, the imposition of colonialism, nationalism and the rise of the independent states of Kenya, Tanzania, Uganda, Ethiopia, Eritrea, Somalia, Rwanda and Burundi. We will use primary sources written or created by Africans and others to explore the developments that affected the region in recent history. This course devotes equal time to lecture and discussion.</td>
</tr>

</tbody>
</table>
HISA 6070 Gender in African History (4 Credit Hours)
This seminar will consider the question of how recent forms of gender theory might be applied to African societies. Readings will include Foucauldian, psychoanalytic, and political theory, as well as historical and ethnographic studies of particular societies.

HISA 6110 Slavery/Emancipation in Africa (4 Credit Hours)
This course focuses on the legacy of colonialism for key political concepts such as citizenship and freedom. We will consider the construction of categories of difference like race, gender, and ethnicity and look at their changing meaning in the context of colonialism, slave emancipation, and freedom struggles in Africa and elsewhere in the colonial world.

HISA 6880 Writing Practicum: HISB 6070 (1 Credit Hour)
Writing Practicum. For description, consult department.

HISB 6910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISB 6981 Service 20-hours: (0 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISB 7910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

History-Ancient & Med Europe
(HISA)

HISA 1020 Barbarian West (3 Credit Hours)
A survey of the period from the fall of Rome to the establishment of feudal kingdoms.

HISA 1030 Medieval Europe 1100-1450 (3 Credit Hours)
A survey of the period in which Western Europe became the center of medieval civilization.

HISA 1500 Special Topics (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISA 1910 Special Topics (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISA 2000 Cities Empires and Gods (3 Credit Hours)
This survey course introduces the early civilizations and religious traditions of the Near East and India that are the institutional and cultural basis of the Middle East today. The course begins with the first, literate, urban civilizations of the Tigris-Euphrates, Nile, and Indus. Stress is on the institutions of ancient kingships and the religious traditions of Mesopotamia, Egypt, the Hebrews, Persia (Zoroastrianism and Manichaeism), and Early India (Hinduism, Buddhism, and Jainism).

HISA 2001 Warring States of Greece (3 Credit Hours)
This lecture course introduces the achievements of Greek civilization from its origins on Crete in the Bronze Age (2800-1400 B.C.) down to the conquest of the Greek world by the Romans. Greek civilization is the foundation of Western civilization. The intense inter-city rivalries shaped political thought with its stress on the consent of citizens and rule of law artistic and literary achievements stressing the human condition, and inquiry based on scientific reasoning and analysis of cause and effect. Stress is on the Archaic (750-480 B.C.), Classical (480-323 B.C.), and Early Hellenistic Ages (323-200 B.C.)

HISA 2002 Rome the Imperial Republic (3 Credit Hours)
This lecture course introduces the political and cultural achievements of the Roman Republic, and Rome’s enduring legacy to Western political thought. Emphasis is on the evolution of the Roman Republic’s political institutions, the Roman conquest of the Mediterranean world, the Hellenization of Roman society, the emergence of a Mediterranean economy, the demise of the Republic in the Roman Revolution, and the legacy of the Republic to the Western tradition.

HISA 2020 The High Roman Empire (3 Credit Hours)
This lecture course explains the political, institutional, and cultural achievements of the Roman Empire that are the foundations of Western civilization. Emphasis is on transformation of the Roman Republic into the monarchy of the Principate by Augustus (27 B.C.-14 A.D.), the imperial army and frontier policies, economic growth and social mobility under the Roman peace, the crisis of the third century (235-305), the rise of Christianity, and the creation of the Christian monarchy by Constantine (306-337).

HISA 2030 Byz & Early Med Civilization (3 Credit Hours)
This course covers the transformation of the late Roman world into the Christian civilization of the Byzantine Empire and early Medieval West. Emphasis is on changes in late Roman state and society, the barbarian invasions and fall of the Western Roman Empire, the failure to restore the Roman order by Justinian (527-565), the emergence of the Middle Byzantine state and Orthodox tradition, the inversion of Eastern Europe, the impact of the Crusades, and the Byzantine transmission of the Classical heritage to Western Europe.

HISA 2310 Medieval England (3 Credit Hours)
A survey of the political, social, and intellectual development of England from the Anglo-Saxon period to 1485.

HISA 2350 Medieval Italy (3 Credit Hours)
A survey of the political, social, and cultural developments in Italy from the eleventh century to the early fifteenth century, with special attention to the development of institution and culture in the city-states of central and northern Italy.

HISA 2910 Special Topics (1-3 Credit Hours)
Courses offered by visiting faculty or permanent faculty. For description, consult the department.

HISA 3000 Historical Methods: (1 Credit Hour)
Historical Methods Lab. For description, consult the department.
HISA 3070 Topics Medieval & Renais Hist (3 Credit Hours)
A reading seminar designed to explore in depth some aspect of late medieval history that is of interest to students and instructor.

HISA 3100 Spec Topics Greek Hist (3 Credit Hours)
Readings and discussion of select topics in classical Greek history. Homer and the Trojan War; The Birth of City-States in Greece and the Near East (1000-500 B.C.E.); Athenian Empire (480-404 B.C.E.); Sparta and Macedon in the Age of Hegemonies (404-323 B.C.E.); or Greek Cities Leagues, and Macedonian Kings (323-133 B.C.E.).

HISA 3110 Spec Topics Roman Hist (3 Credit Hours)
Readings and discussion of select topics in Roman history. The Making of Roman Italy (509-264 B.C.E.); The Punic Wars (264-146 B.C.E.); Roman Revolution (133-27 B.C.E.); Rome and the Jews (167 B.C.E.-135 C.E.), or Money, Market, and Trade from Antiquity to the middle ages.

HISA 3170 Medieval Spain (3 Credit Hours)
Readings, discussion, and essays examine the sweep of Iberian history from the late Roman empire until the early 16th century, with particular attention to the Visigothic monarchy, the society and culture of Islamic al-Andalus, the reconquest and development of the Christian kingdoms of Castile-León, Portugal, and Aragon, and the interaction of Christians, Jews, and Muslims in peninsular society. The development of a distinctive Castilian culture, largely transplanted in large part to Spanish America, will be studied through close attention to legal codes, domestic arrangements, military organization, the Inquisition, and the classics of medieval Castilian literature.

HISA 3230 Great Capts Alexander-Patton (3 Credit Hours)
Interdisciplinary colloquium on how the careers of great commanders have altered warfare and society. Stress is on changes in political, economic, and social institutions that stood behind these careers as well as the impact of innovations in technology, tactics, and strategy. Commanders include Alexander the Great, Hannibal, Scipio Africanus, Belisarius, Gustavus Adolphus, Frederick the Great, and Napoleon.

HISA 3250 Jews, Christians, Muslims (3 Credit Hours)
This seminar explores the relationships between the three Abrahamic religions during the Middle Ages. It examines the experience of Jews as minorities in both Christian and Muslim territories, encounters between Christians and Muslims both violent and peaceful in the Mediterranean and in Europe, and the ways in which each community was shaped by its encounters with the others.

HISA 3880 Writing Intensive: HISA 3230 (1 Credit Hour)
Writing Intensive. For description, consult department.

HISA 3881 Writing Intensive: HISA 3110 (1 Credit Hour)
Writing Intensive. For description, consult department.

HISA 3910 Special Topics (1-3 Credit Hours)
Courses offered by visiting faculty or permanent faculty. For description, consult the department.

HISA 3970 Spec offr: Ancient Med (3 Credit Hours)
For specific offering, see the Schedule of Classes. For description, consult department.

HISA 4140 The Crusades 1095-1291 (3 Credit Hours)
This course deals with the evolution of a distinct civilization in Scandinavia on the eve of the Viking Age (790-1100) and its impact on early Medieval civilization. Through archaeology, coins, the sagas and verse of Iceland, the course examines how Viking raids transformed states and societies across Europe and how the Scandinavians were assimilated into Latin Christendom from the eleventh through thirteenth centuries.

HISA 4150 The Age of the Vikings (3,4 Credit Hours)
This course deals with the evolution of a distinct civilization in Scandinavia on the eve of the Viking Age (790-1100) and its impact on early Medieval civilization. Through archaeology, coins, and the sagas and verse of Iceland, the course examines how Viking raids transformed states and societies across Europe and how the Scandinavians were assimilated into Latin Christendom from the eleventh through thirteenth centuries.

HISA 4910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISA 6000 Select Topics Greek History (3 Credit Hours)
Research seminar on select topics of Greek History: Archaic Greece (750-480 B.C.E.); Athenian Constitutional History; Alexander the Great; Greeks, Macedonians, and Persians: Birth of the Hellenistic World (600-250 B.C.E.); or Greeks in Iran and India (500 B.C.E.-200 C.E.)

HISA 6010 Sem Sel Topic Roman Hist (3,4 Credit Hours)
Research seminar on select topics in Roman History. Roman Imperialism and Transmarine Expansion (264-30 B.C.E.); Roman Principate; Later Roman Empire; Peloponnesian and Punic Wars; Rome and the Raj: Imperial Armies, Frontiers, and Societies; Imperial Rome and Imperial China (200 B.C.E.-200 C.E.); Rome and Iran (100 B.C.E.-650 C.E.); The Conflict of Pagans and Christians in the Roman Empire (30-565), Rome’s Mediterranean Economy or Rome and the Northern Barbarians.

HISA 6050 The Italian Renaissance (3 Credit Hours)
An examination of cultural, religious, and political developments in Renaissance Italy and their impact on the rest of Europe.
HISA 6060 Later Medieval Spain (3,4 Credit Hours)
Examines the political, religious, social, and cultural history of the Iberian Peninsula from the rise of the Caliphate of Cordoba in the tenth century through the reign of the Catholic Monarchs Isabel of Castile (1479-1504) and Ferdinand of Aragon (1479-1516). Among other topics, readings and discussion will address: the evolution of Islamic and Christian polities, and their centuries-long military confrontation (the 'Reconquest'); convivencia, or the interaction of Christians, Muslims, and Jews within medieval peninsula societies, and the reflections of this coexistence in culture, commerce and law; the partial political unification of Spain under the Catholic Monarchs; mounting religious and ethnic tensions within the Christia states, the rise of the Spanish Inquisition, expulsions of Jews and Muslims, and the imposition of Christian orthodoxy.

HISA 6090 Sem Sel Topics Byzant Hist (3,4 Credit Hours)
Research seminar on select topics in Byzantine history. The Age of Justinian (518-565); The Byzantine Dark Age (610-1025); or Byzantium and the Crusades (1025-1204).

HISA 6190 Special Topics: Mediev+Ancient (3 Credit Hours)
Courses offered by visiting faculty or permanent faculty. For description, consult the department.

HISA 6230 Medieval Cities (3 Credit Hours)
This seminar explores the cities of medieval Europe, particularly in the high and late medieval period (roughly 1100-1500), and the ways in which urban space shaped the social, political, and cultural experience of medieval city-dwellers. Themes for readings and discussions include the idea of the city; sacred space and civic religious culture; governments, their institutions and physical sites; commerce and guilds; the gendering of urban space; and poverty and disease.

HISA 6250 Medieval Religious Culture (3 Credit Hours)
This seminar explores a variety of aspects of medieval religious beliefs and practices, raising questions about the specific character of medieval religious culture and about how historians study it. Themes addressed include the cult of the saints; monastic life and intellectual culture; gender and models of sanctity; art and religious meaning; relations between majorities and minorities; and popular religion.

HISA 6270 Women&Gender Middle Ages (3 Credit Hours)
This seminar addresses the construction of gendered identities in the Middle Ages, and on the experience of medieval women and men in relation to those identities. Seminar readings and discussions explore topics such as changes in attitudes towards women's authority during the Middle Ages; the experience of religious women and the meaning of female imagery in religious writings; women's opportunities and experiences in politics and the economy; the lives and writings of illustrious medieval women; and the relationship between medieval conceptions of femininity and masculinity, and their articulation of gender differences in medieval literature and science.

HISA 6910 Special Topics (1-3 Credit Hours)
Courses offered by visiting faculty or permanent faculty. For description, consult the department.

HIS 1500 Special Topics (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HIS 1910 Special Topics (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HIS 1940 Transfer Coursework (3 Credit Hours)
Transfer coursework. Consult the department.

HIS 2010 History of China to 1800 (3 Credit Hours)
This survey course introduces the main themes of Chinese history, from Neolithic times down to the end of the pre-modern era (marked, both by tradition and for sake of convenience, at 1800 CE). Key topics include the exploration of the religious, moral, and social beliefs of early China as well as the assessment of the significance of the institutions of state and family, which have left such a striking imprint on the whole of Chinese history. This course is intended for those with little or no prior study of Chinese history; by the end of the semester, students should have a rounded perspective on the diversity as well as the essential continuities of Chinese culture in its formative stages.

HIS 2120 History of Modern India (3 Credit Hours)
This is an introductory survey of the major cultural, social, political thought, traditions, and institutions of the Indian subcontinent or South Asia from 1500 to the present. No prior knowledge of the area or the culture is assumed or expected from the students.

HIS 2910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HIS 2940 Transfer Coursework (3 Credit Hours)
Transfer coursework. Consult the department.

HIS 3000 Historical Methods: HIS 3910 (1 Credit Hour)
Historical Methods Lab. For description, consult the department.

HIS 3910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HIS 3970 Special Topics - Asia (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HIS 4910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.
HISC 6110 Women in East Asian History (3 Credit Hours)
Historically, women in East Asia had to negotiate with a highly patriarchal and Confucian world. This course aims at exploring the lives of women in East Asia, hoping to gain a further understanding of the challenges they faced under traditional Confucian regimes as well as the modernizing states of the 19th and 20th centuries. Special attention will be placed on the roles of personal agency and state power in shaping female lives and identity.

HISC 6120 Women In China & Japan (3 Credit Hours)
This course examines women's history and gender relations in both traditional and modern China and Japan. Themes to be explored include the constantly evolving roles of women in the family and as workers, artists, writers, and revolutionaries.

HISC 6210 The PRC: China under Communism (3 Credit Hours)
In 1949, as Mao Zedong declared the founding of the People's Republic of China, the Chinese people were once again under a united government, ending decades of civil strife and foreign aggression. Yet the year 1949 represented only the military victory of the CCP and in the following decades the new rulers of China would attempt to recreate state and society on a previously unimaginable scale. This course explores the dramatic years following the establishment of the PRC and follows the mass campaigns and political upheavals that marked Chinese history under the rule of the Communist Party. Attention will be given to both mass movements in the countryside and events that largely affected urban dwellers and intellectuals. Overall, this course aims at understanding the large-scale structural changes of the revolutionary era of 1949 to 1976 and its aftermath, as well as what these changes meant for the lives of individual Chinese citizens.

HISC 6310 China Revolution 1900-1949 (3 Credit Hours)
China's twentieth century was irrevocably and profoundly marked by the Chinese Revolution. But how are historians to define the Chinese Revolution, both in setting its temporal boundaries and interpreting the meaning behind the event? Is it possible to determine the causes of the Revolution, or to elucidate why it took the path that it did? What did the Revolution mean for different social groups, as well as the individual? This course, an intensive reading seminar, is designed to address these issues by engaging a wide range of scholarship. Key topics include the legacy of the Republican Era, the rise of the Chinese Communist Party, land reform, and the impact of the revolutionary era on the lives of women.

HISC 6410 Empire and Rebellion in China (3 Credit Hours)
During the Ming and Qing dynasties, Chinese emperors faced the enormous challenge of maintaining control over a vast and populous polity. This seminar will explore the methods utilized in the late imperial age to control the populace. These methods-most notably the state, legal, and family systems-were never fully effective in enforcing the will of dynastic rulers. As such, we will also investigate the possibilities for resistance against imperial rule and the Confucian worldview. While control and resistance will be the main themes for this seminar, other topics such as the roles of the environment and identity in history will add to our understanding of the late imperial age. Please note that this is a reading and writing intensive course that will rely heavily on the peer-review process.

HISC 6510 Imperialism in East Asia (3 Credit Hours)
Despite a continuing debate over the exact definition of imperialism, there is no doubt that this phenomenon looms large in the history of modern East Asia. This course explores unequal power relations between nation-states, not only between Europe and Asia, but within East Asia itself. Please note that this is an intensive seminar, with equal emphasis on reading, writing, and in-class discussion.

HISC 6610 Seminar on Modern Japan (3 Credit Hours)
Japan's rapid transformation from a traditional agrarian society to a modern nation-state has been one of the most intensely studied and debated topics in the historiography of Asia. This course explores the continuities and contrasts in Japanese history from the late Shogunate period to the disasters of the Pacific War; particular emphasis will be placed on how Japan came to be defined as a modern nation. Please note that this is a reading and writing intensive course that will utilize both peer-collaboration and peer-review.

HISC 6910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISC 7910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

History-Latin Amer & Caribbean (HISL)

HISL 1140 Freshman Seminar-Lat Amr (3 Credit Hours)
Freshman Seminar in Latin American History.

HISL 1500 Special Topics (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISL 1710 Intro Latin Amer Hist (3 Credit Hours)
Main currents of Latin American civilization from the European conquest to the present, with special attention to the historical background of present controversies.

HISL 1720 Intro Caribbean History (3 Credit Hours)
This course provides a survey introduction to the history of the Caribbean basin including the island territories located in the Caribbean Sea as well as those Atlantic islands and regions of mainland Central and South America which have shared similar historical experience with the Caribbean basin. The course covers the period from the mid-fifteenth century immediately before European arrival up to the present day. Major themes will include European conquest and colonialism, African enslavement, East Asian immigration, the development of multi-ethnic societies, U.S. relations with the Caribbean region, and the role of tourism in recent Caribbean history.

HISL 1910 Special Topics (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.
HISL 2100 Latin Am Independence Movement (3 Credit Hours)

Independence movements swept the Americas in an age of radical social and political transformations. New ideas about individual rights, democracy, the public sphere, and equality shaped debates across the region. This class explores how issues of race, gender, and religion influence these debates and the development of these new nations.

HISL 2110 Colonial Latin America (3 Credit Hours)

The year 1492 marked a major watershed in global history, as Europeans began a process of colonial expansion in the Americas that would continue for several centuries. This course explores the long and complex colonial history of Latin America that began in 1492 and ended in most of the region in the 1810s and 1820s. Main themes include the long processes of material and spiritual conquest; indigenous resistance and accommodation; the Columbian Exchange of plants, animals, and diseases; the creation of colonial economies of extraction and regional articulation; the rise of mixed-race societies; and the development of colonial institutions of church and state. The course also treats the expansion of slavery and the transatlantic slave trade, along with the rise of resistance movements and frontier challenges to colonial rule. We end with the responses to new crown demands in the eighteenth century and the collective struggle for independence that began in 1808.

HISL 2120 Making the Modern Caribbean (3 Credit Hours)

HISL 2760 Colonial Mexico (3 Credit Hours)

Social, intellectual, and institutional history of colonial Mexico.

HISL 2770 Modern Mexico (3 Credit Hours)

Political, economic, and social history of Mexico during the national period.

HISL 2790 Central America (3 Credit Hours)

The history of Central America since 1800 with particular attention to the establishment of political independence, economic colonialism, the transfer of hegemony over the region from Europe to North America, problems of chronic political and social instability, and popular revolutions in the 20th century.

HISL 2810 Colonial Brazil (3 Credit Hours)

Brazilian colonial history from 1500 to 1822. Emphasis on major economic, social, and political developments in the context of the Portuguese Empire. Contrasts and similarities with other imperial systems receive particular attention.

HISL 2820 Modern Brazil (3 Credit Hours)

Brazilian history from 1822, including the first and second empires and the republic. Attention is given to the liquidation of slavery, the replacement of imperial values by the establishment of the republic, and the military question.

HISL 2830 The Andean Nations (3 Credit Hours)

A survey of the development of South America's Andean region beginning with the Inca Empire, through the establishment of the vice-royalty of New Castile and emphasizing the modern nations of Chile, Peru, and Bolivia.

HISL 2840 History of Argentina (3 Credit Hours)

Political, economic, and social history of Argentina from 1516 to the present.

HISL 2850 Central America Radicals (3 Credit Hours)

Central Americans have engaged in some of the most important radical and democratic movements of the 20th century. Especially after the triumph of the Nicaraguan revolution in 1979, Central America became the news story of the 1980s. Radical movements and civil wars in Guatemala and El Salvador intensified over this decade. While some saw these battles as the "twilight struggle" of the so-called Cold War between the United States and the Soviet Union, a battle over a supposed Soviet beachhead in "our backyard," these events have a much longer legacy, dating at least to the late-nineteenth century and involving domestic issues as much as international ones.

HISL 2880 Writing Intensive: HISL 2912 (1 Credit Hour)

Writing Intensive. For description, consult department.

HISL 2910 Special Topics (1-3 Credit Hours)

Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISL 2911 Special topics (1-3 Credit Hours)

Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISL 2912 Special Topics (1-3 Credit Hours)

Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISL 2913 Special Topics (1-3 Credit Hours)

Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISL 2914 Special Topics (1-3 Credit Hours)

Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISL 3000 Historical Methods: HISL 3910 (1 Credit Hour)

Historical Methods Lab. For description, consult the department.

HISL 3100 Explorers, Liars and Travelers (3 Credit Hours)

This course focuses on teaching historical methods-the tools we use, as historians, to interpret and represent the past. Travelers provide an excellent and accessible body of historical sources across a wide range of time and places. But traveling is also a great metaphor for being a historian: like travelers, we lack perfect knowledge, we have questionable cultural understanding, and we try to make sense of the world we live in. This course has a required co-requisite Methods Lab.

HISL 3200 History of Voodoo (3 Credit Hours)

Using works of anthropology, folklore, history, and literature, this course examines the history of voodoo in both New Orleans and Haiti, as well as the history of similar religions such as Brazilian candomble, Cuban santeria and Trinidadian orisha worship. Students will explore the development of these religious systems from slavery to the present day.
HISL 3361 Slave Rebellions (3 Credit Hours)
The white supremacist who attacked Emmanuel AME church in Charleston studied slave rebellions. Why? How important were slave uprisings in the history of slavery? What do we really know about them? What should we know?

HISL 3390 The Cuban Revolution (3 Credit Hours)
This course explores the histories, myths, and memories of the Cuban Revolution of 1959, from Fidel Castro to the Miami expatriate communities.

HISL 3710 Colonial Latin America (3 Credit Hours)
Readings and research on topics in the Hispanic period aimed at developing an understanding of Latin American society and institutions as they developed from the 16th to the 19th century.

HISL 3720 Mod Lat Amer. & Carib. (3 Credit Hours)
Selected topics in Latin American and Caribbean history from 1800 to the present. Religion in Latin America; Dictators; Evita.

HISL 3721 Mod Lat Amer. & Carib. (3 Credit Hours)
Selected topics in Latin American and Caribbean history from 1800 to the present. Religion in Latin America; Dictators; Evita.

HISL 3750 Caribbean Slavery (3 Credit Hours)
Weekly readings and discussions of popular revolutions in the Caribbean region. Some attention is paid to the revolutionary tradition in Middle America before concentrating on the 20th-century revolutions there. In a search for common factors, attention is devoted not only to countries where significant revolutions have occurred already, such as Guatemala, Cuba, and Nicaragua, but also to others where revolutionary potential exists.

HISL 3800 Caribbean Revolutions (3 Credit Hours)
This course examines the histories, myths, and memories of the Cuban Revolution of 1959, from Fidel Castro to the Miami expatriate communities.

HISL 3880 Writing Intensive: HISL 3910 (1 Credit Hour)
Writing Intensive. For description, consult department.

HISL 3900 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult department.

HISL 3910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult department. Notes: For special offering, see the Schedule of Classes.

HISL 3911 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISL 3912 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISL 3914 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISL 3950 Spec offering: Lat Amer (3 Credit Hours)
For specific offering, see the Schedule of Classes. For description, consult department.

HISL 4630 Sex/Gender Colonial Latin Amer (3 Credit Hours)
This course examines conquest and colonialism through the lens of gender and sexuality. It looks at the relationships that emerged among indigenous, African, and mestizo populations and how systems of beliefs about sex, gender, and sexuality facilitated the practice of empire.

HISL 4740 Caribbean Cultural History (3 Credit Hours)
This course explores the development of distinctive cultural forms and patterns in the Caribbean basin from the arrival of Europeans at the end of the 15th century up to the present day. Emphasis will be placed on understanding the diverse origins and particular social contexts from which different aspects of Caribbean culture have developed.

HISL 4800 Women in Latin Am History (3 Credit Hours)
An exploration of the pivotal role Latin American women have played in the area’s historical development. Attention is given to how women acquired and exercised power in a male-dominated society and how class, race, sex and sex roles, and traditions have influenced and shaped women’s roles.

HISL 4840 Piracy in the Americas to 1750 (3 Credit Hours)
Who were the “golden age” pirates and who were their main victims? What tactics did pirates use and what was done to stop them? How was piracy related to imperial expansion and resistance to it? How did the golden age pirates come to be lasting iconic cultural figures? Piracy in the Americas traces the rise and fall of sea predators in the Atlantic and Pacific Oceans from the 16th to 18th centuries.

HISL 4880 Writing Intensive: HISL 4740 (1 Credit Hour)
Writing Intensive. For description, consult department.

HISL 4910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISL 4911 Special topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISL 6600 Peasants, Rebellion & the State (3 Credit Hours)
This seminar explores the history of peasants, rebellions and revolution in modern Latin America. Attention will focus on peasant desires and motivations as Latin America has become increasingly urban and states have grown in size and strength.

HISL 6610 Latin American Modernity (3,4 Credit Hours)
This class explores the history of modernity, modernization and underdevelopment in Latin America since the 19th century. Key themes will include labor and industrialization; urbanization and the middle class; citizenship and ethnicity; and state formation.

HISL 6740 Latin American Social Hist (3 Credit Hours)
A specific topic is chosen each year. The course has dealt with slavery, race relations, and social revolutions in previous years. Future topics include the history of the peasantry and peasant movements in Latin America and the development of the Latin American urban working class. Lectures, readings and discussions.
HISL 6750 Africans In The Americas (3 Credit Hours)
This seminar will explore the dispersion and fate of African peoples and their descendants in the United States, the Caribbean, and Central and South America with a view to developing an understanding of African-American culture as a diverse regional phenomenon rather than one confined to the United States.

HISL 6780 Caribbean Hist: Major Themes (3 Credit Hours)
A historiographical course focusing on major texts, major themes, and major trends in the historical literature of the Caribbean, including the island territories along with Belize and the Guianas.

HISL 6850 U.S.- Latin American Relations (3 Credit Hours)
Traces the diplomatic, economic, and cultural relations between the United States and Latin America from the American Revolution to the present. This course seeks to demonstrate the interrelated roles of diplomacy, commerce, and inter-American cultural relations throughout the 19th and 20th centuries.

HISL 6870 Race & Nation in Latin America (3 Credit Hours)

HISL 6881 Writing Intensive: HISL 6740 (1 Credit Hour)
Writing intensive. For description, consult department.

HISL 6910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISL 6911 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISL 7610 Seminar-Comp Hist of Americas (3 Credit Hours)
This graduate seminar approaches a range of issues of comparative interest in the Americas while also exploring questions around the frameworks of comparative history, Atlantic World history, the African Diaspora, and transnational history.

HISL 7620 The City in Latin America (3 Credit Hours)
This seminar explores the forces, mechanisms, and intellectual currents that define 'the city' in Latin America past & present. It also introduces students to various theoretical and methodological ways of approaching urban Latin America.

HISL 7710 Seminar In Mexico (3 Credit Hours)
Seminar In Mexico.

HISL 7720 Sem Modern Lat America (3 Credit Hours)
Seminar in Modern Latin America.

HISL 7750 Sem In Central America (3 Credit Hours)
Seminar In Central America.

HISL 7830 Historiography Col Lat America (3 Credit Hours)
This advanced seminar traces major trends in colonial Latin American historiography.

HISL 7840 Historiography Mod Lat Am (3 Credit Hours)
This course traces major trends in scholarship on modern Latin American history.

HISL 7910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

History-Middle East & N Africa (HISM)

HISM 1500 Special Topics (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISM 1910 Special Topics (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISM 2200 History of Islam to 1400 (3 Credit Hours)
This course surveys the rise and expansion of Islam and the Muslim polities and societies between ca. 600-1400. It covers political developments as well as the emergence and development of Islamic culture and thought.

HISM 2210 Modern Middle East 1750-Pres (3 Credit Hours)
This course is a survey of modern Middle Eastern history. It starts with an evaluation of the Ottoman and Safavid empires, the two largest early modern political entities in the area. It then proceeds by discussing the nineteenth-century reform movements, the impact of the dismantlement of the Ottoman Empire and the First World War on the region, the post-1945 developments, the rise and development of Arab nationalism and political Islam, the Israeli-Palestinian conflict, the Iranian Revolution, the Gulf War and the most recent US intervention in Iraq. The aim of the course is to provide students with a solid grasp of historical events and political processes, as well as a detailed knowledge of important intellectual and cultural developments.

HISM 2910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISM 2940 Transfer Coursework (0 Credit Hours)
Transfer coursework. Consult the department.

HISM 3000 Historical Methods: (1 Credit Hour)
Historical Methods Lab. For description, consult the department.

HISM 3220 Arab/Israeli Conflict (3 Credit Hours)
This seminar traces the course of the Arab-Israeli conflict from the rise of Zionism, through the various Arab-Israeli wars, and up to the recent peace negotiations. Emphasis is on presenting the perspectives of all the parties to the Arab-Israeli conflict, and placing it in the context of the history of the Middle East as a whole.

HISM 3880 Writing Intensive: (1 Credit Hour)
Writing intensive. For description, consult department.

HISM 3910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.
HISM 6110 Religion & Nationalism Mid East (3,4 Credit Hours)
This seminar concentrates on the crucial role that nationalism and religion played in the history of the Modern Middle East during the period between the late nineteenth century and the present day. It explores the general questions of how the "nation" came to dominate both political thought and political reality in the region and how various nationalist movements and ideologies have imagined and constructed national identities. The seminar also critically considers how religions have contributed to and/or challenged these complex processes. Students will read secondary monographs on various Middle Eastern contexts and become familiar with key historical debates on nationalism and religion. The discussions will not only focus on the intellectual and political elites but we will also examine how non-elite individuals and groups influenced nation-building processes.

HISM 6140 Islam & W Med World, 1000-1900 (3 Credit Hours)
Islam and the Western Mediterranean World, 1000-1900.

HISM 6210 Modern Turkey: Past & Present (3 Credit Hours)
This seminar introduces students to the past and present of modern Turkey. We will explore the complex processes of the disintegration of the Ottoman Empire in the aftermath of World War I, the formation of a secular, republican Turkish nation-state, and its dramatic socio-political transformation since the 1950s in response to domestic, regional, and international challenges. We will also discuss how religion has contributed to and/or challenged these processes and how these processes have affected ethno-religious minorities, gender, and class relations.

HISM 6310 Ottomans & Middle East (3 Credit Hours)
This seminar is on the history of the late Ottoman Empire. It addresses the complex social and political transformations that the empire went through in the nineteenth- and twentieth centuries. Over the semester we will travel along the long arc of the late Ottoman history, observing the many overlapping identities that shaped it. More specifically, the subjects we will discuss include the changing relationship between the Ottoman state and society, ethno-national and religious conflicts, political revolutions and their far-reaching implications, women, Ottoman cities and the countryside. We will also examine the dynamics of the empire’s disintegration into independent nation states in the aftermath of World War I and the legacy that the Ottomans left behind.

HISM 6410 State & Soc in Mod Middle East (3 Credit Hours)
This seminar addresses how the emergence of modern states in the Middle East reshaped various aspects of the region's politics, economy, social relations, and culture to create distinct adaptations to modernity. It provides an opportunity for in-depth exploration of the last two centuries of the Middle East through the formation of modern state institutions and practices. Temporally, the course moves from the late 1700s to the first half of the twentieth century. Geographically, the area includes the region from Egypt to Iran, the Balkans to Arabia and Eastern Anatolia, in short, those regions under the dominion of the Ottoman and Qajar Empires and successive nation states.

HISM 6880 Writing Intensive: HISM 6910 (1 Credit Hour)
Writing Intensive. For description, consult department.

Corequisite(s):
HISM 6910.

HISM 6910 Special Topics (1-4 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

History-Modern Europe (HISE)

HISE 1210 Eur & Wide World To 1789 (3 Credit Hours)
European history from the Middle Ages to the French Revolution: the Renaissance and the Reformation, the origin of the modern state and of capitalism, the beginnings of colonialism, the scientific revolution, and the Enlightenment.

HISE 1220 Emerg Cont World 1789- (3 Credit Hours)
The impact of the French Revolution and Napoleon; reaction and revolt; the growth of nationalism; the industrial revolution and the rise of socialism; international rivalry, imperialism, and the coming of World War I; rise of totalitarianism and the failure of international security; World War II and postwar developments.

HISE 1500 Special Topics (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISE 1510 Napoleon in Russia 1812 (3 Credit Hours)
This seminar is a close study of Napoleon’s invasion of Russia in 1812, the impact it had upon the Russian empire, and the place that it came to occupy in Russia’s historical memory. The seminar, which meets twice per week, emphasizes the timely reading of assigned readings and active participation in class discussions.

HISE 1910 Special Topics (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISE 1940 Transfer Coursework (3 Credit Hours)
Transfer coursework. Consult the department.

HISE 2160 Europe in the 18th Century (3 Credit Hours)
Examines developments in human ecology and power, critiques of tradition from diverse groups, and efforts to implement novel models, both cosmopolitan and nationalistic, for a rational and just society.
HISE 2170 Europe in the 19th Century (3 Credit Hours)
Explores the quest for popular and national security in an age of radically shifting material circumstances deeply influenced by concepts of political and social equality.

HISE 2210 Modern Germany (3 Credit Hours)
A survey of the political, social, and economic development of Germany from the revolution of 1848 to the aftermath of the Second World War. Topics include unification, Bismarckian Germany, the Weimar Republic, and the Third Reich.

HISE 2230 France since 1789 (3 Credit Hours)
A survey of French history since 1789, with particular attention to social, cultural, and political change. Among other topics, we will examine political upheaval, imperialism, class dynamics, changing gender roles, and questions of French identity in the modern era.

HISE 2410 Russia Since 1825- Present (3 Credit Hours)
This lecture course covers the last decades of the Tsarist regime, the Russian revolution of 1917, the Soviet Regime from Lenin and Stalin, the collapse of the Soviet Regime in 1991, and the Putin era.

HISE 2420 The Age of Reformation (3 Credit Hours)
Surveys the transformation of Western Christendom (c. 1400-1700), with emphasis on: late medieval religious practice; discontent and reform currents within the Church; the Protestant Reformation of Luther, Zwingli, Calvin, anabaptists, and others; and Catholic response and Counter-Reformation.

HISE 2500 Memories of Violence 20th Cent (3 Credit Hours)
Among the many instances of violent and traumatic collective experiences in 20th century Europe, this class will focus on three particular case studies, the Holocaust in Germany; the bombing of Guernica in Spain; and the siege of Sarajevo during the Bosnian War. These cases are not chosen at random, but for their ability to shape how we narrate individual and collective responses to most traumatic experiences of state imposed violence in 20th century Europe.

HISE 2910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISE 2911 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISE 2940 Transfer Coursework (3 Credit Hours)
Transfer coursework. Consult the department.

HISE 3000 Historical Methods: HISE 3190 (1 Credit Hour)
Historical Methods Lab. For description, consult the department.

HISE 3190 The Spanish Civil War (3 Credit Hours)
The Civil War of 1936-39 considered both as the watershed of modern Spanish history and as an event of major international significance. Readings and discussion focus on the causes and course of the conflict, and on its consequences down to the present.

HISE 3220 WWII In French Film (3 Credit Hours)
This seminar examines the representation of the era of Nazi occupation and the Vichy Regime (1940-44) in films produced between the 1940s and the 2000s. We will focus on depictions of daily life, the politics of collaboration and resistance, and the French role in the Holocaust.

HISE 3250 Russian History II (3 Credit Hours)
This seminar provides an overview and analysis of the Second World War on the Eastern front. The Nazi invasion of the Soviet Union on June 22, 1941, inaugurated one of the bloodiest wars in history. The Soviet victory following devastating defeats and losses at the war’s outset, was indispensable to the overall Allied victory. The Soviet victory was won at enormous cost, whether in human lives lost or in the physical devastation of the country. The victory also transformed the Soviet Union into a superpower and left the Soviet Union in control of much of Eastern Europe. The course requires reading, discussion, and the writing of a research paper.
HISE 3260 Putin's Russia (3 Credit Hours)
The period between the collapse of the Soviet Union in 1991 and the present in Russia has witnessed dramatic changes in every dimension of Russian life, from political ideology and institutions to the transformation of economy, society, and broader culture. This seminar seeks to illuminate the nature of these transformative changes, focusing particular attention on Vladimir Putin's rise to power, the character of his rule, and the reasons for his popularity in Russia. The reasons for the growth in popular as well as state hostility to the West and Western culture forms a particularly important part of the course.

HISE 3270 Lit/Soc In Russ To 1917 (3 Credit Hours)
An exploration of the central role that writers and literature played in the culture and society of nineteenth and early twentieth-century Russia. Readings include selected novels, poetry, critical essays, and memoirs as well as secondary historical literature. The course focuses upon the role of literature in Russian society and the relationship between literary representations and history.

HISE 3280 Lit/Soc In Russ To 1991 (3 Credit Hours)
An exploration of the role that literature and writers played in the history and culture of the Soviet Union from its inception to its collapse in 1991. Readings include selected novels, poetry, and memoirs as well as secondary historical literature. The course focuses on the relationship between writers and the state and society in the Soviet period and the relationship between literary representations and history.

HISE 3290 Origins WWII 1919-1939 (3 Credit Hours)
European international affairs from the treaty of Versailles to Hitler's invasion of Poland, emphasizing the diplomatic, political, and military forces that contributed to the outbreak of the Second World War.

HISE 3300 Death Disease Destitution (3 Credit Hours)
Death, Disease, Destitution and Despair in Early Modern Europe. Readings, discussion, and a research paper examining the experience of and social reaction to illness, insanity, poverty, and death in Western Europe.

HISE 3311 Gardens Parks and Green Spaces (3,4 Credit Hours)
This course examines the creation of gardens, parks and public space in Europe and the Americas from 1500 to the present day. We will study not just the historical evolution, technology or art form of gardens and parks but we will also explore what they mean to people.

HISE 3390 Europe Since 1939 (3 Credit Hours)
A survey of European history since the outbreak of the Second World War, covering all major states. Topics will include the war and its aftermath, the division of the continent in the Cold War, the development of welfare states and socialist systems, the emergence of the idea of a united European community, and the collapse of Communism in eastern Europe.

HISE 3513 Hist of Jews in Russ 1772-2000 (3 Credit Hours)
This course studies the history of the Jews in Russia from the First Partition of Poland in 1772 until the beginning of the twenty-first century. The course examines the evolution of that Jewish community itself and the issues that divided that community.

HISE 3880 Writing Intensive: HISE 3010 (1 Credit Hour)
Writing Intensive. For description, consult department.

HISE 3881 Writing Intensive: HISE 3311 (1 Credit Hour)
Writing Intensive. For description, consult department.

HISE 3890 Service Learning: HISE 3311 (0-1 Credit Hours)
Academic Service Learning is an educational experience based upon a collaborative partnership between the university and the community. For Service Learning, see the Schedule of Classes. For description, consult department.

HISE 3910 Special offering: Europe (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISE 3911 Spec Offering Europe (3 Credit Hours)
For specific offering, see the Schedule of Classes. For description, consult department.

HISE 3921 Special Offering Europe (3 Credit Hours)
For specific offering, see the Schedule of Classes. For description, consult department.

HISE 3922 Special Offering Europe (3 Credit Hours)
For specific offering, see the Schedule of Classes. For description, consult department.

HISE 3940 Transfer Coursework (3 Credit Hours)
Transfer coursework. Consult the department.

HISE 4140 Household Gender Sexuality (3,4 Credit Hours)
This course examines the structure, function, and emotional content of families in Europe from the Renaissance to the 18th century. The construction of gender as well as attitudes to and the regulation of sexuality will also be discussed.

HISE 4880 Writing Intensive: HISE 4140 (1 Credit Hour)
Writing Intensive. For description, consult department.

HISE 4890 Service Learning: HISE 4350 (0-1 Credit Hours)
Academic Service Learning is an educational experience based upon a collaborative partnership between the university and the community. For Service Learning, see the Schedule of Classes. For description, consult department.

HISE 4910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISE 4940 Transfer Coursework (3 Credit Hours)
Transfer coursework. Consult the department.

HISE 6050 The Italian Renaissance (3 Credit Hours)
An examination of cultural, religious, and political developments in Renaissance Italy and their impact on the rest of Europe.

HISE 6100 Ren & Ref 1450 to1660 (3 Credit Hours)
Examines religious and secular aspects of the breakdown of Christian unity from the Renaissance to the mid-seventeenth century. Topics include the decline of the Church; philosophical and doctrinal conflict; dissent and renewal in the Protestant Reformation; the Catholic Reformation; ideology, politics, and wars of religion; Counter-Reformation; and foreign intervention in France and the Netherlands.
HISE 6140 Rev-Napoleon 1789-1815 (3 Credit Hours)
This course explores the questioning of traditions throughout Europe, the exchange of concepts of social organization among regions, and the emergence of an imperial power that redirected civilization.

HISE 6330 Imperial Spain 1469-1659 (3,4 Credit Hours)
Examines the rise and decline of Spanish power in Europe and the Atlantic world and the internal development of the Spanish kingdoms from unification under Fernando and Isabel through the reigns of Charles V and Philip II to the end of the Habsburg dynasty. Besides politics and diplomacy, reading and discussions will address religious practice and the Spanish Inquisition, the art and literature of the Golden Age, and the cult of honor with its consequences for social structure, economic life and gender relations.

HISE 6350 Crime/Punishment Hanov Engln (3,4 Credit Hours)
This in depth seminar focuses on crime, punishment and the justice system in eighteenth-century England. We will investigate such topics as the rise of defense lawyers, the goals of punishment and the development of a system of police. Students will also make use of a digitized data base, theoldbaileyonline, which contains the transcripts of trials held at the Old Bailey courthouse in London to write a research paper.

HISE 6370 Seminar Early Mod Englnd (3 Credit Hours)
Readings, discussion, and research paper will focus on a selected topic of English history between 1485 and 1789. Topics will include Religion and Society and Georgian England, 1714-1783.

HISE 6380 Sem Mod British History (4 Credit Hours)
Readings, discussion, and a research paper focusing on one of the following periods of modern British history: Britain in the Age of Revolution, 1760-1850; The Victorian Era, 1830-1900; Britain in the Age of World War, 1900-1945. On occasion, the seminar might focus on a topic rather than a period.

HISE 6420 Readings In Holocaust (3 Credit Hours)
Examines the origins and development of the Nazi Final Solution; the experience of the victims, perpetrators, rescuers, and bystanders; and the relationship between history and memory.

HISE 6510 The Russian Revolution:1900-24 (3,4 Credit Hours)
The course explores the origins and nature of the Russian revolutions of 1905 and 1917. It focuses equal attention upon the policies of the tsarist regime and the various social movements, political parties, and ideologies that arose in opposition to that regime. The reasons for the Bolshevik victory in October 1917 and the character of the early Bolshevik regime from 1917 through the Civil War are problems the course addresses. The contentious debates historians have conducted on almost every aspect of the revolution are an important part of the course's readings and discussions.

HISE 6511 Stalin's Russia, 1924-1953 (3,4 Credit Hours)
This seminar addresses four major questions: 1) What was the nature of the political, social, and cultural system that came into existence under Stalin and how did that system evolve during his lifetime? 2) What was the scope and nature of political repression and state terror under Stalin? Given the reality of state terror, how can we explain the genuine enthusiasm that the regime was able to mobilize for so many of its initiatives? 3) What was the Soviet experience during World War II, and how did the war affect Soviet society and politics? 4) What was the range of experiences that ordinary individuals and families encountered in their private lives during the Stalin era? A major question throughout the course is the character of Stalin's personal rule and the extent of his responsibility for the major developments under his leadership.

HISE 6512 Stalin's Shadow: Soviet 1953-91 (3 Credit Hours)
This course examines the evolution of the Soviet Union from Stalin's death until its collapse in 1991. Its primary focus is on the important changes that occurred in the political, cultural, and social spheres within the Soviet Union itself and in the stances that the Soviet Union adopted toward the rest of the world. The initial changes, which contemporaries described as the thaw, witnessed a liberalization that culminated in an explicit denunciation of many of Stalin's policies. The course concludes with an inquiry into the Gorbachev reforms of glasnost and perestroika, which culminated in the collapse of the Soviet Union in 1991.

HISE 6520 Immigration and Identity in France (3 Credit Hours)
This seminar will explore the history of immigration to France since the late 19th century and attendant debates over national identity, secularism, and race. We will examine colonial and postcolonial migration, the rise of xenophobic extremist political parties, minority activism, and controversies over the place of Islam in French society.

HISE 6600 Photography and Historical Imagination (3 Credit Hours)
This class aims to explore the relationship between historical memory and photographic practice.

HISE 6601 Jewish Life and Culture in Europe (3 Credit Hours)
This course explores the many facets of Jewish life and culture in Germany and other central European nations. We will focus on the relationship of various Jewish communities with their Gentile neighbors, local and state authorities and trace the course and success of the Haskalah movement (the Jewish enlightenment). We will be particularly sensitive to the daily life experience of women in their struggles to find a voice and acceptance as women and as Jews, as well as the dramatic rise of a Jewish middle class in the realm of science, finance and industry.

HISE 6610 Postwar Cultures: Divided Contemporaries (3 Credit Hours)
This course explores the many ways daily practices and political ideologies have intersected in the lives of ordinary European citizens in the era of the Iron Curtain.

HISE 6880 Writing Intensive: HISE 6910 (1 Credit Hour)
Writing Intensive. For description, consult department.

HISE 6881 Writing Intensive: HISE 6910 (1 Credit Hour)
Writing Intensive. For description, consult department.

HISE 6882 Writing Intensive: HISE 6910 (1 Credit Hour)
Writing Intensive. For description, consult department.
HISU 6883 Writing Intensive: HISE 6910 (1 Credit Hour)
Writing Intensive. For description, consult department.

HISE 6884 Writing Intensive: HISE 6520 (1 Credit Hour)
Writing Intensive. For description, consult department.

Corequisite(s): HISE 6250.

HISE 6910 Spec offerings: European (3 Credit Hours)
For specific offering, see the Schedule of Classes. For description, consult department.

HISE 6911 Spec offerings: European (3 Credit Hours)
For specific offering, see the Schedule of Classes. For description, consult department.

HISE 6913 Spec offering: European (3 Credit Hours)
For specific offering, see the Schedule of Classes. For description, consult department.

HISE 7910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

History-United States (HISU)

HISU 1410 US Hist - Colonization to 1865 (3 Credit Hours)
An analysis of the major forces and events that shaped American history from its beginnings through the Civil War.

HISU 1420 US Hist 1865 To The Present (3 Credit Hours)
An analysis of the forces and events that shaped American history from the Civil War to the present.

HISU 1500 Special Topics (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISU 1800 Early New Orleans (3 Credit Hours)
This course explores the history of New Orleans during the colonial and early national periods, when the city was a crossroads of the Atlantic World that linked Africa, the Americas, and Europe. It locates the city's past in a transnational Atlantic context that reaches back to the fifteenth century and concludes with the emergence of New Orleans as a major American city in the early nineteenth century.

HISU 1910 Special Topics (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 2100 History of Medicine in the US (3 Credit Hours)
Students in this course will study the social dimensions of medicine, disease, and health in U.S. history. We will examine how ordinary people were affected by pandemics, advances in medical technologies, and changing ideas about health care. Students will consider how ideas about medicine have been shaped by economic, military, political, and social transformations in U.S. history.

HISU 2200 History of Digital Revolution (3 Credit Hours)
This course will explore the history of the digital revolution from the 1830s to the present. It will begin with Ada Lovelace and the conception of a general-purpose computer, and it will culminate with the creation of social networks and the sharing economy. Special attention will be paid to the three great inventions that combined to create the digital age: the computer, the microchip, and the internet. The themes will include the importance of collaboration in innovation, the need to connect the humanities and the sciences, and how networked digital technology disrupts traditional hierarchies. In that context, we will look at what makes a successful digital business.

HISU 2300 American Environ History (3 Credit Hours)
A survey of American environmental history from 1491 to the present, focused on how politics, culture, and the economy have changed the way people interact with the world around them over time. Topics include Native America, capitalism, colonialism, democracy, the industrial revolution, wilderness, race, class, gender, justice, and climate change.

HISU 2400 Women & Gender US Hist to 1865 (3 Credit Hours)
This course introduces students to the history of women in North America from 1400 to 1865. Over the course of the semester, we will examine how women were affected by and also influenced historical change. We will consider whether key events and issues, including European colonization, the American Revolution, slavery, and the Civil War look differently when we integrate women into the historical narrative. We will study how women's interactions with work, religious practices, and family life were influenced by race, class, and ethnicity. One of the guiding questions of the course will be: how has gender-understood as the meanings attached to being male and female-changed over time?

HISU 2410 Women & Gender Since 1861 (3 Credit Hours)
This course examines U.S. history from 1861 to the present using the history of women and gender as the primary analysis. This course will be framed around a consideration of how the history of women intersects with ideas about human rights. We will explore how transformations in American laws, politics, customs, economic and military policies affected and were influenced by women. We will also consider how race, class, region, ethnicity, and age facilitated or prevented women from being able to exercise the full rights and obligations of citizenship.

HISU 2480 Louisiana History (3 Credit Hours)
A survey of the history of Louisiana from its settlement to the present.

HISU 2510 Atlantic World (3 Credit Hours)
The Atlantic world has emerged as an important field in early modern western history in the past ten years. It is now especially important for students of United States history to have an opportunity to become familiar with the transnational origins of the nation that are rooted in the Atlantic context. Atlantic world history does not replace traditional colonial history, but is now a necessary complement to it.

HISU 2520 Early America to 1800 (3 Credit Hours)
This course surveys the development of the North American mainland before 1800 with focus on the thirteen British colonies in mainland North America that chose to declare their independence in 1776, and attention to the broader continental and Atlantic contexts in which they were embedded, including colonial Louisiana.
HISU 2620 The Old South (3 Credit Hours)
Economic, cultural and political history of the South from the settlement of Jamestown through the Civil War. Emphasis is on those factors that made the South a unique section of the nation.

HISU 2630 US Foreign Relations Pre-WWII (3 Credit Hours)
This course will investigate the history of U.S. foreign relations from the early republic until World War II. The class will span more than a century and students will be asked to consider the economic and ideological objectives embedded in U.S. foreign relations and the growth of the United States as a world power. Topics will include: the Mexican-American war, westward expansion, U.S.-Hawaii relations, the War of 1898, U.S. interventions in the Caribbean, late 19th and early 20th century immigration, World War I, and World War II. In addition, this course will consider representations of the world in domestic culture by examining the histories of world fairs tourism, travel literature, and missionaries.

HISU 2640 US Foreign Rltns Since WWII (3 Credit Hours)
Foreign relations is front page news every day. The ongoing wars in Iraq and Afghanistan, the threat of terrorism and nuclear proliferation, rising food and oil prices, global warming, debates over human rights practices, and even the Olympics. Although each of these topics has strong contemporary resonance, the United States role in the world has a long and complex history. In this course, we will study US foreign relations from the end of World War II through the present. The course will define US foreign relations broadly and include diplomatic policy makers, military interventions, economic policy, and non-state actors engaged in international relations. Students will learn to analyze opposing historical interpretations, evaluate primary sources, ask analytic questions, and develop arguments.

HISU 2650 US Immigration History (3 Credit Hours)
In this class students will gain a solid foundation in mid-19th and 20th century immigration in the United States and grapple with the following themes: immigrant community formation, the interplay between immigration and American labor, the changing immigration law, the intersection of immigration and U.S. racial formations, and the prominence of immigrant narratives in American culture. The course will also ask that students grapple with contemporary problems and recognize the historic antecedents and struggles behind today's current events.

HISU 2670 American Environmental History (3 Credit Hours)
A survey of American environmental history from 1491 to the present, focused on how politics, culture, and the economy have changed the way people interact with the world around them over time. Topics include Native America, capitalism, colonialism, democracy, the industrial revolution, wilderness, race, class, gender, justice, and climate change.

HISU 2680 Working in America (3 Credit Hours)
Students will gain a solid foundation in mid-19th and 20th century labor history and analyze the following themes: the rise of corporate capitalism, the development of a labor movement, agricultural, industrial, and service economies, the interplay between immigration and American labor, the decline of labor protections, and the emergence of the 'gig' economy. The course will also ask that students grapple with contemporary problems and recognize the historic antecedents and struggles behind today's current events.

HISU 2690 Intro Afro-American History (3 Credit Hours)
A survey of the history of people of African descent in the United States from the 17th century to the end of the Civil War. The course will explore the development of a distinct African-American experience within the context of colonial North America and the early United States. Emphasis will be placed on understanding the origins and nature of slavery not simply as a system of forced labor, but as a system of unique cultural relationships.

HISU 2700 Modern African-American (3 Credit Hours)
This course surveys the history of people of African descent in the United States from the end of the Civil War until the late twentieth century. A central theme of the course will be the varying ways in which African-Americans sought, both successfully and unsuccessfully, to achieve political, social, and economic freedom in the wake of emancipation.

HISU 2890 Service Learning: HISU 2620 (0-1 Credit Hours)
Academic Service Learning is an educational experience based upon a collaborative partnership between the university and the community. For Service Learning, see the Schedule of Classes. For description, consult department.

HISU 2891 Service Learning: HISU 2610 (0-1 Credit Hours)
Academic Service Learning is an educational experience based upon a collaborative partnership between the university and the community. For Service Learning, see the Schedule of Classes. For description, consult department.

HISU 2910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISU 2911 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 2912 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.
HISU 2913 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 2915 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 2920 Special Topics: Us Hist (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 2921 Special Topics-U.S. History (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 2940 Transfer Coursework (3 Credit Hours)
Transfer coursework. Consult the department.

HISU 3000 Historical Methods: HISU 3913 (1 Credit Hour)
Historical Methods Lab. For description, consult the department.

HISU 3001 Historical Methods: HISU 3911 (1 Credit Hour)
Historical Methods Lab. For description, consult the department.

HISU 3100 New Orleans and Senegal (3 Credit Hours)
This course explores the connected and comparative histories and cultures of New Orleans and Senegal. The two were both founded as French colonies. They share histories, cultural traditions, and, by virtue of their geographic location at the edge of threatened estuarial landscapes, a common challenge to their future.

HISU 3120 NOLA Free People of Color (3 Credit Hours)
This methods seminar examines the origins and experience of the large population of free people of color in New Orleans from 1718-1865. Although most Africans and African-descended inhabitants of New Orleans during this period were enslaved, many attained freedom or were born free. In 1800 fully 1/4 of the free people in New Orleans were free people of color. They joined militias, acquired property, ran business, and produced a vibrant body of literature.

HISU 3200 Autobio & Southern Identity (3 Credit Hours)
An interdepartmental seminar that employs autobiography to explore the relationship between regional culture and individual experience in the 20th-century American South. While recognizing the place of autobiography as a literary genre, the seminar will subordinate the concerns of critical theory to the more immediate task of evaluating the strengths and limitations of autobiographical testimony as a form of historical evidence. Class members will read and discuss one book-length autobiography each week.

HISU 3260 America on Trial (3 Credit Hours)
From the Salem Witchcraft trials to the trial of O. J. Simpson, some sensational legal contests have captured the public imagination and resonated in American history and culture. Why do some trials garner such attention while others, perhaps equally sensational, do not? Clearly, they reflect deeper anxieties and tap into larger themes in American culture. This course will focus on trials like these that have captured the public imagination and ask what these trials reveal about the larger society. Other trials, though not as sensational, also reveal important aspects of American culture. We will also explore the law itself, how it functions in society, and what sort of society it aims to foster and protect.

HISU 3300 Katrina and Popular Memory (3 Credit Hours)
This reading seminar will explore the impact of Hurricane Katrina on New Orleans through the lens of popular memory. Readings will be drawn primarily from first-hand accounts of the storm. These memoirs, personal narratives, and biographies can enrich our understanding of human experience and social issues and provide insights into the larger social, economic, and cultural forces that shaped how individuals experienced the tragedy. We will also consider how individuals experienced those forces differently depending on such factors as race, gender, and class. Through careful readings of the texts, we will examine the extent to which the speakers live. We will also consider the use of first-hand accounts as historical sources and the benefits and pitfalls inherent in these sources. Other readings explore how Katrina was and continues to be understood collectively.

HISU 3340 Early American Jewish History (3 Credit Hours)
This class focuses on the period from the earliest Jewish settlers in mid-seventeenth century colonial America through the establishment of viable Jewish communities and institutions by the latter part of the nineteenth century. It covers the so-called Sephardic and Germanic periods of American Jewish history, prior to the wave of Eastern European immigration. Among the themes explored are the tension between Jewish identity and the pressures of assimilation; the transformation of the synagogue; the emergence of Jewish social and cultural institutions; changing religious practices and the rise of Reform Judaism. Events and themes are placed within the broader context of American history.

HISU 3360 Slavery Pub Hist & Pub Memory (3 Credit Hours)
This course will explore the history and public memory of slavery and the slave trade in New Orleans and southern Louisiana, as well as regions of North American. Some attention will also be paid to the Atlantic slave trade and areas of the Caribbean and Latin America which shared the history of black enslavement. The focus here will be on major themes in slavery history and memory and the challenge of studying and portraying those themes in various public history venues in the present day. The course will also address debates about reparations for slavery and other contemporary public policy questions related to the history of black enslavement. The Service Learning component of the course, when offered, will involve working with local public history agencies in the preparation and presentation of slavery-related materials at their individual venues.
HISU 3361 Slave Rebellions: Am Reg Hist (3 Credit Hours)
What happened when enslaved Africans, African-Americans and other people of African descent used organized armed resistance to fight the institution of slavery? This course will explore six different slave rebellions in the United States, the Caribbean and Latin America using documents, films and different kinds of history textbooks. Only in the case of the Haitian Revolution (1791-1804) did a slave rebellion actually succeed. But all slave uprisings left behind fascinating stories—filled with heroism, tragedy, violence, disputed evidence, and angry historical debate. This seminar-style class will delve into all of these questions mostly through weekly readings in both documents and other texts. The class will also focus significantly on questions of historical evidence: What can historians really know, especially when slave rebels themselves left behind relatively few documents? When Methods Practicum is added, this course fulfills Methods Requirement of the History Major.

HISU 3440 African Amer Religious History (3 Credit Hours)
This course surveys the history of African-American religious institutions, leaders, and beliefs from slavery to the present. The course examines the diversity of African-American religious expressions within the larger context of black social and political life. Topics include the transmission of African culture to the New World, slave religion, independent black churches, race relations, black nationalism, as well as gender and class, social reform and everyday resistance.

HISU 3541 Reproductive Health in the US (3 Credit Hours)
This course will explore the history of reproductive health in the United States from the seventeenth century to the present. Students will read scholarly books and articles, memoirs, and films about Americans' encounters with gynecology, midwifery and obstetrics, birth control devices, abortion, and reproductive technologies. Additionally, students will have opportunities to engage with guest lecturers who study reproductive health issues in the United States and around the world. Students will learn about the history of voluntary and coercive sterilization programs, the history of gynecological and obstetrical care, legal and illegal birth control and abortion practices, and the mobilization of the anti-abortion and pro-choice movements.

HISU 3605 Wilderness and Wastelands (3 Credit Hours)
An examination of the changing enigma of "wilderness" and "wastelands" in American culture from 1492 to the present in order to explore the changing ways Americans have imagined and valued the natural world. Topics include capitalism, colonialism, race, class, gender, democracy, national parks, sacrifice zones, post-industrialism, and the anthropocene idea.

HISU 3640 The Vietnam War (3 Credit Hours)
Although in the United States, the US conflict in Vietnam is most commonly referred to as the Vietnam War, in Vietnam, it is known as the American War. In this class, we will study the history of the war in Vietnam and the United States through primary sources and US historians' debates over the Cold War and decolonization. We will be reading works by both US and Vietnamese authors, including policy makers, military personnel, anti-war activists, and immigrants. In addition, students will learn to analyze opposing historical interpretations, evaluate primary sources, ask analytic questions, and develop arguments.

HISU 3642 US War in Vietnam (3 Credit Hours)
Although in the United States, the US conflict in Vietnam is most commonly referred to as the Vietnam War, in Vietnam, it is known as the American War. In this class, we will study the history of the war in Vietnam and the United States through primary sources and US historians' debates over the Cold War and decolonization. We will be reading works by both US and Vietnamese authors, including policy makers, military personnel, anti-war activists, and immigrants. In addition, students will learn to analyze opposing historical interpretations, evaluate primary sources, ask analytic questions, and develop arguments.

HISU 3776 What is an American? (3,4 Credit Hours)
What does it mean to be an American? This course explores a substantial part of the long, complicated, and interesting history of answers that Americans have given this question over time. Does American have a national identity uniquely its own, or is it best understood as a container of diverse ideities defined by separate ethnic and racial groups?

HISU 3830 The Fifties (3 Credit Hours)
This course examines the intersection between the Cold War, domestic politics, and cultural change in America during the decade of the 1950s. Topics will include McCarthyism, conformity and rebellion, youth culture, the beginnings of the civil rights movement, the rise of television, and the transformation of the American family.

HISU 3890 Service Learning: HISU 3100 (0-1 Credit Hours)
Academic Service Learning is an educational experience based upon a collaborative partnership between the university and the community. For Service Learning, see the Schedule of Classes. For description, consult department.

HISU 3891 Service Learning: HISU 3910 (0-1 Credit Hours)
Academic Service Learning is an educational experience based upon a collaborative partnership between the university and the community. For Service Learning, see the Schedule of Classes. For description, consult department.

HISU 3910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISU 3911 Special Topics (1-4 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 3912 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 3913 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 3914 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.
HISU 3915 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 3930 Spec offr: United States (3 Credit Hours)
For specific offering, see the Schedule of Classes. For description, consult department.

HISU 3937 Special Topics U.S. History (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 3941 Special topics in US History (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 3942 Special Topics US History (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 4430 History of American Religion (3 Credit Hours)
This lecture course surveys the development of the many different religious traditions in the United States from the seventeenth through the twentieth centuries. The diverse origins of America's early settlers and the guarantees of religious freedom embedded in the Constitution encouraged the development in the United States of the most religiously diverse society in the Western world. We will explore that diversity and also seek commonalities between religious movements and their impact on the larger society. In such a survey, the emphasis will necessarily be on those formal religious movements that have made a major impact on American culture, but the importance of less mainline groups and popular belief will also be discussed. The course is non-denominational, non-creedal, and taught as cultural/intellectual/social history.

HISU 4500 Civil War & Reconstruction (3 Credit Hours)
The course treats military, political and economic developments during the American Civil War, and examines the postwar consequences of emancipation for Southern and American history.

HISU 4580 Slavery & Freedom Antebellum S (3 Credit Hours)
The course surveys the colonial origins of American racial attitudes; African adaptations to bondage; the historical evolution of plantation slavery as a social institution, labor system, and method of racial control; the nature of white antislavery sentiment; the content and meaning of proslavery ideology; and the status of free blacks in slave society.

HISU 4694 Creation of Jazz in NOLA (3 Credit Hours)
This course explores the cultural dynamics associated with the origins of jazz in New Orleans and related historiography.

HISU 4880 Writing Intensive: HISU 4500 (1 Credit Hour)
Writing Intensive. For description, consult department.

HISU 4881 Writing Intensive: HISU 4580 (1 Credit Hour)
Writing Intensive. For description, consult department.

HISU 4910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISU 6260 New Directions in Womens Hist (3 Credit Hours)
Until recently, most historians paid little attention to social relationships, race, or to the experiences of the poor. Beginning in the 1960s, scholars began to question the assumption that rituals, customs, and social practices were fixed or experienced the same by everyone. By inserting women into their analysis of U.S. history, historians quickly determined that our understanding of key historical events, economic change, and social customs was incomplete and often failed to capture the lived experiences of most Americans. Historians of women and gender have reimagined the ways we might think about the past, causing us to reconsider assumptions about labor, sex, and politics. In this course, you join the enterprise committed to enlarging our sense of what it has meant to live in or engage with the United States by investigating the experiences of women and men.

HISU 6270 American Disasters (3,4 Credit Hours)
A seminar on the political, cultural, and environmental history of disasters in modern America. Topics include race, class, gender, capitalism, democracy, justice, risk, flood control, terrorism, nuclear power, climate change, fate, free will, structure, and agency.

HISU 6420 American Revolutions (3 Credit Hours)
The American War of Independence was one of many revolutionary movements that rocked the Atlantic world between 1760 and the 1820s. This course familiarizes students with the major interpretations of the American revolution and situates it within the larger spasm of freedom struggles that characterized the period, including Caribbean slave rebellions and the Latin American wars of independence.

HISU 6510 Recent US 1945 To Present (3 Credit Hours)
U.S. domestic history and role in world affairs from 1945 to the present. Topics include the Cold War at home; the Vietnam War; politics and protest in the turbulent 60's; the civil rights and women's movements; and the presidency from Truman to Clinton.

HISU 6540 African-American Culture (3 Credit Hours)
An exploration of the formation of distinctive African-American cultural forms in the United States from the years of African enslavement up to the present day. The course will embrace a broad definition of culture to include religion and other community institutions, folklore and folk belief, various leisure activities as well as more obvious cultural manifestations such as music and the arts.

HISU 6560 Rise and Fall Plantation South (3,4 Credit Hours)
This reading and research seminar will explore major topics in the social, cultural, economic, and political history of the plantation South. The course will begin with the origins of the plantation system in the colonial era to its eventual decline in the 20th century. We will consider regional variations tied to the production of export crops including tobacco, rice, cotton, and sugar. Major themes will include issues of race and class, changing labor systems, comparative history, and the impact of the planting system on the region's history.
HISU 6580 Prophets, Sects, & Cults (3 Credit Hours)
Prophet or charlatan? True faith or madness? What separates a cult from any other religious movement? How do new religious movements arise? Why do some fail while others succeed? These questions have surrounded American religious movements from the colonial era to the present.

HISU 6590 US Legal Hist 1865-1975 (3 Credit Hours)
This reading and research seminar will explore major topics in social, cultural, economic, and political history of the plantation South. The course will begin with the origins of the plantation system in the colonial era to its eventual decline in the 20th century. We will consider regional variations tied to the production of export crops including tobacco, rice, cotton, and sugar. Major themes will include issues of race and class, changing labor systems, comparative history, and the impact of the planting system on the region’s history.

HISU 6630 U S Labor and Migration (3 Credit Hours)
This course is an advanced seminar on the relationships between labor, capital, and migrant populations to (and within) the United States in the twentieth century. Globalization and migration are not new phenomenon. This course will begin in the late nineteenth century and explore the role of labor, industrial capitalism, and markets in the early twentieth century. It will challenge students to recognize the antecedents to today’s immigration debates and consider continuities as well as changes in the US economy.

HISU 6750 Africans In The Americas (3 Credit Hours)
This seminar will explore the dispersion and fate of African peoples and their descendants in the United States, the Caribbean, and Central and South America with a view to developing an understanding of African-American culture as a diverse regional phenomenon rather than one confined to the United States.

HISU 6840 United States Empire (3 Credit Hours)
What is an empire, who defines it, and does the United States have one? This class will begin by studying sites of formal US control of overseas territories, namely Cuba, Puerto Rico, and the Philippines. It will then consider definitions of economic and cultural empire, particularly after the end of World War II. The course aims to provide students with several case studies in the early twentieth century and to ask students to ponder their legacies in the present.

HISU 6850 U.S. Latin American Relations (3 Credit Hours)
Traces the diplomatic, economic, and cultural relations between the United States and Latin America from the American Revolution to the present. This course seeks to demonstrate the interrelated roles of diplomacy, commerce, and inter-American cultural relations throughout the 19th and 20th centuries.

HISU 6881 Writing Intensive: HISU 6911 (1 Credit Hour)
Writing Intensive. For description, consult department.

HISU 6882 Writing Intensive: HISU 6913 (1 Credit Hour)
Writing Intensive. For description, consult department.

HISU 6886 Writing Intensive: HISU 6943 (1 Credit Hour)
Writing Intensive. For description, consult department.

HISU 6890 Service Learning: HISU 6560 (0-1 Credit Hours)
Academic Service Learning is an educational experience based upon a collaborative partnership between the university and the community.

HISU 6910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISU 6911 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 6912 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 6913 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISU 7410 Seminar in Amer Colonial Hist (3 Credit Hours)
Seminar in American Colonial History.

HISU 7450 Seminar in Amer Political Hist (3 Credit Hours)
This is a graduate-level course aimed at graduate students who will be teaching and researching in 20th century U.S. history. The course involves substantial reading in secondary sources, and its goal is to provide a foundation in 20th century political history and new trends in the historiography.

HISU 7470 Seminar in Colonial Louisiana (3 Credit Hours)
Seminar in Colonial Louisiana.

HISU 7510 Seminar in 20th Century U.S. (3 Credit Hours)
Seminar in 20th Century U.S.

HISU 7550 Seminar Cultural Hist U.S. (3 Credit Hours)
Seminar Cultural Hist U.S.

HISU 7570 Seminar U.S. Diplomatic Hist (3 Credit Hours)
Seminar U.S. Diplomatic Hist.

HISU 7610 Seminar Comparative Hist Amers (3 Credit Hours)
Seminar Comparative Hist Amers.

HISU 7620 Seminar in Southern History (3 Credit Hours)
This seminar offers a comprehensive exploration of the scholarship on the Atlantic world and is designed to expose graduate students to the major currents, themes and problems in the field.
HMLS 7910 Special Topics (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

Homeland Security (HMLS)

HMLS 1940 Transfer Credit (3 Credit Hours)
Transfer credit.

HMLS 2750 Homeland Security Challenge (3 Credit Hours)
The evolution of homeland security as a concept, and a legal framework, a redirection of national policies and priorities is described. The political, economic, and practical issues of implementation are examined. An overview of the history of the terrorist threat and U.S. responses and an introduction to fundamental policy legislation and documents, such as national security strategies, homeland security decision directives, the National Response Plan, and National Incident Management System is provided. The Department of Homeland Security model of planning, responding, and recovering from a natural disaster and terrorist attacks is described.

HMLS 2940 Transfer Credit (3 Credit Hours)
Transfer credit.

HMLS 3150 Health and Medical Issues (3 Credit Hours)
A study of the important health and medical management issues involved in crises and emergencies presented for the non-medical emergency manager. The wide range of medical and health issues inherent to crisis including biological, radiological, nuclear events and emergencies are described. Methods for integrating medical, public health, and psychological processes into emergency management programs are discussed.

HMLS 3200 Domestic & Int'l Terrorism (3 Credit Hours)
This course introduces participants to various aspects of domestic and international terrorist organizations. The student will be introduced to basic principles of terrorist investigations, international and domestic security threats, and the goals, motivational factors, targets, and tactics of terrorist organizations. The student will learn techniques for evaluating an organization’s vulnerability to attacks that involve chemical, biological, explosive, radioactive weapons or sabotage. Students will learn the current models, roles, and responsibilities of local, state, and federal agencies in counter-terrorism investigations.

HMLS 3250 Emergency Management (3 Credit Hours)
This course will examine core elements of emergency management in the context of the science, law, medicine, and economics that confront 21st Century leaders in business and government. Case studies, including that of Hurricane Katrina, will serve as the focus for readings, class discussion and policy research to improve this vital function of government. Key consideration will be given to asymmetrical problems presented to emergency managers, the established authorities and programs, their effectiveness and how to improve them.

HMLS 3500 Intelligence Resrch & Analys (3 Credit Hours)
This course is designed to give students an understanding of the history and fundamental concepts of intelligence-gathering and analysis. In addition to tracing the development of intelligence organizations, it examines both the disciplines of intelligence (signals intelligence and espionage, for example) and its products. It focuses on the effects intelligence exercises on decision making, particularly, but not exclusively, in the realm of national security and military policy. It uses case studies to illustrate enduring issues or problems in the study of intelligence.

HMLS 3550 Human Intel & Counter Intel (3 Credit Hours)
This course will examine the history of HUMINT and CI within the United States Intelligence Community (USIC) as well as the HUMINT and CI activities of key allies and adversaries. The course will be divided into thirds. The first portion will focus on the structure and functions of intelligence apparatuses throughout the world. In the second portion students will take an in-depth examination of numerous important case studies of successful HUMINT and CI operations. In the final section students will participate in a mock intelligence operation and class discussions regarding the ethics and future of human-based espionage.

HMLS 3555 History & Role of Intell Comm (3 Credit Hours)
This course will focus on key periods in the development of the modern US intelligence community, (1) Revolution to World War One, (2) World War Two, (3) the post World War Two reorganization, (4) the post-Cold War Period, and (5) post 9/11 reforms. Additionally, the different intelligence disciplines and major intelligence agencies will be examined.

HMLS 3600 Critical Infrastructure (3 Credit Hours)
This course introduces participants to the Critical Infrastructure Protection (CIP) process to secure the effective protection of the people, physical entities, and critical information systems. This course will introduce a time-efficient and resource-restrained practice that ensures the protection of only those infrastructures upon which survivability, continuity of operations, and mission success depend. The CIP course will guide leaders in the theories of physical protection and conducting vulnerability assessments of critical infrastructures. This course will also introduce the critical sectors currently identified by the United States Department of Homeland Security and how disruption of these sectors affects civilians and the economy.

HMLS 3700 Transport & Border Secur (3 Credit Hours)
This course provides a student with an analysis of issues that concern the protection of the borders of the United States and U.S. policies regarding the safety of the U.S. transportation system. The course analyses the changes in security arrangements from pre to post 9-11 policies, relative to border and transportation security, with a synthesis of the impact of the formation of the U.S. Department of Homeland Security and on the issues concerning internal CONUS security relative to these two security concerns.

HMLS 3910 Special Topics (1-3 Credit Hours)
Special Topics in Homeland Security Studies.

HMLS 3911 Special Topics (1-3 Credit Hours)
Special Topics in Homeland Security Studies.
HMLS 3920 Emergency Planning & Exercises (3 Credit Hours)
HMLS 3930 Sports Security Management (3 Credit Hours)
This course provides an overview of security planning, risk assessment methodologies, and emergency response considerations for sport and special events. Students will learn how to identify threats and vulnerabilities, analyze and mitigate risk, and harden events and venues through security countermeasure proposals and emergency response/recovery initiatives.

HMLS 4500 Intelligence Analysis (3 Credit Hours)
This course presents an in-depth analysis of the methods used by terrorist organizations to finance global operations and the investigative techniques used to counter such measures. The means used by terrorist organizations to generate, transfer, and spend terrorist funding will be analyzed. It will also include research of public source, information sharing, and other information that can be used to connect the dots. During the computer lab portion to this course
Prerequisite(s): HMLS 3500.

HMLS 4560 Internship (1-3 Credit Hours)

HMLS 4600 Counter-Terrorism (3 Credit Hours)
This course will examine key policy issues and balances that must be addressed in strategic counterterrorism planning, particularly in the use of applied technology within the context of civil jurisdiction and rule of law. The course will examine terrorist threats to the homeland and how these threats can be met by the application of science and technology. Policy issues that address the balance between security and civil liberties that must be resolved to effectively counter terrorism will be discussed. These issues will be addressed from the governance perspective of a liberal democracy. Strategic planning principles that integrate capabilities of current and future applied technology and the key legal and policy issues that must be resolved in order to make effective use of information as balanced against civil liberties will be explored as well.
Prerequisite(s): HMLS 3200.

HMLS 4700 Maritime & Border Security (3 Credit Hours)
This course will examine the role of maritime security in terms of protecting the homeland of the United States and other countries who are members of the International Maritime Organization (IMO). The primary focus will be on the ISPS Code and the Maritime Transportation Security Act.
Prerequisite(s): HMLS 3700.

HMLS 4910 Independent Study (1-3 Credit Hours)
Independent study in Homeland Security Studies.

HMLS 4920 Independent Study (1-3 Credit Hours)
Independent study in Homeland Security Studies.

HMLS 4990 Practicum (3 Credit Hours)
The Practicum may include job-related field projects, integrative analyses of professional literature and published research, original research, original research projects, and comprehensive project proposals for adoption by third parties. In all cases, the Practicum is intended to demonstrate an extensive understanding of the topic area selected, the ability to develop an integrative and systemic analysis of a problem, and the ability to identify appropriate solutions and recommendations. A written report documenting all aspects of the project will be presented for faculty approval. This course is only open to Post-Baccalaureate Certificate students and should be taken in the final year of study.

HMLS 6150 Intro to Emergency Management (3 Credit Hours)
This course will be an advanced examination of modern emergency management concepts, trends nationally and internationally, practical and political issues and policies, technological applications to emergency management, and the development and practical implementation of sound emergency management practices designed to protect people, communities, critical infrastructure and key assets. Included will be a brief review of emergency management policy and procedures in the United States and other countries, legal issues, social science perspectives, planning concepts and techniques, disaster modeling, operational problems, analytical methods, special populations, and management styles. Additionally, case studies will be examined to determine the extent of effective or ineffective planning, responding, and recovering from natural and technological disasters.

HMLS 6250 Health & Med Issues Emer Mgmt (3 Credit Hours)
An advanced study of the important health and medical management issues involved in crises and emergencies presented for the non-medical emergency manager. The wide range of medical and health issues inherent to a crisis including biological, radiological, nuclear events and emergencies are described. Students will focus on innovative response and recovery including long term public health recovery issues methods for integrating medical, public health, and psychological processes into emergency management.
Prerequisite(s): HMLS 6150.

HMLS 6500 Intell Analysis Critical Think (3 Credit Hours)
This course is designed to give students an advanced understanding of intelligence-gathering and analysis as it relates to critical thinking; linkages to money laundering, risk management, risk assessment factors, operational concepts and strategic implications. It is a logical follow-on study that further examines the collaborative process of intelligence analysis and will provide homeland security professionals tools, framework and concepts to further develop their leadership skills by understanding how the synthesis and utilization of intelligence impacts decision making in tactical, operational and strategic settings while emphasizing the principles of holistic, all-hazards approach to preparedness.
HMLS 6600 Approaches Counter-Terrorism (3 Credit Hours)
Students will employ critical analysis to examine key policy issues and balances that must be addressed in strategic counterterrorism planning, particularly in the use of applied technology within the context of civil jurisdiction and rule of law. The course will examine terrorist threats to the homeland and how these threats can be met by the application of science and technology. Policy issues that address the balance between security and civil liberties that must be resolved to effectively counter terrorism will be discussed. These issues will be addressed from the governance perspective of a liberal democracy. Strategic planning principles that integrate capabilities of current and future applied technology and the key legal and policy issues that must be resolved in order to make effective use of information as balanced against civil liberties will be explored as well.

HMLS 7200 Domestic & Intl Terrorism (3 Credit Hours)
The course will provide insight and analysis into the ideology, structure, financing, and driving forces behind terrorist individuals and groups inside the United States ("homegrown") and international (foreign) groups. The course will offer a critical analysis of the governmental response to the war on terrorism?, including contemporary models of counterterrorism. Students will also explore the published works of leading thinkers regarding the concept of terrorism and will discuss and analyze the goals, motivational factors, targets, and tactics of terrorist organizations regardless of ideology. Additionally, students will learn techniques for evaluating vulnerability to all forms of attack, as well as the threat terrorism poses to modern society, while staying abreast of the current roles, and responsibilities of all levels of government agencies in countering terrorism.

HMLS 7300 Maritime & Border Security (3 Credit Hours)
This course will examine key policy issues and balances that must be addressed in all aspects of Maritime Homeland Security. The current paradigm of security on the world's waterways and in the ports of the United States is one of overlapping layers of security. Each layer is specific to a particular port, commodity, state government, governmental agency, maritime classification society, and other maritime agencies, shipping routes, intermodal transportation nodes and shipping methods and end user requirements. It is this intricate and overlapping series of security measures that provides protection and security within the maritime transportation infrastructure against a wide variety of threats.

HMLS 7500 Intelligence Research (3 Credit Hours)
This course presents students with an analysis of how intelligence is collected and processed and how the resulting estimates contribute to the formation of national policy and homeland security. This course examines the collaborative process of intelligence analysis and is designed to provide students the tools, framework and concepts required to develop leadership skills through understanding how the synthesis and utilization of intelligence impacts decision making in tactical, operational and strategic settings within the framework of the principles of all hazards preparedness. Students will gain an understanding of the history and fundamental concepts of intelligence-gathering and analysis. In addition to tracing the development of intelligence organizations, it examines both the disciplines of intelligence (signals intelligence and espionage, for example) and its products. Case studies will be employed to illustrate enduring issues or problems in the study of intelligence.

HMLS 7501 Independent Study (1-3 Credit Hours)
Independent study in Homeland Security Studies.

HMLS 7600 Critical Infrastr. Protection (3 Credit Hours)
This course closely examines the Critical Infrastructure Protection process to secure the effective protection of people, physical entities, and critical information and support systems in the event of natural disasters, and accidental or intentional man-made incidents of major destruction. The course will provide an analysis of a time-efficient and resource-restrained practice that ensures the protection of those critical infrastructures upon which survivability, continuity of operations, and mission success depend. The course will guide students in the theories of physical protection and conducting vulnerability assessments of critical infrastructure elements. We will examine the critical sectors identified by the United States Department of Homeland Security and how disruption of these sectors could effect the civil population and the national economy.

HMLS 7601 Special Topic (3 Credit Hours)
Special Topics in Homeland Security Studies.

HMLS 7602 Special Topic (3 Credit Hours)
Special Topics in Homeland Security Studies.

HMLS 7700 Transportan & Border Security (3 Credit Hours)
This course closely examines the complexities of protecting the borders of the United States and ensuring the safety and security of the U.S. transportation system, including intermodal connections. Fundamentally, the course considers the relationship between security and the need to maintain supply chain flow and how certain strategic approaches can buy down risk. The course also analyzes the changes in security arrangements from pre- to post-9/11 policies, relative to border and transportation security, with a synthesis of the organization of the U.S. Department of Homeland Security and national policy processes. In so doing, the course assesses the adequacies of extant national strategies and implementing plans that address the spectrum of policies involving protection, detection, deterrence, defense, recovery and reconstitution of border and transportation systems. Issues concerning border and transportation security are inextricably linked with global security policies affecting the international supply chain and the cross-border transportation of goods and passengers. Therefore, class discussions and readings will examine the international framework and context of border and transportation security policies.
HMLS 7750 The National Challenge (3 Credit Hours)
The goal of this course is to explore the published works of leading thinkers regarding the evolving nature of Homeland Security and assist students with the tools and resources necessary to gain an understanding of the principles prescribed. Students will learn techniques oriented toward understanding the threats posed to modern society, while staying abreast of the current and future roles and responsibilities of all levels of government agencies in countering threats from the prospective of all hazards preparedness. The political, economic, and practical issues of implementation are thoroughly examined. The course will examine responses to the terrorist threat as well as natural and manmade disasters to include public policy legislation and documents, such as national security strategies, homeland security decision directives, the National Response Framework and National Incident Management System. An overview of the history of The Department of Homeland Security model of planning, protecting, responding, and recovering from a natural disaster and terrorist attack is analyzed. This course provides an overview of Terrorism, Homeland Security, and risk assessment methodologies. Students will learn how to identify vulnerabilities, analyze and mitigate risk, and harden critical infrastructure sites through countermeasure proposals. This course also includes an examination of the basic legislation and operations of the U.S. Department of Homeland Security and its role in protecting the United States by detecting, deterring, preventing, and responding to potential threats, current and future.

HMLS 7800 Cyber Threats and Homeland Sec (3 Credit Hours)
This course takes an in-depth look at cyber threats in relation to personal, organizational, economic and national security. Students will apply their understanding of the variety and nature of cyber threats from the perspective of a cybersecurity manager by gaining an understanding of the commercial and national security cross-threats posed by hackers. This includes studying the impact and relationship of digital espionage, cyber war, cyber terrorism, computer hacking, viruses, communications eavesdropping, forgery, and disruption to information flow to the enterprise. The course also covers legal challenges to national policies for securing cyberspace and their relationship to, and impact on, privacy and civil liberties.

HMLS 7801 Special Topics (3 Credit Hours)
Special Topics in Homeland Security Studies.

HMLS 7802 Special Topics (3 Credit Hours)
Special Topics in Homeland Security Studies.

HMLS 7803 Special Topics (3 Credit Hours)
Special Topics in Homeland Security Studies.

HMLS 7804 Special Topics (3 Credit Hours)
Special Topics in Homeland Security Studies.

HMLS 7805 Special Topics (3 Credit Hours)
Special Topics in Homeland Security Studies.

HMLS 7850 Law & National Security (3 Credit Hours)
This course will survey and explore domestic laws (constitutional, statutory, and regulatory), executive branch decisions and many of their corresponding judicial interpretations that authorize, expand or constrain the U.S. government’s pursuit of its national security policy objectives. This course is organized into four categories: (I) the foundations of U.S. national security powers, (II) the use of force abroad, (III) intelligence gathering and (IV) detaining, interrogating and prosecuting terrorist suspects. This graduate-level course is conducted as a lecture class and in seminar fashion with an emphasis on encouraging and incorporating robust dialogue, engagement and sharing of insights and ideas, integrating and correlating assigned course readings and selected media resources with real world events. Students should expect to acquire a substantive understanding of the balance of liberty and security struck by the executive, legislative and judicial branches to combat threats to the homeland.

HMLS 7940 Transfer Credit (3 Credit Hours)

Human Resources Development (HRDV)

HRDV 1940 Transfer Coursework (3 Credit Hours)
Transfer Coursework for HRDV discipline in BLSL Programs (1000 Level).

HRDV 2450 Career for Life: Finding Bliss (3 Credit Hours)
The purpose of this course is to assist students in exploring careers and assist in long-term career development planning. This course will address career and lifestyle integrated as a whole, taking students through traditional topics such as history and theory, self-assessment activities, career investigation, decision-making, and conducting a successful job search campaign, while also addressing the equally important topics of change, career enhancement, and healthy lifestyle characteristics.
HRDV 2910  Special Topics in HR  (1-3 Credit Hours)
Special Topics in HR Development.

HRDV 2940  Transfer Coursework  (3 Credit Hours)
Transfer Coursework for HRDV discipline in BSLS Programs (2000 Level).

HRDV 3330  Intro To Human Resources  (3 Credit Hours)
This class is an introduction to organizational, legal, and psychological frameworks governing modern Human Resources Administration. This course provides an overview of the Human Resources function and the Human Resources department's role in furthering both employee and organizational goals.

HRDV 3450  Professional Interviewing  (3 Credit Hours)
This course teaches the art of interviewing individuals in various situations. Potential interviewees will include victims, witnesses, suspects, job applicants, and children. Emphasis will be placed on the interviewing process with the intent to reveal deceit, expose untruthfulness and corroborate truthfulness. The interviewing process will be learned from the beginning stages whereby the interviewer determines the objectives of the interview and establishes a rapport with the interviewee. When necessary and warranted, techniques for inducing stress and discomfort will be explored and potential responses to stress will be discussed.

HRDV 3520  Compensation & Benefits  (3 Credit Hours)
This is a comprehensive analysis of the purpose, structure, and effectiveness of compensation systems. Topics include legal issues, job design, job analysis, job evaluation, pay systems, incentives, psychological and motivational aspects of pay, executive compensation and compensation plan administration. Benefits are addressed at a basic level.

Prerequisite(s): HRDV 3330.

HRDV 3650  Plan, Recruit & Selection HR  (3 Credit Hours)
This course addresses the strategic, legal and administrative issues associated with recruitment and selection of employees, including an assessment of staffing needs. The psychological aspects of Human Resources flow systems are emphasized. Career issues are examined from the point of view of the employee and the organization. The coordination of Human Resources planning and organizational competitive strategy is covered.

HRDV 3700  Perf Appraisal & Productivity  (3 Credit Hours)
This course includes developing and implementing performance appraisal systems appropriate for the organization's competitive strategy. Students are introduced to productivity-enhancing work designs such as Total Quality Management, teams, empowerment, and Business Process Reengineering.

Prerequisite(s): HRDV 3330.

HRDV 3920  Employment & Labor Law  (3 Credit Hours)
The Federal laws surrounding employment and their impact on Human Resource policies and practices are addressed in this class. These include the Equal Employment Opportunity Act, the Family and Medical Leave Act, Americans with Disabilities Act, Occupational Safety and Health Act, the National Labor Relations Act, and many others.

Prerequisite(s): HRDV 3330 or 3330.

HRDV 4910  Independent Study  (1-3 Credit Hours)
Independent Study in the BSHR discipline for the BSLS Programs.

Humanities - Interdisciplinary (HUMA)

HUMA 1500  Humanities  (4 Credit Hours)
Course designated for transfer credit.

Immunology (IMMU)

IMMU 1111  Immunology Summer Course  (1 Credit Hour)
T1 & T2 summer courses may be required for students who need to remediate pre-clinical coursework. Contact your course director for more information.

IMMU 2001  Immunology  (1 Credit Hour)
The Immunology course is designed to provide a basis of terminology relevant to the basic concepts of immunology. It commences with the important components (cell, tissues; antibodies; immunoglobulin) involved in host defense against infectious agents. Introductory lectures serve to describe and differentiate between natural defense (innate) mechanisms and adaptive immunity mediated by functional B and T lymphocytes and their products. Subsequently, cellular interactions, especially the differentiation of helper T cells subsets and the production of relevant cytokines, will be described. This will include the mechanisms of T cell activation and regulation. Finally, clinical immunology will be discussed: autoimmunity and autoimmune diseases; hypersensitivity reactions, including atopic disorders and asthma; mechanisms of transplant rejection; and immunodeficiency disorders.

Individual Study (ISTU)

ISTU 5010  Independent Study  (1-6 Credit Hours)

ISTU 6010  Directed Study  (1-6 Credit Hours)

Information Systems (INFO)

INFO 1010  Intro to Business Computing  (1.5 Credit Hours)
The goal of INFO 1010 is to ensure that all business minors have the computing skills necessary to support subsequent courses in their college careers and to prepare students for internships in the business world. The course focuses on teaching students to use the Microsoft Excel application programs needed to ultimately pass the Microsoft Office certification test for Excel. The certification tests are given as part of the coursework. Students who arrive on campus with the Microsoft Certified Application Specialist Certification for Excel 2010 may waive this course requirement; please consult with the course instructor to apply for a waiver.
Interdiscip Newcomb-Tulane Col (INTU)

INTU 1000 Hist & Phil of Higher Education (3 Credit Hours)
This course examines the social and political history of higher education with special emphasis on the transformation of women and the college landscape from the early 20th century to present day. Using historical and literary frameworks to generate and address and answer questions about college women today, this course will provide Newcomb Scholars with the opportunity to examine the social and political culture of various decades and its influence on college culture, women's colleges, women in college, and narratives about college life.

INTU 1010 Special Topics (0-4 Credit Hours)
INTU 1011 Special Topics (0-4 Credit Hours)
INTU 1890 Service Learning: INTU 1000 (1 Credit Hour)
INTU 2000 Seeking Knowledge (3 Credit Hours)
This course will examine questions around the central theme, how do researchers in a particular discipline know when they have reached a conclusion, as a means to understand academic disciplines’ perspectives and methods of research. Studying this question will enable Newcomb Scholars to examine how research questions of various academic disciplines are developed, how a study is set up/established and executed, and how researchers reach a conclusion. Scholars will also be exposed to research methods (qualitative and quantitative) and types of studies (case studies, historical, ethnographic, action research, to name a few). Newcomb Scholars have the opportunity to establish connections with faculty mentors in their fields or related fields.

Prerequisite(s): INTU 1000.
INTU 3000 Women Leading Change (3 Credit Hours)
Prerequisite(s): INTU 2000.

INTU 3010 Global Culture Awareness (1 Credit Hour)
INTU 3020 Cross Cultural Engagement (1 Credit Hour)
INTU 3030 Post Study Abroad Re-Entry (1 Credit Hour)
INTU 3880 Writing Intensive: INTU 3000 (1 Credit Hour)
INTU 3890 Service Learning: INTU 3000 (0-1 Credit Hours)
INTU 3891 Service Learning: INTU 3030 (0-1 Credit Hours)
INTU 3910 Special Topics (0-3 Credit Hours)
INTU 3920 Special Topics (0-3 Credit Hours)
INTU 4000 Newcomb Research Seminar (3 Credit Hours)
This course is designed to provide support and resources from the professor for students in the Newcomb Scholars Program to complete their independent research project. In this course, Newcomb Scholars will incorporate what they have researched and written in the previous seminars, finalize their research question, determine the appropriate research methods, and begin to answer that question in a comprehensive and systematic way that would be recognized by the relevant scholarly community as constituting original and important research. Each Scholar is expected to understand the work that has previously been done in her field and find a place for her research in that body of knowledge. Students will use their skills of analysis, criticism, and synthesis to address or respond to any relevant issues in their fields of study. Each student will present their research project at a campus conference in the Spring semester.

Prerequisite(s): INTU 2000.
INTU 4310 LSAT Review (1 Credit Hour)
INTU 4340 MCAT Review (1 Credit Hour)
INTU 4560 Study Abroad Internship (1-4 Credit Hours)
INTU 5380 Junior Year Abroad (1-6 Credit Hours)
INTU 7000 Year of Service Fall (0-12 Credit Hours)
INTU 7010 Year of Service Spring (0-12 Credit Hours)

INTD 9990 Dissertation Research (0 Credit Hours)
International Business (INBS)

INBS 3100 International Business (3 Credit Hours)
This course deals with the management of global expansion and strategies of firms. To be successful in global business ventures, managers must be prepared to acknowledge and experience the complexities of operating in an international context. This task requires understanding how the world political and economic systems operate and knowing how the unique challenges of different business cultures and institutions affect the development and implementation of business strategies. This course introduces the student to some special business cases set in an international context: managing human resources, international finance, global operations, international team building and leadership, and business strategy.

Prerequisite(s): (ECON 1010 or 1030) or ECON 1010 or 1010 and (ECON 1020, 1020, 1020 or 1040) and (PSYC 1000, 1000, 1000 or 1010) and (MATH 1150 or 1210) and (MATH 1140 or 1230).

INBS 4100 Int'l Business Practices (1-4 Credit Hours)
INBS 4100 introduces students to international business practices as experienced in the context of a specific region or country. The course gives students international business exposure and a unique cultural experience with an opportunity to encounter, first-hand, a global business environment. The location, content, and schedule for this course vary each year. Approval from the Area Coordinator for Legal Studies, Business, and Business Communications required.

INBS 4200 Int'l Business Environment (1-4 Credit Hours)
INBS 4200 provides students with an understanding of the international environment in which businesses must operate. The course examines business practices abroad, patterns of international interdependence, international finance, global operations, and/or the effect of culture on conducting business internationally. The goal is to improve students’ critical, analytical, and creative thinking skills in international business operations. Approval from the Area Coordinator for Legal Studies, Business, and Business Communications required.

INBS 6610 Latin Amer Busn Environ (3 Credit Hours)

INBS 7000 Bus Modeling and Marketing (3 Credit Hours)

Intl Development (IDEV)

IDEV 1890 Service Learning: IDEV 1010 (1 Credit Hour)
Corequisite(s): IDEV 1010.

IDEV 1891 Service Learning: IDEV 1010 (1 Credit Hour)
Corequisite(s): IDEV 1010.

IDEV 2940 Transfer Coursework (3 Credit Hours)

IDEV 3200 Appr To Sustained Devlpm (3 Credit Hours)
This course gives insight into how to make development more sustainable, durable, compatible with nature, the needs of current and future generations, and, in particular, the essential needs of the world's poor. Keeping in mind that the definition of sustainability is heavily dependent on local contexts and concerns, the course provides several approaches to understanding sustainable development. These include: governance at global, national, and local levels, the resource curse hypothesis, sustainable and durable peace, international aid and debt structures, and a gender lens. The assignments take the students through a process of developing a policy for a current problem in a developing country of their choice.

Prerequisite(s): (ECON 1020, 1020, 1020 or 1020) and IDEV 1010.

IDEV 3300 Social Entrepreneur & Develop. (3 Credit Hours)

IDEV 3890 Service Learning: IDEV 3200 (0-1 Credit Hours)

IDEV 3891 Service Learning: IDEV 3300 (0-1 Credit Hours)

IDEV 3940 Transfer Coursework (3 Credit Hours)

IDEV 4220 Humn Aspect Disastr/Emer (3 Credit Hours)
The course will be administered in Geneva in partnership with the International Center for Health and Migration (ICMH). It will focus primarily on disaster relief and reconstruction. Individual lessons will address a variety of subtopics such as rapid assessment, psycho-social health, reproductive health, monitoring and evaluation, relief organizations, GIS, and communicable diseases.

IDEV 4230 Food Aid/Security Humani (3 Credit Hours)
This course explores the dynamics of the use of food aid, the largest single component of humanitarian emergencies. The course will review policies that guide the use of food aid, as principal controversies surrounding the use of food aid in emergency and transition settings. It will also explore assessment techniques used to gauge the vulnerability of affected populations and their needs for food based interventions, and explore the food aid management system and its logistics.

IDEV 4280 Urban Res to Climate Change (3,4 Credit Hours)
This course will explore the concept of resilience in urban communities in the context of the growing challenges presented by global climatic change. Using a multidisciplinary approach, students will address the political, economic, and environmental issues that urban populations will face with the increase of natural disasters and the decrease of available natural resources. Using case studies from around the world, students will explore pragmatic solutions and urban planning techniques to address current and future challenges.
IDEV 4300 Identity and Development (3 Credit Hours)
A principal concern of many development theorists and practitioners today is the need to recognize differences. That means, fundamentally, respecting differences in identity and how one's identity or identities, such as gender, ethnicity, family structure, national origin, political affiliation, race, and religion play out in daily practice. The first section of the course provides historical and theoretical context for current discussions of identity as they relate to, affect and shape current international development theory and practice. The second section of the course examines cross-cutting issues where identity concerns intersect, with an emphasis on current trends and challenges, such as migration, violence, and urban change.

Prerequisite(s): (IDEV 3200, 3200, PSDV 3200 or 3200).

IDEV 4320 Migrants Refugees & Development (3 Credit Hours)
This course provides students with the opportunity to consider the implications of global population movements in 2016, exclusive of internal migrants in 2013; 244 million in 2016, exclusive of internal migrants in 2013; and the events they reflect. We examine internal and external migration flows, their political, economic, social, cultural, and environmental causes and consequences. Moreover, we consider whether migrants may be an engine of development, a hindrance, or both. Success stories of migrant integration, upward mobility and thriving businesses go alongside with tales of discrimination, crowded slums and refugee camps where disease is rampant, education is scarce, and youth widen the ranks of the unemployed and revert to crime as a way of living and violence as a means of surviving. Based on migration theories and case studies, this course aims at understanding these patterns and exploring how the pace of migration may be slowed and conditions improved in order for migrant populations to better integrate their new societies and become positive agents of change.

Prerequisite(s): IDEV 3200 and (ECON 1020, 1020, 1020 or 1020).

IDEV 4330 Post-Conflict Development (3 Credit Hours)
The main objective of this course is to help students understand post-conflict development, in particular the rebalancing of unequal power relations through restorative and restorative justice. Determining the appropriate response to atrocities of gruesome scale, such as genocide and crimes against humanity, is one of the most difficult tasks scholars and policymakers have had to grapple within societies transitioning from conflict. Several case studies and a variety of transitional justice mechanisms are covered in the course, including truth and reconciliation commissions, reparations, ad-hoc criminal tribunals, the International Criminal Court, hybrid courts and domestic courts. The course ends by exposing tensions between the aim of justice and other crucial aims in post-conflict societies, including lasting peace, reconciliation, nation-building, poverty elimination, and gender and refugee issues, in order to familiarize students with the complexities of political development. <br/>

Prerequisite(s): IDEV 1010 and 3200.

IDEV 4560 Internship (1-3 Credit Hours)
With the approval from the International Development Studies Program and the Center for Public Service, students can gain unique practical experiences and earn credit by engaging in a service-learning internship course. The internship program provides students the opportunity to bridge academic learning with service in the community. Internships foster professional development, promote practical application of knowledge acquired in the classroom, and encourage civic engagement. This course requires motivation, passion, and enthusiasm.

Corequisite(s): SRVC 4890.

IDEV 4561 Environment & Development (3 Credit Hours)
Developing countries face serious environmental challenges. Resource exploitation, rapid industrialization, disadvantageous trade and labor abuses are some of the potential consequences of unbalanced and non-sustainable development. Sustainable human development ensures that environmental stewardship accompanies concomitant progress in economic growth, responsive governance, social justice and healthy of the population. Sustainable development implies that resources are used widely, industrialization occurs without uncontrolled pollution and labor is engaged in production and trade practices that avoid exploitation. Global and local environmental problems and their root causes are discussed. Potential avoidance and mitigation measures are presented which may be implemented to guide a developing economy toward responsible and sustainable development.

Prerequisite(s): IDEV 3200.

IDEV 4570 Internship (1-3 Credit Hours)

IDEV 4820 Urban Resilience Climate Chang (3 Credit Hours)
This summer course will explore the concept of resilience in urban communities in the context of the growing challenges presented by global climatic change. Using a multidisciplinary approach, students will address the public health issues that urban populations will face and the increased mobilities they will use as a coping strategies with the increase of natural disasters and the decrease of available natural resources. Using case studies from around the world, students will explore pragmatic solutions and urban planning techniques to address current and future challenges.

IDEV 4880 Writing Practicum: IDEV 4280 (1 Credit Hour)
Writing Practicum: IDEV 4280

IDEV 4890 Service Learning: IDEV 4950 (0-1 Credit Hours)
Corequisite(s): IDEV 4900.

IDEV 4900 Leadership & Mgmt Development (3 Credit Hours)
"Leadership and Management for Development is a course designed for students who seek careers in International Development, working for international or non-governmental organizations, in the public or private sector, or aiming at starting their own social enterprise. Using a variety of case studies including recent economic and human development projects in Africa, Asia, Latin America and the United States, we explore the challenges of effective decision-making, policy formulation and implementation, as well as monitoring and evaluation, in the context of real world social, political, and financial constraints that regularly arise. Students are introduced to a strategic planning conceptual framework, which they use to create a sound and sustainable development project in the location and under an organization of their choice.

Prerequisite(s): IDEV 1010 and 3200.
IDEV 4910 Independent Study (1-3 Credit Hours)  
Open to upper-level students with approval of instructor.

IDEV 4920 Independent Study (1-3 Credit Hours)  
Open to upper-level students with approval of instructor.

IDEV 4950 Special Topics (1-4 Credit Hours)  
Courses offered by visiting professors or permanent faculty. For specific offering, see the Schedule of Classes. For description, consult the department.

IDEV 4951 Special Topics (1-3 Credit Hours)  
IDEV 4952 Special Topics (1-3 Credit Hours)  
IDEV 4953 Special Topics (1-3 Credit Hours)

IDEV 4955 Special Topics (1-3 Credit Hours)  
IDEV 4956 Special Topics (1-3 Credit Hours)  
IDEV 4957 Special Topics (1-3 Credit Hours)  
IDEV 4958 Special Topics (1-3 Credit Hours)  
IDEV 4959 Special Topics (1-3 Credit Hours)  
IDEV 5370 Washington Semester Abroad (1-20 Credit Hours)  
IDEV 5380 Junior Year Abroad (1-20 Credit Hours)  
IDEV 5390 Junior Year Abroad (1-20 Credit Hours)  
Junior Year Abroad.

IDEV 6100 Intro To Econ Analysis I (3 Credit Hours)  
The following course was not found in the supplied content but, was listed in program requirements. Please review and provide us, if possible, with the correct information.

IDEV 6110 Intro To Quant Analysis (3 Credit Hours)  
IDEV 6120 Intro To Research (3 Credit Hours)  
IDEV 6130 Intermed Quant Research (3 Credit Hours)  
IDEV 6150 Intr Forgn Corrupt Prac (1 Credit Hour)  
IDEV 6200 Humn Aspect Disastr/Emer (3 Credit Hours)  
The course, administered in partnership with the International Center for Health and Migration (ICMH), will focus primarily on disaster relief and reconstruction. Individual lessons will address a variety of subtopics such as rapid assessment, psycho-social health, reproductive health, monitoring and evaluation, relief organizations, GIS, and communicable diseases. This course will consist of lectures, guest lecturers, assignments and field trips.

IDEV 6220 Humn Aspect Disastr/Emer (3 Credit Hours)  
The course, administered in partnership with the International Center for Health and Migration (ICMH), will focus primarily on disaster relief and reconstruction. Individual lessons will address a variety of subtopics such as rapid assessment, psycho-social health, reproductive health, monitoring and evaluation, relief organizations, GIS, and communicable diseases. This course will consist of lectures, guest lecturers, assignments and field trips.

IDEV 6230 Food Aid/Security Humani (3 Credit Hours)  
Course by instructor approval only. This is a two-week intensive summer course held in Rome, Italy. This course will explore the dynamics of the use of food aid, the largest single component of humanitarian emergencies. The course will review policies that guide the use of food aid, as principal controversies surrounding the use of food aid in emergency and transition settings. The course will also explore assessment techniques used to gauge the vulnerability of affected populations and their needs for food-based interventions. Lastly, the course will explore the food aid management system and its logistics. Field visits will be conducted to the principal UN agencies involved in food aid as well as diplomatic missions that determine food aid policies.
Intl Studies Intl Business (ISIB)

ISIB 1890 Service Learning: ISIB 1010 (0-1 Credit Hours)
ISIB 1910 Study Abroad Pre-Dep (1 Credit Hour)

This course is designed to give Altman Scholars the information and skills necessary to make the most out of their Rising Sophomore Study Abroad Experience. Through this experience, students will cultivate intercultural communication skills, enhance their knowledge of an important emerging market, be pushed out of their comfort zone, and provide meaningful public service in an international context. This course will equip students with the skills to maximize these outcomes through classroom learning, experiential reflection assignments, and research projects.

ISIB 2010 InterCultural Comm and Busin (3 Credit Hours)
Prerequisite(s): ISIB 1010.

ISIB 2020 Special Topics (3 Credit Hours)
This course urges students to consider their role in their local environments as they prepare for and embark on their education abroad journey. Together, we will examine the methods available to study abroad students to learn about and exist within the various cultures that comprise our everyday locales. We will also deconstruct the notion of a “global citizen” in order to redefine the many ways that one can become a global citizen in our modern, interconnected world.

ISIB 2890 Service Learning: ISIB 2010 (0-1 Credit Hours)

ISIB 3010 Introduction to Globalization (3 Credit Hours)
Open to Altman scholars only, this course will utilize interdisciplinary and experiential approaches to explore of debates surrounding globalization.

ISIB 3890 Service Learning: ISIB 3010 (0-1 Credit Hours)
The class to be administered partly on campus and partially in Thailand.

ISIB 6010 Approaches to Global Dilemmas (3,4 Credit Hours)
Utilizing approaches to learning that are theoretical, empirical, and interdisciplinary, this course will assess contemporary global dilemmas in a variety of developing and developed world regions and the corresponding role of the states in combatting political, ecological, economic insecurity. The course is taught by faculty in various social sciences and humanities disciplines.

Prerequisite(s): ISIB 2010.

ISIB 6020 Altman Senior Seminar (1 Credit Hour)
The course an experiential quasi-independent study that affords graduating seniors an opportunity to critically reflect upon the knowledge and skills gained through the Altman curriculum and their study abroad experiences. Students will assess the “higher level learning” and personal transformation that took place during their junior year abroad experiences. They will also attend scholarly events rooted in liberal arts and business disciplines and utilize the methodological approaches and theoretical content gained through the Altman Program to critically the theoretical and empirical questions presented at these events.

Italian (ITAL)

ITAL 1010 Elementary Italian I (4 Credit Hours)
Development of the skills of speaking, listening, reading, and writing Italian both in the classroom and through audio work.

Prerequisite(s): minimum score of PASS in 'ITAL 1010 Placement'.

ITAL 1020 Elementary Italian II (4 Credit Hours)
A continuation of the objectives presented in Italian I.

Prerequisite(s): minimum score of PASS in 'ITAL 1020 Placement', ITAL 1010 or 1030.
ITAL 1030  Elem Ital For Romnc Lang I (4 Credit Hours)
Same material as ITAL 1010 but designed for students whose previous knowledge of another Romance language or Latin enables them to grasp the principles of Italian grammar and Italian vocabulary more efficiently. Development of the skills of speaking, understanding, reading, and writing Italian, both in the classroom and the language laboratory.

Prerequisite(s): minimum score of PASS in 'ITAL 1030 Placement'.

ITAL 1040  Elem Ital Romnc Lang II (4 Credit Hours)
A continuation of the objectives of Italian for Romance Language Students I, with special emphasis on reading.

Prerequisite(s): minimum score of PASS in 'ITAL 1040 Placement', ITAL 1010 or 1030.

ITAL 1280  Junior Semester (0 Credit Hours)
Junior Semester.

ITAL 1290  Semester Abroad (1-20 Credit Hours)
Semester abroad.

ITAL 1940  Transfer Coursework (1-20 Credit Hours)
Transfer Coursework.

ITAL 2030  Intermediate Italian (4 Credit Hours)
A complete second-year course. Intensive grammar review with readings from standard Italian texts. Comprehension and conversational skills are stressed. Written expression also emphasized.

Prerequisite(s): minimum score of PASS in 'ITAL 2030 Placement', ITAL 1020 or 1040.

ITAL 2040  Intermed Ital Romnc Lang (4 Credit Hours)
A complete second-year course, covering the same material as ITAL 2030, but designed for students whose previous knowledge of another Romance language or Latin enables them to grasp the principles of Italian grammar and Italian vocabulary more efficiently. Intensive grammar review with readings from standard Italian texts. Comprehension and conversational skills are stressed. Written expression also emphasized.

ITAL 2390  Semester Abroad (1-20 Credit Hours)
Semester abroad.

ITAL 2940  Transfer Coursework (3 Credit Hours)
Transfer Coursework.

ITAL 3000  Intro Italian Lit (3 Credit Hours)
An introduction to Italian literature, including readings from Dante, Petrarch, Boccaccio, Poliziano, Machiavelli, Ariosto, Castiglione, Goldoni, Manzoni, Pirandello, Calvino, among others.

Prerequisite(s): minimum score of PASS in 'ITAL 3000 Placement' or ITAL 3130.

ITAL 3130  Advanced Convers & Comp (3 Credit Hours)
The course aims primarily at perfecting the student’s speaking and writing ability. Articles taken from newspapers, periodicals, the Internet, etc., serve as a basis for discussion and familiarize students with contemporary Italy. The course presupposes a solid grammatical foundation and any grammar review is given only on an individual basis.

Prerequisite(s): ITAL 2030 or minimum score of PASS in 'ITAL 3130 Placement'.

ITAL 3200  Italian for business (3 Credit Hours)
Italian for Business is a communicative course designed for students who wish to be prepared in professional areas related to international trade and organizations. It focuses on vocabulary, topics, and cultural aspects specific to an Italian-speaking professional environment. It reinforces the skills of listening, speaking, reading, and writing through the practice of simulated professional situations. The first part of the course will place more emphasis on the practice of communicative activities pertaining to professional functions. The second part of the course will place more emphasis on the student’s understanding of company structures and operations. Taught in Italian. Prerequisite: Intermediate Italian (ITAL-2030)

Prerequisite(s): ITAL 2030, minimum score of PASS in ‘ITAL 4000 Level Placement’, minimum score of PASS in ‘ITAL 3000 Placement’, minimum score of PASS in ‘ITAL 3130 Placement’ or minimum score of PASS in ‘ITAL 3250 Placement’.

ITAL 3250  Italian Lang & Culture (3 Credit Hours)
The course aims at improving the speaking and writing ability of students while familiarizing them with the development of Italian culture and history from the Middle Ages to the 21st century. Students discuss historical event and answer questions using the grammar and idioms learned in the grammar review. Writing assignments are based on the historical and cultural component of the course.

Prerequisite(s): ITAL 3130*, 3200 or minimum score of PASS in ‘ITAL 3250 Placement’.
* May be taken concurrently.

ITAL 3300  Topics Ital Lit & Cinema (3 Credit Hours)
Subject varies with instructor. An introductory study of the major contributions of Italian literature to Western thought. The course emphasizes particularly those authors whose works have interdisciplinary ramifications, e.g. Dante, Petrarch, Machiavelli, Galileo, Pirandello, Calvino. The course may also focus on the history of Italian cinema or a special topic in Italian cinema, such as the silent era, neorealism, the work of a major director, and the relationship between literature and film. Notes: May be repeated for credit provided that a different topic is covered. The course counts for Film Studies credit only when the focus is on cinema.
ITAL 3330  Ital Lit In Translation  (3 Credit Hours)
Subject varies with instructor. A study of the major contributions of Italian literature to Western thought. The course emphasizes particularly those authors whose works have interdisciplinary ramifications, e.g., Dante, Petrarch, Machiavelli, Galileo, Pirandello, Calvino. The course may also focus on the history of Italian cinema or a special topic in Italian cinema, such as the silent era, neorealism, the work of a major director, and the relationship between literature and film. Notes: May be repeated for credit, provided that a different topic is covered. The course counts for FMST credit only when the focus is on cinema.

ITAL 3890  Service Learning: ITAL 3250  (0-1 Credit Hours)
Service learning.

Corequisite(s): ITAL 3130.

ITAL 3940  Transfer Coursework  (3 Credit Hours)
Transfer Coursework.

ITAL 4010  Topics 13 & 14 Cent Ital Lit  (3 Credit Hours)
Topics may include St. Francis and early minor authors, Dante’s Divine Comedy and early works, Boccaccio’s Decameron and minor works, Petrarch’s Canzoniere and minor works.

Prerequisite(s): ITAL 3000, 3130, 3250, 3330 or minimum score of PASS in ‘ITAL 4000 Level Placement’.

ITAL 4020  Topics Ren Lit  (3 Credit Hours)
Topics may include the literati of the Medici court, lyric poetry of the Petrarchist, the drama, the epic poem, political and social treatises.

Prerequisite(s): minimum score of PASS in ‘ITAL 4000 Level Placement’, ITAL 3000, 3030, 3070, 3130, 3250, 3300, 3330 or 3200.

ITAL 4030  Topics 17th & 18th C Lit  (3 Credit Hours)
Works of various literary and philosophical writers will be studied. Topics may include the effect of the Inquisition, the Petrarchan and Arcadian traditions, theater as social and political laboratory, Galileo, Bruno, Campanella, Marino, Vico, Metastasio, Gozzi, Goldoni, the beginnings of the Risorgimento in the works of such authors as Alfieri, Parini, and Foscolo.

ITAL 4040  Topics 19 & 20 Cent Ital Lit  (3,4 Credit Hours)
Topics may include Leopardi, Manzoni, Carducci, Verga, Pascoli, D’Annunzio, Pirandello, Calvino, Pasolini; the avant-garde; contemporary poetry, novel or drama; the history of Italian cinema and special topics in Italian cinema, such as the silent era, neorealism, the work of a major director, and the relationship between literature and film. Notes: May be repeated for credit provided a different topic is covered.

Prerequisite(s): minimum score of PASS in ‘ITAL 4000 Level Placement’, ITAL 3000, 3030, 3070, 3130, 3200, 3250, 3300 or 3330.

ITAL 4440  Topics Lit/Cinema Transl  (3,4 Credit Hours)
Subject varies with instructor. An advanced study of the major contributions of Italian literature to Western thought. The course emphasizes particularly those authors whose works have interdisciplinary ramifications, e.g., Dante, Petrarch, Machiavelli, Galileo, Pirandello, Calvino. The course may also focus on the history of Italian cinema or a special topic in Italian cinema, such as the silent era, neorealism, the work of a major director, and the relationship between literature and film. May be repeated for credit provided that a different topic is covered. Taught in English. Fulfills capstone requirement for FMST when the course is a film topic. For capstone credit, students should also register for FMST 5110 with 0 credits. Notes: May be repeated for credit provided that a different topic is covered.

ITAL 4560  Internship  (1-2 Credit Hours)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the academic department sponsoring the internship on TUTOR.

ITAL 4570  Internship  (1-2 Credit Hours)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the academic department sponsoring the internship on TUTOR.

ITST 4990  Honors Thesis (3-4 Credit Hours)

ITST 5000  Honors Thesis (3-4 Credit Hours)

ITST 6510  Seminar Ital Studies (3 Credit Hours)
A seminar in methodology. Students present proposals for their senior thesis and receive responses from the faculty of the program.

Japanese Language (ASTJ)

ASTJ 1010  Beginning Japanese I (4 Credit Hours)
Emphasizes conversational Japanese. Includes study of basic grammar and introduction of hiragana, and katakana.

Prerequisite(s): minimum score of PASS in 'ASTJ 1010 Placement'.

ASTJ 1020  Beginning Japanese II (4 Credit Hours)
Emphasizes conversational Japanese based on text in hiragana, katakana, kanji. Includes study of complex grammar and introduction of approximately 100 kanji.

Prerequisite(s): minimum score of PASS in 'ASTJ 1020 Placement' or ASTJ 1010.

ASTJ 2030  Intermediate Japanese I (4 Credit Hours)
Conversation, reading, and writing based on text in hiragana, katakana and kanji. Continuation of study of complex grammar and introduction of approximately 100 additional kanji.

Prerequisite(s): minimum score of PASS in 'ASTJ 2030 Placement' or ASTJ 1020.

ASTJ 2040  Intermediate Japanese II (4 Credit Hours)
Conversation, reading, and writing based on text in hiragana, katakana, and kanji. Continuation of study of complex grammar and introduction of approximately 150 additional kanji.

Prerequisite(s): minimum score of PASS in 'ASTJ 2040 Placement' or ASTJ 2030.

ASTJ 3050  Advanced Japanese Speaking I (3 Credit Hours)
Development of conversational, reading and writing skills in Japanese.

Prerequisite(s): ASTJ 2040 or minimum score of PASS in 'ASTJ 3050 Placement'.

ASTJ 3051  Advanced Japanese Speaking II (3 Credit Hours)
ASTJ3051 is a continuation of ASTJ3050, reinforcing previously learned grammar points, the students will deepen overall knowledge on Japanese culture and society through discussion and reading.

Prerequisite(s): ASTJ 3050 or minimum score of PASS in 'ASTJ 3051 Placement'.

ASTJ 3060  Advanced Japanese Reading II (3 Credit Hours)
A continuation of objectives in ASTJ 3010, intended to provide an advanced level of skills in Japanese.

Prerequisite(s): ASTJ 3060.
ASTJ 4060 Advanced Japanese Comp & Pres (3 Credit Hours)
This is a fourth-year advanced Japanese composition and presentation course that will help students develop their vocabulary, writing, and oral presentation skills. The students will learn about effective communication strategies in different types of linguistic situations. The course will also expose students to various aspects of Japanese culture and society. Prerequisite: ASTJ 3051 or equivalent.

Prerequisite(s): minimum score of PASS in 'ASTJ 4000 Level Placement' or ASTJ 3051.

ASTJ 4070 Adv Jap Comp & Pres II (3 Credit Hours)
This class is a continuation of its prerequisite, the course "Advanced Japanese Composition and Presentation." It is designed to equip the students with an ability to participate in Japanese conversation, exchange information and express feelings. The course also aims at deepening an understanding and developing appreciation for Japanese tradition as well as for the students' own culture. Prerequisites: ASTJ 4060 Adv Jap Comp & Pres I

Prerequisite(s): ASTJ 4060 or minimum score of PASS in 'ASTJ 4000 Level Placement'.

ASTJ 4910 Independent Study (1-3 Credit Hours)
Independent study in Asian studies.

ASTJ 5190 Semester Abroad (1-20 Credit Hours)
Semester abroad in Asian studies.

**Jewish Studies (JWST)**

JWST 1010 Intro Jewish Civilizatn: Found (3 Credit Hours)
This course will introduce the student to the variety of religious expression and understanding in the Jewish tradition. The focus of the course is the biblical texts and their interpretations which are relevant to Jewish understandings of issues such as creation, revelation, redemption and community. We will also study the social, literary, historical and cultural influences that helped shape the varieties of Jewish traditions throughout the ages.

JWST 1020 Intro to Jewish Civ:Modern Era (3 Credit Hours)
This course will introduce the students to the variety of religious expression and understanding in the Jewish tradition in the early modern and modern eras. The focus of the course will begin with biblical texts and then use writings from medieval, early modern, and the modern period to explore how the definitions of Jewishness and conceptions of Jewish belonging change over time. We will also study the social, literary, historical and cultural influences that helped shape the varieties of Jewish traditions across 1,000 years.

JWST 1110 Introduction To Judaism (3 Credit Hours)
This course provides an overview of Jews and Judaism from religious, historical, and contemporary perspectives, including the study of Jewish practices, rituals, beliefs, and the holiday structure.

JWST 1250 Building Jewish Identity (3 Credit Hours)
The starting point for our investigation of a distinctively secular Jewish conception of the world will be the fact that roughly on behalf of the American Jewish population possesses a secular non-religious orientation (American Jewish Identity Survey, 2001). How did this non-religious orientation arise amongst what many people consider to be a religious community? We will explore how certain non-religious features, such as shared culture, language, custom, dress, and education played an integral part in the definition of Jews and Judaism from their inception, and the role played by these features in the constitution of variant secular forms of Judaism and secular Jewish orientations in the modern period.

JWST 1290 Semester Abroad (1-20 Credit Hours)
Semester Abroad.

JWST 1890 Service Learning (1 Credit Hour)
Service Learning.

JWST 1895 Service Learning: JWST 1250 (1 Credit Hour)
Service Learning component to JWST 1250.

Corequisite(s): JWST 1250.

JWST 1940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

JWST 2100 Intro To Hebrew Bible (3 Credit Hours)
In this course we will attempt to understand the Hebrew Bible better by examining samples of each of the major genres represented while at the same time placing each within its historical context. We will also focus upon questions of interpretation. By taking a general survey of the ways in which the Hebrew Bible has been read and interpreted in the past we will begin to understand how these ancient texts continue to live and speak to so many.

JWST 2390 Semester Abroad (1-20 Credit Hours)
Semester Abroad.

JWST 2810 Special Topics (1-3 Credit Hours)
Special topic in Jewish Studies.

JWST 2811 Special Topics (1-3 Credit Hours)
Special topic in Jewish Studies.

JWST 2812 Special Topics (1-3 Credit Hours)
Special topic in Jewish Studies.

JWST 2890 Service Learning: JWST 2200 (0-1 Credit Hours)
Service Learning component to JWST 2200.

JWST 2940 Transfer Coursework (0 Credit Hours)
Transfer Coursework.

JWST 3100 Select Topics (1-3 Credit Hours)
This course will cover special offerings in Jewish history, religious thought and literature. It will be taught by various permanent and visiting Jewish Studies instructors.

JWST 3101 Special Topics (3 Credit Hours)
Special topic in Jewish Studies.

JWST 3102 Select Topics (3 Credit Hours)
Select topic in Jewish Studies.
JWST 3103 Select Topics (3 Credit Hours)
Select topic in Jewish Studies.

JWST 3104 Select Topics (3 Credit Hours)
Select Topic in Jewish Studies.

JWST 3140 Selected Readings Hebrew Bible (3 Credit Hours)
In this course we will read specific books from the Hebrew Bible (in translation). The books read will rotate within three topics: Genesis; The Five Scrolls: Song of Songs, Ruth, Lamentations, Ecclesiastes, and Esther; The Prophets. The aim of this course is to provide the student with the opportunity to read portions of the Hebrew Bible in detail and how they have been read, interpreted, and explained throughout the centuries. The student will also learn to read the texts critically and begin to form his/her own understanding of the text.

JWST 3150 Second Temple Judaisms (3 Credit Hours)
Starting with the return from Babylonia up until the destruction of the Jerusalem Temple in 70 C.E., Judaism was transformed from a local ethnic religious cult to a broad-based, diverse, and often fragmented sectarian religion. Many outside cultures and civilizations, from the ancient Persians to the Imperial Romans, influenced the Jews and Judaism through language, culture, and political contacts. We will study these cultural contracts and conflicts that caused Jews in the Second Commonwealth to develop competing understandings of Judaism.

JWST 3200 Modern Judaism (3 Credit Hours)
This course will explore Jewish life and thought in the modern world.

JWST 3210 American Judaism (3,4 Credit Hours)
The course examines the nature of religion in modern and contemporary times, using Judaism in America as an example. How did the American Jewish community come into being? What is American about it? What is Judaic, that is, carrying forward aspects of classical Judaism? What is the meaning of the ethnic, social, and cultural traits emergent in contemporary Jewish life? Answers to these questions provide a picture of the character of American Judaism and of the complexities of contemporary religious life.

JWST 3220 Arab/Israeli Conflict (3,4 Credit Hours)
This seminar traces the course of the Arab-Israeli conflict from the rise of Zionism, through the various Arab-Israeli wars, and up to the recent peace negotiations. Emphasis is on presenting the perspectives of all the parties to the Arab-Israeli conflict, and placing it in the context of the history of the Middle East as a whole.

JWST 3240 The Historical Jesus (3 Credit Hours)
This course portrays Jesus in historical terms.

JWST 3310 Jewish Latin Amer Expressions (3 Credit Hours)
An introduction to the cultural expressions of Jewish communities throughout Latin America.

JWST 3330 Jewish Music (3 Credit Hours)
Survey of Jewish liturgical music from Biblical times to the present, and of Jewish popular, theatre, and folk music. Emphasis on European, Israeli, Sephardic, and American traditions.

JWST 3340 Early Amer. Jewish Hist. (3 Credit Hours)
This class focuses on the period from the earliest Jewish settlers in mid-seventeenth century colonial America through the establishment of viable Jewish communities and institutions by the latter part of the nineteenth century. It covers the so-called Sephardic and Germanic periods of American-Jewish history, prior to the wave of Eastern European immigration. Among the themes explored are the tension between Jewish identity and the pressures of assimilation; the transformation of the synagogue, the emergence of Jewish social and cultural institutions; changing religious practices and the rise of Reform Judaism. Events and themes are placed within the broader context of American history.

JWST 3440 Holocaust In Film & Lit (3 Credit Hours)
This course examines the Holocaust from various perspectives, disciplines, and media (including history, literature, and film) to investigate the conditions and limitations of representations of the Holocaust. May be counted toward a major in German only with departmental approval and provided all reading is done in German.

JWST 3500 Goldn Age Spanish Jewry I (3,4 Credit Hours)
An examination of the cultural, political, and intellectual history of Spanish Jewry from the beginnings of Jewish settlement through the early reconquest. Special attention is given to the contributions of Hasdai ibn Shaprut and Samuel Ha-Nagid.

JWST 3520 Goldn Age Span Jewry II (3 Credit Hours)
A study of the transition of Spanish Jewry from Moslem rule to Christian rule. The course includes an analysis of the several disputations of this period as well as the impact of the inquisition and expulsion. Special attention is given to the literature and philosophy of Maimonides, Crescas, and Solomon ibn Adret.

JWST 3530 Jewish Middle Ages (3 Credit Hours)
The medieval period was perhaps the most prolific age for Jewish exploration and interpretation of Jewish religious texts and sources. We will examine a number of these philosophical, mystical, poetic, liturgic, and juridical in order to better appreciate the context and content of medieval concerns and solutions.

JWST 3540 Jewish Renaissance to Age Reas (3 Credit Hours)
Cromwell’s England, Florence, Vilna, Prague, and Spinoza’s Amsterdam.

JWST 3590 Greek Philo & Jewish Thht (3 Credit Hours)
Western culture has a double source, the Bible and Greek philosophy, or Jerusalem and Athens. Are the two traditions harmonious or do they stand in some essential tension with each other? While this was an especially vital challenge to thinkers of the Medieval period, it expresses a fundamental question about the relation between revelation and reason. This course will approach that question by examining the response of some important Jewish thinkers in the encounter with the teachings of Plato and Aristotle.
JWST 3600 Women In Hebrew Bible (3 Credit Hours)
Women play a significant role in the Bible, one that is often at best misunderstood and at worst ignored. In this class we will examine the biblical stories and their historical context in order to understand the role of women in the biblical period as well as the role of the figures within the biblical text. We will also examine modern interpretations of these texts (including feminist readings and creative fiction based upon the biblical text) to see how modern scholars have understood these ancient texts in modern times.

JWST 3740 Israel: Culture, Pol, and Hist (3,4 Credit Hours)
This course reviews various aspects of Israeli history, politics, society, and culture.

JWST 3750 Jewish ID in Modern Literature (3 Credit Hours)
In this course we will examine novels, short stories, essays, and other literary works by European Jewish authors and study their literary, cultural and political context. We trace the development of literary forms that provide the basis for a modern Jewish self-consciousness and a sense of cultural identity. We compare the concepts of community and individualism, religious reform, and cultural notions of identity in the writings of authors from Eastern European and Western Europe. We also examine the differences of Jews in Europe in the period before the Holocaust.

JWST 3890 Service Learning JWST 3440 (0-1 Credit Hours)
Service Learning component to JWST 3440.

JWST 3891 Service Learning (0 Credit Hours)
Service Learning.

Corequisite(s): JWST 3210.

JWST 3931 Special Topics (3 Credit Hours)
Special Topic in Jewish Studies.

JWST 4110 Rabbinic Judaism (3 Credit Hours)
This course will focus on the literature and culture of the Rabbinic period (c. 200-600 C.E.). We will concentrate on reading and analyzing primary texts (Midrash, Mishnah and Talmud) as well as studying the historical context and methodological issues. This course will discuss the various literatures’ styles, methods and contents as well as their internal and external cultural influences.

JWST 4150 Women, Judaism, Jewish Cul (3 Credit Hours)
Women's roles in Judaism and Jewish life have been defined by the religious precepts and civil laws described in the Bible and interpreted by the rabbis in a patriarchal age. Nevertheless, throughout the ages, women have carved out areas for themselves within the Jewish religious, social, and political systems as well as fulfilled the roles prescribed to them. This course will study the women of Jewish history and how they have participated in, developed and shaped Jewish religious, social, and cultural life.

JWST 4210 American Jewish Movements (3 Credit Hours)
This course will build upon the themes of American Jewish History, JWST 3210, and seek to understand how American Jews balanced their Jewish identity with their desire to be Americans.

JWST 4250 Dead Sea Scrolls (3 Credit Hours)
It has been just over 50 years since a group of Bedouin shepherds found several clay jars containing ancient scrolls. The documents include copies of the Hebrew Bible, apocryphal works, and sectarian works written to provide order and meaning to the readers lives. But who wrote the scrolls and who were they writing for? This course will investigate these questions and others by focusing on the texts themselves and the archaeological evidence from the site of Khirbet Qumran. Secondary sources will also be consulted and read critically.

JWST 4300 Conflict In Cult & Lit (3 Credit Hours)
This course will focus on the literary and cultural response to the Israeli-Palestinian conflict since the beginning of the Zionist settlement to our time. We will ask questions such as how each culture, the Israeli and Palestinian, has represented the other? Has each depiction been a unified cultural portrature or can we identify multifariously delineations? What constitutes national identity and what role have national, religious, racial and gender perspectives played in the construction of the Israeli and Palestinian identities? How has the various formation of the other contributed to the identity creation of each culture? And finally, can we point out significant historical changes in these representations? We will examination of both Palestinian and Israeli experiences as reflected in various texts including fiction, poetry, philosophical and historical treatises, editorials, caricatures, film and the like, all in English translation. Last but not least, we will try to understand both the stable and the changing parameters of national identity on the background of universal intellectual and political movements such as nationalism, multiculturalism, and globalization.

JWST 4310 Jewish Youth and Cultural Chng (3 Credit Hours)
This course will analyze the modern Jewish experience by focusing on the seminal role of Jews in their teens and twenties, examining how this group has affected social change.

JWST 4330 Jew Imm Exp, 1881-Present (3,4 Credit Hours)
This course will examine the transnational migration of Jews to six different continents - North America, South America, Asia, Africa, Australia and Europe - focusing on key components of the migration.

JWST 4350 Rashi, Halevi, Maimonide (3 Credit Hours)
An exploration of the lives and major works of Judaism's most significant religious writers of the Jewish Middle Ages. Rashi, the prince of Biblical commentators; Judah Halevi, poet laureate of the Jewish people and author of The Kuzar; Moses Maimonides, the supreme Jewish thinker of all ages, and author of The Guide for the Perplexed.

JWST 4420 Topics Jewish Lit/Histor (3 Credit Hours)
In this course we will study the work of one pathbreaking Jewish intellectual studying both his/her oeuvre and intellectual context. Of particular importance is the relationship of the intellectual’s work as part of a dialogue with the works of Jewish and non-Jewish contemporaries. Among our subjects are Heinrich Graetz, Simon Dubnov, Israel Zinberg, Jacob Katz, and Salo Baron.
JWST 4500  The History of Zionism  (3 Credit Hours)
This course aims to teach students about significant historical moments and cultural developments in Zionism history and culture. It will help students acquire knowledge of important approaches to the study of Jewish civilization and the presuppositions underlying them: various analytical techniques employed in the humanities and the social sciences for the study of Jewish civilization, the Jews, and their representation.

JWST 4560  Internship  (1-3 Credit Hours)
Internship.

JWST 4570  Internship  (1,3 Credit Hours)
Internship.

JWST 4610  Bible As Political Theory  (3 Credit Hours)
A study of the Bible from the prospective of political theory, which analyzes the similarities and differences between the political perspectives of classical (Greek and Roman) thinkers those of the Bible.

JWST 4670  Israeli Jewish & Arab Israeli  (3 Credit Hours)
This course explores major themes in Israeli cinema and fiction in the context of the social and historical backdrop of the Arab-Israeli conflict and the painful emergence of a new Jewish-Israeli identity in the shadow of the Holocaust and unremitting warfare. Examining in depth a number of Hebrew and Arabic films, short stories and novels, all in English translation, the course situates them in the evolution of Israeli cinema and fiction. prereg: JWST 3220 Arab-Israeli Conflict*

Kinesiology (KINE)

KINE 1400  Intro to Health Sciences  (3 Credit Hours)
This course offers a basic overview of human health. Topics to be addressed include the following: the historical development of public health and ways that health affects daily life; explain the basic principles of epidemiology, including rates, risk factors, disease determinants, causation and surveillance; explain the manner in which health information and communications can be used to improve health; identify how social and behavioral interventions affect health; explain how policy and law affect health; identify the impact of the environment; describe the manner in which communicable diseases affect health; and, describe the basic organization of health care and public health systems.

KINE 1500  Intro to Kinesiology  (3 Credit Hours)
This course will introduce students to the academic discipline of Kinesiology, including fundamental components of fitness & exercise, health & wellness and topics within sport/exercise science. Additional topics will include current issues in the field, and options for career and professional development.
KINE 1800 Wellness in Contemporary Am (3 Credit Hours)
A holistic approach to wellness is presented via the components of total fitness, e.g., physical, social, emotional, and intellectual. Emphasis is placed on behaviors that serve to prevent illness and injury rather than rehabilitative strategies that are implemented after the fact. Content addresses both theoretical and applied perspectives of wellness that should be used in developing personalized exercise programs and healthy lifestyles. Additional topics to be covered include (but are not limited to): strategies for optimal nutrition, global versus national health and fitness trends, comparative analysis of healthcare systems, alternative forms of preventive/rehabilitative medicine, and environmental impact on wellness.

KINE 2010 Social Aspects of Health (3 Credit Hours)
The course is designed to provide students with an overview of the theoretical and empirical bases of social aspects as applied to health sciences, so that students can both apply and communicate this material in the context of their health-related careers. This course explores the social and behavioral connections between health and health-related matters. The challenges/incentives are to promote health through societal and behavioral change.

KINE 2220 Mind/Body Health (3 Credit Hours)
Health is influenced by physical, intellectual, social, spiritual and emotional determinants. In this course, the interaction of these determinants is explored as they relate to the prevention, onset, and progression of, and recovery from, disease. The aim is to provide an overview of the mind/body connection in relation to overall wellness using established theoretical and applied perspectives, e.g., cognitive behaviorism, psychoneuroimmunology, and guidelines for healthy lifestyles.

KINE 2230 Stress Management (3 Credit Hours)
This course examines stress from psycho-physiological and behavioral perspectives. It will afford each student the opportunity to experience various strategies used in coping with stress, e.g., self-mastery, meditation, imagery, exercise, nutrition, and cognitive restructuring. Various theories are discussed that serve as the foundation for the understanding of and coping with everyday stressors as well as those that occur unexpectedly.

KINE 2330 Nutrition and Behavior (3 Credit Hours)
This course is intended to bridge the gap between the theory and practice of nutritional science. Emphasis is given to the basic food constituents and their physiological relationships within the body. Topics will include but not limited to: the fundamental principles of normal nutrition; the interactions between diet and energy expenditure; gender differences; changes in nutrient needs throughout the life cycle; computer-assisted nutritional analyses; and, web-based nutritional sites. Includes the investigation of optimal health, allergies, hyperactivity, hypoglycemia, learning disabilities, eating disorders, delinquency, mental disorders and senility as they pertain to nutritional practices.

KINE 2910 Independent Study (1-3 Credit Hours)
Open to students with approval of Program chair. Student can work with a faculty member on an independent project.

KINE 3001 Special Topics (1-3 Credit Hours)
Special Topics in Kinesiology.

KINE 3002 Special Topics (1-3 Credit Hours)
Special Topics in Kinesiology.

KINE 3003 Special Topics (1-3 Credit Hours)
Special Topics in Kinesiology.

KINE 3004 Special Topics (1-3 Credit Hours)
Special Topics in Kinesiology.

KINE 3110 Exercise & Sport Psychology (3 Credit Hours)
This course will examine the psychological and social-psychological antecedents and consequences of exercise, physical activity and sports participation. Emphasis will be on theory and research on personality, motivation, arousal, cognition, attributions, leadership, and group dynamics.

KINE 3120 Biomechanics (4 Credit Hours)
This course is designed to develop an understanding of the application of mechanical principles to human movement and methods of motion analysis.

KINE 3130 Lifespan Motor Development (3 Credit Hours)
This course is designed to provide the student with a knowledge base in the study of changes in motor behavior across the lifespan, the process that underlie these changes, and factors that affect them.

KINE 3200 The Human Body (3 Credit Hours)
The understanding of the structure and functional significance of the human body is imperative for each individual to possess. The Human Body course will focus on such structural and functional significance with emphasis on the specific systems of the body, including but not limited to skeletal, muscular, neurological, endocrine, respiratory, reproductive, and integumentary systems. This course will cover an introduction to common illnesses/disease processes/ injuries specific to each body system. Exercise, wellness, health, and sports performance will be topics of concentration as they relate to the body and its functions. The Human Body course also concentrates on environmental, ethical, and health issues related to the biology of humans.

KINE 3220 Global Health (3 Credit Hours)
This course introduces students to critical issues in the current global health scene. Emphasis is placed on the main principles of global health, including an analysis of global health systems, diseases, programs, health governance and policies, identification and interpretation of current relevant data sources.

KINE 3250 Gender Based Issues in Health (3 Credit Hours)
The course will explore health concepts as they apply to particular needs of men and women within the context of a gender-based health care system in the United States. The course will address epidemiological and sociological analysis of the major causes of morbidity and mortality on the basis of gender; impact of social and behavioral influences; relationship of social, economic, and political inequality trends based on gender.
KINE 3330 Epidemiology of Aging (3 Credit Hours)
This course will introduce students to critical issues in the aging population. The course provides a comprehensive overview of the most important topics in health and aging, taking a “whole person” epidemiological approach to health, including attention to cultural differences, psychosocial, economic, and population factors affecting aging. The study of aging and health enhances professional opportunities in the fields of gerontology, wellness, and other medical and health related fields.

KINE 3500 Cultural Difference in Healing (3 Credit Hours)
This course is designed to explore the impact of culture on the perception of health and illness, and how this translates into health-seeking behaviors and broader health systems. The course will present an anthropological view of health and illness through its various cultural markers, such as pain, stress, care vs. cure, diet, gender, doctor/patient relationships, mental health among others.

KINE 3600 Economics of Health & Wellness (3 Credit Hours)
This course provides an introduction to the application of economic theory to the field of health and wellness. In particular, students will study the individual as a producer of health/wellness and as a consumer of healthcare services. Also, the role of physicians, hospitals, insurance providers, and the government in the health and medical care marketplace will be examined. Finally, the role of universal insurance and international comparisons of the efficiency and effectiveness of health care systems will be studied.

KINE 3650 Childhood Obesity (3 Credit Hours)
This course will examine the prevalence and impact of obese conditions on disease development in childhood and adolescence. Students will analyze current evidence focused on interventions used in the behavior and clinical management of overweight and obese youth in community and clinical settings.

KINE 3910 Independent Study (1-3 Credit Hours)
Students complete an independent project under the supervision of a faculty member. Approval is required by the Program Director.

KINE 4010 Catastrophic Illness & Injury (3 Credit Hours)
This course reviews the many catastrophic diseases and epidemics that have ravaged human populations, past and present, and how societies have understood and responded to these challenges over time. Possible changes in social conventions, information sharing and healthcare practices which may be necessary to deal with current and future epidemics are discussed. Lessons learned from previous catastrophes may help to deal with future ones.

KINE 4030 Exercise Physiology (4 Credit Hours)
Basic human physiology with emphasis on the physiological changes associated with exercise and overload that affect the underlying function of cells and organ systems of the human body.

Prerequisite(s): (SCEN 3030 or 3035) and (SCEN 3035 or 3035).

KINE 4050 Mass Media and Health (3 Credit Hours)
This course examines the effects of mass media on population health, from the negative impact of advertising of unhealthy products (e.g., cigarettes, alcohol and junk food), to the positive impact of public-health campaigns. Content includes an overview of behavioral science theory, themes and approaches to advertising, mass media prevention, and health promotion campaigns. Case studies of current media coverage and advertising campaigns will be used to demonstrate the effects of media on health and social behavior.

KINE 4070 Motor Learning (3 Credit Hours)
This course is an introduction to applied and basic theoretical aspects of motor learning as they apply to exercise science and related professions. It also includes a major hands-on component introducing the student to the experimental study of motor learning principles.

KINE 4110 Sports Medicine (3 Credit Hours)
This course will examine therapeutic modalities and the advanced care, prevention, and treatment of athletic injuries.

KINE 4120 Strength & Conditioning (3 Credit Hours)
This course will examine the development and evaluation of training principles and programs for diverse populations. Emphasis is placed on physiological adaptations and mechanical principles related to the application of resistance training.

KINE 4150 Exercise Prescription (3 Credit Hours)
This course presents students with the most current information on health-related physical fitness testing and exercise programming for individuals of all ages, fitness levels, and disease states.

Prerequisite(s): KINE 4030 or 4030.

KINE 4200 Mental Health (3 Credit Hours)
This course examines mental health issues in the context of social, environmental, governmental and legal conditions. Specific attention will be given to: identifying historical and current developments in mental health policy in the United States; explaining the significance of stigma in society regarding mental illness and how it affects individuals with mental illness; explaining the manner in which the legal system copes with the mentally ill; analyzing the etiology of some major mental illnesses (e.g., schizophrenia, bipolar disorder, eating disorders, PTSD, and childhood disorders) and how these disorders affect an individual's ability to function in society; identifying risk factors and protective factors related to mental disorders/illness; identifying public health efforts for prevention and intervention of mental disorders in the U.S.; and, access to public health programs, support services, medication costs, and insurance coverage for those with mental illnesses/conditions.

KINE 4250 Environmental Health (3 Credit Hours)
This course provides students with an introduction to scientific approaches to the investigation and modification of the effects of environmental factors on human health. Contributions of the fields of toxicology and epidemiology and the implications of research findings for policy and regulation are examined. Topic areas include toxic metals, pesticides and other organic chemicals, ionizing and non-ionizing radiation, vector-borne diseases, pollution of air and water, occupational exposures, and the health effects of global warming. The roles of local, state, and federal governments in environmental health are critically evaluated, as are initiatives by non-governmental organizations.
KINE 4650  Wellness Coaching: Resist Chng (3 Credit Hours)
This course will explore the trans-theoretical model of behavior change as it pertains to any desired individual behavioral shift. In addition, motivational interviewing strategies to include non-confrontation, reflective listening, client self-efficacy, and risk reduction will be emphasized in this course. Participants will become knowledgeable in the philosophies, practices, and outcomes of models of behavior change.

KINE 4650 Grant Writing  (3 Credit Hours)
This course is designed to teach students basic skills in granting writing. In this course students will learn the different types of grants, components of grants, potential funders and how to search for grants. Emphasis will be placed on learning to break down complex applications into manageable steps. Students will write a practice grant.

KINE 4910  Independent Study  (1-3 Credit Hours)
Students complete an independent project under the supervision of a faculty member. Approval is required by the Program Director.

KINE 5001  Internship  (3 Credit Hours)
This course will help students bridge between college or work or between current careers and the next. Students complete a minimum of 100 hours field experience in a Health and Wellness related facility. This course is to be taken during the senior year of study for the student or with approval of the Program Director. Students are required to turn in a weekly timesheet and weekly journal summaries detailing their duties and experiences on the internship site. Upon completion of the internship, students will submit a final paper and an evaluation from the internship site supervisor. A 2.5 grade point average is required for enrollment in the internship. All internships must be approved by Program Director.

KINE 6001  Special Topics  (1-3 Credit Hours)
Special Topics in Kinesiology.

KINE 6100  Cross Disciplinary Aspects Mgm  (3 Credit Hours)
This course examines overall management of wellness programs and facilities with an emphasis on human resource management. Future wellness professionals will enhance their knowledge of how these elements can be applied to wellness management settings. Topics include organizational structure, training and managing staff, financial management, legal and ethical concerns and customer service relations.

KINE 6250  Leadership in HEWE Professions  (3 Credit Hours)
This course surveys major concepts, examples, practices, and theories of organizational leadership with a special emphasis on analyzing and developing personal leadership skills. It is designed to build upon fundamental leadership theories, e.g. situational, charismatic, servant, transactional/transformational, path-goal, trait leadership, skill-based, and the life cycle theory. Participants will study the theoretical and applied nature of administration and leadership with an organizational context in efforts to develop their personal and philosophical framework, e.g. understanding individuals as followers and leaders, decision-making, promoting diversity and respect for all individuals.

KINE 6450  Legal Ethical Principals in Mgmt  (3 Credit Hours)
This course provides students with the opportunity to gain insight and understanding about the law and its implications on professionals in the fields of health, wellness, sport, education, leisure, and fitness. This course will examine federal, state, and local health care regulations impacting ethical decision-making; the rapidly expanding Codes of Professional Ethics for health care service providers in the fields of health, wellness, sports, education, leisure, insurance, and management; the legal aspects of health information management; and the HIPAA Privacy Standards and rules concerning the use and disclosure of medical and health information.

KINE 6650  Res Methods in Kinesiology  (3 Credit Hours)
In this course, students will investigate research methodology, experimental design and scientific writing, research literature and conduct research. Students will also be introduced to concepts in probability, basic statistical inference procedures of estimation, confidence intervals and hypothesis testing directed toward applications in science.

KINE 7100  Exerc & Nutrition Hlth Disease  (3 Credit Hours)
This course addresses the key health concerns and core differences in programming needs of various populations throughout the life cycle. An examination of nutritional concerns, requirements and metabolism from psychosocial, physical, and economic factors affecting nutritional status through the life span. Preparation of the health professional in assessing and providing services to clients and populations will be addressed. Students will also learn the roles that physical activity and nutritional practices play in the prevention, management, and treatment of chronic diseases and conditions, such as obesity, cardiovascular disease, cancer, diabetes, COPD, arthritis, depression, and anxiety. Populations of focus include children, adolescents, adults, and senior citizens. Methods of physical activity and nutritional assessment for each stage of the life cycle will be examined.

KINE 7150  Programming Approaches  (3 Credit Hours)
This course provides an overview of leading health program planning theories including PRECEDE/PROCEED and intervention mapping. Organizational and administrative approaches utilized in the conduct of health/wellness promotion programs will be described. Emphasis will be placed upon the selection, development, promotion, conduct, and evaluation of the various components of health/wellness promotion programs.

KINE 7200  Intervention Strategies  (3 Credit Hours)
This course will provide students with an understanding of the process involved in planning health interventions in health education and health promotion environments. Practical applications of the needs assessment process, program development and implementation will be executed including the skills, theory and practice involved in assessing clients to develop health related life skills.

KINE 7250  Motivational Interviewing HEWE  (3 Credit Hours)
Motivational Interviewing (MI) is a consumer centered instruction method for improving inherent motivation to change by exploring and resolving uncertainty. This course will include content of exploration into the attitudes and motivations of personal health behavior and an in-depth exploration of motivational interviewing principles and applications.
KINE 7300 Employee and Hlth & Wellness (3 Credit Hours)
Successful companies must understand the importance of workplace involvement in health. The relationship of employee health to healthcare costs and productivity will be discussed as a return on investment (ROI) and an investment in human capital. Strategic and product management planning are developed in relationship to disease management versus population wellness theory. Assessments of employer needs, organizational culture, environmental policy, and procedures supportive to desired outcomes are practiced. Professionals learn about aligning client needs and wants with best practice programs design, implementation, and evaluation for successful results. Age, gender, race, and issues that affect participation in wellness programs are reviewed.

KINE 7350 Integrating Hlth Promo Sch Set (3 Credit Hours)
This course addresses the growing demand for wellness initiatives for students, their families, and school staff. The coordination of teachers, school nurses, school administrators, and community health promotion professionals will set the stage for a comprehensive approach to building wellness programming within the school community.

KINE 7400 Health Systems and Policy (3 Credit Hours)
This course provides information pertaining to the U.S. healthcare system with emphasis on health and wellness. It provides an overview of the major public and private stakeholders including public health, insurance, and healthcare providers. Participants will examine how health policy impacts the design and financing of wellness programs.

KINE 7450 Health Equity & Determinants (3 Credit Hours)
This course is designed to examine the impact of social, economic, and environmental determinants of health on various populations. Health inequities found among marginalized groups due to socioeconomic status, race/ethnicity, sexual orientation, gender, disability status, geographic location, or some combination of these factors will be highlighted. This course will explore health outcomes found among these populations and will address health promotion policies required to attend to these issues.

KINE 7800 Internship (3 Credit Hours)
The goal of this experience is to provide graduate students in Health Promotion and Wellness Management with an opportunity to apply the professional knowledge they have gained in their coursework to a professional setting. In addition to participating in the daily operation of the site, the student will complete a major project on site and submit a document that describes the learning experience.

Labor and Employment Law (EMPL)

EMPL 5000 Developing & Manage Workforce (2 Credit Hours)
Human resources (HR) management can be defined as the effective use of human capital in an organization through the management of people-related activities. It involves leadership, values, workforce planning, recruitment and selection, training and compensation, and performance evaluation and management. HR also significantly influences the corporate culture and values/mission of the company.

EMPL 5410 IP Issues in the Workplace (3 Credit Hours)
Intellectual property issues arise in the employment context from the moment an employee is hired, whether a fulltime employee or an independent contractor. If employees create works—websites, inventions, newsletters, etc. within their job, additional issues will arise, both in terms of who owns the creations, but also what materials the employee is using to create those works. Copyrights, trademarks, trade secrets, patents, and right of publicity are implicated in the hiring and employing of both individuals and other companies. IP policies related to social media also are important to establish, both for the company in general, and individuals within the company, which should be communicated to employees in an effective way. Finally, situations come up where employees are using equipment at work to create afterhours creations, or are creating commercially viable creations at home. Human resources, in administering hiring documents both for employees and independent contractors should be aware of the legal issues that arise, as well as the policy behind the choices.
EMPL 5710 Intro to Labor Law Principles (3 Credit Hours)
This course is created and taught by the Program Director, Prof. Joel Wm. Friedman, a nationally renowned expert in the field of labor and employment law. It is designed to provide the students with a thorough understanding of the federal and state laws and regulations governing the relationship between the employer, employee and labor union. The material will be presented in a very practical way designed to focus on specific problems and issues that human resource professionals experience in dealing with organized and unorganized workforces and offer very specific and detailed instruction on the proper way to deal with these issues. The topics that will be examined include approaches toward a union organizing campaign, a union's request for voluntary recognition; creation of joint employer/employee advisory committees; the role of the NLRB and how to avoid and deal with unfair labor practice charges; proper and improper bases for discipline and discharge; lawful and unlawful responses to strikes, picketing, and sickouts; scope and approaches towards the duty to engage in collective bargaining with a union; methods of enforcing or modifying the terms of a collective bargaining agreement; impact of state right-to-work laws; union security agreements; and the use of arbitration and/or mediation as alternative methods of resolving contractual and statutory disputes.

EMPL 5800 Negotiating Skills (2,3 Credit Hours)
Negotiation is a skill. This course sharpens those skills. It focuses on such matters as negotiation styles, emphasis on interests rather than positions, and psychological biases that hinder effective negotiations. Students will be instructed on the use of the negotiation tools and asked to complete negotiation exercises and then called upon to reflect on their experience. These exercises require the students to negotiate with each other. All of the students in the classroom sessions will discuss their experiences and receive input from the instructor.

EMPL 6000 Social Media Issues in Workplace (3 Credit Hours)
This course will look at legal issues arising out of social media, branding and advertising in the workplace. This includes the use of social media platforms by companies, the relationship between social media and employees, fan and gripe sites, and other issues arising from the use of social media. The course will examine key issues arising in the protection of a company's name, reputation and goodwill. This portion builds off of the introductory materials in the IP survey to think through practical and policy questions that arise within the workplace and, in particular, what HR may encounter. The course will also look at the National Labor Board, social media and hiring practices. The course covers social networking as well, including email, and monitoring computer and internet activities. The course looks at First Amendment issues related to social media, both by employees as well as the public. The course also looks at the issue of the right to be forgotten and the impact of this concept with regard to employees and former employees. The course explores questions of advertising, including puffery, verifiable facts, surveys, advertisements for employees, contests and other issues that arise within the workplace.

EMPL 6050 Sex & Gender Issues in Work (2 Credit Hours)
This course will build on the employment discrimination course by delving into the particularities of human resources law as it relates to sex discrimination. The course will combine in-depth lectures and examinations of contemporary current events in this area with practical exercises and projects designed to prepare HR professionals for the complexities that may emerge for their employers under sex discrimination law. The course will cover pregnancy discrimination and accommodations in the workplace, personal appearance policies, sexual harassment, transgender persons in the workplace, and affirmative action/diversity in hiring. Each substantive module will be accompanied by a graded project designed to prepare students to aid in employer compliance and ensure positive employee relations. Prerequisite: employment discrimination law.

EMPL 6100 Investigat Employee Complaints (2 Credit Hours)
This course combines substantive law and practical exercises that students will discuss and work through during classroom sessions. The course will provide an overview of what the law requires when responding to employee complaints, what actions to take (or not take) and the various methods of alternative dispute resolution that may be necessary to resolve the matter. Students will apply knowledge gained from the lecture presentations and readings to analyze hypothetical situations involving employee complaints. These hypothetical scenarios will be built upon each week, giving students the opportunity to guide fictional companies all the way through the investigative process, including EEOC investigations, mediation and arbitration. Heavy emphasis will be placed on studying and understanding the arbitration process in particular.

EMPL 6400 Legal Analysis I (2 Credit Hours)
Legal Analysis I is taught by Professor Jennifer Cooper. This foundational course introduces students to sources and functions of law in our society relating to labor and employment law. The course begins with an overview of the American legal system and sources of law and introduces students to statutory interpretation and plain language analysis. In Legal Analysis I, students will learn to read and interpret statutory law and regulations, read and brief cases, and develop basic legal writing and analysis skills. Students will also learn to find and research legal information through multiple short research assignments focusing on labor and employment law issues. Through multiple short writing assignments such as a case brief, an IRAC essay analyzing a statutory issue, and an e-memo interpreting statutory & regulatory law relating to a labor and employment law topic, students learn to apply statutes and regulations to analyze legal issues relating to labor and employment law.

EMPL 6401 Legal Analysis II (2 Credit Hours)
This course builds on Legal Analysis I to introduce students to the relationship between enacted & administrative law and common law. The course continues instruction on legal research methods in finding and analyzing cases and common law. Students learn to read and synthesize multiple cases and learn analogical and policy-based reasoning. Through multiple short writing assignments, such as an e-memo analyzing a statutory issue with caselaw and a client letter, students learn to apply statutes, regulations, administrative materials, and caselaw to analyze complex legal issues relating to labor and employment law.
EMPL 6460 Employment Law (2 Credit Hours)
This course will provide students with an understanding of the legal underpinnings of the employer-employee relationship, including the employment-at-will doctrine which is the default setting for the relationship. The course will discuss the limits of the employment-at-will doctrine as well as common legal claims brought in the employment context. It will also explore issues such as privacy expectations of employees and the enforceability of covenants not to compete as well as laws impacting employee compensation and leave.

EMPL 6500 Employee Medical Leaves (2,3 Credit Hours)
An employee comes to you with a doctor’s note asking for time off from work. Sounds simple, right? Not really. That request could be covered by the Family and Medical Leave Act, the Americans with Disabilities Act, your state’s workers’ compensation law, your policies, and more. In this class you will learn how to navigate the often-overlapping legal requirements for medical leave and reinstatement issues. You will also learn how to discuss and document key decisions about the leave in a way that minimizes the risk of litigation.

EMPL 6600 Privacy in the Workplace (2 Credit Hours)
Privacy is a dynamic issue of concern in essentially every modern workplace. However, there is no comprehensive statute governing workplace privacy. Existing laws usually address (or marginally relate to) one discreet area of privacy law. Because privacy law is decentralized by nature, you must understand its general framework to properly address privacy questions that arise in the workplace. You must also be familiar with, or at least capable of referencing, a wide array of federal, state and local privacy laws. This course will cover both the general framework of privacy law and the most notable statutes addressing workplace privacy. The course begins with an overview of the origins and legal sources of privacy law. The course then covers specific areas of workplace privacy, including medical inquiries; background and misconduct investigations; monitoring and surveillance; honesty, psychological, drug and alcohol testing; medical and personnel records; off-duty conduct; employer information; and privacy tort claims. As to each topic, you will gain an understanding of governing legal standards and best practices through reading materials, examples, and when appropriate, checklists and sample policies.

EMPL 6910 Intro to Employment Discrim (3 Credit Hours)
This course is created and taught by the Program Director, Prof. Joel Wm. Friedman, a nationally renowned expert in the field of labor and employment law. It is designed to provide the students with a thorough understanding of all of the legal rules and concepts created by federal and state laws prohibiting discrimination on the bases of race, sex, age, disability, religion, sexual orientation, and national origin in a very practical way. The materials will be presented in a manner dedicated to enhancing the ability of present or future human resource professionals to deal with specific problems that continually arise in the workplace. Instruction will be directed towards providing advice on how to deal with and avoid problems in areas including racial and sexual harassment, religious accommodation, pregnancy and family leave, LBGT concerns, handling EEOC investigations, drafting personnel manuals, avoiding retaliation claims, mandatory and voluntary retirement, disability-based accommodation, and drug testing.

EMPL 6990 Capstone Course (3 Credit Hours)
This course is designed to build upon the doctrinal and practical and strategic knowledge and skills students have acquired during their first five semesters. Students will be assigned to groups of three or four so that they can gain experience in team building, group dynamics, and collegial decision-making. Each team will be required to negotiate a collective bargaining agreement with the course instructor who will provide the basic underlying materials and will represent the interests of the fictional labor union. Once that agreement has been executed, each student will be responsible for drafting each of the four additional projects: (a) a grievance and arbitration policy and procedure; (b) a personnel policy; (c) a sexual harassment policy and enforcement mechanism; (d) a drug testing policy and enforcement mechanism.

EMPL 9000 Immersion Weekend (0 Credit Hours)
Students will need to attend at least one Immersion Weekend during their time in the program. These sessions are held every summer, so students can plan to attend during either their first or second year in the program, but the experience of prior students indicates that the session is most beneficial to those who attend in their first year. It is both an academic and networking opportunity for students to meet their classmates, professors, and other professionals working in the area of labor and employment law. The occasion will include a keynote speaker, lectures and workshops from industry experts, and a variety of social activities.

Latin (LATN)

LATN 1010 Elementary Latin (4 Credit Hours)
In this course, students learn the fundamentals of Latin grammar and syntax so that they can begin reading snippets of Latin literature. Prerequisite: none.
Prerequisite(s): minimum score of PASS in 'LATN 1010 Placement'.

LATN 1020 Intermediate Latin (4 Credit Hours)
This course continues the introduction to the Latin language begun in LATN 1010, including pronunciation, vocabulary, grammar, style, and translation. In addition to learning a lot of Latin, you can also anticipate learning about English grammar and vocabulary. Studying Latin is also an important way to learn about ancient Roman culture, especially Latin literature. Prerequisite: LATN 1010 or equivalent.
Prerequisite(s): minimum score of PASS in 'LATN 1020 Placement' or LATN 1010.

LATN 1290 Semester Abroad (1-20 Credit Hours)
Study abroad in Latin language. Department approval required.

LATN 1390 Junior Semester Abroad (1-20 Credit Hours)
Study abroad in Latin language. Department approval required.

LATN 1940 Transfer Coursework (3 Credit Hours)
For transfer of credit in Latin language. Department approval required.
LATN 2030 Intro to Latin Literature (4 Credit Hours)
This course provides an introduction to Latin prose and poetry through readings from some of the great works of Latin literature. While reading a broad selection of Latin texts, we will consider how Roman literature evolved along with the changing culture and politics of the city. We will also learn about important authors, historical figures, and events that you are likely to encounter again later in your studies. The class emphasizes precise and accurate translation, vocabulary building, and grammatical understanding. Prerequisite: LATN 1020 or equivalent.

Prerequisite(s): minimum score of PASS in 'LATN 2030 Placement' or LATN 1020.

LATN 2390 Semester Abroad (1-20 Credit Hours)
Study abroad in Latin language. Department approval required.

LATN 2940 Transfer Coursework (3 Credit Hours)
For transfer of credit in Latin language. Department approval required.

LATN 3030 Readings in Latin Poetry (3 Credit Hours)
Selections from Latin poets such as Catullus, Virgil, Ovid, Horace, and others. Prerequisite: LATN 2030 or equivalent.

LATN 3070 Readings in Latin Prose (3 Credit Hours)
Selections from such authors as Cicero, Sallust, Nepos, and Apuleius. Practice in Latin prose composition. Prerequisite: LATN 2030 or equivalent.

Prerequisite(s): minimum score of PASS in 'LATN 3070 Level Placement' or LATN 2030.

LATN 3890 Service Learning: LATN 3030 (0-1 Credit Hours)
Optional service learning to accompany LATN 3030: Readings in Latin Poetry.

LATN 3910 Independent Study (1-3 Credit Hours)
Prerequisite: Approval of department. Students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for one, two, or three credits. The reading normally will be part or all, depending on the amount of credit sought, of the assigned reading in an existing 3000-level course.

LATN 3920 Independent Study (1-3 Credit Hours)
Students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for one, two, or three credits. Requires departmental approval and an appropriate faculty supervisor.

LATN 3940 Transfer Coursework (0-20 Credit Hours)
For transfer of credit in Latin language. Department approval required.

LATN 4010 Roman Comedy (3 Credit Hours)
Selected plays of Plautus and Terence to suit the needs and desires of the students enrolled.

LATN 4020 Catullus & Elegiac Poets (3 Credit Hours)
Readings in Catullus, and the elegies of Propertius, Tibullus, and Ovid.

LATN 4030 Virgil (3 Credit Hours)
Selected readings in Latin from the Aeneid, Eclogues, and/or Georgics.

LATN 4040 Roman Philosophy (3 Credit Hours)
Readings in Latin from Lucretius, Seneca, and other authors.

LATN 4070 Medieval Latin (3 Credit Hours)
Survey of medieval Latin literature with special attention to the various styles and literary types, and to the cultural background.

LATN 4080 Literature of The Age Of Nero (3 Credit Hours)
This course examines the reign of the emperor Nero through readings in the literature of that period. Particular focus will be placed upon the changing status of the emperor, the role of the emperor as patron of the arts, and the development of intellectual and political resistance to Nero and the principate.

LATN 4110 Special Authors (3 Credit Hours)
Readings in Latin from a Roman author.

LATN 4130 Rom Historians of the Republic (3 Credit Hours)
Readings in Livy's History or Sallust's Catiline and Jugurtha.

LATN 4140 Roman Satire (3 Credit Hours)
Readings in the satires of Horace, Persius, or Juvenal.

LATN 4150 Roman Historians of the Empire (3 Credit Hours)
Readings in the historical works of Tacitus and other historians of the Roman empire.

LATN 4170 Cicero (3 Credit Hours)
A study of the man and the period based on portions of his work.

LATN 4180 Horace (3 Credit Hours)
Close study of the Latin work of Rome's most important poet.

LATN 4910 Independent Study (1-3 Credit Hours)
Prerequisite: Approval of department. Students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for one, two, or three credits. The reading will normally be part or all, depending on the amount of credit sought, of the assigned reading in an existing 4000-level course.

LATN 4920 Independent Study (1-3 Credit Hours)
Prerequisite: Approval of department. Students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for one, two, or three credits. The reading will normally be part or all, depending on the amount of credit sought, of the assigned reading in an existing 4000-level course.

LATN 4990 Honors Thesis (3 Credit Hours)
Course reserved for students writing an honors thesis for a major in Latin. Requires approval of the department and an appropriate faculty director.

LATN 5000 Honors Thesis (4 Credit Hours)
Course reserved for students writing an honors thesis for a major in Latin. Requires approval of the department and an appropriate faculty director.

LATN 5190 Semester Abroad (1-20 Credit Hours)
Study abroad course in Latin language. Requires department approval.

LATN 5370 Washington Semester (1-20 Credit Hours)
For transfer of credit. Department approval required.

LATN 5380 Junior Year Abroad (1-20 Credit Hours)
Study abroad course in Latin language. Requires department approval.
LATN 5390  Junior Year Abroad (1-20 Credit Hours)
Study abroad course in Latin language. Requires department approval.

LATN 5940  Transfer Coursework (3 Credit Hours)
For transfer of credit in Latin language. Department approval required.

LATN 6010  Roman Comedy (3 Credit Hours)
Selected plays in Latin of Plautus and Terence to suit the needs and desires of the students enrolled.

LATN 6020  Catullus & Elegiac Poets (3 Credit Hours)
Readings in Latin from Catullus, the elegies of Propertius, Tibullus, and Ovid.

LATN 6030  Virgil (3 Credit Hours)
Selected readings in Latin from the Aeneid, Eclogues, and/or Georgics.

LATN 6040  Roman Philosophy (3 Credit Hours)
Readings in Latin from Lucretius, Seneca, and other authors.

LATN 6080  Literature of the Age of Nero (3 Credit Hours)
This course examines the reign of the emperor Nero through readings in the literature of that period. Particular focus will be placed upon the changing status of the emperor, the role of the emperor as patron of the arts, and the development of intellectual and political resistance to Nero and the principate.

LATN 6110  Special Authors (3 Credit Hours)
Readings in Latin from a Roman author.

LATN 6130  Rom Historians of the Republic (3 Credit Hours)
Readings in Livy’s History or Sallust’s Catiline and Jugurtha.

LATN 6140  Roman Satire (3 Credit Hours)
Readings in the satires of Horace, Persius, or Juvenal.

LATN 6150  Roman Historians of the Empire (3 Credit Hours)
Readings in the historical works of Tacitus and other historians of the Roman empire.

LATN 6170  Cicero (3 Credit Hours)
A study of the man and the period based on portions of his work.

LATN 6180  Horace (3 Credit Hours)
Close study of the Latin work of Rome’s most important poet.

LATN 6910  Independent Study (1-3 Credit Hours)
Prerequisite: Graduate student status and approval of department. Students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for one, two, or three credits. The reading will normally be part or all, depending on the amount of credit sought, of the assigned reading in an existing 6000-level course.

LATN 6920  Independent Study (1-3 Credit Hours)
Prerequisite: Graduate student status and approval of department. Students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for one, two, or three credits. The reading will normally be part or all, depending on the amount of credit sought, of the assigned reading in an existing 6000-level course.

LATN 7040  Selected Readings (1-9 Credit Hours)
Prerequisite: Graduate student status and approval of department. Students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for up to 9 credits.

LATN 7920  Independent Study (1-3 Credit Hours)
Graduate students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for one, two, or three credits. Requires departmental approval and an appropriate faculty supervisor.

LATN 9980  Masters Research (0 Credit Hours)
Course reserved for students writing a thesis for the Master’s degree in Latin. Requires approval of the department and an appropriate faculty director.

**Latin American Studies (LAST)**

**LAST 0201  LAST Abroad: Cuba (0-6 Credit Hours)**

**LAST 0202  LAST Abroad- Costa Rica (0-6 Credit Hours)**

**LAST 0203  LAST Abroad- Brazil (0-3 Credit Hours)**

**LAST 0204  LAST Abroad- Chile (0-6 Credit Hours)**

**LAST 0205  LAST Abroad- Guatemala (0-6 Credit Hours)**

**LAST 0208  LAST Abroad: Argentina (0-3 Credit Hours)**

**LAST 0209  Last-Abroad-Grad Cuba (0-3 Credit Hours)**

**LAST 1010  Intro Latin America (3 Credit Hours)**

Majors and minors in Latin American Studies must take LAST 101, a wide-ranging interdisciplinary discussion of Latin America with an emphasis on the 20th century. The course probes the social and cultural institutions and production of modern Latin America through the concepts of Encounter, Identity, Nation, and Welfare. Readings, lectures, discussions, and media presentations are integral components of the course. The objective of the course is to introduce students to the region, institutions, and cultural production of Latin America. Students will become familiar with the physical, political, and cultural boundaries of the region and examine modern Latin America through the use of case studies, primary source materials, discussion and current research. Several sections of this course are offered during the fall and summer semesters. LAST 101 is designated a service learning course.

**LAST 1020  Intro to Latin Amer Studies II (3 Credit Hours)**

Majors and minors in Latin American Studies must take LAST 102, a wide-ranging interdisciplinary discussion of Latin America with an emphasis on the 20th century. The course probes the social and cultural institutions and production of modern Latin America through the concepts of Creativity, Exchange, Land, and Peoples. Readings, lectures, discussions, and media presentations are integral components of the course. The objective of the course is to introduce students to the region, institutions, and cultural production of Latin America. Students will become familiar with the physical, political, and cultural boundaries of the region and examine modern Latin America through the use of case studies, primary source materials, discussion and current research. Several sections of this course are offered each spring semester. LAST 102 is designated a service learning course.

Law Clinical Courses (CLIN)

CLIN 5100 Federal Pretrial Practice Sem (3 Credit Hours)
This seminar is the co-requisite course for the Civil Rights and Federal Practice Clinic and examines the practice, procedure, and ethics of pre-trial advocacy in the area of civil litigation. Topics include client interviewing, case planning, drafting pleadings and discovery requests, taking and defending depositions, motion practice, expert witnesses, and jury selection.

CLIN 5110 Civil Rights & Fed Prac Clinic (3 Credit Hours)
This course is the civil advocacy component in which students, under supervision, represent clients primarily in the areas of fair housing, equal employment opportunity, and civil rights/liberties. Students may draft motions, pleadings, discovery requests, and briefs; conduct depositions; argue motions; negotiate settlements and/or try cases in state and federal court. Student attorneys have professional responsibility for clients and handle all aspects of the case from the initial client interview through fact investigation and discovery, then to trial, adjudication, or settlement. To be taken in conjunction with Federal Pretrial Practice. Students are selected on the basis of an application and personal interview. Full year only, 3 credits in the fall and 3 credits in the spring.

CLIN 5150 Litigation Skills in DV Clinic (3 Credit Hours)
The course will examine domestic violence in the criminal justice system and in family law, with a special focus on practical legal skills. Topics include domestic violence as a violation of law, civil rights, international human rights and as a tort, and the role of domestic violence in divorce law and custody. While examining the issue systematically, students will also learn important practice skills through simulated role plays and demonstrations. Students will take a mock deposition, perform cross-examinations, and oral arguments.

CLIN 5160 Domestic Violence Clinic (3 Credit Hours)
The Domestic Violence Clinic provides legal services to victims of domestic abuse, relationship violence, stalking, or sexual assault. Legal services will address the variety of legal problems which may arise as a consequence of domestic violence, including emergency assistance in obtaining protective orders, and extending to representation in family law cases; including child custody and support; problems with housing, unemployment, or denial of access to financial resources such as bank accounts or other community property. The Domestic Violence Clinic is offered in the fall for three credits and in the spring for three credits. Enrollment is limited to twelve students. Students are selected on the basis of an application and personal interview. Students must meet all eligibility requirements of the Louisiana student practice rule. Prerequisites: Legal Profession and Evidence. Co-requisite: Litigation Skills for DV Clinic Students.

CLIN 5200 Criminal Practice Seminar (3 Credit Hours)
This seminar is an in-depth study of selected aspects of criminal practice, both skills and substantive. Topics covered include: client counseling, investigation and discovery, drafting and arguing motions, competency to stand trial, the insanity defense, expert witnesses, case strategy, state and federal post-conviction proceedings. This course is geared towards those considering careers in criminal law, whether as prosecutors or defense attorneys. Enrollment is limited to students participating in the Criminal Justice Clinic. A rule penalizing students for lack of preparation and/or excessive absenteeism will be invoked. Fall semester only.

CLIN 5210 Criminal Justice Clinic (3 Credit Hours)
This course is the criminal litigation and advocacy component in which students, under supervision, represent indigent criminal defendants in all phases of a criminal case: pretrial motions and trials; parole hearings; state post-conviction relief; appeals to the LA Fourth Circuit Court of Appeal and the LA Supreme Court; and federal habeas corpus petitions in the federal district court, Fifth Circuit Court of Appeal, and United States Supreme Court. Additionally, students engage in non-litigation advocacy on behalf of clinic clients such as testifying before the state legislature, meeting with community organizations, and partaking in community legal education. This course is geared towards those considering careers in criminal law, either as prosecutors or defense attorneys. To be taken in conjunction with Criminal Practice Seminar. Students are selected on the basis of an application and personal interview. Full year only, 3 credits in the fall and 3 credits in the spring. A rule penalizing students for lack of preparation and/or excessive absenteeism will be invoked.
CLIN 5250 Environmental Law Clinic (3 Credit Hours)
The Tulane Environmental Law Clinic (TELC) provides legal services to local, regional, and national groups, as well as individuals, on a wide range of environmental and public participation issues. Under the supervision of the Clinic's staff attorneys, students in the Clinic take the lead in representing clients in pleadings and oral arguments before local governmental bodies, state and federal agencies, and state and federal courts. Among the issues TELC student attorneys address are issues faced by fence line environmental justice communities impacted by facilities which pollute their land, air and water and pose risks from accidental releases; Atchafalaya Basin residents and fishermen who seek to preserve their way of life and the wetlands they rely on; clients concerned with preserving fish and wildlife, including threatened and endangered species; and regional and national groups addressing local environmental issues which reverberate nationwide. TELC is open to 3Ls, 2Ls (during the spring semester only), and LLMs with JD degrees who present an essay on an environmental justice issue. TELC students are selected during the spring of their second year based upon written applications and personal interviews with the supervising attorney. TELC meets weekly and covers legislative and administrative enactment and implementation procedures, research methodologies, drafting techniques, applications and personal interviews with the supervising attorney. TELC is open to students interested in environmental justice issues faced by fence line environmental justice communities impacted by facilities which pollute their land, air and water and pose risks from accidental releases; Atchafalaya Basin residents and fishermen who seek to preserve their way of life and the wetlands they rely on; clients concerned with preserving fish and wildlife, including threatened and endangered species; and regional and national groups addressing local environmental issues which reverberate nationwide. TELC is open to 3Ls, 2Ls (during the spring semester only), and LLMs with JD degrees. TELC is open to 3Ls, 2Ls (during the spring semester only), and LLMs with JD degrees.

CLIN 5300 Juvenile Advocacy Sem (3 Credit Hours)
This seminar studies the special problems involved in the representation of children and their parents. Topics reviewed include discovery practices in criminal and civil cases, evidence, constitutional criminal procedure, expert witnesses, child custody and child support, and pre-trial motions appropriate for litigation in juvenile court. Enrollment is limited to students participating in the Juvenile Litigation Clinic. This seminar studies the special problems involved in the representation of children and their parents. Topics reviewed include discovery practices in criminal and civil cases, evidence, constitutional criminal procedure, expert witnesses, child custody and child support, and pre-trial motions appropriate for litigation in juvenile court. Enrollment is limited to students participating in the Juvenile Litigation Clinic.

CLIN 5310 Juvenile Litigation Clinic (3 Credit Hours)
In the Juvenile Clinic 10 students represent indigent clients in juvenile delinquency cases, and children in need of care cases. Students work under the direction of the supervising attorney, but the students are primarily responsible for all client and witness interviews, pre-trial hearings, trials and appeals. The course must be taken in conjunction with the Juvenile Advocacy Seminar. The course lasts the entire year and carries 3 credits in the fall and 3 credits in the spring. Students are selected during the spring of their second year based upon written applications and personal interviews with the supervising attorney. In the Juvenile Clinic 10 students represent indigent clients in juvenile delinquency cases, and children in need of care cases. Students are selected during the spring of their second year based upon written applications and personal interviews with the supervising attorney.

CLIN 5410 Legislative & Admin Advocacy (3 Credit Hours)
Legislative and Administrative Advocacy examines how bills become law and how agency rules are promulgated. Each student will research and draft a proposed bill or agency regulation on behalf of a client group, present it in a mock hearing, and write a research paper. Grades are based in equal proportions on the draft of the instrument, mock hearing, and research paper; there is no examination. Class meetings will cover legislative and administrative enactment and promulgation procedures, research methodologies, drafting techniques, constitutional restrictions, and public access to information. Legislative and Administrative Advocacy examines how bills become law and how agency rules are promulgated. Class meetings will cover legislative and administrative enactment and promulgation procedures, research methodologies, drafting techniques, constitutional restrictions, and public access to information.

CLIN 5420 Adv Leg & Admin Clinic (2 Credit Hours)
Students will work on multiple legislative and administrative instruments at various stages of development, including bills appropriate for introduction into the spring legislative session, rules intended for promulgation by agencies, city ordinances, research memoranda, one-page informational sheets, proposed amendments, fiscal notes, and fiscal and economic impact statements. Classroom meetings will include presentations by faculty and by personnel from collaborative agencies with expertise in legislative and administrative advocacy. Direct faculty instruction will also be provided through meetings and tutorials, individually and in small groups, where drafts of instruments will be reviewed and critiqued, feedback will be provided on written memoranda, strategic considerations will be discussed, and students will engage in critical reflection on their field experiences. Students will devise implementation strategies based on economic analysis and feasibility of proposed instruments. They will attend meetings of selected public bodies and prepare a written reflection on what they observed. Grades will be based on written memoranda and drafts, timeliness of the work, supervisory and client feedback, and diligence. In order to apply for entry into the clinic, students must have taken the fall semester course in Legislative & Administrative Advocacy; enrollment is subject to professor approval. Grades will be based on written memoranda and drafts, timeliness of the work, supervisory and client feedback, and diligence. In order to apply for entry into the clinic, students must have taken the fall semester course in Legislative & Administrative Advocacy; enrollment is subject to professor approval.

CLIN 5550 Trial Advocacy (3 Credit Hours)
This course is intended to prepare and train students in advocacy skills for litigation. It is graded on a pass/D/fail basis, with top 10% of class receiving “honors” designation. The principal method of instruction is “Learning By Doing.” The students participate in intensive role playing of simulated trial problems. Subjects covered during the course are: opening statements; direct and cross examination; exhibits and demonstrative evidence; impeachment and rehabilitation; examination of expert witnesses; closing arguments; and trial notebook. Members of the faculty give demonstration performances. Each student is videotaped at least once, is critiqued by a faculty member and then reviews his or her performance on videotape. A student-faculty ratio of 4 or 5 to one is maintained to insure that each student receives individual attention. The faculty includes experienced trial lawyers and judges, who rotate through each section so that students will be exposed to a variety of views and ideas. Each student tries a jury trial at the conclusion of the course. The course has a limited enrollment. Open to 3Ls only in the fall. Evidence is a co-requisite. Note: In addition to the regularly scheduled class, a special presentation will be scheduled on a date to be announced. Law First Year Year Courses (1LAW)

1LAW 1080 Constitutional Law 1 (4 Credit Hours)
This course is an introduction to problems arising under the Constitution of the United States, including the nature of the judicial function, the operation of the federal system, the separation of powers, and the protection of individual rights. Both the development of constitutional doctrines and current problems are considered.

1LAW 1110 Contracts I (3 Credit Hours)
This course is an introduction to the law of contracts, dealing with consideration, offer and acceptance, techniques for policing the bargaining process, and an introduction to remedies. Although the course is essentially an introduction to the common law of contracts, there will be some attention to statutory materials, including the Uniform Commercial Code.
1LAW 1160 Contracts II (3 Credit Hours)
The major focus is on the law of contracts for the sale of goods, as embodied in Article 2 of the Uniform Commercial Code. Particular emphasis is placed on remedies for breach of contract and warranties as to quality. Throughout, comparison is made to the similar concepts developed at common law.

1LAW 1210 Criminal Law (3 Credit Hours)
This course focuses on typical statutes proscribing criminal behavior as a means of studying legal concepts of responsibility and punishment. Selected topics include mens rea, mistake, attempt, conspiracy, accomplice liability, homicide, rape, insanity, and related constitutional doctrines.

1LAW 1310 Civil Procedure (4 Credit Hours)
This course offers the first-year law student an introduction to civil procedure. Emphasis is placed on the interrelationship between theories of jurisdiction and notions of federalism. The course also focuses on approaches to such matters as service of process, joinder, preliminary motions, multiple claims and parties, amendments, discovery, directed verdicts, summary judgment, res judicata, and collateral estoppel.

1LAW 1340 Civil Law Property (4 Credit Hours)
This course presents fundamental principles of the civil law as they relate to property. Louisiana Civil Code, Preliminary Title, Articles 1-15; Book II, Articles 448-532, 784-791; Book III, Articles 3412-3555. Topics include: introduction to the civil law system, things, ownership, possession, liberative and acquisitive prescription. The course emphasizes analysis of institutions in the light of civilian methodology, jurisprudence, and doctrine.

1LAW 1360 Common Law Property (4 Credit Hours)
The course surveys the common law system of property rights. The focus is on voluntary and involuntary transfers of land including estates in land, landlord and tenant rights, eminent domain and servitudes and other rights in the land of another.

1LAW 1410 Legal Research & Writing (0-4 Credit Hours)
This course is designed to teach the fundamentals of legal writing and to acquaint the student with various research techniques utilizing the resources of the law library and computerized legal databases. Students are assigned to an instructor, and each instructor will be assisted by several third-year senior fellows. Students will be placed into small sections, which will meet on a regular basis. Over the course of two semesters, students will learn the techniques of legal problem-solving, and learn to research and draft legal memoranda and briefs through a series of progressively more complex writing assignments. The course is graded and ordinarily culminates with the drafting of an appellate brief and an oral argument before an appellate moot court. The course lasts the entire year and carries 2 credits in the fall and 2 credits in the spring.

1LAW 1420 Intro To Career Devl’P (0 Credit Hours)
This series is designed to help first-year students identify professional goals and build critical academic and professional skills.

1LAW 1440 Obligations I (3 Credit Hours)
This is a basic course in Louisiana contract law with primary emphasis upon the Louisiana Civil Code as revised in 1985, and comparisons to the common law. It explores, comparatively, the general concept of a legal obligation, and more particularly the principles of civil law contracts. Matters dealt with include capacity, consent and cause, formation of contracts, effects of contracts, and remedies for nonperformance.

1LAW 1510 Torts (4 Credit Hours)
This course deals with problems of non-contractual wrongs for which private compensation is sought under the common law. Topics include intentional wrongdoing, negligent wrongdoing, instances in which society imposes strict liability, accidents, and the ways in which the legal system shifts their social costs or attempts deterrence.

Law Mini Courses (MINI)

MINI 4700 Cause Lawyering (1 Credit Hour)
This mini-course examines the use of law to advance social, economic, or political goals. After a brief exploration of the theoretical framework and historical background of “cause lawyering,” students will consider the role of law and lawyering in various change-seeking applications, such as social movements and impact litigation, and in various practice settings. Approximately every other week, students will meet with practitioners involved in prominent cases or organizations to discuss their objectives, strategies, and challenges—and whether they achieved their goals. Students will prepare for those meetings by reading relevant material and generating specific questions for the speakers. Grades will be based on several short papers and class participation.
MINI 4810 Socio-Economic Rights (1 Credit Hour)
Socio-economic rights play an important role in many societies. Demands for jobs, food, water, housing/shelter, education, health care or – more generally – dignified living conditions are as important as classical liberal ('first generation') rights to equality, free speech, assembly, political participation or religion in countries like South Africa or India and continue to influence the human rights debate across large parts of South America. The Arab Spring is the most recent battleground over constitutionally entrenched socio-economic demands and greatly expanded the scope of such entitlements in systems like Iraq or Egypt. Other societies, including the United States and many countries in Europe, provide assistance for citizens in need but take a much more cautious stance on the constitutional protection of the socio-economic sphere. This course identifies different approaches to the protection of socio-economic entitlements. Drawing on the origins of social welfare states, including the German and French models, students will be alerted to the tensions that exist between the desire to provide a constitutional basis for the most fundamental needs of citizens and the limited resources available to most societies when it comes to the creation of job opportunities or the provision of social welfare benefits. Options range from ordinary social welfare legislation without a constitutional safety net, constitutional principles that direct public policy and resources towards the development of socio-economic safeguards, constitutional provisions that guarantee a minimum standard of life, to the constitutional entrenchment of ambitious individual rights to socio-economic benefits. Students will explore these options on the basis of selected academic writings, socio-economic data from national sources and international organizations, court decisions, and constitutional texts from a variety of systems including Ecuador, South Africa, India, Egypt, Germany and the United States. Particular emphasis will be placed on the role that constitutional law can play in socio-economic development and the distribution of limited resources between competing societal needs. This will include the difficult question of judicial enforcement and the implications of constitutionally entrenched rights for the separation of powers in democratic systems of government.

MINI 5040 Legal Scholarship Workshop (1 Credit Hour)
This "workshop" will feature presentations by four or five visiting authors of their works-in-progress on regulation of economic activity, broadly construed. Students formally enrolled in the workshop will meet with one or more of the faculty conveners the week before each author's presentation to discuss the paper. Students will prepare brief (one-page) response papers for each paper for discussion in the prior meeting; those response papers will be shared with the authors. In addition, students will be expected to attend two additional approved lectures at the law school or elsewhere on campus and submit a brief (one-page) response paper. The workshop is designed for students who are interested in legal scholarship in general and for those with particular interest in issues related to regulation, economic regulation, and international coordination of economic policies. The author presentations will be open to students who are not formally enrolled in the workshop.

MINI 5070 Cruise Line Legal Liability (1 Credit Hour)
This course will introduce students to the Passage Ticket Contract customarily issued by cruise lines and the current legal liability scheme applicable to these maritime common carriers of passengers. The course will provide an overview of some common issues that arise in suits between passengers and cruise lines, including venue and forum selection clauses, as well as duties and liabilities stemming from incidents which occur during offshore excursions and from shipboard medical care provided to passengers. The course will also introduce students to the Death on the High Seas Act, 46 App. U.S. §§ 761-767 and the Cruise Vessel Security and Safety Act of 2010, Pub. L. 111–207, July 27, 2010, 124 Stat. 2250, 46 U.S.C. Sec. 3507-3508. The course will be taught by Marva Jo Wyatt, a partner with Reich, Album & Plunkett, L.L.C.

MINI 5110 Freight Forwarders & NVOCCs (1 Credit Hour)
This course will examine the role of intermediaries with respect to the negotiation and conclusion, or “fixing” of contracts for the carriage of goods by sea. The course will specifically examine the procedure for negotiating contracts including charter parties, the applicable chartering terms, the relationship between the intermediaries and the merchants, charterers, carriers and owners, and the relevancy of agency law. The course will explore multimodal transportation and liability regimes in EU and US. The course will be taught by Andrei Kharchanka, Manager of Risk, Claims and Litigation for BBC Chartering GmbH of Leer, Germany. BBC specializes in project cargo and is the world's largest operator of heavy lift multipurpose vessels.

MINI 5120 Adm: Charter Parties (1 Credit Hour)
In this course, the student will become familiar with the different types of charter parties utilized by the shipping industry for chartering both cargoes and vessels. The main focus of the course will be on the duties of the owners and charterers under time and voyage charter parties, and the legal basis for disputes under both U.S. and English law.

MINI 5230 Chinese Business Law (1 Credit Hour)
This course is designed to provide with the students a systematic introduction to Chinese business law system in the context of globalization and from the perspective of comparative law. Over the course, various aspects of "doing business in China" will be examined through discussing Chinese contract law, corporate law, foreign direct investment law, securities law, and other relevant systems. Through comparing the Chinese business law with foreign business laws, this course especially presents the part of the Chinese business law concerning foreign investment. The goal is for students to understand both the legal theories and practices in the field of business law, and to be able to analyze and resolve international business law issues in the real business world.
MINI 5300 Corporate Governance (1 Credit Hour)
The course carries one semester hour of credit and meets for six two-hour sessions. It is graded on the “Pass, D, Fail” basis. It considers "hot topics" in corporate governance, such as "shareholder activism" and "proxy access"; a chapter from James Freund’s book “Smell Test,” which examines lawyers caught in what could be career-ending ethical dilemmas involving business clients; and one or two Delaware cases in which governance failures contribute to business failures. Because a significant portion of the course is current events, which are not predictable, newspapers are part of the assigned reading, and the course syllabus may change with little or no notice. A student’s background in corporation and securities law will be useful, but not prerequisite. The course is most appropriate for 3Ls, but 2Ls are also welcomed.

MINI 5620 Human Rights Dialogue (1 Credit Hour)
This course will explore key themes of human rights protection through the lens of U.S. and foreign court decisions.

MINI 5670 Int'l Protection Human Rights (1 Credit Hour)
The course has the purpose of exploring the interrelation existing between protection of cultural heritage and human rights, with its main concrete implications. In most recent decades the international community has matured the awareness that cultural heritage deserves legal protection not only by virtue of its aesthetic, artistic, architectural and economic value, but also – and especially – for its spiritual significance as an essential component of communities’ and individuals’ cultural identity and distinctiveness. Under this perspective, cultural heritage is to be conceived as establishing a symbiotic relationship with human rights, as both play a decisive role in allowing the human person to achieve full realization of her existence – as an individual and as a member of a community – as well as to leave a track of her passage in this world. The need of safeguarding and valorizing the human-rights-related dimension of cultural heritage has been recognized in the most recent international legal instruments relating to the protection of cultural heritage. Contextually, the necessity of guaranteeing respect and promotion of the (often implied) human right to one’s own cultural heritage is today well established in the practice of international human rights monitoring bodies. The course will be structured in six classes, dedicated to the following specific topics: evolution and present status of international human rights law; protection of culture and cultural heritage in international law; human rights implications of cultural heritage protection; intentional destruction of cultural heritage as a violation of human rights; protection of World Heritage and safeguarding of intangible cultural heritage under a human rights perspective; indigenous peoples’ rights and cultural heritage protection.

MINI 5730 Chinese Environmental Law (1 Credit Hour)
The course on Introduction to Chinese Legal System aims to provide a general picture of Chinese legal system to the students. At the beginning of this course, the legal history of traditional China and modern China will be introduced in general. After that, the following topics will be addressed in particular: the constitutional doctrines and state structure, the political parties and elections, sources of law and the law-making system, as well as the Chinese legal institutions including courts, procuratorates and lawyers. The law of procedure and the substantive law will also be discussed to some extent. For the purpose of helping the students to make further research, some useful primary sources of PRC law will also be provided.

MINI 5990 Fed Legislation & Leg Drafting (1 Credit Hour)
The goal of this mini course is to make law students into more informed attorneys, citizens, and voters, by increasing their understanding of how to read and understand Federal bills and laws. Students will learn how to locate and analyze Federal bills and laws and evaluate some of the strengths and weaknesses of our legislative system as it currently operates. Whenever possible, the actual text of bills, laws, and committee reports will be used for purposes of example or analysis. The bulk of this discussion will be from the perspective of the House of Representatives, although Senate procedures and culture will also be touched upon. As part of the course, students will conduct legislative research on a topic, draft a bill for introduction, and prepare a committee report for such bill.

MINI 6150 Int'l Anti-Corruption (1 Credit Hour)
This course will cover the basics of international anti-corruption laws such as the U.S. Foreign Corrupt Practices Act, the U.K. Bribery Act, international conventions against corruption, and similar anti-bribery laws of other countries. These anti-corruption laws generally prohibit direct and indirect corrupt payments to foreign officials. Enforcement has increased significantly in the last few years and will continue to be a major factor to any organization operating globally. The course will use recent SEC and DOJ investigations (such as the case against former U.S. congressman from New Orleans, William Jefferson) to illustrate the basics of these anti-corruption laws. The course will also cover other areas in the international trade regulatory regime such as export controls, anti-boycott, anti-money laundering, and fraud prevention. Other areas addressed by the course include the scope of international anti-corruption laws, identifying a government official, identifying red flags in business partners, conducting due diligence, exceptions to the laws, assessing third party risk, and other areas that play an integral role in counseling clients doing business abroad. We will review the elements of a comprehensive corporate compliance program and mechanisms used to implement compliance procedures and internal controls in an organization. The course will also address the cultural challenges presented by certain countries and industries. Students will be expected to participate in case studies and exercises designed to apply legal principals to situations that arise in the practice of law.

MINI 6180 Real Estate Contracts (1 Credit Hour)
This course will examine the negotiation of a number of real estate contracts and the skills and methods of lawyers who handle transactions. The contracts include a purchase agreement, a construction loan commitment, purchase and remediation agreements for a brownfield site, a workout (loan modification) agreement and a management agreement for a senior living facility. The course materials will include a case study for each transaction and a form of the agreement, with an indication of the matters that most concern the party that receives the initial draft. The course will take up the rules of law that motivate and constrain the contents of particular agreements.
MINI 6181 Real Estate Contracts II (1 Credit Hour)
This course will examine the negotiation of a number of real estate contracts and the skills and methods of lawyers who handle transactions. The contracts include an office lease, a shopping center lease for a small tenant, a reciprocal easement agreement for a shopping center, an LLC agreement between a developer-manager and high net worth investors, an owner-architect contract and an owner-contractor agreement. The properties will include an office building, a shopping center, a warehouse and one to be determined. The course materials will include a case study for each transaction, a form of the agreement, and the response of the party that receives the first draft. The course will take up the rules of law that motivate and constrain the contents of particular agreements.

MINI 6190 Representing Physicians (1 Credit Hour)
This course will begin with an overview of general issues in healthcare law but will focus primarily on practical legal issues physicians face in the current healthcare world and how lawyers can be prepared to counsel the physicians facing those issues. This mini-course will address issues as diverse as anti-trust and ERISA to medical staff and peer review, from the viewpoint of a practitioner who specializes in representing physicians.

MINI 6250 Corp Law & Hostile Acquisition (1 Credit Hour)
This is an advanced corporate law course focusing on state corporate law, corporate governance, the fiduciary duties of directors and the rights of stockholders in the context of hostile acquisitions. This course will emphasize the practical aspects of corporate law and will cover hostile acquisitions from a bidder's perspective (which will include takeover approaches, takeover negotiations, takeover techniques, and the structuring and pricing of offers), hostile acquisitions from a target's perspective (which will include advanced preparation, structural changes to reduce vulnerability, and responding to acquisition offers), proxy contests and stockholder activism. Business Enterprises is a prerequisite for 2L students and a prerequisite or co-requisite for 3L students.

MINI 6300 Transnational Law (1 Credit Hour)
Transnational law, sandwiched between national law and international law, is not easy to define. It involves a number of diverse cross-border phenomena, found in all areas of the law, that depend to a greater or lesser extent on the existence of and legal structures provided by the nation state. Some rules, such as systems of religious law or lex mercatoria, exist beyond nation states. Yet others, such as the European Union, involve nation states and at the same time transcend traditional concepts of nationhood and put in question some of the nation state's most basic concepts (such as identity and sovereignty). The actors in this sphere are equally diverse and can involve nation states, regional and international organizations, non-governmental organizations and bodies, multi-national enterprises, or private citizens.

MINI 6360 Venture Capital (1 Credit Hour)
This course highlights the fact that every society — and the work of national lawyers — is today affected by legal structures and developments that exist and take place beyond its borders. A distinction can be drawn between the interaction of national systems of law, the development of regional systems of law by nation states that have the potential to transcend and exist beyond nation states, and transnational law that does not depend on the existence of nation states. The European Union, to some extent, features all three characteristics of transnational law and serves as a case study that introduces students in greater detail to a unique and influential regional system of law.

MINI 6370 Political Investgsns & Impeachm (1 Credit Hour)
This course looks at issues at the intersection of politics and law that arise in investigations of public officials, including in impeachment proceedings. Topics will include criminal investigations, congressional inquiries, the role of defense counsel, and standards and processes for impeachment and removal of a U.S. president and other high-level government officers. Both the legal framework and practical political considerations will be considered. This course will be taught by Ross Garber, chair of the Government Investigations and White Collar Crime Group of Shipman & Goodwin LLP (Washington, D.C.), whose practice concentrates on representing government officials in investigations and who has served as lead defense counsel to three U.S. governors facing impeachment.

MINI 6380 Law and Culture (1 Credit Hour)
In law schools all around the world, students learn the law—its statutes and decisions, its spirit, how laws combine into a rational whole—and are trained in the practice of law. The teaching of law is therefore based on a twofold premise: it is expressed in the form of rational, normative propositions (rules, principles or procedures), which are supposed to be applied or be capable of application. Lawyers do not like to go into the details of the effectiveness of the law, or to know why a law is respected here and bypassed there; their domain is the world of legal form. This course aims to lift the lid on legal form to understand the complex mechanisms, of an anthropological nature, that the law relies on to be capable of general application. I will identify some of these mechanisms and demonstrate how under-standing them can help lawyers to better practice their profession. Today, understanding these mechanisms is more pertinent in our globalized world, where people, goods and businesses circulate widely and carry a cultural baggage that we remain unaware of. Culture, as presented here, is a set of answers to questions that we rarely ask ourselves: this is why the final exam will consist of discovering a question for something you may consider obvious.

MINI 6450 Intro to Chinese Maritime Law (1 Credit Hour)
This introductory course aims to convey to the student the primary knowledge of the shipping law and practice of the Mainland of China. The key sectors which are to be covered include Chinese legal system, setting up in China, contracting with Chinese entities, carriage of goods by sea, shipping contracts, ship and ship-related rights, marine casualties, marine insurance, agency, dispute resolution and maritime procedural law. This course intends to present the unique features of Chinese shipping law and tries to prepare the students for recognizing and dealing with uncomplicated legal issues in relation to Chinese shipping industry.
MINI 6500 Rights of Native People (1 Credit Hour)
This course is on the rights of native peoples. We will concentrate on the United States, South America, Australia and New Zealand. We will look into the origins of the laws affecting native peoples, how they have changed over the years, and how differently these issues have been handled in various parts of the world both in theory and practice. We will also look into the efforts to create international law on the rights of indigenous peoples.

MINI 6650 Public Co Reporting Practicum (1 Credit Hour)
This course is designed to provide a hands-on and practical introduction to disclosure issues and practices of publicly traded companies. The course will address disclosure issues and topics under the federal securities laws and the various rules and regulations thereunder. The course will also cover select corporate governance issues, such as director independence, committee composition and duties, shareholder approval of certain matters, and other exchange listing requirements (NYSE and/or NASDAQ rules). This is an advanced course that is designed to teach students how to approach and solve problems relating to public company disclosure issues, focusing on the structure and content of disclosure and available resources. The course will be designed to simulate the issues and tasks that an attorney would perform in representing a public company in practice. It is primarily designed for students who intend to practice corporate or securities law and represent companies in connection with public filings with the Securities and Exchange Commission and the sale of securities.

MINI 6760 Trans Atlantic Trade (1 Credit Hour)
This course focuses on the trade relationships between the United States and the European Union. Transatlantic trade and investment are of great importance to the U.S. despite the country's close ties to Canada and Mexico (NAFTA) and the rise of other vibrant economies such as China, India or Brazil. The interaction between the U.S. and the EU, set to further expand in the wake of the ongoing negotiations about a Transatlantic Trade and Investment Partnership (TTIP), also sustains a large number of high-profile legal jobs in a wide range of 1 and as a job market for law school graduates, makes the course offering highly relevant for TLS. The course provides an analysis of the current state of transatlantic trade, traces past efforts at harmonizing key regulatory differences between the U.S. and the EU, and offers insight into the difficult and highly controversial TTIP negotiations. Students are invited to consider differences in law and the wider societal paradigm which make transatlantic trade a lucrative but complex and sometimes frustrating exercise. Specific examples such as data protection, trade in genetically modified organisms (GMOs), health and safety issues, environmental concerns, or the use of international commercial arbitration as a mechanism for dispute resolution highlight both the value of further convergence between the two systems and the challenges that policymakers face in their latest endeavors to close the gap.

MINI 6850 Reproductive Rights & Law (1 Credit Hour)
This course will focus on the 2018 Louisiana Legislative Session as a means of understanding the legislative process, civic engagement with that process, and policy and legal concerns that proposed legislation can raise – all within the context of understanding the legal framework surrounding abortion access and reproductive rights. The course will include legal and policy analysis of the most significant U.S. Supreme Court cases involving abortion rights, as well as an overview of the statutory and regulatory landscape applicable to abortion in Louisiana. With that backdrop, the course will then take a hands-on approach to the Louisiana Legislative Session, focusing on proposed bills that will impact reproductive justice. Guest speakers will help students to understand the policy implications – both intended and unintended – related to the proposed bills, as well as other legislation proposed or passed during recent legislative sessions. Each student will select one proposed bill, and learn how to draft messaging guidance, draft and coordinate testimony for the legislative committee hearings, and how to assess the policy implications and likelihood of success in a subsequent legal challenge. Students will draft a research paper incorporating those elements. For the final project, students will have the opportunity to draft their own proposed legislation, which will be incorporated in a research paper that examines the policy considerations related to their bill and why they think the bill would withstand judicial scrutiny. If scheduling allows, students will be able to attend a committee hearing at the Legislature regarding one of the proposed bills, and see the legislative and advocacy process in action.

Law Non-Classroom Courses (NCLS)

NCLS 9010 Law Review (0-2 Credit Hours)
Founded in 1916 as the Southern Law Quarterly, the Tulane Law Review is published five times annually and is managed and edited by students of the Tulane University Law School. The Review is recognized as a preeminent forum for scholarly publication in the areas of Civil Law, Comparative Law, and Admiralty Law. The Review has a significant international circulation and is on a select list of minimum holdings for courts and law libraries in the United Kingdom. The Review maintains a wide European readership.

NCLS 9020 Moot Court (0-2 Credit Hours)
Tulane Moot Court is one of the largest student-run organizations at Tulane University Law School and among the oldest programs of its kind in the nation. The Tulane Moot Court program was founded in 1929 by a small group of Tulane Law students, including the legendary U.S. Fifth Circuit Judge John Minor Wisdom. Alumni include state and federal judges, members of Congress, U.S. Ambassadors, and state governors. Tulane Moot Court is comprised of four Interschool teams: Mock Trial, Appellate, Alternative Dispute Resolution, and Willem C. Vis International Arbitration. The Appellate team consists of four sub-teams: International Criminal Court, John R. Brown Appellate Admiralty, Pace Environmental Appellate, and Black Law Students Association (BLSA) Appellate. Throughout the year, all of these teams earn academic credit by competing in a number of national and international moot court competitions.
NCLS 9030 Maritime Law Journal (0-2 Credit Hours)
The Tulane Maritime Law Journal is a biannual, student-edited law journal that includes scholarly works written by academics, practitioners, and students concerning current topics in Admiralty and Maritime Law. In addition, the Journal publishes annual sections in Recent Developments and International Law for the United States and the international community, as well as periodic symposia on relevant topical areas in the field and quantum and collision surveys every other year.

NCLS 9040 Environmental Law Journal (0-2 Credit Hours)
The Tulane Environmental Law Journal is a biannual legal periodical produced and edited by students of Tulane Law School with the support of the faculty and administration of Tulane Law School. The Journal contains timely articles written by professors and practitioners, as well as commentary on recent cases written by journal members. Featured scholarly articles rigorously analyze a broad range of environmental issues affecting individuals, communities, and the nation at large.

NCLS 9050 Law & Sexuality Journal (0-2 Credit Hours)
First published in 1991, the Tulane Journal of Law & Sexuality is the first student-edited law review in the country devoted solely to covering legal issues of interest to the lesbian, gay, bisexual, and transgender community on a wide variety of subjects, including constitutional, employment, family, health, insurance, and military law. The Journal also publishes the winning article of the annual National LGBT Bar Association Michael Greenberg Student Writing Competition.

NCLS 9060 Jrnl Int’l & Comparative Law (0-2 Credit Hours)
The Tulane Journal of International and Comparative Law was founded at Tulane University Law School in New Orleans, Louisiana as an outgrowth of that institution’s historical tradition as a signpost in the academic world for international and comparative law. Published biannually, the Journal is dedicated to discussing and debating all facets of international law, from human rights to transnational commerce to the historical evolution of current global law.

NCLS 9070 Tech & Intell Property Journal (0-2 Credit Hours)
The Tulane Journal of Technology & Intellectual Property (JTIP) is a student-edited, subscription-based, scholarly publication of Tulane University Law School. JTIP examines legal issues relating to technology, including topics such as patents, copyrights, trademarks, trade secrets, antitrust, information privacy, computer law, constitutional law, contracts, torts, and all other policy implications of law and technology in our society.

NCLS 9080 Sports Law Journal (0-2 Credit Hours)
The Sports Lawyers Journal is a national legal journal edited by Tulane law students and published by the Sports Lawyers Association (SLA). Every member of the SLA, currently nearly 1,500 practicing lawyers, professors, law students, and other professionals, receives the publication annually. Since the Journal is composed of articles authored by American, Canadian, and European law students, it provides a unique view of sports issues and an unparalleled opportunity for students to have their works published and read.

NCLS 9100 Directed Research (1-3 Credit Hours)
Directed Research is a way for students to receive one, two, or three hours of credit for research papers completed under the supervision of a member of the full-time faculty. The faculty member must approve the topic and scope of the paper and determine the number of pages required for the credit granted. Students may receive a maximum of three credits during their entire degree program.

NCLS 9110 Seminar Work (1-3 Credit Hours)
Out of class work component for 3 credit law seminar courses

NCLS 9150 Immigrant’s Rights Practicum (3 Credit Hours)
The course is an experiential course integrating lawyering theory, skills and doctrine in the context of representing noncitizens (seeking nonimmigrant U or T status) in partnership with the community group, the New Orleans Workers’ Center for Racial Justice (NOWCRJ). Students will be as-signed to work in pairs, under the supervision of a NOWCRJ attorney and Prof. Hlass, on one U nonimmigrant status application for a NOWCRJ client. Students will learn the substantive law of Nonimmigrant Status, as well as ethics and professional-ism, as they develop lawyering skills including: client-centered interviewing, investigating facts, researching and analyzing relevant law, case planning, developing a theory of the case, creative problem-solving, strategic decision-making, collaborating, legal storytelling, cross-cultural lawyering and consequences of implicit bias, and legal writing, including affidavits and advocacy-focused letter briefs.

NCLS 9300 Senior Fellow (2-4 Credit Hours)
Legal Research and Writing Senior Fellowship.

NCLS 9400 Law Externships (0-6 Credit Hours)
The Externship courses provide legal education and skills development in real-life settings. Students work and learn in a variety of workplaces: public interest or nonprofit organizations; courts or government offices at the federal, state or local level; and corporate counsel offices. The Externship courses allow students to gain expertise in professional skills and problem-solving; study professionalism and the lawyers’ ethical requirements; examine lawyers’ roles in the delivery of justice and ensuring justice for all; develop specific lawyering skills or learn a specific area of law; explore career interests in a variety of legal fields and build a professional network; and provide service to the community and to the public at large.

NCLS 9410 Advanced Summer Externship (3 Credit Hours)
Upper-class summer externship.

Law Special Courses (LAWS)

LAWS 6000 Mindfulness for Lawyers (0 Credit Hours)
The 30-minute sessions are designed to help you reduce stress, increase concentration, and thrive during exam period.
LAWS 6010 Pretrial Civil Lit Bootcamp (1 Credit Hour)
This course is designed to teach students the fundamental skills necessary to represent clients in civil discovery and motion practice before trial. The course concentrates on developing skills in client communication, drafting pleadings, preparing and responding to written discovery, arguing pretrial motions, and preparing for and taking the depositions of both fact and expert witnesses. Throughout the individual lessons, the faculty spends time discussing case development, the burden of proof at trial, and the witnesses and exhibits that an attorney will need to obtain in preparation for representing their client before a jury. The faculty also discusses related issues including insurance coverage and its effect on the attorney-client relationship and execution of a potential judgment. The course's explicit focus on pretrial practice reflects the availability of further education in trial skills through Tulane's Trial Advocacy program and Tulane's clinical programs.

LAWS 6020 Pretrial Criminal Lit Bootcamp (1 Credit Hour)
This course hopes to teach students three critical skills required for pretrial advocacy in criminal litigation: information gathering; drafting motions; and arguing motions. The course will focus on the five matters (and related motions) most commonly encountered in the interval between arrest and trial: (1) bail; (2) discovery; (3) “similar acts”/FRE 404B evidence; (4) motions to dismiss; and (5) motions to suppress evidence. Students in the course will be divided into two groups – a prosecution track, and a defense track – and will be expected to learn what information is necessary for each motion; to research and write each motion; and then to argue their motion (or opposition) each day. In addition, students will be expected to learn to formulate a theory of the case, either prosecution, or defense, and then to make strategic decisions consistent with that theory as they move through the pretrial process. The course is designed to occupy the territory between classroom theory and trial practice. Training in the latter area is readily available through Tulane's Trial Advocacy program, Tulane's Criminal Law Clinic, and Tulane's supervised externships at public defenders' and prosecutors' offices.

LAWS 6030 Transactional Bootcamp (1 Credit Hour)
This course will consist of a series of counseling, negotiation, due diligence, and drafting exercises structured around a basic corporate transaction (e.g., an asset purchase). The course will introduce students to fundamental deal skills, such as structuring the timetable for a transaction, eliciting and drafting the operative business terms, identifying legal and business risks and negotiating corresponding risk-shifting and risk-reduction provisions, and reviewing and drafting the ancillary documents necessary to consummate the transaction.

LAWS 6040 Business Literacy (1 Credit Hour)
The Business Literacy Intersession will be co-taught by professors from the Law School and the A.B. Freeman School of Business and will be designed to cover a range of basic concepts in an engaging and interactive format. We hope that this track will appeal to students interested in careers in commercial or transactional practice (particularly, in anticipation of the summer interview season), as well as students who might be interested in pursuing a joint degree (JD/MBA) or who would like a leg up before taking upper-level business, tax or commercial law courses.

LAWS 6050 IP Lab (1 Credit Hour)
The two IP Labs in Patent and Trademark allow students to obtain practical, real-world experience representing clients in patent and trademark matters on a pro bono basis before the U.S. Patent and Trademark Office. Students under supervision help screen and interview clients, conduct patentability or registrability searches, counsel the client regarding the results, and, if appropriate, draft and file patent or trademark applications, responses, and other documents necessary to the application. 2Ls and 3Ls may apply for this limited enrollment course by completing an experiential application (“ONEAPP”). Students applying for the IP Lab in patents must have the technical background described at pp. 4-10 in the General Requirements Bulletin on the USPTO website, available at https://www.uspto.gov/sites/default/files/documents/OED_GRB.pdf

LAWS 6100 Writing to Persuade (1 Credit Hour)
To write to persuade, which is to say, to write to win, you must above all else, and first of all, write to win trust. Judges, clerks, arbitrators, mediators, and indeed, clients, are overworked. They are busy. They have more to read than they have time. They are irritated with bad writing. Which is to say unclear writing. Overwrought writing. Wasteful writing. If you want to persuade your client to send more work, to persuade your judge to actually read your brief (beyond the first page), you must immediately establish credibility — that he or she can entrust to you his or her time, attention, and patience. Students will work to unlearn bad habits, to overwrite “grammar” shibboleths, and to hone the craft of persuasive writing through a series of practical exercises as well as a larger writing project. Successful students will develop a quality writing example.

LAWS 6500 Semester Abroad Australia (0-14 Credit Hours)
Law study abroad in Australia.

LAWS 6510 Semester Abroad - Argentina (0-14 Credit Hours)
Law study abroad in Argentina.

LAWS 6520 Semester Abroad Hong Kong (0-14 Credit Hours)
Law study abroad in Hong Kong.

LAWS 6540 Semester Abroad Copenhagen (0-14 Credit Hours)
Law study abroad in Denmark.

LAWS 6550 Semester Abroad France (0-14 Credit Hours)
Law study abroad in France.

LAWS 6570 Semester Abroad Germany (0-14 Credit Hours)
Law study abroad in Germany.

LAWS 6580 Semester Abroad Israel (0-14 Credit Hours)
Law study abroad in Israel.

LAWS 6600 Semester Abroad Amsterdam (0-14 Credit Hours)
Law study abroad in Amsterdam.

LAWS 6610 Semester Abroad Netherlands (0-14 Credit Hours)
Law study abroad in The Netherlands.

LAWS 6620 Semester Abroad - Barcelona (0-14 Credit Hours)
Law study abroad in Spain.

LAWS 6630 Semester Abroad - Colombia (0-14 Credit Hours)
Law study abroad in Colombia.

**Law Summer Program in England (LENG)**

**LENG 1000** Law - Summer In England (0 Credit Hours)

**LENG 2000** Law - England Housing (0 Credit Hours)
Law summer abroad housing in Cambridge, England.

**LENG 3000** Law - England Facilities Fee (0 Credit Hours)
Law summer abroad in Cambridge facility fee.

**LENG 4030** Brexit & Migration in UK & EU (1 Credit Hour)
On 23 June 2016 52% of the UK population voted for the UK to leave the European Union. Levels of migration to the UK was given as one of the principal reasons which motivated this vote. What were the concerns about migration and were they real? What will happen to the EU nationals living in the UK? What about EU nationals who would like to come to the UK in the future? What is the optimum level of migration and how can this be properly managed? This course will examine these and other questions relating to migration. The course will draw from Professor Barnard’s current research on these issues.

**LENG 4060** Comp Asylum & Refugee Law (1 Credit Hour)
This course will examine each component of the definition of a “refugee” in the 1951 UN Convention Relating to the Status of Refugees, with focus on how the asylum and refugee law in the United States has developed, as well as how the United Nations High Commissioner for Refugees (UNHCR) and other countries have defined a “refugee.” We will focus on some of the most legally complicated and controversial aspects of the definition, such as the meaning of “membership in a particular social group,” which is one of the five grounds for asylum. For example, we will examine how claims relating to gender-based violence have been brought under the “particular social group” ground. We will also examine the legal processes involved in claiming asylum in the United States, as well as the process of refugee status determinations by UNHCR, focusing specifically on concerns around due process and access to counsel. The course will also address the practical challenges involved in winning asylum cases, including the impact of trauma on memory, credibility assessments, fact-gathering, and the role of expert evidence. Finally, the course will provide an analysis of policies around the detention of asylum-seekers, including the detention of children, and consider various alternatives to detention.

**LENG 4550** Int’l Migration & Human Rights (1 Credit Hour)
This course will consider the problem of refugees and migration from the perspective afforded by public international law and human rights treaties.

**LENG 4760** Immigration & Migration: Compar (1 Credit Hour)
This course will examine immigration and migration issues from a comparative legal and constitutional perspective, concentrating on the U.S., the Americas, The United Kingdom, and Europe. We will first study the basics of U.S. immigration law as they relate to these pressing global problems. With respect to the UK and EU, we will examine their constitutional structure and how it relates to the policy problems posed by immigration and refugees.

**Law Summer Program in France (LFRN)**

**LFRN 1000** Law - Summer In France (0 Credit Hours)
Law summer abroad in Paris, France.

**LFRN 4070** Brexit: Leaving the EU (1 Credit Hour)
The course covers the fascinating array of legal, economic and negotiating dilemmas caused by the British decision to leave the EU, including the financial position of London, the rights to “passport”, to travel and trade, the rights of EU citizens in the UK, climate change, human rights, the fate of Scotland, and much more.

**LFRN 4270** The European Financial System (1 Credit Hour)
This course presents a bird's eye view of the European financial system, the way financial markets, regulators, whether private or public, and EU institutions interact one with another and how the whole financial system is supervised and organized regarding regional and international standardization pressure. A specific focus will be given on the key issues related to the integration and development of the European financial markets while highlighting their global relevance.
LGRC 4330 Intl Convention & Maritime Law (1 Credit Hour)
There are many international conventions (multilateral treaties) that govern aspects of maritime law. As a consequence, there is considerable international uniformity of the principles governing maritime law disputes. However, some conventions are amended by subsequent protocols, which are not uniformly adopted by the countries that adopted the original conventions. The United States is party to some, but not all of the international conventions, having chosen to follow its own path with domestic legislation on such matters as oil pollution and limitation of liability. Differences between versions of international conventions create the possibility of forum shopping by claimants or defendants seeking the most favorable country for their dispute to be heard. This course will consider the most important international conventions on maritime law (in outline), the differences (where they exist) between U.S. domestic maritime law and the international conventions, and some of the forum shopping techniques commonly used.

LGRC 4510 Maritime Arbitration (1 Credit Hour)
Arbitration is a form of private, consensual, dispute resolution that is widely used in international commercial disputes of all kinds. It is an important part of maritime dispute resolution, particularly in relation to charter party disputes (i.e. disputes about contracts for the use of trading ships). This course introduces students to some of the legal questions associated with arbitration, including: the scope of the arbitration agreement and the limits of the arbitrators’ powers; enforcement of arbitral awards; the very limited scope for review of arbitrators’ decisions by courts; and the use of the traditional admiralty procedures of arrest and attachment as a means of getting security for a claimant’s claim. The course stresses the intrinsically international nature of maritime arbitration, with particular reference to the Convention on the Recognition and Enforcement of Foreign Arbitral Awards 1958 (the New York Convention), which provides a mechanism for enforcement of arbitral awards in any of the 167 countries that are party to it.

LGRC 4520 Maritime Personal Injury (1 Credit Hour)
Comparative analysis of laws governing maritime torts with emphasis on seamen’s remedies for personal injuries and death. The course covers the three main seamen’s remedies: maintenance and cure, unseaworthiness and the Jones Act. In addition, attention is given to the tort remedies of those covered under the Longshore and Harbor Workers’ Compensation Act as well as the Outer Continental Shelf Lands Act and of non-workers. Maritime jurisdiction, conflicts of laws and the rights of foreign seamen in American courts are also addressed.

LGRC 4650 Intro to the Law of the Sea (1 Credit Hour)
This course reviews the public order of the oceans, i.e., the basic principles of international law, both customary and treaty-based, that apply to maritime spaces, such as the high seas, continental shelf, seabed and ocean floor. It analyzes the allocation of jurisdictional powers among individual states and the international community at large over the various maritime zones involved, the use and management of ocean resources, including fisheries and seabed mineral resources; marine environmental protection and pollution control; military uses of the oceans and navigational safety.
When sovereign states incur excessive debt and fall into financial crisis, there is no legal mechanism (comparable, e.g., to the U.S. Bankruptcy Code) for adjusting the rights and liabilities of the various stakeholders. Some combination of negotiation, contract modification, legislation, intervention by international organizations, and simple leverage must substitute for a formal legal regime. This course explores the techniques employed in two relatively recent financial crises, those in Greece and Argentina.

**Law Summer Program in Italy (LITL)**

**LITL 1000 Law - Summer In Italy (0 Credit Hours)**
Law summer abroad in Siena, Italy.

**LITL 2000 Law - Italy Housing (0 Credit Hours)**
Law summer abroad housing in Siena, Italy.

**LITL 3000 Italy - Field Trip (0 Credit Hours)**
Law summer abroad excursions in Siena, Italy.

**LITL 4120 Collections & Collectors (1 Credit Hour)**
This section will explore the ever-changing ethical issues surrounding the acquisition of art by museums and collectors, who now often go beyond the law to embrace new ethical codes of collecting. What duty does a museum have to ensure that it is not acquiring stolen property? When must property that is discovered to be stolen be returned to its rightful owner or to its country of origin? Is it ethical for a private collector to purchase a masterpiece, and deny the public access to it? Taking advantage of resources in Siena itself, such as the city Paintings Gallery, the Cathedral Museum, and the Archaeological Museum, this section will look at how and why art was and is acquired by museums and collectors in Italy and abroad. We will look in particular at collecting policies and ethical codes of American museums such as the Metropolitan Museum of Art and the J. Paul Getty Museum, and their at-times controversial acquisition of Italian works by seminal figures in Sienese painting such as Duccio. Reflecting on issues of ownership, culture, and identity as faced by museums, we will also examine works of Etruscan art at the center of recent repatriation efforts by Italy, and also address the Elgin or Parthenon Marbles controversy.

**LITL 4560 Int’l Law, Heritage & the Arts (6 Credit Hours)**
This program provides the only opportunity in the world to study in depth the relationship between international law and art itself, as both physical and intellectual property. Its merit is that it looks to the most basic premise of all: that there can be no preservation of artistic excellence if there is no preservation of art itself. While it is all well and good to speak about the production and dissemination of art, there would be no art or artists without their protection. While the program is designed primarily for law students, graduate students in other disciplines, such as art, art history, archeology, and anthropology are encouraged to attend. These students bring additional depth to the program, as their insights and perspectives come from a completely different thought process than the legal one. As can be seen from the course descriptions and faculty biographies sections, the program brings together not only international legal scholars, but also scholars with expertise in art and archeology in order to give students in the program a multi-dimensional understanding of the subject matter. This combination of students and faculty members from many different fields removes barriers from the classroom and allows for an interchange of both ideas and opportunities.

**LITL 4670 Protection Art & Culture (1 Credit Hour)**
Designed for law students, students in other disciplines, and working professionals, this portion of the course will provide an introduction to the complex and often confusing web of principles and systems that constitute international law. Concepts such as sovereignty, jurisdiction, and standing will be considered, as well as the basic rights of both nations and individuals to their art and their cultural property. The following major conventions regarding the protection of art and cultural property will be addressed: the UNIDROIT Convention on Stolen or Illegally Exported Cultural Objects, the UNESCO Convention on the Means of Prohibiting and Preventing the Illicit Import, Export and Transfer of Ownership of Cultural Property, the UNESCO Convention on the Protection of the Underwater Cultural Heritage, and the Universal Declaration on Cultural Diversity.

**LITL 4790 Stolen Art & Antiquities (1 Credit Hour)**
This section will address the recourses to the theft and smuggling of stolen art or looted antiquities, with estimated annual losses as high as $6 billion, according to the FBI Art Crime Team. Particular emphasis will be given to the problem of archaeological site looting. Among the specific topics covered are: the domestic implementation of the 1970 UNESCO Convention among market nations; the prosecution for dealing in stolen art and antiquities; and criminal forfeiture. Finally, we will discuss the particular problems faced by auction houses and purchasers. Case studies, including the looting of the Iraq Museum and of archaeological sites in Iraq, will be used throughout the course to illustrate these legal principles.
LITL 4850 The Protection of Art (1 Credit Hour)
From earliest times, art and cultural property have been treated, and prized as “the spoils of war.” In just the past century, civilization has witnessed massive theft and destruction of art and cultural property during armed conflicts, ranging from the systematic looting of the artwork of entire nations by the Nazis during WWII, to the deliberate eradication of Buddhist temples and monasteries in Cambodia by the Khmer Rouge, to the recent pillaging of an entire national museum. Unfortunately, the legal efforts to protect art and cultural property during such armed conflicts have not kept pace. This section will survey those efforts, beginning with the ancient “laws of war,” continuing up through the Lieber Code, the Hague Conventions of 1899 and 1907, and ending with Article 8 of the Rome Statute of the International Criminal Court. In addition, a portion of the time will be devoted to the issue of protecting art during other times of crisis, such as natural disasters.

Law Undergraduate Courses (LAWU)

LAWU 3000 Intro to Law & Legal Process (3 Credit Hours)
During this course taught by a professor who is on the faculty at Tulane Law School, students will learn about law school, about the practice of law generally, and about the process of a lawsuit and how a court’s decision becomes the common law in the United States. The course will also focus on various legal topics that are at the heart of any first-year law school curriculum. By the end of the term, engaged students will understand the basics of procedure in U.S. courts and will also understand some of the basics of certain substantive law, including aspects of torts, constitutional law, criminal law, property law, and contracts. Students will also participate in active learning throughout the term, including a team negotiation exercise and a team oral argument. Grades will be based on a midterm exam, a final exam, and participation including attendance.

Law Upperclass Electives (2) (2LAW)

2LAW 2070 Business Enterprises (3,4 Credit Hours)
This four-credit course will cover the legal architecture of certain business enterprises (including partnerships, corporations, and limited liability companies), how business enterprises are financed, how control and managerial authority are allocated within a business enterprise, and the scope of the fiduciary duties owed to a business enterprise and its owners in routine and fundamental transactions. This course will also cover aspects of federal securities law affecting the governance of business enterprises, including antifraud rules and insider trading.

2LAW 2110 Civil Law Property II (3 Credit Hours)
This course covers institutions of property law not covered in the first-year Civil Law Property course. It includes analysis of the notion, function, and structure of real rights in civil law jurisdictions; actions for the protection of the ownership and possession of movables and immovables; boundary actions; dismemberments of ownership, such as personal servitudes (usufruct, habitation, rights of use), predial servitudes, and building restrictions in subdivision developments.

2LAW 2150 Civil Procedure II (3 Credit Hours)
This course will start where most first-year Civil Procedure courses end – with multi-party litigation, including third party actions, intervention, interpleader and indispensable parties. A substantial part of the course will be devoted to class actions including certification, judicial management of complex class actions and settlement problems. Finally, a section of the course will be devoted to multi-district litigation, the aggregation of multiple lawsuits under the Manual for Complex Litigation and problems arising from parallel litigation in federal and state courts. This is not a course in federal jurisdiction. It is assumed that those taking the course will have a basic understanding of federal subject matter jurisdiction (arising under federal law, diversity and supplemental) and of the constitutional limitations on personal jurisdiction over non-residents.

2LAW 2300 Con Crim Pro:Investigatin (3 Credit Hours)
This is a constitutional law course focusing on those aspects of the Bill of Rights that apply to the rights of suspects and defendants in the investigative phases of the criminal justice system. Specifically, we will be studying United States Supreme Court case law interpreting the Fourth, Fifth and Sixth Amendments. The course is recommended for the Juvenile Law Clinic and is one of the recommended courses for the Criminal Litigation Clinic.

2LAW 2400 Evidence (3,4 Credit Hours)
The focus of this course is on the law and policy considerations surrounding the proof of facts (and law) in judicial proceedings. We will be studying the Federal Rules of Evidence, as most states have adopted these rules wholesale or in large part. We will cover issues of relevance and of reliability, the two main concerns of the Rules.

2LAW 2530 Income Taxation (3,4 Credit Hours)
Practicing lawyers, regardless of their area of expertise, need a basic understanding of federal income tax because this tax affects so much of modern American life. This course covers the fundamentals of federal income taxation of individuals. It provides a basic understanding of the structure and vocabulary of the tax statute and of the relationship of the statute to regulations, other administrative pronouncements, and case law. The course introduces students to key concepts and issues in individual federal taxation such as the taxable unit, rate structure, the definition of income, capital recovery, the difference between a deduction and a credit, and the treatment of capital gains. Through the use of the problem method, the course develops the critical skills necessary to read and analyze any statutory language.

2LAW 2580 Land Use Planning (3 Credit Hours)
This course provides students a foundation in the core principles and issues important to any land use course: planning, zoning, constitutional limitations on zoning, third party rights, exclusionary zoning and discriminatory land use controls, common law nuisance as an alternative to zoning, covenants and associations, urban redevelopment, historic preservation, eminent domain, growth and sprawl, and the challenge of affordable housing. There is perhaps no better laboratory in which to consider these land use concepts than in the disaster-recovery environment of New Orleans. In order to enhance students’ application of land use theories to real life problems, we will interact with key players in the New Orleans land-use landscape, both inside and outside the classroom.
2LAW 2680 Payment Systems (3 Credit Hours)
The course UCC: Payment and Credit Systems will cover articles 3, 4, 4A, 5, 7 and 8 of the Uniform Commercial Code, as well as statutes and private network rules governing payment and credit systems, negotiable instruments and securitization. The course objectives include learning 1) the black-letter law, 2) to work more generally with complex and technical statutes and apply them to business payment and credit problems, and 3) to analyze factual problems and present, orally and in writing, potential legal consequences and options for the parties under the applicable law. The class uses a problem approach. In each class session, after a brief review of the day’s material, most of the time will be spent working through problems that apply the statutory material to specific fact situations.

2LAW 2750 Obligations II (3 Credit Hours)
This is a continuation course building upon the general principles developed in Obligations I. Its focus is a detailed study of sale and (to a lesser extent) lease, the most important nominate contracts in the Civil Code. Where appropriate, comparisons are made between the UCC and the French and Louisiana Civil Codes.

2LAW 2800 Legal Profession (3 Credit Hours)
This course introduces students to the roles of lawyers in society, the nature and structure of the legal profession, and to fundamental concerns and dilemmas of lawyers engaged in the practice of law. The course seeks to make students aware of their ethical responsibilities, both as members of society and members of the legal profession.

2LAW 2870 Real Estate Transactions (2,3 Credit Hours)
This course will cover issues of substantive and procedural law in their relationship to real estate transactions, drafting, financing, and other problems encountered in sophisticated transactions. The course is taught by V.M. Wheeler, a partner with Chaffe, McCall, LLP. A popular national casebook will be used as the primary text, and reference will be made to civil law principles, when appropriate.

Law Upperclass Electives (3) (3LAW)

3LAW 3000 Civil Law Persons (3 Credit Hours)
This course deals with Book I of the Civil Code, the Law of Persons, and its ancillary statutes. It will first examine the attributes that create the legal status of “person,” and certain legal institutions that govern and protect those who have that status. These include regimes the rights of absent persons whose deaths cannot be proven; marriage and its dissolution; the reciprocal rights and responsibilities arising from the parent-child relationship in both marital and non-marital families; and the protection of minors by means of tutorship and of other incompetents by means of interdiction.

3LAW 3110 Civil Lit:Strategy&Pract (2 Credit Hours)
This course will provide the student with a realistic understanding and appreciation of handling litigation matters in private or corporate practice and the type of work and situations they can expect to deal with on a daily basis. The course will provide a practical application of how to take a lawsuit from the initial client contact through trial and appeal. Students will discuss and prepare pleadings, including Complaints/Petitions, Discovery Requests and Responses, Motions, and Judgments, and will be provided with a practical understanding of what is expected of them by judges and how the rules of civil procedure are applied in the real world. The course will be taught by Robert L. Redfearn, Jr. a partner with Simon, Peragine, Smith & Redfearn, L.L.P. Because of the substantial overlap in content, students enrolled in Civil Litigation: Strategy & Practical Skills may not enroll in the Pre-trial Civil Litigation Winter Intersession.

3LAW 3130 Coml Law-Civil Sec Rghts (3 Credit Hours)
This is a course in credit transactions under the civil law of Louisiana. Topics include suretyship and secured transactions as to movables and immovables. Article 9 of the Louisiana version of the Uniform Commercial Code is considered, together with mortgages on immovables, and codal and statutory privileges. Problems of ranking or priorities are studied.

3LAW 3140 Climate Change Seminar (3 Credit Hours)
This seminar will focus on contemporary issues associated with climate change law, including international ramifications, domestic actions, litigation strategies, and the legal tools available to address the multiplicity of topics related to climate change. Students will be expected to complete background reading independently and then take turns leading the class in critical analyses of climate change scholarship. There will be a collaborative element to this seminar, with a focus on helping each other with topic and paper development and review. Each student will have an opportunity to explore areas of specific interest with the completion of one substantial written legal analysis and presentation to the class.

3LAW 3200 Contract Drafting (2,3 Credit Hours)
This course introduces students to the principles, processes and techniques for drafting business contracts. Students will learn how transactional lawyers translate a business deal into contract provisions. Students will draft commercial agreements with a focus on managing risk, minimizing ambiguity, drafting with clarity, using contemporary commercial drafting techniques, and solving problems through effective drafting. Students will also learn to read, review and analyze contracts with an eye toward both legal and business risk issues. The course is presented through a combination of lecture, drafting and editing assignments, and in-class exercises. Students draft sample contract provisions, draft contracts from scratch, analyze term sheets, and review and revise contracts. Grades will be based upon drafting and editing assignments, participation in in-class exercises, and good faith completion of ungraded assignments.
3LAW 3210 Coml Law-Secured Trans (3 Credit Hours)
This course deals in depth with the creation and perfection of security interests in personal property, priority of claims, and remedies upon debtors’ default under Article 9 of the Uniform Commercial Code. In addition to full coverage of Article 9, the potential risks of the secured creditor under the Federal Bankruptcy Code are considered. Substantial consideration is given to the policies and commercial equities which underlie doctrine in this area of law.

3LAW 3280 Com’L Law-Bankruptcy I (3 Credit Hours)
After a brief study of individual debt collection under state law, this course will focus on federal bankruptcy law. It will provide an overview of fundamental aspects of consumer and business bankruptcy law and practice. It will also explore a number of current and ongoing policy debates related to bankruptcy law. Thus, the course should be of interest to students who expect to be involved in the practice of bankruptcy law as well as any students who wish to explore broader themes related to economics, financial markets, politics, legislative process, and public policy.

3LAW 3350 Common Law Trusts & Ests (3 Credit Hours)
This course examines the law governing the transmission of property at the owner's death. Topics emphasized are intestate succession; the substantive and formal requirements for the validity of wills; interpretation of wills; the creation of private trusts; the nature of the beneficiary's interest in a trust.

3LAW 3370 Comparative Law in Action (2,3 Credit Hours)
This course highlights the fact that large areas of national law are influenced (and sometimes even driven) by developments outside our country's borders, and that 'local' legal practice will often require lawyers to engage with foreign and/or international law – or to apply comparative legal techniques – in their daily work. The focus is very much on the practical application of foreign/comparative/international law in areas such as contract law, torts, constitutional law, human rights protection, public international law, environmental law, development, employment law, criminal law, or economic regulation. The course is based on a background hypothetical involving a U.S. company which seeks to expand its operations – both in terms of production, distribution and administration – to various foreign markets across the globe and/or import to and sell foreign goods in the U.S. Week by week, different legal questions and difficulties arise. These will touch on, e.g., contractual issues, products liability, employment law, environmental regulation, taxation, health and safety (consumer protection), or conflicts of law. International treaties such as TRIPS might also come into play. In one of the two weekly classes the instructor will set out the (new) facts and discuss the core aspects of the relevant area of law. Students will then be asked to research the issues raised in the hypothetical (individually or in groups) and to present in the second weekly meeting their substantive findings as well as any practical difficulties they encountered in the course of their work (language barriers, access to foreign legal materials, or possible non-legal trade-offs between the advantages and problems that foreign jurisdictions might offer or pose in a particular field). The assignment will always require the production of a concise legal memorandum that sets out the issues and possible solutions, and suggests a way forward for the client company. Students should expect a few surprises (such as sudden changes of the situation 24 hours prior to the deadline for completion of the memorandum) and be prepared to present their work in a professional format (both orally and in writing). Successful completion of the course will require submission of the entire portfolio of assignments. Assessment is based on a three-hour final exam. The course will start off with an introduction to comparative methodology, research methods, and an explanation of the background hypothetical, cover 5 distinct problems in selected areas of the law, and close with a final debriefing/review. Students will receive a course package with selected texts about comparative methodology and, in preparation for each problem, substantive background reading that covers the relevant legal topic. The weekly handouts that set out the (developing) narrative of the hypothetical and research assignments may contain additional specific materials such as model contracts, newspaper clippings, or traditional references to cases, statutes, international treaties and legal articles or book chapters.

3LAW 3380 Community Property (2 Credit Hours)
This course is a comparative study of marital property regimes that involve the distinction between the separate and community property of spouses. The course examines the law of the eight community property states and Wisconsin, which has a version of community property based on the Uniform Marital Property Act. Special attention will be given to Louisiana law.
3LAW 3400 Conflict of Laws (3 Credit Hours)
This course explores how courts in the United States determine the governing rules and doctrines in cases that implicate the laws of more than one jurisdiction. Students will learn the various approaches courts take to resolving conflicts of law when they arise, including the historical and theoretical foundations for those approaches.

3LAW 3450 Family Law: Civil & Common (3 Credit Hours)
This course is a study of the formation, rights and obligations in formal and informal family relationships, and the breakdown of marriage and its incidents such as nullity of marriage, divorce, division of property, support, and custody. The course will treat the family law of both the civil law and common law jurisdictions of the United States.

3LAW 3460 Employment Law (2,3 Credit Hours)
The employment relationship serves an important role in structuring the lives of most adults in the United States. Employment provides wages, and often, a slew of benefits including health care and retirement pensions. It also provides a sense of stability and routine, and can even serve as the foundation of our identities. Legal disputes about the employment relationship occupy a significant segment of the legal market and consume a significant proportion of legal resources. This course offers students an overview of the important legal issues that are raised in the context of the employment relationship. It examines the law governing the employment relationship, including the establishment and termination of that relationship. The course will discuss employment issues, such as contractual employment agreements, wrongful discharge, regulation of wage and hour laws (FLSA), leave (e.g., FMLA), safety (OSHA and workers comp), unemployment insurance, privacy and freedom of speech, intellectual property issues (such as R&D ownership, trade secrets and noncompetition clauses), the developing concept of unjust discharge, and regulations providing protection of retirement benefits. Throughout the course, students will be able to deepen their study of contract law, torts, and statutory and regulatory processes through the context of the law of the work. The course does not cover either Employment Discrimination or Labor Law, both of which are offered as separate courses.

3LAW 3490 E-Discovery (2,3 Credit Hours)
Modern discovery increasingly concerns the production and retrieval of information that is electronically stored in computer systems, email, text messages, social media, cloud applications, and varying other methods. This course will focus on the new issues, rules, and practices involving the application of e-discovery, digital evidence, and computer forensics. It will explore not only the application of the federal rules of civil procedure and evidence to electronic discovery but also the appropriate handling and treatment of electronically stored information in the litigation process. The course is taught by the Hon. Karen Wells Roby, Chief Magistrate Judge, U.S. District Court for the Eastern District of Louisiana, and Lynn M. Luker, Of Counsel at Stanley, Reuter, Ross, Thornton & Alford.

3LAW 3500 Federal Courts (3 Credit Hours)
Federal courts occupy a strategic place at the crossroads of the foundational constitutional principles of separation of powers, federalism, and individual rights. This course examines the constitutional and statutory power of federal courts from that vantage point. Topics planned for the course include case-or-controversy and justiciability limitations on the federal judicial power (with an emphasis on standing doctrine), congressional power to control the jurisdiction of the Supreme Court and lower federal courts, the role of state courts in the enforcement of federal rights, state sovereign immunity under the Eleventh Amendment, and abstention doctrine.

3LAW 3510 Federal Prac&Proc:Appeal (2 Credit Hours)
This course covers the Federal Rules of Appellate Procedure and their application in litigation before the federal courts. Substantive topics may include, but are not limited to: post-trial motions preparatory to appeal, perfecting an appeal, standards of review, drafting of briefs, presentation of oral argument, and post-argument petitions. The course includes an experiential learning component of writing a brief and presenting oral argument. The course will be taught by Deborah Pearce-Reggio, a 1993 graduate of Tulane Law School. Final grades will be based on the brief and oral argument, with potential extra points to be earned through small written/oral exercises relevant to appeals. Professor Pearce plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism. Students who have taken Advanced Appellate Advocacy may not register for this class.

3LAW 3520 Gov't Contract Law in 21st Cen (2,3 Credit Hours)
This is a two-hour weekly class survey course in lecture and/or seminar format of the many issues involved in federal contract law, not contract law in general. Federal procurements boast of a multi-hundred billion $ marketplace annually. State run procurements often are modeled after the federal sector and add to this value. Bid protests, contract changes, special clauses in the Federal Acquisition Regulation, False Claim Act, contract terminations, and claims are covered. Class attendance and participation (10%) are required. Normally, a take-home exam option is used for final grading (90%). Tulane and Loyola students are invited to register. Course site this semester to be announced.

3LAW 3560 Gift & Estate Tax Planning (2,3 Credit Hours)
The course focuses on techniques for the transmission of wealth to a person's successors with emphasis on methods of minimizing federal estate, gift, and generation-skipping taxes under the Internal Revenue Code. Appropriate consideration is also given to the federal income tax consequences of wealth transfer transactions. Both inter vivos and testamentary planning techniques are covered, as is the use of trusts to meet estate-planning objectives. Other topics include the valuation of property included in the transfer tax base, transfers to minors, life insurance planning, planning for jointly-held property and community property, charitable gifts and bequests, retirement benefits planning, and deductions (particularly the marital deduction) from transfer taxes. The basic course in income tax is not required, but is a desirable preparation. The course is taught by Kenneth Weiss, a board certified specialist in both taxation and estate planning.
3LAW 3640 Louisiana Civil Procedure (2,3 Credit Hours)
The objective of this course is to provide a basic and practical knowledge of the Louisiana Code of Civil Procedure necessary to successfully pass the Louisiana Civil Procedure section of the Louisiana State Bar Exam, as well as to draft pleadings and litigate in Louisiana state trial and appellate courts. This course will emphasize practical skills training, in conjunction with theory, and when possible use examples of pleadings, memoranda, briefs and jurisprudential authorities that focus on Louisiana Civil Procedure Law. When practical, students will be exposed to the application of certain provisions of the Code through experiential learning, by viewing one or two rule days at Civil District Court for the Parish of Orleans. Upon completion of this course, students will have a thorough working knowledge of Louisiana Civil Procedure, as well as be trained to handle all aspects of civil litigation.

3LAW 3660 Legal Writing for Lay Audience (2,3 Credit Hours)
Lawyers routinely communicate with audiences who are not trained in law, including clients and prospective clients and other target audiences through public advocacy, media commentary, and marketing. This rigorous writing course will introduce students to the fundamentals of effective, accessible writing about legal topics for such audiences (writing that can also ultimately help better legal memoranda and briefs). Students will research, write, and share both short and longer essays and other written work on legal topics geared mostly toward a general audience; students will also learn to present such work to prospective clients in client presentations and broadcast interviews. By the end of the seminar, each student will produce a long-form magazine article about a law-related subject ready to submit to a bar magazine in the jurisdiction of his or her choice. This seminar does not qualify for the upper-level writing requirement.

3LAW 3680 Solo Practice (2 Credit Hours)
Solo and small firm practice is the most common organizational form in the legal profession today. This course will focus on the essential elements of forming and operating a small firm or solo law practice. Although many of the topics covered in this course could be translated into law practice skills in general, the course will give particular emphasis to those issues that are frequently encountered by solo and small firm practitioners, including setting up a law practice; developing business; hiring, managing, and effectively using support staff; financial planning, billing, and fee management; issues of ethics and professionalism; leveling the playing field through practice skills and management; and many others. Students will be graded on a P/C/F basis and will be assessed on quality of their involvement and participation in both individual and group exercises. Students will also be evaluated on the quality of their critiques of fellow students’ performance. There will not be a final exam in this course. Attendance and participation are require. The course is primarily geared toward 3L students who will be given preference. 2L students may be accepted, with permission of the professor, provided they have taken or are enrolled in legal ethics.

3LAW 3690 Successions Donations Trusts (4 Credit Hours)
A course in the Louisiana civil law governing the transfer of property by inheritance, testament or gift during life. Topics include rules of inheritance, rights of surviving spouses, acceptance and administration of successions; collation and partition; the making of wills, kinds of legacies, and forced heirship limitations on gratuitous dispositions. The course also considers the Louisiana Trust Code’s provisions concerning the creation, modification, and termination of trusts; limitations on dispositive provisions; and the powers and responsibilities of trustees.

3LAW 3770 Oil and Gas (2,3 Credit Hours)
This course covers the law relating to oil and gas exploration, development, and production. The class will largely focus on issues related to oil and gas leases but will also cover the nature and classification of other mineral rights and related issues. The course will include common law doctrines as well as certain Louisiana law concepts. The course will be taught by Aimee Hebert, a partner in the law firm Kelly, Hart & Pitre.

3LAW 3780 Oil & Gas, International (2 Credit Hours)
The course will review the basics of international oil and gas business transactions including the areas of exploration, development and transportation. The objective is to introduce the student to this complex and specialized area of legal practice in order that he or she will gain an understanding of the main legal issues involved in international oil and gas transactions through a historic and comparative law approach. Many factors are considered when drafting oil and gas laws or entering into international oil and gas transactions, including but not limited to economic, social, political and environmental impacts. This course will review the history of the oil and gas industry as an instrument to identify the main issues involved, the key players, the contractual models, the industry developments and the impacts of local legislation. Among others the following topics will be discussed: energy sources; sovereignty and ownership of natural resources; oil and gas, power and politics; dependence and national security; and key industry players such as multinational oil and gas companies, national oil companies, and OPEC. Additionally, we will explore the main characteristics of oil and gas laws in selected countries and the basic agreements used in the international oil and gas business. Other key issues to be analyzed by the international oil and gas practitioner include environmental, labor, foreign investment, currency exchange, and human rights concerns, to name a few. Finally, the course will include the analysis of specific selected contracts.
3LAW 3810  Adv Legal Profession Seminar (2,3 Credit Hours)
This course will explore the role of lawyers' ethics in the American legal system and the conceptual models that currently frame the ethical rules and regulate lawyer behavior. It also will explore those areas in which ethical regulation deviates from practice, and further examine the larger structural, social, and economic issues of the U.S. legal profession, including law firms, solo practice, and the role of general counsel. Materials will be largely empirical, sociological, and conceptual rather than practice-oriented, unlike related courses on advocacy ethics. The grade will be based principally on a non-anonymous paper and, to a lesser extent, on several smaller assignments. Some lesser aspects of the grading will also involve teamwork. The seminar is an intensive writing and editing experience which will result in a published book of student work. Professor Childress plans to invoke a rule penalizing students for failure to be prepared and/or excessive absenteeism. Students who take this class may not have taken, or co-enroll in the Professional Responsibility Seminar.

3LAW 3840 Remedies (3 Credit Hours)
Recognizing a right tells us very little about how its violation might best be remedied by a court. A single wrong might conceivably be redressed in many ways; by compensatory damages, punitive damages, preventive and reparative injunctions, restitution, declaratory judgment, specific performance, or some combination. The law of remedies concerns the choice among these alternative means for restoring an injured party to her "rightful" position, without unduly harming others in the effort. This body of law displays with particular clarity, and so will be studied as to reveal, both the potentialities and the limits of the legal imagination in redressing complex wrongs to individuals and social groups. Cases will be drawn from tort, contract, and civil rights law.

3LAW 3860 Rights of Nature Seminar (2,3 Credit Hours)
This seminar explores the boundaries of an emerging concept in environmental law, the rights of nature, not based on human protection, use or enjoyment but rather rights recognized in nature itself. It explores the evolution of existing norms for species protection, for example, based on moral and philosophical grounds, some based on other cultures and even civilizations, and the appearance more recently of constitutional provisions and community-based initiatives around the world according these rights more broadly. It is, thus, both very old, and very new. One challenge of the course will be to explore what these rights, as a practical matter, mean, and what they might mean. Grading will be based on class discussion, research and a final paper. Priority will be given to students who have taken Natural Resources, Pollution Control or at least one other related environmental law course.

3LAW 3920 Tax - Adv Corporate Tax (2,3 Credit Hours)
The course will use a transactional approach to examine the corporate tax law issues associated with business operations and acquisitions. Major topics include spin-offs, taxable acquisitions, reorganizations, consolidated returns, tax attributes, contributions, distributions, redemptions, and liquidations. Some partnership, international, and tax procedure issues will also be discussed. There will be assigned readings for each class (generally cases, rulings, articles, and brief passages from the treatises). Class will consist of a short lecture followed by a discussion of problems. Students will be evaluated on the basis of class participation (in the form of a half-page to full-page memorandum on an assigned issue with a brief oral explanation to the class), two short writing assignments, and a final writing assignment. This course will be taught by Joseph Henderson, Senior Vice President and General Tax Counsel, Entergy Corporation.

3LAW 3960 Taxation of Business Entities (3 Credit Hours)
The course covers federal income taxation of C corporations, S corporations, partnerships, and limited liability companies ("LLCs") and the holders of ownership interests in such entities, including the federal income tax consequences of operations; contributions of capital to the entity; distributions by the entity; and acquisitions, dispositions, and rearrangements of the entity. The course also will address choice of entity considerations under the new tax law. Prerequisite or Co-requisite: Federal Income Taxation.

Law Upperclass Electives (4) (4LAW)

4LAW 4010 Deposition Pract. & Procedure (2 Credit Hours)
This is a skills course focused on depositions. While the course centers on basic and advanced skills in preparing for, taking, and defending depositions, its focus is broader. It begins by placing depositions in the context of formal pretrial discovery, and ends with the use of depositions in pretrial motions, negotiation and at trial. Skills exercises will include both oral and written advocacy skills relevant to this important portion of civil litigation. While most civil cases filed in federal or state court are resolved before final adjudication, all practicing attorneys will have to take depositions in order to learn what evidence they must meet at trial, or alternatively use case evaluation for settlement negotiations or mediation. The information obtained in a deposition will allow an attorney to intelligently evaluate the case and competently advise their clients. The course begins with the role of depositions in the larger discovery process, preparation, developing a theme, and the mechanics of the deposition process and procedure, including questioning techniques. More advanced topics will include the expert deposition, use of expert depositions to make effective Daubert challenges, taking and defending corporate depositions, and the use of depositions in pretrial practice including Daubert challenges and summary judgment motions.
4LAW 4020  Accounting & Auditing  (2 Credit Hours)
This course is intended to convey an understanding of the process by which accountants prepare financial statements, and the nature and limitations of financial statements for various uses. The meaning and significance of the independent audit function are explored, as well as distinctive accounting meanings of key terms used in the law, and the auditor’s liability to third parties other than clients. The course is intended for law students who have not previously studied accounting. It is offered every other year. This course is taught by Raechelle Munna, who formerly worked in the corporate & securities group at the law firm of Jones Walker L.L.P. and currently serves as in-house counsel at Entergy.

4LAW 4040  Advanced Persuasive Writing  (2,3 Credit Hours)
This course combines theory and practicality to cover advanced strategies in persuasive writing and build upon the instruction provided in Legal Research and Writing. The theoretical aspect of the course will focus on principles of persuasion drawn from several disciplines, such as classical rhetoric, cognitive psychology, linguistics, and literary theory. Topics studied may include the rhetorical foundations of legal persuasion and credibility; the role of stock structures, visual imagery, and literary or cultural allusions in legal analysis and argument; leveraging storytelling and narrative coherence; and using document design and other visual techniques persuasively. The practical aspect of the course will involve the application of the covered principles to litigation-oriented documents. Students will analyze the persuasiveness of various examples of attorney communications, such as briefs, letters, and judicial opinions, and create their own versions of these documents that incorporate the principles we discuss. Thus, students will learn a number of strategies and techniques, and practice implementing them, to become more persuasive writers. The course will involve a combination of lecture, discussion, in-class exercises and workshops, and individual student-teacher conferences outside of class. Grades will be based on several writing and editing assignments of various length, as well as students’ participation in class discussions and fulfillment of course requirements. There will be no final exam.

4LAW 4050  Corp Compliance Risk Managmnt  (2,3 Credit Hours)
This course addresses issues of significant and growing importance in the areas of corporate governance, compliance and risk management. The course will principally focus on the business corporation, but we will consider the perspectives and concerns of attorneys, regulators, other relevant stakeholders who may influence governance, compliance or risk management. For the purposes of the course, governance refers to the process by which decisions relative to risk management and compliance are made within an organization. Risk management refers to the process by which risk is identified, analyzed, included in strategic planning, and either reduced through risk mitigation tactics or accepted as inherent in activities that the organization wishes to conduct. Compliance refers to the processes by which an organization policies its own behavior to ensure that it conforms to applicable rules and regulations. The law of governance, risk management, and compliance is the body of rules, regulations, and best practices that, individually and collectively, are intended to ensure that organizations are managed effectively and in such a way as to enhance social welfare. This course explores topics of growing importance that arise at the intersection of governance, risk management and compliance and technology. Specifically, this course offers an introduction to the use of blockchain platforms in finance and health care. Questions emerge regarding the governance structure of blockchain, the use of blockchain technology to address privacy concerns, the ability of blockchain systems to replace transfer and storage systems in the public and private sector. This seminar may be taken to satisfy the upper-class writing requirement. Business Enterprises is a prerequisite.

4LAW 4060  Administrative Law  (3 Credit Hours)
The course explores the history, present status and nature of administrative agencies. The main emphasis is placed on administrative procedure, contrasting it with the judicial process, as well as constitutional limits on administrative action and the due process rights of persons who are adversely affected by agency action. Topics covered include: delegation of powers, the law of judicial review of agency actions, and procedural requirements of administrative rulemaking and adjudication. (3 credits)
4LAW 4070 Art/Culture Law (2,3 Credit Hours)
This course will look at all of the main issues surrounding art, cultural heritage, and current contemporary user-generated culture. We will look at Holocaust-era related art crimes; the life of the artist and legal issues; museums, dealers, and collectors; First Amendment issues related to art; moral rights; indigenous cultures and cultural preservation; who owns the past within an international context; and the creation of user-generated culture in our current Internet world. This class focuses on visual arts, but in many cases applies to all cultural works, particularly in our multi-media world. The seminar will produce a collection of essays that will be published as a book, (Il)Legal Art: A Handbook. Students will each write a chapter for the book. Because of the nature of the course, students must be good at deadlines and working with others. We will potentially be working with local artists as part of the experience. Students will be graded on their paper, but also should make a commitment to make revisions to their post-graded paper as part of the book as we get further in the process of publication, even if this occurs after graduation. This may be up to a year or more in the future. While this latter time commitment is not great, it still is an integral part of the experience. IP Survey is a required pre-requisite. If you have not taken IP Survey, but feel that you have other qualifications that might benefit the class, please indicate this on your seminar application. This seminar may be taken to satisfy the upper-class writing requirement.

4LAW 4080 Advanced Appellate Advocacy (2 Credit Hours)
The course is designed to further develop the skills learned in Legal Research and Writing and to provide 2Ls and 3Ls with the opportunity to draft an appellate brief and present an oral argument. The course focuses on appellate theory, standard of review, advanced appellate brief writing, and the art of appellate oral argument. Students will be assigned to act as either Appellants or Appellees and will write a brief from a shortened record. While focusing on the Federal Rules of Appellate Procedure, the course will also survey certain differences in Louisiana state appellate practice. Students will also prepare, practice and deliver a full oral argument. Because of the experiential nature of this class, enrollment will be limited to twenty students.

4LAW 4120 Complex Litigation (2,3 Credit Hours)
This is an advanced civil procedure course focusing on a number of important aspects of civil procedure which are only superficially considered in the first year. It is useful for anyone interested in litigation or practice involving multi-party transactions such as antitrust, securities, product liability, mass torts, consumer litigation and employment rights. The procedures considered include: joinder of parties and structure of law suits in complicated multi-party suits; duplicative litigation and use of stay orders, injunctions, consolidation, and transfer to the Multi District Panel; res judicata; class actions; discovery and trial in complex cases; settlement, and attorneys’ fees.

4LAW 4160 Con Crim Pro:Adjudication (2,3 Credit Hours)
The course will examine constitutional procedural and litigation issues from the commencement of a criminal case through conviction (or acquittal), appeal, and post-conviction relief options. Students will be asked to think critically about the goals of criminal procedure and about whether our legal system effectively serves those goals. The course primarily addresses Sixth Amendment issues.

4LAW 4200 Animal Law (2,3 Credit Hours)
This survey course will provide an overview of the evolution of animal law and the breadth of issues encompassed by this rapidly developing field of law. At the same time, the course will afford the opportunity for in-depth deliberation of the salient issues in current animal law litigation, including in Louisiana. Because animal law necessarily implicates virtually every field of law, including constitutional law, property law, criminal law, and torts, students must develop and apply their knowledge of these other fields in class discussions. Students will also be expected to understand and apply basic principles of administrative law introduced in the course.

4LAW 4270 Business Planning (2,3 Credit Hours)
What do transactional lawyers do and how do they do it? The course focuses on the lawyer's role as an advisor to a privately-owned start-up company and its owners. We will explore how legal issues and business objectives overlap, the role played by the transactional lawyer in the transaction and soft skills such as client relations/communications and co-worker relationships. This course will examine the life cycle of a hypothetical company, focusing on sample transactions from three major stages of the company's life cycle: choice of entity, formation and obtaining capital; ongoing operations; and exiting or sale of the company. Much of the class work will involve working in teams simulating an actual transactional practice. Using hypothetical business scenarios and actual deal documents, students will represent the company, its owners, or third parties and will analyze, structure and negotiate selected deal components, and, on a limited basis, draft portions of the relevant deal documents. This capstone course is designed to broaden the student's knowledge in a number of substantive areas, help students learn to focus on a client's business objectives rather than just addressing legal issues, and to begin the process of bridging the gap between law school and practice. The course will be taught by John Herbert, outside general counsel of a Houston-based energy company and formerly a division general counsel of a Fortune 30 energy corporation. Business Enterprises is a prerequisite. Grades will be based on periodic written team and individual exercises, a personal journal, and a final written project. There will be no final exam.

4LAW 4280 Antitrust (3 Credit Hours)
This course will examine the basic antitrust statutes, Sections 1 and 2 of the Sherman Act, Sections 3 and 7 of the Clayton Act, Section 5 of the Federal Trade Commission Act, and the Robinson Patman Act. The course will focus on the objectives of antitrust law, the concepts of market power and market definition, monopolization, horizontal and vertical restraints, mergers, the use of the per se rule and the rule of reason, price discrimination, and commercial bribery. Professor Feldman plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism. Note: Antitrust may not be offered during the 2019-2020 academic year.
4LAW 4310 Bioethics (2,3 Credit Hours)
Bioethics is the multidisciplinary study of ethical and legal issues that emerge with advancements in medicine. Students will learn about bioethics from a historical perspective as well as its application today. The course will address concepts including patient rights, maternal-fetal conflict, right to life, right to die, and control and regulation of medical resources. The course will teach students to recognize and analyze conflicts which arise between medical professionals, patients, the government and private business interests, according to accepted bioethical frameworks. The course is taught by Kathy Rito, Esq., an attorney at The Middleberg Group.

4LAW 4360 Civil Law Seminar (1-3 Credit Hours)
This Seminar covers selected civil law institutions with emphasis on the laws of property, obligations, community property, and successions. It also covers the subjects of civilian methodology, techniques of codification, and the modern history of the civil law. The Seminar is designed to sum up student experience in the civilian tradition. Louisiana law is studied in comparison with the common law of sister states and the laws of European countries. Doctrinal study is applied to the resolution of legal issues in contemporary practice. There is no final examination. Students are graded in light of class participation and their ability to produce an original research paper on a civil law topic. Students are required to have taken at least one civil law course (e.g., Property, Obligations I or II).

4LAW 4380 Civil Law Torts:Selected Issue (2,3 Credit Hours)
This course will focus primarily on Louisiana's unique tort law, utilizing the Louisiana Civil Code, current Louisiana cases and statutes. Some of these concepts will be compared to common law torts. Subjects likely to be covered during the semester are duty-risk, intentional torts, damages, defenses, wrongful death, contribution and indemnification, vicarious liability, absolute liability, strict liability, products liability, liability of owners/lessors and occupiers of land, and professional malpractice (medical and legal) and prescription. (2 Credits)

4LAW 4410 Contemp Issues in Legal Ethics (2,3 Credit Hours)
This course is designed around the fundamental premise that the subject of professional responsibility and its intersection with an individual's personal moral and ethical code is the single most relevant consideration to a future career as a member of the bar. The course will explore ethical problems and dilemmas that modern lawyers face from day one of practice. It is critical that lawyers be alert to spotting these issues when they arise and be educated in the methods of resolving them and prepared to handle them. Rather than a straightforward discussion of the Model Rules, the course will be an in-depth examination of contemporary issues that affect modern legal practice, including the development of a professional identity in an adversarial system, ethical issues in alternative dispute resolution, the use (and misuse and failure to use) social media and other technology, and the ethical implications of innovation in the law. The course will be co-taught by the Hon. Scott Crichton, Associate Justice of the Supreme Court of Louisiana; James Garner, a co-managing member of Sher Garner Cahill Richter Klein & Hilbert, L.L.C.; and Sarah Rubin Cohen. This course is limited to third year students. This course does not satisfy the Legal Profession requirement, and Legal Profession is a prerequisite for this course. This course is not eligible to satisfy the upper-class writing requirement.

4LAW 4450 Com'L Law-Adv Bankruptcy (2,3 Credit Hours)
Through a lens examining the philosophy, principles, and policies underlying business reorganizations, this course will provide a practical look at the path a financially distressed enterprise can take, from filing to confirmation of a plan of reorganization under chapter 11, conversion to chapter 7, or dismissal. The following topics, among others, will be covered: good-faith filing and venue; retention and compensation of professionals; the extent of the court's equitable powers; use, sale, and lease of the debtor's property; successor liability; post-petition financing; the absolute priority rule; involuntary imposition of a reorganization upon creditors and shareholders; claims allowance; and the role of debtors, professionals, creditors, officers, directors, and trustees in the context of corporate restructuring. Grades will be based on draft pleadings and mock arguments for hypothetical clients at each stage.

4LAW 4460 Env'L Law:Comparative (3 Credit Hours)
This course treats the rising phenomenon of environmental law around the world, not through international accords (the subject of other courses) but through national approaches to common issues including: impact assessment, judicial review, land use, toxics and wildlife species. The class will be graded on the basis of student participation (including TWEN), and on selected research projects leading to discussions and papers at the end of the course. Introductory in nature, prior or concurrent classes in the field are useful but not required. (3 Credits)

4LAW 4540 Compar Constitutional Law (2,3 Credit Hours)
This course provides a comparative survey of influential contemporary constitutions including those of the United Kingdom, France, Germany, and South Africa. Following an introduction to comparative methodology and the functions of comparative law, especially in the legislative and judicial spheres, the class focuses on a shortlist of specific topics. These include the legislative process, bicameralism, the separation of powers, electoral systems, federalism, judicial review, and the protection of human rights. The concept of transnational constitutionalism, the potential and pitfalls of constitutional legal transplants, and the drafting of new constitutions in post-conflict societies such as Iraq, Tunisia or Kenya will also be considered. Students are invited to engage with foreign approaches to these issues through the lens of US case law and constitutional doctrine. The course will be based on a study pack of selected legal materials from the systems under review. Knowledge of foreign languages is not required.

4LAW 4550 Con Law:14th Amendment (3 Credit Hours)
This course is designed to cover issues of individual rights under the Fourteenth Amendment that are given only brief treatment in the introductory first-year course. Subjects include equal protection, substantive due process, state action, and Congress's power to enforce the Fourteenth Amendment's guarantees.
4LAW 4590 Constitutional Law Sem (2,3 Credit Hours)
Decisions of the Supreme Court such as Brown v. Board of Education and Roe v. Wade have inspired extensive debate among academic scholars as to the role of the Supreme Court in our system of government and the proper way to interpret the Constitution. This seminar will provide an in-depth examination of the most important issues in constitutional theory. The main topics to be addressed will be the idea of constitutionalism in the U.S., the justification of judicial review in a representative democracy, and the various theories of constitutional interpretation proposed by scholars. The readings for the course will be extensive, and will represent the wide diversity of opinion present in contemporary theoretical debates.

4LAW 4630 Consumer Financial Services (2,3 Credit Hours)
This course examines the federal and state laws and regulations governing consumer financial services and the entities offering those financial products. The course will cover common law approaches to consumer financial protection but will focus heavily on federal and state consumer protection statutes, including the Fair Credit Reporting Act, the Truth in Lending Act, the Fair Debt Collection Practices, the Telephone Consumer Protection Act, and the Dodd-Frank Consumer Protection Act.

4LAW 4690 Constitution & Religion (2,3 Credit Hours)
The substantive focus of this course will be the history, theory, and doctrine of the Establishment Clause and Free Exercise Clause of the First Amendment. Additional topics may include the religious dimension of American constitutionalism, the concept of American Civil Religion, the relationship between religion and politics, and similar subjects. The grade will be based on the student's research paper, the student's oral presentation of his or her research project to the seminar, and the student's overall contribution to the work of the seminar.

4LAW 4700 Copyright Law (0-3 Credit Hours)
This course will take an in-depth look at copyright law. Building upon the IP Survey, which is a prerequisite, the course will focus on the advanced and contemporary topics in copyright law, both in a domestic and international context.

4LAW 4710 Copyright+Trademark Prac (2,3 Credit Hours)
The copyright and trademark course will cover the key advanced topics in copyright and trademark law. Although the class will contain a final exam, it will also be research intensive and students will be assessed, in part, on their ability to work collaboratively on writing and to undertake domestic and international research. IP Survey required.

4LAW 4740 Corporate Finance (3 Credit Hours)
This course provides both an introduction to financial economics – e.g., how companies are valued, how investment decisions are made – and advanced coverage of corporation and contract law related to the financing of modern business enterprises. The course will survey the rights and protections that exist for financial stakeholders in the corporate enterprise, including debtholders, preferred shareholders, holders of warrants and rights. Business Enterprises is a pre-requisite or permission of instructor required. Mergers & Acquisitions is also highly recommended.

4LAW 4770 Corporate Practice, Adv (2,3 Credit Hours)
This course will emphasize the practical aspects of advising the public corporation's board of directors in the deal making context of takeovers, proxy contests, shareholder activism, and mergers and acquisitions. The course will introduce students to the laws, theories, and corporate governance systems that underpin the board's decision-making process, as well as the roles and perspectives of other players, including corporate officers, investors, investment bankers, and regulators. Each topic will be addressed in a policy class taught by faculty and a practice class led by distinguished legal practitioners. Grades will be based on attendance, biweekly written analyses of a hypothetical transaction, and a final reflection paper. Business Enterprises is a prerequisite for 2L students and a prerequisite or co-requisite for 3L students. Some course content may overlap with that taught in Mergers & Acquisitions and the Corporate Governance mini-course.

4LAW 4780 Criminal Procedure Sem (3 Credit Hours)
This seminar provides students with the opportunity to do advanced work on a research topic of their choosing on a topic related to Fourth, Fifth, or Sixth Amendment law. The course in Constitutional Criminal Procedure: Investigation is a prerequisite. Students will write a 30-page research paper that resembles a law review comment in format, style, and footnoting. Each student will select relevant readings on his or her topic, and lead a one-hour "workshop" discussion about these readings as preparation for writing or revising the rough draft. The course grade is based on the final paper, class participation, and timely completion of written assignments such as responses to prompt questions about the readings.

4LAW 4810 Criminal Law, Federal (2,3 Credit Hours)
This course explores major jurisdictional, procedural and substantive issues involved in the enforcement of federal criminal law. Included among the crimes on which the course focuses are mail and wire fraud, drug offenses, banking offenses and money laundering, perjury and obstruction of justice, and RICO. Professor Larson plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

4LAW 4840 Criminal Practice, Adv (2 Credit Hours)
This course explores the various stages of the criminal justice process, e.g. arrest, first appearance, bail hearing, charging process (district attorney, grand jury), arraignment, pre-trial discovery, plea negotiations, and post-trial motions. The course will be taught partly by lecture, partly by class discussion of hypothetical fact situations, and class discussion of leading cases as to each topic. The format differs from some classes in that the students evaluate the hypothetical fact situations first, and only thereafter read the applicable case law to see how it reinforces or changes their original opinions. The class is limited to 20 students and preference is given to seniors and those students who are not in the criminal law clinic. Constitutional Criminal Procedure: Investigation is a corequisite.
4LAW 4860 Criminal Law, International (2,3 Credit Hours)
The course attempts to examine the political and jurisprudential theories which underlie the rapidly-developing system of international criminal law, together with the actual structure of the system which now exists. The course will address both the “core crimes” of international criminal law, i.e., war crimes, crimes against humanity, genocide, and aggression, as well as those crimes that have become truly international in nature, such as drug trafficking, money laundering, and terrorism. During the semester, the course will cover both threshold issues, e.g., what is “international” criminal law, and general concepts, such as sovereignty and jurisdiction in international criminal matters. In addition, international enforcement and penal mechanisms will be studied, all within the context of those entities that create, implement or enforce international criminal laws, such as the United Nations, the European Union, and the federal courts of the United States. With regard to each such entity, consideration will be given to the political and economic implications of the international aspect of the system, and to the procedural problems created by its trans-national nature. Public International Law is recommended. Professor Larson plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

4LAW 4890 Election Law (2,3 Credit Hours)
Election law is a fascinating topic not only in politically charged times; the rules surrounding elections determine the way constitutional principles play out in practice at any point in time and thus lie at the very heart of democracy. In combination with a few other key variables, such as the structure of the executive (presidential or parliamentary) and the vertical distribution of power (unitary or federal), election systems can shape the exercise and coherence of party influence over government, the stability of the executive, the breadth and legitimacy of representation, the capacity of a system to manage internal conflict, the extent of public participation, and the overall responsiveness of government. Several factors – in particular overall system design, state funding and private campaign financing, districting, or general party influence – impact on elections. The course covers these and many other core issues in the context of different voting systems and their respective political and constitutional dynamics. Most of the course deals with the United States; the increasing influence of proportional representation and variants of majoritarian election systems both in the U.S. and around the world, however, also invites some comparison with approaches found in the United Kingdom, France, Germany and South Africa. Due to overlap in content students may not enroll in both the Election Law and the Law of Democracy course.

4LAW 4910 Employment Discrimination (3 Credit Hours)
This course concentrates on analyzing the statutory, constitutional, administrative, and judicial responses to discrimination on the basis of race, age, sex, religion, national origin, alienage and sexual orientation by private and public employers.

4LAW 4920 Employment Discrim Sem (3 Credit Hours)
This course is designed to provide in-depth coverage of some of the most currently controversial subjects in employment discrimination and to provide the students with an opportunity to write a substantial scholarly paper dealing with an employment discrimination topic of their choosing that I have approved. Completion of this paper would satisfy the upper class writing requirement as the students will receive three (3) academic credits. The course will be divided into three components: The class will meet at a regularly scheduled day and time once per week (as is typical for seminar courses) for the first third of the semester to discuss the assigned material. For the following third of the semester each students will meet with me individually once per week to discuss the progress on her or his paper. For the final third of the course, the class will again meet once per week to give each student an opportunity to present his or her paper to the class for comment and analysis. Each student is responsible for choosing his or her paper topic and will be expected to have chosen a paper topic during the intersession period, to be handed in at the beginning of the first class meeting. Employment Discrimination law is a mandatory prerequisite for this course. Enrollment will be limited.

4LAW 4930 Env Law: Historic Preservation (2 Credit Hours)
This seminar will present a national, state and local perspective on historic preservation in a broad sense, including protection of the urban environment and of archaeological, cultural and other historic resources. It will examine laws dealing directly and indirectly with preservation, and the institutions that implement them. The city of New Orleans provides rich material for this examination. Students will be required to research selected topics and to present their findings orally to the class and in a substantial final paper. Grade will be based on research paper, oral presentation of paper topic, class participation and attendance. (3 Credits)

4LAW 4950 Entertainment Law (2,3 Credit Hours)
This course will cover legal issues in representing clients within the entertainment industry, highlighting business and economic considerations. The focus will be on the nature of relationships and transactions, including implications on intellectual property rights arising from contractual and other legal matters, which arise among various players from the music, film, visual and performing arts sectors. These players will include recording artists, songwriters, producers, managers/agents, record labels, publishers, filmmakers, screenwriters, graphics artists, studios, etc. Emphasis will be placed on analyzing the initial development and evolution of these dynamic relationships as they are intertwined within a pragmatic fact-pattern involving common issues arising from entertainment legal matters. Throughout the course, consideration will be given to various revenue streams flowing from intellectual property through channels of commerce, such as tangible record sales, digital sales, performance rights, and licensing, including synchronization licensing for music placements against film.
4LAW 4960 Energy Regulation (2,3 Credit Hours)
This course will begin with an overview of the global energy situation in terms of supply and demand as well as balanced projections for the coming decades both here and abroad. It then will proceed to examine the primary sources of energy along with the multi-faceted role of electricity as the central source of secondary energy in our economy. This portion of the course will cover in some detail how these energy sources are used and regulated from economic, reliability, and environmental perspectives. There will therefore be a review of legal and regulatory principles governing fossil fuel extraction and use, the coal industry, nuclear power, a range of renewable energy sources, and finally the regulation of electricity generation, transmission, and distribution. The course will conclude with a brief review of the growing role of conservation and climate change in energy markets here and to some extent abroad. There will be an essay-based final examination and class participation will certainly be encouraged.

4LAW 4990 Env Law: Pollution Control (3 Credit Hours)
This course introduces the basic pollution control statute, the Clean Water Act, the Clean Air Act and hazardous waste laws. It examines and contrasts their objectives, their regulatory schemes and their relative successes. Special emphasis is given to comparing and critiquing the major regulatory approaches to pollution control: command and control regulation according to health-based or technology-based standards and economic incentive schemes, as well as statutory interpretation.

4LAW 5000 Toxic Tort Theory & Practice (2,3 Credit Hours)
This course aims to developing an understanding of the history and development of toxic tort litigation as a practice area. Special attention will be given to the difficulties in fashioning equitable remedies, novel issues of medical causation as well as the practical problems arising from emerging science and unsettled law.

4LAW 5010 Env Law-Clean Water Act (2,3 Credit Hours)
This class examines hot topics in clean water law and policy, some of long standing that are coming to a head, others new and challenging. Subjects include the Chesapeake Bay program, the Everglades, Thermal Power plants, Concentrated Animal Farms, Ocean acidification, and potential litigation by private and public parties against pollution impacts. Several of these we will treat preliminarily in class; others of any kind you may choose to investigate for your class projects. The class will be of two parts, selected readings that illustrate the Act’s approach to key sectors, followed by classes based on student research, leading to a final paper. Grades will be determined on the basis of class and TWEN discussion, research presentations, and the ultimate paper. Because the Clean Water Act is also included this Spring in Pollution Control, the focus of this seminar will be more geographic and sectoral, how the law works with regard to a particular problem. While Pollution Control is not a prerequisite for this seminar, a student should either be taking it concurrently or have equivalent experience with the law or the research intended.

4LAW 5020 Biodiversity & Endangered Spec (2,3 Credit Hours)
This seminar examines the so-called “pit-bull” of environmental law, whose requirements draw a bottom line for human activity across the board, altering government programs and private decisions along the way. Not without angst. And not without vigorous attempts to modify or eliminate them altogether, one currently pending before the Supreme Court. We begin the seminar with readings and discussions of the science and legal principles of the field, and then move to issues of your own choice for research, class presentation and final papers. We will also address events in Congress and the responsible agencies as they, too, evolve. The protections of endangered species and biodiversity are themselves on trial, and the stakes on all sides are high. Familiarity with environmental law generally, and/or conservation biology, are useful but not required. Class size limited to 15 students.

4LAW 5030 Env Law-International (3 Credit Hours)
This course examines the basic international legal setting for the protection and management of the environment. It discusses how international law is made and applied, the role of international environmental regimes or institutions, transboundary liability and compensation, enforcement strategies and compliance control mechanisms. Major themes of the course include human rights and the environment, free trade and environmental protection, the financing of global environmental protection measures, the protection of biodiversity, North-South issues generally, as well as various regulatory regimes for the protection of the global commons and internationally sensitive natural resources, including the Climate Change Convention. Public International Law is highly recommended. Professor Handl plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

4LAW 5040 Env Law-Coastal Law (2,3 Credit Hours)
This seminar provides an examination of the factual, legal, and policy framework that has developed regarding issues of coastal land-loss, with a focus primarily on the quickly disappearing wetlands in Louisiana, but also with an examination of similar land-loss issues in other communities. The seminar will examine the background of the importance of coastal wetlands, the crisis of coastal wetlands loss, the causes of that loss, and the legal and policy responses in the search for remedies for that loss. The seminar will be co-taught by Christopher Dalbom (Senior Research Fellow and Assistant Director of the Institute on Water Resources Law and Policy at Tulane Law School) and Bessie Antin Daschbach and Tad Bartlett (both members of Jones, Swanson, Huddell & Garrison LLC). This seminar will not satisfy the upper-class writing requirement.

4LAW 5060 EnvLaw Seminar (2,3 Credit Hours)
This seminar will explore actual and proposed changes to the environmental regulatory system under the Trump administration. It will focus on both substantive and procedural aspects of these changes, including barriers to change. This will involve study of environmental law and administrative law issues. Students will write and present a seminar paper that satisfies the upper-class writing requirement. Professor Babich plans to invoke a rule penalizing students for excessive absenteeism.
This course is about everything environmental. That is, it cuts across the body of the environmental media statutes and goes to the heart of the law – enforcement. Permits and rules are mainly technical, and (except for rule-making litigation and legal transactions) enforcement is mostly where the lawyer reigns. So we will not focus so much on details of the media programs other than what happens after a violation. We’ll cover such topics as EPA priorities, enforcement theories, overfiling, reporting, investigations, civil penalties, injunctions, citizen suits, remediation and white collar criminal prosecution. Classes will be lecture, case discussions from a text, and team hypothetical problem solving and presentations. The course will be taught by Stan Millan with the Jones Walker Law Firm. Professor Millan plans to invoke a rule penalizing students for lack of preparation (which counts as part of grade) and/or excessive absenteeism (3 or more classes). The plan is to teach the course jointly at Tulane with Loyola College of Law students.

This seminar treats the rising phenomenon of environmental law around the world, not through international accords (the subject of other courses) but through national approaches to common issues including: impact assessment, judicial review, land use, toxins and wildlife species. The class will be graded on the basis of student participation (including TWEN), and on selected research projects leading to discussions and papers at the end of the course. Introductory in nature, prior or concurrent classes in the field are useful but not required.

This course will cover the role and influence of the legal system on the use, allocation, and stewardship of water resources in the United States and Louisiana. Since the field of water resources management is rapidly evolving to accommodate storm protection, ecosystem restoration and sea level rise an understanding of the policies that underlay our current laws and the factors that are influencing current policy and law-making will be an important part of the course’s focus. Course materials will include law cases and related materials which must be read before class. The course will be lecture oriented with occasional guest lecturers with specific experience in development of water resources law and policy. Students will be asked to participate in one group project in which they will be asked to develop, present and defend a position paper on some aspect of the water resources management challenges arising in coastal Louisiana.

This course covers the legal and political development of the European Union, highlighting the gradual functional and organizational changes that have taken place over the past five decades, and deals with its present-day constitutional structures including the Commission, the Council, Parliament, the European Court of Justice, and the European Central Bank. Specific emphasis will be placed on human rights protection and judicial review in the European context, the concept of a European constitution, the ongoing expansion process, and challenges connected to the introduction of a common European currency. The course also focuses on the tensions between an increasingly influential and supranational Union and its 28 sovereign Member States. Students are invited to draw comparisons between the European Union and the United States throughout the course.

Feminist legal theory can pose a significant epistemological challenge to traditional schools of jurisprudence, questioning some of the very premises of what constitutes justice and equality in a liberal democracy. At the same time, it seeks to explore how gender shapes the law and how the law shapes gender. This course will examine the principle tenets, methodologies, and controversies in feminist legal theory including the meaning of equality, the intersection of race and law, the public/private divide, concepts of objectivity and neutrality, and how law reproduces hierarchies while also having the ability to participate in significant social change. We will look at how feminist theory has used, incorporated, modified and critiqued other schools of jurisprudence and theoretical paradigms including Marxism, critical legal studies, critical race theory, and postmodernism. We will also analyze debates between feminist theorists regarding essentialism, women’s sexual agency, and how feminist theory itself is a product of a particular society. The goal of the course is to think broadly and critically regarding the interaction of law, society, and gender while exploring the potential and limitations of our legal system.

The financial system is the infrastructure on which all economic activity takes place with enormous political and distributive stakes. The law of financial institutions is thus of central concern to students of diverse interests: aspiring private practitioners, regulators, and public interest lawyers concerned with social justice. A decade now since the Global Financial Crisis, the legal reforms put into place are profoundly trans-forming all three areas and their interrelationships. We will study these transformations, focusing on the law of commercial banks and the Federal Reserve (Part 1); broker-dealers, hedge funds, and registered investment companies (Part 2); and central clearing counterparties (Part 3).

The United States are the single most important trading partner of the European Union (and vice versa)—despite the growing importance of expanding economies such as India, China, the ASEAN, or Brazil. The sheer volume of transatlantic trade and the battle for worldwide market shares inevitably create a need for lawyers with specialized and comparative legal expertise in substantive EU law. This course provides both a basic introduction to the political and legal organization of the European Union and detailed treatment of the most important areas of business related EU law. The course covers the most important aspects of the legal and regulatory framework of EU internal market. Discussions will focus on the so-called four freedoms – free movement of goods, services, persons and capital – within the common market, state aid, competition rules and antitrust policy as well as the Union’s external commercial (trade) policy. Students will be made aware of differences between national and EU approaches, and how these differences impact on transatlantic business relationships.
4LAW 5160 Fair Housing & Litigation (2,3 Credit Hours)
With SCOTUS recognizing discriminatory effects claims under the Fair Housing Act (FHA) last term and U.S. HUD issuing the first comprehensive regulation interpreting affirmative governmental fair housing duties in 2015; a study of fair housing law and litigation is particularly timely. This course will examine Title VIII of the Civil Rights Act of 1968, as amended in 1988; classes protected; transactions covered (rental, sales, lending, insurance); and the fair housing obligations of states, municipalities, and public and affordable housing programs. Students will be challenged to consider the strengths and weaknesses of litigation as a tool for creating an equal housing market and eradicating residential segregation. This course will incorporate doctrine, theory, and practice and will be assessed using a mid-term exam and several writing assignments.

4LAW 5170 Energy & Env'l LLM Seminar (1 Credit Hour)
This seminar explores current issues in Environmental and Energy law through faculty and LLM candidate presentations and discussion. This seminar is open to graduate Energy & Environment students only.

4LAW 5180 Con Law:Freedom Speech/Press (3 Credit Hours)
This course focuses on the Supreme Court’s opinions on freedoms of speech and press issues in First Amendment jurisprudence. The topics of study may include: advocacy of illegal action, defamation, commercial speech, obscenity, offensive speech, hate speech, symbolic speech, regulation of the public forum, prior restraint, and other topics. The First Amendment topic of freedom of religion is the subject of a separate course, entitled The Constitution & Religion.

4LAW 5200 Foreign Affairs & National Sec (3 Credit Hours)
The focus of the course will be on the U.S. constitutional structure and how that affects the role the United States plays in the international arena. We will inquire into how the Constitution enables and constrains the manner in which the United States government participates in lawmaking internationally and how that in turn affects private rights within the United States. An international lawyer working in this country will surely need to be familiar with constitutional and other legal constraints that govern our relationship with the outside world. And a domestic lawyer to be effective in this day of global interdependence will need to be familiar with the international process that continuously shapes the nature of the constitutional order in this country and our very understanding of the Constitution itself. Some of the areas that will be covered in the course are: foreign relations and the separation of powers doctrine; the scope of and limitation on the treaty power; presidential power to conclude international agreements outside Article II treaty power; constitutional and domestic status of customary international law; foreign sovereign immunity and the act of state doctrine; congressional and presidential war-making powers; constitutional rights and the war on terrorism; extraterritorial application of the U.S. Constitution and U.S. laws; and the power of states in relation to foreign affairs.

4LAW 5260 First Amendment Seminar (3 Credit Hours)
This seminar provides students with the opportunity to write a research paper on a topic of their choosing related to freedom of speech. The course in Constitutional Law: Freedoms of Speech & Press is a co-requisite. (Students either must have taken the course in a prior semester or must be enrolled in the course in Spring 2014.) Seminar students will write a 25-page research paper that is similar to a law journal comment in format, style, and footnoting. Each student will lead a one-hour workshop discussion as preparation for drafting and/or revising the paper. Each presenter will select relevant readings on his or her topic and design prompt questions that will be posted on TWEN one week before the workshop discussion. Each non-presenting student is required to post responses to the prompt questions of the presenters. Note that students also are required to submit a paper topic memo and list of sources, a rough draft of 15 pages with footnotes, and written comments on the rough drafts of two other students. The course grade is based on the final research paper, the workshop presentation and discussion, class participation, and the timely completion of all writing assignments.

4LAW 5280 Health Care Law & Regul (2,3 Credit Hours)
The course begins with an overview of the U.S. health care industry and then addresses the law that affects major portions of that industry and those it serves. Relationships among individual health care providers (e.g., physicians), institutional providers (e.g., hospitals, nursing homes, clinics), and patients of those providers are explored, as are various statutory entitlements (e.g., Medicare, Medicaid, EMTALA), medical malpractice concepts, preemption effects of ERISA, patient privacy/consent issues including HIPAA mandates, and the policing of fraud and abuse. The class will examine the health law that resulted from the health reform legislation signed by the president in March, 2010. Finally, the course will review how the antitrust laws impact the structure and conduct of health care providers.

4LAW 5290 Health Care Law Practice (2,3 Credit Hours)
Health care law practice has come to play an increasingly important role in our legal system. The cost and accessibility to health care is presently the most significant domestic issue facing the United States. An ever growing matrix of federal and state statutes and regulations determines how and when medical services are delivered, where they are delivered, to whom they will be available, and how payment is made for those services. The volume and intricacy of these legal authorities has increased so rapidly that there are now subspecialties of law within health care law itself. There also exists a complex system of contracts as well as abundant detailed federal and state statutory and regulatory requirements as to such contracts. The seminar will examine many of the most significant legal issues as to the health care delivery system, the regulation of health care providers, statutory and regulatory issues as to payments, managed care and rights of health care providers and patients. Emphasis will be placed upon examining the many applicable legal issues implicit in the delivery of health care by health care providers and the payment for health care services in an arena of rapidly changing and dynamic statutory and jurisprudential activity.
4LAW 5340 Immigration Law (2,3 Credit Hours)
The course examines the immigration and naturalization processes of the United States with a focus on practical application, procedures, and statutory construction. Topics will include citizenship and naturalization, the admission and removal of immigrants and nonimmigrants, and the issues of undocumented immigration and national security. We will also address the intersection of immigration with other practice areas including employment, criminal, and family law.

4LAW 5341 Immigration:Policy & Social (2,3 Credit Hours)
This course touches upon the major policy debates currently swirling around immigration reform and policy. This course will survey social changes and development of immigration law over the last few decades, including the emergence and role of social change movements. Topics will include undocumented immigration, international coordination on migration, judicial review and due process, refugee and asylum policy, immigration and employment, border security, state and local enforcement of immigration law, and the relationship between immigration law and crime. The course will include dialogue with leading immigration and refugee advocates and policy-makers, engaging students in important debates about what immigration and refugee policy should be.

4LAW 5342 Immigration for Business (2 Credit Hours)
The course is a foundation in the practice of business immigration law with a focus on practical application, procedures, and statutory construction. Topics will include both nonimmigrant and immigrant employment based immigration to the United States and employer compliance matters (such as I-9 compliance). We will also address the intersection of immigration with other practice areas of business and employment law. Familiarity with basic immigration concepts is recommended.

4LAW 5345 Immigrant's Rights (2,3 Credit Hours)
The course is an experiential course integrating lawyering theory, skills and doctrine in the context of representing noncitizens (seeking nonimmigrant U status) in partnership with the community group, the New Orleans Workers’ Center for Racial Justice (NOWCRJ). Students will be assigned to work in pairs, under the supervision of a NOWCRJ attorney and Prof. Hlass, on one U nonimmigrant status application for a NOWCRJ client. Students will learn the substantive law of U Nonimmigrant Status, as well as ethics and professionalism, as they develop lawyering skills including: client-centered interviewing, investigating facts, researching and analyzing relevant law, case planning, developing a theory of the case, creative problem-solving, strategic decision-making, collaborating, legal storytelling, cross-cultural lawyering and consequences of implicit bias, and legal writing, including affidavits and advocacy-focused letter briefs. This course has a weekly seminar, as well as an expectation of 10-15 hours of fieldwork weekly to complete the 135-hour fieldwork requirement. Enrollment is by application and is subject to the approval of the faculty.

4LAW 5370 Information Privacy (2,3 Credit Hours)
Information Privacy is a course that explores privacy law with a special focus on its history, technological advancements, and the tort aspects of privacy in the United States, including misappropriation, intrusion, publication of private facts, and false light.

4LAW 5380 Insurance Law (2 Credit Hours)
Insurance plays a critical role in all areas of law practice. This course will introduce you to the basic concepts and terminology; survey numerous types of insurance such as general liability, property, life, automobile, construction, professional liability, employment, environmental, homeowners, product liability, including litigation issues such as the duty to defend, the duty to indemnify, subrogation, fraud, bad faith, defenses, damages, procedure; and address governmental regulation.

4LAW 5390 Initial Public offerings (2 Credit Hours)
This course will examine the law governing, and the skills involved in, the preparation of an initial public offering of securities. The skills include: giving advice (including unwelcome advice); analyzing business opportunities and performance; writing clearly and concisely; and dealing with other professionals who participate in the transaction (issuer, underwriter, counsel to other parties, accountant, SEC staff). We will read excerpts from the Securities Act, SEC regulation S-K, some SEC releases, a handful of judicial decisions, parts of a prospectus, episodes from a novel and other materials. Students will be asked to select an offering and to prepare three short comments, one on the Business section, one on the Risk Factors section, and one on the Management’s Discussion and Analysis of the prospectus they select.

4LAW 5400 Law of Higher Education (2,3 Credit Hours)
This course will focus on law within colleges and universities, including academic freedom, the law and faculty, the law and students, and the history of the intersection between higher education and law. Students will be expected to come to class having done the readings and ready for discussion.

4LAW 5410 Intellectual Property (3 Credit Hours)
This survey course introduces students to the basic state and federal laws relating to inventions and cultural works. The class will cover topics that include patents, trademarks, copyright, right of publicity, and trade secrets. The course will look at the moral, cultural, economic and theoretical underpinnings to our current controversies in intellectual property law. This course is a prerequisite for nearly every advanced course in Intellectual Property.

4LAW 5420 Intellectual Property Seminar (2,3 Credit Hours)
The IP seminar will focus this year upon the law related to creators and inventors. Through the use of student writings and a set of weekly readings, this seminar will examine key themes arising in this area in a more in-depth way than is covered in a traditional classroom course. The first third of the course will primarily be spent critically reviewing and evaluating the writing of others in this area, so that students can learn to assess the strengths and weaknesses of written work and practice revising work to improve it. In the second two-thirds of the course, students will focus upon their own writing and will produce an original research paper. To apply, students should propose an area of any part of IP that is interesting, where we see individuals or groups struggling. This could be your grandfather, who was a famous photographer, and now your family doesn’t know what to do with his photographs. It could be that you have an invention for a new app, but are not sure how to protect it. It could be that you see small companies struggling to understand the role of social media in their businesses. Propose an topic/area that you would like to work on, and why. The course will satisfy the upper-class writing requirement.
4LAW 5450 Int'l Business Transactions (3 Credit Hours)
The objective of this course is to provide students with an introduction to a number of areas of international business law and to provide an opportunity to study some of those areas in more detail. The course looks at the supranational and U.S.-domestic law that serves as backdrop to any international business transaction connected to this country. It focuses particularly on how to finance both sales and direct investment and how to structure direct investment of various tangible and intangible assets. The course is focused on the law as it affects individual business entities rather than on the relationships between States. However, this course does deal with the way that certain treaties have an impact on domestic law in relevant areas, such as international dispute settlement. This course also covers the World Trade Organization treaties to a limited extent as relevant to international business transactions.

4LAW 5470 Int’l Human Rights Law (3 Credit Hours)
In this course we will explore the place of human rights in United States and international law. More broadly, we will closely examine and evaluate the entire human rights "regime," that is to say the norms, principles, rules, and decision-making institutions that occupy and organize this issue area within the broad sphere of international relations. The course is designed to provide students with a confident grasp of: the substantive norms of human rights; the philosophic basis for the concept of rights and the leading points of controversy about the existence or character of certain rights that appear in conventional enumerations; the diverse procedures available at the global, regional, and national level for defense and promotion of human rights; the subtle and not-so-subtle ways in which ideological and material interests influence the definition and enforcement of rights; the ways in which policy makers attempt to reconcile the demand for human rights enforcement with more traditional foreign policy objectives.

4LAW 5490 International Law—Public (3,4 Credit Hours)
This is the basic introductory course in international law and as such focuses initially on how international law is made and applied as well the various theoretical justifications for and explanation of international law and international institutions. The course then explores other issues such as the proper subjects of international law—states, international organizations, individuals, etc; allocation of legal authority among states; the forums for and the methods of international dispute resolutions, etc. Special attention is paid to the use of force in international relations and the UN-based collective security system. Using the United States as an example, the course will also explore the interrelationship of domestic law and international law—the domestic effect of treaties and customary international law, the role of federalism in the adoption and enforcement of international obligations, and the role of municipal courts in the enforcement of international obligations.

4LAW 5540 Int'l Commercial Arbitration (3 Credit Hours)
This offering is intended to introduce students to the problems of dispute resolution in the international transactional context. Most international commercial disputes and contract claims are resolved through arbitration. The course will address the primary substantive law issues in the field, consider in detail comparative and transborder aspects of the subject area, and provide students with a simulation exercise in a contemporary practice problem.

4LAW 5550 Int'l Sale of Goods (3 Credit Hours)
This course will address the United Nations Convention on Contracts for the International Sale of Goods (the "Vienna Convention"). The rules of the Convention, to which more than eighty States adhere (including the U.S.), govern a great number of export/import transactions involving American parties. The course is designed to familiarize students with these rules and their application to specific aspects of international sales contracts, such as contract formation, remedies and allocation of risk. The discussion also will address the broader ramifications of the Vienna Convention. Topics of this nature include an assessment of fundamental problems, such as uniform interpretation, that are inherent in every effort to unify or harmonize legal rules. The course will also familiarize students with INCOTERMS 2010 that govern the transportation and insurance aspects of sales transactions and UCP 600 that provides the standard mechanisms for international payments, including letters of credit and documentary collections. Professor Davies plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

4LAW 5570 Int'l Institutions (2,3 Credit Hours)
This seminar examines international institutions -- both formal organizations and informal arrangements -- as increasingly important elements of a rapidly changing international governance system. These institutions range from traditional treaty-based organizations, such as the United Nations and its subsidiary organs, to understandings among states lacking formal structural organization which govern some aspects of international economic relations, human rights and arms control. Apart from the topics of formation, membership and participation, as well as of (applicable) privileges and immunities, the seminar will pay special attention to international institutions’ role in developing international law. It will also canvass the extent to which international institutions are accountable pursuant to international law. The seminar will thus highlight political-legal phenomena of the transition to an international legal order in which international institutions have taken on indispensable governance functions that both compliment and threaten states’ traditional, dominant position in the international legal system. Professor Handl plans to invoke a rule penalizing students for failure to be prepared and/or excessive absenteeism.

4LAW 5580 Int'l Trade Finance & Banking (3 Credit Hours)
Analyzes competing trade and industrial policies, GATT-WTO, NAFTA, unfair trade practices, dumping and subsidy controversies, trade imbalance problems, foreign investment, safeguards, expropriation and remedies, international banking and lending, debt overloads, IMF policies, global financial crisis, remedies, and adjustment mechanisms.
4LAW 5600 Intro to Law of the US (1,2 Credit Hours)
This course is designed to help international law students pursuing an LL.M. in the United States prepare for the demands of graduate education in an American law school. Because of its location in a state with a civil law heritage (which is unique in the United States), Tulane has long been known for its expertise in comparative and international law. This expertise allows the school and its faculty to better understand and meet the needs of students who come from a wide variety of legal systems. By utilizing tenured faculty, and by focusing on the basic principles of the American Legal system, with particular emphasis on constitutional law, the orientation program ensures that international students are given the best possible grounding for their subsequent studies. Classes meet four days a week, for 220 class minutes per day, in the three weeks before regular fall classes begin. The specific courses taught are as follows: Constitutional Law, Criminal Law, the U.S. Legal system, Constitutional Criminal Procedure, and Civil Procedure. Students who pass the written examination at the end of the course will earn two credits for their work, based upon American Bar Association guidelines. In addition to regular classes, students are offered free tutoring in English, with particular emphasis on legal terms and phrases, a speaker series, and an introduction to legal education in the U.S. Students will also be invited to attend a variety of social events and dinners, and will be given the opportunity to visit local courts and observe judicial proceedings.

4LAW 5610 Intro To Jurisprudence (3 Credit Hours)
This course will survey the major issues in the philosophy of law, paying special attention to those issues that have concerned lawyers and constitutional scholars. The leading theories of law including legal positivism, natural law, Ronald Dworkin's “third theory of law” and legal realism will be discussed, along with their historical origins. To illustrate these theories, the course will examine how they apply to several of the most important issues in legal theory, such as the relationship between law and morality, law and politics, and the nature of legal reasoning. The course will also survey the major theories of justice. The course does not assume any prior background in philosophy.

4LAW 5700 Law of Democracy Seminar (3 Credit Hours)
This constitutional law course concerns voting rights and elections, topics not covered in upper-level classes on the Fourteenth Amendment and First Amendment. We will address a variety of topics related to the proper legal functioning of our democratic system, including the law of voter participation, reapportionment and redistricting, rights of political parties, campaign finance, racial discrimination and the Voting Rights Act, racial redistricting, and direct democracy. Due to overlap in content students may not enroll in both the Election Law and the Law of Democracy course.

4LAW 5710 Labor Law (3 Credit Hours)
After a brief introduction to the history and evolution of the labor movement and labor legislation, the course covers in depth the legal framework dealing with union organization and collective bargaining. The material is considered from the beginning of the relationship between the employer and union, the organizational phase, through collective bargaining and enforcement of the contract once it is in place. Professor Friedman plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

4LAW 5730 Law of The Sea (3 Credit Hours)
This course reviews the public order of the oceans, i.e., the basic principles of international law, both customary and treaty-based, that apply to maritime spaces, such as the territorial sea, the high seas, continental shelf, seabed, and ocean floor. The course analyzes the allocation of jurisdictional powers among individual states and the international community at large over the various maritime zones involved; the use and management of ocean resources, such as regional and global fisheries regimes and seabed mining; marine environmental protection and pollution control; military uses of the ocean; and freedom of navigation. Special consideration will be given to enforcement issues related to drug trafficking and violations of marine environmental protection or fisheries regulations.

4LAW 5770 Law and Literature Sem (2,3 Credit Hours)
This interdisciplinary seminar will use various works from the canon of Western literature—Homer, Shakespeare, Kafka, and others—as well as American film to explore jurisprudential concerns such as the distinction between justice and revenge, law and illegality, and the limits and purposes of punishment. We will explore the differences and similarities between legal and literary narrative, the origin and nature of law, how law reflects (and whether it should reflect) community norms and moral views. Students will be required to prepare a research paper which they may use to satisfy the upper-class writing requirement, make one or more class presentations, and participate in class discussion. Reading assignments will consist of literary works and commentaries of these works.

4LAW 5830 Law and Technology (2,3 Credit Hours)
This seminar focuses on the legal issues raised by advances in technology. In recent years, technological developments such as social media, the sharing economy, genetic engineering/testing, virtual reality, the Internet of Things, artificial intelligence, self-driving cars, etc. have had profound social, economic, and political consequences that have raised novel legal issues in a variety of fields, including tort law, criminal law, election law, privacy, civil rights, employment law, corporate law, and health law. We will explore several major themes and current trends governing the complex interrelationship between law and technology. This seminar may be taken to satisfy the upper-class writing requirement.

4LAW 5831 Law, Finance & Technology (2,3 Credit Hours)
4LAW 5840 Lawyering (2,3 Credit Hours)
This course examines the use of law to advance social, economic, or political goals. After a brief exploration of the theoretical framework and historical background of “cause lawyering,” students will consider the role of law and lawyering in various change-seeking applications, such as social movements and impact litigation, and in various practice settings. Throughout the semester, students will meet with practitioners involved in prominent cases or organizations to discuss their objectives, strategies, and challenges—and whether they achieved their goals. Students will prepare for those meetings by reading relevant material and generating specific questions for the speakers. Grades will be based on several short papers, a final paper, and class participation. This course is not subject to a curve and includes an option for students to satisfy the upper-level writing requirement.
4LAW 5880 Modern European Legal History (3 Credit Hours)
This course traces the history of private law in Europe from approximately 1750 to 1950. It will begin with the pre-codified law and custom found in the European ius commune, the legal situation during the Ancien Régime of France, revolutionary age leading out to the first great codifications, and proceed to the rise of the historical school and Romanist legal science in Germany; the national debates over codification in Germany, the nature and background of the German Civil Code, the Austrian, Swiss, Spanish and Italian codification experience, and the diffusion of European codifications in countries of Latin America and Asia. Readings will be assigned for discussion and participation in class. Professor Palmer plans to invoke a rule penalizing students for failure to be prepared and/or excessive absenteeism.

4LAW 5910 Intro to Leg Rsh & Writing US (1-2 Credit Hours)
This two credit course is an introduction to the legal methodologies of practicing attorneys in the United States. Because the course is limited to international students seeking their LL.M., it emphasizes the development of legal reasoning and writing skills in an adversarial legal system, while simultaneously acquainting students with the legal resources readily available to attorneys in the United States, such as Westlaw, and Lexis. The first half of the course is devoted to short writing projects, e.g., motions, and memoranda, as might be created and used by a U.S. law firm. The second portion of the course, which immediately follows the first, is devoted to the creation of a brief on a current issue. In addition, the students are required to orally argue at least three times. Professor Larson plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

4LAW 5950 Legal Research, Adv (3 Credit Hours)
Building on the research techniques presented in Legal Research and Writing, Advanced Legal Research focuses on the effective use of electronic and print legal research tools and examines existing electronic sources for both legal and non-legal information of interest to lawyers. After reviewing research concepts taught during Tulane’s first year Research and Writing course, this advanced course will provide coverage of selected additional research subjects, including statutory research, legislative history, administrative and regulatory research, practice aids, research strategies, and various specialized areas, including an introduction to treaty research and international/foreign research sources. The course also offers advanced training on comprehensive proprietary online research systems such as Westlaw and LexisNexis and introduces specialized proprietary online systems such as Bloomberg Law and BNA. It will focus on using the Internet to locate legal and non-legal resources, covering such topics as search engines, legal portal sites, websites for federal and state law, government information, and no/low cost information sources (commercial and noncommercial). This course will not be subject to the curve. The professor plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

4LAW 5960 Litigating Com’l Fraud Sem (2,3 Credit Hours)
The subject of this seminar is commercial fraud. The goal is to provide students with a comprehensive understanding of what parties should consider, what they should anticipate, and how they might respond in litigating and arbitrating commercial fraud cases. The topics to be covered include (1) the Racketeer Influenced and Corrupt Organizations (RICO) Act, (2) the federal securities laws, and (3) various state law claims. Class will focus on the problems confronted daily by the practicing attorney.

4LAW 5970 Mixed Jurisdictions Sem (2,3 Credit Hours)
This seminar will focus principally upon the so-called ‘classical’ Mixed Jurisdictions of which there are about 15 or so in the world. Prominent among these are South Africa, Scotland, Quebec, Puerto Rico, Israel, The Philippines and Louisiana. There is debate about the countries belonging to this group and our research interest may extend beyond this circle in order to deal with classification issues. Each student in the seminar will select a topic dealing with some aspect of the Mixed Jurisdictions and write a research paper that will be presented and discussed in class. A paper topic may relate to any micro or macro aspect of such systems and should make use of the comparative method. Before topics are chosen, the opening classes will discuss the defining characteristics and traits of the mixed jurisdictions and students will be introduced to the literature on the subject. The principal text in the course will be V.V. Palmer (ed), Mixed Jurisdictions Worldwide: The Third Legal Family (2001).

4LAW 5990 Financial Markets Sem (3 Credit Hours)
This seminar will analyze the causes and consequences of the current and prior crises in financial markets, with a view to understanding the extent to which legal structures and regulatory policies both contribute to their emergence and mitigate their effects. The seminar will serve as a forum for discussing the efficacy of the current regulatory framework for financial services; the particular transactions, financial instruments and regulatory decisions that are believed to have contributed to various financial crises; and legislative and regulatory strategies for remediating crises and preventing their reoccurrence. To be eligible, students (i) must have completed Business Enterprises II and (ii) must have completed or concurrently be enrolled in one of the following upper-level courses: Mergers & Acquisitions, Corporate Finance, Financial Institutions, Real Estate Transactions, Secured Transactions, Bankruptcy, or Securities Regulation.

4LAW 6000 Marine Pollution (2,3 Credit Hours)
This course will cover U.S. legislation, administrative regulations, state legislation, and case law in the area of marine pollution. This course counts as credit for both the Environmental and Maritime certificates.

4LAW 6020 Social Media & Advertising (2,3 Credit Hours)
Social Media and Advertising Law explores the legal questions that arise in both traditional advertising contexts and within the social media framework. Issues we will touch upon including commercial speech, puffery, NLRB, blog endorsements, giveaways, brand ambassadorships, sponsorship deals, and other interactions with the general public.
4LAW 6040 Mergers & Acquisitions (2,3 Credit Hours)
This is an advanced corporate law course covering federal law aspects of tender offers, mergers (including forward and reverse triangular), leveraged buyouts, asset purchases, and other acquisition techniques, as well as selected defensive tactics (poison pills, recapitalization, white knights, etc.), due diligence, and drafting merger and acquisition deal documents. Business Enterprises is a pre-requisite or permission of instructor required.

4LAW 6080 Env Law: Natural Resources (3 Credit Hours)
This course is one of the two foundation courses in environmental law and presents a survey of programs that govern the use and protection of natural resource systems, including energy, mining, timber, grazing, transportation and water resource development. Special attention is given to the National Environmental Policy Act, and to management statutes for public lands, forests, parks, refuges, wilderness areas, and endangered species.

4LAW 6100 Negotiation and Mediation (3 Credit Hours)
The purpose of this course is to expose students to the process of negotiation as a pervasive lawyering activity; to increase awareness of the technical, interdisciplinary, and ethical dimensions of that process; to introduce the concept of the lawyer's role as problem-solver; to enable students to experiment with and consider thoughtfully the various theories, forms, and techniques of negotiation and mediation advocacy; and to provide students an opportunity to assess their own capabilities within those contexts. 75% of the course will focus on negotiation and 25% on mediation advocacy. (Please note that the mediation advocacy portion of the course is not training students to be mediators but rather to enhance their understanding of the lawyer's role in a mediation.) A number of negotiation exercises are completed outside of class at times that are mutually agreed upon by the negotiators. Flexibility by students in this regard is expected. Students will be graded on a "Pass/C/Fail" basis. There is no curve in this course. This course is taught by Stephen Bullock, Mathew Chester, Gabe Feldman, Dan Friel, Stephen Hall, Lesli Harris, Ault Hootsell, Robert Jenks, Roger Larue, Michael Moran, William Pitts, Elizabeth Ryan, Charles Thensted, Thomas Usdin, Susanne Veters, and Rachel Wendt Wisdom. The professors plan to invoke a rule penalizing students for lack of preparedness and/or excessive absenteeism. Students who have taken Intercultural Negotiation & Mediation in Berlin may not take Negotiation & Mediation Advocacy due to course overlap.

4LAW 6110 EU: Energy & Environmental Law (2,3 Credit Hours)
This course presents an introduction to the basic history and legal framework of the European Union (EU) and then concentrates on several key areas of practice. While the course will touch on the role of key EU institutions in the integration process, a central area of emphasis will be EU law in the fields of energy -- principally electricity, gas, and nuclear -- and the environment. Throughout the course, recurring overall themes will be sovereignty, federalism, subsidiarity and power sharing.

4LAW 6160 Patent Prosecution (2,3 Credit Hours)
This course concentrates on U.S. patent laws, U.S. patent regulations, and procedures involved in obtaining patents from the U.S. Patent and Trademark Office. Students will learn how to write patent claims, patent applications, and responses to office actions from the USPTO. Some aspects of foreign and international law will be discussed. The grade will be based on several written assignments and a final exam.

4LAW 6180 Patent Law (3 Credit Hours)
Topics to be covered include: patentability requirements, infringement, defenses, remedies, litigation, appellate issues, administrative revocation, and special topics. A technical background is NOT required for this course. Prerequisites: Intellectual Property.

4LAW 6200 Legal Syst, Leg Prof & Justice (3 Credit Hours)
This is a course that will focus on how the legal system functions and in particular the role of lawyers in it. It will use fictional works and biography (as well as some historical material) to provide examples of the kinds of issues and problems that arise in the conduct of lawyers working within the legal system. Fiction can often provide richer examples for students to work with than the usual classroom hypotheticals. Novels and short stories by such authors as Melville, Kafka, Faulkner, Auchincloss, Grisham, Turow, and others will be assigned. A principal reference will be the American Bar Association Model Rules of Professional Conduct (2004 edition) which students will bring to all classes. This will be supplemented by hand-outs of ethical and professional opinions. The course is intended to serve the ends of experiential learning by having the students confront the kinds of practical issues that arise in law practice. One focus will be whether the legal system can and does achieve the ends of justice. The objective is to provide a searching examination of how lawyers use or abuse the law and how the public interest is or is not thereby served. The seminar will have elements of courses in legal profession, jurisprudence, legal analysis, literary criticism, and sociology.

4LAW 6210 Law & Entrepreneurship (2,3 Credit Hours)
This course focuses on questions that arise in new social ventures, start-ups, non-profits and other early-stage projects. This will be a hands-on course where students will be introduced to the practice of IP and entrepreneurship through a variety of means, including a standard casebook, guest attorneys and entrepreneurs, and individualized research assignments. This course is recommended for students interested in the following areas: business, IP, non-profits, and solo practice. The grade is based project based work (individual research assignments each week) that will be graded. Students turn in a portfolio of their work at the end of the course which will be graded on completeness and thoroughness. This is a rigorous class that takes dedication. Students are expected to dedicate 3 hours preparation per class (6 hours a week) to the individual research assignments. Attendance is also key.

4LAW 6220 Client Interview & Counseling (3 Credit Hours)
The course will focus on the legal principles and skills involved in interviewing clients and witnesses and counseling clients in the course of litigation, dispute resolution, and decision making. Establishing an effective lawyer-client relationship requires gathering information relevant to decisions to be made by the client, analyzing the decision to be made, advising the client about the decision, and implementing the decision. Additional topics include addressing cultural differences and interviewing and counseling clients with mental and physical disabilities, children, criminal defendants, and organizational clients. Students will be assessed based on in-class role plays, recorded interviewing and counseling simulations, written plans, and self-evaluations.
4LAW 6230 Property Theory Seminar (3 Credit Hours)
This seminar provides a forum in which students can deepen their understanding of what property is, debate the merits of property law, and contemplate future issues that property law will face. In doing so, this seminar strives to enhance students' analytical, research, writing, and presenting skills. The seminar is divided into three main parts. The first part focuses on developing a greater understanding of how the law views property. We will read fundamental property scholarship that has helped develop the modern concepts of what property is and how ownership is established and protected. The second part applies the traditional theories of property rights in more modern context. Through a variety of readings, the class will contemplate whether property rights should extend to things like the body, outer space, and virtual worlds. The third part allows students to develop their own thoughts on property rights through the writing and presenting of a seminar paper.

4LAW 6270 Compar Private Law Sem (3 Credit Hours)
This course will compare common and civil law approaches to the law of property, contracts, and torts. The common law originated in England and is judge made. The civil law developed from Roman law and, in most jurisdictions today, it is codified. We will look at how England, the United States, France, and Germany deal with some concrete legal problems, and ask whether the differences are due to history, codification, culture or to the problems themselves. The topics chosen will be familiar to the students from their first year. NOTE: Students who previously completed Professor Palmer’s European Legal Systems course may not enroll in this course.

4LAW 6290 Products Liability (3 Credit Hours)
The course focuses upon the founding and evolution of American products liability law, including the latest formulation in the third Restatement of Torts as well as state "reform" statutes. Emphasis is placed upon the inter-relationship between contract and tort remedies; the rise of the doctrine of strict liability; and the theory of enterprise liability.

4LAW 6320 Prof Responsibility Sem (2,3 Credit Hours)
This course will explore the role of lawyers' ethics in the American legal system and the conceptual models that currently frame the ethical rules and regulate lawyer behavior. It also will explore those areas in which ethical regulation deviates from practice, and further examine through the use of practical in-class exercises how ethical rules can be developed to improve advocacy and truth-finding in the legal process. The grade will be based on a non-anonymous paper. Professor Stanley plans to invoke a rule penalizing students for lack of preparation or excessive absences. Note: This course does not satisfy the requirement to take Legal Profession.

4LAW 6330 Military Law (2,3 Credit Hours)
This course will be an overview of military and military-related law as practiced in the United States. The course will be divided into three thematic blocks: 1) the military justice system as it applies to service members, 2) the military legal system as it interacts with veterans, civilians, and civilian institutions, and 3) the military legal system as it acts internationally.

4LAW 6360 Critical Race Theory Sem (2,3 Credit Hours)
This seminar will explore the relationship between critical understandings of the significance of race and legal interpretation. Of particular importance will be the examination of how societal values and customs, expressed in legal rules purporting to address racial issues, inhibit critical approaches to the concerns of justice for the disadvantaged groups. Students must take any one of the following courses as a co-requisite for this seminar: Constitutional Law: 14th Amendment, Gender Law & Public Policy or Law & Sexuality Seminar.

4LAW 6370 Human Trafficking (2,3 Credit Hours)
The Human Trafficking Practicum is an experiential course that offers students the chance to learn critical aspects of human trafficking, both globally and domestically, and to apply that knowledge to class exercises and class presentations. This course will take a multi-disciplinary approach to the complex issue of human trafficking, particularly sex trafficking and will focus on restorative justice and other remedies. The course combines guest speakers, in-class discussions, exercises, and class presentations to facilitate a complete understanding of the multi-disciplinary aspects of human trafficking.

4LAW 6390 Cuban Law & US Relations (2,3 Credit Hours)
This seminar will cover the legal system of Cuba, U.S.-Cuba relations, and the impact of each on Cuba's development. By the end of the course, students will have acquired an understanding of the historical development of Cuban law and legal institutions as these emerged during the colonial, republican and revolutionary eras; the Cuban legal system, and the Cuban legal and economic framework regulating foreign investment, trade, and international business transactions; the use of other disciplines in the analysis of Cuban legal problems and institutions for sustainable development; and the relationship between the United States and Cuba and the role of U.S. citizens, particularly the Cuban-American community, in rebuilding Cuba. The course will also explore alternatives to modernize the Cuban legal system in comparison with other mixed jurisdictions that have been greatly influenced by the Common Law, such as Puerto Rico and Louisiana. The course will be taught by José Cot, a Director in the New Orleans law firm of Hurley & Cot, and Rolando Anillo, corporate counsel for Florida Crystals Corp—American Sugar Refining Inc.

4LAW 6400 Intro Intl & Comp Energy Law (2,3 Credit Hours)
International energy law is an important part of the required knowledge base of an “energy lawyer”. There is no single body of law or a treaty on “energy law” or “international energy law”. Instead, it is a combination of various rules of international, regional and national laws. After providing insights into what “energy law” is and who are the main players in the field, this course will cover the entire energy value chain and introduce students to legal and contractual issues relating to each segment. The course covers all forms of energy from oil and gas to renewable energy. It also provides an overview of typical national policies and policy drivers for various energy activities.
4LAW 6410 Public Purpose Finance Seminar (2,3 Credit Hours)
It is a little appreciated fact that one of the central goals of U.S. financial law is to channel credit into activities and sectors deemed vital for the public interest. Such “public purpose finance” supports private borrowers but only insofar as their projects promote publicly determined goals. With over one quarter of the U.S. bond market some $10 trillion the political stakes of public purpose finance are enormous though they are rarely discussed. Our seminar will be organized in three parts. The introductory sessions will provide students with all the necessary background by familiarizing them with basic financial concepts and institutions (E.g., what is a bond? How do banks work? How does one measure economic and racial inequality?). Building on these sessions, we will then explore two case studies. The first case study concerns housing policy in the U.S., which accounts for the lion’s share of public purpose finance today. The institutions and legislation we will discuss include the Government State Enterprises (Fannie Mae, Freddie Mac, and FHLB), the Community Reinvestment Act, and Community Development Financial Institutions. We will study the considerable achievements of this system in expanding access to credit for homeownership, but also its serious shortcomings with respect to racial and economic inequality. Students will be encouraged to explore these issues in the context of housing policy here in New Orleans. The second case study concerns “climate finance,” which addresses the large investments in renewable energy that are necessary to transition into a low carbon economy. In distinction from housing finance, climate finance in the U.S. is still very much in its infancy. We will build on our discussion of housing to examine the design choices that are available for us today with respect to climate. Current initiatives in China and Europe will provide additional examples. No background in finance or economics is required and students from all backgrounds are encouraged to register to the seminar.

4LAW 6450 Sexuality and The Law (2,3 Credit Hours)
This course examines the impact of legal regulation in the United States on such areas as sexuality and sexual preference as intimate association, marriage, family structure, workplace discrimination, and civil rights. It also covers law relevant to transgender persons, intersex persons, and queer sexualities.

4LAW 6460 Securities Regulation (2,3 Credit Hours)
This course provides a broad overview of U.S. Federal securities law, including statutes and regulations governing the underwriting and offering process, exemptions from registration, the operation of securities markets, and the activities of securities intermediaries, such as stock exchanges and broker-dealers. The course focuses on theoretical issues, such as the philosophy of regulating disclosure; the classification of professional and retail investors; the allocation of authority among the SEC, self-regulatory organizations and other federal and state regulators with respect to financial instruments; and the scope of and limitations on private securities litigation and the SEC’s enforcement authority. Business Enterprises is required.

4LAW 6480 Large Scale Energy Projects (2,3 Credit Hours)
The core purpose of this seminar is to examine legal and contractual questions relating to large-scale energy projects here and abroad. The seminar is built around three large-scale energy projects that raise a number of legal and contractual issues: A cross-border pipeline in Europe; the decommissioning of a large nuclear power plan; and cross-border oil and gas investment in Africa. Each project is based on real projects that have taken place in the past. These projects will in all cases raise a range of complex issues which requires energy industry legal advice, whether the counsel is directed to regulatory authorities, private enterprises, non-governmental organizations, or other industry players. Topics that will be examined during the course of the seminar include: the application of state, local, and national laws as appropriate; the application and impact of international law, including the UN Law of the Sea Convention and bilateral and multilateral investment treaties; and the role of contractual terms most commonly used in the energy industry sectors and projects that will be the focus of the seminar. Students will prepare legal memoranda on a variety of legal and contractual issues relating to the projects examined in the class.

4LAW 6490 Immigration Detention & Removal (2 Credit Hours)
This course will teach students the process and laws applying to detention and removal defense of immigrants. Topics will include the authority to detain and eligibility for release, classification of immigrants, grounds of inadmissibility and deportability and defenses against removal. The course is taught by Homero López, Jr., Director/Managing Attorney of Immigration Services and Legal Advocacy (ISLA) in New Orleans.

4LAW 6500 Negotiating M&A Transactions (2 Credit Hours)
This course is designed to give students an introduction to the real world experience of the deal making process, from the first contact between the parties to drafting and negotiating the documents that govern transformational corporate transactions. Over the course of the semester, we will break down the main agreements involved in a hypothetical deal with a view to developing a fundamental understanding of how those components interact with the overall business arrangement and deal dynamics. You will analyze and learn to understand how the key provisions of these transaction agreements are negotiated with the goal of maximizing value for the client and appropriately allocating risk among the parties to a deal. We will also discuss the less tangible aspects of deal making that take place outside of the four corners of the transaction agreements but are no less important. Specifically, we plan to discuss the economic and personal motivations of the various parties involved and the psychology and group dynamics of a deal process. As the deal world is an ever changing environment, we’ll look to bring current real world examples into the classroom. Students will participate in out-of-class group and individual practice assignments, including drafting or “marking up”) transaction documents and negotiating key issues in the context of a prepared fact pattern. Students will also participate in an off-campus mock negotiation of a deal term sheet at Jones Walker, LLP’s office downtown.

4LAW 6520 Sports Law: Antitrust & Labor (3 Credit Hours)
This course examines how the antitrust and labor laws apply to the unique relationships in the sports industry. The course focuses on the ways the antitrust and labor laws have shaped virtually every aspect of professional and amateur sports – ranging from salary caps and age restrictions to television deals and team relocations.
4LAW 6640 Sports Law: Int'l & IP (2,3 Credit Hours)
This course examines the application of a variety of different areas of law—including intellectual property, contracts, torts, and constitutional law—to the sports industry. The course emphasizes intellectual property law and issues relating to the ownership of “data” produced by sports leagues, teams, and athletes. In particular, the course focuses on right of publicity and trademark law. This course will also examine a variety of legal issues that arise in collegiate, amateur, and international sports.

4LAW 6680 Statutory Const. Interpr (3 Credit Hours)
Statutory interpretation is one of the most important subjects you can take in law school. Statutes (and administrative regulations) are pervasive in today’s legal society; they will govern whatever area of law in which you choose to practice. Knowing how to understand statutory language, any written legal language, is a critical legal skill. This course will help you develop the fundamental skills involved in reading, interpreting, and applying legal language. We will explore how laws are created and who earns deference when interpreting those laws. We will study the theories and canons of statutory interpretation; but, more importantly, we will learn how to use the theories and canons to counsel clients effectively and win cases. Interpreting written legal language is not a precise science; rather the “rules” are somewhat malleable; and therein lies the opportunity for the advocate. We will put your skills to the test by resolving problems similar to ones that lawyers face daily.

4LAW 6690 Tax: Corporate Tax (3 Credit Hours)
The course provides a basic overview of regular “C” corporations. Using a transactional approach, the course traces the life of a corporation from formation through distributions to liquidation. Income Tax is a prerequisite for this class.

4LAW 6700 Tax: International Tax (3 Credit Hours)
This course introduces the United States taxation of U.S. and foreign persons engaged in international activities. Topics surveyed will include both inbound transactions (i.e., the U.S. taxation of foreign persons and foreign investments in the United States) and outbound transactions (i.e., the U.S. taxation of U.S. persons and businesses earning income outside of the United States). Specific topics may include: residency and domicile; source rules for income and deductions; taxation of businesses and nonbusiness income of foreign persons; mitigation of double taxation of income of U.S. residents; anti-deferral regimes aimed at limiting deferral of income by U.S. persons; the principles and application of U.S. tax treaties; and transfer pricing. Income Tax is a prerequisite for this course, except with permission of instructor.

4LAW 6680 Tax Policy Seminar (2,3 Credit Hours)
This seminar focuses on selected topics pertaining to the legal, economic and political considerations involved in the formulation and implementation of federal tax policy. Topics may include the choice of the tax base, income versus consumption taxes, the taxation of business and investment, taxation of the family, and taxation of wealth transfers. Income Tax is a prerequisite for this class. The grade will be based on class participation and a seminar paper.
4LAW 6730 Tax: State & Local Tax (2 Credit Hours)
This course explores the state and local taxation of entities and individuals, focusing on multi-state taxation and overall tax planning strategies to minimize or eliminate multi-state tax liability. In this course, we will examine the concept of "nexus" (when a taxpayer or transaction is subject to the taxing jurisdiction of a state or locality), both as it has been understood historically, and in light of technological advances that have made remote business operations increasingly practical. We will also address the unique state and local tax issues created by the growth of "e-commerce" and the financial impact on state and local tax jurisdictions administering tax laws developed in the context of local business operations. Finally, we will discuss and analyze business activity taxes and sales and use taxation in detail, and will also cover very generally franchise, capital stock and gross receipts taxes, and property taxation, as time permits.

4LAW 6750 Tax: Nonprofit Sector (2-3 Credit Hours)
This course covers an important "third" sector of the American economy - responsible for an estimated 15% to 33% of the nation's gross domestic product - that is not otherwise dealt with in the law school curriculum and which represents a distinct legal discipline. This course will of particular value to those students who may become involved in nonprofit and charitable entities as directors, trustees, legal counsel or volunteers. Coverage will focus upon the roles of philanthropy and the nonprofit sector in society, as shaped by the requirements and limitations applicable where exemption from taxation are desired. Specific topics will include: a historical and policy-based examination of the nonprofit sector and philanthropic motivations; the formation, operation, and dissolution of nonprofit entities; corporate governance of nonprofit entities, including issues of compensation, liability, and fiduciary responsibility; an analysis of the requirements for exemption from federal income taxation, including the prohibition on private inurement and restrictions on lobbying and political campaign activities; the commercial and competitive activities of nonprofit entities; the tax on unrelated business income; private foundation status; charitable gifting and solicitation; and current trends affecting the nonprofit sector. This course is in many ways a survey course, consisting of an equal balance between the corporate, fiduciary and tax considerations that are essential to an understanding of the legal issues affecting this sector.

4LAW 6760 Title IX (2 Credit Hours)
This course focuses on one of the most important laws impacting American educational institutions, Title IX of the Education Amendments of 1972. We will start with a brief discussion of the history of higher education law generally, including the deference courts routinely showed to colleges and universities and how that has changed over the years. We will then shift our attention to the passage of Title IX and how that law applies in three contexts: academic employment, school-based athletics, and student affairs. We will also focus on the primary contemporary legal issues colleges and universities are dealing with, including sexual misconduct and the treatment of transgender students.

4LAW 6770 Terrorism/Countertersm (3 Credit Hours)
Terrorism is a term that is invoked quite often by governments and private actors to label acts of individuals or groups that they view as unacceptably cruel and destructive. However, there is often deep disagreement as to what acts are properly designated as terrorist acts and whether the label should be attached to the action of states as it is to the action of non-state actors. The term's popularity is inversely related to its clarity. This seminar has three purposes. First, it will explore the elements that go to define actions and behaviors we should deem terrorist. The purpose here is to develop a description of terrorism that is precise as well as capable of being endorsed by a diverse international community. Second, the seminar will examine selected institutional responses to the phenomenon of terrorism. Third, it will explore the role human rights play (or should play) in shaping the nature of counterterrorism responses. Students will be expected to produce a research paper on any aspect of the subject matter, but they would need to talk to the instructor before settling on a topic. The grade will be mainly based on the research paper, but the quality of the oral presentation may improve or negatively affect the grade and so may the quality of class participation.

4LAW 6780 Transnational Law (2 Credit Hours)
The rapidly growing number of disputes involving foreign parties and transactions present distinct problems that do not arise in purely domestic litigation or arbitration. The course will address these problems and the emerging solutions as developed by American courts, and it will compare these developments with approaches that prevail in other legal systems. Areas that will be covered include the extraterritorial application of U.S. laws, taking evidence abroad, personal jurisdiction over foreign defendants, and the enforcement of foreign judgments.

4LAW 6790 Intl Energy Investment Protect (3 Credit Hours)
International investment protection is particularly important for energy activities. This is true for all segments of the energy value chain from upstream to downstream energy. It is a national and an international issue. Looking at various treaties and agreements as well as real disputes from around the world, this course covers all the main elements of energy investment protection. The objective of the course is to introduce the students to various investment protection methods. The classes examine both treaty and contract based investment protection. It will also cover both investment treaties and Host Government Contracts and Inter-Governmental Agreements used for upstream, pipeline and downstream investments. In addition to the theoretical and more abstract parts, the course will also use several case studies as learning material. The students will be exposed to real contracts and real treaties.

4LAW 6810 Venture Capital (1,2 Credit Hours)
This course examines the contracts by which a new business with high potential obtains necessary resources, the legal rules which motivate and constrain those contracts, and some of the disputes which have arisen from such contracts. Although the title refers to financial resources, the course will consider contracts to gain other resources such as talent and intellectual property. Performance will be assessed by an examination. There will be a requirement for attendance and preparation.
4LAW 6820 Trademark Law (2,3 Credit Hours)
This course picks up where IP Survey left off. Advanced topics in trademark are covered, along with key concepts related to the use of those trademarks in advertising law. Topics include foreign trademarks, false advertising, deception, omissions and disclosures in advertising, brand protection, and many others. IP survey is required for all participants (no waiver). Students who previously took copyright/trademark may enroll in trademark and advertising law.

4LAW 6840 Transnational Litigation (3 Credit Hours)
The rapidly growing number of disputes involving foreign parties and transactions present distinct problems that do not arise in purely domestic litigation or arbitration. The course will address these problems and the emerging solutions as developed by American courts, and it will compare these developments with approaches that prevail in other legal systems. Areas that will be covered include the extraterritorial application of U.S. laws, taking evidence abroad, personal jurisdiction over foreign defendants, and the enforcement of foreign judgments.

4LAW 6860 Environmental Litigation (1 Credit Hour)
This is a theory and practice course covering the major components of an environmental case up to trial including: substantive and procedural law, investigations, claims/defenses, discovery and depositions, experts and science, and motions. Grading will be based on written and oral exercises; no examination. It is taught by William Goodell, a sole practitioner specializing in environmental and toxic damage litigation. Mr. Goodell is principal of the Goodell Law Firm, was formerly Louisiana Assistant Attorney General for Environmental Enforcement, and also taught the Environmental Trial Advocacy and Deepwater Horizon Seminar courses at Tulane. This course is the former Toxic Tort Litigation Practice.

4LAW 6880 US Constitutional History (3 Credit Hours)
This course will cover U.S. constitutional history from 1787 to the present, concentrating on the evolution of the main institutions and structures of government and their relationship to the leading political eras and regimes in American history. Although the course will not cover issues of rights, we will address the history of the civil rights movement, especially as it relates to structural issues such as federalism. We will use a main text of primary source materials and at least two additional books, so students should expect a substantial amount of reading. There will be a take-home exam based on the course readings. The exam will be a unique “take home”, done during the regular semester in the manner of a research paper, then due on the last day of class and graded anonymously.

4LAW 6890 Urban Change & Development (2 Credit Hours)
Urbanization is arguably the dominant demographic feature of our age. Indeed, not only are we now a majority urban planet, the UN estimates that by 2030, nearly 80% of the world’s population will be urban. Unsurprisingly, this rapid change is generating a wide range of social, economic, political, environmental and legal problems. This intensive, two-credit course will examine the public policies, sociopolitical processes and possible legal reforms necessary to make more urban settlements livable such that more people can lead productive, safe lives. The approach will be transdisciplinary, seeking to determine the main nature, characteristics, causes, and implications of urban change today. Case studies and examples will be drawn from many continents and different country contexts, although the focus will be on Latin America. Unlike other parts of the developing world, Latin America was heavily urbanized before any other major geographic region. As such, the region has been profoundly marked by combined patterns of sociospatial segregation, socioenvironmental impact and sociopolitical exclusion, as well as widespread land and housing informality. The course will place special emphasis on the role historically played by the legal-institutional order, especially regarding overall conditions of urban land governance. Moreover, the course will discuss the nature, dynamics and aspirations of growing sociopolitical processes and disputes that have laid claim for urban reform through institutional and legal change. In this, the course will allow students to explore the notion of the “right to the city”, which seeks to integrate the key principles of the social value of property and democratic urban management. There will be a take home final exam for this course.

4LAW 6920 Wealth & Public Policy (3 Credit Hours)
This seminar considers wealth and income distribution in connection with public policies in a democracy. It examines various ways government can achieve its goals such as directly through spending programs (e.g., subsidies), through laws and regulations, and indirectly through tax expenditures that lower tax liability by giving special treatment in the form of deductions, exclusions and credits (such as the home interest deduction or the adoption and energy credits). Topics range from general philosophical questions about fairness and inequality to current political issues such as education and housing. The seminar focuses on federal policies in the United States but uses some international and American state data for perspective. Students are expected to come to the first class with one or two general ideas for a paper involving wealth and/or income distribution and public policy. Although the materials—and class discussion—focus on United States federal government policies, the research paper need not be limited to the federal level.

4LAW 6930 WTO Seminar (2,3 Credit Hours)
This seminar explores the fundamentals of international trade practice in the World Trade Organization (WTO). After reviewing the economic foundations for international trade and the historical underpinnings of the WTO system, our primary focus will be on the texts of the WTO agreements and the international legal practice surrounding the WTO dispute settlement system. This course is taught by Edward T. Hayes, a partner at Leake & Andersson, LLP.
4LAW 6940 Law and Gender (3 Credit Hours)
Using gender as a paradigm for thinking about law, this course examines sex-based discrimination from a variety of perspectives in substantive areas of law that influence the lives of women and men. It covers issues of formal equality in employment, equal opportunity in education, substantive equality through affirmative action and pay equity, pregnancy, parenting, sexual orientation, sexual harassment, family law, domestic violence, pornography, prostitution, rape, and reproductive choice among others.

4LAW 6950 Domestic Violence Advocacy (3 Credit Hours)
The course will examine domestic violence in the criminal justice system and in family law, with a special focus on practical legal skills. Topics include domestic violence as a violation of criminal law, civil rights, international human rights and as a tort, and the role of domestic violence in divorce law and custody. While examining the issue systemically, students will also learn important practice skills through simulated role plays and demonstrations. Students will take a mock deposition, perform cross-examinations, and oral arguments.

4LAW 6990 Wrongful Convictions (3 Credit Hours)
This course is intended to provide students with an overview of the issues and case law related to wrongful convictions. The goal of this course is for students to gain an understanding of this dynamic and ever-growing area of law but they will do so with significant real-world context. Topics studied will include habeas corpus, ineffective assistance of counsel, police and prosecutorial misconduct, the reliability of eyewitness testimony, forensic and DNA evidence, and others. The cases will be studied from across the country with occasional international examples. However, we will examine local examples, (Louisiana, Mississippi, and Texas) in most of the topic areas we cover.

Legal Studies in Business (LGST)

LGST 2390 Junior Semester Abroad (1-20 Credit Hours)

LGST 3010 Legal/Ethical/Regul Busn (3 Credit Hours)
LGST 3010 examines ethical and legal issues that affect business decision-making. The course covers ethical decision making, including the concepts of professionalism, integrity-based management, compliance-based management, and corporate social responsibility. The course then focuses on the ethical and legal issues associated with the legal system, the litigation process; alternative dispute resolution techniques; business torts based on negligence; intent and strict liability, including fraud, product liability, misrepresentations, and misleading advertising; contracts; consumer protection issues; business crimes; bankruptcy; labor and employment law; laws surrounding equal opportunity; and property law, including patents, copyrights, trade secrets, trade names, and trademarks.

Prerequisite(s): (ECON 1010, 1030, 1010, 1010 or 1010) and MCOM 3010.

LGST 3890 Service Learning: LGST (0-1 Credit Hours)
Freeman students may elect to fulfill their upper-level Newcomb-Tulane public service requirement through this service learning option that functions as an added component to the foregoing Legal Studies courses. This added one-hour component supplements the Legal Studies curriculum and gives students the opportunity to become familiar with courtroom procedure while acquiring research, investigation, and analytical skills through courtroom observation and data collection. Students are required to fulfill 20 – 40 hours of public service and will engage in reflective learning through journal exercises and class presentations.

LGST 4010 Legal Studies in Business (3 Credit Hours)

LGST 4100 Business Law (3 Credit Hours)
LGST 4100 examines the basic legal element of almost every business transaction – a contract. The course focuses on how businessespeople form and perform contracts, as well as possible remedies for breach of a contract. In addition to contracts, the course examines negotiable instruments and how they function in the banking system. The course then focuses on the general rights of creditors and how bankruptcy affects creditor rights. Business Law presents material on the structure of business organizations, including mergers and consolidations, and the use of agents in business. The course concludes with a variety of special topics including property law, landlord-tenant law, insurance law, estate law, and professional liability law. This course is required for the legal studies in business major.

Prerequisite(s): LGST 3010.

LGST 4110 Legal Writing & Research (3 Credit Hours)
LGST 4110 develops fundamental legal writing skills and acquaints the student with the basic resources of computerized legal databases. Students learn the techniques of legal problem-solving and practice how to research and draft legal memoranda and briefs through a series of progressively more complex written assignments. This course is required for the Legal Studies in Business major.

Prerequisite(s): LGST 3010.

* May be taken concurrently.

LGST 4120 Internatnl Business Law (3 Credit Hours)
LGST 4120 introduces students to relevant features of the various legal systems currently governing the conduct of international business - national, regional, and international. Topics include international trade agreements, international dispute resolution, jurisdictional and choice of law problems, treatment of foreign investments, foreign corrupt practices, conflicting standards on labor, the environment, competition, and tariff law. The course presents policy problems and operational concerns that arise as the result of conflicting laws, gaps in laws, and developing international standards.

Prerequisite(s): LGST 3010.

LGST 4130 Fraud Prevent & Investig (3 Credit Hours)
Prerequisite(s): LGST 3010 or PERS 3210.
LGST 4140 Insurance & Risk Mgmt (3 Credit Hours)
LGST 4140 helps students navigate the ever-changing landscape of identifying and analyzing risk. Students learn how to manage risk through insurance and finance techniques that are integral to a firm's overall risk management plan. This class also shows students how risk management impacts important financial decisions through techniques such as loss control, risk retention, and risk transfer. An added focus on speculative risk management, in addition to current insurance coverage, makes this class essential for managers who need to understand risk.

Prerequisite(s): (LGST 3010 or PERS 3210) and (FINE 3010 or FINC 3010).

LGST 4150 Real Estate Law (3 Credit Hours)
LGST 4150 examines the fundamentals of real estate financing and development from a legal and managerial perspective. The course introduces real estate law to students. The course develops the student's skills in using legal concepts in a real estate transactional setting. The main topics covered include the following: land acquisition, subdivision, construction, permanent loans, joint ventures, management (leasing, environmental), limited partnerships, disposition of real property (sale of mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks), and recent legal developments.

Prerequisite(s): LGST 3010 or PERS 3210.

LGST 4160 Law of E-Commerce (3 Credit Hours)
LGST 4160 examines the law relating to the developing field of electronic commerce or electronic business. The first part of the course looks at the online legal environment. Online legal environment issues typically involve dispute resolution, cyber torts and crimes, and intellectual property issues. The second part of the course examines management and e-commerce issues, which involve e-contracting, risk management, and information security. The third part of the course focuses on marketing and e-commerce and examines online marketing, consumer protection, and privacy issues. The fourth part of the course examines employment relationships and web technology, including monitoring employee activities. The fifth section of the course focuses on the economics, finance, and taxation of e-commerce.

Prerequisite(s): LGST 3010.

LGST 4170 Employmt Law For HR Prof (1-3 Credit Hours)
LGST 4170 examines legal issues associated with the hiring process, such as recruitment, background checks; eligibility; hiring and promoting; and managing a diverse workforce, including affirmative action, harassment, and accommodations. The course also covers conditions of employment such as pay, benefits, terms of employment, and so forth; managing performance; and terminating an employee, including terminating union, non-union, and public sector employees.

Prerequisite(s): LGST 3010.

LGST 4175 White Collar Crime (3 Credit Hours)
LGST 4175 examines white-collar crime, which is a significant problem in the business world. Major corporations and financial institutions fail because of unlawful activities, resulting in huge financial losses to Federal, state and local governments, as well as to private organizations and individuals. Whether students plan to pursue careers in business or law, they will need to be familiar with at least the basics of white-collar criminal law. This course covers a variety of subjects, including substantive criminal law, inchoate offenses, the attorney-client privilege, business ethics, and corporate criminal liability, as well as a number of specific offenses such as fraud, obstruction of justice, bribery, environmental crime, computer crimes, currency crimes, insider trading, and RICO.

Prerequisite(s): LGST 3010.

LGST 4180 Sports & Entertmnt Law (3 Credit Hours)
LGST 4180 introduces students to the legal principles applicable to the sports and entertainment industries. The first part of the course focuses on entertainment law, and the second half explores sports law. The primary areas of the law that are examined are those relating to contracts, torts, intellectual property, agency, anti-trust, labor and employment, and the business forms used in the sports and entertainment industries. The course also delves into policy problems and operational concerns that arise as the result of conflicting laws, and gaps in the laws applicable to these two industries.

Prerequisite(s): LGST 3010 and 4100.

LGST 4200 LSAT Review (1 Credit Hour)
The Law School Admissions Test Review (LSAT) course prepares students for the LSAT, including familiarizing students with the LSAT's format and structure and developing test-taking strategies. The course is one credit hour taken on an S/U basis, and the course does not count toward the student's degree requirements. Open to all students.

LGST 4210 Mock Trial (1.5 Credit Hours)
LGST 4210 is a year-long course that examines procedural and evidentiary issues involved in case analysis and trial preparation. The course covers ethical decision making, including the concepts of professionalism, negotiations, public speaking, and legal research and writing. The course then focuses on the ethical and legal issues associated with the legal system, specifically the litigation process and alternative dispute resolutions. The course will include simulation exercises involving trial preparation and trial procedures, including motion filing and oral arguments. Trial materials will include subject matter related to business torts based on negligence; intent and strict liability; fraud; products liability; misrepresentations and misleading advertising; contracts; consumer protection issues; business crimes; bankruptcy; labor and employment law; laws surrounding equal opportunity, and property law, including patents, copyrights, trade secrets, trade names, and trademarks. The course will culminate in participation in a National Moot Court competition where students will compete with other undergraduate institutions.

Prerequisite(s): LGST 3010.

LGST 4220 Moot Court II (1.5 Credit Hours)
Prerequisite(s): LGST 3010 or PERS 3210.
Less Commonly Taught Languages (LCTL)

LCTL 1010 Arabic I (3 Credit Hours)
LCTL 1020 Arabic II (2 Credit Hours)
LCTL 1210 Hungarian (2 Credit Hours)
Introduction to essential skills in Hungarian

LCTL 1290 Semester Abroad (1-20 Credit Hours)
LCTL 1510 Swahili (2 Credit Hours)
LCTL 1610 Spec Language offerings (2 Credit Hours)
To be offered as demand arises and resources permit. Currently includes elementary Hindi and intermediate Swahili.

LCTL 2390 Semester Abroad (1-20 Credit Hours)
LCTL 5190 Semester Abroad (0 Credit Hours)
LCTL 5380 Junior Year Abroad (1-20 Credit Hours)
LCTL 5390 Junior Year Abroad (1-20 Credit Hours)

Linguistics (LING)

LING 1010 American Sign Language I (3 Credit Hours)
The purpose of this course is to enable students to acquire introductory knowledge of American Sign Language. A linguistic, communicative, and cultural approach will allow students to explore this visual-spatial language used by up to two million people in the United States. Instruction will focus on the development of receptive and expressive signing skills and on the acquisition of the fundamentals of applied grammar.

LING 1015 Elem Amer Sign Language II (3 Credit Hours)
Continuation of Elementary American Sign Language I, with focus on the expansion of vocabulary, a deepening of the understanding of grammatical structures, and the further development of communicative skills. Prerequisite: LING 1010 Elementary American Sign Language I.

Prerequisite(s): LING 1010.

LING 1940 Transfer Coursework (3 Credit Hours)
Approved coursework from another institution.

LING 2010 Intermed Amer Sign Language (3 Credit Hours)
Continuation of intermediate/advanced study in American Sign Language, with focus on the expansion of vocabulary, conversational skills, demonstrative skills, and receptive skills in a seminar setting. Use of grammatical structure in natural and informative settings and the further development of communicative skills. THIS COURSE Requires Successful Completion of ASL II at the B-Level or Above.

Prerequisite(s): LING 1015.
LING 3000 Tunica La's Sleeping Language (3 Credit Hours)
Tulane has been collaborating with the Tunica tribe of Louisiana to bring back their language, the last speaker, Sesostrie Youchigant having died over fifty years ago. This course addresses the processes of language death, as well as methods and initiatives for language revitalization. Students will learn effective second language teaching methods and elementary Tunica. They will then apply what they have learned, serving as teaching assistants during the tribe's Language Summer Camp. The Tunica tribe will host the course in Marksville for the week of the Summer Camp. This course counts as a second tier service learning course.

LING 3010 Semantics (3 Credit Hours)
What does the word cat mean? This course looks at three answers. One says that cat is just the set of all cats. Another says that cat refers to a prototypical cat, one described by the characteristics common to all the cats that you have ever seen. The third answer says that cat is the word that the brain associates with the cats that you saw when you were younger. Each of these answers assumes that the mind works in a certain way, so the right one tells us something about how the mind works in situations that have nothing to do with the meaning of cat.

LING 3011 Special Topics In Ling (0-1 Credit Hours)
Prerequisite(s): LING 3822.
LING 3012 Special Topics In Ling (3 Credit Hours)
Prerequisite(s): LING 3822.
LING 3013 Special Topics In Ling (3 Credit Hours)
Prerequisite(s): LING 3822.

LING 3430 Semantics of Nat. Lang. (3 Credit Hours)
An introduction to the study of meaning in natural languages. The central techniques involve extending the methods of logical semantics for formal languages. No prerequisites, but prior exposure either to generative grammar (e.g., ANTH 3590) or symbolic logic (e.g., PHIL 1210) would not be wasted.

LING 3441 Lexicography (3 Credit Hours)
Lexicography is the making of dictionaries. Dictionaries take many forms and fulfill many functions. Dictionaries have evolved new formats; professional lexicographers share word gleaning with internet users. Dictionaries may be monolingual, di-, tri-, or multi-lingual, etymological or encyclopedic, synchronic or diachronic, prescriptive or descriptive, terminological or generic. Dictionary construction requires a number of skills which co-vary with the type of dictionary to be produced. This course provides an overview of dictionaries, their forms, formats and histories, while fostering a basic skill set for harvesting words and compiling lexicons. Dictionaries provide a cognitive map to communities of speakers, both past and present. Notes: Writing Practica Option

LING 3700 Second Language Acquisition (3 Credit Hours)
This course is intended to familiarize students with the field of Second Language Acquisition, including a history of the field's origins. Discussion of recent theories of second language acquisition and an overview of approaches to research methodology in this field.

LING 3810 Special Topics In Ling (3 Credit Hours)
Special topics in linguistics. For description consult the director. Other departments offer courses with linguistic import as well.

LING 3811 Special Topics In Ling (3 Credit Hours)
Special topics in linguistics. For description consult the director.

LING 3820 Special Topics (3 Credit Hours)
Special topics in linguistics. For description consult the director. Other departments offer courses with linguistic import as well.
LING 4880 Writing Practicum: LING 4910 (1 Credit Hour)
Writing practicum.

LING 4890 Service Learning LING 4110 (0-1 Credit Hours)
Service learning.

LING 4910 Independent Study (1-3 Credit Hours)
Independent study in Linguistics.

LING 4990 Honors Thesis (3 Credit Hours)
Honors Thesis.

LING 5000 Honors Thesis (4 Credit Hours)
Honors Thesis.

LING 5110 Capstone Component: ANTH 3310 (0 Credit Hours)
Cross-registered with a capstone component.

LING 5111 Capstone Component: LING 4850 (0 Credit Hours)
Cross-registered with a capstone component.

LING 5112 Capstone Component: LING 4850 (0 Credit Hours)
Capstone.

LING 6720 Translation Studies Theory (3 Credit Hours)
This course is an exploration of the development of the field of Translation, from Ancient Civilization through the twenty-first century, with a heavy emphasis on primary source commentaries on translation produced by translators over time. The course intends to prepare the advanced graduate student for undertaking independent research in the field of translation studies by familiarizing him/her with the issues in the field of translation from Ancient to Modern times.

LING 6810 Special Topics (3 Credit Hours)
Special topics in linguistics. For description consult the director.

LING 6820 Special Topics (3 Credit Hours)
Special topics in linguistics. For description consult the director.

LING 6823 Special Topics (3 Credit Hours)
Special topics in linguistics. For description consult the director.

LING 6880 Writing Intensive: LING 6720 (1 Credit Hour)
Writing intensive.

Corequisite(s): LING 6720.

LING 6910 Independent Study (1-3 Credit Hours)
Independent study in Linguistics.

LING 7010 Semantics (3 Credit Hours)
What does the word cat mean? This course looks at three answers. One says that cat is just the set of all cats. Another says that cat refers to a prototypical cat, one described by the characteristics common to all the cats that you have ever seen. The third answer says that cat is the word that the brain associates with the cats that you saw when you were younger. Each of these answers assumes that the mind works in a certain way, so the right one tells us something about how the mind works in situations that have nothing to do with the meaning of cat.

LING 7960 Independent Study (3 Credit Hours)
Independent study in Linguistics.

LING 9980 Master's Research (0 Credit Hours)
Master's Research.

LING 9990 Dissertation Research (0 Credit Hours)
Dissertation Research.

Literature (LITR)

LITR 5380 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

LITR 5390 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

Louisiana Studies (LOUS)

LOUS 2910 Special Topics (3 Credit Hours)
Special topics in Louisiana Studies.

Management (BSMT)

BSMT 1940 Transfer Coursework (3 Credit Hours)
Transfer Coursework for BSMT discipline in BSLS Programs (1000 Level).

BSMT 2250 Business Communications (3 Credit Hours)
In today's business environment, it is important to understand how to strategically use business communication channels. Business Communications provides basic concepts and skill-building exercises necessary for you to communicate effectively and professionally. This course will help you improve your business writing and communication skills by using business language clearly, concisely, and correctly; analyzing each audience to target and tailor messages appropriately; and, using critical thinking and a problem-solving approach to analyze business issues. These skills will help you communicate effectively in a variety of business settings.

BSMT 2310 Principles of Management (3 Credit Hours)
This course reviews and analyzes basic management processes such as planning, organization, coordination, and control. The course will survey various schools of management thought with emphasis on the process, human behavior and quantitative schools of management. No prerequisites are required.

BSMT 2750 Intro to Franchising (3 Credit Hours)
The course will examine franchising as a business form. During the semester, students will study franchising from the perspective of both the franchisor and the franchisee covering all relevant issues, including franchising agreements and related documents, financing, site selection, marketing, financial management, and operations. The course will examine the franchisee/franchisor relationship, contractual requirements, trademarks, territorial rights, compliance issues, legal considerations, and current issues in franchising.

BSMT 2910 Special Topics in Management (1-3 Credit Hours)
Special Topics in Management.

BSMT 2940 Transfer Coursework (3 Credit Hours)
Transfer Coursework for BSMT discipline in BSLS Programs (2000 Level).
BSMT 3250 Business Statistics (3 Credit Hours)
A survey of some of the more important concepts and techniques of statistics. Examples are drawn from the business world; in particular, time series analysis and index numbers are introduced. Students are introduced to computer implementation of statistical procedures. Student should have a background in high school algebra. The course meets math proficiency requirement for Bachelor of Arts degree only.

BSMT 3340 Managing Org Behavior (3 Credit Hours)
This course is an introduction to how organizations function. The student will develop abilities to diagnose and respond more flexibly in organizations they participate in and explore and reflect critically on key themes in modern organizations. Major emphasis is placed on teams, globalization and diversity, interpersonal and group communication, organizational cultures, and negotiating the fit between the individual and the organization.

BSMT 3380 Business Ethics (3 Credit Hours)
A theoretical critique and case-oriented analysis of the moral, ethical, and value issues that challenge business, industry, and corporate life. Students will discover ethical principles and strategies applicable to the management process.

BSMT 3600 Entrepreneurship (3 Credit Hours)
This course introduces students to entrepreneurship, discusses the personality traits common to many entrepreneurs, and explores ways to analyze new venture opportunities from marketing, production, and organizational perspectives. The course also emphasizes the legal considerations involved in starting a business and protecting a new idea and how to finance the venture.

BSMT 3650 Developing a Small Business (3 Credit Hours)
This course is designed to introduce students to the essentials of small business start-up and management. This course will teach students how to locate and to analyze opportunity, set up the operating structure, develop marketing and financial plans, and utilize financial reports for effective management of a developing small business.

BSMT 3700 Global Business (3 Credit Hours)
This course introduces the student to the fundamentals of international trade and the global business environment. The course covers policies and laws that affect small and large businesses engaged in international trade and the impact of globalization on people, the environment, national employment, and national competitiveness. The students will learn how small and large companies enter and engage in global business. The course includes the study of ethics and corporate citizenship.

BSMT 4910 Independent Studies (1-3 Credit Hours)
Independent Study in the BSMT discipline for the BSLS Programs.

Management (MGMT)

MGMT 3010 Organizational Behavior (3 Credit Hours)
MGMT 3010 applies concepts from psychology and social psychology to organizational problems that managers face. Topics such as perception, communication, attitudes, motivation, influence, group dynamics, and organizational change are covered in a lecture, discussion, and problem-solving framework. Prerequisites: ECON 1010, ECON 1020, MCOM 3010 (Students admitted fall 2014 and later); sophomore standing or above. This course includes a writing intensive component; Pre- or Co- requisites: CDMA 1201

Prerequisite(s): (ECON 1010, 1010, 1010 or 1010) and (ECON 1020, 1020, 1020, 1020, 1040, 1040, 1040 or 1040) and MCOM 3010 and CDMA 1201

* May be taken concurrently.

MGMT 3380 Business Ethics (3 Credit Hours)
This course considers the ethical responsibilities of managers and corporations. Specific objectives of the course include fostering an understanding of the ethical responsibilities in becoming a manager; improving individual and group skills in identifying and analyzing ethical issues in the contexts they arise, developing action plans based upon those analyses, and providing a safe setting in which to critically examine the assumptions and values people bring to complex business decisions that raise ethical issues. Class sessions will entail case discussions, exercises, and presentations of theoretical frameworks for interpreting business ethics. Prerequisite: MGMT 3010

MGMT 4001 Hospitality Seminar (3 Credit Hours)
The hospitality industry fuels the global economy and is a major contributor to growth in both developing and developed countries. Globally the industry contributes $7.6 trillion to GDP. In New Orleans alone, the industry provides almost 90,000 jobs, and visitors to our city spent $7.4 Billion in 2016. Today hospitality is more important than ever before and it has become a critical source of innovation for companies in all industries. Hospitality is a mechanism to create and capture customer value through experience, and has become important in many industries including technology, healthcare, financial services and education. From Apple to Walmart, from Amazon to Wells Fargo, companies are increasingly focused on hospitality as a mechanism to create market differentiation, build customer value, and provide a sustainable competitive advantage. This course takes a deep dive into entrepreneurial hospitality and examine how hospitality is driving customer experience in a wide variety of companies. The course provides a hands-on opportunity to learn from experts, entrepreneurs, and industry leaders.
MGMT 4010  Strategic Management  (3 Credit Hours)
MGMT 4010 must be taken concurrently with MGMT 4900. Together, these courses serve as the Business Capstone Experience. In this course, students will integrate the knowledge and skills acquired from the BSM core curriculum to identify and diagnose the strategic issues that companies face in complex and competitive environments. Strategic Management encompasses a series of interrelated steps by which managers conduct analyses at the industry, business, and corporate levels; decide on strategies to enhance firm competitiveness; put those strategies into action; and constantly evaluate and modify those strategies, as needed. This case-based course helps students develop skills in conducting industry analyses, identifying the firm’s resources and capabilities, and addressing problems in strategy implementation. In MGMT 4010, students assume the role of the practicing general manager and develop a capacity to propose and implement sound, realistic, and specific solutions for the firm’s strategic problems. Prerequisites: All 3000-level BSM core courses, enrollment limited to students with senior standing, with priority given to graduating seniors.

Prerequisite(s): (ACCN 3010 or ACCT 3010) and (CBMA 3010, MKTG 3820 or 3010) and (FINE 3010, FINC 3520 or 3010) and (INFO 3010 or ISPM 3010) or MGSC 3010 and (LGST 3010 or PERS 3210) and (MHSC 3010, OBHR 3310 or MGMT 3010) and (MCOM 3010, MOCO 3010 or MCOM 3350).

MGMT 4100  Entrepreneurial Mgmt  (3 Credit Hours)
This course considers the ethical responsibilities of managers and corporations. Specific objectives of the course include fostering an understanding of the ethical responsibilities in becoming a manager; improving individual and group skills in identifying and analyzing ethical issues in the contexts they arise, developing action plans based upon those analyses, and providing a safe setting in which to critically examine the assumptions and values people bring to complex business decisions that raise ethical issues. Class sessions will entail case discussions, exercises, and presentations of theoretical frameworks for interpreting business ethics.

Prerequisite(s): MGMT 3010.

MGMT 4110  Cases In Entrepreneurship  (3 Credit Hours)
MGMT 4110 reviews thirteen actual business cases. A visiting CEO (or other top executive) and the professor teach each case jointly. The class explores problems and opportunities encountered in the search, evaluation, and acquisition of new, as well as ongoing, ventures. Students will further develop analytical skills in finance, accounting, business analysis, management, and marketing that they have acquired in other courses. Brainstorming sessions will challenge and improve innovative thinking while assignments and presentations hone business communication skills. Discussion of entrepreneurship, family business, and small business management gives the student an overview of the alternatives to traditional corporate employment. Most importantly, students interact with top-level executives who are role models from whom they can learn how to be successful entrepreneurs. Prerequisites: Sophomore standing or above

MGMT 4120  Corporate & Coopertv Strategy  (3 Credit Hours)
In MGMT 4120, students integrate knowledge from the different functional areas and evaluate strategic decisions in a corporate context. This case-based course emphasizes the analysis of the drivers of value creation and value destruction in such corporate tools as mergers and acquisitions, alliances, and informal interorganizational networks. Students will learn to apply a set of tools that help them to make better corporate-level decisions addressing diversification, integration, and internal development issues facing modern multibusiness firms. The coursework includes a team project. Prerequisites: All 3000-level BSM core courses; junior standing or above

Prerequisite(s): (ACCN 3010 or ACCT 3010) and (CBMA 3010, MKTG 3820 or 3010) and (FINE 3010, FINC 3520 or 3010) and (INFO 3010, ISPM 3010 or MGSC 3010) and (MGMT 3010, MHSC 3010 or OBHR 3310) and (MCOM 3010, MOCO 3010 or MCOM 3350).

MGMT 4130  Dimensions in HR Mgmt  (3 Credit Hours)
MGMT 4130 introduces the major strategies and procedures for effectively managing human resources. Through readings, cases, and a series of experiential exercises, students learn about the legal environment of human resource management, analyzing jobs and work, staffing, performance management, training, compensation, and workplace safety. Prerequisites: MATH 1140, PSYC 1000; junior standing or above

Prerequisite(s): (MATH 1140 or 1230) and (PSYC 1000, 1000, 1000, 1010 or 1020).

MGMT 4140  Entrepreneurial Mgmt  (3 Credit Hours)
MGMT 4140 consists of two parts. In the first part, class members team up to choose a business. The teams then create a business plan. By maintaining the books of the firm, students see the financial impact of their decisions. This format emphasizes how day-to-day decisions add to or detract from corporate liquidity and profits or losses. The second part of the course comes from the professor's many years of business experience. Topics include developing and recognizing business opportunities; using teamwork to organize a business; building a realistic business plan; raising capital and borrowing money; interviewing, hiring, and managing people; determining cost structure; analyzing margins; pricing; making decisions in groups; considering ethics; identifying industry characteristics; evaluating financial statements; negotiating; dealing with labor unions; creating a successful business partnership; understanding the banking system and how it works globally; and developing a philosophy of business. Prerequisites: Sophomore standing or above
MGMT 4150 Enviro, Society & Capitalism (3 Credit Hours)
This course takes a strategic planning perspective to investigate environmental management issues in the context of assessing and responding to competitive and social forces. This course examines a serious challenge to corporations competing in the global economy. How to maximize profitability and production in such a way that will allow the planet to support operations indefinitely. Emphasis will be on the company’s ability to use both traditional management concepts and new sustainability practices to build and sustain a competitive advantage. Students will learn how an enterprise can meet sustainability goals while still fulfilling its financial and market objectives. Prerequisites: All 3000-level BSM core courses; junior standing or above
Prerequisite(s): (ACCN 3010 or ACCT 3010) and (CBMA 3010, MKTG 3820 or 3010) and (FINE 3010, FINC 3520 or 3010) and (INFO 3010, MGSC 3010 or ISPM 3010) and (LGST 3010 or PERS 3210) and (MGMT 3010, MHSC 3010 or OBHR 3310) and (MCOM 3010, 3350 or MOCO 3010).

MGMT 4160 Leadership (3 Credit Hours)
The purpose of this course is three-fold. First, students will develop a general understanding of leadership theories and an understanding of their own leadership traits. Second, students will use theories to help analyze real-world cases involving both successful and unsuccessful examples of leadership. Finally, students will practice their own leadership skills as they lead their teams in a variety of exercises and projects. Prerequisites: MGMT 3010, junior standing or above
Prerequisite(s): MGMT 3010, MHSC 3010 or OBHR 3010.

MGMT 4170 Negotiations (3 Credit Hours)
This course addresses the theoretical foundations and practical skills used in resolving differences and negotiating mutually satisfying outcomes. Students develop skills through simulated negotiations in a variety of contexts. Class topics include the nature of negotiations, different negotiating styles, distributive versus integrative bargaining, conflict, and intercultural bargaining. Self-reflection and giving and receiving feedback are key aspects in developing negotiation skills. Prerequisites: MGMT 3010, junior standing or above
Prerequisite(s): MGMT 3010, MHSC 3010 or OBHR 3310.

MGMT 4180 Mgmt of Tech & Innovation (3 Credit Hours)
Technology, innovation, and entrepreneurship are among the most frequently used terms in today’s business environment. We are bombarded by products and technologies that are changing the ways we live and work, but how do we analyze the processes that bring them to market? What exactly is technology? What forces shape its evolution? What roles do strategic alliances, standards, and intellectual property play in forecasting? How should we create product development teams? How should we create organizations that foster innovation? What is the role of creativity in the development of new technologies? These are some of the topics that are covered in this course. Prerequisites: All 3000-level BSM core courses; junior standing or above
Prerequisite(s): (ACCN 3010 or ACCT 3010) and (MGMT 3010, MHSC 3010 or OBHR 3310) and (MCOM 3010, 3350 or MOCO 3010) and (CBMA 3010, MKTG 3820 or 3010) and (FINE 3010, FINC 3520 or 3010) and (INFO 3010, ISPM 3010 or MGSC 3010) and (LGST 3010 or PERS 3210).

MGMT 4200 Student Venture Accelerator 1 (3 Credit Hours)
In this course, students will develop an understanding of the resources, strategies, and management skills required to launch a new business — and some students will have the opportunity to create viable ventures that they can pursue through Student Venture Accelerator 2 in a subsequent semester. Working out of the LePage Center’s Student Venture Incubator, students will have the opportunity to take an idea from its earliest inception to analyze potential product-market fit. Throughout this course, student teams will work on their new ventures by developing a business model and business strategy; creating financial, marketing, sales, and hiring analyses; developing your founding documents and policies; setting up charts of accounts; and developing a new venture pitch. Prerequisites: All 3000-level BSM core courses
Prerequisite(s): (ACCN 3010 or ACCT 3010) and (CBMA 3010, MKTG 3820 or 3010) and (FINE 3010, FINC 3520 or 3010) and (LGST 3010 or PERS 3210) and (INFO 3010, ISPM 3010 or MGSC 3010) and (MGMT 3010, MHSC 3010 or OBHR 3310) and (MCOM 3010, MOCO 3010 or MCOM 3350).

MGMT 4210 Student Venture Accelerator 2 (3 Credit Hours)
In this course, students will deepen their understanding of the resources, strategies, and management skills required to launch a new business — with a goal of creating a profitable venture that they can pursue well beyond the end of the course. Working out of the LePage Center’s Student Venture Incubator, students will have the opportunity to take an idea to fruition by undertaking customer interviews to test your ideas, determine product-market fit, and obtain their first paying customers. Throughout this course, student teams will work on their new ventures by improving the business model and business strategy; developing financial, marketing, sales, and hiring plans; finalizing founding documents and policies; refining charts of accounts; and preparing for a board meeting simulation. To support the launch of each new venture, the professor, a team of mentors that includes entrepreneurs/executives-in-residence, and the LePage Center’s expert network will provide coaching, referrals, and guidance that will be customized to the unique challenges facing each startup. Prerequisites: All 3000-level BSM core courses
Prerequisite(s): (ACCN 3010 or ACCT 3010) and (CBMA 3010, MKTG 3820 or 3010) and (FINE 3010, FINC 3520 or 3510) and (LGST 3010 or PERS 3210) and (INFO 3010, ISPM 3010 or MGSC 3010) and (MGMT 3010, MHSC 3010 or OBHR 3310) and (MCOM 3010, MOCO 3010 or MCOM 3350) and MGMT 4200.
MGMT 4550  Management Internship (1 Credit Hour)
Freeman School majors may elect to do a Business Internship that will appear as a one-credit, 4000-level course on their transcripts; however, the credit does not apply towards the 122 minimum hours required for a BSM degree. The Internship must be related to one of the majors offered through the BSM program, and the Internship must apply (within an ongoing business organization) the intellectual capital obtained from first-year through third-year Freeman School courses. To obtain approval of the Internship, the student must visit the Career Management Center for instructions. The final grade for the Internship is given on a Satisfactory/Unsatisfactory (S/U) basis when the student submits a paper/evaluation to the supervising faculty member in the Career Management Center. This course is normally offered during the summer and fulfills the “curricular practical training” option for students with F-1 visa status. Prerequisites: All 3000-level BSM core courses.

MGMT 4600  Strategic Consulting (3 Credit Hours)
A strategic management consultant provides strategic guidance, tactical advice, and implementation support to senior managers in industry and government. Students in this course will learn to make value propositions that reflect their clients’ goals and maximize their clients’ competitive potential. Topics include industry analysis, consulting skills development, consultant-client relationships, stages of consulting (contracting, data collection and diagnosis, feedback and the decision to act, developing client commitment, implementation, results, and accountability), ethics in consulting, and differences between internal and external consulting. Students will learn to understand resistance and manage meetings; they will study project management and the management of consulting firms. Pre- or Co- requisite: MGMT 4010; senior standing.

Prerequisite(s): MGMT 4010 and ACCN 3010 and (MKTG 3010 or 3820) and FINE 3010 and INFO 3010 and (LGST 3010 or PERS 3210) and MGMT 3010 and (MCOM 3010 or 3350).
* May be taken concurrently.

MGMT 4610  Management of New Ventures (3 Credit Hours)
Entrepreneurs are concerned with the relentless pursuit of opportunities in the marketplace. This course explores the key characteristics of entrepreneurs and examines the entrepreneurial process. The course provides students with the concepts, techniques, and skills needed to manage the entrepreneurial process and face the challenges of entrepreneurial companies. By the conclusion of this class, students should understand their potential roles as entrepreneurs and should have gained a “real-world” orientation to the entrepreneurial process of conceiving and implementing an idea for a new venture. Pre- or Co- requisite: MGMT 4010; senior standing.

Prerequisite(s): MGMT 4010.
* May be taken concurrently.

MGMT 4890  Service Learning: MGMT 4180 (0-1 Credit Hours)
This course requires students to complete an Eco Challenge Project where they will develop a plan that utilizes the latest technologies to have the Metropolitan New Orleans area run on totally renewable energy. This public service experience will add to the students’ knowledge and experience by allowing them to see—firsthand—the needs of the community, and face the challenges in transforming the city to an area sustained entirely on renewable resources. Prerequisite: MGMT 3010; Corequisite: MGMT 4180; junior standing or above.

Corequisite(s): MGMT 4180.

MGMT 4891  Service Learning: MGMT 4130 (0-1 Credit Hours)
Student teams will work with the partnering organization on an HR-related project relevant to the needs of that organization. The teams will work in close coordination with the organization and the professor. The semester-long project will result in end-of-semester team presentations, and individual teams submitting a written report. Prerequisite: MGMT 3010; Corequisite: MGMT 4130; junior standing or above.

Corequisite(s): MGMT 4130.

MGMT 4896  Service Learning: MGMT 4160 (1 Credit Hour)
This course studies leadership and leadership development. At the center of the course is a service learning project that students will do in collaboration with the Center for Public Service. Each student will lead a team in doing a service project in the community. Students will be responsible for defining the mission, recruiting and motivating a team, formulating and executing a plan, and assessing the results of their efforts. In tandem with the service projects, class meetings will focus on various aspects of leadership. Students will analyze theories and receive practical advice about leadership. In addition, students will take several leadership assessments and receive feedback about their leadership styles. Students should leave the course with a sound understanding of the challenges of leadership, knowledge about research on leadership, practical experience doing leadership, and an increased awareness of their own leadership styles. Prerequisite: MGMT 3010; Corequisite: MGMT 4160; junior standing or above.
MGMT 4900 Busin Integratn Capstone (1 Credit Hour)
In MGMT 4900, students will integrate the knowledge, skills, and concepts acquired from the core classes and majors in the Bachelor of Science of Management degree. Students will examine the problem of making strategic business decisions from functional area perspectives and a total organizational perspective. The professor will organize the class into teams, and the highlight of the course will be a final BSM Case Competition involving all students who are taking the Capstone course. The course requirements include an individual written case analysis, and a team case analysis and presentation. The professor will also grade students on class attendance and participation, and on their abilities to work effectively and contribute as team members. In this course, students will be required to take a comprehensive exam known as the ETS® Major Field Test for the Bachelor's Degree in Business, and this exam is part of the course grade. The exam contains 120 multiple-choice questions designed to measure a student's subject knowledge and ability to apply facts, concepts, theories, and analytical methods. Some questions are grouped in sets and based on diagrams, charts, and data tables. The questions represent a wide range of difficulty and cover depth and breadth in assessing students' achievement levels. The test covers the following areas (coverage): Accounting (~15%), Economics (~13%), Management (~15%), Quantitative Business Analysis (~11%), Information Systems (~10%), Finance (~13%), Marketing (~13%), Legal and Social Environment (~10%) and International Issues (overlapping and drawn from other content areas previously listed). Prerequisites: All 3000-level BSM core courses, enrollment limited to students with senior standing, with priority given to graduating seniors. Corequisite: MGMT 4010 MGMT 4900 must be taken concurrently with MGMT 4010. Together, these courses serve as the Business Capstone Experience.

MGMT 4910 Independent Studies (1-3 Credit Hours)
Freeman School seniors who demonstrate academic excellence are allowed to pursue an Independent Study. The work may take the form of directed readings, laboratory or library research, or original composition. Instead of traditional class attendance, the student substitutes conferences with the supervising faculty, as needed. An Independent Study requires the approval of the supervising instructor and the Associate Dean for Undergraduate Education. The credit does not apply towards the Management major requirements for a BSM degree; the independent study counts as Business elective credit only. Interested students should contact the Office of Undergraduate Education at the Freeman School. Prerequisites: Minimum cumulative GPA of 3.333 or higher; senior standing

MGMT 4990 Management Honors Thesis (3 Credit Hours)
This course is for BSM students in the Tulane Honors Program. Students enrolled in this section will begin their Business Senior Honors Thesis. They will conclude their Business Senior Honors Thesis in MGMT 5000 in the spring semester.

Corequisite(s): MGMT 4010 and MGMT 4900.

MGMT 5000 Honors Thesis (3 Credit Hours)
This course is for BSM students in the Tulane Honors Program. Students enrolled in this section of the course will complete their Business Senior Honors theses. They will start the Business Senior Honors theses in MGMT 4990 in the fall semester.

Prerequisite(s): MGMT 4010 or STRE 3010.

MGMT 5380 Junior Year Abroad (1-20 Credit Hours)

MGMT 5390 Junior Year Abroad (1-20 Credit Hours)

MGMT 6030 Strategic Management (3 Credit Hours)
This course is designed to present strategic management from the point of view of the practicing general manager. It focuses on specific knowledge and skills that are required to understand strategy and the process by which it is developed in business organizations. It also provides information on the situation and context in which strategy is formed and implemented.

MGMT 6040 Business Ethics & Leadership (3 Credit Hours)
This course concerns the ethical foundations of leadership in business and society. Students will gain an understanding of various academic perspectives on leadership, real-world examples of effective and ineffective leadership, and insights into their own leadership capabilities. The emphasis on ethics will include some moral philosophy, but will also involve the application of common sense morality to business leadership. This means that active student participation is essential in this course. The classroom experience will include much conversation, debate, disagreement, and dissent in response to provocative case studies, class exercises, and group projects.

MGMT 6050 Operations Management (3 Credit Hours)

MGMT 6060 Human Resource Management (3 Credit Hours)
This course develops an understanding of how human resource management influences organizational success, how human resource strategy should align with the strategic goals of an organization, and the skills that general managers need in order to successfully manage human resources. This course will draw on economics, psychology, sociology, and legal issues to inform students about recruiting, selecting, training, placing, compensating, and managing employees in order to develop and maintain a highly committed and high performing workforce. Students will engage in a variety of exercises and projects which require the application of course material.

MGMT 6070 Strategic Consult Organization (3 Credit Hours)
Strategic consulting aims to prepare students for internal and external management consulting positions. Topics include industry analysis, consulting skills development, consultant-client relationships, stages of consulting (contracting, data collection and diagnosis, feedback and the decision to act, developing client commitment, implementation, results, and accountability), ethics of consulting, differences between internal and external consulting, understanding resistance, managing meetings, project management, and management of consulting firms.

MGMT 6080 Managing People in Orgs (3 Credit Hours)
This course provides students with knowledge of the elements of individual, group, and organizational influences on behavior in organizations and the impact that behavior has on individual, group, and firm outcomes. It covers a range of issues and challenges including creating an environment for success, managing diversity, managing performance, motivating workers, understanding group processes, and making decisions. In doing so, this course exposes students to current thinking, strategies, and evidence-based best practices by incorporating perspectives of leading practitioners, consultants, and researchers in the field.
MGMT 6110 Managing People (1.5-3.75 Credit Hours)

MGMT 6140 Leadership & Ethics (2-3 Credit Hours)

MGMT 6150 Global Business Projects (3 Credit Hours)
This course provides an overview and some in-depth study of management at the executive level in Asia. With a conceptual base in books, current articles and brief lectures, it tackles the most important issues and current situations for top level management doing business in China, India, Japan, Korea, and Southeast Asia. Direct experience for the students is provided through a team project developing and presenting a strategy for an Asian client.

MGMT 6160 New Venture Planning (3 Credit Hours)
The primary objective of this elective course is to teach students to apply the skills learned in their functional area courses toward the goal of understanding entrepreneurship, becoming an entrepreneur, and launching a new venture. Working in teams, students learn to assess, plan, finance, launch, manage, and harvest a scalable, high-growth new venture.

MGMT 6270 Internship Studies (1-3 Credit Hours)
In this course, students will apply the intellectual capital obtained from coursework to a real business organization. The objectives of the course are to help the student integrate the concepts presented in separate functional area courses, to allow the student to experience how academic concepts are adapted to fit the realities of a particular business context, and to help the student understand how his or her academic training can help the organization. Note: MGMT 6270 does not count toward degree completion.

MGMT 6510 Global Leadership I (2 Credit Hours)
This course provides an overview of the world economy and the patterns of global interaction among countries. It develops the foundations of aggregate demand and aggregate supply in an open economy. The emphasis is on open economy macroeconomic issues for managerial decisions. Topics include the determination of interest rates, inflation, wage levels, real output growth, exchange rates, foreign investment, and international trade patterns in the world economy. Issues of government policy, such as government debt, and external balances of trade are also considered.

MGMT 6540 Asia - Gl IV (3 Credit Hours)
Competing internationally is no longer limited to large multinational corporations. The globalization of production and markets, the decline in barriers to trade, and the development of the internet, world wide web, and transportation technologies have allowed even small companies access to global markets and supply chains. The objective of this course is to examine ways to design a strategy for competing efficiently in global markets. In a given industry, what are the mechanisms for market entry? How can international opportunities be evaluated and understood? What are the factors underpinning the success of global competitors in a given industry? How do you redesign the value chain of the firm across the globe? How do you successfully enter foreign markets? This course has a regional focus on Asia and includes an international business consulting project and an immersion experience in Asia.

MGMT 6620 Euro Union-GLOBAL Leadership II (3 Credit Hours)
Leaders in business organizations increasingly work globally and in multicultural environments. You may work regularly with customers, suppliers, and partners abroad, or as part of a globally dispersed cross-functional team, or as a manager on an international assignment. In all of these contexts, your effectiveness as a leader depends on how well you understand and are able to manage in a global context. This course has a regional focus on the European Union and includes an international business consulting project and an immersion experience in a major Western European city.

MGMT 6630 Latin Amer-GLOBAL Leadership III (3 Credit Hours)
This course provides a basis for understanding the Latin American external business environment from a social, cultural, economic, and political perspective, as well as its effect on managerial decisions. General international business theory is covered with lectures, case studies, and readings focused primarily on the countries of Argentina, Brazil, Colombia, Mexico, and Venezuela. Effective people management is a key to organizational functioning and success in that region. Therefore, individual competencies required to be an effective manager in Latin America are also identified. Those managerial competencies are studied within four categories: leadership, attitudinal, motivational, and cross-cultural. A direct experience for students is also provided through an international business consulting project, and a trip to a major Latin American city.

MGMT 7000 MBA Practicum (9 Credit Hours)
This multidisciplinary course is the experiential core of the Fast-Track MBA program. It challenges students to identify, create, and evaluate business opportunities for an existing company. This experience is tailored to the students’ career objectives. Students conduct a comprehensive assessment of a company’s strategy including the customer value proposition; product and service offerings; product innovation; new product development process; organizational structure; finance; marketing, including customer segmentation; supply chain management and operations, including distribution channels; and corporate strategy, including alliances, acquisitions, and divestitures. The assessment will also include an evaluation of the industry, including value chain, competitive dynamics, and elements of the macro environment relevant to business strategy. This course is team-taught by faculty from different disciplines within the Freeman School. Students will also engage with industry practitioners throughout the course.
MGMT 7001 Entrepreneurial Hosp Sem (3 Credit Hours)

MGMT 7010 Org Rsh Methods & Analytics (3 Credit Hours)

This course is designed to develop students’ knowledge of the process and tools of organizational research, and students’ critical thinking and skills in regard to the conduct of such research. Importantly, this course will provide students with hands-on experience in planning research, analyzing individual level and organizational level data, and disseminating information and insights to possible decision-makers. The course will cover a range of topics including but not limited to ethics in organizational research, clarifying research questions and hypotheses, research design and sampling, measurement issues and survey design, data analysis and presentation, report writing, and research communication strategies. Learning in relation to these topics will be facilitated through lecture and discussion, case studies, experiential exercises/workshops, group projects, and student presentations.

Prerequisite(s): STAT 6020.

MGMT 7050 Global Strat Capstone (3 Credit Hours)

This capstone course integrates and summarizes fast-track MBA course work. The material is developed at an advanced MBA level with the goal of utilizing the collective experience of the students to enhance the learning experience. The course utilizes Glo-Bus, an online global simulation that focuses on competitive global business strategy. Glo-Bus allows students to run an action camera and drone company in head-to-head competition against companies run by other class members. Company operations parallel those of actual action camera and drone companies. Just as in the real world, companies compete in a global market arena, selling digital cameras in four geographic regions—Europe-Africa, North America, Asia-Pacific, and Latin America. Students make decisions relating to R&D, component usage, camera and drone performance, product line breadth, production operations, workforce compensation, outsourcing, pricing, sales and marketing, and finance. The challenge is to craft and execute a competitive global strategy that results in a respected brand image, keeps your company in contention for global market leadership, and produces good financial performance as measured by earnings per share, return on investment, stock price appreciation, and credit rating. All aspects of the global business strategy simulation parallel the functioning of the actual action camera and drone market, thus allowing students (1) to think rationally and logically in deciding what to do and (2) to get valuable practice in making a variety of different business decisions under circumstances that mirror real-world competitive conditions.

Prerequisite(s): MGMT 6030.

MGMT 7110 Negotiations (3 Credit Hours)

The behavioral processes and phenomena that are inherent in virtually all types of negotiations are explored. Emphasis is on systematic preparation of a negotiating strategy. In-class exercises, role plays, and simulations are used by students to test their strategies and tactics.

Prerequisite(s): MGMT 6210 or 6030.

MGMT 7120 Competition & Strategy (2-3 Credit Hours)

Analytical tools are presented for formulating competitive strategies. In-depth analysis of several industries and competitors is undertaken to help predict competitors’ behavior and future industry evolution. Additional considerations include how government, technology, and other environmental factors affect competition. This course also provides analytical approaches to examine the corporate strategies of diversified firms. The principal focus will be on high technology industries and services.

Prerequisite(s): MGMT 6030.

MGMT 7140 New Prod Dev-Hospitality Ind (3 Credit Hours)

This course teaches students the fundamentals of new product development and provides first-hand experiences through application. It provides an understanding of the design innovation process and a set of tools and experiences in finding and developing innovative solutions to address strategic business problems in any industry. Students explore creativity from an individual and team perspective as they identify innovation opportunities and develop prototype potential solutions. Students examine the key concepts of the design innovation process and apply these concepts in a systematic way to the problem of crafting compelling and competitive offerings. The format of the course is a mixture of lecture, exercises, activities, guest speakers, and field work, drawing from the wealth of examples found in New Orleans and specifically in the New Orleans hospitality industry. The course incorporates a group project in which students design an innovative prototype or proof of concept for a new product or service.

MGMT 7170 Healthcare Policy & Reform (3 Credit Hours)

This elective will benefit students by giving them a foundation of knowledge in three key areas of focus on the United States healthcare system: access to care, cost of care, and quality of care. Students will gain an understanding of the insurance industry, Medicare, and Medicaid evolved into what it is today, their purpose, and their role in the three key areas of the healthcare system. Students will also learn about the government’s role in healthcare and the history of healthcare reform. Finally, students will be able to see how these lessons apply in the real world through a series of guest lectures from hospital administrators, insurance company executives, experienced physicians, and ex-government employees.
MGMT 7180 Innovation Tech Commercial (3 Credit Hours)
This course is designed to teach students to develop models of innovation and apply innovation theory and practices from across a range of commercial size-scales—from small startup companies to intrapreneural units within large, established companies. The twin poles of theory and practice are balanced through classroom lectures and experiential training. Weekly lectures furnish students with effective and portable theoretical frameworks for identifying, selecting, and executing opportunities for technological innovations in healthcare, energy, water, and the environment. In the experiential training component, students will apply their classroom learning to develop targeted, formal innovation and entrepreneurship business models. Completion of this course will supply students with intellectual groundwork and practical experience in advancing inventive technological ideas toward commercialization and ultimately public benefit. This course builds on the frameworks and case method teaching utilized in MGMT 7210 Management of Technology and Innovation, which is a recommended prerequisite.

Prerequisite(s): MGMT 6030, 6080 or 6210.

MGMT 7210 Mgmt of Tech & Innovatn (3 Credit Hours)
Maintaining or creating a competitive advantage requires innovation in process and product technologies. In many industries, top companies in one decade are struggling or absent in the next due to an inability to deal effectively with innovation development. In many cases, top companies fade from prominence due to an inability to anticipate or adjust to the introduction of disruptive technologies by other firms. In this course, frameworks and tools for managing technology advancement are introduced.

Prerequisite(s): MGMT 6030.

MGMT 7250 Strategic Human Res Mgmt (3 Credit Hours)
This course develops an understanding of how human resource management influences organizational success, how human resource strategy should align with the strategic goals of an organization, and how general managers acquire the skills needed in order to successfully manage human resources. This course will draw on economics, psychology, sociology, and legal issues to inform students about recruiting, selecting, training, placing, compensating, and managing employees in order to develop and maintain a highly committed and high performing workforce. Students will engage in a variety of exercises and projects which require the application of course material.

Prerequisite(s): MGMT 6030, 6080 or 6210.

MGMT 7320 Executive Leadership (1.25-3 Credit Hours)
This course provides an opportunity to explore leadership from the point of view of a senior business executive. The starting point will be a set of leadership challenges that are currently faced by business executives. Examples include responding to a business crisis, leading an integration following a merger or acquisition, making a highly consequential strategic decision, implementing a workforce reduction, finding value from diversity and inclusiveness, creating a change in operating culture, accessing a new foreign market, and negotiating the sale of a company. Students will work in teams to develop a response to their assigned challenge. Students will present their response to the class and receive feedback from the professor, their peers, and executive leaders who have actually faced that specific situation. In addition, throughout the course, perspectives on leadership from research and academic frameworks are analyzed. This approach puts students “in the trenches” and develops a practical understanding of the functions of executive leaders.

Prerequisite(s): MGMT 6210 or 6030.

MGMT 7910 Independent Study (1-3 Credit Hours)
Independent study. General Management.

Management Communications (MCOM)

MCOM 3010 Management Communication (3 Credit Hours)
Open to fi ear students in their second semester and above This course includes a writing intensive component. Emphasizing a problem-solution approach, MCOM 3010 focuses on often overlooked—but essential—business writing skills, including grammar, punctuation, organization, etc. Through case exercises and focused assignments, MCOM instructors teach students to produce professional written documents and deliver oral presentations; analyze various communication purposes, strategies, and audiences; and work effectively in teams. Some sections of this course will satisfy one of the University's Public Service requirements and will provide an additional Public Service credit. Prerequisite: ENGL 1010

Prerequisite(s): ENGL 1010, 1010, 1010, 1010, 1011, 1020, 1020, 1020, ENLS 1190, ENGL 1011 or 1011.

MCOM 3100 Social Media (3 Credit Hours)
Using case studies and real-world examples from large corporations and small business, students explore current and future ways professionals communicate through online social networks, user-generated content, and content sharing. This course looks at these new channels of communication that make up social media and the Web, and it explores how these tools fit into a company's traditional integrated communication strategy. Prerequisites: MCOM 3010, junior standing or above

Prerequisite(s): MCOM 3010.
MCOM 3200  Conscious Busn Practices/Posit (3 Credit Hours)
The goals of this course are to make the student a positively, penetrating and powerful participant in their personal and professional lives, through exploration of positive business practices, meditation, communication, positivity, and negotiation. Students will acquire the skills and abilities to be a positive force in personal and professional settings. Learn to meditate, communicate, collaborate, activate creativities, enhance intuition, marshal resources and integrate the highest possibilities and business opportunity. Explore the methods and means to entrepreneurially address issues in need of service, support, advance, and expansion. Develop frameworks and strategies for paramount personal impact and purposeful satisfaction. Prerequisites: MCOM 3010, LGST 3010 and MGMT 3010

Corequisite(s): MCOM 3891.

MCOM 3300 Organizational Comm.  (3 Credit Hours)
This course emphasizes the development of critical-thinking, communication, and team-building skills among students and focuses on enhancing team dynamics, leadership, and communication. For six weeks, students will engage in a global virtual team experience with students from other universities and other countries. As a result, students will know how to work in a virtual work environment using virtual collaboration tools (IBM Connections), manage a virtual team processes and collaboration, and develop leadership skills. Using case studies, we will explore crisis communications and corporate social responsibility as it relates to team coordination, leadership, and ethics. The course complements individual communication skills students have developed in other courses. Prerequisites: MCOM 3010, junior standing or above, Business students only

Prerequisite(s): MCOM 3010.

MCOM 3890 Service Learning: MCOM 3100 (1 Credit Hour)
Freeman students may elect to fulfill their upper-level Newcomb-Tulane public service requirement through this service learning option that functions as an added component to Management Communication. This added one-hour component supplements the Management Communication curriculum and gives students the opportunity to identify communication opportunities and challenges within a specific organization, identify and analyze various stakeholder groups associated with the organization, and consider the role of communication in achieving the organization's goals. Students are required to fulfill 20-40 hours of public service and will develop and execute a semester-long project for their community partner.
Corequisites: MCOM 3100, junior standing or above

Prerequisite(s): ENGL 1010.

MCOM 5380  Junior Year Abroad (1-20 Credit Hours)

MCOM 5390  Junior Year Abroad (1-20 Credit Hours)

MCOM 6010 Management Communication (2 Credit Hours)
This course is a blend of principles and practice, subject and skill. Students apply communication theories to relevant business situations to develop specific behaviors and skills. The successful manager must analyze communication situations, develop communication strategies, and demonstrate appropriate behavior leading to intelligent, flexible decisions. Specifically, students evaluate communication issues in both internal and external environments, and communicate orally and in writing both as an individual employee and as a member of a work group. In addition, the course examines corporate communication issues such as communication management, image, identity, reputation, and media relations.

MCOM 6020 Business Communications (3 Credit Hours)
This course is a blend of principles and practice, subject and skill. Students apply communication theories to relevant business situations to develop specific behaviors and skills. The successful manager must analyze communication situations, develop communication strategies, and demonstrate appropriate behavior leading to intelligent, flexible decisions. Specifically, students evaluate communication issues in both internal and external environments, and communicate orally and in writing both as an individual employee and as a member of a work group. In addition, the course examines corporate communication issues such as communication management, image, identity, reputation, and media relations.

MCOM 6130 Financial Communications (3 Credit Hours)
Finance and accounting are disciplines that are pre-eminently quantitative, yet fundamentally rely on human interaction. This course arms finance and accounting students with the tools and knowledge of advanced communication principles, enabling them to deliver complicated financial information to various audiences in a way that fosters sound investment decisions. Through training in financial reporting in both written documents and in oral presentations, students will become an effective interface between the financial system and its stakeholders.

MCOM 7910  Independent Study (1-3 Credit Hours)
Management Science (MGSC)

MGSC 3010 Intro to Business Analytics (3 Credit Hours)
This course introduces students to using the computer as a business-modeling tool. The overarching goal is to teach students to use computers to analyze models and interpret data for integrated decision making across multiple domains, including Finance, Marketing, Accounting, Strategy, and Operations. The course material consists of four modules. The first module concerns data modeling and builds on MATH 1140 by reviewing data modeling in Excel. The second module focuses on deterministic modeling, including decision-making under certainty, and the use of optimization models such as linear programming. This module also covers topics such as portfolio optimization, transportation, and assignment, and introduces students to the concepts of problem formulation and sensitivity analysis. The third module focuses on spreadsheet automation, including concepts for programming in Excel. The fourth module covers probabilistic modeling. This module uses simulation and decision analysis principles in uncertain environments. In addition, students will learn to choose the appropriate probability distribution for a given problem. Prerequisite: MATH 1140 or MATH 1230

Prerequisite(s): MATH 1140, 1140, 1140, 1140, 1140, 1230, 1230, 1230, 1230 or 1230.

MGSC 4320 Business Analytics (3 Credit Hours)
This course introduces the concepts, methods, and software used in the emerging field of Business Analytics. Students use computer languages, software packages, and statistical methods to collect and to analyze large data sets and to apply the results in business performance improvement and planning. The course employs examples, exercises, and cases that demonstrate how Business Analytics has been transforming decision-making processes in many companies and industries. Students improve their knowledge of and skills in computing and data analysis and enhance their analytical capabilities and problem-solving abilities. Prerequisite: MGSC 3010

Prerequisite(s): INFO 3010 or MGSC 3010.

MGSC 6020 Business Stats and Models (3 Credit Hours)
Methods for summarizing, analyzing, and making inferences from statistical data germane to management are learned. Topics include descriptive statistics, probability concepts, discrete and continuous probability distributions, sampling distributions, confidence intervals, hypothesis testing, simple and multiple regressions, and chi-squared tests. The methods are applied to management problems drawn from finance, marketing, accounting, operations management, human resources management, economics, and strategic planning.

MGSC 6090 Ops and Supply Chain Mgmt (3 Credit Hours)
The management of technology, people, and business processes presents one of the most critical challenges to business leaders. To achieve competitive advantage, managers must thoroughly understand the complex processes underlying the development, manufacture, and distribution of products as well as the creation and delivery of services. This course will expose students to topics and techniques related to operations, design, and management of supply chains by means of qualitative and quantitative techniques. The course material is applicable to a broad range of industries such as electronics, online services, insurance, healthcare, retail, fashion, automotive, manufacturing, and more. The topics covered include: process, capacity, inventory, revenue, supply chain, quality, and project management.

MGSC 7000 Bus Analytics Practicum (3 Credit Hours)
This course introduces business analytics. It involves three components: (1) an overview of business analytics, (2) introduction to tools for business analytics and (3) field trips to companies and follow-up sessions on how business analytics creates value in the real-world.

MGSC 7100 SQL Data Fund and Bus Intel (3 Credit Hours)
This course is designed for the Master of Business Analytics program of the Freeman School. The effective use of data across firms to deliver fast and intelligent services presents one of the most critical challenges to today's business leaders. This course is designed to introduce students to basic concepts and techniques in the theory, design, implementation and administration of relational databases. Topics to be covered include, the database design process, the entity-relationship (ER) model, normalization, queries in Structured Query Language (SQL), distributed and client-server databases, database administration, and big data analysis. We will build a database application as a completion project. This course focuses on the skills and concepts needed to design and query databases and therefore contribute to companies' competitive positions.

MGSC 7310 Modeling and Analytics (3 Credit Hours)
The widespread proliferation of IT-mediated economic activity generates a large amount of micro-level data about consumer, supplier, and competitor preferences. This has led to the emergence of a new form of competition based on the extensive use of analytics, experimentation, and fact-based decision-making. In nearly every industry, the competitive strategies that organizations are employing today rely extensively on data analysis to predict the consequences of alternative course of action, and to guide executive decision-making. This course provides a hands-on introduction to the concepts, methods, and processes of business analytics. Students will learn how to obtain and draw business inferences from data by asking the right questions and using the appropriate tools. Topics include data preparation, statistical tools, data mining, and the overall process of using analytics to solve business problems. Students will work with real-world business data and analytics software such as R. Students should also have a basic familiarity with elementary probability and be comfortable with basic data manipulation.

Prerequisite(s): STAT 6020 or ENRG 7110.
Managerial Perspectives (PERS)

PERS 4570  Business Svc Learning Int (1-3 Credit Hours)
This practicum is designed for students who are participating in an intensive business public service internship experience. The goal of this course is to offer students an opportunity to discuss issues related to their service learning internship experience, to encourage them to actively explore issues related to both their internship setting and their major, and to facilitate individual growth and career development. The course requires 60 hours of public service and contains a workshop that meets one hour per week for ten weeks. The course provides three credits towards the BSM degree. Students are restricted to one internship for credit. Corequisite: PERS 4890

PERS 6010  Career Development I (0 Credit Hours)
This seminar, graded on a pass/fail basis, begins during MBA orientation and is designed to provide students with the tools and information to identify appropriate career goals. Additionally, students will begin the development of their internship and job search strategies. Topics include: networking skills development, business etiquette/protocol, and interviewing skills. A passing grade in this seminar is required for graduation from the two-year MBA program only.

PERS 6050  Job of The Executive (2 Credit Hours)
This intensive course, held during orientation, helps students think critically about their role as an executive in an organization. Further, it develops students’ understanding of leadership, developing strategies, and managing organizational issues. With the overwhelming amount of information regarding these subjects, the successful executive will understand the daily issues dealt with and the problems that arise, then develop strategies to overcome these issues and problems in order to create a high performing organization. Through readings, discussions, experiential learning, and business detailed analyses of outcomes, students develop new solutions to problems or issues and think critically about the role of the executive.

Marketing (BSMK)

BSMK 1940  Transfer Coursework (3 Credit Hours)
Transfer Coursework for BSMK discipline in BSLS Programs (1000 Level)

BSMK 2910  Special Topics in Marketing (1-3 Credit Hours)
Special topics in Marketing.

BSMK 2940  Transfer Coursework (3 Credit Hours)
Transfer Coursework for BSMK discipline in BSLS Programs (2000 Level).

BSMK 3200  Intro to Marketing Principles (3 Credit Hours)
A study of our present-day marketing system from a managerial point of view. Subjects covered include strategic marketing, products, consumers and target markets, promotion, channels of distribution, market research, pricing, feasibility analysis, and global marketing.
BSMK 3300 Consumer Behavior (3 Credit Hours)
Understanding the consumer is the key to developing and implementing successful marketing strategies. Disciplines such as psychology, sociology, and anthropology provide insight into the factors that influence the decision to buy. These factors are used to identify market segments and to explain their buying habits and mental processes.

BSMK 3400 Principles of Advertising (3 Credit Hours)
This course covers the fundamentals of advertising, beginning with the history and evolution of advertising as an element in the economy, a specialized form of communication, a craft, and an area of ethical sensitivity. At the practical level, students will be introduced to media planning and the emergence of new media, market research, agency organization and creativity as well as the legal and ethical concerns that advertising professionals must bear in mind.

BSMK 3410 Advertising II (3 Credit Hours)
Building on the Principles of Advertising, this course requires students to develop and present advertising campaign projects that involve organizing research, establishing goals and objectives, developing creative and messaging strategies, and preparing budgets similar to what advertising agencies do on a day-to-day basis. The projects will provide a greater mastery of advertising principles and provide completed projects for their portfolio.

Prerequisite(s): BSMK 3400.

BSMK 4910 Independent Studies (1-3 Credit Hours)
Independent Study in the BSMK discipline for the BSLS Programs.

Marketing (MKTG)

MKTG 3010 Marketing Fundamentals (3 Credit Hours)
Prerequisites: MATH 1140 or 1230, MATH 1150 & 1160 or 1210, ECON 1010, ECON 1020, PSYC 1000, MCOM 3010 (students admitted fall 2014 and later); sophomore standing or above. This course is designed to teach students the basic elements of marketing. The course presents frameworks to analyze marketing problems faced by both for-profit and non-profit organizations. Students will study the influence of consumers, the marketplace, and the marketing environment on marketing decision making. The course will also provide a conceptual and theoretical toolkit for developing marketing strategies – segmentation, targeting, and positioning - and marketing tactics including price, promotion, product, and distribution.

Prerequisite(s): (MATH 1150, 1150, 1150 or 1150) and (MATH 1160, 1160, 1160, 1160, 1210, 1210, 1210 or 1210) and (MATH 1140, 1140, 1140, 1140, 1230, 1230, 1230 or 1230) and (ECON 1010, 1010, 1010, 1010 or 1030) and (ECON 1020, 1020, 1020, 1020 or 1040) and (PSYC 1000, 1000, 1000 or 1000) and CDMA 1201 and MCOM 3010.

MKTG 4100 Consumer Behavior (3 Credit Hours)
Prerequisite: MKTG 3010 The course covers major concepts and findings in consumer behavior and how these ideas relate to consumer decision-making and consumption choices. The course is focused on understanding the cognitive, emotional, social and contextual factors that govern consumer decision making. Students debate the efficacy and ethics of marketing actions by brand managers, advertising agencies, public service organizations and policy makers and consumers’ reactions to these actions. The course draws substantially on real-world marketing stimuli to illustrate how the success (or failure) of marketing strategies depend on the close correspondence to (or violation of) principles of consumer behavior.

Prerequisite(s): MKTG 3010.

MKTG 4105 Customer Relationship Mktg (3 Credit Hours)
Prerequisite: MKTG 3010 Customer relationship marketing (CRM) is the overall business process in which companies use marketing strategies and activities to build and maintain client relationships, reinforce customer loyalty, and increase brand value. The objective of the course is to examine the strategic, analytical, and technological aspects of CRM to provide students with a fundamental knowledge of CRM and an understanding of the implementation of CRM systems and analysis of customer data. Topics covered in the course include relationship marketing; customer lifetime value; customer equity; customer databases; customer retention; customer loyalty; operational, analytical, and collaborative CRM; reasons for CRM implementation failure; and the role of CRM in marketing management.

Prerequisite(s): MKTG 3010.

MKTG 4110 Research and Analytics (3 Credit Hours)
Prerequisite: MKTG 3010 This course provides a hands-on introduction to marketing research, an organized approach to developing and providing information for marketing decision-making. Through a combination of lectures, exercises, and projects, the course familiarizes students with data collection techniques such as focus groups, surveys, and experiments, as well as data analyses techniques such as hypothesis testing and regression. Specific applications include preference measurement, market segmentation and targeting, customer economics, product and brand policies, pricing, advertising, and digital marketing.

Prerequisite(s): CMBA 3010, 3010, MKTG 3010 or 3010.

MKTG 4115 Marketing Research Lab (1.5 Credit Hours)
This course is a co-requisite of the Marketing Research lecture course and is designed to supplement that material. The laboratory is designed to help students attain skills in data collection, statistical analysis, and interpretation of data collected from primary and secondary sources. Emphasis is on hands-on experience with real-world projects and cases that emulate the experience of a market research analyst. Prerequisite: MKTG 3010

Prerequisite(s): CMBA 3010* or MKTG 3010.

Corequisite(s): MKTG 4110.
MKTG 4117 Business to Business Mktg (3 Credit Hours)
Prerequisite: MKTG 3010. The course focuses on strategic aspects of marketing decisions of the organizations that market products to other organizations. The course teaches students the unique needs of business customers, how to analyze business organizations' core competencies and their competitive environment, positioning and segmentation of businesses, and personal selling. Students will learn how to set organizations' business objectives and strategies, build business-to-business marketing plans, and measure customer satisfaction.

MKTG 4120 Advanced Marketing Strategy (3 Credit Hours)
Prerequisite: MKTG 3010. This course teaches students how to analyze markets, make better marketing decisions, and evaluate and monitor marketing performance. The impact of each marketing decision made by the firm is influenced by a wide variety of factors, including culture, consumer psychology, the business environment/context, competitor actions, and the other marketing tactics utilized by the firm. The course combines quantitative and qualitative analysis within a theoretical framework to analyze these complex relationships and better understand the relationships between market knowledge and the many decisions needed to effectively design and monitor an effective marketing strategy.

Prerequisite(s): MKTG 3010, 3010, 3010 or 3010.

MKTG 4127 Channels of Distribution (3 Credit Hours)
Prerequisite: MKTG 3010. This course provides students with an opportunity to analyze and evaluate various marketing channel structures and decisions, and to understand their impact on the rest of a company's marketing mix. The course takes the perspective of the manufacturer and is organized around the two main tasks of channel management: designing a channel structure and coordinating within the channel. Throughout the course, we will focus on how marketing channels can add value to both the customer and the manufacturer. Specific topics covered will include direct vs. indirect channels, single vs. multi-channel distribution systems, franchising, channel conflict, distributing authority in channel relationships, the role of strategic alliances, and the impact of e-commerce on channel management.

MKTG 4137 Pricing (3 Credit Hours)
Prerequisite: MKTG 3010. The course will introduce the student to the basic considerations a firm faces in devising a pricing policy. The broad aims of the course are the following: Expose students to the concepts, theories, and latest thinking on pricing, from the viewpoint of a marketing manager; enable the student to understand the pricing strategies of a firm in a variety of situations; work towards the above objectives, while drawing on microeconomic models and marketing theories.

Prerequisite(s): MKTG 3010.

MKTG 4145 New Products Marketing (3 Credit Hours)
Prerequisite: MKTG 3010. While new products offer unique opportunities for growth, most new products fail in the marketplace. This course will introduce students to the new product development process to maximize the likelihood of their success. Students will learn how to identify potential ideas and markets for new product development; how to position, price and advertise new products; and how to measure potential sales and success prior to launch.

Prerequisite(s): MKTG 3010.

MKTG 4155 Brand Management (3 Credit Hours)
Prerequisite: MKTG 3010. The brand names associated with products and services are among a firm's most valuable assets. This course addresses the fundamental branding decisions faced by a firm when determining how to build, measure, and manage brand equity. The course objectives include planning brand strategies, evaluating brand strategies, and examining the actions needed to improve a brand's long term sustainability. The course combines lectures, case discussions, guest speakers, and a team brand evaluation project.

Prerequisite(s): MKTG 3010.

MKTG 4165 Retailing (3 Credit Hours)
Prerequisite: MKTG 3010. This course in an introduction to the retail environment and its role in the marketing process. It includes discussions on operations, location strategy, store organization, personnel, buying, merchandising, inventory control, pricing, vendor relations, sales promotions, and consumer demand. It provides frameworks for understanding different types of retail outlets and the relationship between bricks-and-mortar retailing and e-tailing.

Prerequisite(s): MKTG 3010.

MKTG 4170 Mktg Planning & Implementation (3 Credit Hours)
This course focuses on the development of dynamic marketing plans for a broad array of companies who may be facing accelerated growth opportunities and/or operating difficulties. Focus will be on choosing the right marketing vehicles, determining how the vehicles need to work together, developing the implementation work plan, mapping out sequencing, and defining metrics and measurement process. Student teams will draw on this information, as well as knowledge acquired from earlier marketing courses, to implement a field study. For classroom discussions, we will be using a mix of text, articles, and case studies focusing on companies across diverse industries. Fieldwork will also be discussed in class, culminating in team marketing plan presentations. Prerequisite: MKTG 3010

Prerequisite(s): MKTG 3010, 3010, 3010 or 3010.

MKTG 4220 Sales Force Management (3 Credit Hours)
Prerequisite: MKTG 3010. The Bureau of Labor Statistics estimated, in 2017, that about 15 million people in the United States work in sales. Sales jobs are in every industry and include retail selling of consumer products, business to business selling, and selling of financial services and products. The course examines practices of sales management that enhance both corporate performance and the wellbeing of salespeople. The management of salespeople starts with the recruitment and selection of talent followed by training to enhance motivation (or what the popular press terms as developing passion). The class draws theoretical frameworks from research in marketing, organizational behavior, psychology, and economics, and students apply these frameworks through case discussions. Some teachers supplement case discussions with a simulation game.

Prerequisite(s): MKTG 3010.
MKTG 4230 Global Marketing (3 Credit Hours)
Prerequisite: MKTG 3010 This course takes a multidisciplinary approach, including concepts from marketing, sociology, political science, and economics, to examine the issues associated with marketing across borders. Students will study key characteristics of major markets in different regions of the world, how to collect and interpret the information about the markets, how to analyze global customers, competitors, and collaborators, and how to develop international and global marketing strategies. This course also considers contemporary issues, including globalization and the impact of the internet.

Prerequisite(s): MKTG 3010.

MKTG 4240 Relationship Marketing (3 Credit Hours)
Prerequisites: MKTG 3010; junior standing or above In marketing, nothing is as critical as building and maintaining relationships with key constituencies. Business corporations and non-profit institutions, alike, realize the importance of long-lasting relationships and their impact on these organizations’ success. The major objectives of this course are twofold. First, it will focus on the marketing tools and techniques that organizations use to identify key constituencies, build relationships, and assess their impact on the organizations’ performance. Second, the course will provide students with a forum for presenting and defending their recommendations, and for critically examining and discussing the recommendations of others.

Prerequisite(s): MKTG 3010.

MKTG 4250 Social and Online Marketing (3 Credit Hours)
Prerequisite: MKTG 3010 The media landscape has undergone significant changes in recent years. The amount of time people devote to traditional media outlets has been steadily declining. Meanwhile, online and social media channels have been growing at breakneck speed, leaving businesses scrambling to understand and effectively tap these emerging marketing channels. In this course, students will learn tools and frameworks to understand how companies can implement effective online and social media marketing campaigns.

Prerequisite(s): MKTG 3010.

MKTG 4251 Tourism Marketing (3 Credit Hours)
In this course, students will gain perspective on marketing in the hospitality/tourism industry, using a real-life case study of developing a destination in New Orleans. Students will follow and be quizzed on the text and tackle actual challenges in real-estate, market research, business modelling, non-profit arts management, digital production/marketing and grant research/writing. Using market research students will take the insights from their survey to incorporate the 4 P’s to generate their forward-looking destination and its prescribed features. Open to School of Business students only.

Prerequisite(s): MKTG 3010 or 3010.

MKTG 4260 Advertising and Promotions (3 Credit Hours)
Prerequisite: MKTG 3010 This course is designed to provide the conceptual underpinnings of marketing communication, and reflect the role of media strategies in providing information, persuading, selling and creating popular culture. This course emphasizes the development of integrated marketing communication programs. Students will learn the fundamentals of different media options, how to evaluate marketing communication programs/outcomes, and how to develop an integrated marketing communication campaign. A substantial portion of in-class and out-of-class time will be devoted to applying the concepts and developing a real-world marketing communication program.

Prerequisite(s): MKTG 3010 or CBMA 3010*.
* May be taken concurrently.

MKTG 4275 Law in Marketing (3 Credit Hours)
Prerequisites: MKTG 3010 & LGST 3010 Law in Marketing will assist the student in developing an appreciation and an understanding of the legal and ethical challenges present in marketing decisions. The course takes an in-depth look at the relationship between intellectual property, product development, and marketing. Explorations of these topics range from how to identify potential intellectual property rights to how protect those rights by using a variety of intellectual property protections such as patents, copyrights, trademarks, trade dress, and trade secrets to give a firm a comparative advantage. Further, the course will examine strategies for addressing competitors that infringe on a firm’s intellectual property rights through techniques such as litigation and licensing. Intellectual property issues are examined from both a U.S. and global perspective.

Prerequisite(s): MKTG 3010 and LGST 3010.

MKTG 4280 Sports Marketing (3 Credit Hours)
Prerequisite: MKTG 3010 The Sports Marketing course provides students with a practical application of marketing concepts in this unique industry, with an emphasis on strategy development. The course is designed to explore how businesses and organizations market their products and services, including product decisions, distribution, pricing, and development of promotional programs. Topics include the marketing environment, segmenting audiences, building a relevant brand, communications strategies and channels, customer relationship management, and delivering sports experiences. The course will incorporate a guest speaker series and project work to provide students with professional perspectives within the sports industry.

Prerequisite(s): MKTG 3010.
Prerequisite(s): 

MKTG 4285 Marketing Projects (3 Credit Hours)
Prerequisite: MKTG 3010, Pre- or Corequisite MKTG 4110 This course provides students an opportunity to develop solutions for real-world marketing needs. Each student will take on a main project relating to a company. The marketing plan or campaign will involve one or more aspects of market research, branding, public relations, digital production, social media, media, fundraising, and sales challenges. Students will work with the faculty sponsor to define, scope, execute, and analyze the success of their project. Students will be required to work with their selected company and present or provide their final project to the company. Students should leave this course with a greater understanding of the theory and practice of marketing management with hands-on experience in one or more functional areas of marketing.

Prerequisite(s): MKTG 4110 or MKTG 4110.

Corequisite(s): MKTG 4110.

MKTG 4290 Service Marketing (3 Credit Hours)
Prerequisite: MKTG 3010 This course introduces students to the challenges professional and organizations face in creating, marketing, and delivering high-quality services. Class sessions center around lecture presentations and case-based learning on topics such as measuring and managing customer satisfaction, coordinating marketing and operations in designing and implementing service delivery, developing the human and technical skills of employees who deliver services, and utilizing emerging technology. Assignments provide students with a hands-on understanding of concepts and methods practitioners use in today’s competitive markets to analyze customer/client requirements; measure service quality; and design, promote, and deliver outstanding services in financial, healthcare, educational, high-tech, manufacturing, nonprofit, and retail organizations.

Prerequisite(s): MKTG 3010.

MKTG 4410 Special Topics (1-3 Credit Hours)
This course is designed to teach students the elements of social and online marketing, through hands-on exercises. Students will be working inside analytic programs, researching and purchasing domain names and internet traffic through traditional Pay-Per-Click marketing channels with a course-sponsored budget, as well as creating a full sales process for message or product of their choosing. The outcome will be direct experience taking a product or message to market, with application of knowledge learned through previous courses.

Prerequisite(s): MKTG 3010.

MKTG 4550 Marketing Internship (1-3 Credit Hours)
Freeman School majors may elect to do a business internship that will appear as a one-credit, 4000-level course on their transcripts; however, the credit does not apply towards the 122 minimum hours required for a BSM degree. The internship must be related to one of the majors offered through the BSM program, and the internship must apply (within an ongoing business organization) the intellectual capital obtained from first- through third-year Freeman School courses. To obtain approval of the internship, the student must visit the Career Management Center for instructions. The final grade for the internship is given on a Satisfactory/Unsatisfactory (S/U) basis when the student submits a paper/evaluation to a supervising faculty member in the Career Management Center. This course is normally offered during the summer and fulfills the “curricular practical training” option for students with F-1 visa status.

Prerequisite(s): MKTG 3010.

MKTG 4600 Cases in Marketing (3 Credit Hours)
Prerequisites: All BSM 3000-level core courses This course is an integrative class that teaches effective marketing strategy largely through cases. It builds on the framework that a deep understanding of consumer needs enables the creation of successful brands and effective marketing strategies. It evaluates the success of marketing actions – product innovations, pricing, advertising strategies, Internet marketing, personal selling, sales promotions, retailing and distribution channels – from a framework of accurately understanding and meeting consumer needs. Discussions include the moderating effect of culture/country and the importance of marketing to diverse populations including individuals at the bottom-of-the-pyramid.

Prerequisite(s): MKTG 3010.

MKTG 4650 Global Marketing (3 Credit Hours)
The following course was not found in the supplied content but, was listed in program requirements. Please review and provide us, if possible, with the correct information.

MKTG 4890 Service Learning: MKTG 4260 (0-1 Credit Hours)

MKTG 4910 Independent Study (1-3 Credit Hours)
Prerequisites: Minimum cumulative GPA of 3.333 or higher, senior standing Freeman School seniors who demonstrate academic excellence are allowed to pursue an independent study. The work may take the form of directed readings, laboratory or library research, or original composition. Instead of traditional class attendance, the student substitutes conferences with the supervising faculty, as needed. An independent study requires the approval of the supervising instructor and area head. The credit does not apply towards the marketing major requirements for a BSM degree; it may be used as business elective credit. Interested students should contact the Office of Undergraduate Education at the Freeman School.

MKTG 4990 Marketing Honors Thesis (3 Credit Hours)
Traditional thesis option for marketing area. Students enrolled in this course will begin their thesis in the fall semester. They will conclude their thesis in LGST 5000 in the spring semester.

MKTG 5000 Marketing Honors Thesis (4 Credit Hours)
Prerequisite: MKTG 4990 Traditional thesis option for marketing area. Students enrolled in this course will conclude their thesis in the spring semester. They will start the thesis in MKTG 4990 in the fall semester.
Independent study: Marketing

MKTG 6020 Marketing (3 Credit Hours)
Successful marketing strategy is predicated on an appreciation of how consumers make decisions in the marketplace. This course provides an understanding of traditional, "rational" models of human reasoning. It also covers biases and counterintuitive processes that guide everyday judgements and choice. The class examines the role of information, emotions, social scripts, and the choice context in driving decisions in the real world. The purpose of this course is to inform future managers and consultants of how a thorough knowledge of consumers' decision processes and resultant judgements and behaviors can be leveraged to build and sustain brand equity.

MKTG 7250 Social Media & Online Mktg (3 Credit Hours)
In this course, students will learn tools and frameworks to understand how companies can implement effective online and social media marketing campaigns. Using a mix of theoretical and practical exercises, students will learn to think about online tools from a marketing perspective. Following completion of this course, students should be able to 1) understand the different tools available for social media and online marketing, 2) help a company listen to and engage customers through online and social media, 3) use tools to measure and evaluate the effectiveness of online and social media campaigns, and 4) develop a comprehensive online and social media strategy.

Prerequisite(s): MKTG 6010 or 6020.

MKTG 7280 Research and Analytics (3 Credit Hours)
This quantitative course focuses on gathering, analyzing, and interpreting data about markets and customers. It is designed for managers who will be using market research so it is intended for students who with to go into marketing management, consulting, and entrepreneurship. Students will learn about the types of marketing decision problems in which research information is most useful - problems of target market selection, new product or service introduction, customer retention, and pricing, among others. The learning objectives for the course include defining the decision problem and determining what information is needed, acquiring trustworthy and relevant data and judging its quality, and analyzing data to make certain types of marketing decisions.

Prerequisite(s): STAT 6020 and MKTG 6020*.

MKTG 7290 Marketing Plng and Impl (3 Credit Hours)
MKTG 7300 Mktg Planning & Implementation (3 Credit Hours)
MKTG 7980 Independent Study (1-3 Credit Hours)
Independent study: Marketing

---

Master of Liberal Arts Courses (MLAR)

MLAR 7010 Ancient Political Thought (3 Credit Hours)
This course will study classical works of ancient political philosophy in the Western tradition, with a concentration on Plato and Aristotle. We will examine their understanding of political life and the place of the individual in society, exploring the questions they raise that remain of central importance in our world today: What is justice? What is a citizen? Why is the rule of law desirable? What is the relation between freedom and equality in democracy?

MLAR 7020 Modern Political Thought (3 Credit Hours)
This course will be devoted to a study of classical works of modern political philosophy in the Western tradition. How did the early modern political philosophers try to make a new beginning by turning to a realism they thought missing in the ancients? How did they go about defending individual rights in society on that basis? We will examine Machiavelli’s introduction of this approach, and its development in the political theories of thinkers such as Hobbes, Locke and Rousseau.

MLAR 7030 Masterwrs West Lit Foundation (3 Credit Hours)
This course will examine literary texts, ancient and medieval, that have played an important role in shaping Western thought and imagination. We will explore the understanding of the human condition that comes to light in works such as the Bible, the Homeric poems, Greek tragedy, the dialogues of Plato, the writings of Augustine or Dante, among others.

MLAR 7040 Masterwrs West Lit Modern Era (3 Credit Hours)
This course will examine literary texts central to the Western tradition from the Renaissance to the present. We will explore the understanding of the human condition that comes to light in works such as those of Cervantes, Shakespeare, Dostoevsky, Kafka, Toni Morrison, and others.

MLAR 7050 Understanding Amer Foundations (3 Credit Hours)
This course is an intensive analytical investigation of social, political, economic, religious, and philosophical issues in the early years of the American republic. The course examines the people and events of the founding of the American republic from the revolution, through the creation of the American Constitution, and culminating in the election of 1800. This course is primarily an intellectual history course and the main scholarly work that we will read is the work of historians, but the course also delves deeply into issues in political theory, political economy, and political and social philosophy. The course charts the development of American political ideas about constitutionalism, governance, political freedom, economic freedom, representative democracy, republicanism, and federalism primarily from the vantage point of the careers of two of the main figures from this period, John Adams and Thomas Jefferson. The views of other figures will also be central to our investigation, particularly the views of James Madison and Alexander Hamilton. The student will be challenged to examine fundamental assumptions about these topics in order to rethink the intellectual origins of the American political tradition in its founding years.
MLAR 7060 Understanding Amer Modern Era (3 Credit Hours)
This course is an intense encounter with the work of perhaps the most significant, original, and influential philosopher in American history, Richard Rorty (1931-2007). The material that we will read will cover all the main aspects of Rorty’s philosophical and political work. The main focus of the course will be an attempt to come to terms with Rorty’s critique of the cult and culture of professional philosophy. We will also be concerned with an attempt to understand Rorty as a major figure in the American intellectual tradition and locate him within the history that includes such figures as Emerson, Whitman, William James, John Dewey, and other figures considered to be exemplars of naturalism, pragmatism, or neo-pragmatism in one form or another.

MLAR 7070 Political World (3 Credit Hours)
This course examines the political economy of food by exploring the processes of production, regulation, and consumption that determine the relationships between humans and the food we eat in the world today. We will explore the moral, political, social, and economic dimensions of this topic with the goal of providing a platform for personal exploration and transformation. The presentation of material in the course is designed to be engaging, provocative, and stimulating and to provide the student with an opportunity to make informed decisions about the moral and political dimensions of their own relationship to food.

MLAR 7080 The Economic World (3 Credit Hours)
This course examines the causes and consequences of the Great Recession, the economic crisis of 2008 and beyond. Over the past thirty years, the economic and political landscape of the world has been transformed by sweeping economic changes that reflect the influence of the once marginalized but now dominant ideology of neo-liberalism and free market fundamentalism. These changes have created the greatest accumulation of individual wealth in human history, but also have arguably created greater suffering, poverty, inequality, anti-democratic developments, and the growing potential for the catastrophic failure of the global economy, as evidenced by recent events. We will consider a variety of political and economic views of the Great Recession, from a broad spectrum of economic and political thinkers.

MLAR 7100 Special Topics (3 Credit Hours)
Special topics in liberal arts.

MLAR 7101 Special Topics (3 Credit Hours)
Special topics in liberal arts.

MLAR 7102 Special Topics (3 Credit Hours)
Special topics in liberal arts.

MLAR 7103 Special Topics (3 Credit Hours)
Special topics in liberal arts.

MLAR 7113 Philosophy of Religion (3 Credit Hours)
This course will analyze various ways of understanding the nature and importance of religious experience and religious beliefs. We will consider some of the most influential arguments for the existence of God and examine central issues such as the problem of evil or the relation between revelation and reason.

MLAR 7122 King Arthur: History & Legend (3 Credit Hours)
In this course, we will investigate the evidence, both textual and archaeological, for the existence of an historical Arthur, King of the Britons, and will then consider how that evidence was transformed into an imaginative cycle of stories concerning kingship and chivalry that were highly influential within and beyond the Middle Ages. We will pay particular attention to three themes: the ideals of monarchy and knightly behavior that inform the Arthurian stories (e.g. the medieval theory of the divine right of kings); the development within the Arthurian materials of ideas about medieval romantic love or fin amor, especially in representations of the passionate but doomed relationship between Lancelot and Guinevere; and the mystical dimensions of Arthurian romance, as these emerged from writings about the Round Table fellowship’s pursuit of the Holy Grail. We will read Sir Thomas Malory’s late medieval revision of the Arthurian story cycle, but with reference to other non-Malory materials to be introduced and explained by the instructor (e.g. a long alliterative poem concerning Arthur’s battle with the giant of St. Michael’s Mount). We will also deal briefly at the end of the course with Victorian adaptations of the Arthurian materials, especially those by Tennison in his Idylls of the King and William Morris in his Defence of Guenevere. Three written assignments: a midterm and final examination (essay format) and a short critical paper (5 pp. typed, double-spaced). Required Text: Sir Thomas Malory, Le Morte Darthur: The Winchester Manuscript, ed. by Helen Cooper (Oxford: Oxford University Press, 2008).

MLAR 7123 Robin Hood (3 Credit Hours)
This course will explore the legendary history of the medieval outlaw figure, Robin Hood, as it developed through the Medieval and Early Modern periods and into our own century. We will begin by examining historical and archaeological evidence for the person “Robin Hood” (including pre-Christian influences on his character) and then will consider Robin Hood’s complex literary and cultural identity. We will also be concerned with various political uses to which the figure of Robin Hood was put in the Medieval and Early Modern periods and with Robin Hood’s persistent role in modern British and American popular culture, especially the movies. Three written assignments: a midterm and final examination (essay format) and a short critical paper (5 pp. typed, double-spaced). Required Texts: Stephen Knight and Thomas Ohlgren, eds., Robin Hood and Other Outlaw Tales, 2d ed. (Kalamazoo: Medieval Institute Publications, 2000) and Stephen Knight, Robin Hood, A Mythic Biography (Ithaca: Cornell University Press, 2009).

MLAR 7124 Great Irish Famine (3 Credit Hours)
The Great Irish Famine, 1846-1852, is the central event in the history of modern Ireland. The Famine or the Great Hunger killed approximately one million Irish, forcing the emigration of another two million, and altering not only the history of Ireland, but also the history of Britain, Australia, Canada, and the United States. This course will concentrate on the seminal issues concerning the Famine: Ireland’s political and social relationship with British society, the tortured relationship between landlord and tenant, the desperate poverty which afflicted the Irish underclass and threatened much of the population with ruin, the bitter sectarian conflicts which convulsed the island and tainted its political and economic arrangements, and Ireland’s struggle for self-determination. We will discuss the causes of the Famine (which were different from the blight which attacked the potato), the domestic and international responses to it, and its consequences for Ireland, Britain, and the United States. This course is a seminar and will emphasize reading, discussion, and writing.
MLAR 7126 Tudors in TV and Film (3 Credit Hours)
This course will look at popular depictions of Henry VIII, Thomas Cromwell, Catherine of Aragon, and Anne Boleyn. We will explore questions about creators of historical fiction: Do they have obligations to their audience and to the memory of the dead? Are there some cases in which it is particular important to achieve historical accuracy and others not?

MLAR 7129 Canterbury Tales (3 Credit Hours)
This course will investigate the medieval phenomenon of pilgrimage—or religious vacationing—by way of a reading of one of the classics of English literature, Geoffrey Chaucer’s 14th c. masterpiece, The Canterbury Tales. In addition to the motif of devotional journeying, we will study the different medieval social classes (knights, clerics, and peasants) and story types (chivalric romances, fabliaux or bawdy tales, saints lives) that Chaucer explores in his literary masterwork.

MLAR 7130 Love/Romance in Lit & Film (3 Credit Hours)
In this course we will look at the portrayal of love, romance, and marriage in modern society in short stories, plays and films.

MLAR 7132 Masculinities (3 Credit Hours)
What does it mean to be “masculine”? What effects does the concept of “masculinity” have on men, on women, and on society? Until recently, masculinity was considered “natural” for “real men.” Recently, however, traditional notions have been challenged by economic crises, social conditions, feminists, and men who do not “fit” the characteristics of “traditional” masculinity. This class takes a critical look at the concept of “masculinity,” particularly “hegemonic masculinity,” its domination of various “sub” masculinities, and its constructions in popular culture. Through readings, lectures, class discussions, and analyses of films and other cultural elements, we examine what it means to conform to and challenge “hegemonic masculinity” in the United States over the last half century or so.

MLAR 7133 Culture & Politics of Marriage (3 Credit Hours)
Although today there are numerous ways to construct a family in America, marriage continues to be the preferred option. Nearly 100% of Americans routinely report a desire to marry at some point in their lives. Roughly 90% of them do marry at least once, and over half do it more than once. Yet soaring divorce rates point to a disconnect between what we expect marriage to be and what it actually is. As young children, we’re told that marrying our prince/princess will ensure us a happily ever after, as it did for Cinderella, and this cultural message only gets stronger as we grow up. We’re so bombarded by these assurances that we take it for granted that we must marry our prince or princess just to be happy. For this reason, we rarely stop to consider that marriage is a social institution that creates, reinforces, and reflects power and hierarchy. This is a master’s level seminar on the social institution of marriage. This course engages questions such as: What is marriage? Where does our notion of marriage come from? How does popular culture act to construct and reinforce that notion and make it part of our taken-for-granted stock of knowledge? How do our idealized notions of marriage differ from our practice of marriage? What politics are implicated in our idealized notions about marriage, and how do those politics play out in the practice of marriage? Drawing on class readings, discussions, and exercises, we engage these issues (and more) as part of the ongoing family values debate that questions whether marriage is in crisis or simply in transition. The intent of this course is to make students aware of some of the hidden forces that shape our contemporary attitudes and ongoing cultural debates about marriage and family.

MLAR 7134 History, Power and the State (3 Credit Hours)
This course will explore the theme of power and the state through a study of films, such as “The Man for All Seasons,” “Amistad,” “Schindler’s List” or “Book Thief.” We will discuss the historical accuracy of the films, asking what they can teach us, both about the period depicted and the period in which they were made, considering in particular the way people have thought about power and the state.

MLAR 7135 Huey Long in Literature & Film (3 Credit Hours)
This course will consider the life of Huey Pierce Long as depicted in biography and film. It will discuss and analyze three major biographical and literary works about Long: Alan Brinkley’s comparative biography Voices of Protest: Huey Long, Father Coughlin, and the Great Depression, Richard D. White, Jr.’s Kingfish The Reign of Huey P. Long, and Robert Penn Warren’s classic political novel, All the King’s Men. The course will also view and analyze two films about Huey Long: Ken Burns’s documentary Huey Long and an Academy Award film based on Robert Penn Warren’s All the King’s Men. The course will also discuss and assess Long’s life in light of other writings on the history of Louisiana, the South, and nation from the 1890s through the 1930s.

MLAR 7136 Philosophy of Art (3 Credit Hours)
This course is an examination of central philosophical questions about the nature of art. We will examine philosophers’ responses to questions such as: what is art? Does art differ from craft? Must art be beautiful? Is art universal or the same across cultures? Are there objective standards for determining the value of a piece of art? What is the relationship of aesthetic value to moral value, and what role (if any) does art play in social justice? We will also examine issues that arise in relation to particular art forms, including poetry, music, painting, dance, and theater.
MLAR 7137  Love and Death in Lit and Film (3 Credit Hours)
In this course we analyze the representation of love and death in works of literature and cinema. We will discuss questions about the way these works reveal presumptions of gender, economic class, public and private life.

MLAR 7140  Represnt of War in Lit/Film (3 Credit Hours)
In this course we will look at the ways war has been portrayed by writers or film directors and address a number of important questions: Why do countries go to war? When, if ever, is resorting to war legitimate or necessary? What are the psychological effects of war?

MLAR 7153  The Twentieth Century (3 Credit Hours)
Was it the most violent century or the most humane? Technologically advanced or spiritually sick? What is often called “the American Century” seems to be characterized by contradictions. What is its legacy? This course will address that question by considering important events and processes, including World War II, the Cold War, Existentialism, Colonialism, Imperialism, and Post-Colonialism.

MLAR 7155  Utopia and Dystopia (3 Credit Hours)
This course is devoted to the depiction of utopia and dystopia in Western culture from Plato to the present. We will consider the relation between the two: Why does utopia so often turn into dystopia? What are the elements of a perfect society? Why have all attempts to create a utopian society failed, at least so far?

MLAR 7157  Witchcraft Early Modern Europe (3 Credit Hours)
In this course students analyze the causes of the rise of witchcraft prosecution in late medieval and early modern Europe (roughly 1300-1700), while also examining recent historiographical trends in early modern witchcraft research. Topics include the relationship between gender and witchcraft, as well as the effects of social, political, and religious change on witchcraft accusations and trials.

MLAR 7160  Contempry Culture in Lit/Film (3 Credit Hours)
In this course we will look at problems in our contemporary culture as they have been represented in short stories, plays, and films.

MLAR 7161  Civil War New Orleans (3 Credit Hours)
This course is a seminar which emphasizes reading, discussion, research, and writing. Despite the contentions of some historians, the Civil War had a profound impact on the people and history of New Orleans. During the late antebellum period (1840s-1850s), the city was the principal slave market in the nation. This domestic trade fueled the lower south and New Orleans’ economic development. Slavery shaped the economic and social character of the south, over the years creating not only a society with slaves, but also a slave society. Despite its dominance and apparent unanimity, slavery was also a contentious and divisive institution. Slavery in New Orleans was no exception to these twin dynamics. The historical records, newspapers, acts of sales, successions, census records, and private correspondence demonstrate the centrality of slavery to New Orleans’ antebellum society. On the other hand, the city’s complex racial, ethnic, and sectional composition heightened political and social tensions, raising suspicions and fears about racial identity, naturalization and citizenship, and loyalty. Slavery and ethnicity shaped issues of civil liberties, criminal justice, and politics. The presidential and secession elections of 1860 and 1861 sharply divided New Orleans, as they did throughout much of the urban south. These divisions did not disappear with mobilization and civil war, but were only intensified in the hothouse of occupation, reunion, reconstruction, and, above all, loss. New Orleans suffered greatly during and after the Civil War. Thousands of men were killed or died from wounds and disease and even more were maimed physically and scared emotionally. The fighting ended, but the war continued beyond Appomattox Court House. To this day, the privileges and immunities of American citizens are intensely debated, bringing not only hope but also rancor and division, as much as they did in antebellum New Orleans and America.

MLAR 7166  Genocide as a Political Weapon (3 Credit Hours)
This course examines the character of genocide in the modern world, from the killing of the Armenians during World War I to events in Rwanda and Bosnia. What is a genocide? Is it something different than mass murder? What lessons can we learn from the Holocaust and subsequent examples of genocide?

MLAR 7169  Special Topics (3 Credit Hours)
Special topics in liberal arts.

MLAR 7171  Introduction to the Bible (3 Credit Hours)
This course examines the structure and content of the Bible from historical, literary, philosophic, and religious or theological perspectives.

MLAR 7193  Special Topics (3 Credit Hours)
Special topics in liberal arts.

MLAR 7194  Special Topics (3 Credit Hours)
Special topics in liberal arts.

MLAR 7195  Special Topics (3 Credit Hours)
Special topics in liberal arts.

MLAR 7196  Special Topics (3 Credit Hours)
Special topics in liberal arts.

MLAR 7215  Asian Philosophy (3 Credit Hours)
This course studies the major intellectual traditions of India and China, including Hindu and early Buddhist thought in India, as well as Confucian, Taoist, and later Buddhist thought in China.
MLAR 7240 Justice, Law & Public Policy (3 Credit Hours)
This course will examine considerations of justice and morality that help shape law and public policy. Issues to be discussed may include: crime and punishment, drugs, gun control, treatment of enemy combatants, torture, surveillance and privacy, free speech and national security.

MLAR 7245 Medieval New Orleans (3 Credit Hours)
By way of numerous Power Point tours of on and off campus sites and materials, as well as our reading of a popular American novel, Mark Twain’s A Connecticut Yankee in King Arthur’s Court, this course will consider the influence of medieval culture and ideas on New Orleans and, to some extent, Southern culture in general, especially during the post-Civil War period and Reconstruction. For instance, we will discuss medieval architectural styles preserved in Tulane and other local buildings (Richardsonian Romanesque and Gothic Revival), experience medieval music by New Orleans’ Musica da Camera (a special guest performance), and explore real medieval manuscript materials from the Tulane Rare Books Room in Jones Hall. We will also talk about medieval influences on such pre-Lenten festivals as Mardi Gras and on such regional foods as gumbo and turducken. Class will conclude with our viewing of a musical film version of Connecticut Yankee, which suggests how Hollywood adapted medieval experience to bring it in line with certain nineteenth-century attitudes toward the Middle Ages. Three written assignments: a midterm (essay format), short critical paper (5 typed pp.), and a final examination (on course terminology). Required Text: Mark Twain, A Connecticut Yankee in King Arthur’s Court, ed. by MLAR Justin Kaplan (New York: Penguin, 1972).

MLAR 7247 Shakespeare (3 Credit Hours)
What makes Shakespeare a great writer and why are some of his plays and poems judged to be greater than others in terms of their literary merits? We will take up this twofold question by way of a discussion of some of Shakespeare’s “greatest hits,” examples derived from each of his major literary genres.

MLAR 7250 Verbal and Visual Rhetoric (3 Credit Hours)
This course will focus on theories and practices of verbal discourse in comparison with visual imagery and technology. While concentrating on rhetorics of western cultures, some comparison will be made with rhetorical discourse and imagery in other cultures. The course will examine topics such as the interfaces of religion and politics, mass media and persuasive campaign, or the role of values in institutional leadership and issue campaigns.

MLAR 7280 Philosophy of Religion (3 Credit Hours)
This course examines various attempts to understand the nature and importance of religious experience and religious beliefs from a naturalistic perspective. We will discuss the ontological, epistemic, and axiological significance of claims about the nature of religious experience and religious beliefs in an attempt to situate these phenomena in a broader naturalistic understanding of the self and the world. After a consideration of the varieties of religious experience as exemplified in the work of William James, we will review arguments by Pascal Boyer and Daniel Dennett to the effect that the origin, development, and diversity of religious belief and religious experience are all phenomena that are scientificallyexplainable within the naturalistic frameworks of evolutionary biology and cognitive psychology.

MLAR 7400 Gender, Culture and Families (3 Credit Hours)
Research suggests that gender and family are inseparable concepts. Family carries particular gender role expectations at both the “ideal” and the “practice” level. However, we rarely think about what family is or how gender plays into family—we simply take gendered family roles for granted. Yet where do our ideas about family and gender come from? This class will explore our perceptions of the gender-family nexus, and the changes that have occurred over the last half century or so, from the perspective of popular culture.

MLAR 7451 Religions of the World (3 Credit Hours)
This course will examine the teachings of several major religious traditions—including Hinduism and Buddhism as well as Judaism, Christianity, and Islam—through selected readings from their sacred scriptures.

MLAR 7500 Independent Study (3 Credit Hours)
For specific topics, see Schedule of Classes.

MLAR 7550 Holocaust in Film & Literature (3 Credit Hours)
This course will consider the Holocaust, the attempted genocide of European Jewry by the Nazis during World War II, and the diverse ways that the events related to it are portrayed and understood by diverse audiences. The course is divided into thematic sections that highlight the different issues motivating the authors and creators of relevant texts and films.

MLAR 7940 MLA Transfer Credit (3 Credit Hours)
MLA Transfer Credit.

MLAR 7990 Masters Research (3 Credit Hours)
Research in Liberal Arts

MLAR 9980 Masters Research (3 Credit Hours)
Research in Liberal Arts

Materials Phys. & Engineering (MPEN)

MPEN 6290 Computation Material Sci & Eng (3 Credit Hours)
Prerequisite(s): PHYS 2350 and 2360.

MPEN 6350 Kinetics of Material Systems (3 Credit Hours)
This course covers all aspects of kinetics in material systems. Topics include thermodynamics, steady state and time dependent diffusion, phase transformations, statistical mechanics, structure evolution, boundaries and interfaces, solidification, and precipitation effects.
MPEN 6360 Structure of Materials (3 Credit Hours)
The properties of matter depend on which of the about 100 different kinds of atoms they are made of and how they are bonded together in different crystal structures; specifically, the atomic structure primarily affects the chemical, physical, thermal, electrical, magnetic, and optical properties of materials. Metals behave differently than ceramics, and ceramics behave differently than polymers. Students will learn the different states of condensed matter and develop a set of tools for describing the crystalline structure of all of them. They will gain a better understanding of the principles of structure common to all materials. Key concepts, such as symmetry theory will be introduced and applied to provide a common viewpoint for describing structures of ceramic, metallic, and polymeric materials and the latter includes optical microscopy, electron optics, x-ray diffraction and some surface analytical techniques. Structure-sensitive properties of real materials will also be introduced.

MPEN 6370 Processing of Biomaterials (3 Credit Hours)
Processing of biomaterials gives an overview of the most advanced techniques to process biomaterials into structures that satisfy next generation applications. All materials classes will be covered including polymers, ceramics, metals, composites and cells and tissues. In each case, the material-specific processing and the properties and potential applications will be covered.

MPEN 6380 Materials for Energy (3 Credit Hours)
The course begins with a history of our understanding and utilization of different sources of energy and a review of thermodynamics. In all cases, the most effective materials used are discussed as well as the relevant fundamental equations used and approaches for improving the figure-of-merit. The 5 different forms of energy are introduced - mechanical, electromagnetic, thermal, chemical, and nuclear - and discussed. Materials and techniques used for energy applications are discussed including thermoelics, fossil fuels, nanoparticles, different approaches for energy storage, fuel cells, nuclear energy (fission and fusion), energy biological systems - from cellular scale and ATP and catabolism/anabolism to biomass conversion, and magnetohydrodynamics. Techniques for energy conversion, biomimetics, energy and the environment and material issues for energy transformation are discussed. The sun is also discussed as a source of energy for photosynthesis, photovoltaics, and photothermal power generation.

MPEN 6560 Photonic Materials & Devices (3 Credit Hours)
This course will cover the theory, design, fabrication, characterization, and application of photonic materials and devices. The course will start with a review of the fundamentals of photonics, including ray optics, wave optics, and nanophotonics/quantum optics. The course will then focus on light-matter interactions and photonic materials, including dielectrics, semiconductors, metals, metamaterials, and photonic crystals. Using these principles and materials, we will explore a number of device architectures, including LEDs, lasers, photodetectors, photovoltaics, etc. We will then discuss fabrication methods for making these materials and devices and common optoelectronic characterization techniques. The course will conclude with exploration of cutting edge topics in photonics research. Prerequisites: PHYS 2350 and PHYS 2360 (or equivalent) or instructor approval.

MPEN 6620 MicroFab and Nanotech (3 Credit Hours)
Nano/micro-electromechanical devices (N/MEMS) require knowledge of a broad range of disciplines, from the fundamental physics of mechanics and electromagnetism to practical nano/microfabrication processes and techniques. This course is open for the intr

MPEN 6660 Special Topics (1-3 Credit Hours)
Special Topics.

MPEN 6720 Mechanic Behavior of Materials (3 Credit Hours)
The course covers the general foundations of elasticity and plasticity theory, dislocation theory, and strengthening mechanisms. Basics of materials forming processes are studied. An overview for non-destructive testing of materials is taught. The course emphasis is on destructive mechanical testing of materials including; tension, torsion, hardness, fatigue and creep tests, in addition to fracture mechanics and failure analysis.

MPEN 6760 Thermodynamics of Materials (3 Credit Hours)
The course covers the general foundation of both statistical thermodynamics and classical thermodynamics, including thermodynamics laws, auxiliary functions, and behavior of gases and solutions. In addition, special attention is dedicated to equilibria of reactions and phase diagrams of materials. Computer-based programs will be used to solve thermodynamics problems for complicated materials.

MPEN 6950 Engineers for Int'l Deve (1 Credit Hour)
Engineers for International Development at Tulane University exists for students to participate in community-driven development programs worldwide through the design and implementation of sustainable engineering projects, while fostering responsible leadership. We work both internationally and locally to build and educate communities about their basic infrastructure systems such as drinking water, sanitation, and safe homes.

MPEN 7910 Research I (3 Credit Hours)
MPEN 7920 Research II (3 Credit Hours)
MPEN 7930 Research III (3 Credit Hours)
MPEN 7940 Research IV (3 Credit Hours)
MPEN 7951 Advanced Research I (3 Credit Hours)
MPEN 7952 Advanced Research II (3 Credit Hours)

Maternal And Child Health (MCHL)
MCHL 6040 Nurs Fmly Hlth/Fmly Plan (2 Credit Hours)
MCHL 7930 Susan's Course (1 Credit Hour)

Mathematics (MATH)
MATH 1001 College Mathematics Prep (1 Credit Hour)
A five week review of algebra, trigonometry and other pre-calculus concepts relevant to success in calculus and statistics using an artificially intelligent assessment and learning system. This course is open only to students participating in the Newcomb-Tulane College Summer Experience program.
MATH 1105 Explore Experiment Math (3 Credit Hours)
An introduction to selected topics in mathematics through inquiry-based discovery. Students will make novel calculations, search for patterns, formulate conjectures, and ultimately prove theorems based on their exploration. The emphasis of the course is on the search for structures in mathematics through guided discovery. This course is open only to high school students participating in the Tulane Science Scholars program.

MATH 1110 Probability & Statistics I (3 Credit Hours)
Elementary probability theory with applications; random variables; distributions including a thorough discussion of the binomial, and normal distributions; central limit theorem; histograms; sampling distributions; confidence intervals; tests of hypotheses; linear models; regression and correlation; chi-square test; non-parametric statistics. 1110 is a prerequisite for 1120. These courses do not count toward the Mathematics B.S. requirement in SSE. Students may receive credit for only one of MATH 1110, 1140 or 1230.

MATH 1140 Statistics For Business (4 Credit Hours)
An introductory statistics course for BSM students using MSExcel. Includes confidence intervals and hypothesis tests for one and two populations and introduction to linear regression. Extensive coverage of data collection and analysis as needed to evaluate statistical results and to make good decisions in business. In comparison to Math 1110, the course spends more time on statistical inference problems, less on probability. This course does not count toward the Mathematics B.S. requirement. Students may receive credit for only one of MATH 1110, 1140 or 1230.

MATH 1150 Long Calculus I (3 Credit Hours)
The material of Calculus 1210 is covered in two semesters, with diversions for topics in algebra, trigonometry, complex numbers as the need for these topics arises. Mathematics 1150 is a prerequisite for 1160. Students finishing the course sequence 1150-1160 may continue with 1220 or any other course having Calculus 1201 as a prerequisite. The combination of 1150 and 1160 may count as one course toward the B.S. degree requirement.

MATH 1160 Long Calculus II (3 Credit Hours)
The material of Calculus 1210 is covered in two semesters, with diversions for topics in algebra, trigonometry, complex numbers as the need for these topics arises. Mathematics 1150 is a prerequisite for 1160. Students finishing the course sequence 1150-1160 may continue with 1220 or any other course having Calculus 1201 as a prerequisite. The combination of 1150 and 1160 may count as one course toward the B.S. degree requirement.

MATH 1210 Calculus I (4 Credit Hours)
Functions and their graphs, limits and continuity, derivatives and applications of derivatives, and introduction to the integral.

MATH 1220 Calculus II (4 Credit Hours)
Integration; exponential, logarithmic, and trigonometric functions; techniques of integration; mean value theorem; Taylor's Theorem and Taylor series; and infinite series.

MATH 1230 Stats For Scientists (4 Credit Hours)
The objective of this course is to provide a practical overview of the statistical methods and models most likely to be encountered by scientists in practical research applications. Students will learn statistical concepts by generating and analyzing stochastic datasets using the Minitab software package. Specific topics that will be covered in this course include discrete and continuous distributions, sampling methods, and descriptive statistics, the Central Limit Theorem and its applications, estimation methods, confidence intervals, hypothesis testing, linear regression, and Analysis of Variance. Students may receive credit for only one of MATH 1110, 1140 or 1230. Only MATH 1230 counts towards the B.S. degree.

Prerequisite(s): MATH 1210, 1210, 1210 or 1210 or (MATH 1150 and 1160) or (MATH 1150 and 1160) or (MATH 1150 and 1160) or (MATH 1150 and 1160) or (MATH 1150 and 1160) or (MATH 1150 and 1160) or (MATH 1150 and 1160) or (MATH 1150 and 1160).

MATH 1310 Consolidated Calculus (4 Credit Hours)
A combined course in Calculus I and II for students with a background in Calculus I.

MATH 1940 Transfer Coursework (3 Credit Hours)

MATH 2010 Math Modeling of World (3 Credit Hours)
This course exposes students to the process of mathematical modeling as a way to describe, explain, understand, or predict situations arising in everyday life. Examples of such situations might include: the design of handicap ramps, estimating the number of sand bags needed to raise a levee a few feet, understanding and predicting the number of daylight hours at different places in the world, analyzing the consequences of child support payment adjustment formulas used by the states, etc. The modeling process emphasizes making assumptions, translating the empirical situation into mathematical language, drawing conclusions from the mathematical solution, interpreting and validating those conclusions in the context of the original situation and revising assumptions if necessary. Prerequisite: Calculus I or equivalent.

Prerequisite(s): MATH 1150, 1150, 1150, 1150, 1150, 1210, 1210, 1210, 1210, 1210, 1210, 1210, 1210, 1220, 1220, 1220, 1220, 1220, 1220, 1310, 1310, 1310, 1310, 1310, 1310, 2210, 2210, 2210, 2210 or 2210.

MATH 2170 Intro To Discrete Math (3 Credit Hours)
An introduction to the concepts and techniques of discrete mathematics including set theory, mathematical induction, graphs, trees, ordered sets, Boolean algebras, and the basic laws of combinatorics.

MATH 2210 Calculus III (4 Credit Hours)
A basic course in differential and integral calculus of several variables. Vectors in the plane and space. Vector functions, derivatives, arc length, curvature. Functions of several variables: continuity, partial derivatives, chain rule, gradient, optimization, Lagrange multipliers. Double and triple integrals: change of variables, polar coordinates, cylindrical and spherical coordinates, surface area. Vector fields: gradient, curl, divergence, line and surface integrals, Green's, Stokes', and Divergence theorems.

Prerequisite(s): MATH 1220, 1310, 1220, 1220, 1220, 1310, 1310, 1310 or 1310.
MATH 2240 Intro To Applied Math (4 Credit Hours)
An introduction to the techniques of applied mathematics. The emphasis will be on the mathematical modeling by differential equations of a variety of applications in the natural sciences. Numerical and graphical techniques for finding both quantitative and qualitative information about solutions will be discussed and implemented on the computer. No programming experience is assumed.

Prerequisite(s): MATH 1220, 1310, 1220, 1220, 1310, 1310 or 1310.

MATH 2890 Service Learning (0-1 Credit Hours)
Service learning component to MATH courses. See Schedule of Classes each semester for offerings. 20 or 40 hours of public service with a CPS approved community partner.

MATH 2940 Transfer Coursework (3 Credit Hours)

MATH 3050 Real Analysis I (3 Credit Hours)
Introduction to analysis. Real numbers, limits, continuity, uniform continuity, sequences and series, compactness, convergence, Riemann integration. An in-depth treatment of the concepts underlying calculus.

Prerequisite(s): MATH 2210, 2210, 2210 or 2210.

MATH 3070 Intro To Probability (3 Credit Hours)

MATH 3080 Intro Statisticl Infernc (3 Credit Hours)

Prerequisite(s): (MATH 2210, 2210, 2210 or 2210) and (MATH 3070, 3070, 3070 or 3070).

MATH 3090 Linear Algebra (4 Credit Hours)
An introduction to linear algebra emphasizing matrices and their applications. Gaussian elimination, determinants, vector spaces and linear transformations, orthogonality and projections, eigenvector problems, diagonalizability, Spectral Theorem, quadratic forms, applications. MATLAB is used as a computational tool.

Prerequisite(s): MATH 2210, 2210, 2210 or 2210.

MATH 3110 Abstract Algebra I (3 Credit Hours)
An introduction to abstract algebra. Elementary number theory and congruences. Basic group theory: groups, subgroups, normality, quotient groups, permutation groups. Ring theory: polynomial rings, unique factorization domains, elementary ideal theory. Introduction to field theory.

Prerequisite(s): MATH 2210.

MATH 3140 Experimental Mathematics (3 Credit Hours)
The exploration of Mathematical tools in Symbolic Languages. Examples are taken from calculus, differential equations, and linear algebra.

Prerequisite(s): MATH 1210, 1220 and 2210.

MATH 3200 Combinatorics (3 Credit Hours)

Prerequisite(s): (MATH 1210, 1210, 1210, 1210 or 1210) and (MATH 1220, 1220, 1220 or 1220) and (MATH 2210, 2210, 2210 or 2210) or (MATH 3090, 3090, 3090 or 3090) or (MATH 1310, 1310, 1310 or 1310).

MATH 3250 Theory of Computation (3 Credit Hours)
Introduction to the theory of computation: Formal languages, finite automata and regular languages, deterministic and nondeterministic computation, context free grammars, languages, pushdown automata, turning machines, undecidable problems, recursion theorem, computational complexity and NP-completeness.

Prerequisite(s): MATH 2170.

MATH 3260 Algorithms and Complexity (3 Credit Hours)
Students who have taken neither MATH 2170 nor MATH 3200 require the permission of the instructor. A study of important algorithms (including searching and sorting, graph/network algorithms, and algorithms in number theory) and algorithm design techniques (including greedy, recursive, and probabilistic algorithms). Covers the analysis of algorithms (including worst-case and average-case analysis) and discussions of complexity classes for decision and enumeration problems (including P, NP, #P, PSPACE).

Prerequisite(s): CMPS 2200.

MATH 3280 Information Theory (3 Credit Hours)
This introduction to information theory will address fundamental concepts, such as information, entropy, relative entropy, and mutual information. In addition to giving precise definitions of these concepts, the course will include a probabilistic approach based on equipartitions. Many of the applications of information will be discussed, including Shannon's basic theorems on channel capacity and related coding theorems. In addition to channels and channel capacity, the course will discuss applications of information theory to mathematics, statistics, and computer science.

Prerequisite(s): MATH 3050, 3090 or 6090.

MATH 3310 Scientific Computing I (3 Credit Hours)

Prerequisite(s): (MATH 2210, 2210, 2210 or 2210) and (MATH 2240, 2240, 2240 or 2240) or (MATH 4240, 4240, 4240 or 4240).
MATH 3650  Number Theory (3 Credit Hours)
The subject of number theory is one of the oldest in mathematics. The course will cover some basic material and describe interesting applications. One of the recurrent themes is the realization that mathematics that was developed usually for its own sake, has found applications in many unexpected problems. Some of the topics covered in the class are Pythagorean triples, prime numbers, divisibility and the highest common divisor, linear diophantine equations, congruences, round-robin tournaments and perpetual calendars, multiple functions, perfect numbers, primitive roots, pseudo-random numbers, decimal fractions and continued fractions, quadratic reciprocity.

MATH 3660  Special Topics (1-3 Credit Hours)
Special Topics.

MATH 3890  Service Learning (0-1 Credit Hours)
Students complete a service activity in the community in conjunction with the content of a three-credit corequisite course.

MATH 3940  Transfer Coursework (1-4 Credit Hours)
Transfer Coursework.

MATH 3980  Senior Seminar (1 Credit Hour)
Under faculty guidance, students will select a topic in current mathematical research, write an expository article on that topic, and give an oral presentation. This seminar is required of all mathematics majors who are not doing an Honors Project within the department.

MATH 3990  Senior Seminar (3 Credit Hours)
Under faculty guidance, students will select a topic in current mathematical research, write an expository article on that topic, and give an oral presentation. This seminar is required of all mathematics majors who are not doing an Honors Project within the department.

MATH 4060  Real Analysis II (3 Credit Hours)
An in-depth treatment of multivariable calculus. Extends the material covered in Mathematics 2210. Chain rule, inverse and implicit function theorems, Riemann integration in Euclidean n-space, Gauss-Green-Stokes theorems, applications.

Prerequisite(s): MATH 3050 and 3090.

MATH 4120  Abstract Algebra II (3 Credit Hours)

Prerequisite(s): (MATH 3090, 3090, 3090 or 3090) and (MATH 3110, 3110, 3110 or 3110).

MATH 4210  Differential Geometry (3 Credit Hours)
Theory of plane and space curves including arc length, curvature, torsion, Frenet equations, surfaces in three-dimensional space. First and second fundamental forms, Gaussian and mean curvature, differentiable mappings of surfaces, curves on a surface, special surfaces.

Prerequisite(s): (MATH 3050, 3050, 3050 or 3050) and (MATH 3090, 3090, 3090 or 3090).

MATH 4240  Ordinary Differential Equa (3 Credit Hours)
Review of linear algebra, first-order equations (models, existence, uniqueness, Euler method, phase line, stability of equilibria), higher-order linear equations, Laplace transforms and applications, power series of solutions, linear first-order, systems (autonomous systems, phase plane), application of matrix normal forms, linearization and stability of nonlinear systems, bifurcation, Hopf bifurcation, limit cycles, Poincare-Bendixson theorem, partial differential equations (symmetric boundary-value problems on an interval, eigenvalue problems, eigenfunction expansion, initial-value problems in 1D).

MATH 4250  Math Found Comp Security (3 Credit Hours)
This course studies the mathematics underlying computer security, including both public key and symmetric key cryptography, cryptographic protocols and information flow. The course includes a study of the RSA encryption scheme, stream and clock ciphers, digital signatures and authentication. It also considers semantic security and analysis of secure information flow.

Prerequisite(s): (MATH 2170 or CMPS 2170) and MATH 3110.

MATH 4300  Complex Analysis (3 Credit Hours)
The complex number system, complex integration and differentiation, conformal mapping, Cauchy's theorem, calculus of residues.

MATH 4410  Topology (3 Credit Hours)

Prerequisite(s): MATH 3050.

MATH 4411  Intro to Alg Topolgy (3 Credit Hours)
An introduction to algebraic topology with perspectives on applications to sensor networks, target detection and learning theory. Elementary algebraic topology: fundamental group, simplicial complexes, homology, long exact sequences, excision, Lefschetz fixed point theorem, persistent homology. Applications to coverage in sensor networks, deSilva-Ghrist criterion, target enumeration.

MATH 4470  Analyt Method Appl Math (3 Credit Hours)
Derivations of transport, heat/reaction-diffusion, wave, Poisson's equations; well-posedness; characteristics methods for first order PDE's; D'Alembert formula and conservation of energy for wave equations; propagation of waves; Fourier transforms; heat kernel, smoothing effect; maximum principles; Fourier series and Sturm-Liouville eigen-expansions; method of separation of variables, frequencies of wave equations, stable and unstable modes, long time behavior of heat equations; delta-function, fundamental solution of Laplace equation, Newton potential; Green's function and Poisson formula; Dirichlet Principle.

MATH 4560  Internship (1-3 Credit Hours)

MATH 4660  Special Topics (1-3 Credit Hours)
Special Topics.
MATH 4880 Writing Intensive: (1 Credit Hour)
MATH 4900 Advanced Topics In Math (3 Credit Hours)
This course covers a variety of advanced topics in mathematics and exposes students to recent developments not available in other parts of the mathematics curriculum. Topics covered will vary from semester to semester. Recent topics offered include Knot Theory and 3-Manifolds, Algebraic Combinatorics, Cardiac Modeling, Number Theory.

MATH 4910 Independent Study (1-3 Credit Hours)
No more than four hours of 4910-4920 may be counted toward satisfying the major requirements.

MATH 4920 Independent Study (1-3 Credit Hours)
No more than four hours of 4910-4920 may be counted toward satisfying the major requirements.

MATH 4940 Transfer Coursework (1-4 Credit Hours)
Transfer Coursework.

MATH 4990 Honors Thesis (3 Credit Hours)
Honors thesis research, first semester. Register in department.

MATH 5000 Honors Thesis (4 Credit Hours)
Honors thesis research, second semester. Register in department.

MATH 5380 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

MATH 5390 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

MATH 6020 Mathematical Statistics (3 Credit Hours)
Thorough review of key distributions for probability and statistics, including the multivariate calculus needed to develop them. Full derivation of sampling distribution. Classical principles of inference including best tests and estimations. Methods of finding tests and estimators. Introduction to Bayesian estimators.

MATH 6030 Stochastic Processes (3 Credit Hours)
Markov processes, Poisson processes, queueing models, introduction to Brownian Motion.

Prerequisite(s): MATH 3070.

MATH 6040 Linear Models (3 Credit Hours)
Overview of multivariate analysis, theory of least squares linear regression, regression diagnostics, introduction to generalized linear models with emphasis on logistic regression. The student will complete several extended data analysis assignments using SAS, S-Plus, or R.

MATH 6050 Real Analysis I (3 Credit Hours)
Introduction to analysis. Real numbers, limits, continuity, uniform continuity, sequences and series, compactness, convergence, Riemann integration. An in-depth treatment of the concepts underlying calculus.

Prerequisite(s): MATH 2210.

MATH 6060 Real Analysis II (3 Credit Hours)
An in-depth treatment of multivariable calculus. Extends the material covered in Mathematics 2210. Chain rule, inverse and implicit function theorems, Riemann integration in Euclidean n-space, Gauss-Green-Stokes theorems, applications.

MATH 6070 Intro To Probability (3 Credit Hours)
An introduction to probability theory. Counting methods, conditional probability and independence. Discrete and continuous distributions, expected value, joint distributions and limit theorems. Prepares student for future work in probability and statistic

MATH 6080 Intro Statstcl Inference (3 Credit Hours)

MATH 6090 Linear Algebra (3 Credit Hours)
An introduction to linear algebra emphasizing matrices and their applications. Gaussian elimination, determinants, vector spaces and linear transformations, orthogonality and projections, eigenvector problems, diagonalizability, Spectral Theorem, quadrati

MATH 6110 Abstract Algebra I (3 Credit Hours)
An introduction to abstract algebra. Elementary number theory and congruences. Basic group theory: groups, subgroups, normality, quotient groups, permutation groups. Ring theory: polynomial rings, unique factorization domains, elementary ideal theory. Int

MATH 6120 Abstract Algebra II (3 Credit Hours)

MATH 6200 Combinatorics (3 Credit Hours)

MATH 6210 Differential Geometry (3 Credit Hours)
Theory of plane and space curves including arc length, curvature, torsion, Frenet equations, surfaces in three-dimensional space. First and second fundamental forms, Gaussian and mean curvature, differentiable mappings of surfaces, curves on a surface, sp

MATH 6240 Ordinary Differentl Equa (3 Credit Hours)
Review of linear algebra, first-order equations (models, existence, uniqueness, Euler method, phase line, stability of equilibria), higher-order linear equations, Laplace transforms and applications, power series of solutions, linear first-order, systems (autonomous systems, phase plane), application of matrix normal forms, linearization and stability of nonlinear systems, bifurcation, Hopf bifurcation, limit cycles, Poincare-Bendixon theorem, partial differential equations (symmetric boundary-value problems on an interval, eigenvalue problems, eigenfunction expansion, initial-value problems in 1D). Students may not receive credit for both 2240 and 4240.

MATH 6250 Math Found Comp Security (3 Credit Hours)
This course studies the mathematics underlying computer security, including both public key and symmetric key cryptography, crypto-protocols and information flow. The course includes a study of the RSA encryption scheme, stream and clock ciphers, digital signatures and authentication. It also considers semantic security and analysis of secure information flow.
MATH 6260 Advanced Algorithms (3 Credit Hours)
MATH 6280 Information Theory (3 Credit Hours)
This introduction to information theory will address fundamental concepts, such as information, entropy, relative entropy, and mutual information. In addition to giving precise definitions of these concepts, the course will include a probabilistic approach.

MATH 6300 Complex Analysis I (3 Credit Hours)
The complex number system, complex integration and differentiation, conformal mapping. Cauchy's theorem, calculus of residues.

MATH 6310 Scientific Computing I (3 Credit Hours)

MATH 6350 Optimization (3 Credit Hours)
Constrained and unconstrained non-linear optimization; Linear programming, combinatorial optimization as time allows. Emphasis is on realistic problems whose solution requires computers, using Maple or Mathematica.

MATH 6370 Time Series Analysis (3 Credit Hours)
This course provides an introduction to time series analysis at the graduate level. The course is about modeling based on three main families of techniques: (i) the classical decomposition into trend, seasonal and noise components; (ii) ARIMA processes and the Box-Jenkins methodology; (iii) Fourier analysis. Iterative methods for nonlinear equations and systems of nonlinear equations.

Prerequisite(s): MATH 6070 and 6080 and (MATH 6040 or 7260).

MATH 6410 Topology I (3 Credit Hours)

MATH 6470 Analy Methods Appl Math (3 Credit Hours)

MATH 6500 Differential Geometry I (3 Credit Hours)

MATH 6560 Differential Geometry II (3 Credit Hours)

MATH 6570 Stochastic Diff Equatns (3 Credit Hours)

MATH 6620 Algebra II (3 Credit Hours)

MATH 6660 Special Topics (1-3 Credit Hours)
Special Topics.
MATH 6710 Analysis I (3 Credit Hours)

MATH 6720 Analysis II (3 Credit Hours)

MATH 6810 Applied Math I (3 Credit Hours)

MATH 6820 Applied Math II (3 Credit Hours)

MATH 6940 Transfer Coursework (1-4 Credit Hours)
Transfer Coursework.

MATH 7010 Topology I (3 Credit Hours)

MATH 7020 Topology II (3 Credit Hours)

MATH 7030 Stochastic Processes (3 Credit Hours)
Markov processes, Poisson processes, queueing models, introduction to Brownian Motion.

MATH 7110 Algebra I (3 Credit Hours)

MATH 7120 Algebra II (3 Credit Hours)

MATH 7150 Probability Theory I (3 Credit Hours)
Consists of Math 6020 and additional meetings and readings to cover advanced limit theorems and foundations of mathematical statistics.

MATH 7210 Analysis I (3 Credit Hours)

MATH 7220 Analysis II (3 Credit Hours)

MATH 7240 Mathematical Statistics (3 Credit Hours)
Consists of Math 6020 and additional meetings and readings to cover advanced limit theorems and foundations of mathematical statistics.
MATH 7260 Linear Models (3 Credit Hours)

MATH 7291 Algebraic Geometry I (3 Credit Hours)
This is the first semester of a second year course for graduate students with research interest in Algebraic Geometry and related areas. The course will give students a necessary background preparation for research in Algebraic Geometry or to read and understand papers in this area. Topics in this course include: affine and projective varieties, morphisms of varieties, nonsingular varieties, and category theory.

MATH 7292 Algebraic Geometry II (3 Credit Hours)
This is the second semester of a second year course for graduate students with research interest in Algebraic Geometry and related areas. The course will give students a necessary background preparation for research in Algebraic Geometry or to read and understand papers in this area. Topics in this course include: sheaves and schemes, line bundles and divisors, projective morphisms, and applications in toric geometry, homogeneous spaces, and algebraic group embeddings.

MATH 7310 Applied Mathematics I (3 Credit Hours)
This is a first year graduate course in Applied Mathematics. A solid working knowledge of linear algebra and advanced calculus is the necessary background for this class. The topics covered include a mix of analytical and numerical methods that are used to understand models described by differential equations. We will emphasize applications from science and engineering, as they are the driving force behind each of the topics addressed.

MATH 7320 Applied Math II (3 Credit Hours)
This is a first year graduate course in Applied Mathematics. A solid working knowledge of linear algebra and advanced calculus is the necessary background for this class. The topics covered include a mix of analytical and numerical methods that are used to understand models described by differential equations. We will emphasize applications from science and engineering, as they are the driving force behind each of the topics addressed.

MATH 7340 Numerical Methods In Pde (3 Credit Hours)
MATH 7350 Scientific Computing I (3 Credit Hours)

MATH 7360 Data Analysis (3 Credit Hours)
This course covers the statistical analysis of datasets using R software package. The R environment, which is an Open Source system based on the S Language, is one of the most versatile and powerful tools available for statistical data analysis, and is widely used in both academic and industrial research. Key topics include graphical methods, generalized linear models, clustering, classification, time series analysis and spatial statistics. No prior knowledge of R is required.

MATH 7370 Time Series Analysis (3 Credit Hours)
This course provides an introduction to time series analysis at the graduate level. The course is about modeling based on three main families of techniques: (i) the classical decomposition into trend, seasonal and noise components; (ii) ARIMA processes and the Box and Jenkins methodology; (iii) Fourier analysis. If time permits, other possible topics include state space modeling and fractional processes. The course is focused on the theory, but some key examples and applications are also covered and implemented in the software package R.

MATH 7440 Linear Models (3 Credit Hours)
MATH 7510 Differential Geometry I (3 Credit Hours)

MATH 7520 Differential Geometry II (3 Credit Hours)

MATH 7530 Partial Diff Equations I (3 Credit Hours)

MATH 7540 Partial Diff Equations II (3 Credit Hours)
MATH 7550  Probability Theory II  (3 Credit Hours)

MATH 7560  Stochastic Process II  (3 Credit Hours)

MATH 7570  Scientific Computation II  (3 Credit Hours)
Floating point arithmetic (limitations and pitfalls). Numerical linear algebra, solving linear system by direct and iterative methods, eigenvalue problems, singular value decompositions, numerical integrations, interpolations. Unconstrained optimization.

MATH 7580  Scientific Computing III  (3 Credit Hours)
Numerical ODE, both initial and boundary value problems. Numerical PDE. Introduction to fluid dynamics and other areas of application.

Prerequisite(s): (MATH 7570 or 7570).

MATH 7590  Functional Analysis I  (3 Credit Hours)
MATH 7600  Functional Analysis II  (3 Credit Hours)
MATH 7610  Topology III  (3 Credit Hours)
MATH 7630  Algebra III  (3 Credit Hours)
MATH 7710  Topics In Algebra  (3 Credit Hours)
MATH 7711  Topics in Algebra  (3 Credit Hours)
MATH 7712  Topics in Algebra  (3 Credit Hours)
MATH 7713  Topics in Algebra  (3 Credit Hours)
MATH 7714  Topics in Algebra  (3 Credit Hours)
MATH 7715  Topics in Algebra  (3 Credit Hours)
MATH 7720  Topics In Analysis  (3 Credit Hours)
MATH 7730  Topics In Applied Math  (3 Credit Hours)
MATH 7731  Topics In Applied Math  (3 Credit Hours)
MATH 7732  Topics in Applied Math  (3 Credit Hours)
MATH 7740  Topics In Computation  (3 Credit Hours)
MATH 7750  Topics/Differential Equa  (3 Credit Hours)
MATH 7760  Topics In Geometry  (3 Credit Hours)
MATH 7770  Topics/Probability&Stats  (3 Credit Hours)
MATH 7780  Topics/Theoret. Comp Sci  (3 Credit Hours)
MATH 7790  Topics In Topology  (3 Credit Hours)
MATH 7940  Transfer Credit-Grad  (1-12 Credit Hours)
MATH 7980  Reading and Research  (1-9 Credit Hours)
MATH 7990  Advanced Math  (1-9 Credit Hours)
MATH 9980  Masters Research  (3 Credit Hours)
Research toward completion of a masters degree.

MATH 9990  Dissertation Research  (3 Credit Hours)
Research toward completion of a doctoral degree.

MD - Anesthesiology (ANES)

ANES 4020  Basics of Anesthesiology  (2 Credit Hours)
This course is an introductory course to the practice of Anesthesiology. Students participating in this rotation will be introduced to the most common anesthesia subspecialties including General Anesthesia, Obstetric Anesthesia, Regional Anesthesia, and the Preoperative evaluation process.

ANES 4021  Advanced Anesthesiology  (2 Credit Hours)
This course is an advanced course to the practice of Anesthesiology. Students participating in this rotation will be introduced to the advanced anesthesia subspecialties including Cardiac Anesthesia, Neuro Anesthesia, and Transplant Anesthesia. Students will also take part in basic anesthesia cases and the preoperative evaluation process.

ANES 4040  Anesthesiology Research  (4 Credit Hours)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.
ANES 5000 Introduction To Anesthesiology (1 Credit Hour)
This elective introduces medical students to the Anesthesiology specialty. The course includes differing combinations of classroom problem-based case discussions, group lectures with other students or residents, and visits to the simulation center and operating rooms. Operating rooms and the simulation center are where students are provided with hands-on experience with endotracheal intubation and the placement of intravenous lines. Supervision is by residents and/or attendings. Discussion topics might include airway management, general vs. regional anesthetic techniques, preoperative & postoperative assessment, intraoperative monitoring, pharmacology, cardiovascular and pulmonary physiology, and co-existing disease, as well as anesthetic complications such as awareness during general anesthesia, malignant hyperthermia, regional anesthetic mishaps, and failed intubation.

ANES 5500 Clinical Preceptorship - Anes (1 Credit Hour)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

ANES 5540 Anesthesiology Research (1 Credit Hour)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

ANES 9020 ANES Visiting Student (2 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

MD - Biochemistry (BIOC)

BIOC 1003 Metabolic Biochemistry (5 Credit Hours)
BIOC 1004 Cellular Biochemistry (2 Credit Hours)
BIOC 1010 Biochemistry (7 Credit Hours)
Biochemical understanding of proteins and nucleic acids is fueling a revolution in medicine, demonstrating how the basic principles of biochemical structure govern molecular regulation in normal human health or malfunction in disease. Medical Biochemistry at Tulane University School of Medicine divides its focus into two sets of broad topics. Cellular Biochemistry focuses upon the molecular and cellular level of biochemistry, providing information about how cell organelles and structures function. Metabolic Biochemistry focuses upon biochemical pathways involved in intermediary metabolism. Both stress normal function and why disease states occur if these functions are abrogated. In this manner students can appreciate the relevance of biochemical structure and function. Numerous clinical cases are provided, relating disease states to biochemistry, to help students integrate complex disease states viewed from a cellular stand point.

BIOC 1111 Biochemistry Summer Course (5 Credit Hours)

MD - Brain & Behavior (BRBH)

BRBH 2006 Brain, Mind and Behavior (6 Credit Hours)
The Brain, Mind, and Behavior course is an integration of neuroscience and its application in pre-clerkship neurology and psychiatry.

MD - Clinical Diagnosis (CLDG)

CLDG 2004 Clinical Diagnosis (3 Credit Hours)
Clinical Diagnosis is a required, year-long course for sophomore medical students. It is designed to enhance history-taking skills while introducing the student to both normal and abnormal exam findings. The course is inter-digitated with the mechanisms of disease course and is, therefore, organ systems-based. This allows the student to approach the patient's exam with an understanding of the underlying pathophysiology, thus reinforcing the principles of basic science at the bedside. In addition to the history and physical exam sessions with the preceptor, the student will be introduced to statistics and evidence-based medicine, clinical reasoning sessions, SP FEX sessions, and SIM Center activities. There are also ward preparation sessions which present and allow for group discussion of ethical issues which the students may face as clinical clerks.

MD - Dermatology (DERM)

DERM 4000 Dermatology (4 Credit Hours)
The goal of the dermatology elective is to provide fundamental dermatology skills in medical dermatology, surgical dermatology, pediatric dermatology and dermatopathology. The student will participate in clinics, didactic lectures, Kodachrome sessions, and journal clubs. Students are expected to complete the American Academy of Dermatology's Basic Derm Curriculum. Students on the 4-week rotation will be expected to give a 15-minute oral presentation at the conclusion of their rotation.

DERM 4020 Dermatology (2 Credit Hours)
The goal of the dermatology elective is to provide fundamental dermatology skills in medical dermatology, surgical dermatology, pediatric dermatology and dermatopathology. The student will participate in clinics, didactic lectures, Kodachrome sessions, and journal clubs. Students are expected to complete the American Academy of Dermatology's Basic Derm Curriculum.

DERM 4040 Dermatology Research (4 Credit Hours)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.

DERM 5500 Clinical Preceptorship - Derm (1 Credit Hour)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

DERM 5540 Dermatology Research (1 Credit Hour)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.
MD - Family Medicine (FAMY)

FAMY 3000  Family Medicine (6 Credit Hours)
The family medicine clerkship is a six-week required course for third-year medical students. Clerkship students are paired with a community family medicine physician “preceptor.” Preceptors are board-eligible family medicine physicians who volunteer their time to mentor Tulane medical students during the clerkship. Students work one-on-one with their preceptor to learn the essentials of family medicine through direct patient care.

FAMY 3500  Family Medicine Subinternship (4 Credit Hours)
Hands-on, ward-based inpatient experience on a Family MEDICINE hospital service in an approved academic program under the supervision of Tulane Clinical faculty. The experience is equivalent to that of a FAMILY MEDICINE intern, but with fewer patients. Patients are of all ages and both genders.

FAMY 4020  Family Medicine (2 Credit Hours)
This is a clinical, ambulatory rotation during which students adopt their preceptor’s schedule and community engagements and meant to further our students’ family medicine experiences within the community. This rotation is predominantly outpatient with attention to chronic and acute conditions and longitudinal care across a wide range of patients, utilizing the patient-centered interview, and can include aspects of the business of medicine within a changing healthcare system and community projects, where possible. Students are evaluated via observation, leading to a final evaluation, and will strengthen their history and physical-taking, differential diagnoses, and pharmaceutical knowledge, all connected to evidence-based medicine.

FAMY 4022  Spanish Clinical Elective (2 Credit Hours)
This is a clinical, ambulatory rotation during which students adopt their preceptor’s schedule and community engagements with their medical Spanish. It is predominantly outpatient with attention to chronic and acute conditions and longitudinal care across a wide range of patients, utilizing the patient-centered interview, and can include aspects of the business of medicine within a changing healthcare system. Students are evaluated via observation, leading to a final evaluation.

FAMY 4023  Sports Medicine (2 Credit Hours)
This is a clinical, ambulatory rotation during which students adopt their preceptor’s schedule and community engagements with a noninvasive sports medicine specialty. It is predominantly outpatient with attention to chronic and acute conditions and longitudinal care across a wide range of patients, utilizing the patient-centered interview, and can include aspects of the business of medicine within a changing healthcare system. Students are evaluated via observation, leading to a final evaluation.

FAMY 4040  Family Medicine (4 Credit Hours)
This is a clinical, ambulatory rotation during which students adopt their preceptor’s schedule and community engagements and meant to further our students’ family medicine experiences within the community. This rotation is predominantly outpatient with attention to chronic and acute conditions and longitudinal care across a wide range of patients, utilizing the patient-centered interview, and can include aspects of the business of medicine within a changing healthcare system and community projects, where possible. Students are evaluated via observation, leading to a final evaluation, and will strengthen their history and physical-taking, differential diagnoses, and pharmaceutical knowledge, all connected to evidence-based medicine.

MD - Emergency Medicine (EMER)

EMER 4000  Emergency Medicine (4 Credit Hours)
Emergency Medicine in New Orleans is a fascinating and challenging blend of fast-paced patient care, hands-on learning, multidisciplinary team interactions, and a strong focus on the social determinants of health. In Advanced Emergency Medicine, students will obtain insight into and experience with the principles and practice of emergency medicine and trauma care; gain knowledge and skills in the evaluation and treatment of the acutely ill undifferentiated patient; be exposed to a variety of procedural experiences; and explore the variety of subspecialties and career options in Emergency Medicine. The 4-wk EMER4000 elective is open ONLY to students who intend to match in EMER.

EMER 4020  Emergency Medicine (2 Credit Hours)
Emergency Medicine (EM) is a broad, complex discipline with a wealth of patient encounters unmatched by most other specialties. Evaluation of the undifferentiated patient – that is, figuring out who is truly “sick” or “not sick” – is one of the most elusive yet important skills for any physician. Through this rotation, we aim to teach you basic skills in acute medical care, including simple and common procedures, and provide you with an evidence-based foundation for approaching patient care. Furthermore, by one-on-one interactions with faculty and residents, we hope to illustrate to you that every patient encounter can result in both formal and informal teaching and education. Evidence-based learning should occur as often as possible during the course of your shift. Finally, we intend to provide you with a healthy understanding of how a modern ED and trauma unit operates.

Dermatology Visiting Student (4 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

Dermatology Visiting Student (2 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.
FAMY 4041 Hospice (4 Credit Hours)
This is a home healthcare elective, wherein the student rotates with a hospice professional in making home visits, exposing him/her to end of life care and the empathy, costs, and family dynamics that go with it. The student regularly consults with RN's and the director of the course. This is a daily elective that runs for two weeks and can serve as a complement to the FM clerkship or serve as a T4 experience that showcases a unique and necessary part of primary care.

FAMY 4042 Spanish Clinical Elective (4 Credit Hours)
This is a clinical, ambulatory rotation during which students adopt their preceptor’s schedule and community engagements and utilize their medical Spanish. It is predominantly outpatient with attention to chronic and acute conditions and longitudinal care across a wide range of patients, utilizing the patient-centered interview, and can include aspects of the business of medicine within a changing healthcare system. Students are evaluated via observation, leading to a final evaluation.

FAMY 4121 Community Medicine (2 Credit Hours)
A basic understanding of the public health, community medicine and social determinants of health are essential for any medical student. Medicine is moving more and more in the direction of population management. Population health and public health is an issue that needs to be addressed in medicine from the national policy level, healthcare system level, community level, clinic level, and even the individual patient level. This rotation will provide a basic introduction to the concepts of public health and community medicine as they apply to physicians today. Students will leave this rotation with an understanding of the importance of population medicine and public health. They will also understand how to begin to incorporate the basic concepts of public health and population management into their future practice. These concepts include but are not limited to epidemiology, biostatistics, health systems management, emergency preparedness, outbreak investigations, community health, injury prevention, mental health, and environmental health.

FAMY 4140 Community Medicine (4 Credit Hours)
A basic understanding of the public health, community medicine and social determinants of health are essential for any medical student. Medicine is moving more and more in the direction of population management. Population health and public health is an issue that needs to be addressed in medicine from the national policy level, healthcare system level, community level, clinic level, and even the individual patient level. This rotation will provide a basic introduction to the concepts of public health and community medicine as they apply to physicians today. Students will leave this rotation with an understanding of the importance of population medicine and public health. They will also understand how to begin to incorporate the basic concepts of public health and population management into their future practice. These concepts include but are not limited to epidemiology, biostatistics, health systems management, emergency preparedness, outbreak investigations, community health, injury prevention, mental health, and environmental health.

FAMY 4520 Rural Montana Medicine (2 Credit Hours)
This is a clinical, ambulatory rotation during which students adopt their preceptor’s schedule and community engagements in rural Ennis, MT. It is predominantly outpatient with attention to chronic and acute conditions and longitudinal care across a wide range of patients, utilizing the patient-centered interview, and can include aspects of the business of medicine within a changing healthcare system. Students are evaluated via observation, leading to a final evaluation.

FAMY 4540 Rural Montana Medicine (4 Credit Hours)
This is a clinical, ambulatory rotation during which students adopt their preceptor’s schedule and community engagements in rural Ennis, MT. It is predominantly outpatient with attention to chronic and acute conditions and longitudinal care across a wide range of patients, utilizing the patient-centered interview, and can include aspects of the business of medicine within a changing healthcare system. Students are evaluated via observation, leading to a final evaluation.

FAMY 4800 International (8 Credit Hours)
The global health elective is an opportunity to experience first-hand the practice of medicine in a unique, underserved, international setting. Students will gain a meaningful appreciation of the challenges faced by providing healthcare in a resource limited setting as well as experience the rewards of doing so. This rotation is particularly well-suited to the student–physician interested in rural health care, community health and primary care or in the socioeconomics of medical care around the world.

FAMY 4840 International (4 Credit Hours)
The global health elective is an opportunity to experience first-hand the practice of medicine in a unique, underserved, international setting. Students will gain a meaningful appreciation of the challenges faced by providing healthcare in a resource limited setting as well as experience the rewards of doing so. This rotation is particularly well-suited to the student–physician interested in rural health care, community health and primary care or in the socioeconomics of medical care around the world.

FAMY 5001 Autonomy in the Clinical Rel. (1 Credit Hour)
Autonomy is a cornerstone value of medical ethics. Even so, there is widespread disagreement regarding the nature of autonomy, what it means to respect the autonomy of others, and autonomy’s proper role – as well as its limits – in medicine. This course provides students an opportunity to explore these issues and how they affect the students’ professional lives. It begins with a treatment of the various theories of autonomy. It then moves on to such questions as: Does respecting patient autonomy require providing patients with whatever treatment they wish? How do we respect the autonomy of patients who can no longer make autonomous decisions of their own? Does physician autonomy justify withholding medically indicated interventions to which the physician has moral objections? Students will have the opportunity to wrestle with these and other questions in an open, supportive, discussion-based setting. Doing so will provide students with an understanding of important issues in professionalism and patient care which will be valuable for their Step 2 exams.
The vision of the health policy elective is to educate and facilitate action about local and national health policy issues among Tulane medical students and the larger New Orleans community. We hope to spur thought, dialogue, and involvement that will improve access to and quality of health care, leading to better health outcomes. By exposing students to health policy issues now, we hope they will see the importance of getting involved in policy-making and advocacy and will continue to stay informed and engaged as practicing physicians who advocate on their patients’ behalf. We hope that this elective will serve to spur positive change in health care policy both presently and long-term.

This elective is a 2 week international rotation in Dharmsala, India, where students will gain experience working in an underserved global health setting, while providing health services to Tibetan refugees. Daily activities will include medical assessments of refugees, team meetings with attending physician, lectures by various local medical experts, tours of local medical facilities, and opportunities to learn from local practitioners. Students will be supervised by a board certified physician during the rotation. The 2 week elective will be followed by an optional 1 week of organized travel to experience further cultural immersion.

Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

This course is designed to provide a forum for discussion of pertinent issues in global health and human rights and to motivate students to become active advocates for their resolution. Students will participate in weekly discussions with local and national experts in public health, clinical medicine, and health sciences research who are also strong advocates for human rights. The speakers will stress the importance of addressing the underlying social, political, and economic factors influencing health. Speakers will give examples from their background and the motivations for their career choices and discuss the skills and strategies necessary to become effective advocates for health and human rights.

This is a clinical, ambulatory rotation during which students meet six times with their preceptor(s) for a minimum of four hours per session in a shadowing capacity. It is predominantly outpatient with attention to chronic and acute conditions and longitudinal care across a wide range of patients, utilizing the patient-centered interview, and can include aspects of the business of medicine within a changing healthcare system. Students receive P/F pre-clinical elective credit based on attendance/participation, history taking (T1’s) and history and physical taking (T2’s), and a final clinical evaluation.

Pre-clinical students may apply to participate in a 4 week primary care preceptorship program during the summer following their T1 year. Preceptorships are arranged with practitioners, group practices, or clinics in the disciplines of Family Practice, General Internal Medicine, General Pediatrics, or OB/GYN that provide primary care in rural or medical disadvantaged areas through out Louisiana. As this is an early clinical experience during the basic science years of medical education, the approach to this preceptorship has been characterized by some as an ‘observer-ship’ reflecting the limited ability of the early trainee to participate in independent patient care. However, the preceptorship provides a rich opportunity for early development of clinical skills and application of basic science knowledge.

This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training. Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

Foundations in Medicine I serves as the clinical counterpart to the basic science courses. While the medical knowledge you’ll acquire via your basic science coursework is the traditional cornerstone of medical education, it’s the tip of the iceberg when it comes to what it takes to be a competent physician. In recent years, the organization that accredits medical schools has developed a list of competencies in which medical schools should ensure students are proficient prior to graduation. Tulane has adapted these competencies into our own set of objectives encompassing, in addition to knowledge, the domains of patient care, practice-based learning and improvement, interpersonal communication, professionalism, systems-based practice, interprofessional collaboration, personal and professional development, and community health and engagement. Foundations in Medicine is tasked with ensuring you are introduced to each of these domains, whose mastery is critical in your journey toward competency as a practicing physician.

Students who serve in major leadership roles in service learning organizations will participate in program development and administration, technology innovation and product development, and resource procurement activities under the guidance of the course director. Students participating in this elective will gain experience in leadership and community involvement.
MD - Genetic (GENE)

**GENE 1007 Genetics (1 Credit Hour)**
The Genetics course is designed to provide an overview of human genetic concepts and clinical disorders that have a genetic component. The course seeks to teach students to apply knowledge of the principles of human genetics to a variety of clinical problems. It surveys many clinical areas including cytogenetics, molecular genetics, biochemical genetics, population genetics and clinical genetics.

**GENE 5500 Clinical Preceptorship (1 Credit Hour)**
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

**GENE 5540 Genetics Research (1 Credit Hour)**
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

MD - General Medicine (GENM)

**GENM 8000 Full Time Medical Stud (12 Credit Hours)**
This course has no specific content: it serves as a place-holder for T1 & T2 curriculum.

MD - Gross Anatomy (GANT)

**GANT 1008 Gross Anatomy (8 Credit Hours)**

**GANT 1111 Gross Anatomy Summer Course (8 Credit Hours)**

**GANT 5005 Teaching Medical Gross Anatomy (1 Credit Hour)**
Students will serve as a teaching assistants in gross anatomy. Each student will assist a faculty member in the laboratory.

**GANT 5006 Teaching Medical Histology (1 Credit Hour)**
Students will serve as teaching assistants in the Medical Histology course and will gain hands-on teaching experience in small group facilitation and presentation.

**GANT 5007 MS Elective (1 Credit Hour)**

**GANT 5008 Medical Mandarin I (1 Credit Hour)**
6 week-long course dedicated to learning and improving medical Mandarin speaking skills. Class will involve students learning medical vocabulary, going over clinical cases, applying vocabulary in mock patient interview situations, and improving cultural competence in medical encounters.

**GANT 5009 Medical Mandarin II (1 Credit Hour)**
7 week-long course dedicated to learning and improving medical Mandarin speaking skills. Class will involve students learning medical vocabulary, going over clinical cases, applying vocabulary in mock patient interview situations, and improving cultural competence in medical encounters.

**GANT 5010 China Summer Mission Trip (1 Credit Hour)**
4 week-long mission trip dedicated to learning about an alternative healthcare systems in both rural and urbanized China. Students will be engaged in clinical encounters, improving cultural competency, navigating language barriers. When not on rotation, students will be able to experience the local culture and partake in excursions.
GANT 5011 Spirituality in Medicine (1 Credit Hour)
Interested in learning more about the different religions and cultures of New Orleans and their views on medicine, death and disease? Want to know how this can help you provide better health services to your patients? This elective will develop your understanding of a wide variety of religions and cultural views on health care, including such faith practices as Islam, Voodoo, Buddhism, and local Vietnamese culture. Through this elective, you will become a more sensitive and compassionate physician to those of differing faith practices and cultural traditions.

GANT 5012 Leadership in Healthcare I (1 Credit Hour)
To confront the challenges facing modern health care, experts and organizations are calling for an increase in physician leadership capabilities. The Institute of Medicine describes a need to "develop leaders at all levels who can manage the organizational and systems changes necessary to improve health...". The mission statement of the Tulane University School of Medicine states "...to deliver the highest quality patient care and prepare the next generation of distinguished clinical and scientific leaders". To meet this need, two consecutive preclinical electives, Leadership in Health Care I and II, will engage with leadership topics starting early in the preclinical stages of training. This course will be guided by the Five Practices of Exemplary Leadership revealed by studying the times when leaders performed at their personal best. The five practices of exemplary leadership align with three major leadership theories: transformational, situational, and servant leadership. Each has features that align with expressed beliefs about physician leadership. Students will engage in seminars with leaders to learn to utilize these 5 practices in their own leadership opportunities. This is an experiential course based on participation and student interaction.

GANT 5013 Leadership in Healthcare II (1 Credit Hour)
To confront the challenges facing modern health care, experts and organizations are calling for an increase in physician leadership capabilities. The Institute of Medicine describes a need to "develop leaders at all levels who can manage the organizational and systems changes necessary to improve health...". The mission statement of the Tulane University School of Medicine states "...to deliver the highest quality patient care and prepare the next generation of distinguished clinical and scientific leaders". To meet this need, two consecutive preclinical electives, Leadership in Health Care I and II, will engage with leadership topics starting early in the preclinical stages of training. This course will be guided by the Five Practices of Exemplary Leadership revealed by studying the times when leaders performed at their personal best. The five practices of exemplary leadership align with three major leadership theories: transformational, situational, and servant leadership. Each has features that align with expressed beliefs about physician leadership. Students will engage in seminars with leaders to learn to utilize these 5 practices in their own leadership opportunities. This is an experiential course based on participation and student interaction.

GANT 5500 Advanced Gross Anatomy (1 Credit Hour)
Individual projects of dissection by advanced medical and graduate students. Enrollment may be limited by the availability of cadavers. No final examination.

GANT 5540 Anatomy and Med Ed Research (1 Credit Hour)
Students participate with a member of the faculty in an ongoing research program as a means of learning research principles and techniques. In addition, reading assignments from original literature will be made and if results warrant, a publication should develop from the work. No final exam.

MD - Histology (HSTO)

HSTO 1001 Histology (5 Credit Hours)
The Histology course is designed to provide students with a thorough understanding of the microscopic appearance and function of normal structures in the human body. This allows students to integrate this information with other disciplines such as Gross Anatomy, Pathology, and Physiology.

HSTO 1111 Histology Summer Course (5 Credit Hours)
T1 & T2 summer courses may be required for students who need to remediate pre-clinical coursework. Contact your course director for more information.

MD - Mechanism of Disease (PATH)

PATH 1111 Pathology Summer Course (14 Credit Hours)
T1 & T2 summer courses may be required for students who need to remediate pre-clinical coursework. Contact your course director for more information.

PATH 2002 Mechanisms of Disease (14 Credit Hours)
The Mechanisms of Disease course is designed to help students develop an understanding of the causes and mechanisms of disease and the associated structure and function. Students are expected to develop the skills of observation, interpretation, and integration needed to analyze human disease. Specifically, when provided with the clinical history, the anatomic lesions, and the laboratory data of a patient, students are expected to determine the most likely diagnosis and explain the pathogenesis of the disease.

PATH 2003 Advances in Pathology Research (1 Credit Hour)
PATH 2004 Mechanisms of Disease - MS (5 Credit Hours)
PATH 4000 Pathology (4 Credit Hours)
The Pathology elective introduces the medical student to the field of pathology. The elective runs for four weeks with a choice of 2 weeks each in Surgical pathology, Cytopathology, Dermatopathology or Hematopathology. The student will participate in the pathology rotation at TMC and will experience the spectrum of responsibilities of a pathologist including interactions with clinicians. This includes but is not limited to gross prossections, microscopic evaluation, frozen section evaluations, ancillary techniques, and histologic diagnosis with differential diagnostic considerations. The student will work closely with the pathology residents and faculty on service. The student will attend tumor boards. This elective runs Monday through Friday and begins at approximately 8:00 am and ends at approximately 5:00 pm each weekday.

PATH 4040 Pathology Research (4 Credit Hours)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.
PATH 4210 Cytopathology (2 Credit Hours)
In this elective, students will learn the value of the clinical application of cytopathology to include: diagnosis, differential diagnosis, ancillary tests and therapy. Students will learn to understand the clinical significance of morphologic changes in healthy and diseased cells from cytologic examination of gynecologic and non-gynecologic specimens, including superficial and deep fine needle aspirations. Students will participate in the fine needle aspiration service as well as daily cytology sign-out. Student will work closely with the cytology fellow, resident and staff cytopathologist.

PATH 4220 Dermatology (2 Credit Hours)
The dermatopathology elective introduces the medical student to the field of dermatopathology, a subspecialty of anatomic pathology and dermatology. During this elective, the student will participate in the dermatopathology service and will experience the spectrum of responsibilities including interactions with clinicians. This includes microscopic evaluation, ancillary techniques, and histologic diagnosis with differential diagnostic considerations. The student will work closely with the Dermatopathology fellows, pathology residents and faculty on service. The clerkship runs for two weeks, Monday through Friday and begins at approximately 8:00 a.m. and ends at approximately 5:00 p.m. each weekday.

PATH 4230 Hematopathology (2 Credit Hours)
Students will encounter about 20 new cases, involving CBC’s, blood smears, bone marrow biopsies, flow cytometry, molecular diagnostics, coagulation studies, hemoglobin electrophoresis and protein electrophoresis. The student will gather pertinent clinical history on assigned cases, and preview slides with the hematopathology fellow. At each afternoon’s sign-out with the faculty and fellow, the student will have the opportunity to present their brief case histories and to summarize the laboratory data at hand. Morphologic evaluation and case interpretation will take place during sign-out. The student will also have an opportunity to observe specimen work-up in the flow cytometry lab. Every evening, the student will be given sample cases to solve that reflect the kinds of cases seen at sign-out. These exercises will be reviewed with the course director every morning.

PATH 4240 Surgical Pathology (2 Credit Hours)
The Surgical Pathology elective introduces the medical student to the field of surgical pathology, a subspecialty of anatomic pathology. During this rotation, the student will participate in the surgical pathology rotation at either Tulane Medical Center and UMCNO and will experience the spectrum of responsibilities of a surgical pathologist including interactions with clinicians. This includes but is not limited to gross prosections, microscopic evaluation, frozen section evaluations, ancillary techniques, and histologic diagnosis with differential diagnostic considerations. The student will work closely with the pathology residents and faculty on service. The student will attend the tumor boards. The clerkship runs Monday through Friday and begins at approximately 8:00 am and ends at approximately 5:00 pm each weekday.

PATH 4440 Surgical Pathology (4 Credit Hours)
The Surgical Pathology elective introduces the medical student to the field of surgical pathology, a subspecialty of anatomic pathology. During this rotation, the student will participate in the surgical pathology rotation at either Tulane Medical Center and UMCNO and will experience the spectrum of responsibilities of a surgical pathologist including interactions with clinicians. This includes but is not limited to gross prosections, microscopic evaluation, frozen section evaluations, ancillary techniques, and histologic diagnosis with differential diagnostic considerations. The student will work closely with the pathology residents and faculty on service. The student will attend the tumor boards. The clerkship runs Monday through Friday and begins at approximately 8:00 am and ends at approximately 5:00 pm each weekday.

PATH 5500 Clinical Preceptorship - Path (1 Credit Hour)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

PATH 5540 Pathology Research (1 Credit Hour)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

PATH 6100 Pathology Research Elective (2,4 Credit Hours)
The course integrates the study of the nature of disease with the structural and functional changes that accompany those disease processes. This course is for graduate students and not intended for medical students.

PATH 6300 Mechanisms of Disease 1 (5 Credit Hours)
This course follows Mechanisms of Disease 1. It is intended for graduate students and not intended for medical students.

PATH 6310 Mechanisms of Disease 2 (5 Credit Hours)
This course follows Mechanisms of Disease 1. It is intended for graduate students and not intended for medical students.

PATH 6400 Molec & Cellular PATH (4 Credit Hours)

PATH 7600 Cancer Biology and Pathology (3 Credit Hours)

PATH 9000 Pathology Visiting Student (4 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

PATH 9020 Pathology Visiting Student (2 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.
MD - Medicine (MED)

**MED 3000 Medicine (8 Credit Hours)**
The entire rotation is an inpatient rotation. In other words, all patients seen will be hospitalized patients or patients being evaluated for hospitalization. Students will spend their time at either Tulane University Hospital or the University Medical Center-NO or both. The Veterans Hospital service is contained within the Tulane University Hospital until the new VA hospital is built (estimated Spring 2017). Students will spend 6 weeks on a general internal medicine hospitalist service and 2 weeks on a subspecialty consulting service, either cardiology, hematology/oncology, gastroenterology, infectious disease, or nephrology.

**MED 3020 Medicine (2 Credit Hours)**
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.

**MED 3040 Medicine Research (4 Credit Hours)**
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.

**MED 3041 DeBakey Scholar Research (4 Credit Hours)**
The DeBakey Scholars program provides Tulane medical students with an opportunity to pursue a four-year structured research project with a faculty mentor. Research training forms an important part of medical education because it instills critical thinking and reasoning skills. Since its founding in 2009, the program continues to attract the best and brightest students at Tulane University School of Medicine. DeBakey Scholars are exposed to the creative culture of research throughout their four years in medical school. They evaluate and interpret new clinical and scientific information. The development of these skills foster students' professional growth through continuing education and lifelong learning. DeBakey Scholars are highly-motivated students who are focused on success and looking to make a difference. These students pursue a program that develops skills and talents in the field of research. The tools they develop, publishing papers and presenting to peers, make them even more desirable in highly competitive residency placement.

**MED 3400 Medicine (4 Credit Hours)**
This course is a general medicine elective that is reserved for special circumstances: students are encouraged to request specialty-specific electives, but may be encouraged to enroll in this elective by the Medicine Department.

**MED 3401 Eli Lilly (4 Credit Hours)**
This 4-week elective involves enrollment in the Medical Student Rotation Program at Eli Lilly in Indianapolis. It's an experiential learning program that features a student-centric curriculum and structured mentorship in various aspects of pharmaceutical development. It includes independent projects, industry-led workshops, exposure to many facets of drug discovery and development, and networking opportunities with Lilly medical leaders.

**MED 3410 Internal Med Specialty Clinic (4 Credit Hours)**
The Ambulatory and Subspecialty Clinics Rotation is designed to supplement the Internal Medicine Clerkship. Most of Internal Medicine is practiced in the outpatient setting and this is an opportunity to learn from clinic and subspecialty faculty. Students will rotate through a variety of clinics, including both primary care and subspecialty clinics. Students will be exposed to common internal medicine complaints, chronic disease, and highly specialized care. Students will also attend a number of education seminars focused on specific topics in internal medicine, such as Allergy, Hypertension, Dyslipidemia, etc. In addition, students will complete a self-study curriculum rooted in general internal medicine. Students will read the most up to date literature and guidelines on the treatment and prevention of IM diseases.

**MED 3500 Medicine Subinternship (4 Credit Hours)**
The Sub-internship is an opportunity for medical students to assume more responsibility for their patients and tryout being an intern on a limited number of patients. Students should assume the role of intern for 2-4 patients and complete all the necessary tasks for patient care. These may include, but are not limited to, calling consults, writing orders, performing procedures, preparing discharge paperwork, and writing discharge summaries under the supervision of the resident or attending. Students are expected to use this opportunity to refine their physical exam, diagnostic skills, and medical knowledge. Sub-interns are expected to set an example for the clerkship students and help teach them how to maneuver the hospital setting and meet the clerkship expectations. Students should complete the four-week sub-internship with a firm understanding of the responsibilities of an intern and ways he or she can improve prior to beginning intern year. We hope that this will be a meaningful and enjoyable rotation that helps you mature into the physician you hope to become. NOTE: Preference in May-August will be given to students applying to IM for residency at the discretion of the director of student programs.
MED 4000 MD/MBA Elective (4 Credit Hours)

MED 4019 Learning in Venture Capital (2 Credit Hours)
The New Orleans BioFund (NOBF) has created an educational program that brings highly driven Tulane medical students interested in VC directly into the fund's day to day operations. The program will provide students with firsthand experience with the southern VC region. Students will leave with the fundamental skills and knowledge in VC, specifically in fields related to healthcare. Tulane medical students have previously interned at NOBF and reported high satisfaction. Students will work a minimum of 60 hours over the T4 year at the NOBF office, located in the New Orleans Bioinnovation Center (NOBIC). Students, the NOBF Managing Director and Analyst will work together on a flexible schedule. Students will be assigned to work on projects most of which will be current investment deals the fund is working on. Students will track their deals from due diligence to deal closing. NOBF associates will assign tasks, answer questions, and provide guidance to each student. Students will research, draft memos, and give presentations periodically to demonstrate their work. NOBF associates will provide targeted feedback to ensure by the end of the term students are comfortable with the basics of VC.

MED 4020 Stories: Narrative Medicine (2 Credit Hours)

MED 4021 Technology Commercialization (4 Credit Hours)
This is an elective primarily for fourth-year students in the 4-yr combined MD/MBA program. The elective is an experiential learning opportunity in Tulane's Office of Technology Transfer. Students participating in the elective will be able to combine their interests and training in business and medicine to contribute to commercialization of biomedical intellectual property developed at Tulane. Students will be given projects that include patent research, marketing research, and feasibility studies for products at various stages of development in the Office of Technology Transfer. Students will apply concepts of strategy, marketing, new venture planning, and valuation in real time. Students will be assigned projects that are actively being commercialized through the Office of Technology Transfer. Students will gain experience with intellectual property law, the role of venture capital, and the role of universities in developing an idea into a commercializable product. The one-month rotation will be experiential in nature. Students participating in the elective will work full time for the entire month. Students will participate in the mechanics of bringing an idea to market through activities in the Office of Technology Transfer and the New Orleans Bioinnovation Center (NOBIC). Occasional lectures will take place in NOBIC. Final grades will be based on a final project as well as overall participation in the technology commercialization process.

MED 4022 Online Medical Spanish Level 1 (2 Credit Hours)
This 2-week elective is for students interested in learning Spanish in a clinical context. For credit, students are expected to complete one level of medical Spanish language training using the Canopy program over a two-week period. Students must also attend an online orientation and record a 3-5 minute final presentation using the grammar, vocabulary, and cultural training in their respective Canopy level. All course activities can be done as correspondence, and students do not need to physically be present in New Orleans for this elective. Credit will be given upon completion of the required number of modules, orientation attendance, and completion of the final presentation. Students may take this elective more than once at different level 1-3, up to three times.

MED 4023 Online Medical Spanish Level 2 (2 Credit Hours)
This 2-week elective is for students interested in learning Spanish in a clinical context. For credit, students are expected to complete one level of medical Spanish language training using the Canopy program over a two-week period. Students must also attend an online orientation and record a 3-5 minute final presentation using the grammar, vocabulary, and cultural training in their respective Canopy level. All course activities can be done as correspondence, and students do not need to physically be present in New Orleans for this elective. Credit will be given upon completion of the required number of modules, orientation attendance, and completion of the final presentation. Students may take this elective more than once at different level 1-3, up to three times.

MED 4024 Online Medical Spanish Level 3 (2 Credit Hours)
This 2-week elective is for students interested in learning Spanish in a clinical context. For credit, students are expected to complete one level of medical Spanish language training using the Canopy program over a two-week period. Students must also attend an online orientation and record a 3-5 minute final presentation using the grammar, vocabulary, and cultural training in their respective Canopy level. All course activities can be done as correspondence, and students do not need to physically be present in New Orleans for this elective. Credit will be given upon completion of the required number of modules, orientation attendance, and completion of the final presentation. Students may take this elective more than once at different level 1-3, up to three times.

MED 4026 Making Medicines: Drug Dev (2 Credit Hours)
This 2-week elective is an eLearning course in which students will explore how a new drug is developed from the initial concept to the patient. The goal of the course is to provide an opportunity for individuals with an interest in a health-related field and medical research to learn the processes required to discover and develop drugs that will ultimately provide a benefit to meet unmet medical needs, with minimal risk.

MED 4028 Intro to Clinical Teaching (2 Credit Hours)
This is a longitudinal elective that will take place over the course of the academic year. Upon successful completion of course criteria, students will receive credit for a two-week elective. Students will attend hour-long workshops, held in evenings throughout the fall, each focusing on one discrete teaching skill. Students will then be given multiple opportunities to practice teaching skills within the context of the Foundations in Medicine course and other possible settings. This course is meant to complement, not to replace, the Advanced Clinical Teaching elective held in spring. While both offer opportunities to practice, this course contains more focused skill-building, while the Advanced Clinical Teaching course offers theory, approaches, and applications to lifelong development as a clinical educator.
MED 4029 Upperclassman Tutoring (4 Credit Hours)
This T4 tutoring elective increases academic support for underclassmen and enables upperclassmen tutors to develop a tutoring skill set. Our elective meets the needs of tutors by providing elective credit, opportunity for development of a tutoring skill set, increased confidence in tutoring ability, and improved communication skills. It meets the needs of tutees by increasing the number of available upperclassman tutoring sessions and improving the quality of such tutoring sessions by adequately training tutors. This tutoring elective improves the quality of learning and student academic performance by providing an additional academic resource for failing and struggling students. Our elective tutoring sessions serve as a supplement to the PAL program's current resources by providing group tutoring reviews, rather than replacing the PAL program's traditional one-on-one sessions. We utilize TutorLingo software, faculty-led training sessions, and standardized tutee experiences to train upperclassmen in how to be effective tutors for underclassman students. This training process includes a Pre-Tutoring Assessment. Following completion of the training process, upperclassman tutors develop lesson plans and provide group tutoring sessions for both underclassmen who have failed a block exam and students who are passing their courses but are seeking further aid. Tutors complete a Reflection on their growth as a tutor in order to receive academic credit.

MED 4030 Upperclassman Tutoring (2 Credit Hours)
This T4 tutoring elective increases academic support for underclassmen and enables upperclassmen tutors to develop a tutoring skill set. Our elective meets the needs of tutors by providing elective credit, opportunity for development of a tutoring skill set, increased confidence in tutoring ability, and improved communication skills. It meets the needs of tutees by increasing the number of available upperclassman tutoring sessions and improving the quality of such tutoring sessions by adequately training tutors. This tutoring elective improves the quality of learning and student academic performance by providing an additional academic resource for failing and struggling students. Our elective tutoring sessions serve as a supplement to the PAL program's current resources by providing group tutoring reviews, rather than replacing the PAL program's traditional one-on-one sessions. We utilize TutorLingo software, faculty-led training sessions, and standardized tutee experiences to train upperclassmen in how to be effective tutors for underclassman students. This training process includes a Pre-Tutoring Assessment. Following completion of the training process, upperclassman tutors develop lesson plans and provide group tutoring sessions for both underclassmen who have failed a block exam and students who are passing their courses but are seeking further aid. Tutors complete a Reflection on their growth as a tutor in order to receive academic credit.

MED 4031 Healthcare Policy & Reform (2 Credit Hours)
This elective for graduate students is designed to provide a foundation of knowledge of the United States healthcare system in four critical areas of focus: access to care, cost of care, quality of care, and consumer perception of care. Students will learn about U.S. healthcare policy, the government’s role in healthcare, the history of healthcare reform, and the Affordable Care Act (ACA). Students will gain an understanding of how healthcare in the U.S. compares to that in the developed world. The course will introduce students to the history and evolution of the U.S. insurance industry, Medicare and Medicaid. The course will also explore the rise of consumerism in healthcare, both in the U.S. and globally. Further, students will gain additional insights about the intersections between business and healthcare through a series of guest lectures from hospital administrators, insurance company executives, experienced physicians, and experts on ACA legislation. This course will also offer an opportunity for students to engage in self-directed learning by designing and leading custom modules tailored to specific interests of class members.

MED 4032 Student-Run Clinic Elective (2 Credit Hours)
This is a longitudinal elective that will take place over the course of the academic year. Upon successful completion of course criteria, students will receive credit for a two-week elective. Students enrolling in this elective will be given credit for their participation in Tulane's student-run clinics. T3s/T4s are a valuable part of the clinics: they help guide the T1s/T2s through what is often their very first experience with patients; they provide instruction and assistance with obtaining a medical history, formulating an assessment and plan, documentation and presentation; and they help provide quality care to persons with limited access to healthcare. Tulane's student-run clinics appeal to incoming students, and help develop our students into effective and open-minded physicians. This elective is intended to improve junior and senior students’ clinical teaching skills, and to increase student involvement in the student-run clinics.

MED 4033 Healthcare in Central America (2 Credit Hours)
This 2-week online elective will help “fill-in” the gap in End-of-life care education at Tulane School of Medicine. It also offers medical students the opportunity to learn about this topic when it’s most relevant - when they are being exposed to clinical opportunities.

MED 4201 Palliative Care (2 Credit Hours)
This 2-week online elective will help “fill-in” the gap in End-of-life care education at Tulane School of Medicine. It also offers medical students the opportunity to learn about this topic when it’s most relevant - when they are being exposed to clinical opportunities.

MED 4210 Cardiology (2 Credit Hours)
This elective is for students with an interest in learning more about how to diagnose and treat cardiac disease. Students will learn more about the management of severe congestive heart failure, arrhythmias, and coronary artery disease. Students will also get to observe cardiac catheterization, echocardiography, and nuclear medicine. The students will be members of an inpatient consult team comprised of a fellow and faculty from the section of Cardiology. An intern or resident may also be a part of the team. Students are expected to participate in daily rounds with the fellow and attendings and attend all Cardiology conferences. Students will be assigned a panel of patients from which they are expected to write daily progress notes and present on rounds. A student panel should not exceed four patients.
MED 4220 Endocrinology (2 Credit Hours)
This elective is for students with an interest in learning more about how to diagnose and treat endocrine diseases. Students are to become familiar with the principles of clinical endocrinology in an outpatient setting. Teaching will be largely focused on clinical activities; seeing patients in the clinic setting at three locations. Students will also be encouraged to attend and participate in our weekly endocrine conference on Monday afternoons, from 4 – 6 pm, monthly multidisciplinary tumor board meetings (4th Wednesday of the month, 2-3 pm), and other weekly didactic sessions.

MED 4230 Gastroenterology (2 Credit Hours)
This 2-week elective is for students with an interest in general gastroenterology. This is the inpatient consult service which works with the general medicine inpatient teams and other services to address GI patient issues. Clinic time may also be involved at the discretion of the supervision attending or fellow.

MED 4250 Hematology/Oncology (2 Credit Hours)
This 2-week elective is for students with an interest in learning more about how to diagnose and treat patients with hematological and oncological disease. Students will be members of an inpatient consult team. The consult team usually evaluates between 1-2 consults per day. The team consists of a medical resident, a fellow, and a staff physician. Rounds are held once a day. Both new consults and prior consults are discussed. The medical student is expected to take an active role in this rotation. Under the supervision of the fellow and the attending, the student is expected to interview patients, perform the physical exam, review pertinent radiological and laboratory data, as well as pathology slides with the attending or pathologist. The student will have a great opportunity to participate and be exposed to the multidisciplinary aspect of Hematology/Oncology as a subspecialty.

MED 4260 Allergy/Imm/Rheum (2 Credit Hours)
This elective is for students with an interest in learning more about how to diagnose and treat allergic and immunologic diseases. Students will travel to various outpatient clinics at Tulane and Ochsner (will need to provide own transportation). Students will work directly with fellows and attendings in the Section of Allergy and Immunology. Students are expected to participate in seeing clinic patients and attend all Allergy and Immunology conferences.

MED 4270 Infectious Disease (2 Credit Hours)
This elective is for students with an interest in learning more about how to diagnose and treat patients with infectious disease. Students will also learn how to use antibiotics appropriately, prevent future infections, and manage the complications of HIV and other chronic infections. The students will be members of an inpatient consult team comprised of a fellow and faculty from the section of Infectious Disease. An intern or resident may also be a part of the team. Students are expected to participate in daily rounds with the fellow and attendings and attend all ID conferences. Students will be assigned a panel of patients from which they are expected to write daily progress notes and present on rounds.

MED 4275 Medicine-Pediatrics (4 Credit Hours)
This 4-week elective provides students exposure to both adult and pediatrics patients, through both inpatient and outpatient duties.

MED 4276 Medicine-Pediatrics (2 Credit Hours)
This 2-week elective provides students exposure to both adult and pediatrics patients, through both inpatient and outpatient duties.

MED 4280 Nephrology (2 Credit Hours)
This 2-week elective is for students with an interest in learning more about how to diagnose and treat patients with renal disease. Students will also learn how to assess fluid balance and manage patients on hemodialysis. The students will be members of an inpatient consult team comprised of a fellow and faculty from the section of nephrology. An intern or resident may also be a part of the team. Students are expected to participate in daily rounds with the fellow and attendings and attend all renal conferences. Students will be assigned a panel of patients from which they are expected to write daily progress notes and present on rounds.

MED 4290 Pulmonary (2 Credit Hours)
This elective is for students with an interest in learning more about how to diagnose and treat patients with pulmonary disease. Students will also learn about ventilator management, indications for bronchoscopy, and in-depth evaluation of chest x-rays and CT of the chest. The students will be members of an inpatient consult team comprised of a fellow and faculty from the section of Pulmonology and Critical Care. An intern or resident may also be a part of the team. Students are expected to participate in daily rounds with the fellow and attendings and attend all pulmonology conferences (i.e. Chest conference). Students will be assigned a panel of patients from which they are expected to write daily progress notes and present on rounds. A student panel should not exceed four patients.

MED 4400 Advanced Clinical Teaching (4 Credit Hours)
This course is designed for fourth-year students who seek advanced instruction in clinical education. Students will work with the best of Tulane’s medical educators to learn the principles of clinical education. The course is highly interactive and requires 100% attendance on the part of all participants. All elements of the course are required. Students will begin the course by having one of their teaching attempts videotaped. The first two weeks of the course will combine didactic lectures with teaching drills that will sharpen the principles discussed in the didactic lectures. During all weeks of the course, students will observe some of Tulane’s most accomplished educators, including Dr. Jeff Wiese (author of Teaching in the Hospital) and have the opportunity to sit with them to discuss their teaching strategies. Students will participate in discussion conferences in which these principles will be analyzed. Students will have the opportunity to use their newly acquired teaching skills to teach Foundations in Medicine students, Clinical Diagnosis students and Internal Medicine Clerkship students.
MED 4409 Community Health (4 Credit Hours)
The Tulane Community Health Clerkship is a 4-week non-clinical rotation focusing on social determinants of health. These are the non-medical aspects of patients’ lives such as education, housing, employment, language, environment, nutrition, and safety that affect their health. The skills students gain in this course are vital to contextualizing care to individual patient needs and addressing broader population health issues. Students meet with the instructor once weekly (twice in the first week) for didactic instruction and group discussions based on readings. Core topics include health disparities, cultural humility, contextualization of patient care, and workforce and programmatic interventions to address social determinants of health. Students also spend approximately 20 hours per week working at a community partner organization where they design, implement, enhance or evaluate an intervention that addresses social determinants of health. Students connect classroom and community experiences through weekly reflective writing assignments and a final presentation.

MED 4410 Cardiology (4 Credit Hours)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in cardiology should see the description for the 2-week cardiology elective.

MED 4412 Teaching Kitchen (4 Credit Hours)
The fourth-year elective (4-weeks) in the Goldring Center for Culinary Medicine involve building content and helping guide hands-on cooking classes for 1st year medical students, allied health workers and community members. These classes cover culinary medicine and culinary nutrition concepts, meal planning principals and culinary technique. You will learn by leading, and rotations include an introduction to the kitchen and knife-skills. This rotation will have students working alongside medical students, chefs, physicians, nutritionists, dietitians and other public health professionals, so you’ll be introduced to many culinary medicine concepts as you go along. Hours will likely include evenings and weekends, and will require a flexible schedule. This rotation includes work on your feet in the kitchen preparing for classes, curriculum development and leading class discussions teaching culinary medicine concepts. Rotation may include up to 40 hours/week with some evenings and weekends. Please note that we require a minimum of a 4-week commitment in order to complete this rotation. No exceptions will be made. Rotations are offered year-round.

MED 4420 Endocrinology (4 Credit Hours)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in endocrinology should see the description for the 2-week endocrinology elective.

MED 4430 Gastroenterology (4 Credit Hours)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in gastroenterology should see the description for the 2-week gastroenterology elective.

MED 4450 Hematology/Oncology (4 Credit Hours)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in hematology/oncology should see the description for the 2-week hematology/oncology elective.

MED 4460 Allergy/Immunology/Rheumatology (4 Credit Hours)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in allergy/immunology/rheumatology should see the description for the 2-week allergy/immunology/rheumatology elective.

MED 4470 Infectious Disease (4 Credit Hours)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in infectious disease should see the description for the 2-week infectious disease elective.

MED 4480 Nephrology (4 Credit Hours)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in nephrology should see the description for the 2-week nephrology elective.

MED 4490 Pulmonary (4 Credit Hours)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in pulmonary electives should see the description for the 2-week pulmonary elective.

MED 4500 MEDI/PEDS Subinternship (4 Credit Hours)

MED 4520 ICU (2 Credit Hours)
This 2-week elective is for students with an interest in critical care medicine. The students will see 2-3 VA ICU level patients each day and present on rounds. Students will work with Tulane/VA faculty as well as Tulane Pulmonary/Critical Care Fellows.

MED 4540 ICU (4 Credit Hours)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in the ICU elective should see the description for the 2-week ICU elective.

MED 4620 Quality Improvement (2 Credit Hours)
This 2-week elective is for students interested in Quality Improvement and Patient Safety. This is an online elective. Students are expected to complete a required number of modules on the Institute for Health Improvement (IHI) Open School Model over a two-week period for credit. The modules can be done as correspondence and students do not need to physically be present in New Orleans for this elective. Credit will be given upon completion of the required number of modules.

MED 5000 Affordable Care Act (1 Credit Hour)
This elective provides students opportunities to learn about nuances of the Affordable Care Act (ACA). Emphasis will be on the three pillars of ACA, including individual mandate, employer mandate and insurance companies.

MED 5001 Bioethics Seminar (1 Credit Hour)
This elective provides students opportunities to explore issues of organ donation, genetic screening and controversial medical procedures. Research ethics, and reproductive autonomy will be part of the discussion.
MED 5003 Disparities in Health Care (1 Credit Hour)
The United States is the most diverse country in the world. The US is made up of citizens from all types of backgrounds, races, ethnicities, and beliefs. Cultural competence in health care is a course that gives students the opportunity to learn about cultural biases, social determinants of health, and adapt clinical and communication skills to adequately treat a diverse patient population. Furthermore, this course will help prepare students for USMLE Step II CS, a mandatory nationwide exam in which students must interact with patients of different races and ethnicities. This is an opportunity for students to gain worthy clinical and communication skills in order to deliver effective care to all patients, regardless of their background.

MED 5004 MBA Elective (1 Credit Hour)

MED 5007 Narrative Medicine (1 Credit Hour)
What does it mean to experience illness? What emotions are felt when a student meets their first patient in anatomy lab, silently waiting and seemingly voiceless? Narrative medicine is an interdisciplinary field that explores these questions and challenges disparities in health care by allowing participants (students, patients, providers) to give voice to their experiences, be heard, and valued. The field is steadily growing, featuring the works of such doctor-authors as Atul Gawande, MD, Danielle Ofri, MD, and Paul Kalanithi, MD. This course serves as a primer, giving foundational tools and a space for students to engage with narrative medicine and more fully own their academic and clinical experiences.

MED 5009 Health Care Law & Regulation (1 Credit Hour)
This elective provides a broad survey of the most fundamental legal issues surrounding the delivery of health care in America. No prior knowledge of health law is required. By the end of this elective students should be able to explain both the current state of American health law and the social forces that have shaped its historical development. Major topics include state and federal regulation of health care providers and institutions; tort liability in the context of medical care; patient and provider rights and obligations; public and private insurance systems; and basic issues in bioethics and public health. This elective is intended to provide only an introductory overview of the major issues in health law.

MED 5010 Integrative Medicine Elective (1 Credit Hour)
Have you ever wanted to know how Acupuncture actually worked? Have you, a family member or friend suffered from a condition that doctors haven’t been able to resolve? The Integrative Medicine elective is designed to expose students to various approaches that are used to achieve wellness, and uses evidence-based data when available. It also reviews indications, contraindications and best use of each modality. A few of the lectures have the students practice the techniques on themselves, so that they can better explain it to their future patients (i.e. mind-body/guided imagery). Students will also benefit from shadowing a community provider of their choice to see how their approach is used in day-to-day practice and hear from the patients what benefits they experience. Students will also enjoy a journal club discussion on an article pertaining to Integrative Medicine. Topics covered include acupuncture, integrative medicine, mind-body medicine, chiropractic, nutrition among others.

MED 5011 Foundations: Ethics & Justice (1 Credit Hour)
This elective provides an opportunity to gain a better understanding of the principles and practice of medical ethics presented in a case-based format. Site visits and surveys of current Social Justice issues will be introduced in light of Ethical Decision making.

MED 5052 History of Medicine Seminars (1 Credit Hour)
Weekly speakers will discuss various topics of interest to medical historians. Discussion of the medical aspects and their impact on current medical thought and practice will be emphasized.

MED 5100 DeBakey Program (1 Credit Hour)

MED 5101 Sexual Health (1 Credit Hour)
This elective is designed to develop medical students' knowledge and skills toward encouraging healthy sexualities and managing sexual concerns among their patients. Medical students will be able to apply a lot of this information during their rotations. Sessions vary in topics and teaching methods and are purposefully designed to provide cross-disciplinary perspectives.

MED 5149 Recruiting the Next Generation (1 Credit Hour)
Participants in this course will learn how to serve as standardized patients. They will run role-play scenarios with applicants to the School of Medicine. They will rate applicants’ performance for the admissions committee as well provide formal feedback to applicants to exemplify how focused Tulane is on formally developing students’ interpersonal skills.

MED 5152 Culinary Medicine in Practice (1 Credit Hour)
The T1/T2 course will teach fundamental dietary and nutrition knowledge with basic culinary skills through hands-on cooking classes. Lessons will be keyed to the basic science curriculum (biochemistry, physiology, etc.) while linking concepts learned to the practical clinical skills needed for the patient-physician discussion about the importance of dietary and lifestyle change. Students will be expected to watch a 15-20 minute presentation and take a short quiz prior to scheduled class time. Step preparation is tied into the course, and students get to eat what is cooked! Most time in the classroom is spent in a fun, interactive environment in the kitchen.

MED 5153 Medicine in Martial Arts (1 Credit Hour)
This course will provide students a brief overview of some of the anatomical, physiological, and pathological concepts encountered in the first 2 years of medical school and Step 1 through the context of martial arts. Lecture topics will include such things as boxing, the mystical “touch of death,” and rear-naked choke. There will be both a lecture component and optional practical component where students will learn select techniques and be able to practice them in a controlled and supervised environment. Please note that this is not a self-defense class.

MED 5500 Clinical Preceptorship - Med (1 Credit Hour)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.
**MED 5501 Out In The Field With Geriatri (1 Credit Hour)**

This elective will introduce students to the special needs of the older patient. Students may get involved in seeing patients in the home setting, Community Living Center (CLC), Geriatrics outpatient clinic, Palliative Care clinic, as well as other aspects of care of the older veteran. Most of the efforts will occur at sites associated with Southeast Louisiana Veterans Health Care System (SLVHCS).

Preceptors for the course will include the faculty physicians of Geriatrics and Extended Care at SLVHCS and Tulane University Section of General Internal Medicine/Geriatrics. Students will be encouraged to follow patients as they transition from various settings, e.g. the inpatient to the home setting and/or nursing home setting as they recover from an acute illness. Student performance will be evaluated by rating of preceptors.

**MED 5505 Mind Body Medicine (1 Credit Hour)**

This elective will teach the biological underpinnings of Mind-Body Medicine while you experience the mind-body skills in a small group setting. This course has been taught in over 13 medical schools, including Georgetown and University of Minnesota. The eight sessions are based on the Center for Mind Body Medicine in Washington DC model (www.cmbm.org). This experiential elective will help medical students understand the concept of Self-Care and how to incorporate relaxation, mindful nutrition and exercise into their lives. It will teach many skills (meditation, autogenic training and biofeedback, movement, nutrition, and virtual imagery) that will help develop the resiliency needed for a demanding and fulfilling career in medicine. Most importantly, the skills are simple and help with many stress-induced and preventable chronic conditions that will be encountered in patient care.

**MED 5506 Medical Humanities (1 Credit Hour)**

This elective focuses on the application of literature and film to medical education and practice.

**MED 5507 Palliative & End of Life Care (1 Credit Hour)**

The art and science of palliative and end of life care remain under-discussed and under-taught during the preclinical years of medical education. This can lead to both patient and provider frustration in addition to less than optimal patient centered care. This elective will foster a better understanding of core concepts palliative and end of life care while empowering students to begin the journey of feeling comfortable with having difficult conversations.

**MED 5540 Medicine Research (1 Credit Hour)**

5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

**MED 5567 Emergency Medicine Volunteerin (1 Credit Hour)**

Students will become familiar with the specialty of Emergency Medicine through observation and limited hands-on Emergency Department experience. Students are encouraged to participate in patient care in three ways: learning the basic approach to the emergency patient, contributing to resident and staff discussions of basic anatomy and physiology with knowledge obtained from studies of the first or second year level of medical school, and assisting in such procedures as starting IVs, drawing blood, etc. when appropriate. They will interact with emergency medicine faculty and residents in the ED and discuss patient management and emergency medicine principles.

**MED 5568 Entrepreneurship in Bioscience (1 Credit Hour)**

This course is looking for the dreamers, the students who ask why, and the ones who may be interested one day of becoming an entrepreneur. This course focuses on taking an idea or taking graduate and senior capstone engineering and bioscience research projects to a commercial stage. Not only does one need to take the research projects to an advanced engineering/bioscience stage in order to be commercialized, one needs to develop a competitive business plan, an intellectual property position, and a sustainable competitive advantage.

**MED 5570 Medical Spanish (1 Credit Hour)**

Medical Spanish is a half-semester long course dedicated to learning and improving medically-related Spanish speaking skills. The class will involve students in learning medical vocabulary, going through clinical cases, applying vocabulary in mock interview situations, and learning about various aspects of Latino culture. This elective is facilitated by members of the Tulane Latin American Medical Student Association (LAMSA).

**MED 9000 Medicine Visiting Student (4 Credit Hours)**

This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training. Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

**MED 9020 Medicine Visiting Student (2 Credit Hours)**

This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

**MD - Microbiology (MICR)**

**MICR 1111 Microbiology Summer Course (4 Credit Hours)**

T1 & T2 summer courses may be required for students who need to remediate pre-clinical coursework. Contact your course director for more information.

**MICR 2000 Intro to Infectious Diseases (4 Credit Hours)**

The IID course is designed to provide medical students with a broad-based foundation in the basic concepts of medical microbiology. Course material is presented in two distinct sections: 1) a 3-week introductory module touching upon basic principles in immunology, bacteriology, mycology, virology, and parasitology; 2) more in-depth sessions on specific pathogens within the context of their respective diseases taught throughout systems modules.
NEUR 3020 Neuropathology (1 Credit Hour)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

NEUR 3500 Clinical Preceptorship - Neuro (1 Credit Hour)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

NEUR 5500 Neurology Research (1 Credit Hour)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

NEUR 9020 Neurology Visiting Student (2 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training. Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

NEUR 3020 Neurology (2 Credit Hours)
This is a 2-week elective for students who want to learn more about neurocritical care. Students will be exposed to a variety of cases at Tulane Medical Center including neurosurgical patients in the ICU, neurology consults from other ICU services and critical care management of patients on the stroke service. Attendance is required daily for the 2-week block. Topics covered include but are not limited to evaluation of coma, ventilator management, subarachnoid hemorrhage management, intracranial pressure monitoring and management, sodium management in the ICU and post-operative care of spinal surgery. There is no call associated with this elective and there is no final examination.

NEUR 3500 Neurology Subinternship (4 Credit Hours)
Three site placements are available: 1) Clinical Neurology Stroke Service 2) Pediatric Neurology 3) Outpatient Neurology. Students can view eMedley for more information about each site.

NEUR 4040 Neurology Research (4 Credit Hours)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.

NEUR 5500 Clinical Preceptorship - Neuro (1 Credit Hour)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

NEUR 5540 Neurology Research (1 Credit Hour)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

MD - Neurology (NEUR)

NEUR 3000 Neurology (4 Credit Hours)
It is expected that the student will accomplish the following educational informational goals during the clerkship. This can be achieved by evaluating patients on the in-patient, consult, and clinic services as well as participating in clinical problem solving during the lectures and conferences. The student is expected to know the clinical history, examination findings and appropriate decision analysis for patients with the following disorders: headache and face pain; dizziness-vertigo and episodic loss of consciousness; weakness and gait impairment; stupor and coma; cerebrovascular disease; seizures and epilepsy; traumatic injury - brain and spine; neurobehavioral disorders, including dementia, amnesia and aphasia; central nervous system infection; abnormal involuntary movements, including Parkinsonism; demyelinating disorders (multiple sclerosis and its mimics); neurological complication of medical illness; stroke; delirium & dementia; neuromuscular disorders; acute spinal cord disorders.

NEUR 3020 Neurology (2 Credit Hours)
This is a 2-week elective for students who want to learn more about neurocritical care. Students will be exposed to a variety of cases at Tulane Medical Center including neurosurgical patients in the ICU, neurology consults from other ICU services and critical care management of patients on the stroke service. Attendance is required daily for the 2-week block. Topics covered include but are not limited to evaluation of coma, ventilator management, subarachnoid hemorrhage management, intracranial pressure monitoring and management, sodium management in the ICU and post-operative care of spinal surgery. There is no call associated with this elective and there is no final examination.

NEUR 3500 Neurology Subinternship (4 Credit Hours)
Three site placements are available: 1) Clinical Neurology Stroke Service 2) Pediatric Neurology 3) Outpatient Neurology. Students can view eMedley for more information about each site.

NEUR 4040 Neurology Research (4 Credit Hours)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.

MD - Neuroscience (NESC)

NESC 5500 Neuroscience Research (1 Credit Hour)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

MD - Neurosurgery (NRSR)

NRSR 3500 Neurosurgery Subinternship (4 Credit Hours)
NRSR 4000 Neurosurgery (4 Credit Hours)
NRSR 4020 Neurosurgery (2 Credit Hours)
NRSR 4040 Neurosurgery Research (4 Credit Hours)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.

NRSR 5500 Clinical Preceptorship - Neurosurgery (1 Credit Hour)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

NRSR 5502 Introduction To Neurosurgery (1 Credit Hour)
Students will be given an introduction to career opportunities in neurosurgery. The course will be conducted through weekly conferences, daily rounds, clinic, and observation in the operating room. Students will be provided exposure to the neurological examination, as well as the diagnosis and treatment of common neurosurgical pathologies.

NRSR 5540 Neurosurgery Research (1 Credit Hour)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.
**OBGY 3000 Obstetrics & Gynecology (8 Credit Hours)**
This course is an introductory experience in the provision of comprehensive medical care and counseling services to adult and adolescent female patients. The obstetrical conditions and gynecological problems commonly encountered by the physician provide the primary focus for this clerkship experience, but knowledge of serious, less common conditions, is also required.

**OBGY 3500 OB/GYN Subinternship (4 Credit Hours)**
**OBGY 4000 Obstetrics & Gynecology (4 Credit Hours)**
Fourth year electives are designed to permit medical students to gain a greater depth of understanding of principles of women’s health care in Obstetrics and Gynecology. The foundation is expected to have been acquired in the core third year clinical clerkship experience.

**OBGY 4020 Obstetrics & Gynecology (2 Credit Hours)**
Fourth year electives are designed to permit medical students to gain a greater depth of understanding of principles of women’s health care in Obstetrics and Gynecology. The foundation is expected to have been acquired in the core third year clinical clerkship experience. At the conclusion of the course the student will achieve a more advanced level of knowledge, clinical skills, and independence of judgment under faculty and resident supervision in a focused aspect of Obstetrics and Gynecology. Such students are expected to demonstrate increased initiative in the care of their patients and increased knowledge gained through more advanced reading and discussion of principles related to the care their patients.

**OBGY 4040 OB/GYN Research (4 Credit Hours)**
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.

**OBGY 4220 Advance OB/GYN (2 Credit Hours)**
**OBGY 5000 Introduction to OB/GYN (1 Credit Hour)**
This elective is an introduction to the field of Obstetrics and Gynecology for interested first and second year medical students. Besides shadowing attendings and residents providing obstetric and gynecologic care to patients in the outpatient setting, students have the opportunity to observe continuity of care by following a patient throughout their care. Students will also observe surgeries at Tulane Medical Center and Lakeside. Students will participate in a lecture series which will introduce the different sub-specialties as well as practice settings in OB/GYN.

**OBGY 5500 Clinical Preceptorship - Obgyn (1 Credit Hour)**
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

**OBGY 5540 Ob/Gyn Research (1 Credit Hour)**
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

**OBGY 9000 OB/GYN Visiting Student (4 Credit Hours)**
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

**OBGY 9020 OB/GYN Visiting Student (2 Credit Hours)**
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

**MD - Ophtalmology (OPTH)**

**OPTH 4000 Ophthalmology (4 Credit Hours)**
A four-week elective designed to give students an introduction to Ophthalmology in both outpatient clinics and surgical settings. Students will rotate among different subspecialties to gain exposure to a wide breadth of ophthalmologic pathologies. Subspecialties may include: Cornea & Anterior Segment, Glaucoma, Retina-Vitreous, Pediatric, Strabismus, Orbital & Lacrimal Diseases/Surgery, Oculoplastics & Periocular Eyelid Reconstructive Surgery, Orbital & Ocular Adnexal Oncology, and Ophthalmic Plastic & Reconstructive Surgery.

**OPTH 4020 Ophthalmology (2 Credit Hours)**
A two-week elective designed to give students an introduction to Ophthalmology in both outpatient clinics and surgical settings. Students will rotate among different subspecialties to gain exposure to a wide breadth of ophthalmologic pathologies. Subspecialties may include: Cornea & Anterior Segment, Glaucoma, Retina-Vitreous, Pediatric, Strabismus, Orbital & Lacrimal Diseases/Surgery, Oculoplastics & Periocular Eyelid Reconstructive Surgery, Orbital & Ocular Adnexal Oncology, and Ophthalmic Plastic & Reconstructive Surgery.

**OPTH 4040 Ophthalmology Research (4 Credit Hours)**
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.
ORTH 0400 Orthopaedic Surgery (4 Credit Hours)
This is a four-week elective designed for the student interested in Orthopedics or a similar surgical specialty. Each week, students will join a resident-faculty team at our affiliated hospitals. Students will participate in all inpatient and outpatient clinical activities within the different orthopedic specialties, including Trauma, Sports Medicine, Reconstruction, Pediatric Orthopedics, and/or Foot/Ankle. Attendance is expected at all orthopedic training functions, including grand rounds and fracture conference.

ORTH 4020 Orthopaedic Surgery (2 Credit Hours)
This is a two-week elective designed for the student interested in Orthopedics or a similar surgical specialty. Students will participate in all inpatient and outpatient clinical activities within the different orthopedic specialties including Trauma, Sports Medicine, Reconstruction, Pediatric Orthopedics, and/or Foot/Ankle. Attendance is expected at all orthopedic training functions, including grand rounds and fracture conference.

ORTH 4040 Orthopaedic Research (4 Credit Hours)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.

ORTH 4041 Orthopaedic Pediatric (4 Credit Hours)
This is a four-week elective designed for the student interested in pediatric orthopaedics. The student will join a resident-faculty team for four weeks at our affiliated hospitals. They will take call, attend grand rounds and conferences, and participate in all inpatient and outpatient clinical activities including surgical cases. Student evaluation is by faculty.

ORTH 4042 Physical Medicine and Rehab (4 Credit Hours)
Students may be eligible to complete a PM&R elective at an away site. See eMedley information about approval for away rotations. Students should see ORTH4121 and ORTH4140 for a Tulane-based PM&R elective.

ORTH 4121 PM&R/Sports Medicine (2 Credit Hours)
The Physical Medicine and Rehabilitation/Sports Medicine elective provides basic training in PM&R evaluations with a strong focus on sports medicine and neurological rehabilitation. The elective exposes the medical student to the broad field of PM&R including sports injuries, ultrasound, electromyography, complications of disability, and the restoration and maintenance of function. Time will be spent on the inpatient rehabilitation service, and in the Tulane Institute of Sports Medicine. The student will be exposed to therapies, medications and procedures typically used in PM&R practice. There will be opportunities for sideline game coverage if desired.

ORTH 4141 PM&R/Sports Medicine (4 Credit Hours)
The Physical Medicine and Rehabilitation/Sports Medicine elective provides basic training in PM&R evaluations with a strong focus on sports medicine and neurological rehabilitation. The elective exposes the medical student to the broad field of PM&R including sports injuries, ultrasound, electromyography, complications of disability, and the restoration and maintenance of function. Time will be spent on the inpatient rehabilitation service, and in the Tulane Institute of Sports Medicine. The student will be exposed to therapies, medications and procedures typically used in PM&R practice. There will be opportunities for sideline game coverage if desired.

ORTH 4500 PM&R Subinternship (4 Credit Hours)
Students may be eligible to complete a PM&R Subinternship at an away site. See eMedley information about approval for away rotations.

ORTH 5053 Orthopaedic Pathways (1 Credit Hour)
The pre-clinical student is given an introduction to the basics of Orthopaedic Surgical Science including basic surgical skills, principles and opportunities for career development. The course is a preceptorship with role-model orthopaedic surgeons to provide personalized instruction, teaching, and mentoring through experience in the clinic office, conferences, rounds, operating room (if applicable), and professional association. This elective is split into four subspecialties. Subspecialties include Foot and Ankle Surgery, Total Joint Surgery, Sports Medicine, and Shoulder/Elbow.
ORTH 5056 Orthopaedic Spring Elective (1 Credit Hour)
Participants will be given hands-on learning on how to reduce fractures and dislocations, make splints and casts, and incise, debride, and suture wounds. They will receive biweekly lectures on the following topics: musculoskeletal chief complaints and their workup, a primer to fractures and dislocations, being a team physician, and musculoskeletal imaging. Students may be given the opportunity to observe operative cases. Students will be required to participate in a scheduled Sim Center activity on Sterile Scrubbing Technique and Proper OR Procedure. Students will take a musculoskeletal competency test at the end of their elective in order to solidify their knowledge. This test will be compiled by the residents. No book will be required for purchase—all material tested will be included in information provided to students in electronic form. The students completing the elective will be given a certificate stating their participation in the musculoskeletal elective.

ORTH 5500 Clinical Preceptorship - Ortho (1 Credit Hour)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

ORTH 5501 Introduction To Orthopaedic Su (1 Credit Hour)
This elective is designed to give students an introduction to orthopaedic surgery and the diagnosis and treatment of the musculoskeletal system. It is taught by senior faculty in the Department of Orthopaedic Surgery. The sessions will consist of problem-based case presentations via a Socratic interactive dialogue between faculty and students. Students will be exposed to various aspects of orthopaedic surgery including general orthopaedics, total joints, sports medicine, pediatrics, trauma, oncology, hand, spine and foot/ankle. There will be no written or oral examinations. Pass/fail grades will be based upon class attendance, class participation, and oral student presentations.

ORTH 5540 Orthopaedic Research (1 Credit Hour)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

ORTH 9000 Orthopaedic Visiting Student (4 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training. Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

ORTH 9020 Orthopaedic Visiting Student (2 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training. Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

MD - Otolaryngology (OTLN)

OTLN 3500 Otolaryngology Subinternship (4 Credit Hours)
Students may be eligible to complete an OTLN Subinternship at an away site. See eMedley information about approval for away rotations.

OTLN 4000 Otolaryngology (4 Credit Hours)
The student will function as a sub-intern during this four-week rotation. The rotation is divided into two two-week rotations at Tulane University Hospital and Clinics and Ochsner. The elective is designed to be an outstanding learning environment for students interested in pursuing Otolaryngology as a career or students who would benefit from exposure to Otolaryngology for their career. Students will be expected to track patients assigned to the Otolaryngology-Head & Neck Surgery service throughout the patient’s hospital stay including planned and emergent surgery. Attendance at weekly didactic conference (Tuesday 4 to 6 PM) is required. The student will be required to present patients on clinical rounds as well as discuss relevant Otolaryngology topics in the operating room and clinics. This is an intense clerkship experience.

OTLN 4020 Otolaryngology (2 Credit Hours)
The student is introduced to Clinical Otolaryngology during this two-week rotation at Tulane University Hospital and Clinics. The elective is designed to be an outstanding learning environment for students interested in learning more about Otolaryngology as either a possible career, or students who would benefit from exposure to Otolaryngology for their career. Students are expected to attend both the Otolaryngology clinic as well as track patients assigned to the Otolaryngology-Head & Neck Surgery service throughout the patient’s hospital stay including planned and emergent surgery. Attendance at weekly didactic conference (Tuesday 4 to 6 PM) is required. The student will be required to present patients on clinical rounds as well as discuss relevant Otolaryngology topics in the operating room and clinics. This is a focused clerkship experience. The student is expected to read the Primary Care Otolaryngology online textbook from the American Academy of Otolaryngology Head & Neck Surgery. During the rotation, the faculty will review relevant topics and the students are expected to demonstrate competency in the subject matter.

OTLN 4040 Otolaryngology Research (4 Credit Hours)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.

OTLN 9000 Otolaryngology Visiting Student (4 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training. Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

OTLN 9020 Otolaryngology Visiting Student (2 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training. Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.
MD - Pediatrics (PEDS)

PEDS 3000 Pediatrics (8 Credit Hours)
The Pediatric Clerkship is an 8-week clinical rotation designed to provide an introductory experience in the care of children for junior or senior medical students. The curriculum is based on a national curriculum formulated by the Council on Medical Student Education in Pediatrics and is designed to assist students in acquiring basic knowledge of common and uncommon but significant pediatric disorders through both clinical and didactic learning experiences. All students spend time in general and specialty ambulatory clinics, general or specialty oriented inpatient ward services, and the well-baby and neonatal intensive care nurseries.

PEDS 3004 Pediatrics (4 Credit Hours)
This four-week elective provides students with an introduction to outpatient primary care and acute care in pediatrics. Students will rotate in various outpatient clinics to gain a better understanding of primary preventative care.

PEDS 3020 Pediatrics (2 Credit Hours)
This two-week elective provides students with an introduction to outpatient primary care and acute care in pediatrics. Students will rotate in various outpatient clinics to gain a better understanding of primary preventative care.

PEDS 3040 Pediatric Research (4 Credit Hours)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.

PEDS 3500 MED/PEDS Subinternship (4 Credit Hours)

PEDS 4119 Advanced Pediatric Experience (4 Credit Hours)
The Department of Pediatrics will be offering the Advanced Pediatric Elective (APE) in the T-4 February block each year. The APE is a course designed for senior medical students who are interested in residency careers which involve the care of infants, children, and adolescent patients. The APE is an additional elective for senior students (the other being their sub-internship) designed to give students extra training to prepare them for pediatrics, internal medicine/pediatrics (med/peds), triple board (pediatrics/adult psychiatry/child psychiatry), or family practice residencies. The APE will be held in February each academic year as a 1 month elective in order for students to acquire the knowledge and skills necessary to be competent and successful at the start of their intern year. This senior elective will be limited to 10 seniors to ensure a more concentrated and robust learning experience for each student.

PEDS 4120 PDES Emergency Medicine (2 Credit Hours)
This is a 2-week elective in the Pediatric Emergency Department. Students will actively participate in the management of patients in the ED. Students will learn how to approach each complaint by considering most common causes and acutely emergent cases.

PEDS 4140 PDES Emergency Medicine (4 Credit Hours)
This is a 4-week elective in the Pediatric Emergency Department. Students will actively participate in the management of patients in the ED. Students will learn how to assess each patient and how to approach each complaint by considering most common causes and acutely emergent cases.

PEDS 4210 PDES Cardiology (2 Credit Hours)
This is a two-week elective designed to provide exposure to Pediatric Cardiology. Students will rotate in an outpatient Cardiology Clinic to learn the diagnostic workup and management of common cardiology cases. Students will learn about Congenital Heart Diseases and how they are managed in infants, children and adults.

PEDS 4230 PDES Gastroenterology (2 Credit Hours)
This is a 2-week elective with inpatient and outpatient clinical experiences involving patients with GI and Nutritional issues.

PEDS 4240 PDES Genetics (2 Credit Hours)

PEDS 4250 PDES Hematology/Oncology (2 Credit Hours)

PEDS 4270 PDES Infectious Disease (2 Credit Hours)
During this 2-week elective, the student will be part of the clinical team, including the attending, fellow (some months) and resident (some months). The team will do inpatient consults, attend Pediatric ID clinics (including pediatric TB and HIV clinics), visit the microbiology lab to review cultures and smears, and attend teaching conferences and journal club. The student is expected to make 1-2 case presentations which include a review of the literature.

PEDS 4275 PDES Medicine-Pediatrics (4 Credit Hours)
Students may be eligible to complete a PEDS Med-Peds elective at an away site. See eMedley information about approval for away rotations.

PEDS 4276 PDES Medicine-Pediatrics (2 Credit Hours)
Students may be eligible to complete a PEDS Med-Peds elective at an away site. See eMedley information about approval for away rotations.

PEDS 4280 PDES Nephrology (2 Credit Hours)
This is a two-week elective on the Nephrology service.

PEDS 4290 PDES Pulmonary (2 Credit Hours)
This is a two-week elective that provides an introduction to pediatric pulmonology in both inpatient and outpatient clinic services. Students will be exposed to a wide range of topics including cystic fibrosis, asthma, chronic lung disease, recurrent lung infections in infancy, and pulmonary function testing.

PEDS 4410 PDES Cardiology (4 Credit Hours)
This is a four-week elective designed to provide exposure to Pediatric Cardiology. Students will rotate in an outpatient Cardiology Clinic to learn the diagnostic workup and management of common cardiology cases. Students will learn about Congenital Heart Diseases and how they are managed in infants, children and adults.

PEDS 4430 PDES Gastroenterology (4 Credit Hours)
This elective is a four-week rotation with inpatient and outpatient clinical experiences involving patients with GI and Nutritional issues.
Peds 4475 Peds Infectious Disease (4 Credit Hours)
The student will be part of the clinical team, including the attending, fellow (some months) and resident (some months). The team will do inpatient consults, attend Pediatric ID clinics (including pediatric TB and HIV clinics), visit the microbiology lab to review cultures and smears, and attend teaching conferences and journal club. The student is expected to make 1-2 case presentations which include a review of the literature.

Peds 4480 Peds Nephrology (4 Credit Hours)
This is a four-week elective on the Nephrology service.

Peds 4490 Peds Pulmonary (4 Credit Hours)
A four-week introduction to pediatric pulmonology in both inpatient and outpatient clinic services. Students will cover a wide range of topics including cystic fibrosis, asthma, chronic lung disease, recurrent lung infections in infancy, and pulmonary function testing.

Peds 4500 Pediatric Wards Subinternship (4 Credit Hours)

Peds 4501 Pediatric NICU Subinternship (4 Credit Hours)

Peds 4502 Pediatric PICU Subinternship (4 Credit Hours)

Peds 4520 Peds Adolescent Medicine (2 Credit Hours)
This is a 2-week elective in which students will care for adolescent and young adult patients in a variety of outpatient clinics including non-traditional, community-based settings (homeless shelter, voc/tech school). Autonomy is encouraged. Learning will be supplemented with live lectures and online modules.

Peds 4540 Peds Adolescent Medicine (4 Credit Hours)
Care for adolescent and young adult patients in a variety of outpatient clinics including non-traditional, community-based settings (homeless shelter, voc/tech school). Autonomy is encouraged. Learning will be supplemented with live lectures and online modules.

Peds 4490 Peds Pulmonary (4 Credit Hours)

Peds 5500 Clinical Preceptorship - Peds (1 Credit Hour)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

Peds 5501 Pediatric Hematology/Oncology (1 Credit Hour)
The student is expected to participate for a semester in the elective, which will involve about 1/2 day per week following patients in the Pediatric Hematology/Oncology clinic. The students will be mentored by the Pediatric Hematology/Oncology attending physician. Initially, students will see and examine patients in the presence of the attending. As the student becomes more experienced and comfortable, he/she will take histories, do examinations, formulate the assessments and plans and make presentations to the attending physician before the physician sees the patient. Because the majority of patients have chronic illnesses, the student will be able to follow many patients over most of the year. A variety of illnesses are seen such as leukemia, solid tumors, and sickle cell disease, anemia's and coagulation disorders. Emphasis will be placed on understanding the pathophysiology of these disorders.

Peds 5540 Pediatric Research (1 Credit Hour)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

Peds 9000 Pediatrics Visiting Student (4 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training. Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

Peds 9020 Pediatrics Visiting Student (2 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training. Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

MD - Pharmacology (PHAR)

Phar 2003 Pharmacology (5 Credit Hours)
The Pharmacology course covers primary concepts such as mechanisms of drug action, drug indications, contraindications, drug interactions & side effects.

Phar 5001 Health and the Environment (1 Credit Hour)
This course will introduce students to topics about the intersection between the environment and human health. Lectures will explore topics ranging from molecular biology to ecosystem-level determinants of health. The courses will be a mixture of lectures and interactive discussion sessions mediated by various faculty and visiting lecturers.

Phar 5500 Clinical Preceptorship - Phar (1 Credit Hour)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.
**MD - Physiology (PYSI)**

**PYSI 1002 Physiology (5 Credit Hours)**
This course involves the study of the body's function from molecules to the whole organism. Students are expected to apply fundamental principles of physics and chemistry to the understanding of the body's function and regulatory mechanisms.

**PYSI 1111 Physiology Summer Course (5 Credit Hours)**
T1 & T2 summer courses may be required for students who need to remediate pre-clinical coursework. Contact your course director for more information.

**PYSI 5110 Capstone component: PYSI 1002 (0 Credit Hours)**

**PYSI 5500 Clinical Preceptorship - Pysi (1 Credit Hour)**
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

**PYSI 5540 Physiology Research (1 Credit Hour)**
Several faculty members, led by our Chairman, Dr. L.G. Navar, are investigating the role of the kidney and blood vessels in the pathophysiology of hypertension. Students will be exposed to various experimental approaches used in the study of renal function, hemodynamics, tubular transport processes, and fluid and electrolyte regulation. Student can learn techniques for the evaluation of renal function, renal tubule reabsorption, and vascular responses to different antihypertensive drugs, as well as the expression and regulation of genes involved in hypertension. Basic methodological approaches also will be covered in a systematic manner. The remainder of the student's time will be spent in one or more laboratories of participating faculty.

**MD - Psychiatry (PYCH)**

**PYCH 3000 Psychiatry (4 Credit Hours)**
Psychiatry is a 4-week rotation intended to expose students to the basics of mental health, as well psychopathology and its treatment. It is intended to illustrate to students that psychological and psychiatric issues and patients will be part of their career, no matter what specialty they choose.

**PYCH 3500 Psychiatry Subinternship (4 Credit Hours)**
During the psychiatry sub-internship, students will gain increased supervised responsibility for patients with severe psychopathology in an inpatient setting. The goals are to deepen understanding of psychopathology and psychotherapeutics, learn evaluation and management skills for patients with a broad range of psychiatric disturbances, and begin to gain skills necessary for first-year residency as a psychiatry intern.

**PYCH 4000 Psychiatry (4 Credit Hours)**
Psychiatry is a 4-week rotation intended to expose students to the basics of mental health, as well psychopathology and its treatment. It is intended to illustrate to students that psychological and psychiatric issues and patients will be part of their career, no matter what specialty they choose.

**PYCH 4020 Psychiatry (2 Credit Hours)**
This is a 2-week elective in Psychiatry. The following experiences are available: Assertive Community Treatment and Forensic Psychiatry. See eMedley for more information about sites.

**PYCH 4040 Child Psychiatry (4 Credit Hours)**
During this elective, students will have the opportunity to participate in some or all of the following clinical activities: 1) school-based mental health treatment for complex behavioral and emotional disorders; 2) Tulane Parent Education Program – outpatient treatment of children and adolescents and their biological or foster families; 3) Psychiatric Consult/Liaison - consultation in the Tulane ER, Tulane pediatrics and school-based clinics in various Louisiana parishes; 4) Community mental health clinics providing outpatient treatment. Students will also attend Child Psychiatry didactics one day each week, along with clinical case conferences and seminars. Students are able to select a curriculum of varied clinical sites for a broad exposure to child psychiatry or may choose a more intense focused experience.

**PYCH 4041 Med-Psych (4 Credit Hours)**
This elective is offered for 4th year medical students interested in combined training and want a closer look at the environments and practice styles of dual-boarded physicians. The elective involves experiences in our two Med/Psych continuity clinics and the consult/liaison service run by a combined physician. Students may also participate in a traumatic brain injury clinic run in conjunction with the NFL and observe forensic evaluations of medically-complicated psychiatric cases. Rotating students will be expected to attend didactics in both the Internal Medicine and Psychiatry departments as well as our weekly Med/Psych conference. By the end of the rotation, the student will lead the weekly conference on a topic chosen in collaboration with the course director.

**PYCH 5500 Clinical Preceptorship - Pych (1 Credit Hour)**
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

**PYCH 5534 Psychiatry Research (1 Credit Hour)**
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.
PHEA 4000 Public Health (4 Credit Hours)
Required for students in the MD/MPH combined degree program. See MD/MPH Program Office for more information.

PHEA 4001 Tropical Medicine (4 Credit Hours)
Available only to TRMD students in the MD/MPH combined degree program. See MD/MPH Program Office for more information.

PHEA 4002 MD/MPH (4 Credit Hours)
Only available in T3 May to students in the MD/MPH combined degree program. See MD/MPH Program Office for more information.

PHEA 5001 Public Health (1 Credit Hour)
T1/T2 elective available only to students in the MD/MPH combined degree program.

MD - Radiology (RADS)
RADS 3020 Radiology (2 Credit Hours)
The radiology clerkship is a concentrated two-week experience in diagnostic imaging and its role in patient care. Students attend regular faculty lectures and spend time in each of the imaging areas within the radiology department. The imaging reading areas include: general radiology, CT, ultrasound, nuclear medicine, angiography, neuroradiology, pediatric radiology, musculoskeletal imaging, and mammography. While in the reading areas students can observe the imaging exams and interact with the radiologist as the results are interpreted and dictated. This experience offers opportunity to correlate patient clinical presentation and findings with the results from the appropriate diagnostic imaging exam(s). In addition to faculty lectures and time in the reading areas, students have access to the radiology teaching area where their knowledge can be augmented by participation in teaching files covering the full spectrum of diagnostic imaging. During the two weeks, students are required to complete an assigned programmed text on the principles of chest Roentgenology. Students are evaluated by input from attending radiologists in each of the reading areas (25%), student participation in class lectures (25%), and power point presentation of an interesting case encountered while on service.

RADS 3040 Radiology (4 Credit Hours)
See description for RADS3020. The 4-wk RADS3040 rotation will count as 2 weeks of the required RADS3020 and 2 weeks of elective credit.

RADS 3044 Radiology Research (4 Credit Hours)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.

RADS 4000 Interventional Radiology (2 Credit Hours)
This course is designed to be a foundational, 2-week experience in interventional radiology. Students interested in or considering pursuing a residency in diagnostic and interventional radiology are encouraged to take the course as T3s, although it is offered for T3s and T4s. Students should expect to participate as a member of the IR team, which will include seeing consults, presenting patients, discussing imaging, and participating in cases in the angiography suites.

RADS 4021 Radiation Oncology (2 Credit Hours)

RADS 4040 Radiology Oncology Research (4 Credit Hours)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.

RADS 4041 Radiation Oncology (4 Credit Hours)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

RADS 5500 Clinical Preceptorship - Rads (1 Credit Hour)

RADS 5540 Radiology Research - (1 Credit Hour)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

RADS 9000 Radiology Visiting Student (4 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

MD - Surgery (SURG)
SURG 3000 Surgery (8 Credit Hours)
The Surgery clerkship is designed to teach students the role of surgical care in the overall management of patients. Specifically, the students are expected to learn the work-up and evaluation of surgical patients, as well as the indications and contraindications for expected results, risks and complications of specific operations. Students are expected to scrub on a number of operations and will follow patients from presentation, work-up, and treatment, including operations and post-treatment/postoperative care.

SURG 3040 Surgery Research (4 Credit Hours)
The Surgery Research Elective is designed to encourage students to participate in active research with a faculty member or community faculty member and to understand all aspects involved with current research protocols and steps taken to achieve research goals. The student should be able to feel confident at the completion of the elective with the research process. The student will have research experience and will be able to include this in their CV in order to support their future career opportunities.
SURG 3500 Honors Surgery (4 Credit Hours)
This is a four-week course creating an intense and comprehensive surgical experience. This course will be limited to 4th year medical students. Such students will be chosen/accepted to this course based on high evaluations during their core surgery rotations and have demonstrated an aptitude and interest in a surgical career. The course will consist of the following: Dedicated lectures by selected faculty, which will encompass topics including surgical diseases, innovative surgical procedures, introduction to academic research, career planning and litigation issues; student presentations on specific surgical issues and procedures; dedicated simulation training including "Intern BootCamp" that Tulane surgical interns currently undergo; an introductory course and simulation training on the DaVinci Surgical Robotic system by residents and faculty; an animal lab over two/three days where the students will perform surgical procedures themselves with supervision and feedback; individual time to meet and discuss career goals, resume/personal statement review and interview preparation with faculty members. The overall goal is to help prepare these students to become outstanding interns at the start of their surgical residency. The course will be Pass/Fail, and students may use this to help strengthen their residency applications by stating they were chosen for, and passed the Tulane Honors Surgery Course.

SURG 3500 Surgery Subinternship (4 Credit Hours)
Students on senior electives in surgery will advance their clinical skills and knowledge by focusing on a specific area of surgical practice with a particular surgery service. The students will strengthen their clinical skills in perioperative patient assessment and management, in the use of diagnostic studies pertinent to the surgeon's practice, and assisting or performing procedures under direct supervision. Students are expected to participate in the operating room, clinic, wards fully including taking night or weekend call.

SURG 4002 Surgery (2 Credit Hours)
Students on senior electives in surgery will advance their clinical skills and knowledge by focusing on a specific area of surgical practice with a particular surgery service. The students will strengthen their clinical skills in perioperative patient assessment and management, in the use of diagnostic studies pertinent to the surgeon's practice, and assisting or performing procedures under direct supervision. Students are expected to participate in the operating room, clinic, wards fully including taking night or weekend call.

SURG 4020 Plastic Surgery (4 Credit Hours)
SURG 4021 Plastic Surgery (2 Credit Hours)
SURG 4022 Surgery Research (2 Credit Hours)
SURG 4520 SICU (2 Credit Hours)
The student will receive in-depth exposure to critical care patients in either the surgical or trauma critical care units that will strengthen their clinical skills in perioperative assessment and management of critically ill patients. This will be accomplished by working as a member of a surgical resident team, including approximately weekly night/weekend call. Students will be expected to participate in all rounds, seminars, and resident teaching lectures.

SURG 4540 SICU (4 Credit Hours)
The student will receive in-depth exposure to critical care patients in either the surgical or trauma critical care units that will strengthen their clinical skills in perioperative assessment and management of critically ill patients. This will be accomplished by working as a member of a surgical resident team, including approximately weekly night/weekend call. Students will be expected to participate in all rounds, seminars, and resident teaching lectures.

SURG 5500 Clinical Preceptorship - Surg (1 Credit Hour)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

SURG 5540 Surgery Research (1 Credit Hour)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

SURG 5550 Surgical Pathways (1 Credit Hour)
This elective is designed to give you an up close look into the life of a surgeon and that of an academic center's clinical surgical program. We have redesigned the elective in hopes that all of you are able to gain new knowledge while still maintaining your duties and obligations of being a T1/T2 pre-clinical student.

SURG 5640 Plastic Surgery Research (1 Credit Hour)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

SURG 9000 Surgery Visiting Student (4 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training. Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC’s VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.
MD - Urology (UROL)

UROL 3500 Urology Subinternship (4 Credit Hours)
The student will function as much in the capacity of an intern as can be permitted under present medico-legal limitations. Ward rounds will be made daily with the residents; attendance and participation in outpatient clinics will be expected; and the student will assist in both diagnostic and operative procedures. Weekly staff pyelogram conferences, IVP conferences, faculty and resident lectures, daily sign out rounds with staff on call, and monthly D & C Conferences are held and the student is expected to attend. All outpatient clinics meet with an attending physician. Seminars and Visiting Professor Programs are open to the student.

UROL 4000 Urology (4 Credit Hours)
Students enrolled in this elective will make ward rounds daily with the residents; attendance and participation in outpatient clinics will be expected; and the student will assist in both diagnostic and operative procedures. Weekly staff pyelogram conferences, IVP conferences, faculty and resident lectures, daily sign out rounds with staff on call, and monthly D & C Conferences are held and the student is expected to attend. All outpatient clinics meet with an attending physician. Seminars and Visiting Professor Programs are open to the student.

UROL 4020 Urology (2 Credit Hours)
During this 2-week rotation, students will make ward rounds daily with the residents; attendance and participation in outpatient clinics will be expected; and the student will assist in both diagnostic and operative procedures. Weekly staff pyelogram conferences, IVP conferences, faculty and resident lectures, daily sign out rounds with staff on call, and monthly D & C Conferences are held and the student is expected to attend. All outpatient clinics meet with an attending physician. Seminars and Visiting Professor Programs are open to the student.

UROL 4040 Urology Research (4 Credit Hours)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.

UROL 5500 Clinical Preceptorship - Uro (1 Credit Hour)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

UROL 5540 Urology Research (1 Credit Hour)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

UROL 9000 Urology Visiting Student (4 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

UROL 9020 Urology Visiting Student (2 Credit Hours)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

Mediev & Early Modern Studies (MDST)

MDST 1290 Semester Abroad (1-20 Credit Hours)
MDST 1940 Transfer Coursework (0 Credit Hours)
MDST 2000 Intro To Medieval Stdies (3 Credit Hours)
An introduction to the interdisciplinary nature of medieval studies focusing on the relationships between history, language, and the production of literary texts.

MDST 2390 Semester Abroad (1-20 Credit Hours)
MDST 2940 Transfer Coursework (0 Credit Hours)
MDST 4000 Topics In Medieval Stds (3 Credit Hours)
Each course will treat a particular area of medieval and early modern studies, within an interdisciplinary framework.

MDST 4990 Honors Thesis (3 Credit Hours)
MDST 5000 Honors Thesis (4 Credit Hours)
MDST 5190 Semester Abroad (1-20 Credit Hours)
MDST 5370 Washington Semester (1-20 Credit Hours)
MDST 5380 Junior Year Abroad (1-20 Credit Hours)
MDST 5390 Junior Year Abroad (1-20 Credit Hours)
MDST 5940 Transfer Coursework (0 Credit Hours)
Microbiology - Graduate (MIIM)

MIIM 7010  Seminar Microbiol, Immun (1-2 Credit Hours)
MIIM 7020  Seminar Microbiol, Immun (1-2 Credit Hours)
MIIM 7030  Topics in Microbiology (1-3 Credit Hours)
MIIM 7050  Thesis Research Design (2 Credit Hours)
MIIM 7065  Scientific Writing (2 Credit Hours)

This course is for students in the Master of Science Program in Microbiology and Immunology who have chosen the thesis track for completion of their degree. This course will guide students through the scientific writing process, with a focus in the field of biomedical science. In doing so, students will be expected to critically analyze scientific literature in the fields of microbiology and immunology. Weekly sessions will focus on the scientific writing process, critical analysis of published literature, slide presentation preparation, and providing constructive feedback as a reviewer.

Prerequisite(s): MIIM 7050 or 7065.

MIIM 7100  Clincl Cases & Underlying Mech (2 Credit Hours)
Prerequisite(s): MIIM 7600 and 7500.

MIIM 7120  Advanced Virology (4 Credit Hours)
Prerequisite(s): MIIM 7500.

MIIM 7150  Dynamics Immuno & Microb Inter (3 Credit Hours)
MIIM 7210  Special Problems (1-5 Credit Hours)
MIIM 7220  Advanced Research Methods (1-4 Credit Hours)
MIIM 7250  Vaccine Biology (3 Credit Hours)
MIIM 7310  Research (1-10 Credit Hours)
MIIM 7320  Research (1-10 Credit Hours)

MIIM 7400  Responsible Conduct-Biomed Rsh (2 Credit Hours)
MIIM 7500  Graduate Microbiology (4 Credit Hours)
MIIM 7550  Microbiology Laboratory (3 Credit Hours)
MIIM 7600  Medical Immunology (3 Credit Hours)
MIIM 7620  Advanced Immunology (3 Credit Hours)
MIIM 7720  Medical Mycology (3 Credit Hours)
MIIM 7750  Medical Parasitology (3 Credit Hours)
MIIM 8100  Viral Pathogenesis Jrl Club (2 Credit Hours)
MIIM 9970  Master's Thesis (1-2 Credit Hours)
MIIM 9980  Master's Research (2 Credit Hours)
MIIM 9990  Dissertation Research (0 Credit Hours)

Music (MUSC)

MUSC 1000  Fundamentals of Theory (3 Credit Hours)
Basic course in the elements of music. Both semesters.

MUSC 1010  Adv Fund Theory Songwrt (3 Credit Hours)
The focus of this course involves writing songs and acquiring basic skills in arranging.

MUSC 1050  The Art of Listening (3 Credit Hours)
A course designed to increase the listener's perception and enjoyment of music employing masterworks of the European classical tradition.

MUSC 1060  Survey of Euro Art Music (3 Credit Hours)
A chronological survey of masterworks of the European classical tradition.

MUSC 1090  Intro To Popular Music (3 Credit Hours)

MUSC 1190  Freshmen Writing Seminar (4 Credit Hours)

MUSC 1290  Semester Abroad (1-20 Credit Hours)

MUSC 1410  Hist Euro Music To 1800 (3 Credit Hours)
Primarily for music majors and minors.

MUSC 1420  Hist European Music Since 1800 (3 Credit Hours)
Primarily for music majors and minors.

MUSC 1510  Harmony (3 Credit Hours)
The study of diatonic and secondary chord structures and progressions with written exercises and analysis of music from the common practice period. Basic musicianship laboratory.

Prerequisite(s): MUSC 1000.
Corequisite(s): APMS 1090.

MUSC 1520  Advanced Harmony (3 Credit Hours)
Chromatic harmony and modulation, written exercises using expanded harmonic vocabulary. Formal analysis of classic period works. Advanced musicianship laboratory.

Prerequisite(s): MUSC 1510.
Corequisite(s): APMS 1100.

MUSC 1530  Jazz Theory (3 Credit Hours)
This course will be an intense study of jazz harmony and its application. The course is designed for music majors and minors as well as for non-majors who have a firm grasp of music fundamentals.

Prerequisite(s): MUSC 1000.

MUSC 1650  History West Art Music (3 Credit Hours)

MUSC 1880  Writing Intensive: MUSC 1420 (1 Credit Hour)

MUSC 1890  Service Learning: MUSC 1900 (1 Credit Hour)
Service learning students will gain firsthand knowledge of musical socialization - the role of young people in extending the city's musical traditions - by interacting with students and instructors at the Roots of Music afterschool music program for middle-school children. Service learning students will schedule 40 hours of work over the course of the semester. Each Tulane student will assist with academic tutoring one weekday per week from 3:30 pm to 6:00 pm.

MUSC 1900  Music in New Orleans (3 Credit Hours)
This course is intended as an introductory survey of New Orleans music, including jazz, brass band, Mardi Gras Indian, rhythm and blues, funk, and hip-hop, through an intensive exposure to existing research, field trips, and occasional visits from local researchers and musicians. Musical socialization—the role of young people in extending the city's musical traditions—will be a running theme throughout the course and will connect the course materials to the optional service learning project.
ologies in the contemporary world as they have adapted to the mass communications technology of the present day.

MUSC 2450 Intro To Opera (3 Credit Hours)
Course includes lectures concerning the nature of opera and also a historical outline of the development of opera in Europe. Emphasis is then placed on viewing a number of complete operas, which will be screened on laser discs.

MUSC 2800 Intro To Music Business (3 Credit Hours)
This course prepares students for operational and administrative as well as creative and technical positions within the music and entertainment industry.

MUSC 2880 Writing Intensive: MUSC 2420 (1 Credit Hour)

MUSC 2890 Service Learning: MUSC 2880 (0-1 Credit Hours)

MUSC 2940 Intro To Music Business (3 Credit Hours)
An introduction to the critical role of computers in the music field today. As a survey of computer tools and techniques, this course will include applied work with notation, MIDI, digital sound-editing and multi-media software.

MUSC 2940 Electronic Music History (3 Credit Hours)
This course will cover the development of music for orchestra from Bach to Mahler. Listening, reading, and written reports.

MUSC 2170 Transfer Coursework (3 Credit Hours)
The development of music for orchestra from Bach to Mahler. Listening, reading, and written reports.

MUSC 2290 Hist Amer Popular Music (3 Credit Hours)
This is a survey history of American popular music from pre-Civil War minstrelsy to MTV. The course is intended for the general student body, with no musical prerequisites required. Lectures integrate an in-depth discussion of the music itself, generously illustrated by recordings, with a solid presentation of the music's historical and cultural context. Major topics include the multicultural roots of American popular musics, the parallel development of four separate streams of popular music (an urban mainstream and three rural sub streams), the increasing tendency of these separate streams to interact to create new popular styles, and the function of the music industry in the dissemination of popular musical styles.

MUSC 2300 Computer Apps In Music (3 Credit Hours)
This course will cover the development of music for orchestra from Bach to Mahler. Listening, reading, and written reports.

MUSC 2310 Musical Theatre In Amer (3 Credit Hours)
A survey of vernacular theatre music in America from its European roots in opera buffa, ballad opera, and operetta through the jazz and rock developments of the sixties.

MUSC 2320 Jewish Music (3 Credit Hours)
A survey of Jewish liturgical music from Biblical times to the present, and of Jewish popular, theatre, and folk music. Emphasis on European, Israeli, Sephardic, and American traditions.

MUSC 2334 History of Jazz (3,4 Credit Hours)
Development of jazz as a cultural, sociological phenomenon, and survey of jazz styles.

MUSC 2350 Music In Contem Society (3 Credit Hours)
An introduction to the music of the contemporary world as it interacts with social, political, and cultural processes that distinguish the 20th century. Examines the full spectrum of modern musical styles (classical, jazz, popular, folk, rock) as they have adapted to the mass communications technology of the present day.
MUSC 3360 The Latin Tinge (3,4 Credit Hours)
This course explores the relationship of African-American popular music and Latin American popular music, with a special focus on how New Orleans is a key site mediating these musical mixtures. It compares U.S. popular styles with styles from other countries in the hemisphere.

MUSC 3370 Studies in Great Composers (3 Credit Hours)
The music of three influential composers is studied in depth against the background of their careers and times. The composers selected will change each term; contact the instructor or department for more information. Student must have ability to read, analyze, and discuss musical notation in order to be successful in the course.

Prerequisite(s): MUSC 1410*, 1420* and 2010*.
* May be taken concurrently.

MUSC 3390 World Vocal Traditions (3 Credit Hours)
This course is an ethnomusicological exploration of selected vocal traditions from around the world. Anchored around three sets of guest lectures and live performances by Tuvan throat singers, a Persian Jewish singer, and a singer of Afro-Cuban religious music, the course will examine both the musical sounds that voices can produce, and the ways in which these voices are woven into the cultures from which they emerge.

MUSC 3410 Russian Music (3 Credit Hours)
The history of 19th- and 20th-century Russian music with special emphasis on Tchaikovsky, Prokofiev, and Shostakovich.

MUSC 3430 Blues In American Life (3 Credit Hours)
The blues, as both a musical form and a state of being, is the primary layer of African American culture. This course considers how the blues permeates American life, through the music of work songs, rural blues, classic blues, jazz, rhythm and blues, cowboy and rock n roll.

MUSC 3440 Black Music, Black Lives (3 Credit Hours)
Black music is celebrated as the signature artistic contribution America has given to the world. Music has been a source of power for people subject to enslavement, legal segregation, and an ongoing struggle for political citizenship and economic equity. This course highlights the agency of black musicians and the political significance of the music they have created, from slave songs to hip-hop. This is a social and cultural history, and no musical training is required for understanding course materials.

MUSC 3450 Music & Politics (3 Credit Hours)
Though often considered apart from social and political trends, music is central to thought and action in the public sphere. From patriotism to protest, from sponsorship to censorship, music challenges the belief that public opinion is expressed solely through language. Students are encouraged to listen for the politics of music, whether in Beethoven’s symphonies written after the French Revolution or in the realist depictions of inner-city life in contemporary hip-hop. Readings are drawn from recent research in social theory and the cultural study of music. This course is open to all undergraduate students.

MUSC 3460 Music, Religion, Spirit (3 Credit Hours)
Music forms vital part of ritual for most religions around the world. In performing and listening to music, religious affiliates seek connection with the supernatural, foster community ties, and create tradition bridging past, present, and future. Furthermore, music gives religious groups visibility in the broader society, whether in live or recorded performance. This course explores the traditional musical practices of the three major monotheistic religions - Judaism, Christianity, Islam - followed by one unit on Indian religions, and one unit about of selected spiritual practices inherited from Africa currently practiced in the Americas, including voodoo, candomble, and Santeria. We will also critically look at historical and current social perceptions reacting to these musical practices and to their practitioners. This is a cultural history class; no musical training is required.

MUSC 3480 Music and Gender (3,4 Credit Hours)
In this course, we'll explore the relationship between gender and music in the West over the past 450 years. How have shifting rules and boundaries of gender identity interacted with similarly shifting rules and boundaries about beauty, function, and construction of music? In what ways has music helped to represent and/or define gender in culture? Further, how do gender identities intersect with other categories if social and cultural identity such as race, ethnicity, and class? This course will use a variety of case studies from popular and art music to explore the relationships between musical practice and gender identification, including: the courtesans and castrati of Baroque opera; Glam Rock; Clara Schumann, jazz singers; and Elvis Presley. Course open to both music majors and non-majors.

MUSC 3700 Contemp Music Industry (3 Credit Hours)

MUSC 3890 Service Learning: MUSC 3440 (0-1 Credit Hours)

MUSC 3940 Transfer Coursework (3 Credit Hours)

MUSC 4110 Chamber Music (3 Credit Hours)

MUSC 4400 Music & Dsp (3 Credit Hours)
This course introduces the student to the breadth and depth of signal processing used in musical applications. The course will cover fundamentals of signal processing and familiarize the student with classic computer music theories as well as state-of-the art topics for sound synthesis, analysis, and computer music composition. Students work mostly in a graphical coding language for audiovisual applications called Pure Data. No prior coding experience is required although experience with Matlab, Python or other languages translates well. Pure Data is an excellent coding language for students interested in both creative applications and science and engineering projects.

MUSC 4410 Music Performance System (3 Credit Hours)
This course is a HCI (Human Computer Interface)-based course with a concentration in musical applications. The course will be hands-on, writing code, building circuits with conjunction of microcontrollers and sensors.

Prerequisite(s): MUSC 4400.

MUSC 4420 Algorithmic & Comp Music (3 Credit Hours)
This course will be an exploration of computer music composition using various available techniques and state-of-the-art tools. This will be a hands-on course with compositional exercises and projects, working in our digital studio, and producing a concert at the end of the term.
MUSC 4882 Writing Intensive (1 Credit Hour)

MUSC 4890 Service Learning: MUSC (0-1 Credit Hours)

MUSC 4900 Intro New Orleans Jazz (3 Credit Hours)
This course is designed to provide an historical introduction to the origins, idiomatic coalescence, and early development of New Orleans jazz.

MUSC 4910 Independent Study (1-4 Credit Hours)

MUSC 4920 Independent Study (1-3 Credit Hours)

MUSC 4930 Seminar (3 Credit Hours)

MUSC 4940 Seminar (3 Credit Hours)

MUSC 4950 Spec Topic In Musicology (3 Credit Hours)

MUSC 4951 Special Topics in Musicology (3 Credit Hours)

MUSC 4952 Special Topics (3 Credit Hours)

MUSC 4953 Special Topics (3,4 Credit Hours)
This class provides an overview of the benefits of music education in the lives of young people. We will consider the influence of teachers in the development of professional musicians as well as the value of teamwork, leadership, and discipline imparted to all students. Focusing on marching bands in New Orleans, we will visit school bandrooms, attend a high school football game, and host visits from music educators. Students will get a birds-eye view of the fate of music education while researching the effects of increasing cutbacks in arts education.

MUSC 4954 Special Topics in Musicology (3 Credit Hours)

MUSC 4955 Spec Topic In Musicology (3 Credit Hours)

MUSC 4956 Spec Topic In Musicology (3 Credit Hours)

See MUSC 4410 for course description.

MUSC 6420 Algorithmic & Comp Music (3 Credit Hours)
See MUSC 4420 for course description.
revival movements. developments, including the folk revival and the civil rights and ethnic performers in the context of larger social, political, and cultural national, and international elites who saw the music's traditions local researchers and musicians. No musical training is required for the 1970s, the spread of this regional sound was driven by local, hop, through an intensive exposure to existing research and visits from mainstream music culture, except by a handful of collectors, scholars, and commercial promoters who sought to popularize it. From the first recordings in the 1920s to the transformation of the genre by jazz, brass band, Mardi Gras Indian, rhythm and blues, funk, and hip-hop, through an intensive exposure to existing research and visits from local researchers and musicians. No musical training is required for understanding course materials.

French Louisiana music (Cajun and Creole) was largely ignored in mainstream music culture, except by a handful of collectors, scholars, and commercial promoters who sought to popularize it. From the first recordings in the 1920s to the transformation of the genre by the 1970s, the spread of this regional sound was driven by local, national, and international elites who saw the music's traditions and performers in the context of larger social, political, and cultural developments, including the folk revival and the civil rights and ethnic revival movements.
PRIOR TO REGISTRATION: Students are strongly encouraged to meet with the Coordinator of Music Studies prior to registration. Students must make a sincere effort to determine the correct course for their level and potential career goals. It is not sufficient to register for courses based on a year of music experience in high school. It is the student’s responsibility to determine the appropriate courses, though guidance will be available.

Prerequisite(s): APMS 1520

APMS 2185  Jazz Combo (1 Credit Hour)
Ensemble courses are open, for credit, to all students of the University. Some are by instructor approval (audition), as indicated

APMS 2186  Orchestra (1 Credit Hour)
Ensemble courses are open, for credit, to all students of the University. Some are by instructor approval (audition), as indicated

APMS 2187  Musical Theatre Workshop (1 Credit Hour)
Ensemble courses are open, for credit, to all students of the University. Some are by instructor approval (audition), as indicated

APMS 2210  Voice/Vocal Jazz (2 Credit Hours)
One 50-minute private lesson per week (2 credits). Students assigned to guitar, piano or voice meet for two 50-minute classes each week (2 credits); all beginners must start with a class.

APMS 2211  Voice Class I (2 Credit Hours)

APMS 2212  Voice Class II (2 Credit Hours)

APMS 2213  Voice/Vocal Jazz (2 Credit Hours)
One 50-minute private lesson per week (2 credits). Students assigned to guitar, piano or voice meet for two 50-minute classes each week (2 credits); all beginners must start with a class.

APMS 2214  Voice/Vocal Jazz (2 Credit Hours)

APMS 2218  Composition (2 Credit Hours)
One 50-minute private lesson per week (2 credits). Students assigned to guitar, piano or voice meet for two 50-minute classes each week (2 credits); all beginners must start with a class.

APMS 2220  Instrument (2 Credit Hours)

APMS 2221  Piano/ Jazz Piano (2 Credit Hours)

APMS 2222  Piano Class (2 Credit Hours)

APMS 2223  Piano Class II (2 Credit Hours)

APMS 2225  Guitar (2 Credit Hours)

APMS 2226  Guitar Class I (2 Credit Hours)

APMS 2227  Guitar Class I-A (2 Credit Hours)

APMS 2228  Drums (2 Credit Hours)

APMS 2390  Semester Abroad (1-20 Credit Hours)

APMS 2890  Service Learning APMS 2186 (0-1 Credit Hours)
Music service learning component available with various applied music courses at the 2000-level

APMS 2893  Service Learning: APMS2183 (0-1 Credit Hours)
Music service learning component available with various applied music courses at the 2000-level

Corequisite(s): APMS 3183.

APMS 2940  Transfer Coursework (3 Credit Hours)

APMS 3020  Counterpoint (18th Cen) (3 Credit Hours)

Prerequisite(s): APMS 1520.

APMS 3130  Tech of Instru Conduct (1 Credit Hour)
Prerequisite(s): MUSC 1520 and 2020.

APMS 3140  Tech of Instru Conduct (1 Credit Hour)

APMS 3210  Voice/Vocal Jazz (2 Credit Hours)
One 50-minute lesson per week at the intermediate level culminating in half recital

APMS 3211  Instrument (2 Credit Hours)

APMS 3212  Piano/Jazz Piano (2 Credit Hours)

APMS 3213  Composition (2 Credit Hours)
One 50-minute lesson per week at the intermediate level culminating in half recital

APMS 3214  Voice/Vocal Jazz (2 Credit Hours)

APMS 3330  Music For Film (3 Credit Hours)
This course provides both critical analysis of music and sound for film as well as practical approaches to the medium. Students will complete several music for film projects, such as scoring original music for a scene from a silent film.

APMS 3400  The Story Road Project (3,4 Credit Hours)
In this course, students will prepare, perform and tour a work of music theatre to area schools and civic organizations. The participants will not only perform, but also create educational materials to accompany the production, take on marketing responsibilities, and act as moderators with the audience members following the performances. This course fulfills the first or second tier service learning requirement. There is no prerequisite for the course, but instructor permission is needed for registration.

Corequisite(s): APMS 3891.

APMS 3450  Music & Musicians in Community (1 Credit Hour)
Music service learning students will gain firsthand knowledge of how emerging musicians can serve and create music in the New Orleans community - creating musical programs, cultural events, or major service projects for the Bishop Perry Center, and by learning how to prepare and work in the Chapel of the Holy Spirit’s church music setting. (This a 1 credit course, with an additional 1 credit service learning component).

APMS 3500  Jazz Improvisation (2 Credit Hours)
Students will work with instructors individually and in small groups to develop the ability to logically respond to the harmonic, melodic, rhythmic, and formal implications inherent in specific types of musical material. Students will also examine compositional techniques characteristic of the jazz idiom. This course may be taken twice for credit.

APMS 3510  Jazz Arrangements (3 Credit Hours)
Students will work with the instructors individually and in small groups to develop the ability to understand the challenges involved in the process of creating jazz arrangements. Student will focus on the concepts of music notation characteristic of the jazz idiom and on the idiomatic writing for instruments. They will also examine the sound characteristics of individual instruments, the mixtures, and the crucial issues of balance within the ensembles.
Musical Cultures Gulf South (MCGS)

MCGS 2000 Intro to Music Cultures GS (3 Credit Hours)
An introduction to the culture of the Gulf South region with an emphasis on New Orleans music, history, ritual, dance, and cultural geography. Explores the musical relationship of the Gulf South region to the Caribbean and African diaspora. Introduces critical tools for analysis of the relationship of music and place. Themes of the course include ethnic migrations, social diversity, vernacular architecture, and slavery. Field trips to second-line parades, Mississippi River access points, diverse neighborhoods and historical slave markets.

MCGS 2890 Service Learning: MCGS 2000 (0-1 Credit Hours)
MCGS 4560 Internship (1-3 Credit Hours)
Internships will vary. See director for more information. May be taken for credit up to 2 times.

MCGS 4570 Internship (1-3 Credit Hours)
Internships will vary. See director for more information. May be taken for credit up to 2 times.

MCGS 4920 Independent Study (1-3 Credit Hours)
MCGS 4950 Special Topics (1-3 Credit Hours)
Topics will vary reflecting course offered

Neuroscience (NSCI)

NSCI 1005 Intro to NSCI Lab (1 Credit Hour)
This is a lab course that introduces high-school students to procedures in neuroanatomy, behavioral neuroscience, animal learning and memory, human sensation and perception, and bench science. Statistical analyses and scientific writing is included. Limited to high school students.

NSCI 1015 Basic Neuroscience with Lab (3 Credit Hours)
Introduction for high school students enrolled in the TSSP summer program.

NSCI 1940 Transfer Coursework (1-3 Credit Hours)
NSCI 2890 Service Learning (0-1 Credit Hours)
Service learning component to NSCI courses. See Schedule of Classes each semester for offerings. 20 or 40 hours of public service with a CPS approved community partner.

NSCI 2940 Transfer Coursework (1-3 Credit Hours)
NSCI 3010 Physical Dimensions of Aging (3 Credit Hours)
This course is designed to introduce students to the physiological, behavioral, and cognitive changes associated with aging. In particular, we will focus on the effects of exercise on the aging human system. We will also discuss what it means to become older within a community, what can a person expect during the aging process, and what kind of control a person has over his/her aging body. Does not count as a NSCI lecture elective.

Prerequisite(s): CELL 1010, 1010, 1010 or 1010 and (EBIO 1010, 1010, 1010, 1010, 1110, 1110, 1110 or 1110) or EBIO 1015, 1015, 1015 or 1015.
NSCI 3300 Brain and Behavior (3 Credit Hours)
Lectures cover the function and structure of the nervous system and the role of brain activity in the regulation of behavior. This course provides Neuroscience majors with a first exposure to the biological bases of behavior and should be taken prior to other Neuroscience courses at the 3000-level and above.

Prerequisite(s): PSYC 1000, 1000, 1000 or 1000.

NSCI 3310 Cellular Neuroscience (3 Credit Hours)
In-depth coverage of the basic principles of cellular neuroscience, including the biophysical basis of the membrane potential, action potential generation and propagation, and synaptic signaling. Students also will be introduced to the synaptic organization of higher neural systems, such as the visual, auditory and somatic sensory systems.

Prerequisite(s): CELL 1010, 1010, 1010 or 1010.

NSCI 3315 Cellular Neuroscience Lab (1 Credit Hour)
This is an interactive lab class giving students hands-on experience working with techniques used in the study of cellular neuroscience. Techniques include: behavioral testing using invertebrates, tissue staining, immunocytochemistry, and intracellular electrophysiological recordings.

Prerequisite(s): CELL 3310 or NSCI 3310.

NSCI 3320 Systems Neuroscience (3 Credit Hours)
The subject of this course is the human nervous system, its anatomy, connectivity and function. Discusses the normal structure of the nervous system and the relationship of that structure to physiological function. The course is taught from a practical, clinical point of view and is intended to prepare students for further study in the neurosciences.

Prerequisite(s): CELL 3310 or NSCI 3310.

NSCI 3325 Neuroanatomy Lab (1 Credit Hour)
The subject of this course is the anatomy of the human nervous system. Students will learn to identify and map the structure and position of nuclei, pathways, and anatomical divisions of the brain and spinal cord. The course is a practical correlate to Systems Neuroscience (NSCI 3320), and is intended to prepare students for further study in the neurosciences.

Prerequisite(s): CELL 3320*, 3320, 3320, NSCI 3320*, 3320, 3320 or 3320.
* May be taken concurrently.

NSCI 3360 Neuroanatomy & CNS Dissection (3 Credit Hours)
The course emphasis is extracting intact Central Nervous System (CNS) structures with connecting peripheral nerves. The course will look at specific pathways (afferent, efferent, dermatomes) and discuss related clinical manifestations associated with lesions to the individual CNS and peripheral nerve structures. Team dissection will attempt to save substantial segments of cranial nerves and will explore the structures with which they communicate. As student progress through the dissection they will: 1) identify structures that surround and or cover the CNS; 2) log them in a course notebook and then dissect appropriate structures. Grading will be based upon participation, complete notebooks and final dissection results. (e.g., did you remove the brain, spinal cord, and peripheral nerves as a single unit in reasonable condition?)

Prerequisite(s): NSCI 3300 or PSYC 3300.

NSCI 3360 Special Topics (1-4 Credit Hours)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department.

Corequisite(s): NSCI 3661.

NSCI 3665 Special Topics Lab (1-3 Credit Hours)
Special Topics Lab.

NSCI 3770 Sensation & Perception (3 Credit Hours)
Course provides the student with an appreciation for the different senses and the psychological phenomena associated with each sense. Topics include the major theories and experimental methods and findings associated with each of the sensory systems. Emphasis is placed on understanding sensory functions from an evolutionary perspective. The objective is for the student to obtain a firm understanding of the sensory functions and psychological phenomena associated with each sense.

Prerequisite(s): NSCI 3300 or PSYC 3300.

NSCI 3775 Sensation & Perceptn Lab (1 Credit Hour)
Course provides the student with hands on activities in order to gain a deeper understanding for the different senses and the methods used to study psychological phenomena associated with each sense. Satisfies neuroscience laboratory requirement.

Prerequisite(s): NSCI 3300 or PSYC 3300.

NSCI 3880 Writing Intensive (0-1 Credit Hours)
Course to be attached to regular courses that incorporate a writing component within the regular course. Register within department.

NSCI 3890 Service Learning (0-1 Credit Hours)
NSCI 3940 Transfer Coursework (1-3 Credit Hours)
NSCI 3945 Transfer Course Work Lab (1-3 Credit Hours)

NSCI 4060 Behavioral Endocrinology (3 Credit Hours)
An introduction to the roles of steroid and peptide hormones in physiology and behavior. Lectures focus on the hormonal mechanisms that control reproductive and regulatory functions in human and infrahuman species.

Prerequisite(s): (NSCI 3300, 3300, 3300 or 3300) or (NSCI 3670, 3670, 3670 or 3670) or (PSYC 3300, 3300, 3300 or 3300) or (PSYC 3670, 3670, 3670 or 3670).

NSCI 4065 Behavioral Endocrinology Lab (1 Credit Hour)
Laboratories provide demonstration and hands-on experience in research methods used in contemporary neuroendocrinology including hormonal manipulation, behavioral measurement, data analysis, and manuscript preparation.

Prerequisite(s): (NSCI 3300 or PSYC 3300) and (NSCI 4060* or PSYC 4060*).
* May be taken concurrently.

NSCI 4110 Brain and Language (3 Credit Hours)
The goal of this course is to learn how the brain is organized to produce and comprehend language and to understand linguistic disorders attendant on brain damage. There is an optional service learning component in which students can work with a speech therapist at a local health-care provider.

Prerequisite(s): NSCI 3300 or PSYC 3300.
NSCI 4130  Sport Rel Brain Injury (3 Credit Hours)
This course will provide students with a conceptual and practical appreciation of contemporary neuroscience techniques that are utilized for the assessment and rehabilitation of athletes that suffer sport related concussion(s), including both strengths and limitations. The course will provide an innovative and engaging environment within the community for supervised exploration of specific components of sport concussion management including education/prevention and baseline testing. The students will also communicate research findings in oral and written formats. Course grades will be determined by the students’ performance on test(s), scientific article critiques, student lead class discussions, and a group project. In lieu of a final exam, students will submit a group project that will simulate the process to complete a clinical research project. All undergraduate students who register for the course are required to register and to participate in the Service Learning course.

Prerequisite(s): NSCI 3300 or PSYC 3300.

NSCI 4200  General Endocrinology (3 Credit Hours)
This course explains the basics of hormone action and hormone interactions with their receptors, with an emphasis on the molecular mechanisms by which homeostasis is maintained in multicellular organisms. Physiological outcomes of hormone actions on different organs, as well as aberrant hormone action will be covered.

Prerequisite(s): CELL 3030 or 3750.

NSCI 4330  Neurobiol Learn & Memory (3 Credit Hours)
An introduction to the study of the neural mechanisms involved in learning and memory. The course involves detailed study of the memory systems of the brain as well as historical trends, theoretical perspectives and empirical findings that are associated with the neurobiology of learning and memory.

Prerequisite(s): NSCI 3300 or PSYC 3300.

NSCI 4340  Neurobiology of Disease (3 Credit Hours)
Advanced course on the higher neural functions of the nervous system and neurological diseases resulting from disruption of these functions. An emphasis is placed on the physiology of the nervous system and neural dysfunction caused by inherited and acquired diseases. Topics range from motor control and neuromuscular diseases to high cognitive function and dementia. Clinical interventions as well as current research are discussed.

Prerequisite(s): NSCI 3300 or PSYC 3300.

NSCI 4350  Developmental Neurobiol (3 Credit Hours)
A broad overview of the different stages of neural development. Examination of the molecular aspects of developmental neurobiology, with reference to some important signaling pathways involved in neural growth and specification. Particular attention will be given to those active research fields, such as growth cone guidance and collapse and activity-dependent development, and applications of these to injury and disease.

Prerequisite(s): CELL 3010, 3750, 3110, 3030, 3310 or NSCI 3310.

NSCI 4370  Molecular Neurobiology (3 Credit Hours)
Introduction to the molecular biology of neurons and neuronal function. Topics of study will include: the molecular composition of nerve cells, and how this provides a basis for their functional properties; their synaptic connectivity; how they receive, transmit and retain information at a molecular level. Studies will focus on current research in the field of molecular neurobiology.

Prerequisite(s): CELL 3310, 3320, NSCI 3310 or 3320.

NSCI 4380  Cognitive Neuroscience (3 Credit Hours)
An introduction to the study of human behavior and cognition using neuroscience methods. The course will examine the neural basis of perception, attention, memory, language, motor control, and emotions.

Prerequisite(s): NSCI 3300, 3300, 3300, 3300, PSYC 3300, 3300, 3300 or 3300.

NSCI 4385  Cognitive Neuroscience Lab (1 Credit Hour)
A laboratory course that provides training in experimental design and ethical issues, data collection, analysis, and manuscript preparation for cognitive neuroscience experiments. Methods used in cognitive neuroscience research, such as event-related potentials, structural and functional MRI, also will be discussed. Students will conduct their own studies using behavioral and brain electrical activity measures. Note: Satisfies psychology and neuroscience laboratory requirement. Fulfills college laboratory requirement.

Prerequisite(s): (NSCI 3300, 3300, 3300, 3300, 3670, 3670, 3670, 3670, PSYC 3300, 3300, 3300, 3300, 3300, 3670, 3670 or 3670) and NSCI 380. *May be taken concurrently.

NSCI 4450  Genome Biology (3 Credit Hours)
Genome-level science is changing the pace of biomedical research and medicine. This course will examine how whole genomes, transcriptomes, and proteomes are studied, and what we are learning about the biology of multiple organisms using these novel techniques. Epigenetics, genomics, and proteomics will be covered in the context of disease and the development of novel therapeutics. NOTE: Cross-listed as CELL/NSCI 4450/ 6450/ 7450.

Prerequisite(s): NSCI 4370 or CELL 3030.

NSCI 4500  Adv Molec Neurobiology (3 Credit Hours)
This course provides detailed description and in-depth discussion of current techniques and experimental topics in the field of molecular neurobiology.

Prerequisite(s): NSCI 4370 or CELL 4370.

NSCI 4510  Biological Psychology (3 Credit Hours)
A survey of biological psychology with an emphasis on neuroanatomy and research methods used to study mechanisms of learning and memory, mental disorders, emotion, stress, and other psychological phenomena.

Prerequisite(s): NSCI 3300 or PSYC 3300.

NSCI 4513  Music and Brain (3 Credit Hours)
An introduction to current research linking music education to brain development and function. Fulfills writing intensive and service-learning requirements. NOTE: Cross-listed with PSYC 4513.

Prerequisite(s): NSCI 3300 or PSYC 3300.
**NSCI 4515 Biological Psych Lab (1 Credit Hour)**
A laboratory course providing training in behavioral and neurobiological methods, experimental design, data collection and analysis and preparation of research reports. Fulfills the writing intensive requirement.

**Prerequisite(s):** PSYC 4510* or NSCI 4510*.

* May be taken concurrently.

**NSCI 4530 Psychopharmacology (3 Credit Hours)**
An introduction to the effects of psychoactive agents on the nervous system. Lectures emphasize the mechanisms by which drugs regulate neurotransmitter systems to alter psychological and physical states.

**Prerequisite(s):** NSCI 3300 or PSYC 3300.

**NSCI 4535 Psychopharmacology Lab (1 Credit Hour)**
Optional laboratory that fulfills laboratory requirement for Neuroscience and Psychology majors.

**Prerequisite(s):** NSCI 4530* or PSYC 4530*.

* May be taken concurrently.

**NSCI 4560 Internship Fall (3 Credit Hours)**
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Apply through the Center for Public Service for the three credit internship that fulfills the Second Tier service requirement. Registration is completed with the Neuroscience Program.

**NSCI 4570 Internship Neuroscience Spring (3 Credit Hours)**
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Apply through the Center for Public Service for the three credit internship that fulfills the Second Tier service requirement. Registration is completed with the Neuroscience Program.

**NSCI 4580 Internship (1-3 Credit Hours)**
An experiential learning process coupled with pertinent academic course work. Registration is completed with the Neuroscience Program. Notes: Does not fulfill either the Neuroscience Elective Lecture or Neuroscience Laboratory requirement. Graded S/U.

**NSCI 4590 Stress & Trauma (3 Credit Hours)**
This course provides an overview of the psychobiological bases of stress and trauma reactions and related psychological disorders.

**NSCI 4660 Special Topics in Neuroscience (1-4 Credit Hours)**
Various topics in Neuroscience based on faculty and student interest.

**NSCI 4665 Special Topics Lab (1-3 Credit Hours)**
Special Topics Lab.

**NSCI 4890 Service Learning: NSCI 4060 (0-1 Credit Hours)**
Optional service learning component of Psychopharmacology in which students complete 40 hours of service during the semester at a substance abuse treatment facility to be arranged by the Center for Public Service.

**NSCI 4910 Independent Study (1-3 Credit Hours)**
Laboratory research under direction of a faculty member. Registration is completed with the Neuroscience Program. A three-credit independent study may be used to fulfill a neuroscience laboratory requirement.

**NSCI 4920 Independent Study (1-3 Credit Hours)**
Laboratory research under direction of a faculty member. Registration is completed with the Neuroscience Program. May be used to fulfill a neuroscience laboratory requirement. Graded S/U grade.

**NSCI 4940 Transfer Coursework (1-3 Credit Hours)**

**NSCI 4945 Transfer Course Work Lab (1-3 Credit Hours)**

**NSCI 4990 Honors Thesis (3 Credit Hours)**
Honors thesis research, first semester. Register in department.

**NSCI 5000 Honors Thesis (4 Credit Hours)**
Honors thesis research, second semester. Register in department.

**NSCI 5380 Study Abroad (1-20 Credit Hours)**
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

**NSCI 5390 Study Abroad (1-20 Credit Hours)**
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

**NSCI 6010 Physical Dimensions of Aging (3 Credit Hours)**
This course is designed to introduce students to the physiological, behavioral, and cognitive changes associated with aging. In particular, we will focus on the effects of exercise on the aging human system. We will also discuss what it means to become older within a community, what can a person expect during the aging process, and what kind of control a person has over his/her aging body.

**Prerequisite(s):** (CELL 1010, 1010, 1010 or 1010) and (EBIO 1010, 1010, 1010 or 1010).

**NSCI 6030 Brain Institute Seminar (1 Credit Hour)**
Students attend weekly departmental seminars as an introduction to research hypotheses, techniques and presentations.

**NSCI 6040 Trends In Neuroscience (1 Credit Hour)**
Students select, analyze, present, and discuss recent empirical articles in the field of Neuroscience. During most weeks, an article authored by a neuroscientist who is presenting a departmental colloquium will be selected to facilitate understanding of the presentation. Therefore, students are required to enroll in the companion course NSCI 6030, Neuroscience Seminar.

**NSCI 6050 Behavioral Endocrinology (3 Credit Hours)**
An introduction to the roles of steroid and peptide hormones in physiology and behavior. Lectures focus on the hormonal mechanisms that control reproductive and regulatory functions in human and infrahuman species.

**NSCI 6060 Neurobiology of Aging (3 Credit Hours)**
This course will survey the current literature in clinical and research journals regarding the Neurobiology of the aging process. Emphasis is placed on the state of research in aging, looking at experimental design issues as well as published results. Connections will be drawn between the research literature and current clinical practice, as well as what the research literature says regarding aging and lifestyle.
NSCI 6110  Brain and Language (3 Credit Hours)
The goal of this course is to learn how the brain is organized to produce and comprehend language and to understand linguistic disorders attendant on brain damage. There is an optional service learning component in which students can work with a speech therapist at a local healthcare provider.

NSCI 6130  Sport Rel Brain Injury (3 Credit Hours)
This course will provide students with a conceptual and practical appreciation of contemporary neuroscience techniques that are utilized for the assessment and rehabilitation of athletes that suffer sport related concussion(s), including both strengths and limitations. The course will provide an innovative and engaging environment within the community for supervised exploration of specific components of sport concussion management including education/prevention and baseline testing. The students will also communicate research findings in oral and written formats. Course grades will be determined by the students' performance on test(s), scientific article critiques, student lead class discussions, and a group project. In lieu of a final exam, students will submit a group project that will simulate the process to complete a clinical research project.

NSCI 6150  Methods in Neuroscience (3 Credit Hours)
A lecture course exposing students to contemporary theories and techniques used in cellular and behavioral neuroscience by Tulane neuroscientists in their own research programs. The course is taught by faculty members representing several departments from both the uptown and downtown campus and the Health Sciences Center.

NSCI 6200  General Endocrinology (3 Credit Hours)
This course explains the basics of hormone action and hormone interactions with their receptors, with an emphasis on the molecular mechanisms by which homeostasis is maintained in multicellular organisms. Physiological outcomes of hormone actions on different organs, as well as aberrant hormone action will be covered. Open to undergraduates by petition who plan to transfer credit to the 4+1 Program in Neuroscience.

NSCI 6220  Neural Microengineering (3 Credit Hours)
In recent years, a number of technologies have been developed and utilized for probing the nervous system. This course will focus on microscale tools, technologies, and techniques employed for the control, manipulation, and study of the nervous system in vitro. Course material will be presented primarily by students who prepare presentations from extensive background literature review. A number of projects will be assigned as design challenges in which multiple interdisciplinary groups will research and present proposed solutions to the same challenge. No background in engineering or math is required. Generally offered every other Spring.

NSCI 6310  Cellular Neuroscience (3 Credit Hours)
In-depth coverage of the basic principles of cellular neuroscience, including the biophysical basis of the membrane potential, action potential generation and propagation, and synaptic signaling. Students also will be introduced to the synaptic organization of higher neural systems, such as the visual, auditory and somatic sensory systems. In addition, a term paper is required. Open to graduate students only. Students are required to take NSCI 6360, Topics in Cellular Neuroscience, to obtain graduate credit.

NSCI 6320  Systems Neuroscience (3 Credit Hours)
The subject of this course is the human nervous system, its anatomy, connectivity and function. Discusses the normal structure of the nervous system and the relationship of that structure to physiological function. The course is taught from a practical, clinical point of view and is intended to prepare students for further study in the neurosciences. In addition, a term paper is required.

Prerequisite(s): CELL 3310 or NSCI 3310.

NSCI 6330  Neurobiol Learn & Memory (3 Credit Hours)
An introduction to the study of the neural mechanisms involved in learning and memory. The course involves detailed study of the memory systems of the brain as well as historical trends, theoretical perspectives and empirical findings that are associated with the neurobiology of learning and memory. Open to undergraduates by petition who plan to transfer credit in Neurobiology of Learning and Memory to the 4+1 Program in Neuroscience.

NSCI 6340  Neurobiology of Disease (3 Credit Hours)
Advanced course on the higher neural functions of the nervous system and neurological diseases resulting from disruption of these functions. An emphasis is placed on the physiology of the nervous system and neural dysfunction caused by inherited and acquired diseases. Topics range from motor control and neuromuscular diseases to high cognitive function and dementia. Clinical interventions as well as current research are discussed. In addition, a term paper is required. Open to undergraduates by petition who plan to transfer credit in Neurobiology of Disease to the 4+1 Program in Neuroscience.

NSCI 6350  Developmental Neurobiol (3 Credit Hours)
A broad overview of the different stages of neural development. Examination of the molecular aspects of developmental neurobiology, with reference to some important signaling pathways involved in neural growth and specification. Particular attention will be given to those active research fields, such as growth cone guidance and collapse and activity-dependent development, and applications of these to injury and disease. In addition, a term paper is required. Open to undergraduates by petition who plan to transfer credit to the 4+1 Program in Neuroscience.

NSCI 6362  Neuroscience & CNS Dissection (3 Credit Hours)
The course emphasis is extracting intact Central Nervous System (CNS) structures with connecting peripheral nerves. The course will look at specific pathways (afferent, efferent, dermatomes) and discuss related clinical manifestations associated with lesions to the individual CNS and peripheral nerve structures. Team dissection will attempt to save substantial segments of cranial nerves and will explore the structures with which they communicate. As student progress through the dissection they will: 1) identify structures that surround and or cover the CNS; 2) log them in a course notebook and then dissect appropriate structures. Grading will be based upon participation, complete notebooks and final dissection results. (e.g., did you remove the brain, spinal cord, and peripheral nerves as a single unit in reasonable condition?) Notes: Satisfies neuroscience laboratory requirement. Cross-listed with NSCI 3360.
NSCI 6370  Molecular Neurobiology  (3 Credit Hours)
Introduction to the molecular biology of neurons and neuronal function. Topics of study will include: the molecular composition of nerve cells, and how this provides a basis for their functional properties; their synaptic connectivity; how they receive, transmit and retain information at a molecular level. Studies will focus on current research in the field of molecular neurobiology. In addition, a term paper is required. Open to undergraduates by petition who plan to transfer credit to the 4+1 Program in Neuroscience.

NSCI 6380  Cognitive Neuroscience  (3 Credit Hours)
An introduction to the study of human behavior and cognition using neuroscience methods. The course will examine the neural basis of perception, attention, memory, language, motor control, and emotions. Open to undergraduates by petition who plan to transfer credit to the 4+1 Program in Neuroscience.

NSCI 6400  Neuroscience Applied  (3 Credit Hours)
This course is designed for neuroscience graduate students to help them utilize and apply their skills and knowledge of neuroscience and to help prepare them for their future professions. The course consists of individual and group presentations, discussion of selected readings, career preparation activities, invited speakers, evaluation/feedback, and a final project as students develop their critical thinking, analytical, and communication skills. For Graduate Students only.

NSCI 6450  Genome Biology  (3 Credit Hours)
Genome-level science is changing the pace of biomedical research and medicine. This course will examine how whole genomes, transcriptomes, and proteomes are studied, and what we are learning about the biology of multiple organisms using these novel techniques. Epigenetics, genomics, and proteomics will be covered in the context of disease and the development of novel therapeutics. NOTE: Cross-listed as CELL/NSCI 4450/ 6450/ 7450.

Prerequisite(s): NSCI 4370 or CELL 3030.

NSCI 6500  Adv Molec Neurobiology  (3 Credit Hours)
This course provides detailed description and in-depth discussion of current techniques and experimental topics in the field of molecular neurobiology.

NSCI 6530  Psychopharmacology  (3 Credit Hours)
An introduction to the effects of psychoactive agents on the nervous system. Lectures emphasize the mechanisms by which drugs regulate neurotransmitter systems to alter psychological and physical states. Open to graduate students. Open to undergraduates by petition who plan to transfer credit in Psychopharmacology to the 4+1 Program in Neuroscience.

NSCI 6550  Syn Org of the Brain  (3 Credit Hours)
The goal of this course is to discuss and understand functional connections within and between areas of the brain to lead to a greater understanding of brain function and behavior. We will focus on limbic and memory systems. A strong emphasis will be placed on in-class discussions and student presentations to enhance critical thinking and oral presentation skills.

NSCI 6590  Stress & Trauma  (3 Credit Hours)
This course provides an overview of the psychobiological bases of stress and trauma reactions and related psychological disorders.

NSCI 6630  Cellular Neurophysiology  (3 Credit Hours)
Survey of current topics and techniques in the physiology of neurons and neuronal circuits, concentrating primarily on electrophysiological studies.

NSCI 6660  Special Topics  (1-3 Credit Hours)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department.

NSCI 6665  Special Topics Lab  (1-3 Credit Hours)
Special Topics Lab.

NSCI 6900  Graduate NSCI Internship  (1-3 Credit Hours)

NSCI 6940  Transfer Coursework  (1-3 Credit Hours)

NSCI 7030  Cog. Neurosc. Grad Seminar  (3 Credit Hours)

NSCI 7100  Special Projects In NSCI  (1-3 Credit Hours)
Individual studies in a selected field with approval of instructor and advisor.

NSCI 7110  Graduate Neuroscience I  (3 Credit Hours)
An advanced survey of cellular neuroscience team-taught by members of the Tulane Neuroscience Program faculty. Topics covered include, among others: neuronal electrogenic properties, synaptic transmission and neuromodulation, signal transduction, neurotransmitter systems, synaptic plasticity, blood-brain barrier, glia, and neuropsychiatric disorders. The objective of the course is to achieve a fluency in neuroscience that will provide a foundation for pursuing further graduate-level neuroscience study and research. Restrictions: Open only to graduate students in Neuroscience.

NSCI 7120  Graduate Neuroscience II  (3 Credit Hours)
This course is concerned with the structure and function of the human nervous system. In addition to lectures, this course provides hands-on examination of neuroanatomical structures. Most neuroscience research requires a working knowledge of the structural components of the nervous system as the basis of understanding conceptual aspects of nervous system function. This course is designed to provide a clear and concise account of the anatomy of the human nervous system in sufficient detail to understand the main functions and common disorders which impact the nervous system. This method will demonstrate how knowledge of neuroanatomy can aid in understanding clinical symptoms and emphasizes those areas of neuroanatomy which are particularly relevant to human neurological disorders. In addition, this course will focus on some broad aspects of human neuroscience and how they are rooted in the structure of the nervous system. Restrictions: Open only to graduate students in Neuroscience.

NSCI 7130  Research Rotations  (3 Credit Hours)
First-year doctoral students in Neuroscience complete research rotations in three different laboratories lead by faculty members of the Tulane Brain Institute before placement in a permanent laboratory to pursue doctoral training. The research objectives of each rotation are outlined by the supervising faculty member at the beginning of the rotation, typically 6-8 weeks in length. Three credits are earned for the first research rotation completed during the fall semester in the doctoral program and three additional credits are earned for the two research rotations completed during the spring semester. Restrictions: Open only to first-year doctoral students in Neuroscience.
NSCI 7240 College Teaching Pedagogy (3 Credit Hours)
The objective of Teaching Pedagogy is to provide a structured learning experience for doctoral students in Psychology and Neuroscience to facilitate their preparation to teach at the collegiate level and to increase their competitiveness on the job market. The course focuses on strategies and techniques to teach undergraduate and graduate courses in Psychology and Neuroscience.

NSCI 7241 College Teaching Practicum (1-4 Credit Hours)
College Teaching Practicum allows doctoral students in Psychology and Neuroscience to design, prepare, and team-teach a section of an undergraduate course in their areas of expertise. Students receive supervision and mentoring based on classroom observations by Dr. Dohanich and other faculty members. Each student enrolled in the course teaches approximately 25% of an undergraduate course. Final grades are based on the effectiveness of teaching as evaluated by Dr. Dohanich using the attached rubric provided the CELT Peer Observation Program. The College Teaching Pedagogy course (PSYC/NSCI 7240) is the mandatory pre-requisite course for College Teaching Practicum.

NSCI 7260 Graduate Communications (3 Credit Hours)
NSCI 7450 Genome Biology (3 Credit Hours)
Genome-level science is changing the pace of biomedical research and medicine. This course will examine how whole genomes, transcriptomes, and proteomes are studied, and what we are learning about the biology of multiple organisms using these novel techniques. Epigenetics, genomics, and proteomics will be covered in the context of disease and the development of novel therapeutics. NOTE: Cross-listed as CELL/NSCI 4450/ 6450/ 7450.

NSCI 7940 Transfer Credit-Grad (1-3 Credit Hours)

- NSCI 7980 Research in Neuroscience-PhD (1-9 Credit Hours)
  Individual research supervised by faculty.

- NSCI 7981 Research in Neuroscience -MA (1-9 Credit Hours)
  Individual research supervised by faculty.

- NSCI 9980 Master’s Thesis Research (3 Credit Hours)
  Research toward completion of a masters degree.

- NSCI 9990 Dissertation Research (3 Credit Hours)
  Research toward completion of a doctoral degree.

Nutrition (NTRN)

- NTRN 9000 Thesis (0 Credit Hours)

Pharmacology - Graduate (GPHR)

GPHR 7040 Neuropharmacology (2 Credit Hours)
GPHR 7050 Cellular Control Mechm (2 Credit Hours)
GPHR 7060 Endocrine Pharmacology (2 Credit Hours)
GPHR 7120 Adv Topics In Cardiobiol (2 Credit Hours)
GPHR 7160 Env Signaling (2 Credit Hours)
GPHR 7180 Selected Topics (0-9 Credit Hours)
GPHR 7190 Pharmacology Seminar (1 Credit Hour)
GPHR 7200 Seminar Pharmacology (1 Credit Hour)
GPHR 7210 Pharm Advances (1 Credit Hour)
GPHR 7220 Adv In Pharmacology (1 Credit Hour)
GPHR 7230 Principles of Pharmacol (3 Credit Hours)
GPHR 7240 Principles of Pharmacol (3 Credit Hours)
GPHR 7250 Medical Pharmacology (3-6 Credit Hours)
GPHR 7260 Medical Pharmacology (2-3 Credit Hours)
GPHR 7505 Master’s Research (2 Credit Hours)

GPHR 7520 Pharmacology ePortfolio (1-2 Credit Hours)
GPHR 7530 Molecular & Cellular Pharmacol (2 Credit Hours)
GPHR 9980 Master’s Research (2 Credit Hours)
GPHR 9990 Dissertation Research (0 Credit Hours)

Philosophy (PHIL)

PHIL 1010 Introduction to Philosophy (3 Credit Hours)
A general introduction to the most persisting questions of philosophy: Is there a God? Do I exist? Can I live forever? Do I have free will? How should I live?

PHIL 1020 Philosophies of The Self (3 Credit Hours)
An examination of several theories of the nature of self and its relation to society and to the world.

PHIL 1030 Ethics (3 Credit Hours)
A critical study of alternative theories of the good life, virtue and vice, right and wrong, and their application to perennial and contemporary moral problems.

PHIL 1040 Beginning With Minds (3 Credit Hours)
A topical introduction to philosophy which surveys historical and current work in philosophy of mind and the study of cognition. The material revolves around the reasons we have to attribute minds to people. We explore several reasons for having a mind: the capacity for knowledge, innate representations, language, consciousness, agency, control over the body, freedom from natural causality. This course is particularly useful for those students interested in the cognitive studies program, a coordinate major.
PHIL 1060 Critical Thinking (3 Credit Hours)
This course is intended to enhance the student’s analytical reasoning skills. Emphasis is placed on the study of arguments and the development of techniques of informal logic for assessing their cogency.

PHIL 1210 Elementary Symbolic Logic (3 Credit Hours)
The course concerns techniques of analyzing sentences and arguments by uncovering the formal structures and relations which underlie them. This involves translating ordinary language into the symbolic formulas of elementary logical systems and proving formalized arguments.

PHIL 1290 Semester Abroad (1-20 Credit Hours)

PHIL 1330 Meaning of Life (3 Credit Hours)
The question, What is the meaning of life?, has been regarded as one of the most important and profound of human inquiries. This course will examine a number of different philosophical attempts to address this question.

PHIL 1890 Service Learning: PHIL 1030 (0-1 Credit Hours)

PHIL 1891 Service Learning: PHIL 1210 (0-1 Credit Hours)

PHIL 1940 Transfer Coursework (3 Credit Hours)

PHIL 2010 History of Ancient Phil (3 Credit Hours)
A study of ancient Greek philosophy, focusing on the thought of the Pre-Socratics, Plato, and Aristotle.

PHIL 2020 History of Modern Phil (3 Credit Hours)
A study of early modern philosophy, focusing on the period from Descartes through Kant.

PHIL 2030 Minds, Machines & Experiences (3 Credit Hours)
Introduction to philosophical issues in the study of mind and consciousness. Topics include: the place of mind in the natural world; mechanism and thought; computer intelligence; consciousness and the mind-body problem; mental causation and explanation.

PHIL 2040 East Meets West (3 Credit Hours)

PHIL 2110 Classics Ancnt Poli Phil (3 Credit Hours)
A study of classical works of political philosophy in the Western tradition, primarily Plato’s Republic and Aristotle’s Politics.

PHIL 2120 Classics Modrn Poli Phil (3 Credit Hours)
A study of classical works of modern political philosophy in the Western tradition, including those of Machiavelli, Hobbes, Locke, Rousseau, Marx, or Mill.

PHIL 2190 Phil & Hist Nat Science (3 Credit Hours)
Scientific method will be analyzed as a process of stages and illustrated by historical examples. The philosophical presuppositions of science are examined in light of the historical shift from Aristotelian to modern science. Whether change in scientific theories is revolutionary or evolutionary is studied with reference to actual case histories.

PHIL 2200 Matter and Consciousness (3 Credit Hours)
A systematic survey of philosophical and foundational theories of mind and cognition of this century. The course begins with the philosophical legacy of earlier centuries (mind/body dualism, consciousness and privileged access, introspection, sense data, and phenomenology), considers the first scientific response to this legacy (behaviorism and the rise of scientific psychology), and then follows the major theoretical positions and debates of this century such as physicalism and reductionism, functionalism and the computer model of the mind, eliminative materialism and neurophilosophy, instrumentalism, and common sense psychology.

PHIL 2600 Ethics In Business (3 Credit Hours)
This course is about how to deal with moral problems in business management with integrity. The scope and resources for making principled responses to ethical challenges will be examined and a variety of cases will be analyzed.

PHIL 2930 Special Topics: Phil (3 Credit Hours)
Examination of philosophical issues not typically covered in existing courses.

PHIL 2931 Special Topics: Phil (3 Credit Hours)

PHIL 2940 Transfer Coursework (3 Credit Hours)

PHIL 3010 Philosophy of Religion (3 Credit Hours)
A study of major philosophical ideas and figures in the philosophy of religion.

PHIL 3020 Topics in Bible & Philosophy (3,4 Credit Hours)
The Western tradition has two roots: Jerusalem and Athens, or the Bible and Greek philosophy. This course will be devoted to a reading of the Bible with a view to the fundamental philosophic questions it raises. Courses in different semesters will focus on various biblical texts (Genesis; Exodus and Deuteronomy; Samuel and Kings; Job), with relevant philosophic reflections drawn from Plato, Aristotle, Maimonides, Machiavelli, Kant, Kierkegaard, and others.

PHIL 3030 Philosophy of Art (3 Credit Hours)
A philosophical inquiry into the nature of art in its various forms, including poetry and literature, painting and sculpture, dance and music. Based on readings of classical and contemporary texts, we will address questions such as: What makes an object a work of art? How do different forms of art influence each other? How is art related to scientific inquiry and philosophy? What is the role of art in social and political life?

PHIL 3040 Mathematical Logic (3 Credit Hours)
An introduction to and survey of the mathematical study of formalized logical systems.

PHIL 3050 Moral Philosophy (3 Credit Hours)
A critical inquiry into the major issues of normative and critical ethics. Problems and positions concerning moral conduct and responsibility and the meaning and justification of ethical discourse are discussed in connection with readings from classical and contemporary sources.

PHIL 3090 Existentialism (3 Credit Hours)
A study of characteristic existentialistic themes as exemplified in the writings of thinkers like Kierkegaard, Nietzsche, Heidegger, or Sartre.
PHIL 3100 19th Cent European Phil (3 Credit Hours)
A study of major philosophical ideas and figures from Hegel through Nietzsche.

PHIL 3110 Contempora European Philosophy (3 Credit Hours)
A study of major philosophical issues and figures in 20th-century continental philosophy, including Husserl, Heidegger, and Sartre, among others.

PHIL 3120 Analytic Philosophy (3 Credit Hours)
An introduction both to major figures in the analytic tradition such as Frege, Russell, and Quine, and to major problems such as meaning, reference, and truth.

PHIL 3130 Classic American Thought (3 Credit Hours)
Readings in American philosophy from early 17th century to late 19th century, covering representative thinkers from the Puritans to the pragmatists.

PHIL 3140 Recent American Philosophy (3 Credit Hours)
Readings in American philosophy from the pragmatists to the present.

PHIL 3150 Logical Empiricism (3 Credit Hours)
Survey of main figures and movements in logical empiricism. Topics may include meaning and verification, the nature of philosophical inquiry, the unity of scientific discourse.

PHIL 3190 Philosophy of Social Science (3 Credit Hours)
Exploration into the logic, methods, and foundations of social sciences such as psychology, economics, and political science.

PHIL 3200 Plato (3 Credit Hours)
An in-depth reading of one or more of the Platonic dialogues.

PHIL 3240 Medieval Philosophy (3 Credit Hours)
A study of major thinkers in the Christian, Islamic, and Jewish traditions, such as Augustine, Aquinas, Alfarabi, Averroes, or Maimonides.

PHIL 3250 Descartes & 17th Century (3 Credit Hours)
Exploration of Descartes' writings that focuses on his place in and influence on the scientific and religious revolutions of the 17th century.

PHIL 3340 Humanity’s Place in Nature (3 Credit Hours)
This course will compare the predominant Western conception of humanity’s place in nature with alternative conceptions, including those held by non-Western thinkers.

PHIL 3410 Theory of Knowledge (3 Credit Hours)
An introduction to epistemology. Topics may include the problem of skepticism, theories of epistemic justification, the nature of empirical knowledge, a priori or mathematical knowledge, and our introspective knowledge of our mental states.

PHIL 3420 Metaphysics (3 Credit Hours)
An introduction to one or more topics in metaphysics, including causality, identity, modality, existence, persons and minds, universals and particulars, space and time, and the nature and possibility of metaphysics itself.

Prerequisite(s): PHIL 2020.

PHIL 3430 Semantics of Nat. Langu. (3 Credit Hours)
An introduction to the study of meaning in natural languages. The central techniques involve extending the methods of logical semantics for formal languages. No prerequisites, but prior exposure either to generative grammar (e.g., ANTH 3590) or symbolic logic (e.g., PHIL 1210) would not be wasted.

PHIL 3500 Buddhism (3 Credit Hours)
This course examines the metaphysical, epistemological, religious, and psychological dimensions of Buddhism, while also tracing its development from India into Southeast Asia, China, Japan, and the West.

PHIL 3510 History of Ethics (3 Credit Hours)
The historical development of philosophies concerning the good life, moral duty and right, choice and consequences, freedom and necessity in their personal and social nature.

PHIL 3550 Medical Ethics (3 Credit Hours)
A systematic and critical study of ethical problems in medicine concerning the physician-patient relationship, life and death, and social responsibility.

PHIL 3560 Social & Polit Ethics (3,4 Credit Hours)
A study of the arguments and positions advanced by philosophers with regard to the need for and justification of social and political institutions and with regard to the character of human rights, justice, and the good society.

PHIL 3570 Ethics of Abortion (3 Credit Hours)
Investigates the philosophical arguments surrounding the most controversial moral issue of our time, including arguments about moral status, the rights of women, personhood and its potential, and the development of pain and consciousness.

PHIL 3580 Ethical Theory (3 Credit Hours)
This course surveys the prominent ethical theories of the late nineteenth and twentieth centuries. It considers both theories of meta ethics and normative ethics. Theories to be examined include: relativism, subjectivism, egoism, moral realism, utilitarianism, Kantianism, contractualism, virtue theory, and Existentialism.

PHIL 3590 Greek Philo & Jewish Thought (3,4 Credit Hours)
Western culture has a double source, the Bible and Greek philosophy, or Jerusalem and Athens. Are the two traditions harmonious or do they stand in some essential tension with each other? This course will approach that question by examining the response of some important Jewish thinkers, Maimonides in particular, in their encounter with the teachings of Plato and Aristotle.

PHIL 3640 Philosophy of Law (3 Credit Hours)
A study of the character and justification of law and legal systems. Legal realism, legal positivism, and natural law theories are explored as are such law-related issues as punishment, the enforcement of morals, and the grounds of legal responsibility.
PHIL 3650 Crime and Punishment (3 Credit Hours)
This course offers a critical examination of philosophical issues involving crime and punishment. In the first half, we will ask what forms of behavior, if any, the state is entitled to declare to be criminal, focusing on such issues as drug abuse, prostitution, blackmail, gambling, hate speech, suicide, pornography, ticket scalping, insider trading, and gun control. In the second half, we will ask what forms of punishment, if any, the state is entitled to impose on those who violate those laws, if any, which are permissible, focusing on such issues as capital punishment, corporal punishment, and competing justifications of punishment in general.

PHIL 3660 Anarchy (3 Credit Hours)
This course examines diverse philosophic treatments of anarchy. Specific topics may include: various anarchist views, such as those embracing private or communal property; defenses of anarchism based in natural rights, autonomy, efficiency, or avoidance of pernicious tendencies of states; theories according to which the state is justified as a means for addressing conflicts or deficiencies endemic in an anarchic state of nature; arguments regarding the authority of states and our obligations to obey laws; philosophical fiction concerning anarchistic utopias or related themes.

PHIL 3740 Consciousness (3 Credit Hours)
This course addresses questions such as the following: What is consciousness and why is it puzzling, if not mysterious? Is consciousness one phenomenon or many? What mechanisms and competencies underpin consciousness? Where (brain location)? Who are the possessors of consciousness, phylogenetically and ontogenetically? Why consciousness: its rationale and functions? How does consciousness emerge from matter (if at all)?

PHIL 3750 Foundations of Cognitive Science (3 Credit Hours)
This course will serve as an overview to theoretical approaches and debates in cognitive science, viewed through a philosophical lens.

PHIL 3760 Interpreting Minds (3 Credit Hours)
A systematic introduction to the recent and dynamic interdisciplinary research area in naive psychology or theory of mind. The course begins with the philosophical debates about naive or folk psychology, then surveys the main empirical data, key experiments and hypotheses about ape and child interpretation of minds, and concludes with a comparative analysis of several much debated proposals about the interpretation of minds is accomplished through innate mechanisms (modules), by simulation or in terms of a naive theory.

PHIL 3765 Imagination (3,4 Credit Hours)
This class is an advanced undergraduate overview of imagination, construed as cognitive competence. In an interdisciplinary spirit, covering data and theories from philosophy, cognitive and developmental psychology as well as neuroscience, the class surveys such topics as the evolutionary reasons for imagination; the cognitive and cerebral mechanisms of imagination; the format of imaginative representations-pictorial versus symbolic; the ontogeny of imagination; and connections between imagination and reasoning, deliberation and foresight.

PHIL 3800 Language and Thought (3,4 Credit Hours)
An introduction to the philosophy of language and mental representation. Major topics: the relations between language and thought, models of mind, representation as computation, the language of thought, mental imagery, propositional attitudes, meaning and intentionality.

PHIL 3850 Terrorism (3 Credit Hours)
An examination of terrorism and counter terrorism with emphasis on moral issues.

PHIL 3870 Mind In Evolution (3 Credit Hours)
As any biological capacity, the mind must have evolved. Can evolution explain its design? The mind has many components, from perception to language and thinking. Are they all products of natural selection, of other evolutionary forces, or of no such forces at all? Can evolution explain the uniqueness of the human mind? What could be the factors that explain this uniqueness: tool making, language, social life? In attempting to answer these questions, the class brings an evolutionary perspective to some important topics in philosophy of mind and philosophical psychology and offers a multidisciplinary introduction to the emerging but rapidly developing field of evolutionary cognitive science.

PHIL 3890 Service Learning: PHIL 3500 (0-1 Credit Hours)
PHIL 3891 Service Learning: PHIL 3930 (0-1 Credit Hours)
PHIL 3892 Service Learning: PHIL 3932 (0-1 Credit Hours)
PHIL 3894 Service Learning: PHIL 3931 (1 Credit Hour)
PHIL 3895 Service Learning: PHIL 3500 (1 Credit Hour)
PHIL 3896 Service Learning: PHIL 3936 (1-5 Credit Hours)
PHIL 3897 Service Learning: PHIL 3937 (1-5 Credit Hours)

PHIL 5380 Metaphysics of Mind (3,4 Credit Hours)
Discussion of topics related to the place of mind in the natural world. Topics may include mental causation, materialism and dualism about mind, fundamental and derivative reality. Prerequisites: PHIL 2010, PHIL 2020, or PHIL 2030; or permission of instructor.
PHIL 6160 Advanced Symbolic Logic (3 Credit Hours)
Translation of propositions into quantified formulas with single-place and relational predicates. Deduction by quantification rules. Also, theorematic development of an axiomatic logistic system.

PHIL 6070 Mathematical Logic (3 Credit Hours)
This course treats soundness and completeness of first-order systems of deduction, arithmetical coding of syntax, unprovability of consistency, and undefinability of truth. The course develops these topics and reflects on their philosophical significance. Instructor approval strongly recommended.

PHIL 6090 Philosophy of Science (3 Credit Hours)
The scientific method as phases of forming hypotheses and verifying them. The logic and epistemology of scientific explanation. Metaphysical presuppositions underlying scientific knowledge.

PHIL 6100 Skepticism (3 Credit Hours)
A study of historical and contemporary skepticism about knowledge.

PHIL 6105 Philosophy of Neuroscience (3 Credit Hours)
This course will introduce students to interdisciplinary research at the intersection of philosophy and neuroscience. The course will cover both historical and current material. Topics will include the relationship between neuroscience and psychology, neuroscience and the *self*, the neural correlates of consciousness, and the localization of function in the brain.

PHIL 6120 Metaphysics (3,4 Credit Hours)
An examination of basic problems of metaphysics (e.g. being, substance, universals, identity, freedom) as treated by the main traditions in classical and contemporary thought.

PHIL 6130 Moral Psychology & Meta-Ethics (3 Credit Hours)
This seminar offers students the opportunity to develop more deeply their understanding of the origins and nature of moral attitudes and beliefs, and thus to probe more fully issues to which they had been introduced in previous courses in ethics. Optional Capstone for senior majors and second semester juniors with 5110 add-on. Writing Practicum option.

PHIL 6150 Freedom & The Self (3,4 Credit Hours)
Free will is one of the main puzzles in philosophy. While human beings ordinarily think that their choices are free, it is difficult to see how this conception can go together with modern scientific conceptions of nature. The problem is not only to establish whether human beings have free will, but whether it is an intelligible conception at all. This course will examine major approaches put forward to solve this puzzle, drawn from contemporary as well as classical sources.

PHIL 6160 Philosophy of Action (3 Credit Hours)
Investigates the causes of human behavior; the nature of action and human agency; the relations between intentions, motives, desires, and beliefs, how to individuate and describe actions, and the nature of free action.

PHIL 6162 Philosophy of Language (3 Credit Hours)
Discussion of topics in philosophy of language (reference, meaning, descriptions, truth) with an emphasis on how these topics bear on issues in metaphysics, philosophy of mind, and logic.

Prerequisite(s): PHIL 2010 or 2020.

PHIL 6170 Philosophy of Perception (3,4 Credit Hours)
A systematic philosophical and interdisciplinary examination of major theories of perception.

PHIL 6180 Mental Representation (3,4 Credit Hours)
A survey and evaluation of major theories of mental representation drawing on recent work in philosophy of mind, cognitive psychology, linguistics, semantics, and artificial intelligence. Major topics: linguistic representation, the language of thought, propositional attitudes, mental imagery, and innate representations.

Prerequisite(s): PHIL 1040, 3740, 3750, 3760 or 3780.

PHIL 6190 Philosophy of Mind (3 Credit Hours)
The mind-body problem, knowledge of other minds, and problems about thought, action, and feelings are discussed in the light of readings from classical and contemporary sources.

Prerequisite(s): PHIL 1210 and 2020.

PHIL 6200 Topics in Plato (3,4 Credit Hours)
An in-depth study of one or more of the Platonic dialogues, Republic, Theaetetus, Sophist, Statesman, Parmenides, Philebus or Timaeus, with reading and discussion of related dialogues as background.

Prerequisite(s): PHIL 2010 or 2110.

PHIL 6210 Topics in Aristotle (3,4 Credit Hours)
An in-depth study of one or more of the Aristotelian treatises, Metaphysics, Physics and De anima, Ethics, Politics, or the logical writings.

PHIL 6250 Locke's Moral & Political Phil (3 Credit Hours)
A detailed critical examination of the political philosophy of John Locke. Locke is arguably the pivotal figure in the development of modern individualist liberalism. Both historically and philosophically, the course examines Locke's doctrines of natural law, freedom, property rights, contractually grounded government, rights of resistance and rebellion, and the rights of toleration.

PHIL 6260 Rationalism (3 Credit Hours)
Descartes, Spinoza, and/or Leibniz examined individually and as contributors to one of modern philosophy's historical developments.

PHIL 6270 Empiricism (3 Credit Hours)
Locke, Berkeley and/or Hume examined both individually and as contributors to one of modern philosophy's historical developments.

PHIL 6280 Kants Critique of Pure Reason (3 Credit Hours)
An examination of Kant's Critique of Pure Reason. Topics include Kant's epistemology (e.g. his Copernican Revolution), as well as his metaphysics (e.g. freedom and the self).

PHIL 6290 Kant's Ethics (3,4 Credit Hours)
An examination of Kant's Groundwork and Critique of Practical Reason. Topics include Kant's view of the nature of morality, the role of the Categorical Imperative, as well as his views on worth, respect, dignity and autonomy.
PHIL 6300  Philosophies of India  (3 Credit Hours)
PHIL 6310  Hegel  (3 Credit Hours)
A close reading and critical examination of selected major works of Hegel.

PHIL 6330  Nietzsche  (3 Credit Hours)
A close reading and critical examination of selected major works of Nietzsche.

PHIL 6340  Heidegger  (3 Credit Hours)
A close reading and critical examination of selected major works of Heidegger.

PHIL 6340  Heidegger  (3 Credit Hours)

PHIL 6420  Heidegger  (3 Credit Hours)

PHIL 6490  17th Century Political Philoso  (3 Credit Hours)
This course will focus on the most important political philosophers of the 17th century, e.g., Hugo Grotius, Thomas Hobbes, and John Locke--authors who founded and set the agenda for much of modern western political philosophy. A central theme of the course will be the attempts by these authors to reconcile the autonomous pursuit by individuals of their own self-preservation and happiness with moral order and social cooperation. What sort of state (if any) with what sort of authority (if any) facilitates individual freedom, justice, and social order? (Optional Capstone)

PHIL 6510  Theories of Economic Justice  (3,4 Credit Hours)
A study of alternative conceptions of economic justice including the conceptions offered by utilitarians, contractarians, natural rights theorists, and Marxists. Other topics include the just distribution of natural resources and the choice between command and market economies.

PHIL 6520  Environmental Ethics  (3 Credit Hours)
Examination of ethical issues regarding treatment of nonhuman beings. Major topics include moral extensionism, as well as critiques of attempts to extend human-centered moral doctrines to nonhuman beings.

PHIL 6530  Philosophy and Gender  (3 Credit Hours)
An examination of conceptions of gender in the history of philosophy and in contemporary philosophic discussions. Topics may include relations between gender and identity, ethics, law, and science.

PHIL 6540  Global Justice  (3 Credit Hours)
A study of the justice of relations among nations and among individuals across national boundaries. Topics include international distributive justice, the ownership of global resources, the morality of secession, just war, and terrorism.

PHIL 6620  Philosophical Logic  (3 Credit Hours)
Central topics in philosophical logic are covered, including reference, predication, vagueness, logical form, counterfactuals, propositional attitudes, logical truth, and paradoxes.

PHIL 6730  Con Empirical Pol Theory  (3 Credit Hours)

PHIL 6740  Contemporary Polit Phil  (3 Credit Hours)
An analysis of contemporary approaches to normative concepts in politics, concentrating on political philosophers such as Arendt, Marcuse, Oakeshott, Rawls, and Strauss.

PHIL 6750  Utilitarianism  (3,4 Credit Hours)
An examination of the utilitarian tradition and the modern debate over whether some version of utilitarianism is likely to serve as the most adequate moral and political philosophy.

PHIL 6760  Mil's Util Liberalism  (3 Credit Hours)
A study of the liberal moral and political philosophy of John Stuart Mill, including his utilitarian ethics, doctrine of individual liberty, theory of constitutional democracy, and analysis of capitalism versus socialism.

PHIL 6890  Service Learning: PHIL 6130  (0-1 Credit Hours)

PHIL 6920  Independent Study  (1-3 Credit Hours)

PHIL 6930  Special offerings  (1-4 Credit Hours)
For specific offering, see the Schedule of Classes. For description, consult department.

PHIL 6931  Special Topics  (3,4 Credit Hours)

PHIL 6935  Special Topics  (3 Credit Hours)

PHIL 6940  Special offerings  (3,4 Credit Hours)
For specific offering, see the Schedule of Classes. For description, consult department.
PHIL 6941 Special Offerings (3,4 Credit Hours)
PHIL 7020 Metaphysics (3 Credit Hours)
PHIL 7030 Epistemology (3 Credit Hours)
PHIL 7040 The Mind At Work (3 Credit Hours)
PHIL 7050 Explanation & Interpret (3 Credit Hours)
PHIL 7060 Ethical Theory (3 Credit Hours)
PHIL 7080 Sem Phil of Language (3 Credit Hours)
PHIL 7100 Game Theory (3 Credit Hours)
PHIL 7150 Phil Psychol (3 Credit Hours)
PHIL 7160 Set Theory (3 Credit Hours)
PHIL 7170 Logical Positivism (3 Credit Hours)
PHIL 7200 Topics in the Hist of Philo (3 Credit Hours)
PHIL 7210 Aristotle (3 Credit Hours)
PHIL 7280 Kant Critique Pure Reaso (3 Credit Hours)
PHIL 7290 Kant's Later Writings (3 Credit Hours)
PHIL 7300 Hegel (3 Credit Hours)
PHIL 7310 Kierkegaard (3 Credit Hours)
PHIL 7320 Wittgenstein (3 Credit Hours)
PHIL 7340 Pragmatism (3 Credit Hours)
PHIL 7370 Peirce (3 Credit Hours)
PHIL 7380 William James (3 Credit Hours)
PHIL 7390 Phenomenology (3 Credit Hours)
PHIL 7410 Topics In Am Phil (3 Credit Hours)
PHIL 7420 Heidegger (3 Credit Hours)
PHIL 7430 Whitehead (3 Credit Hours)
PHIL 7440 Continental Philosophy (3 Credit Hours)
PHIL 7450 Dewey (3 Credit Hours)
PHIL 7480 Nietzsche (3 Credit Hours)
PHIL 7490 Topics Moral Poli Philo (3 Credit Hours)
PHIL 7500 Recent Soc & Polit Phil (3 Credit Hours)
PHIL 7510 Contemp Issues In Logic (3 Credit Hours)
PHIL 7880 Writing Intensive: PHIL 7200 (1 Credit Hour)
PHIL 9980 Masters Research (0 Credit Hours)
PHIL 9990 Dissertation Research (0 Credit Hours)

Physics (PHYS)

PHYS 1011 Great Ideas in Sci & Tech (4 Credit Hours)
For non-scientists. Basic principles of science, applications and their relevance to our world. Typically includes astronomy, universe, Newtonian mechanics, energy and applications, symmetry in nature, order and disorder, electricity and applications, quantum mechanics, atoms and molecules, DNA, computer technology, and ethical issues. Laboratory.

Corequisite(s): PHYS 1010.

PHYS 1015 Materials Science & Eng & Lab (3 Credit Hours)
This summer session will focus on the field of Materials, which is an interdisciplinary field applying the properties of matter to various areas of science and engineering. This two-week (ten-day) course is intended for high school students who wish to explore and stimulate their interest in the materials sciences and engineering. The course consists of rotations between six materials science research laboratories in the Department of Physics and Engineering Physics. Each rotation combines lectures with hands-on laboratory activities to excite and introduce students to contemporary methods and issues in superconductivity, optics and lasers, biomaterials, nanomaterials, nanotechnology, and energy harvesting materials and technologies. Emphasis is placed on demonstrating basic principles and hands-on student involvement. Laboratory activities will be supervised by Tulane faculty members and graduate students.

PHYS 1050 Physics for Architects (3 Credit Hours)
A non-calculus course in classical physics stressing the fundamental physical laws and their application to architecture. Main topics include Newtonian mechanics with an emphasis on equilibrium applications, elasticity, fluids, and thermal processes. Credit not given for PHYS 1050 and PHYS 1210 or 1310. Does not count towards the B.S. Physics or B.S.E. Engineering Physics degrees.

PHYS 1210 Introductory Physics I (4 Credit Hours)
A non-calculus course in classical physics stressing the fundamental physical laws. Newtonian mechanics, oscillations, and classical waves normally are treated in 1210. A weekly laboratory is included; the laboratory includes a review of techniques of problem solving, as well as experiments in classical physics. Not open for credit to students who have completed 1310. Does not count towards the B.S. Physics or B.S.E. Engineering Physics degrees.

Corequisite(s): PHYS 1211.

PHYS 1211 Introductory Physics I Lab (0 Credit Hours)
Lab section for PHYS 1210

Corequisite(s): PHYS 1210.

PHYS 1220 Introductory Physics II (4 Credit Hours)
A continuation of PHYS 1210. Electricity and magnetism, optics, and thermal phenomena. A weekly laboratory is included. Not open for credit to students who have completed 1320. Does not count towards the B.S. Physics or B.S.E. Engineering Physics degrees.

Prerequisite(s): PHYS 1210, PHYS 1220.

PHYS 1221 Introductory Physics II Lab (0 Credit Hours)
Lab section for PHYS 1220

Corequisite(s): PHYS 1220.
PHYS 1310 General Physics I (4 Credit Hours)
Prior or concurrent study in calculus is required. A calculus-based course in classical physics designed primarily for physical science and engineering majors. Emphasis is on understanding basic principles and solving problems. A weekly laboratory is included. The laboratory includes a review of techniques for problem solving, as well as experiments in classical physics.

Prerequisite(s): MATH 1150*, 1210* or 1310*.
* May be taken concurrently.
Corequisite(s): PHYS 1311.

PHYS 1311 General Physics I Lab (0 Credit Hours)
Lab section for PHYS 1310

Corequisite(s): PHYS 1310.

PHYS 1320 General Physics II (4 Credit Hours)
A continuation of PHYS 1310. Emphasis on electricity and magnetism, with selected topics in optics and modern physics. The laboratory includes a review of techniques for problem solving, as well as experiments in classical physics.

Prerequisite(s): PHYS 1310, 1310, 1310, 1310 or 1310.
Corequisite(s): PHYS 1321.

PHYS 1321 General Physics II Lab (0 Credit Hours)
Lab section for PHYS 1320

Corequisite(s): PHYS 1320.

PHYS 1890 Service Learning: PHYS 1320 (0-1 Credit Hours)

PHYS 1940 Transfer Coursework (3 Credit Hours)

PHYS 2350 Modern Physics I (3 Credit Hours)
Quantitative treatment of important topics of 20th-century physics, focused on special relativity and introductory quantum physics. Planck's and de Broglie's hypotheses, photons, the Bohr model, introduction to wave mechanics, the hydrogen atom, spatial quantization, spin, exclusion principle, multi-electron atoms. Prerequisites: PHYS 1210 and 1220 or 1310 and 1320, MATH 1210 and 1220 or equivalent.

Prerequisite(s): (PHYS 1210, 1210, 1210 or 1210) and (PHYS 1220, 1220 or 1220) or (PHYS 1310, 1310, 1310 or 1310) and (PHYS 1320, 1320, 1320 or 1320) and (MATH 1220, 1220, 1220, 1220, 1210, 1310, 1310 or 1310).

PHYS 2360 Modern Physics II (3 Credit Hours)
An overview of the major fields in modern physics. Quantum statistics. Diatomic molecules, electrons in metals, band theory of solids, superconductivity, properties of nuclei, radioactivity, nuclear reactions, interaction of particles with matter, elementary particles, the standard model and cosmology. Prerequisites: PHYS 2350.

Prerequisite(s): PHYS 2350, 2350, 2350 or 2350.

PHYS 2890 Service Learning: PHYS 2910 (0-1 Credit Hours)
Service learning.

PHYS 2910 Intro to Physics Pedagogy (1 Credit Hour)
Introduction to the theory and practice of teaching physics courses through workshops, observations and assisting teachers at local schools with lectures and/or classroom demonstrations. Prerequisites: PHYS 1210 and 1220 or 1310 and 1320.

Prerequisite(s): (PHYS 1210 or 1310) and (PHYS 1220 or 1320).

PHYS 2940 Transfer Coursework (3 Credit Hours)

PHYS 3150 Intro To Neutron Science (3 Credit Hours)
An introduction to the theory and applications of neutron scattering, neutron optics, neutron interferometry and neutron beta decay. This course explores the many uses of thermal and cold neutron beams to study condensed matter, nuclear, molecular and biological systems; test fundamental principles of quantum mechanics and advance the frontier of particle physics. Prerequisites: MATH 2210, MATH 2240 or equivalent; PHYS 2350, PHYS 2360 or equivalent.

Prerequisite(s): MATH 2210, 2240, PHYS 2350 or 2360.

PHYS 3170 Computnl Physics & Engr (3 Credit Hours)
An introduction to the use of computational methods in physics and engineering. Writing computer code and using data visualization techniques to help solve experimental and theoretical problems. Data analysis and modeling, Monte Carlo simulations, numerical differentiation and integration, ordinary and partial differential equations, electrostatics nonlinear dynamics and chaos, fast Fourier transform, noisy signal processing, quantum spectra, thermodynamics. Prerequisites: PHYS 2350 and MATH 2210 or 2240.

Prerequisite(s): PHYS 2350 and (MATH 2210 or 2240).

PHYS 3210 Molec Biophysics & Polymer Phy (3 Credit Hours)
An introduction to the physics of polymers and the physical bases underlying the biofunctionality of macromolecules in living systems. Themes of molecular self-organization, conformation, complementarity, and information content are emphasized and related to protein, lipid, and nucleic acid structure and processes. Introduction to scattering and other spectroscopic techniques. Prerequisites: PHYS 2350 or equivalent, CHEM 1070 or equivalent, and MATH 1220 or equivalent.

Prerequisite(s): PHYS 2350 and CHEM 1070 and (MATH 1220 or 1310).
PHYS 3230 Quantum Information Sci & Eng (3 Credit Hours)
This survey course introduces students to the new world of quantum information, quantum communication, and quantum computing. The course is intended for advanced undergraduates and beginning graduate students in physics, engineering, and mathematics. Topics include: Quantum states, operators, and linear algebra; Bits and qubits; Ensembles and density operators; Unitary transformations; Gates and circuits; Information and entropy; POVM measurement; Multipartite systems; Bell inequality, Bell states, and non-locality; Measures of entanglement; Quantum communication and cryptography; Teleportation; Superdense coding; Quantum noise and error correction; Classical and quantum computational complexity; Quantum algorithms; Deutsch-Jozsa, Grover, Shor; DiVincenzo criteria; Physical realizations of quantum computers: trapped ions, solid state qubits; Quantum optics and quantum internet; Topological quantum computation; Quantum biology.

Prerequisite(s): PHYS 2350 and (MATH 2210, 2210, 2210, 2210 or 2240).

PHYS 3290 Computation Material Sci & Eng (3 Credit Hours)
Computational Materials Science and Engineering: This course will cover theories, implementations, and applications of common quantum mechanical software for computational study of materials. State-of-the-art computational methods will be introduced for materials research with emphasis on the atomic and nano scales and hands-on modeling on PCs and supercomputers. The class is aimed at beginning graduate students and upper level undergraduate students, and will introduce a variety of computational methods used in different fields of materials science. The main focus is quantum mechanical methods with a short overview of atomistic methods for modeling materials. These methods will be applied to the properties of real materials, such as electronic structure, mechanical behavior, diffusion and phase transformations. Computational design of materials using materials database via high-throughput and machine learning methods will also be covered.

PHYS 3310 Quantum Optics (3 Credit Hours)
Quantum optics is an emerging field of physics that involves the study of semi-classical and quantum-mechanical models of the electromagnetic field, as well as its interaction with atoms and molecules. These nonclassical and quantum features of light have been shown to break the barriers imposed by classical physics in a variety of fields, such as communication, interferometry, computation, and imaging. The main emphasis of this course will be to introduce these nonclassical features, quantize the electromagnetic field, introduce fundamental tests of quantum mechanics by use of optics, and explore the applications of nonclassical concepts such as entanglement.

Prerequisite(s): PHYS 1320.

PHYS 3350 Kinetics of Material Systems (3 Credit Hours)
This course covers all aspects of kinetics in material systems. Topics include thermodynamics, steady state and time dependent diffusion, phase transformations, statistical mechanics, structure evolution, boundaries and interfaces, solidification, and precipitation effects.

Prerequisite(s): ENGP 3120.
PHYS 3450  Elem Particle Physics  (3 Credit Hours)
An introduction to modern elementary particle physics, with an emphasis on the Standard Model, its phenomenology, and dynamics. The Standard Model explains, in principle and with remarkable success, virtually all phenomena that are observed in nature except gravity. The course begins with a qualitative examination of the electromagnetic, strong, and weak interactions and an introduction to the elementary particles through the use of Feynman diagrams. This is followed by relativistic kinematics, the quantum theory of angular momentum and spin, discrete symmetries, and bound states of leptons and quarks, with a focus on the hadrons. Finally the Dirac equation, the Feynman calculus, and the mathematical tools needed to calculate basic decay lifetimes and cross sections involving the electromagnetic and weak interactions are developed and applied.

Prerequisite(s): (PHYS 1310, 1310, 1310 or 1310) and PHYS 1320, 2350 and 2360 and (MATH 2210, 2210, 2210, 2210 or 2210).

PHYS 3530  Advanced Laboratory  (3 Credit Hours)
Advanced experiments in modern physics, particularly nuclear physics, emphasizing research techniques and analysis of data using computers. Prerequisites: PHYS 2350 or approval of instructor.

Prerequisite(s): PHYS 2350, 2350, 2350 or 2350.

PHYS 3560  Photonic Materials & Devices  (3 Credit Hours)
This course will cover the theory, design, fabrication, characterization, and application of photonic materials and devices. The course will start with a review of the fundamentals of photonics, including ray optics, wave optics, and nanophotonics/quantum optics. The course will then focus on light-matter interactions and photonic materials, including dielectrics, semiconductors, metals, metamaterials, and photonic crystals. Using these principles and materials, we will explore a number of device architectures, including LEDs, lasers, photodetectors, photovoltaics, etc. We will then discuss fabrication methods for making these materials and devices and common optoelectronic characterization techniques. The course will conclude with exploration of cutting edge topics in photonics research. Prerequisites: PHYS 2350 and PHYS 2360 (or equivalent) or instructor approval.

Prerequisite(s): PHYS 2350 and 2360.

PHYS 3600  Nanoscience & Technology  (3 Credit Hours)
Nanoscience and technology is often branded the science of the 21st century. It has been promised that nanotechnology will have similar stimulating effects on the world’s economy and society as the industrial-and microelectronics-revolution. Nanoscience is an interdisciplinary effort with the aim to manipulate and control matter at length scales down to single molecules and atoms and thus to create materials and devices with novel properties. With diminishing dimensions material properties are being governed by quantum mechanics. The description and exploitation of quantum phenomena in novel devices is the quintessence of nanophysics. Consequently, the main emphasis of this course is to give an overview of the physics of low dimensional solid state systems. This course is supplementary to courses in solid state physics and surface science but can be taken independently. Prerequisites: PHYS 2350.

Prerequisite(s): PHYS 2350, 2350, 2350 or 2350.

PHYS 3620  MicroFab and Nanotech  (3 Credit Hours)
Nanomicro-electromechanical devices (N/MEMS) require knowledge of a broad range of disciplines, from the fundamental physics of mechanics and electromagnetism to practical nano/microfabrication processes and techniques. This course is opened for the introduction of this interdisciplinary engineering field, using examples and design projects drawn from real-word N/MEMS applications. Lectures will cover nano/micro-fabrication technologies, material properties at different scaling, physical principle and behaviors of nano/microstructural behavior, piezoresistive and capacitive sensing, electrostatic actuation, fluid damping, noise, and feedback systems.

Prerequisite(s): PHYS 2360.

PHYS 3630  Electromagnetic Theory  (3 Credit Hours)
Electrostatic fields in a vacuum, dielectric materials, solutions to Laplace’s and Poisson’s equations, currents, magnetic fields, vector potentials, electromagnetic induction, relation to Special Relativity, Maxwell’s equations, and the properties of classical electromagnetic waves. Prerequisites: PHYS 1310, PHYS 1320, and Mathematics 2210 or equivalent.

Prerequisite(s): (PHYS 1310, 1310, 1310 or 1310) and (PHYS 1320, 1320, 1320 or 1320) and (MATH 2210, 2210, 2210, 2210 or 2210).

PHYS 3660  Special Topics  (1-3 Credit Hours)
Special Topics.

PHYS 3700  Electnc Prop of Materls  (3 Credit Hours)
Quantum physics, electronics and energy bands in crystals, electronic transport in materials, photoconductivity, Hall effect, quantum Hall effect, superconductors and their applications, magnetic properties of material and their applications, thermal properties of materials and dielectric properties of materials. Prerequisites: PHYS 2350/2360 or instructor approval.

Prerequisite(s): PHYS 2350, 2350, 2350 or 2350 and (PHYS 2360, 2360 or 2360).

PHYS 3720  Mechanic Behavior of Materials  (3 Credit Hours)
A course covering the general foundations of elasticity and plasticity theory, dislocation theory, and strengthening mechanisms. Basics of materials forming processes are studied. An overview for non-destructive testing of materials is taught. The course emphasis is on destructive mechanical testing of materials including; tension, torsion, hardness, fatigue and creep tests, in addition to fracture mechanics and failure analysis.

Prerequisite(s): (ENGP 3120 or 3120) and (ENGP 2430 or 2430) and (MATH 2210 or 2210).

PHYS 3740  Classical Mechanics  (3 Credit Hours)
Newtonian mechanics, oscillations, central force motion, special theory of relativity, dynamics of rigid bodies, and the Lagrangian formulation of classical mechanics. Prerequisites: PHYS 1310, 1320, and MATH 2210.

Prerequisite(s): PHYS 1320, 1320, 1320 or 1320 and (MATH 2210, 2210, 2210 or 2210).
PHY 3760 Thermodynamics of Materials (3 Credit Hours)
The course covers the general foundation of both statistical thermodynamics and classical thermodynamics, including thermodynamics laws, auxiliary functions, and behavior of gases and solutions. In addition, special attention is dedicated to equilibria of reactions and phase diagrams of materials. Computer-based programs will be used to solve thermodynamics problems for complicated materials.

PHY 3800 Physics Colloquium (1 Credit Hour)
A series of undergraduate and faculty seminars emphasizing topics and points of view not covered in the standard curriculum, but which are nonetheless important to the education of a physicist. Notes: Required of all majors. Prerequisites: Junior standing or departmental approval.

PHY 3880 Writing Practicum (1 Credit Hour)
Writing Practicum. Notes: Does not count toward Physics courses or electives for the Physics major. Prerequisites: Successful completion of the First-Year Writing Requirement. Corequisites: Three-credit departmental course.

PHY 3890 Service Learning (0-1 Credit Hours)
Students complete a service activity in the community in conjunction with the content of a three-credit corequisite course.

PHY 3940 Transfer Coursework (1-4 Credit Hours)
Transfer Coursework.

PHY 4230 Thermal Physics (3 Credit Hours)
A study of the physical properties of matter where temperature is an important variable. The laws of thermodynamics, equations of state, thermodynamic potentials. Kinetic theory of gases. Elementary statistical postulates. Ensembles, the partition function. Entropy, phase transitions. Prerequisites: PHYS 1210 and 1220, or 1310 and 1320.

Prerequisite(s): (PHYS 1210, 1210, 1210 or 1210) and (PHYS 1220, 1220, 1220 or 1220) or (PHYS 1310, 1310, 1310 or 1310) and (PHYS 1320, 1320, 1320 or 1320).

PHY 4470 Intro Quantum Mechanics (3 Credit Hours)
The postulates of quantum mechanics, Schroedinger equation, operator methods, angular momentum, fermion and boson systems, and Heisenberg formulations, applications to simple physical systems. Prerequisites: PHYS 2350 and MATH 2210.

Prerequisite(s): (PHYS 2350, 2350, 2350 or 2350) and (MATH 2210, 2210, 2210 or 2210).

PHY 4650 Optics (3 Credit Hours)
Geometrical, physical and quantum optics, with an emphasis on the classical electromagnetic aspects of optics pertaining to scattering, reflection, refraction, dispersion, polarization and interference. Applications to optical instruments, spectroscopy, interferometry, and Fourier optics. Prerequisites: PHYS 1210 and 1220, or PHYS 1310 and PHYS 1320, integral and differential calculus. PHYS 3630 recommended but not required.

Prerequisite(s): (PHYS 1320, 1320, 1320 or 1320) and (MATH 2210, 2210, 2210 or 2210).

PHY 4660 Special Topics (1-3 Credit Hours)
Special Topics.

PHY 4910 Independent Studies (1-3 Credit Hours)
Independent Studies. Prerequisites: Approval of instructor and chair of department.

PHY 4920 Independent Studies (1-3 Credit Hours)
Independent Studies. Prerequisites: Approval of instructor and chair of department.

PHY 4940 Transfer Coursework (1-4 Credit Hours)
Transfer Coursework.

PHY 4990 Honors Thesis (3 Credit Hours)
Honors thesis research, first semester. Register in department.

PHY 5000 Honors Thesis (4 Credit Hours)
Honors thesis research, second semester. Register in department.

PHY 5380 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

PHY 5390 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

PHY 6010 Techniques Theor Phys I (3 Credit Hours)
Mathematical techniques used in theoretical physics. Topics include partial differential equations, orthogonal coordinate systems, separation of variables, introduction to ordinary differential equations, series solutions and convergence; Sturm Liouville theory, eigensystems and orthogonal functions; complex variables, Taylor and Laurent series, contour integration, integration by steepest descents, and conformal mappings.

PHY 6020 Techniques Theor Phys II (3 Credit Hours)

Prerequisite(s): PHYS 6010, 6010, 6010, 6010, 6010, 6010 or 6010.

PHY 6070 Astrophysics (3 Credit Hours)

PHY 6150 Intro To Neutron Science (3 Credit Hours)
An introduction to the theory and applications of neutron scattering, neutron optics, neutron interferometry and neutron beta decay. This course explores the many uses of thermal and cold neutron beams to study condensed matter, nuclear, molecular and biological systems; test fundamental principles of quantum mechanics and advance the frontier of particle physics.
PHYS 6170 CompuTL Physics & Engr (3 Credit Hours)
An introduction to the use of computational methods in physics and engineering. Writing computer code and using data visualization techniques to help solve experimental and theoretical problems. Data analysis and modeling, Monte Carlo simulations, numerical differentiation and integration, ordinary and partial differential equations, electrostatic nonlinear dynamics and chaos, fast Fourier transform, noisy signal processing, quantum spectra, thermodynamics.

PHYS 6210 Molec Biophyscis & Polymer Phy (3 Credit Hours)
An introduction to the physics of polymers and the physical bases underlying the biofunctionality of macromolecules in living systems. Themes of molecular self-organization, conformation, complementarity, and information content are emphasized and related to protein, lipid, and nucleic acid structure and processes. Introduction to scattering and other spectroscopic techniques.

PHYS 6230 Quantum Information Sci & Eng (3 Credit Hours)
This survey course introduces students to the new world of quantum information, quantum communication, and quantum computing. The course is intended for advanced undergraduates and beginning graduate students in physics, engineering, and mathematics. Topics include: Quantum states, operators, and linear algebra; Bits and qubits; Ensembles and density operators; Unitary transformations, Gates and circuits; Information and entropy; POVM measurement; Multiparticle systems; Bell inequality; Bell states and non-locality; Measures of entanglement: Quantum communication and cryptography; Teleportation, Superdense coding, Quantum noise and error correction; Classical and quantum computational complexity; Quantum algorithms; Deutsch-Jozsa, Grover, Shor; DiVincenzo criteria; Physical realizations of quantum computers; trapped ions, solid state qubits; Quantum optics and quantum internet; Topological quantum computation; Quantum biology.

PHYS 6300 General Relativity (3 Credit Hours)

PHYS 6310 Quantum Optics (3 Credit Hours)
Quantum optics is an emerging field of physics that involves the study of semi-classical and quantum-mechanical models of the electromagnetic field, as well as its interaction with atoms and molecules. These nonclassical and quantum features of light have been shown to break the barriers imposed by classical physics in a variety of fields, such as communication, interferometry, computation, and imaging. The main emphasis of this course will be to introduce these nonclassical features, quantify the electromagnetic field, introduce fundamental tests of quantum mechanics by use of optics, and explore the applications of nonclassical concepts such as entanglement.

PHYS 6450 Elem Particle Physics (3 Credit Hours)
An introduction to modern elementary particle physics, with an emphasis on the Standard Model, its phenomenology, and dynamics. The Standard Model explains, in principle and with remarkable success, virtually all phenomena that are observed in nature except gravity. The course begins with a qualitative examination of the electromagnetic, strong, and weak interactions and an introduction to the elementary particles through the use of Feynman diagrams. This is followed by relativistic kinematics, the quantum theory of angular momentum and spin, discrete symmetries, and bound states of leptons and quarks, with a focus on the hadrons. Finally the Dirac equation, the Feynman calculus, and the mathematical tools needed to calculate basic decay lifetimes and cross sections involving the electromagnetic and weak interactions are developed and applied.

PHYS 6600 Nanoscience & Technology (3 Credit Hours)
Nanoscience and technology is often branded the science of the 21st century. It has been promised that nanotechnology will have similar stimulating effects on the world's economy and society as the industrial-and microelectronics- revolution. Nanoscience is an interdisciplinary effort with the aim to manipulate and control matter at length scales down to single molecules and atoms and thus to create materials and devices with novel properties. With diminishing dimensions material properties are being governed by quantum mechanics. The description and exploitation of quantum phenomena in novel devices is the quintessence of nanophysics. Consequently, the main emphasis of this course is to give an overview of the physics of low dimensional solid state systems. This course is supplementary to courses in solid state physics and surface science but can be taken independently.

PHYS 6660 Special Topics (1-3 Credit Hours)
Special Topics.

PHYS 6700 Electrc Prop of Materls (3 Credit Hours)
Quantum physics, electronics and energy bands in crystals, electronic transport in materials, photoconductivity, Hall effect, quantum Hall effect, superconductors and their applications, magnetic properties of material and their applications, thermal properties of materials and dielectric properties of materials.

PHYS 6750 Modern Cosmology (3 Credit Hours)

PHYS 6940 Transfer Coursework (1-4 Credit Hours)
Transfer Coursework.

PHYS 7060 Theoretical Mechanics (3 Credit Hours)
Advanced studies of theoretical mechanics. Lagrangian and Hamiltonian methods. Integrable and non-integrable problems.
PHYS 7100 Statistical Mechanics (3 Credit Hours)
Advanced studies of statistical mechanics. Probability theory, random walks, statistical ensembles, entropy, quantum statistical mechanics and applications.

PHYS 7130 Solid State Physics (3 Credit Hours)
Advanced studies of solid state physics. Properties of the solid state, semiconductors, novel systems, applications.

PHYS 7160 Atomic/Molecular Physics (3 Credit Hours)
Advanced studies of atomic and molecular physics. The hydrogen, helium and many electron atoms. Diatomic and polyatomic molecules.

PHYS 7170 Quantum Mechanics I (3 Credit Hours)
Advanced studies of quantum mechanics. Quantization, probability, quantum wave functions, quantum entanglement. Two, three and multi-level quantum systems and applications.

PHYS 7180 Quantum Mechanics II (3 Credit Hours)
Continuation of PHYS 7170.

PHYS 7230 Electromagnetic Theory I (3 Credit Hours)
Advanced studies of electromagnetic theory. Maxwell’s equations and applications. Electric and magnetic fields and their properties. Applications.

PHYS 7240 Electro-Magnetic Thry II (3 Credit Hours)
Continuation of PHYS 7230.

PHYS 7310 Advanced Spec Problems (3 Credit Hours)

PHYS 7311 Advanced Special Problems (3 Credit Hours)

PHYS 7312 Advanced Special Problems (3 Credit Hours)

PHYS 7320 Adv Special Problems II (1-9 Credit Hours)

PHYS 7810 Seminar (3 Credit Hours)

PHYS 7820 Seminar (1 Credit Hour)

PHYS 7910 Research I (3 Credit Hours)
Individual research supervised by faculty.

PHYS 7920 Research II (3 Credit Hours)
Individual research supervised by faculty.

PHYS 7930 Research III (3 Credit Hours)
Individual research supervised by faculty.

PHYS 7940 Research IV (3 Credit Hours)
Individual research supervised by faculty.

PHYS 7951 Advanced Research I (3 Credit Hours)

PHYS 7952 Advanced Research II (3 Credit Hours)

PHYS 7990 Research (1-9 Credit Hours)
Individual research supervised by faculty.

PHYS 9980 Masters Research (3 Credit Hours)
Research toward completion of a masters degree.

PHYS 9990 Dissertation Research (3 Credit Hours)
Research toward completion of a doctoral degree.

**Physiology - Graduate (GPSO)**

GPSO 5520 Experimental Physiology (2 Credit Hours)

GPSO 6010 Medical Physiology (6 Credit Hours)

GPSO 6040 Human Physiology (6 Credit Hours)

**Poli Sci - American (POLA)**

POLA 2100 American Government (3 Credit Hours)
An introductory survey of government at the national level with emphasis on constitutional principles and significant contemporary trends and problems.

POLA 3010 Special Projects (3,4 Credit Hours)

POLA 3011 Special Projects (3 Credit Hours)

POLA 3012 Special Topics (3 Credit Hours)

POLA 3013 Special Topics (3 Credit Hours)

POLA 3020 Special Projects (3 Credit Hours)

POLA 3030 Special Topics (3 Credit Hours)

POLA 3031 Special Topics (3 Credit Hours)

POLA 3032 Special Topics (3 Credit Hours)

POLA 3110 State and Local Politics (3 Credit Hours)
This course examines the roles and responsibilities of state governments and the complex dynamics of state politics in the U.S. federal system. It uses a comparative state perspective to examine state government institutions, political behavior in the states, and the major areas of policy frequently addressed in the states.

POLA 3240 Public Policy (3 Credit Hours)
This course covers the policy making process for domestic policy in the United States. We will study the following questions: Why do some problems reach the political agenda and others do not? Who are the important actors in the policy process and what roles do they play? What are the values at stake with policy debates? What explains why certain solutions are offered and others are rejected? How do we know if a policy has been successful?
POLA 3270 Courts and Politics (3,4 Credit Hours)
Analysis of the political factors that influence courts, their staffing, their decisions, and their policymaking role. The interaction between legal policies and structures and political institutions and their development will be addressed.

POLA 3272 Big Easy Politics (3 Credit Hours)
The objective of this course is for students to examine the level of government with the greatest impact on the daily lives of Americans–local government. Specifically, we will focus on the politics, functions, and governmental structure of the City of New Orleans.

POLA 3280 Southern Politics (3 Credit Hours)
This class is designed to provide a comprehensive overview of Politics in the American South. The course focuses on both the distinctiveness of the region and the South's influence on the nation. The course selectively examines historical as well as contemporary issues related to the eleven states of the Old Confederacy.

POLA 3300 Race and American Politics (3 Credit Hours)

POLA 3880 Writing Intensive: POLA 3010 (1 Credit Hour)

POLA 3881 Writing Intensive: POLA 3280 (1 Credit Hour)
Corequisite(s): POLA 3220.

POLA 3882 Writing Intensive: POLA 3030 (1 Credit Hour)

POLA 3890 Service Learning: POLA 3170 (0-1 Credit Hours)

POLA 3891 Service Learning: POLA 3220 (0-1 Credit Hours)

POLA 3910 Independent Study (1-3 Credit Hours)
Independent study on a suitable topic, with consent of instructor

POLA 4010 Special Projects (3 Credit Hours)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4011 Special Projects (3 Credit Hours)
Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4012 Special Projects (3 Credit Hours)
Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4020 Special Projects (3 Credit Hours)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4110 Policy Research Shop (3 Credit Hours)
The Policy Research class creates a partnership between city government and Tulane students in order to address issues of concern to the city and increase students' civic engagement. In this course, the professor solicits policy topics from elected and appointed officials and bureaucrats and the students write policy briefs on these issue areas. In exchange for the policy brief, policy sponsors agree to allow the students to present their findings at an official forum, such as a city council meeting.

POLA 4120 Louisiana Politics (3 Credit Hours)
A review of topics in Louisiana politics, including right- and left-wing populism, campaign techniques, diversion of campaign funds and rewards for supporters, the culture of sociability, and the history of racial, regional, and religious cleavage. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4140 Urban Politics (3 Credit Hours)
This course is an introduction to urban politics in the United States. It will focus on problems of cities and discuss solutions to these problems, including the lack of formal authority and high rates of class, race, and ethnic heterogeneity and segregation. We will focus on the heritage of municipal government in the U.S., the development of their responsibilities, and the role of federal and state governments in municipal affairs. The course will also spend time discussing some of the solutions for residents of urban areas to try to advocate for change.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4150 Elections in America (3 Credit Hours)
Pre-requisites: POLA 2100 and POLS 2010 - The focus is on candidates, political parties, the Dress, consultants, and public opinion in elections and political campaigns. Covers presidential and congressional elections. Each semester, special attention is paid to a topic such as the economy, fundraising, activists, or campaign techniques.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4160 Political Parties (3 Credit Hours)
Pre-requisites: POLA 2100 and POLS 2010 - A study of theories of political parties in the United States and other democracies. The stress is on the electoral and governmental role of party organizations.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4170 The American Presidency (3 Credit Hours)
Pre-requisites: POLA 2100 and POLS 2010 - A study of the office of the President of the United States that includes both historical review and analysis of the Presidential role in our national government. A main focus of the course is on the relative importance of particular presidents and their leadership capacities and the limitations on the office itself.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4200 Congress (3 Credit Hours)
Pre-requisites: POLA 2100 and POLS 2010 - A study of the United States Congress with emphasis on its development, its internal structure, the relationship of the elected representatives to their constituents, and the legislative process itself.

Prerequisite(s): POLA 2100 and POLS 2010.
POLA 4210 Women and Politics (3,4 Credit Hours)
Pre-requisites: POLA 2100 and POLS 2010 - This course is an exploration of the role gender and sex have in politics, including voting, party activism, leadership, candidacy, holding office, and law-making. Special attention will be paid to the relationship between gender and political behavior, including political socialization, political attitudes, and public policy creation. Time will be spent on understanding what gender and sex mean in American politics, as well as the effect that disparate power has on political behavior.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4230 Environ Politics & Policy (3 Credit Hours)
Pre-requisites: POLA 2100 and POLS 2010 - This course is an examination of the process of environmental policymaking in the United States. We will evaluate how environmental politics and policymaking has progressed in the US and the current state of environmental policymaking. Using a case-study approach, we will examine current environmental problems for local and state governments and suggest policy solutions.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4250 Politics of Poverty Policy (3 Credit Hours)
Pre-requisites: POLA 2100 and POLS 2010 - This course covers the politics of poverty policy within the United States, including relevant approaches to the debates over poverty's causes consequences and solutions: the ways in which poverty is defined and measured and how this affects the policy alternatives: the state of economic inequality in the United States: American attitudes toward the poor and policies seeking to address poverty: and, an examination of case studies to redress poverty.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4260 Race, Sex, & Power (3 Credit Hours)
This course examines the role of race and sex based classification in the law of equal protection and focuses on the political actions and events that lead to legal remedies for discrimination. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4270 Constitutional Law (3 Credit Hours)
A study of the general powers and limits of the branches of the national government and the relationship among the levels of government, as this has affected civil rights and individual liberties under the Constitution. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4300 Interest Group Politics (3 Credit Hours)
Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4310 Interest Groups & Supreme Crt (3 Credit Hours)
This course will examine the role of interest groups in various aspects of the Supreme Court process, including the selection of justices, case selection, and judicial decision making. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4320 Women's Legislative Leadership (3 Credit Hours)
This course is an examination of gender in American legislatures. We will analyze both the processes and personnel of legislatures at the federal and state level of the United States in order to better evaluate the policy outcomes of these institutions. Students will be placed in a service role with one of the above sites for the length of the semester. Having students placed at several sites in the legislative process enables a more thorough analysis of how gender is interwoven into policymaking. Students will have a range of perspectives on the process as a consequence of their own placement and the experiences of their peers. Pre-requisites: POLA 2100 and POLS 2010. In lieu of pre-requisites please contact the instructor for approval to enroll. Mandatory 20-hour service learning component POLA 4891-11.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4350 Politics of Education Policy (3,4 Credit Hours)
This course examines education policy through the lens of U.S. Politics. In particular, we will consider what public schools should do for students: the changing nature of school governance: the major policy problems within primary and secondary education and how they have been defined: the groups that have had power in education policy debates: and where New Orleans fits into the larger national picture with regard to its education system*

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4450 Politics and Literature: US (3 Credit Hours)
Prof. Brox. Pre-requisite: POLA 2100. Study of political theme as presented in American literature. For majors only. Non-major junior and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4882 Writing Intensive: POLA 4011 (1 Credit Hour)

POLA 4890 Service Learning: POLA 4230 (0-1 Credit Hours)

POLA 4891 Service Learning: POLA 4012 (0-1 Credit Hours)

POLA 4892 Service Learning: POLA 4350 (0-1 Credit Hours)

POLA 5190 Semester Abroad (1-20 Credit Hours)

POLA 5380 Junior Year Abroad (1-20 Credit Hours)

POLA 5390 Junior Year Abroad (1-20 Credit Hours)

POLA 6120 Adv Campaigns & Elections (3 Credit Hours)
Prof. Brox. Pre-requisite: POLA 2100 and POLA 4150. This course explores advanced topics related to election campaigns in the United States. Particular attention will be paid to how campaigns are run and their impact on election outcomes. The course will introduce students to the paradigms and techniques that political scientists use to study campaigns and elections.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 6180 Pub Opinion Voting Behv (3 Credit Hours)
An analysis of opinion formation in political situations and a survey of voting behavior in the United States.

POLA 6200 Interpretations Amer Pol (3 Credit Hours)
This class examines alternative accounts of American politics, using research to explore competing views, different methodologies, and varying emphases. Each participant will be responsible for conducting a serious piece of research on his or her own.
POLC 3003 Women Leading Change (3 Credit Hours)
This course engages students in considering the real world dilemmas of women working in organizations and bringing about social change in those and other organizations. The course analyzes different theories and explanations of why so few leaders are women and how women can become leaders and lead as well. Case studies are used to examine the intricacies of organizations, the roles of women in various organizations, as well as the impact of organizations on policy (public, social, scientific, educational), government, and leadership in a global world. The course outcomes are an enhanced critical understanding of the dilemmas that are encountered by women leading change; the ability to evaluate and compose case studies at the intersection of leadership and gender; and the demonstration of critical thinking and problem-solving skills. Prerequisite: INTU 1000.

POLC 3010 Special Projects (1-6 Credit Hours)

POLC 3011 Special Projects (1-6 Credit Hours)

POLC 3012 Special Projects (1-6 Credit Hours)

POLC 3013 Special Projects (1-6 Credit Hours)

POLC 3030 Special Topics (3 Credit Hours)

POLC 3040 Special Topics (3 Credit Hours)

POLC 3200 African Politics (3 Credit Hours)
This course offers an introduction to Sub-Saharan African politics from the precolonial period to the contemporary era. We will examine colonialism and independence movements, new state creation, democratic breakdown and dictatorship, protest movements, civil wars and genocide, economic collapse and ethnicity politics. This course offers students an understanding of political theories and these theories' applicability to African politics.

POLC 3300 European Governments (3 Credit Hours)
This course is an introduction to the Post-World War II evolution of Western Europe. It examines four main dimensions: (i) the position of countries in the international political economy, (ii) the role of the state in the management of the economy as well as of the welfare system, (iii) the formal structure of the system of governance and policymaking, and (iv) the form of political participation and representation.

POLC 3310 Politics of Central America (3 Credit Hours)
This course will focus on the current state of Central American politics and society by analyzing the social and political forces at play in the region, the challenges of its economic development, and its external interaction with the United States and other world regions. Although regional in its scope the course will rely on individual countries to exemplify particular issues confronting the region.

POLC 3340 Middle East Comp Politics (3 Credit Hours)
Overview of domestic politics in the countries of the Middle East, focusing on different types of regime and recent political developments.

POLC 3350 Politics of Latin America (3 Credit Hours)
This course will focus on the current state of Latin American politics and society by analyzing the social and political forces at play in the region, the challenges of its economic development, and its external interaction with the United States and other world regions. Although regional in its scope the course will rely on individual countries from South America as well as Mexico to exemplify particular issues confronting the region.

POLC 3380 Asian Governments (3 Credit Hours)
This course focuses on the origins and dynamics of change in the newer nations of Asia, with a special emphasis on South Asia.

POLC 3410 Politics & Nationalism (3 Credit Hours)
A study of nationalism and ethnic conflict in the contemporary world. Both approaches to the study of nationalist conflict and case studies of conflict are included.

POLC 3881 Writing Intensive: POLC 3003 (1 Credit Hour)

POLC 3890 Service Learning: POLC 3003 (0-1 Credit Hours)

POLC 4010 Special Projects (3 Credit Hours)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLC 2300, POLS 2010 and POLA 2100.

POLC 4011 Special Projects (3 Credit Hours)

Prerequisite(s): POLC 2300, POLA 2100 and POLS 2010.

POLC 4012 Special Projects (3 Credit Hours)

Prerequisite(s): POLC 2300, POLA 2100 and POLS 2010.
POLC 4030  Comp Poli Econ Welfare State  (3 Credit Hours)
This course analyzes the historical development of, and contemporary change in, the welfare states of the advanced industrial countries. It focuses in particular on the political, economic, and institutional sources of outcomes in the post-war era and the post-1970 period. It investigates how and why welfare states have developed historically, how they vary cross-nationally, and how pressures on inherited arrangements are generating reforms in a variety of institutional and political contexts.
Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4200  The Politics of Rape  (3,4 Credit Hours)
Prerequisite(s): (POLs 2010 or 2010) and (POLC 2300, 2300, 2300 or 2300).

POLC 4300  Polt/Econ Devlp W Europe  (3 Credit Hours)
This course focuses on the historical antecedents of contemporary West Europe politics, with an emphasis on the social and economics bases of 20th-Century regime outcomes. It explores the political development of four major European countries - Great Britain, France, Germany, and Italy-with particular attention to contrasting responses to economic, social, and political challenges since the middle ages, including the commercialization of agriculture, the consolidation and dissolution of political regimes, democratization, and industrialization.
Prerequisite(s): POLC 2300, POLS 2010 and POLA 2100.

POLC 4310  Mexican Politics Govt  (3 Credit Hours)
An exploration of the Mexican political process and the historical developments leading up to its present structure. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.
Prerequisite(s): POLC 2300, POLA 2100 and POLS 2010.

POLC 4340  Chinese Politics Revo to Reform  (3 Credit Hours)
In this course we will analyze Chinese politics, paying particular attention to how the Chinese Communist Party came to power in 1949; how it ruled during the Mao era; and why it initiated economic reforms in 1978. We will also analyze enduring features of the Chinese polity that were instituted shortly after 1949 and persist to the current day, like the single-party system, campaigns, and ideology.
Prerequisite(s): POLC 2300, POLA 2100 and POLS 2010.

POLC 4350  Chinese Politics  (3 Credit Hours)
This course will examine the political and economic reforms that China has undertaken since 1978.
Prerequisite(s): POLC 2300.

POLC 4360  Russian Politics  (3 Credit Hours)
An examination of both formal and informal factors affecting the nature of the Russian political system. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.
Prerequisite(s): POLC 2300.

POLC 4390  Poverty & Development  (3 Credit Hours)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.
Prerequisite(s): POLC 2300.

POLC 4392  Controversies-Global Pub Hlth  (3 Credit Hours)
This class explores the politics of global public health, both in the sense of how politics affects global health governance and the ways in which global health issues fit into the discipline of political science.
Prerequisite(s): (POLC 2300 or POLI 2500) and POLS 2010.

POLC 4420  State Society Devlp Coun  (3 Credit Hours)
The course examines the global context of political development in Africa, Asia, and Latin America, the pursuit of economic development and democracy in these regions, and efforts at grass-roots reform.
Prerequisite(s): POLC 2300.

POLC 4470  Politics & Literature  (3 Credit Hours)
Study of the literature of political dissent, with particular focus on writers in communist and other authoritarian states.
Prerequisite(s): POLC 2300.

POLC 4510  Politics of the European Union  (3,4 Credit Hours)
The nation-states of the old Europe are becoming the member-states of a European Union. While founded to avoid a repetition of the horrors of the past, the New Europe is increasingly being viewed as a model for the future. This course provides an overview of the political institutions and the political economy of the European Union. Four main areas are examined: (i) formal institutions and institutional relations of the European Union (ii) critical junctures in the evolution of the European Union, (iii) issues of democratic deficits, and (iv) external relations and eastward enlargement.
Prerequisite(s): (POLC 2300, 2300, 2300 or 2300) and (POLS 2010 or 2010).

POLC 4520  Comparative State Building  (3 Credit Hours)
This course will explore the nature of state authority and the processes by which different types of states emerged at different moments in world history and in different regions of the world, as well as how the nature of states has evolved over time.
Prerequisite(s): POLC 2300.

POLC 4550  People's Politics of Latin Am  (3 Credit Hours)
Prerequisite(s): POLC 2300.

POLC 4590  Service Learning: POLC 4011  (0-1 Credit Hours)

POLC 5190  Study Abroad  (1-20 Credit Hours)

POLC 5380  Junior Year Abroad  (1-20 Credit Hours)

POLC 5390  Junior Year Abroad  (1-20 Credit Hours)

POLC 6010  Approaches to Global Dilemmas  (3 Credit Hours)
This course employs an interdisciplinary approach to explore the tensions and debates surrounding global capitalism in various world regions. Open to senior Altman Scholars only.

POLC 6100  Politics & Health  (3 Credit Hours)
This course approaches health care as a policy area, one in which a variety of actors attempt to influence the design and delivery of health services. We begin with an overview of the U.S. system, compare it to peer nations, and then analyze health policy issues in other world regions.
Prerequisite(s): (POLS 2010 or 2010) and (POLC 2300, 2300, 2300 or 2300).
POLC 6110 Comparative Political Econ (3 Credit Hours)
POLC 6120 Comparative Social Policy (3 Credit Hours)
This course focuses on welfare states and social policy across world regions including advanced industrialized countries, post-communist states, and developing nations. It examines explanations for variation in social policy provision across countries and regions and asks why welfare state reforms are more successful in some places than others. The course includes detailed study of key policy areas (pensions, healthcare, and education).

POLC 6410 Approaches L A Politics (3 Credit Hours)
Major approaches to the study of Latin American politics such as developmentalism, institutionalism, corporativism, bureaucratism, authoritarianism, and dependency theory.

POLC 6881 Writing Intensive: POLC 6410 (1 Credit Hour)
POLC 6882 Writing Intensive: POLC 6950 (1 Credit Hour)

POLC 6910 Authoritarianism (3 Credit Hours)
Despite the impressive gains that democracy has made over the past four decades, more than half of the countries in the world remain autocratic. What are the roots of this authoritarian resilience? We will first approach this question theoretically and by cases studies of countries in Europe and Eurasia (the Soviet Union; pre-1989 Eastern Europe; post Soviet Russia and Central Asia), Asia (China, North Korea, Taiwan), Latin America (Mexico, Cuba), and the Middle East (Iraq, Syria, Iran).

POLC 6930 Regime Change in Asia (3,4 Credit Hours)
In this course we will analyze the reasons for democratization in some Asian countries and will evaluate the prospects for regime change in countries that remain authoritarian. The first module of the course will focus on theories of authoritarian rule and of democratization. The second will examine several successful cases of democratization. The third module will focus on China, which represents a crucial case of regime durability. The fourth module of the course will assess the prospects for regime change in North Korea and several Southeast Asian autocracies.

Prerequisite(s): POLS 2010 and POLC 2300.

POLC 6950 Special Topics (3,4 Credit Hours)
Prerequisite(s): POLS 2010 and POLC 2300.

POLC 6951 Special Topics (3 Credit Hours)

POLC 7315 Sem in Comparative Politics (3 Credit Hours)

Poli Sci - General (POLS)
POLS 1010 Introduction To Politics (3 Credit Hours)
An introduction to the principles and practice of political life in a variety of domestic and international contexts. Open to freshmen only. Each 1010 section has a limited enrollment of no more than 20 students. A paper is required and is assigned on a tutorial basis with individual student-instructor conferences.
The Globalization and Politics course examines diverse aspects of globalization and their effects on politics. The course begins with the analyses of the debate between globalists and anti-globalists, followed by the study of the economic effects of globalization and increase in capital and labor mobility. The issues of global inequality, global civil society, North-South gap and global governance are also addressed. The course provides answers to the questions about the impact of global culture and growing influence of high-tech global flows in special social networking.

Global War on Terrorism (3 Credit Hours)
The course will ask student to examine broad questions about the nature of the contemporary world in order to understand the roots of modern terrorism, including its historical, philosophical and political background. It will also discuss and evaluate the various counterterrorism policies developed by the United States and elsewhere to address terrorist violence. Prerequisites: POLI 3450, <br/>

International Organizations (3 Credit Hours)
A systematic study of attempts to modify the international system through multilateral organization.

International Political Economy (3 Credit Hours)
Survey of traditional and recent theories and approaches to the study of international political economy. Emphasis will be given to the microfoundations for macromodels such as liberalism, Marxism, and realism. Topical areas will include monetary management, trade, and multinational corporations.

Conflict Mgmt in Arab-Israeli (2 Credit Hours)
This course is part of the Mandel-Palagye Program for Middle East Peace. It will introduce students to a range of theories and experiences exploring ways to resolve violent conflict, and conditions to build sustainable peace, with a focus on the Arab-Israeli conflict.

Causes & Prevent Intl War (3 Credit Hours)
This course surveys the causes of war among nations. The course examines theories of war causation, and tests these out on historical case studies from the 20th century. The lessons of the past will be applied to important contemporary questions: Is the postwar peace among the great powers permanent? What policies can help reduce the likelihood of future war? Can 20th century theories explain 21st century conflicts? Upon completion of this course, students will be familiar with many of the factors that seem to cause, exacerbate, or lessen military conflict between nation-states. Students will be able to apply these factors in examining real-world scenarios.

Service Learning: POLI 3040 (0-1 Credit Hours)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLI 2500 and POLS 2010.

Special Projects (3 Credit Hours)
Prerequisite(s): POLI 2500 and POLS 2010.
POLI 410 Peace Studies & Conflict Mgmt (3 Credit Hours)
Peace Studies is often defined as the study of conflict resolution through nonviolent means. This course will introduce students to a range of theories and experiences exploring ways to resolve violent conflicts, with a focus on intrastate war, and conditions to build sustainable peace in nations that have seen armed conflict. Taking an interdisciplinary approach by including readings from psychology, anthropology, international relations and more, we will consider theoretical debates regarding the roots of conflicts and how these interpretations affect the choice of conflict management tools. Then we will study various attempts of peacemaking, ranging from mediation to nonviolent resistance, nation-building to human rights regimes. Reflecting on both evidence and theory the course will give students an understanding of the strengths and weaknesses of current approaches to conflict management and peace building. Pre-requisites: POLI 2500, POLS 2010

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4410 International Law (3 Credit Hours)
This course provides an introduction to basic principles of international law and how it is created, implemented, and enforced. Students will learn what forms of law make up international law; how international law is made and by whom; to whom international law applies; and the specific rules of international law in various subject areas. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4520 Intell. & Covert Ops. (3 Credit Hours)
The class examines the uses of intelligence and clandestine operations as strategies affecting international relations from the end of World War II to the present. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4530 American Foreign Policy (3 Credit Hours)
Theory and practice of American foreign policy. Emphasis is on major issues in United States diplomacy and on basic ideas governing American foreign policy.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4600 Latin Am Intl Relations (3,4 Credit Hours)
This course deals with relations among Latin American nations as well as those with the United States, Europe, Japan, and multinational institutions. This class will cover the international aspects of issues such as trade, security, human rights, immigration, and environmental politics as they relate to Latin America.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4620 Global Envirnmnt Poltics (3 Credit Hours)
An examination of the political dimensions of international environmental problems. The course will include investigation and analysis of the causes, consequences, and potential solutions to a range of environmental problems.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4630 Strategy & Politics (3,4 Credit Hours)
The focus of this course is grand strategy - the economic, diplomatic, and military policies adopted by states to improve their security. Theory and historical evidence will be used to address these questions: What are the different types of grand strategy, and which are appropriate to different international conditions? What forces determine a state's choice of grand strategy? What political, psychological, and cultural factors lead states to choose badly?

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4650 Russian Foreign Policy (3 Credit Hours)
This course will explore the sources and substance of Russian foreign policy with a focus on security issues, and on relations with the U. S., Europe, and the new independent states of Eurasia.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4660 Middle East Security (3 Credit Hours)
Overview of contemporary security conditions in the Middle East, including conventional arms balances, weapons of mass destruction, guerrilla wars, terrorism, and economic conditions affecting security.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4670 Politics of Arab Israeli Confl (3,4 Credit Hours)
Examines the origins and development of the Arab-Israeli conflict from the beginning of renewed Jewish settlement in Palestine in the 1880s until the present day.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4882 Writing Intensive: POLI 4630 (1 Credit Hour)

POLI 4883 Writing Practicum: POLI 4010 (1 Credit Hour)

POLI 4890 Service Learning: POLI 4600 (0-1 Credit Hours)
Corequisite(s): POLI 4600.

POLI 5190 Semester Abroad (1-20 Credit Hours)

POLI 5380 Junior Year Abroad (1-20 Credit Hours)

POLI 5390 Junior Year Abroad (1-20 Credit Hours)

POLI 6530 Intl' Human Rights (3 Credit Hours)
This course is an exploration of the history, theory and practice of human rights law. It pays particular attention the interactions between international law and repressive campaigns, transnational social movements, and the operation of domestic courts. Students will be challenge to assess claims about progress and decline in human rights over time.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 6630 International Security (3 Credit Hours)
A review of critical issues threatening the security of the major powers including nuclear strategy, arms control, weapons procurement, international economics, and military interventions in regional disputes. In addition to the substance of selected issues, the course deals with the literature on decision-making, crisis management, and the organization of governments for effective foreign policy-making. Emphasis is on American security problems and policy-making.

Prerequisite(s): POLI 2500 and POLS 2010.
Prerequisite(s): (PSDV 2400 or 2400) and (POLS 2010 or 2010).

PSDV 4320 Migrants Refugees & Development (3 Credit Hours)
Prerequisite(s): (PSDV 2400 or 2400) and (POLS 2010 or 2010).

PSDV 4330 Post-Conflict Development (3 Credit Hours)
Prerequisite(s): (PSDV 2400 or 2400) and (POLS 2010 or 2010).

PSDV 4392 Controversies-Glovab Pub Hlth (3 Credit Hours)
Prerequisite(s): (PSDV 2400 or 2400) and (POLS 2010 or 2010).

PSDV 4400 Dev in the Francophone World (3 Credit Hours)
Development in the Francophone World, taught in the French language, focuses on political, economic, and social aspects of development in francophone developing areas, especially in Africa. We will discuss disaster relief issues with a focus on Haiti. Topics of discussion include: historical and political heritage; French and European development practices in terms of trade, investment, and foreign aid; entrepreneurship as a tool of development; and the impact of globalization and migration on the regions in question. We will examine development programs in areas such as poverty, food security, education, human rights and gender equity, health, and the environment, and will assess the performance and prospects of the United Nations Millennium Development Goals (2000-2015) and Sustainable Development Goals (2016-2030).
Prerequisite(s): (PSDV 2400 or 2400) and (POLS 2010 or 2010).

PSDV 4560 Internship (1-3 Credit Hours)
With the approval from the International Development Studies Program and the Center for Public Service, students can gain unique practical experiences and earn credit by engaging in a service-learning internship course. The internship program provides students the opportunity to bridge academic learning with service in the community. Internships foster professional development, promote practical application of knowledge acquired in the classroom, and encourage civic engagement. This course requires motivation, passion, and enthusiasm.
Prerequisite(s): (PSDV 2400 or 2400) and (POLS 2010 or 2010).

PSDV 4561 Special Topics (1-3 Credit Hours)
Prerequisite(s): (PSDV 2400 or 2400) and (POLS 2010 or 2010).

PSDV 4900 Leadership & Mgmt Development (3 Credit Hours)
Prerequisite(s): (POLS 2010 or 2010) and (PSDV 2400 or 2400).

PSDV 4901 Independent Study (1-3 Credit Hours)
Prerequisite(s): (PSDV 2400 or 2400) and (POLS 2010 or 2010).

PSDV 4950 Special Topics (1-3 Credit Hours)
Prerequisite(s): (PSDV 2400 or 2400) and (POLS 2010 or 2010).
POLT 3810

Tradition of political theory, such as justice, equality, and liberty.

POLT 3820

The relationship between classical rhetoric and political theory.

POLT 3010

Late 20th-century democratic theory. Special attention will be paid to common means that are most commonly used in the political process. No prerequisites.

POLT 3710

An examination of the morally questionable means that are most commonly used in the political process. No prerequisites.

POLT 3730

Democratic Theory (3 Credit Hours)

This course will focus, first on the role of women in the tradition of Western political thought. Second, the course will examine the attempts of contemporary feminist thinkers to deal with concepts central to the tradition of political theory, such as justice, equality, and liberty.

POLT 3750

Feminist Political Theory (3 Credit Hours)

This course will examine the attempts of contemporary feminist thinkers to deal with concepts central to the tradition of political theory, such as justice, equality, and liberty.

POLT 3780

Rhetoric & Politics (3 Credit Hours)

A survey of theories of political discourse from the ancient Greeks to late 20th-century democratic theory. Special attention will be paid to the relationship between classical rhetorical and political theory.

POLT 3820

Contemporary Political Ideas (3 Credit Hours)

An examination of variants of revisionist Marxism, socialism, anarchism, fascism, 20th-century liberalism and conservatism, and the relation of these to contemporary American ideologies.

POLT 3890

Service Learning: POLT 3780 (0-1 Credit Hours)

For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

POLT 4610

Bible As Political Theory (3 Credit Hours)

A study of the Bible from the perspective of political theory, which analyzes the similarities and differences between the political perspectives of classical (Greek and Roman) thinkers and those of the Bible. The course will focus on the Hebrew Bible (Old Testament), although the New Testament, especially those sections dealing with social ethics, will be examined and discussed. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

POLT 4720

Ancient & Medieval Political Theory (3 Credit Hours)

For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

POLT 4770

Transition To Modernity (3 Credit Hours)

For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

POLT 4780

Modern Political Theory (3 Credit Hours)

An analysis of the development of political theory since the 16th century with emphasis on modern ideologies especially conservatism, liberalism, communism, and fascism. Hobbes, Locke, Rousseau, Burke, Bentham, and Marx are given particular attention. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

POLT 4790

Contemporary Political Theory (3 Credit Hours)

Analyzing contemporary political philosophy, within the context of Kantianism versus Hegelianism. Attention will be concentrated on political philosophers such as Arendt, Oakshott, Rawls, Foucault, Lyotard, and Derrida. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

POLT 4860

American Political Thought (3,4 Credit Hours)

This course discusses the historical development of the Constitution and associated political ideas, from the founding period up to the present. Thinkers discussed include Paine, Madison, Calhoun, Dewey, and Rawls, among others. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

PECN 3010

Positive Political Economy (3 Credit Hours)

Credit placeholder for study abroad courses in Political Economy.
PECN 3020 Pol Econ: Historical Overview (3 Credit Hours)
This course introduces students to the question of how different modern Western societies and thinkers have defined the relationships between political and economic activities. Beginning with the experience of Europe in the 15th century, it examines what the unprecedented wealth of modern Western societies has meant for the understanding and practice of politics. It also explains what caused the economic abundance of Western nations to come into being in the first place, and how that abundance has been sustained over time.

PECN 3030 The Individual, Society & State (3 Credit Hours)
This course presents an integrated study of the main alternatives in political ideology (liberalism, socialism, fascism, Marxism) advocated in the modern world and the exemplifications of these ideologies in practice in the modern world (post-war West Germany, 20th-century Britain, Mussolini's Italy, the former Soviet Union).

PECN 3040 Comp & Intl Pol Econ (3 Credit Hours)
Virtually all contemporary economies are characterized by extensive relations between the economic and political systems. Furthermore, these relations seem to involve often complex relations between the global, national, and sub-national political economies. This fact is currently referred to as globalization. However, it is clear that globalization, whatever it is, has different effect on national (and sub-national) political economies. In this course, we will: 1) attempt to develop an understanding of globalization; 2) develop a comparative analysis of the links between globalization and national outcomes; and 3) examine the international institutions that attempt to manage globalization. Because time is finite, and there are other courses, we will focus primarily on advanced democracies.

PECN 4010 Constitutionalism (3 Credit Hours)
This course discusses the historical development of constitutionalism, with a view to understanding what is common to the various forms of constitutional government which have appeared in different societies from classical Athens to modern America.

PECN 4040 Democracy/Capitalism/Free Speech (3 Credit Hours)
This course discusses freedom of expression in the context of advanced capitalist democracies such as the U.S. Topics include justifications for free speech, its proper scope, tensions between democratic self-government and capitalist mass media, and Supreme Court decisions relating to freedom of expression.

PECN 4300 Behavioral Econ & Public Policy (3 Credit Hours)
This course provides an overview of research in "behavioral economics" which integrates insights from psychology into economic models of behavior. We'll survey a range of topics which comprise the standard behavioral economic canon — focusing on ways in which individuals may systematically depart from assumptions such as perfect rationality, self interest, and time consistency of decisions. It will examine models of non-standard preferences and decision rules, and discuss empirical strategies for distinguishing between such behavioral decision-making and the predictions of the standard model. Behavioral economics incorporates insights from social psychology, experimental economics, and sociology. Important areas of emphasis will be behavior towards risky outcomes, financial decision making, and applications to social institutions such as taxation and public finance. An important emphasis will be on how insights into behavioral economics can and should influence the design of public policy programs.

Prerequisite(s): ECON 3010.

PECN 4400 Law & Economics of the Regulatory State (3 Credit Hours)
This course is designed to introduce students to the law and economics of the regulatory state and the challenges to governance posed by the regulatory state. Students will be expected to develop an understanding of key legal principles as well as to apply economic analysis to legal rules. For each of the topics, a discussion of legal principles will be paired with the relevant economic analysis. The first part of the course treats classic topics of law and economics. The aim here is to provide the key foundational material in contracts, torts, property, and administrative procedures. The questions to be addressed are the specifics of the legal rules and their impact on economic efficiency and welfare, broadly defined. These tools are necessary in order to understand why there may need to be further government regulation. The second part focuses on administrative law and the regulatory state. It will focus on why laws are written so as to permit action for regulatory agencies; the procedures that agencies and courts follow for regulations; and the limits of regulatory authority. There will be a careful look at case studies illustrating these principles.

Prerequisite(s): ECON 1010 and 3010.

PECN 4560 Internship (1-3 Credit Hours)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Only one internship may be completed per semester. Certain internships may satisfy the public service graduation requirement with prior approval of the department and the Center for Public Service.

PECN 4570 Internship (1-3 Credit Hours)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Only one internship may be completed per semester. Certain internships may satisfy the public service graduation requirement with prior approval of the department and the Center for Public Service.

PECN 4910 Independent Study (3 Credit Hours)
Independent study in Political Economy.

PECN 4920 Independent Study (1-3 Credit Hours)
Independent study in Political Economy.
PECN 4970  Special Topics Political Econ  (3 Credit Hours)
Special topics in Political Economy.

PECN 4980  Special Topics Political Econ  (3 Credit Hours)
Special topics in Political Economy.

PECN 4981  Special Topics Political Econ  (3 Credit Hours)
Special topics in Political Economy.

PECN 4990  Honors Thesis  (3 Credit Hours)
Honors thesis in Political Economy.

PECN 5000  Honors Thesis  (4 Credit Hours)
Honors thesis in Political Economy.

PECN 5190  Semester Abroad  (3-6 Credit Hours)
Semester Abroad.

PECN 5380  Junior Year Abroad  (1-20 Credit Hours)
Junior Year Abroad.

PECN 5390  Junior Year Abroad  (1-20 Credit Hours)
Junior Year Abroad.

PECN 6000  Major Seminar In Pol Econ  (3,4 Credit Hours)
The political economy majors' seminar focuses on a large theme or question that no single discipline in the program uniquely claims for its own and no one approach exhausts. Example of such issues: the rise of the nation state, capitalism and democracy, the foundations of economic behavior, the organization and meaning of work, and industrialization, economic growth, and social change. In designing a majors seminar, faculty define the issues that most engage them as teachers and scholars and that sustain a coherent cross-disciplinary course offering.

PECN 6890  Service Learning: PECN 6000  (0-1 Credit Hours)
Service learning add-on credit for major seminar in Political Economy.

Corequisite(s): PECN 6000.

Portuguese (PORT)

PORT 1120  Intensive Portuguese  (4 Credit Hours)
An intensive one-semester introduction to Portuguese with an emphasis on listening and speaking skills designed to quickly prepare students for more advanced study of language, literature, and culture. Co-requisite: PORT 1121.

Prerequisite(s): minimum score of PASS in 'PORT 1120 Placement' or PORT 1020.

Corequisite(s): PORT 1121.

PORT 1121  Intensive Portuguese Lab  (0 Credit Hours)
A 75-minute weekly meeting dedicated to improving proficiency via telecollaboration. Co-requisite: PORT 1120.

Corequisite(s): PORT 1120.

PORT 2030  Intermediate Portuguese  (4 Credit Hours)

Prerequisite(s): minimum score of PASS in 'PORT 2030 Placement' or PORT 1120.

PORT 2031  Intermediate Portuguese Lab  (0 Credit Hours)

PORT 2050  Immersive Intermedia Portugues  (4 Credit Hours)
Summer Program.

Prerequisite(s): PORT 1120.

PORT 2390  Semester Abroad  (1-20 Credit Hours)
Semester Abroad.

PORT 2890  Service Learning: PORT 2030  (0-1 Credit Hours)
Service Learning.

PORT 3040  Grammar & Writing - Portuguese  (3 Credit Hours)
Analysis and practice in the written language.

Prerequisite(s): PORT 2030.

PORT 3050  Immersive Grammar & Writing  (3 Credit Hours)
Summer program.

Prerequisite(s): PORT 2030.

PORT 3130  Intro to Brazilian Culture  (3 Credit Hours)
Introduction to Brazilian literature, with a focus on questions of cultural identities, relations between high and low culture, representations of race, gender, class, and sexuality.

Prerequisite(s): minimum score of PASS in 'PORT 3130 Placement' or PORT 2030.

PORT 3190  Brazilian Short Stories  (3 Credit Hours)
This course provides an introduction to the Brazilian short story from 1870 to the present, while providing intermediate to advanced training in Portuguese conversation and composition.

PORT 3250  Composition & Convers  (3 Credit Hours)
Reinforcement of spoken Portuguese and review of grammatical structures. Short stories and plays serve as the basis for further development of speaking and writing. Emphasis in dealing with the texts is on their utility for skill practice rather than literary analysis.

Prerequisite(s): minimum score of PASS in 'PORT 3250 Placement' or PORT 2030.

PORT 3280  Adv Port thru Brazilian Film  (3 Credit Hours)
Through a series of film viewings, readings, and access to other visual media from Brazil, students receive instruction in how to discuss and analyze visual culture in Portuguese. Vocabulary building and strategies for enhanced viewing and reading comprehension are stressed. Significant emphasis on the continued development of linguistic skills.

Prerequisite(s): PORT 2030.
PORT 3290 Special Topics (3 Credit Hours)
Course will expand upon grammar and vocabulary learned in 1120-2030 sequence. Emphasis on written and oral production in specific registers. Possible themes include Portuguese across the Lusophone world, regional studies in the Lusophone world, professional skills, historical development of Portuguese, Portuguese pronunciation. The precise topic varies from year to year.

Prerequisite(s): PORT 2030 or minimum score of PASS in 'PORT 3290 Placement'.

PORT 3330 Brazilian Lit Translatn (3 Credit Hours)
A survey of Brazilian literature in translation, focusing primarily on the novel and short story. Students engage a wide variety of texts, including representative works of romanticism, realism, modernism and postmodernism. This course may be taken for major or minor credit if written work is completed in Portuguese.

PORT 3340 Brazilian Women Writers (3 Credit Hours)
An introductory survey of influential Brazilian women writers of prose fiction, with a focus on literary treatment of questions of gender, sexuality, race, and class.

PORT 3890 Service Learning: PORT 3280 (0-1 Credit Hours)
Service Learning.

PORT 4100 Gender & Sexuality Brazilian (3 Credit Hours)
This course proposes a historicized and interdisciplinary consideration of gender and sexuality in modern Brazil through short fiction, films, documentaries, popular music, and critical texts. It will address a wide range of topics, including patriarchal power and the construction of masculinity, the quest for female subjectivity, gender in relation to race and class, the constitution and crisis of the bourgeois family, marital strife and infidelity, homosexuality, and transgender performance.

Prerequisite(s): PORT 3130, 3130, 3040, 3280 or 3280.

PORT 4120 Soc Problems Braz Lit & Cultur (3 Credit Hours)
The chief problems of Brazilian society as reflected in fiction, testimony, poetry, theatre, music, and other forms of cultural expression. Representative works may concern persistent race, class, and gender inequalities; tyranny and political repression; violence; and/or environmental issues.

Prerequisite(s): PORT 3130, 3280 or 3250.

PORT 4130 Topics in Brazilian Literature (3 Credit Hours)
Readings in Brazilian stories, essays, and poems, focusing on a topic of historical and cultural importance. Some themes: women in Brazilian literature, regionalism, Afro-Brazilian culture, soccer. The precise topic varies from year to year.

Prerequisite(s): PORT 3130, 3250, 3280 or minimum score of PASS in 'PORT 4000 Level Placement'.

PORT 4160 Afro-Brazilians (3 Credit Hours)
This course provides an introduction to the history of Brazilian race relations, the fiction and poetry of black writers from Brazil, and the study of recent Afro-Brazilian cultural and social movements.

PORT 4290 Brazilian Cultural Study (3 Credit Hours)
A survey of Brazilian cultural practices and discourses of the twentieth century that engages historic and contemporary debates in Brazil surrounding nationality, modernity, democracy, and citizenship.

PORT 4440 Brazilian Popular Music (3 Credit Hours)
This course examines Brazilian cultural history through the prism of popular music, often regarded as Brazil’s most accomplished field of artistic production. The study of music will provide the basis for the exploration of issues such as nationalism, regionalism, developmentalism, authoritarianism, and globalization.

PORT 4510 Luzo-Brazilian Cities (3 Credit Hours)
An advanced undergraduate course with a focus on the literary and cultural production of a major city of the Portuguese-speaking world including Lisbon, Rio de Janeiro, São Paulo, Salvador da Bahia, Luanda, and Maputo.

Prerequisite(s): PORT 3130, 3250 or 3280.

PORT 4610 Brazilian Cinema (3 Credit Hours)
This survey of Brazilian cinema and film criticism covers key phases in national film production including early experiments, the failed Vera Cruz enterprise, Cinema Novo, Cinema Marginal, Embratime productions, and recent film directors include Mário Peixoto, Humberto Mauro, Anselmo Duarte, Nelson Pereira dos Santos, Ruy Guerra, Glauber Rocha, Carlos Diegues, Walter Lima Junior, Luiz Carlos Barreto, Paulo César Saraceni, Joaquim Pedro de Andrade, Rogério Sganzerla, Júlio Bressane, Suzana Amaral, and Carla Camurati.

PORT 4990 Honors Thesis (3 Credit Hours)
Honors Thesis.

PORT 5000 Honors Thesis (4 Credit Hours)
Honors Thesis.

PORT 5380 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

PORT 6000 Independent Study (1-3 Credit Hours)
Independent Study.

Prerequisite(s): (PORT 4120, 4130, 4510, 4610, 4910 or 4920).

PORT 6130 Brazilian Cultural Imaginaries (3 Credit Hours)
This course is a textual and experiential exploration of Brazil and specifically the city of São Paulo as part of the Tulane Summer in Brazil program.

PORT 6160 Afro-Brazilians (3 Credit Hours)
This course provides an introduction to the history of Brazilian race relations, the fiction and poetry of black writers from Brazil, and the study of recent Afro-Brazilian cultural and social movements.

PORT 6190 Avant-Garde Move Lat Am (3 Credit Hours)
This course surveys the avant-garde movements in Spanish America and Brazil, focusing on the period from 1916 to 1935. Some of the movements to be examined include Huidobro’s creacionismo, ultraismo, Brazilian modernismo and verdadeamrelismo, Mexican estridentismo and the “Contemporáneos” group, and the impact in Latin America of surrealism and other European avant-garde movements. Readings in both Spanish and Portuguese, and the class is taught in both languages, but fluency in both languages is not expected.
PORT 6220 The Lit of Brazil (3 Credit Hours)
In-depth study of Brazilian literature from its beginning to the present.
Authors: Manuel Antônio de Almeida, José de Alencar, Gonçalves Dias, Castro Alves, Machado de Assis, Aluisio Azevedo, Graciliano Ramos, José Lins do Rêgo, Mário de Andrade, Oswaldo de Andrade, Manuel Bandeira, João Cabral de Melo Neto, Jorge Amado, Carlos Drummond de Andrade, Guimarães Rosa, Clarice Lispector, Antônio Callado, Lygia Fagundes Telles, Rubem Fonseca, Sérgio Sant’anna, Roberto Drummond, and others.

Prerequisite(s): (PORT 4120, 4130, 4510, 4610, 4910 or 4920).

PORT 6230 Brazilian Lit & The City (3 Credit Hours)
Brazilian literature and its production within an urban environment focusing of issues such as slavery and race relations, class divisions and spatial marginality, industrialization and labor movements, gender and sexuality, media and popular culture, rural to urban migration, and violence and criminality. Authors may include Manuel Antônio de Almeida, Aluisio Azevedo, Machado de Assis, Lima Barreto, Mário de Andrade, Patricia Galvão, Marques Rebelo, Nelson Rodrigues, Rubem Fonseca, Caio Fernando Abreu, Patricia Melo, Paulo Lins, and Regina Rheda.

PORT 6290 Brazilian Cultural Studies (3 Credit Hours)
An advanced survey of Brazilian social and cultural critics of the twentieth century including Silvio Romero, Euclides da Cunha, Gilberto Freyre, Sérgio Buarque de Hollanda, Guerrero Ramos, Roland Corbisier, Florencest Fernandes, Antônio Cândido, Roberto Schwarz, Ferreira Gullar, Silviano Santiago, Luiz Costa Lima, Flora Süsskind, Renato Ortiz, Muniz Sodré, and Marilena Chauí. The course foregrounds historic and contemporary debates in Brazil surrounding nationality, modernity, democracy, and citizenship.

PORT 6440 Brazilian Popular Music (3 Credit Hours)
Prerequisite(s): (PORT 4120, 4130, 4510, 4610, 4910 or 4920).

PORT 6710 Contemp Fict Sp Am &Braz (3 Credit Hours)
A comparison of the contemporary fiction of Spanish America and Brazil. Topics vary but may include: the short story; race, gender, and nationalism; the regionalist novel; experimental fiction; fiction and popular culture. Among the selected authors are Julio Cortázar, Guimarães Rosa, Fonseca, Borges, Clarice Lispector, Rufó, Donoso, Icaza, Ramos, Rivera. Reading competence in Spanish and Portuguese to be established by previous course or judgment of instructor.

PORT 6910 Special Topics (3-4 Credit Hours)
Open to graduate students only

Prerequisite(s): (PORT 4120, 4130, 4510, 4610, 4910 or 4920).

PORT 9980 Master’s Research (0 Credit Hours)

PORT 9990 Dissertation Research (0 Credit Hours)
Dissertation Research.

PR- Digital Media & Mkt Communication (PRDM)

PRDM 2900 Digital Media Princ & Strategy (3 Credit Hours)
This course will provide students with an understanding of how goals, audience, and metrics define a strategic approach to online communication and how specific channels, platforms, and tactics are used to achieve that strategy. The course will also focus on the key components of planning and creating an effective inbound strategy to reach an organization’s audience.

Prerequisite(s): (PRDM 2900 or 2900).

PRDM 3010 Creating Digital Content (3 Credit Hours)
This course will teach students how to think critically when developing digital content for different online channels and platforms, including long-form writing, short-form copy and headlines, images, infographics, and long-form videos and short clips.

Prerequisite(s): PRDM 2900*.
* May be taken concurrently.

PRDM 3150 Digital Media Analytics & Rpt (3 Credit Hours)
This course will take a deeper look at developing metrics, reporting tactics, and evaluating results of digital media and marketing communication campaigns. Students will have hands-on access to multiple platforms that track performance on different channels (social, paid media, email, etc.) and will analyze and report results.

Prerequisite(s): PRDM 2900 or 2900.

PRDM 3200 CRM and Digital Media (3 Credit Hours)
This course is designed to present how customer relationship management (CRM) software is used to manage customer and audience relationships with digital media and marketing communication strategies, campaigns, and tactics. Students will learn and evaluate different CRM and engagement database platforms and develop strategies, tactics, and processes to help manage relationships with an organization’s customers, constituents, and audience.

Prerequisite(s): PRDM 2900 or 2900.

PRDM 3410 SEO & SEM Strategies (3 Credit Hours)
This course will present the basic principles of Search Engine Optimization, Search Engine Marketing, and Paid Media. It will focus on both creative and technical applications and strategies guided by industry research and best practices. Students will have hands-on access to the platforms available to research, build, and measure digital media effectiveness across platforms.

Prerequisite(s): PRDM 2900 or 2900.

PRDM 4100 Digital Media Campaigns (3 Credit Hours)
This course will provide a hands-on, applied learning experience using digital media and marketing communications automation software suites. Students will work in groups with real-life companies and organizations to create, implement, and analyze the effectiveness of their digital media and marketing communication campaign. Peers, faculty, and other industry experts will evaluate and judge the performance of the group's plan and results.

Prerequisite(s): PRDM 2900, 3010 and 3410.
Professional MBA (PMBA)

PMBA 6100 Managerial Accounting (2 Credit Hours) applies the accounting models that support managerial decision-making in an advanced environment. Topics include cost behavior, cost-volume-profit analysis, variable costing, differential (incremental) analysis, capital budgeting (with emphasis on the sources of accounting data), and interdivisional transfer pricing. Models are applied to service and merchandising as well as manufacturing environments.

PMBA 6110 Financial Accounting (2 Credit Hours) familiarizes students with key financial accounting concepts, methods and terminology and introduces the tools of financial statement analysis. The financial reporting roles of management, auditors and regulators are studied, and students learn how accounting policy choices can influence reported performance and financial position. Students develop knowledge and skills that allow them to read, interpret and analyze financial statements at a basic level and to discuss business issues in accounting terms.

PMBA 6120 Financial Statement Analysis (2 Credit Hours) explores the principles and techniques for understanding and interpreting financial statements, including statement comparability, income measurement and disclosure, cash flow analysis, ratio analysis and the disaggregation of ratios, quality of earnings, account analysis, and footnote disclosures. The financial relationships of the accounting model are applied to published financial statements. Cases are used extensively.

PMBA 6200 Management Communication (2 Credit Hours) focuses on the different ways companies communicate with both internal and external constituencies, including employees, shareholders, regulators, the public, etc. The practical emphasis is on student exercises and includes informal individual briefings, formal group presentations, and media events during crisis situations. The course also uses video and print media extensively to illustrate good and poor communication efforts on the part of existing corporations over the past several years, including examples from the oil and chemical industries, the mining industry, the tobacco industry, the accounting/consulting industry, and the wine/beer industry.

PMBA 6210 Managing People (2 Credit Hours) introduces students to leadership in business organizations. Leading teams and leading during times of change are also covered. Students will study current business leaders and analyze their leadership practices. Team projects and presentations are used to illustrate team leadership. Current models of change are also discussed.

PMBA 6220 Leadership (2 Credit Hours) introduces the theory of national income determination in relation to full employment, price stability, international trade, and economic growth. The emphasis is on macroeconomic issues for managerial decisions. Topics include the determination of interest rates, inflation, wage levels, real output growth, exchange rates, international trade patterns and how these variables impact business decision making.

PMBA 6400 Microeconomics (2 Credit Hours) examines the art of solving problems under uncertainty. Course topics include descriptive statistics, probability, sampling distributions, confidence intervals, hypothesis testing and simple and multiple regressions. Methods are applied to management problems drawn from marketing, finance, economics, organizational behavior, and operations management.

PMBA 6500 Decision Models (2 Credit Hours) increases understanding of the functions and responsibilities of general management. It examines the problems that affect the character and success of an entire enterprise, whether an entrepreneurial venture or a multinational conglomerate.
PMBA 6800  Marketing Management (2 Credit Hours)
analyzes the market-driven corporation with respect to the marketing mix (product, promotion, price and distribution strategy) as it applies to consumer and industrial goods and services in the private and public sectors. Emphasis is placed on the application of the marketing mix through real-world projects.

PMBA 6810  Global Marketing (2 Credit Hours)
This course deals with the challenges of a firm's international expansion efforts. The course is organized around four topics: 1) international marketing in the early stages of a firm's expansion, including analysis and understanding of the business environmental factors (such as cultural, political, and legal issues) that affect marketing decisions; 2) the role of research for growth and for detecting opportunities across markets; 3) the dilemma of product/service adaptation vs. marketing program standardization for consumer/business markets across specific countries; and 4) how to plan, organize, and implement a global marketing program.

PMBA 7080  Cross-Cultural Management (2-4 Credit Hours)
considers how culture and cultural differences impact perceptions of the social and organizational environment, as well as how culture and cultural values are a major influence on ethics and ethical reasoning. It also explores the challenge of making ethical decisions in specific situations and what organizations can do in order to prevent misconduct.

PMBA 7090  Managing Global Enterprises (2-4 Credit Hours)
focusses on the structure and processes of management, particularly those of a global organization, and simulates upper-level management activities of the global enterprise. Course objectives include developing an integrated understanding of strategic and operational decision-making in a global enterprise from a general management perspective.

PMBA 7160  Energy Risk Mgmt (2 Credit Hours)
This course will cover a broad range of topics pertaining to financial risk management in the energy industry, using a combination of lectures and case studies to provide a rigorous yet thoroughly applied perspective on the topics covered. The focus will be on the energy risk exposure faced by corporations arising from the volatility of energy prices — what it is; how it’s assessed; whether it should be managed; and how it should be managed. Students will be introduced to the toolkit of energy financial risk management instruments — both standard tools such as forwards, futures, options and swaps and a variety of hybrids that built on them.

PMBA 7170  Energy Acct & Finance (2 Credit Hours)
This course will cover the fundamentals of the upstream oil and natural gas exploration and production process (E&P or upstream) and the key financial decisions and metrics. The various operational steps and related financial decisions will be followed through to their ultimate impact to a public E&P company’s external financial statements. Students will be able to understand the immediate impact of various decisions on a company’s cash and non-cash financial performance which in turn lead to future financial and operational flexibility and success.

PMBA 7180  Energy & Env Economics (2 Credit Hours)
In the past 50 years, the largest industries involved in the energy sector (oil, gas, and electric) have undergone profound changes and have had a large impact on the economy. Managers in the oil, natural gas, and electric industries have had to devise strategies to cope with changes in the marketplace and ever-changing governmental regulations. The energy industries feature a complex mix of regulation and market-driven incentives. Students in this class will learn to use fundamental tools of economics and finance to study the business and public policy issues involved in these energy markets from the exploration, production, distribution, and ultimate sale to consumers. Students will study a number of cases from each of these industries, critically analyzing positions and evidence and formulating recommendations by applying the economic concepts they have learned in the class.

PMBA 7190  Energy Invest. Banking (2 Credit Hours)

PMBA 7300  Options (2 Credit Hours)
This course is designed to help students become proficient in the inner workings of options and options markets; the valuations of options; and the applications of options. Specifically, the course will cover simple as well as complicated arbitrage and hedging strategies, and popular options pricing models such as the binomial-tree and the Black-Scholes-Merton models. Students will also practice the real-world applications of options techniques in the context of Monte Carlo simulations and back tests of trading strategies. This course should benefit students who are interested in derivatives trading, risk management, hedge funds, portfolio management, management consulting, executive compensation, commercial banking, investment banking, or any other field involving financial decision-making.

PMBA 7310  Cases in Finance (2 Credit Hours)
Through case analysis, this course explores ways to value different types of business enterprises. The course emphasizes discounted cash flow methods of valuation, though other methods, such as the method of multiples, the venture capital method, and real options are also introduced. Students develop and practice valuation skills, such as financial forecasting, cash flow measurement, discount rate estimation and continuing value calculation. In addition, students work with a variety of corporate situations, such as LBO’s, IPO’s, spin-offs, and mergers, in which valuation plays a key role.

PMBA 7320  Portfolio Theory (2 Credit Hours)
This course is concerned with the choice of investment strategies with differing risk/return characteristics in the presence of uncertainty. It begins with a rigorous development of the foundations of modern portfolio theory while critically examining the assumptions that lead to its conclusions. Students will learn how various market indexes are determined, explore the pros and cons of market efficiency, and learn some of the founding principles of behavioral finance. Students will create mean/variance efficient portfolios; discuss the challenges of doing so using historical data, and develop several tools to measure the risk-adjusted performance of a portfolio.

PMBA 7340  Corporate Risk Management (2 Credit Hours)
PMBA 7400  Negotiations (2 Credit Hours)
explores the behavioral processes and phenomena which are inherent in virtually all types of negotiations. Emphasis is on systematic preparation of a negotiating strategy. In-class negotiation exercises and extensive debriefings are used by participants to test and evaluate their strategies and tactics.
PMBA 7410  Managing Innovation  (2 Credit Hours)
This course focuses on how firms innovate and on how they strategically manage and capture value from innovation. Technological innovations are among the most important drivers of success in many industries. For firms to gain competitive advantage in the face of technological change, they not only need a superior technology but also a superior strategy. In this course, students will gain a set of powerful analytical frameworks that are critical for formulating and implementing technology strategy as an integral part of business strategy.

PMBA 7420  Change Management  (2 Credit Hours)
examines the key aspects of leading a successful organizational change. The course analyzes both successful and unsuccessful change management efforts. The course will build a framework for leading a successful organizational change.

PMBA 7430  Entrepreneurship  (2 Credit Hours)
conveys skills and modes of analysis that will be used directly in initiating or acquiring, managing, and harvesting a new venture. Concepts are also applicable to venturing within an existing corporation. Students will be expected to apply tools and theories learned in functional area core courses and additional knowledge gained from this class to the analysis of cases, a venture feasibility analysis process, and the formulation of a business plan.

PMBA 7440  Performance Management  (2 Credit Hours)
PMBA 7450  Global Strategy  (2 Credit Hours)
-is designed to measure how well students can integrate and use the knowledge and skills gained from core PMBA courses. The course is based on a management simulation in which teams of students compete against each other for business success within an industry while utilizing “real-world” decision making, strategy formulation, problem-solving, and competitive challenges. Teams must analyze the economic conditions of the simulated environment, insure smooth production, and understand their products relative to their customers, use accounting data to evaluate results and make decisions, finance operations, determine research and development targets, market products, manage employees and the team and respond to the competition.

PMBA 7460  Topics in Marketing  (2 Credit Hours)
PMBA 7470  Corporate Strategy  (2 Credit Hours)
This course is designed to provide students with practice-oriented, nuanced, in-depth knowledge of the various aspects of the corporate strategy of the firm. “Corporate strategy” means managing the firm’s scope – in other words, managing a corporation as a portfolio of businesses: What business units should the company have in order to maximize the shareholders’ value? How should it acquire new lines of business? How should it divest the units it no longer wants? What should be the extent of the units’ autonomy? The two primary objectives in this class are first to improve students’ understanding of what makes a portfolio of businesses under a single corporate umbrella more or less valuable and second, to develop and hone the decision-making tools for properly structuring and executing acquisitions and alliances under different business situations.

PMBA 7490  Strategic HR Management  (2 Credit Hours)
PMBA 7560  Intro to Electricity Markets  (2 Credit Hours)
The number of players in power markets, competing interests, and evolving regulatory policy gives electricity markets a unique niche in the world of commodity trading. The unique physical characteristics of its product, coupled with the nature of its delivery (and associated constraints), have created opportunities for trading shops and major corporations to rise and fall in a little more than a decade. As this market (slowly) matures, and regulation continues to improve market transparency and efficiency, it will be a bumpy ride. To better understand where these markets are going and where they have been, we shall first obtain a historical perspective. With a concrete understanding of the market evolution, we will then investigate what variables (both physical and political) influence market prices on a long term, day ahead, and real time basis. We will also study the infamous market failures, and how regulators have responded to eliminate opportunities for indiscretion. The course will conclude with a brief look at several recent regulatory enactments to more closely align the interests of all market participants and stakeholders (and perhaps make the invisible hand seem more human!) This course will include market simulation exercises which will give students the opportunity to experience Power Marketing from the perspectives of a pure-market, independent power producer, and regulated utility.

PMBA 7700  Legal Enviro of Business  (2 Credit Hours)
introduces the basic concepts of contracts, labor laws, discrimination, torts, partnership, corporations, securities, and bankruptcy and gives students an understanding of the relationships between parties in a typical business setting. Tax consequences relative to various entities used in business transactions are also examined.

PMBA 7920  Independent Study  (0-4 Credit Hours)
PMBA 7990  PMBA Internship  (1-3 Credit Hours)

Psychology (PSYC)
PSYC 1000  Introductory Psych  (3 Credit Hours)
Fundamentals of contemporary psychology, including topics such as scientific methodology, heredity and behavior, principles of learning, physiological substrates of behavior, perception, social interaction, and mental health.

PSYC 1001  Psychology Beyond Classroom  (0 Credit Hours)
The goal of this S/U course is to encourage students to learn more about how the scientific field of psychology operates in the real world by experiencing various aspects of the psychological research process.

Corequisite(s): PSYC 1000.
PSYC 1100  Exploring Psychology & Lab  (3 Credit Hours)
Introduction to Psychology for high school students enrolled in the TSSP summer program.
PSYC 1660  Special Topics  (1-3 Credit Hours)
Special topics.
PSYC 1665  Special Topics Lab  (1-3 Credit Hours)
Special Topics Lab.
PSYC 1940 Transfer Coursework (3 Credit Hours)

PSYC 2890 Service Learning (0-1 Credit Hours)
Service learning component to PSYC courses. See Schedule of Classes each semester for offerings. 20 or 40 hours of public service with a CPS approved community partner.

PSYC 2940 Transfer Coursework (3 Credit Hours)

PSYC 3010 Intro To Personality (3 Credit Hours)
An introductory survey of theories and measurement in personality.
Prerequisite(s): PSYC 1000, 1000, 1000 or 1000.

PSYC 3090 Univariate I & Lab (4 Credit Hours)
Lectures and laboratory in design of experiments, psychological measurement, and deriving conclusions from experimental data.
Prerequisite(s): (PSYC 1000, 1000, 1000 or 1000).

PSYC 3130 Experimental Psychology & Lab (4 Credit Hours)
Lectures and laboratory in design of experiments, quasi-experimental designs, control of variables, scientific communication, and application of statistical procedures.
Prerequisite(s): (PSYC 3090, 3090, 3090, 3090 or 6090) or (PSYC 2090, 2090, 2090 or 2090).

PSYC 3131 Experimental Psychology Lab (0 Credit Hours)
Lab section for PSYC 3103
Corequisite(s): PSYC 3130.

PSYC 3180 Psych Testing & Measure (3 Credit Hours)
PSYC 3180 provides an overview of the process of test development and analysis. The primary objective is to provide students with a solid foundation in the area of psychological measurement. After completion of this course, students should: (1) have an understanding of what psychological tests are and the criteria used to evaluate them, and (2) have an appreciation of the various types of tests available for commercial use.
Prerequisite(s): PSYC 1000, 1000, 1000 or 1000.

PSYC 3185 Psych Testing & Measure Lab (1 Credit Hour)
PSYC 3185 is a 1-credit lab course that must be taken simultaneously with PSYC 3180, a 3-credit lecture course. The goal of PSYC 3185 is to provide students with an opportunity to work "hands-on" with the development, administration, and analysis of a psychological test. The lab is designed to maximize the learning experience by allowing students to apply the concepts discussed in the lecture portion of the course (PSYC 3180). In order to achieve this goal, students will write and critique test items, enter test data, analyze test data, and write up the results of their statistical analyses.
Prerequisite(s): (PSYC 3090 or 3090) and (PSYC 3130 or 3130).

PSYC 3200 Educational Psychology (3 Credit Hours)
Examines psychological principles applied to educational practices with special emphasis on development, learning theories, and contexts of learning. Its purpose is to help adults working with children to understand better the relationship between applied educational practices and psychological principles and research.
Prerequisite(s): PSYC 1000, 1000, 1000 or 1000.

PSYC 3210 Child Psychology (3 Credit Hours)
A survey of the concepts, principles, and major findings of research on human development.
Prerequisite(s): PSYC 1000, 1000, 1000 or 1000.

PSYC 3230 Nursery School Observ (3 Credit Hours)
For students in the coordinate psychology and early childhood education major
Prerequisite(s): PSYC 3210.

PSYC 3250 Psychology of Early Childhood (3 Credit Hours)
An investigation of educational programs for young children and/or parents of young children based on cognitive developmental theory, learning theory, and others. Curriculum development and the evaluation of program effectiveness are discussed.
Prerequisite(s): PSYC 3210.

PSYC 3260 Infancy (3 Credit Hours)
The cognitive, perceptual, and social development of the human infant are reviewed. Research findings and methods are emphasized.
Prerequisite(s): PSYC 3210.

PSYC 3300 Brain and Behavior (3 Credit Hours)
Lectures cover the function and structure of the nervous system and the role of brain activity in the regulation of behavior. This course provides psychology majors with a first exposure to the biological bases of behavior and is not recommended for students who have taken other courses in this area of study.
Prerequisite(s): PSYC 1000, 1000, 1000 or 1000.

PSYC 3310 Intro to African American Psyc (3 Credit Hours)
A study of a wide range of topics relating to psychology generally, and African Americans specifically. Topics include personality, education, psychological assessment, racism, psychology in communities, and research.
Prerequisite(s): PSYC 1000, 1000, 1000 or 1000.

PSYC 3330 Abnormal Psychology (3 Credit Hours)
An introduction to the psychological aspects of the behavior disorders.
Prerequisite(s): PSYC 1000, 1000, 1000 or 1000.

PSYC 3340 Developmental Psychopathology (3 Credit Hours)
This course is intended to provide a basic familiarity with the major forms of psychopathology and behavioral disorders. This familiarity includes knowledge of the etiology, developmental course, and prognosis of major psychological disorders affecting children and adolescents. Students will increase their knowledge on the application of information gained from the study of psychological disorders to the diagnosis, treatment and study of disorders and psychological problems found in children and adolescents.
Prerequisite(s): PSYC 1000, 1000, 1000 or 1000.

PSYC 3350 Nursery School Principles (3 Credit Hours)
A study of the basic principles involved in guiding the behavior of preschool children.
Prerequisite(s): PSYC 3230, 3230, 3230 or 3230.
PSYC 3390 Adolescent Psychology (3 Credit Hours)
A study of development through the adolescent years. Emphasis is on cognitive, social, physical, moral, sexual, and political development.
Prerequisite(s): PSYC 1000, 1000, 1000 or 1000.

PSYC 3430 Intro To Social Psych (3 Credit Hours)
The individual in a social context: the nature and measurement of attitudes, social perception, interpersonal and intergroup relations.
Prerequisite(s): PSYC 1000, 1000, 1000 or 1000.

PSYC 3440 Experimental Social Psych (4 Credit Hours)
Laboratory and field experiments in interpersonal relations, social roles, and attitude change.
Prerequisite(s): PSYC 3130, 3130, 3130 or 3130.

PSYC 3450 Positive Psychology (3 Credit Hours)
This upper-level seminar in which the content and application of positive psychology will be discussed, including the topics of well-being, happiness, health, and strengths.
Prerequisite(s): PSYC 3430.

PSYC 3460 The Self in Social Psychology (3 Credit Hours)
This is an upper level honors seminar in which we will explore the large body of theory and research focused on understanding the nature and function of the self from a social psychological perspective, including topics such as self-awareness, self-esteem, and neural correlates of self-related processes.

PSYC 3470 Psychology of Diversity (3 Credit Hours)
Navigating diversity has become increasingly important as our social world becomes more integrated with people from many varied backgrounds. Psychologists have become increasingly interested in studying diversity from a scientific perspective in order to gain a fuller understanding of these complex phenomena as well as to identify ways to increase social justice. This course will provide students with an increased understanding of theory and research related to the psychology of diversity. The course will emphasize an empirical approach to diversity. The heart of this course will cover basic psychological processes related to prejudice, stereotyping, discrimination, and stigma. We will examine diversity that results from differences in race, ethnicity, gender, gender identity/expression, disability, age, social class, sexual orientation, weight, religion, political ideology, and more. The course will make use of different learning formats and emphasize both more formal and experiential learning.
Prerequisite(s): PSYC 3430 or 3430.

PSYC 3660 Special Topics (1-3 Credit Hours)
Special Topics.

PSYC 3665 Special Topics Lab (1-3 Credit Hours)
Special Topics lab.

PSYC 3680 Comp Animal Behavior (3 Credit Hours)
A lecture course to introduce the types of questions asked by animal behaviorists, theoretical disciplines posing those questions, and recent research in behavior as related to the environment, social behavior, and reproduction.
Prerequisite(s): PSYC 1000, 1000, 1000 or 1000.

PSYC 3700 Evolution & Psychology (3 Credit Hours)
Lecture course exploring human behavior and cognition from an evolutionary perspective. Topics include evolutionary mechanisms, history of evolution in psychology, and the adaptive nature of sensory processes, language, social behaviors, reproduction and psychopathology.
Prerequisite(s): PSYC 1000.

PSYC 3770 Sensation & Perception (3 Credit Hours)
Sensation and Perception provides an appreciation for the different senses and the psychological phenomena associated with each sense. Discussions include the major theories, experimental methods, and findings associated with each of the sensory systems. Emphasis is placed on understanding sensory functions from an evolutionary perspective.
Prerequisite(s): PSYC 3300 or NSCI 3300.

PSYC 3775 Sensation & Percept Lab (1 Credit Hour)
Sensation and Perception lab is a course that provides the student with hands on activities in order to gain a deeper understanding for the different senses and the methods used to study psychological phenomena associated with each sense.
Prerequisite(s): PSYC 3300 or NSCI 3300.
Corequisite(s): PSYC 3770.

PSYC 3880 Writing Intensive: PSYC 4610 (0 Credit Hours)
Course to be attached to regular courses that incorporate a writing component within the regular course. Register within department.

PSYC 3890 Service Learning PSYC 3300 (0-1 Credit Hours)
Students complete a service activity in the community in conjunction with the content of the corequisite course.

PSYC 3940 Transfer Coursework (3-4 Credit Hours)

PSYC 4060 Behavioral Endocrinology (3 Credit Hours)
An introduction to the roles of steroid and peptide hormones in physiology and behavior. Lectures focus on the hormonal mechanisms that control reproductive and regulatory functions in human and infrahuman species.
Prerequisite(s): NSCI 3300, 3670, PSYC 3300 or 3670.

PSYC 4065 Behavioral Endocrinology Lab (1 Credit Hour)
Laboratories provide demonstration and hands-on experience in research methods used in contemporary behavioral endocrinology including hormonal manipulation, behavioral measurement, data analysis, and manuscript preparation.
Prerequisite(s): PSYC 3130 and 3090 and (PSYC 4060 or NSCI 4060). May be taken concurrently.

PSYC 4180 History & Systems (3 Credit Hours)
A survey of the roots of contemporary psychology. Students then identify an interest area, trace its historical roots, and present their work in class.
Prerequisite(s): (PSYC 1000, 1000, 1000 or 1000).
PSYC 4330  Neurobiol Learn & Memory (3 Credit Hours)
An introduction to the study of the neural mechanisms involved in learning and memory. The course will involve detailed study of the memory systems of the brain as well as historical trends, theoretical perspectives and empirical findings that are associated with the neurobiology of learning and memory.
Prerequisite(s): PSYC 3300 or NSCI 3300.

PSYC 4380  Cognitive Neuroscience (3 Credit Hours)
An introduction to the study of human behavior and cognition using neuroscience methods. This course will examine the neural basis of perception, attention, memory, language, motor control, and emotions.
Prerequisite(s): PSYC 3300, 3300, 3300, 3300, NSCI 3300, 3300, 3300 or 3300.

PSYC 4385  Cognitive Neuroscience Lab (1 Credit Hour)
A laboratory course in which students will be introduced to the methods of cognitive neuroscience, including neural networks, event-related potentials, and functional magnetic resonance imaging. Students will design and carry out simple cognitive experiments to examine issues of hemispheric laterality.
Prerequisite(s): PSYC 3130 and 4380*.
* May be taken concurrently.

PSYC 4510  Biological Psychology (3 Credit Hours)
Survey of biological psychology with an emphasis on neuroanatomy and research methods used to study mechanisms of learning and memory, mental disorders, emotion, stress, and other psychological phenomena.
Prerequisite(s): PSYC 3300 or NSCI 3300.

PSYC 4513  Music and Brain (3 Credit Hours)
An introduction to current research linking music education to brain development and function. Fulfills writing intensive and service-learning requirements.
Prerequisite(s): PSYC 3300 or NSCI 3300.

PSYC 4515  Biological Psyc Lab (1 Credit Hour)
A laboratory course providing training in behavioral and neurobiological methods, experimental design, data collection and analysis and preparation of research reports. Fulfills the writing intensive requirement.
Prerequisite(s): PSYC 3130 and 3090 and (PSYC 4510* or NSCI 4510*).
* May be taken concurrently.

PSYC 4530  Psychopharmacology (3 Credit Hours)
An introduction to the effects of psychoactive agents on the nervous system. Lectures emphasize the mechanisms by which drugs regulate neurotransmitter systems to alter psychological and physical states.
Prerequisite(s): (PSYC 3300 or NSCI 3300).

PSYC 4535  Psychopharmacology Lab (1 Credit Hour)
Lab section for PSYC 4530
Prerequisite(s): PSYC 3130 and (PSYC 4530* or NSCI 4530*).
* May be taken concurrently.

PSYC 4560  Internship Psychology (3 Credit Hours)
Students will complete 70 hours of service in a community setting in which they will use the knowledge of psychology to complete a project or paper of benefit to the community site.

PSYC 4570  Internship Psychology (3 Credit Hours)
Students will complete 70 hours of service in a community setting in which they will use the knowledge of psychology to complete a project or paper of benefit to the community site.

PSYC 4580  Internship (1-3 Credit Hours)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the academic department sponsoring the internship.

PSYC 4590  Internship (1-3 Credit Hours)
This course provides an overview of the psychobiological bases of stress and trauma reactions and related psychological disorders.

PSYC 4610  Blck Youth Develop Psyc (3,4 Credit Hours)
A study of major research findings with African-American children and adolescents. The course includes a participant-observer experience in the applied setting (e.g., school, group home). Intensive writing required.
Prerequisite(s): PSYC 3200, 3210 or 3390.

PSYC 4650  Cognitive Development (3 Credit Hours)
In addition to describing developmental and individual differences in cognition, scientists who study children's thinking are concerned with the mechanisms that underlie cognition and its development. How do biological factor interact with experiences in the physical and social world to yield a particular pattern of development? Do children develop all their intellectual skills uniformly, or do some skills develop at a faster rate than others? Is development relatively continuous and gradual over a childhood, or are there major disruptions on its course? We will examine classic and contemporary accounts of cognitive development, and consider them from both a theoretical and an empirical standpoint.

PSYC 4660  Special Topics (1-3 Credit Hours)
Special Topics.

PSYC 4670  Clinical Neuropsych Assessment (3 Credit Hours)
The primary purpose of this course is to provide an introduction to the study of clinical neuropsychology. The course will begin by presenting an overview of brain structures and functions. It then will cover conditions that are due to some malfunction in the central or peripheral nervous system. Specifically, this course will (1) survey current neuropsychological knowledge as it pertains to normal function and to both neuropathological and psychopathological conditions (2) present a developmental perspective about neuropsychological factors in pathological conditions and (3) familiarize students with primary research literature in an area of personal interest.

Prerequisite(s): (PSYC 3300, 3300, 3300, 3300, 3670, 3670, 3670, 3670, 3670, 3670, NSCI 3300, 3300, 3300, 3300, 3670, 3670, 3670, 3670, 3670 or 3670) and (PSYC 3330, 3330, 3330 or 3330).
PSYC 4810 Independent Project Lab (4 Credit Hours)
For individual research project done with a department faculty member. Generally includes hypothesis generation, design, consideration of ethical issues, data gathering, inferential analysis and the writing of work in acceptable scientific (APA) format.

PSYC 4850 Writing in Psychology (2 Credit Hours)
Writing in Psychology is a practicum course geared toward students planning on masters or graduate study. Written products will include statement of intent, conference abstracts, research summaries, and proposal introduction. Students will obtain experience and feedback on writing for empirically-supported arguments for a scholarly audience, manuscript organization and idea transition, and technical writing. The course is graded S/U.

Prerequisite(s): PSYC 3130 or 3130.

PSYC 4880 Writing Intensive: PSYC 4610 (1 Credit Hour)
Course to be attached to regular courses that incorporate a writing component within the regular course. Register within department.

PSYC 4900 Service Learning PSYC 4513 (0-1 Credit Hours)
Optional service learning component of Drugs and Behavior in which students complete 40 hours of service during the semester at a substance abuse treatment facility to be arranged by the Center for Public Service.

PSYC 4900 Psychology Research (1-3 Credit Hours)

PSYC 4910 Independent Study (1-3 Credit Hours)
Laboratory or library research under direction of a faculty member.

PSYC 4920 Independent Study (1-3 Credit Hours)

PSYC 4930 Advanced Psychology Research (1-3 Credit Hours)
By arrangement with department.

PSYC 4940 Transfer Coursework (3 Credit Hours)

PSYC 4950 Race & Inclusion Research in US (3 Credit Hours)

PSYC 4960 Special Projects (1-3 Credit Hours)
Individual studies in a selected field. Open to qualified juniors and seniors with approval of instructor and advisor.

PSYC 4990 Honors Thesis (3 Credit Hours)
Honors thesis research, first semester. Register in department.

PSYC 5000 Honors Thesis (4 Credit Hours)
Honors thesis research, second semester. Register in department.

PSYC 5380 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

PSYC 5390 Study Abroad (1-20 Credit Hours)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA.

PSYC 5880 Writing Intensive: PSYC 5040 (1 Credit Hour)
Course to be attached to regular courses that incorporate a writing component within the regular course. Register within department.

PSYC 6060 Behavioral Endocrinology (3 Credit Hours)
An introduction to the roles of steroid and peptide hormones in physiology and behavior. Lectures focus on the hormonal mechanisms that control reproductive and regulatory functions in human and infrahuman species.

PSYC 6065 Behavioral Endocrinology Lab (1 Credit Hour)
Laboratories provide demonstration and hands-on experience in research methods used in contemporary behavioral endocrinology including hormonal manipulation, behavioral measurement, data analysis, and manuscript preparation.

Corequisite(s): PSYC 6060.

PSYC 6090 Univariate I (3 Credit Hours)
An introductory course covering a variety of statistical procedures commonly used in Psychology research. Course topics include descriptive statistics and significance testing as well as detailed instruction on various statistical tests. Students learn to conduct each type of analysis both by hand and using statistical analysis software (SPSS).

PSYC 6100 Rsch Methods Behav Hlth (3 Credit Hours)
This course covers a wide array of issues related to the conduct of clinical research. Topics include Ethical Issues, choosing a research question, defining a study population, study design, randomization methods, and other relevant topics. In addition, the course includes instruction on statistical analyses that are relevant in clinical research, such as analysis of covariance (ANCOVA) and survival analysis.

PSYC 6110 Psyec Appl Univar Stat II (3 Credit Hours)
An intermediate-level course in statistics designed to meet the needs of beginning graduate students and those undergraduate students who plan to undertake graduate work in psychology. Emphasis is placed upon design of experiments and interpretation of research results.

PSYC 6130 Psyec Appl Multivar Stats (3 Credit Hours)
Design and analysis of experiments in the behavioral sciences involving multiple predictor and criterion variables. Extensive use is made of Tulane computer facilities but no programming knowledge is required.

PSYC 6150 Research Methods in Psychology (3 Credit Hours)
Individual research supervised by faculty.

PSYC 6180 History & Systems (3 Credit Hours)
A survey of the roots of contemporary psychology. Students then identify an interest area, trace its historical roots, and present their work in class.

PSYC 6330 Neurobiol Learn & Memory (3 Credit Hours)
An introduction to the study of the neural mechanisms involved in learning and memory. The course will involve detailed study of the memory systems of the brain as well as historical trends, theoretical perspectives and empirical findings that are associated with the neurobiology of learning and memory.

PSYC 6380 Cognitive Neuroscience (3 Credit Hours)
An introduction to the study of human behavior and cognition using neuroscience methods. This course will examine the neural basis of perception, attention, memory, language, motor control, and emotions.
PSYC 6385 Cognitive Neuroscience Lab (1 Credit Hour)
A laboratory course in which students will be introduced to the methods of cognitive neuroscience, including neural networks, event-related potentials, and functional magnetic resonance imaging. Students will design and carry out simple cognitive experiments to examine issues of hemispheric laterality.

Corequisite(s): PSYC 6380.

PSYC 6530 Psychopharmacology (3 Credit Hours)
An introduction to the effects of psychoactive agents on the nervous system. Lectures emphasize the mechanisms by which drugs regulate neurotransmitter systems to alter psychological and physical states.

Corequisite(s): PSYC 6530

PSYC 6570 Cognitive Neuroscience (3 Credit Hours)
This course covers conditions that are due to some malfunction in the central or peripheral nervous system. Specifically, this course will (1) survey current neuropsychological knowledge as it pertains to normal function and to both neuropathological and psychopathological conditions (2) present a developmental perspective about neuropsychological factors in pathological conditions and (3) familiarize students with primary research literature in an area of personal interest.

Corequisite(s): PSYC 6575.

PSYC 6575 Cognitive Neuroscience Lab (1 Credit Hour)

Corequisite(s): PSYC 6570.

PSYC 6590 Stress & Trauma (1 Credit Hour)
This course examines the interactions of biological, psychological, and social factors that influence stress and trauma reactions and related psychological disorders.

PSYC 6610 Adv Studies In Psych (1-3 Credit Hours)
By arrangement with department.

PSYC 6611 Adv Studies In Psych (1-3 Credit Hours)
By arrangement with department.

PSYC 6620 Advanced Studies (1-3 Credit Hours)
By arrangement with department.

PSYC 6670 Clinical Neuropsych Assessment (3 Credit Hours)
The primary purpose of this course is to provide an introduction to the study of clinical neuropsychology. The course will begin by presenting an overview of brain structures and functions. It will then cover conditions that are due to some malfunction in the central or peripheral nervous system. Specifically, this course will (1) survey current neuropsychological knowledge as it pertains to normal function and to both neuropathological and psychopathological conditions (2) present a developmental perspective about neuropsychological factors in pathological conditions and (3) familiarize students with primary research literature in an area of personal interest.

PSYC 6700 Health Psychology I (3 Credit Hours)
This is the first course of the two-semester Health Psychology series for the Behavioral Health 4+1 terminal Master of Science Program in Psychology. The primary purpose of this course is to provide an introduction to the study of health psychology. The course will examine how biological, psychological, and social factors interact with and affect: (1) the efforts people make in promoting good health and preventing illness; (2) the treatment people receive for medical problems; (3) how effectively people cope with and reduce stress and pain; and (4) the recovery, rehabilitation, and psychosocial adjustment of patients with serious health problems.

PSYC 6710 Health Psychology II (3 Credit Hours)
This seminar is the second course of the two-semester Health Psychology series for the Behavioral Health 4+1 terminal Master of Science Program in Psychology. The primary purpose of this course is to delve more deeply into contemporary topics in health psychology with direct relevance to the priorities outlined in recent healthcare reforms under the Affordable Care Act (ACA). By the end of the course, students are expected to develop knowledge and skills relevant to a broad range of topics in health psychology directly relevant to future careers in research, clinical practice, or policy.

PSYC 6940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

Public Health - Tropical Med (PHTM)

PHTM 1940 Transfer Coursework (3 Credit Hours)

Public Health Special Courses (SPHL)

SPHL 6020 Foundations in Public Health (3 Credit Hours)
PHL 6020 is one of five interdisciplinary courses that contribute to the foundational competencies required of graduates with professional degrees in public health. SPHL 6020 uses blended learning with online lessons that provide an overview of public health principles, concepts, and evidence-based approaches to global public health and the biological, environmental, behavioral, socioeconomic, and political determinants of health. Students will integrate these influences through case study and scenario analyses discussions. SPHL 6020 is a requirement for all graduate students pursuing any degree in the School of Public Health and Tropical Medicine

SPHL 6050 Biostatistics for Public Health (3 Credit Hours)
One of five interdisciplinary courses that contribute to the foundational competencies required of graduates with professional degrees in public health. Strong analytical skills in evidence-based practices are essential across all public health disciplines. In SPHL 6050, students learn how to collect, manage, and visualize a wide variety of data and appropriate biostatistical methods, including probability distributions, estimations, power and sample size, and regression. Interdisciplinary exercises, homework assignments, and data sets are drawn from real-world scenarios. The course also prepares those students who move on to advanced biostatistics courses. Biostatistics for Public Health is a requirement for all students in the MPH, MSPH, and MPH&Tropical Medicine professional degree programs.

SPHL 6060 Epidemiology for Public Health (3 Credit Hours)
One of five interdisciplinary courses that contribute to the foundational competencies required of graduates with professional degrees in public health. SPHL 6060 introduces students to epidemiological methods and approaches for use across all public health domains. This includes measuring the occurrence of disease, outbreak investigations, incidence and prevalence, natural history of disease, study designs, and estimating risk. The course also addresses the interpretation of data analyses for research, policy, and practice. Epidemiology for Public Health is a requirement for all students in the MPH, MSPH, and MPH&Tropical Medicine professional degree programs.
### Public Health Undergraduate (SPHU)

#### SPHU 1010 Intro To Public Health (3 Credit Hours)
Students are introduced to the concepts and practice of public health in the U.S. and internationally by tracing its historical evolution. Classic public health problems and their resolution will be discussed in the context of the broader contemporary social environment. The latter part of the course is focused on public health practice in both the U.S. and developing countries, with a consideration of the structure, function, and financing of public health organizations. The many different roles for public health professionals in these organizations are also described.

#### SPHU 1020 Cell, Individual & Commu (3 Credit Hours)
This course provides a foundation of knowledge about the human body in health and disease. It gives an overview of important concepts on the biological mechanisms of disease at the cellular, individual, and population/community levels. The course will focus on a natural progression in the development of health and disease, moving from a discussion of the cell, to the individual, and finally, to specific infectious or chronic disease states and processes. The role of the community in public health will be emphasized. This course is designed to provide a good foundation in the mechanisms of health and disease. Furthermore, each lecture will offer insights into current public health topics and research trends. Each lecture will address the following: 1) specific mechanisms of health and disease; 2) topics of special public health importance, and 3) a scientific update on research in the news.

#### SPHU 1890 Service Learning: SPHU 1010 (0-1 Credit Hours)
Service Learning.

#### SPHU 1891 Service Learning: SPHU 1020 (1 Credit Hour)
Service Learning.

#### SPHU 2016 Evolu, Microbes & Disease Emer (3 Credit Hours)
This course covers the basic concepts of infectious disease, dynamics of disease transmission, and the emerging and reemerging infectious diseases from an evolutionary perspective. The course’s main focus is on the dynamic nature of host-pathogen relationships and the biological phenomena behind the emergence of new microbial threats. From an initial review of some core evolutionary concepts, the students will progress into detailed discussions on how particular pathogens evolutionary strategies allow them to establish within human populations. The course encourages a wider conversation on the implications of infectious diseases in the broader context of public health, and challenges students to think creatively about solutions for prevention and control.

**Prerequisite(s):** SPHU 1010* and 1020*.

* May be taken concurrently.
SPHU 2050  Arthropods and Public Health  (3 Credit Hours)
This course provides a broad introduction to insects and other arthropods that transmit infectious pathogens, or cause problems to humans through infestation or other contact. The impact of arthropods on the history of human civilization and development will be explored, as will their use as food and in art. Arthropod utilization in forensic science and for medicinal purposes will be discussed. Throughout the course the myriad adoptions utilized by arthropods, allowing them to become the most specious group of animals in existence, will be highlighted.

Prerequisite(s): SPHU 1010 and 1020.

SPHU 2150  Foundations of Environ Health  (3 Credit Hours)
This course is designed to provide students with an introduction to and overview of key areas in environmental health. Using the perspectives of the population and community, the course will cover factors associated with the development of environmental health problems. Students will gain an understanding of the interaction of individuals and communities with the environment, the potential impact on health of environmental agents, and specific application of concepts of environmental health. The course consists of lectures that cover principles derived from core environmental health disciplines. The sequence begins with background material and "tools of the trade"; agents of environmental diseases; and applications and domains of environmental health.

Prerequisite(s): SPHU 1010* and 1020*.
* May be taken concurrently.

SPHU 2220  Concepts of Health & Wellness  (3 Credit Hours)
This course provides a foundation of knowledge about the wellness movement - personal responsibility, behavior change and risk reduction - to introduce students to the health and wellness-related information they need to thrive in today's world. The course provides a balance among the seven dimensions of wellness while at the same time emphasizing the central roles of physical fitness, nutrition, avoidance of tobacco, and stress management as keys to a healthy life. Additional fitness and wellness topics include body composition, flexibility, safety, drugs, STDs, and chronic diseases. The course also provides scientifically based information on wellness topics, as well as assessment activities and other tools for encouraging behavioral change.

Prerequisite(s): SPHU 1010 and 1020.

SPHU 2300  Introduction to Nutrition  (3 Credit Hours)
This course is designed to provide students with an introduction to the basic principles of nutrition science and research. It is recommended for undergraduate students who have not had a prior course in nutritional science. It is designed to help students gain basic knowledge about the roles of specific nutrients, with emphasis on their sources, functions, and metabolism in the human body, basic principles of digestion and absorption. Other topics include food selection for optimal health, energy balance and weight control, dietary practices in health promotion and chronic disease prevention, nutrition throughout the lifespan, and in introduction to public health nutrition including but not limited to food safety, food supply, food insecurity, and food policy.

SPHU 2333  Intro to Global MCH  (3 Credit Hours)
The course introduces undergraduate students to the complex public health problems that affect women and children in the USA and in developing countries. The course will introduce and use the socio-ecological framework and the life-course models to examine factors that determine women and children's health and disease. The foundation of the course is a comprehensive review of common health issues that affect pregnancy, children and teenagers worldwide. Programs and policy to address these issues will also be reviewed and discussed in the context of socio-ecological frameworks.

Prerequisite(s): SPHU 1010* and 1020*.
* May be taken concurrently.

SPHU 2810  Special Topics in Pub Health  (1-3 Credit Hours)
Special Topics in Public Health.

Prerequisite(s): SPHU 1010 and 1020.

SPHU 2880  Writing Intensive: SPHU 2333  (1 Credit Hour)
Writing Intensive.

SPHU 3010  Foundations of Health Care Sys  (3,4 Credit Hours)
This course develops conceptual and methodological skills for the design and implementation of public health policy. A solid grounding in systems theory will complement the use of practical management tools such as strategic planning, cost effectiveness analysis and decision analysis. Students will apply these concepts and tools within the context of current international and domestic policy frameworks in the field of public health.

Prerequisite(s): SPHU 1010 and 1020.

SPHU 3015  PH Program Implement & Mgmt  (3 Credit Hours)
This course develops practical skills for the design, implementation, and management of public health programs. A solid grounding in personal, financial, and organizational determinants of health and organizational effectiveness will complement the use of practical management tools and techniques such logic model development for program design and implementation. Students will apply these concepts and tools within the context of service delivery and policy-making in the field of public health.

Prerequisite(s): SPHU 3110*.
* May be taken concurrently.

SPHU 3020  Info In Public Hlth Pract  (3 Credit Hours)
This course provides an overview of how data, information and knowledge are acquired and applied to public health problems. The philosophy of scientific inquiry and systems approaches to problem solving are covered. The course describes the methods by which data are collected, analyzed and applied to public health planning, as well as the measures and statistical tools necessary to assess the importance of public health problems. Students learn to understand and evaluate scientific publications on public health topics.

Prerequisite(s): SPHU 1010 and 1020.
SPHU 3030 GIS Information Systems (3 Credit Hours)

SPHU 3110 Social & Behavioral Perspectiv (3 Credit Hours)
This class establishes a foundation of public health theories and their application to the social and behavioral determinants of health. These topics and theories are core to public health practice across disciplines. Students explore how the key determinants of health, such as race, gender, poverty, geography, affect the health status of the public. Students delve into the underlying theoretical or organizational explanation of determinants. Through this exploration students will identify appropriate behavior change theories to address health issues and learn how to select an intervention. Students are coached through a semester-long assignment to refine their skills in writing literature reviews, matching theories to determinants, and identifying and choosing an intervention.

Prerequisite(s): SPHU 1010 and 1020.

SPHU 3120 Issues & Strategies in PH (3 Credit Hours)
This seminar-style course is designed to provide students with basic biological and social concepts, control practices, and policies underlying the epidemiology of diseases of global importance. This course investigates how culture, society and the environment influence disease transmission, risk factors, disease prevention and health status. The course will be transdisciplinary, emphasizing the connections between the biological nature of disease and the social, economic and political context that influences prevention and control practices. Examples of health topics that may be addressed are malaria, neglected tropical diseases, diabetes, and vaccine preventable diseases.

Prerequisite(s): SPHU 1010 and 1020.

SPHU 3150 Global-Local Enviro Hlth (3 Credit Hours)
The course is designed to identify environmental issues regarding various environmental media. Fundamental concepts addressing these issues and potential solutions will be covered. Related experiences from global to local and personal perspectives will be

Prerequisite(s): SPHU 1010 and 1020.

SPHU 3160 Biostatistics in Public Health (3 Credit Hours)
This course provides an overview of various statistical methods used in public health practice and research. Emphasis is on application of appropriate methods and interpretation of results. Examples and problems from public health settings will be included. Various statistical software will be used to analyze data (excel, SPSS and others), but prior computing experience is not required. Topics covered include methods of summarizing data and estimation and hypothesis testing techniques, including the t-test, the chi-square test, the analysis of variance, correlation analysis, and linear regression.

Prerequisite(s): SPHU 1010 and 1020.

SPHU 3170 Foundations of Epidemiology (3 Credit Hours)
This course is designed to give students a general introduction to epidemiological concepts and basic tools of the field. The historic and current contributions made through the use of epidemiology in shaping our understanding of disease in populations will be described and investigated. The course will assist the student in establishing a foundation for the definition of and response to, public health challenges in the community as well as the global society. The course will introduce a number of areas of specialization within the field of epidemiology: including infectious and non-infectious diseases and other health issues.

Prerequisite(s): SPHU 1010 and 1020.

SPHU 3200 Nutrition & Chronic Disease (3 Credit Hours)
This course will provide students the opportunity to explore the complex relationships between diet, obesity and chronic disease outcomes particularly cardiovascular disease and cancer. The emphasis of the course will be using evidence-based approaches to investigate relationships between diet and disease. We will review research from experts in areas related to nutrition. The course will focus on the causal pathway from diet and inactivity to obesity to negative chronic outcomes with overnutrition being the pivotal mechanism to disease. Students will explore current diet trends and learn practical skills around making food choices in addition to examining the current research on diet factors associated with chronic disease.

Prerequisite(s): SPHU 3170 or 3170.

SPHU 3250 Global Food Security & PH (3 Credit Hours)
This course explores theoretical and practical questions regarding how food production and security have changed over the last 150 years. What are the regulatory and policy mechanisms that shape domestic food security as it relates to public health? How does food security affect human health and development? Are local/regional food production models a viable healthy alternative to the current national model? This course presents and analyzes the changing world of food security and production and its relation to public health. Using concepts and theories drawn from interdisciplinary sources, students will be able to understand current food security policy as well as analyze alternatives with potential for different health outcomes based upon sustenance patterns.

Prerequisite(s): SPHU 1010 and 1020.

SPHU 3400 Nutrition, Cooking and Pub Hlt (3 Credit Hours)
SPHU 3410 Food Safety, Comm and Policy (3 Credit Hours)

SPHU 3500 PH Approach to Sexual Violence (3 Credit Hours)
This course provides an in-depth examination of sexual violence from a public health perspective. Theories of sexual violence, the epidemiology of sexual violence (scope, causes, risk factors, and consequences), and public health approaches to reducing sexual violence will be covered.

Prerequisite(s): SPHU 3110*

* May be taken concurrently.
SPHU 3600 Women's Repro & Obstetric Hlth (3 Credit Hours)
This 3-credit course is geared toward public health undergraduate students with a strong interest in women and maternal health. The course has two distinct objectives. The first objective is to provide an overview of the pathophysiology of the female reproductive system and a survey of the complications of pregnancy, labor and delivery. The second objective is to explore medical and lay practices related to women gynecological and obstetric health, in USA and worldwide. Existing scientific evidences associated with these practices will be examined, along with ways to reconcile medical authoritative knowledge and women's autonomy.

Prerequisite(s): SPHU 1010 and 1020.

SPHU 3660 Adverse Childhood Experiences (3 Credit Hours)
Corequisite(s): SPHU 3810.

SPHU 3810 Special Topics in Public Hlth (0-3 Credit Hours)
Special Topics in Public Health.
Corequisite(s): SPHU 3660.

SPHU 3880 Writing Intensive: SPHU 3010 (1 Credit Hour)
Writing Intensive.

SPHU 3881 Writing Intensive: SPHU 3110 (1 Credit Hour)
Writing Intensive.

SPHU 3882 Writing Intensive: SPHU 3120 (1 Credit Hour)
Writing Intensive.

SPHU 3883 Writing Intensive: SPHU 3500 (1 Credit Hour)
Writing Intensive.

SPHU 3884 Writing Intensive: SPHU 4010 (1 Credit Hour)
Writing Intensive.

SPHU 3890 Service Learning: SPHU 3110 (0-1 Credit Hours)
Service Learning.

SPHU 3891 Service Learning: SPHU 3300 (0-1 Credit Hours)
Service Learning.

SPHU 4010 Formulation Public Hlth Policy (3 Credit Hours)
Students will be introduced to the nature of health policy and the process by which it is developed. Various approaches to health policy are defined and their rationale considered. The politics of the development of health policy in democratic societies are discussed from both national and international perspectives. The ethics of public health policy are addressed. The course includes modern case studies of important public health issues (e.g., AIDS, smoking prevention, emerging infections such as West Nile Virus) to illustrate the development and application of policy to promote the public health.

Prerequisite(s): SPHU 1010 and 1020.

SPHU 4160 Intro to Statistical Packages (3 Credit Hours)
This course covers the elementary concepts and applications for managing and analyzing data using the Statistical Analysis System (SAS) and Stata statistical packages. The course focuses on managing and summarizing hospital admissions and international health data. The concepts covered are applicable to virtually all academic and professional settings. Each lecture begins with a presentation to introduce fundamental mapping concepts and is complemented with hands-on exercises to reinforce technical application. The first part of the course covers SAS applications, and the analog concepts for Stata are covered in the second part of the course.

Prerequisite(s): SPHU 3660.

SPHU 4180 Intro to Qualitative Methods (3 Credit Hours)
This course is an introduction to the discipline of qualitative research in public health. Students will learn how to conceptualize a research project, develop a background description of the topic, propose a research guide, and compose a problem or purpose statement. Students will learn about the ethical and legal controls about public health research. In small groups, students will undertake a pilot research study as part of the course requirements and as a means of applying their research conceptualizing and data collection skills.

Prerequisite(s): SPHU 1010, 1020 and 3110.

SPHU 4200 Evidence Based Pub Hlth (3 Credit Hours)
This course introduces the student to the scientific, epidemiological, organizational and management skills needed in designing and obtaining funding for an evidence-based public health intervention within an organizational or community setting. Students become familiar with the role and operation of non-profit organizations, foundations, national and international government agencies, and the local community in this process. Students learn to access publicly available and electronic information provided by these agencies and organizations. The course illustrates how evidence-based public health is used by funding agencies in developing and awarding grants and by public health providers and community contractors in applying for and receiving them. Emphasis is placed on how evidence-based public health is used in writing grant proposals and students have an opportunity to write a grant proposal as part of the course.

Prerequisite(s): SPHU 1010 and 1020.
SPHU 4210 Health & Environmental Risk (3,4 Credit Hours)
The course covers the principles of human health and ecological risk assessment. The National Academy of Sciences model framework for risk assessment (hazard identification, dose response assessment, exposure analysis, and risk characterization) is used to explain environmental risks of long-term exposure of humans and wildlife to air pollution and chemicals in food and drinking water. The interaction of scientific methods with focus on toxicology and regulatory requirements will be reviewed. Case studies focus on current environmental pollution issues such as exposure to lead paint, mercury in fish, arsenic from smelters and petrochemical industrial emissions. Specific topics to be covered detail include: health and ecological effects toxicology and environmental epidemiology; qualitative and quantitative risk assessment methods; cancer risk models; regulatory toxicology; risk communication; reproductive risk assessment; endocrine disruption; different approaches to risk assessment by federal, state and international agencies; political and economic aspects of risk management; information resources, and field trips to state regulatory agencies.

Prerequisite(s): SPHU 2150.

SPHU 4240 Epid of Sexually Transm Infect (3 Credit Hours)
This course is designed to provide students with the skills to conduct epidemiologic research in HIV and other sexually acquired infections. The first part of the course, we discuss the etiology, treatment, epidemiology and common prevention methods for the most common and/or most serious STIs. In the second part of the course, we will cover the methodological issues of surveillance, study design in the context of clinical and behavioral research. Ethical aspects of conducting research in HIV/STI are also discussed. Students will have hands on practice examining methodological issues by completing four exercises. Finally, we put STIs into context by discussing social, economic and political ramifications of these infections in the world by reviewing two books and one movie that illustrate these concepts.

Prerequisite(s): SPHU 3170.

SPHU 4260 Org Leadership & Mgmt (3 Credit Hours)
Organizational Leadership and Management in Developing Countries is an interdisciplinary course that examines the complex challenges inherent in managing non-profit and government organizations in developing regions. Central to your examination is the role of leadership in managing social, political, and financial influences upon policy decision-making. This course is designed for students intending to work in leadership and management positions at government agencies, international organizations, or non-governmental organizations in the developing world. Within this context, the class focuses on negotiating constraints in policy development and implementation and draws comparatively from experiences in Africa, Asia, Latin America, and the United States.

Prerequisite(s): SPHU 1010 and 1020.

SPHU 4300 Public Health Comm. (3 Credit Hours)
This course examines the intended and unintended effects of health communication, with specific focus on how the mass media and the Internet stimulate change in knowledge, attitudes, behavior, and subsequent health outcomes. Three health communication foci will be explored: 1) planned communication campaigns designed specifically to elicit health behavioral change, 2) traditional mass media's role in influencing health outcomes, and 3) the evolving influence of the Internet on health outcomes. This course examines the linkages between communication effects and various health topics, including smoking/alcohol, sex, diet, and physical activity. By the end of the course, students will understand the theoretical and practical aspects of the linkage between communication and public health and be able to apply such to public health initiatives.

Prerequisite(s): SPHU 1010 and 202.

SPHU 4330 Resilience in Int’l Disasters (3,4 Credit Hours)
This course addresses the field of disaster and international humanitarian studies, trends and recent developments in the field, and strategies to reduce disaster risk. It builds basic concepts and tools that will prepare students to understand humanitarian issues for disaster management. Students will learn to articulate concepts about disasters and the changing patterns of disasters, disaster resilience and international humanitarian response. They will develop a broad view of the key organizations involved in and components of the international humanitarian response system. The course methodology includes case studies of major disasters including the Haiti earthquake of 2010, Hurricane Katrina, the current crisis in Syria, famines in the Horn of Africa, Sahel, Southern Africa and the 2004 Asian Tsunami. Students will gain hands-on experience in computing indicators used to determine the effects of disasters on public health. Guest lecturers from the Centers for Disease Control will participate through televideo-conferencing.

Prerequisite(s): SPHU 1010 and 202.

SPHU 4340 Public Health Genomics (3 Credit Hours)
This course is designed to prepare public health students for the study of human health in a post-genome era. Students will learn the molecular basics and the complex issues involved in applying and integrating genomic technology and information into public health. The students will be able to discuss the ethical, legal, and social implications of genomics on public health.

Prerequisite(s): SPHU 1010 and 202.

SPHU 4350 Zoonotic Infections (3 Credit Hours)
This course provides a foundation of knowledge on the public health consequences of infections originating in vertebrate animals that cross over to humans with or without disease. Topics include: the consequences of animal-transmitted infections on the emergence of new human diseases; adaptation process of animal infections transitioning from animal microbes to become human microbes; human activities, occupational exposures, and medical practices that enable microbial transitions. Students will present reports and follow zoonotic disease outbreaks in real time.

Prerequisite(s): SPHU 202 and 1020.
SPHU 4400 Practical Bioinformatics (3 Credit Hours)
This practical, hands-on course introduces the basic concepts and resources of bioinformatics and genomics. Topics include health information retrieval for literatures, public grants, nucleotide and protein sequences, genome variations, and human diseases. BLAST, DNA and protein sequence alignments, building phylogenetic trees, bioinformatics tools for the laboratory will be introduced. After taking the course, students will learn how to navigate different bioinformatics databases, and grasp strategies useful for research in public health and related fields in general.

SPHU 4410 Data & Information Mgt in PH (3 Credit Hours)
This course provides students with a full introduction to data and information management. The topics include tools for collecting data; database concepts; data-entry techniques; queries of databases; data quality control; data cleaning, sharing, and reporting; database design; implementation and management of database systems. Hands-on exercises in medicine, biology, and public health are mainly practiced MS Access. Having taken this course, students will be able to design, implement and manage a database system for use in public health.

Prerequisite(s): SPHU 1010 and 1020.

SPHU 4540 Capstone Senior Seminar (3 Credit Hours)
Capstone Senior Seminar.

SPHU 4550 Capstone Independent Study (3 Credit Hours)
Capstone Senior Seminar.

SPHU 4560 Capstone Internship (3 Credit Hours)
This credit is given to students who complete an approved public service internship, independent research with a public health faculty member, or complete an approved international study program.

SPHU 4570 Internship (3 Credit Hours)
Public Health Internship.

SPHU 4580 Capstone International Program (3 Credit Hours)
Capstone International Program.

SPHU 4810 Special Topics in Pub Health (1-3 Credit Hours)
Special Topics in Public Health.

Prerequisite(s): SPHU 1010 and 1020.

SPHU 4880 Writing Intensive: SPHU 4010 (1 Credit Hour)
Writing Intensive.

SPHU 4881 Writing Intensive: SPHU 4200 (1 Credit Hour)
Writing Intensive.

SPHU 4882 Writing Intensive: SPHU 4260 (1 Credit Hour)
Writing Intensive.

SPHU 4883 Writing Intensive: SPHU 4330 (1 Credit Hour)
Writing Intensive.

SPHU 4884 Writing Intensive: SPHU 4240 (1 Credit Hour)
Writing Intensive.

SPHU 4885 Writing Intensive: SPHU 4910 (1 Credit Hour)
Writing Intensive.

Corequisite(s): SPHU 4910.

SPHU 4886 Writing Intensive: SPHU 5390 (1 Credit Hour)
Writing Intensive.

SPHU 4887 Writing Intensive: SPHU 4390 (1 Credit Hour)
Writing Intensive.

SPHU 4890 Service Learning: SPHU 4560 (0-1 Credit Hours)
Service Learning.

SPHU 4892 Service Learning SPUH 4300 (0-1 Credit Hours)
Service Learning.

SPHU 4910 Independent Study (1-3 Credit Hours)
The student will work closely with a faculty member from the department of Environmental Health Sciences. The student and faculty member will craft a research topic together. Students should consult their advisor for assistance.

SPHU 4920 Independent Study (1-3 Credit Hours)
The student will work closely with a faculty member from the department of Environmental Health Sciences. The student and faculty member will craft a research topic together. Students should consult their advisor for assistance.

SPHU 4990 Honors Thesis (3 Credit Hours)
Honors Thesis.

SPHU 5000 Honors Thesis (4 Credit Hours)
Honors Thesis.

SPHU 5380 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

SPHU 5390 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

Public Relations (PRPA)

PRPA 1010 Intro to Mass Media (3 Credit Hours)
This course is designed to offer a broad appreciation of all types of media, and an understanding of how media shapes and reflects our culture. The course will examine the impact of books, newspapers, magazines, movies, radio, TV and the Internet. The course will also cover advertising and public relations and how these industries are used in mass media to shape consumer perceptions and behaviors.

PRPA 1940 Transfer Coursework (3 Credit Hours)
Transfer Coursework for PRPA discipline in BSLS Programs (1000 level).

PRPA 2010 Ethical Issues in Media (3 Credit Hours)
This course discusses traditional moral theory and ethical philosophies while applying them to current-day issues, including truth in media, privacy, social justice, stereotyping, advertising, communications law and the Internet. Students are presented with case studies of events and issues surrounding various media as they focus on a systematic approach to making ethical decisions.
PRPA 2020 Journalism and PR (3 Credit Hours)
This course introduces students to researching, reporting, and writing news stories for print, broadcast, Internet and other media. Through extensive reporting/writing assignments, guest speakers, and quizzes on current events, the course will cover the nature of news, journalistic style, the preparation of manuscripts for publication, the development of leads, interviewing techniques, selection and organization of facts, and the difference between various media styles. The importance of effective interviewing and how companies interact with media via PR will also be discussed.

PRPA 2050 Media and the Law (3 Credit Hours)
This course provides a historical survey and analysis of the current and future trends in the development of the media-related law in America. Students explore media-related ethical theories and the law in current issues, case studies, and problem-solving scenarios. Students explore the moral philosophies that govern such concerns as royalties, copyright infringement, libel, and intellectual property.

PRPA 2100 Visual Communications (3 Credit Hours)
This course provides an introduction to visual literacy with the fundamentals of Visual Communications. Class discussions and assignments will demonstrate how these tools are used to communicate visually to an audience. The value, ethics, and methods of visual communicators will be explored and analyzed by discussing examples from graphic art, print, film/video slides, and computer graphics.

PRPA 2610 Princ of Public Relations (3 Credit Hours)
This course focuses on the communication between an individual or organization and the public to promote public acceptance and approval. Students explore traditional and emerging components of the public relations process through mass media, as well as the needs of different types of businesses, such as corporations, nonprofit organizations, and government offices.

PRPA 2650 Public Relations Writing (3 Credit Hours)
This course emphasizes the factors of information content, creativity, and persuasion in a way that relates specifically to the practice of Public Relations. Students will receive guidance in the preparation of written materials that adhere to high standards of truth and information value, engage and interest the public(s), and take an advocacy stance in support of the originating organization’s goals and objectives. These qualities of writing will be fostered for use both in the new media of websites and social media as well as in the traditional media of printed materials, news releases, speeches, letters, multi-media presentations, fact sheets, etc. Public Relations writing’s association with marketing and advertising will also be explored.

Prerequisite(s): (PRPA 2610 or MDAR 2610) and (ENGL 1010, 1010, 1010 or 1010).

PRPA 2700 PR Event Planning (3 Credit Hours)
Events are a very important strategy utilized by PR practitioners. This class will examine every aspect of event planning – from research and planning to contracts and budgets. Whether a practitioner is working with members of an internal or external audience, event planning will always be a useful tactic to build community, awareness and influence behavior. Students will also learn to promote events through both traditional and social media.

Prerequisite(s): PRPA 2610.

PRPA 2910 Special Topics in PR (1-3 Credit Hours)
Special Topics in Public Relations.

PRPA 2940 Transfer Coursework (3 Credit Hours)
Transfer Coursework for PRPA discipline in BSLS Programs (2000 level).

PRPA 3610 Public Relations Campaigns (3 Credit Hours)
This course studies real-life public relations cases with a view to understanding why some campaigns succeed while others fail. Special attention is given to contemporary cases and to development of the tools necessary for effective campaigns. Using contemporary campaigns as models, the course examines the development of public relations strategies and communications for employees, the media, the community, the consumer, and other relevant groups. Students also practice the elements of public relations research and writing.

Prerequisite(s): (ENGL 1010, 1010, 1010 or 1010) and (PRPA 2610 or MDAR 2610).

PRPA 3650 Internet Public Relations (3 Credit Hours)
This course explores the opportunities and special demands of digital media in the business and promotion of public relations and PR campaigns. Students are taught the techniques of using blogging, social networking and advanced web technology in the promotion and publicizing of public relations clients.

Prerequisite(s): PRPA 2610 or MDAR 2610.

PRPA 3910 Special Topics in PR (3 Credit Hours)
Special Topics in Public Relations.

PRPA 4910 Independent Study-PR (1-3 Credit Hours)
Independent Study - Public Relations.

Public Service (SRVC)

SRVC 4890 Service w/ Internship (0 Credit Hours)
This course carries the second tier public service graduate program requirement when associated with xxxx 4560/4570 Internship Seminar courses offered through various departments. Internship Seminars are designed for students completing public service internships for elective and public service credit. They offer students an opportunity to discuss and explore issues related to their internship experience. Internship Seminars are academic courses based on discussion sessions, professional development workshops, guest speakers from local organizations, and student presentations. They meet weekly during the academic year and run online during summer. CPS Internship Coordinators place students in one of the following seminars, depending on their department for credit and their internship: Communication Internship (limited to Communication major/minors only), Careers in Health Sciences, Leadership and Ethics in Public Health, Psychology Internship, STEM Education Internship, Public History Internship Seminar, or Topics in Community Engagement. Students receive a letter grade for their participation in the Public Service Internship Program. The letter grade is posted to the xxxx 4560/4570 departmental courses, which carry elective credits. The final grade reflects work in the Internship Seminar and an evaluation of the internship by the Internship Supervisor. SRVC 4890 courses are graded S/U (based on completion of minimum number of hours required by department).
Real Estate (REAL)

REAL 1940 Transfer Coursework (3 Credit Hours)
Transfer Coursework for REAL discipline in BSLS Programs (1000 Level).

REAL 2320 Princ & Prac Real Estate (3 Credit Hours)
This course discusses the real estate business, market, ownership and interests, contracts, land surveying, property description, title transfers, closings, financing, mortgage market, liens, taxes, assessments, brokerage, appraisal, leases and property insurance. Experts in special fields contribute to lectures and discussions.

REAL 2940 Transfer Coursework (3 Credit Hours)
Transfer Coursework for REAL discipline in BSLS Programs (2000 Level).

REAL 3320 Adv. Real Estate Princpl (3 Credit Hours)
This course presents the principles of Real Estate that are necessary for effective decision making in the marketing of real estate, purchasing of real estate, and buy-hold-sell situations. The student will study factors of supply and demand, financing options, investment analysis, and the development process use in decision making by real estate developers. (Discounted Cash Flows) The Louisiana Real Estate Commission has approved this course for 45 hours towards resident and general appraisal certification.

REAL 4910 Independent Study (1-3 Credit Hours)
Independent Study in the REAL discipline for the BSLS Programs.

Religious Studies (PARL)

PARL 2931 Middle Eastern Religion (3 Credit Hours)
This course examines some of the religious traditions of the Middle East in terms of their history, worldview, devotional practices, cultural expressions, goals and ideas. We will survey the main themes of each religion in a functional way, to examine how religion has worked to influence the region and sub sequential worldview through means such as ritual, myth, symbolism, individual and institutional meaning. Course topics include: Zoroastrianism, Baha’i, Judaism, Christianity and Islam among others.

PARL 3330 World Religions (3 Credit Hours)
This course presents the student with a survey of the principal living religions in the modern world, and provides the necessary intellectual tools to understand their history and relation to world events and contemporary issues. The student will also learn to identify underlying religious patterns throughout a large variety of cultures, ancient and modern, incorporating the study of myth, symbol, ritual, scripture, music, and community.

PARL 3911 Special Topics (3 Credit Hours)

Religious Studies (RLST)

RLST 1020 Religions of the World (3 Credit Hours)
An introduction to historical origins, teachings, scriptures, and devotional practices of major religious traditions, including Hinduism, Buddhism, Confucianism and Taoism, Judaism, Christianity, and Islam.

RLST 1100 Intro To Religious Stud (3 Credit Hours)
This course gives an overview of the development of the western approach to the study of religion. It will be comparative and cover many aspects of world civilization, provide a window on the cultural dimensions of global politics, and supply a way of perceiving approaches to the study of religion under the rubrics of anthropology of religion, sociology of religion, history and phenomenology of religion, and philosophy of religion. Important theorists and schools of thought will also be examined.

RLST 1290 Semester Abroad (1-20 Credit Hours)
Semester Abroad.

RLST 1940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

RLST 2390 Semester Abroad (1-20 Credit Hours)
Semester Abroad.

RLST 2910 Spec Topics Rel Studies (3 Credit Hours)
This course will cover special topics in Religious Studies offered by one of the cooperating departments in the RLST program.

RLST 2920 Spec Topics Rel Studies (3 Credit Hours)
This course will cover special topics in Religious Studies offered by one of the cooperating departments in the RLST program.
RLST 3140 Religious Tolerance & Coexist (3 Credit Hours)
Every study of coexistence and tolerance invariably harbors assumptions regarding integration or the lack of integration within a given society. When we speak about Christians, Jews, and Muslims across space and time, scholars must decide how and to what extent these different religious groups raised families, ate, worked, shopped, spoke and died with (or simply alongside) their neighbors. How have Christians and Jews, Jews and Muslims and Muslims and other Americans truly live together? Or did they exist in parallel spaces while spending the majority of their lives apart? This seminar uses autobiographies, religious texts, official reports, memoirs, poetry, fiction and film to explore how different religious groups lived together and apart in the twentieth century, from the Ottoman Empire to the Interwar Polish Republic, Palestine and the United States.

RLST 3890 Service Learning: RLST 3020 (0-1 Credit Hours)
Students complete a service activity in the community in conjunction with the content of the corequisite course.

RLST 3940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

RLST 3950 Spec Topics Rel Studies (3 Credit Hours)
This course will cover special topics in Religious Studies offered by one of the cooperating departments in the RLST program.

RLST 3960 Spec Topics Rel Studies (3 Credit Hours)
This course will cover special topics in Religious Studies offered by one of the cooperating departments in the RLST program.

RLST 4910 Independent Study (3 Credit Hours)
Open to students provided that the appropriate faculty director is available.

RLST 4920 Independent Study (3 Credit Hours)
Open to students provided that the appropriate faculty director is available.

RLST 4950 Spec Topics Rel Studies (3 Credit Hours)
This course will cover special topics in Religious Studies offered by one of the cooperating departments in the RLST program.

RLST 4960 Spec Topics Rel Studies (3 Credit Hours)
This course will cover special topics in Religious Studies offered by one of the cooperating departments in the RLST program.

RLST 4990 Honors Thesis (3 Credit Hours)
Honors Thesis.

RLST 5000 Honors Thesis (4 Credit Hours)
Honors Thesis.

RLST 5190 Semester Abroad (1-20 Credit Hours)
Semester Abroad.

RLST 5380 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

RLST 5390 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

River Coast Sci & Engineering (RCSE)

RCSE 6660 Special Topics (1-3 Credit Hours)
Special Topics.

RCSE 6800 Intro to River Science & Eng (3 Credit Hours)
Rivers drain the majority of non-ice-covered land surfaces on Earth and are the primary conduit for freshwater, minerals, carbon, and dissolved ions to the global ocean. In the 21st century, rivers large and small are being increasingly managed for flood control, as a source of water (agricultural, industrial, potable), recreation and navigation, all of which can have system-wide environmental consequences. Future basin and global-scale climate changes must also be considered in management decisions. This course is designed to be a graduate and advanced undergraduate, interdisciplinary examination of river science and engineering practices that can serve as a springboard to more advanced coursework on the disciplinary aspects covered. It will also be useful to practitioners who require an interdisciplinary overview of river systems to more effectively perform their professional duties.

RCSE 6810 River and Stream Restoration (3 Credit Hours)
Rivers and streams are complex ecosystems which have interconnected geologic, geomorphic, chemical and biological underpinnings. As the demands of human populations have increased over the past several centuries, rivers and streams have often been pushed beyond their ability to maintain the dynamic equilibrium inherent to the system. In recent decades, in an attempt to restore some of the values and functions to these systems, river and stream restoration has emerged as a multi-billion-dollar industry. This course will cover the definitions of river and stream restoration, discuss the planning process associated with solid restoration efforts, present restoration techniques, discuss environmental flows as restoration measures, present commonly applied design concepts and consider how uncertainty, monitoring, and adaptive management may be applied to river and stream restoration efforts.

Prerequisite(s): SCEN 6800 or 6800.

RCSE 6820 Hydraulic/ Hydrologic Modeling (3 Credit Hours)
The substantial advancement in computational power has allowed numerical models to be viable and efficient tools to solve complex problems and improve our understanding of the fundamentals in the water resources field. Despite these advancements, it is critical to fully understand the basics of numerical modeling techniques, and recognize the strengths and limitations of these techniques. This introductory modeling course provides a general overview of the basics of numerical modeling; model development and applications, and includes hands-on training on model applications to watersheds, streams, large rivers, and coastal settings.

Prerequisite(s): SCEN 6800 or RCSE 6800.
RCSE 6830  River Mechanics & Management  (3 Credit Hours)
This course will provide a thorough understanding of the practical application of river mechanics. This science is a critical, but often overlooked component, of any river management project. The River Mechanics and Management course introduces the student to a wide range of river topics related to the engineering and management of river systems. This includes an advanced examination of fluvial processes, channel stability concepts, sediment transport, and design considerations for commonly used engineering features. The course will also provide instruction on designing structural elements to aid in the management of river channels and floodplain. The course will emphasize the interdisciplinary nature of river science and engineering.

Prerequisite(s): SCEN 6800 or RCSE 6800.

RCSE 6840  Methods in River Sampling  (3 Credit Hours)
Tools and procedures developed for sampling and monitoring riverine systems over the last century are distinct from those developed for other aqueous environments. In addition to the need for tools tailored for systems of a wide range of size, energy, and setting, effective river monitoring also needs to capture highly episodic hydrographs that encompass large overbank areas during floods. River monitoring has profound implications in managing rivers for human use and for channel and riparian ecosystem health. Rivers are also highly sensitive to climate, and historical records of their behavior are a key indicator of changing climate on a basin and global scale. This course is designed to examine river sampling as conducted by agencies and academic researchers, including the use of remote sensing, and the collection of ecological, water chemistry, hydrological, sediment dynamics, and morphological evolution data sets. Historical data will be examined to define statistical data analytical procedures.

Prerequisite(s): SCEN 6800 or RCSE 6800.

RCSE 6900  Independent Study  (1-3 Credit Hours)
Independent study on a research topic of choice under the direction of a faculty member.

ROTC - Aerospace Studies (AERO)

AERO 1010  Foundations of USAF I  (1 Credit Hour)
Description. AERO 1010 is a survey course designed to introduce students to the United States Air Force and encourage participation in Air Force Reserve Officer Training Corps. Featured topics include: overview of ROTC, special programs offered through ROTC, mission and organization of the Air Force, brief history of the Air Force, introduction to leadership and leadership related issues, Air Force Core Values, Air Force officer opportunities, and an introduction to communication studies. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences. Course Objectives: The AERO 1010 student should know what AFROTC and the Air Force have to offer potential entrants, as well as the expectations the Air Force will set concerning core values and leadership. The student should also have a basic knowledge of what role the Air Force plays and how it is organized to support national objectives. The individual should demonstrate basic communicative skills.

Corequisite(s): AERO 1021.

AERO 1020  Foundations of USAF II  (1 Credit Hour)
Description. AERO 1020 is a survey course designed to introduce students to the United States Air Force and encourage participation in Air Force Reserve Officer Training Corps. Featured topics include: overview of ROTC, special programs offered through ROTC, mission and organization of the Air Force, brief history of the Air Force, introduction to leadership and leadership related issues, Air Force Core Values, Air Force officer opportunities, and an introduction to communication studies. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences. Course Objectives: The AERO 1020 student should know what AFROTC and the Air Force have to offer potential entrants, as well as the expectations the Air Force will set concerning core values and leadership. The student should also have a basic knowledge of what role the Air Force plays and how it is organized to support national objectives. The individual should demonstrate basic communicative skills.

Corequisite(s): AERO 1021.

AERO 1021  Foundations of USAF II Lab  (0 Credit Hours)
AERO 1021 Leadership Laboratory (LLAB)” is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. It is a student planned

Corequisite(s): AERO 1020.
AERO 1210  Evol Usaf Air&Space Pow  (1 Credit Hour)
AERO 1220  Air Power History II  (1 Credit Hour)
AERO 1290  Semester Abroad  (1-20 Credit Hours)
AERO 1940  Transfer Coursework  (0 Credit Hours)
AERO 2010  Development of Air Power  (1 Credit Hour)

Description. A course designed to examine general aspects of air and space power from a historical perspective. The course covers the period from the first balloons and dirigibles to the space-age systems of the Global War on Terror. Historical examples are provided to show the development of Air Force distinctive capabilities (previously referred to as core competencies), and missions (functions) to demonstrate the evolution of what has become today's USAF air and space power. Furthermore, the course examines several fundamental truths associated with war in the third dimension, e.g., principles of war and tenets of air and space power. As a whole, this course provides the students with a knowledge-level understanding for the general employment of air and space power, from an institutional, doctrinal, and historical perspective. In addition, what the students learned about the Air Force Core Values in AERO 1000 will be reinforced through the use of operational examples, and they will complete several writing and briefing assignments to meet Air Force communication skills requirements. Course Objectives: The AERO 2000 student should know the key terms and definitions used to describe air and space power. The individual should know the events, leaders, and technical developments that led to the evolution and employment of USAF air and space power. The individual should demonstrate basic verbal and written communication skills. The individual should know the Air Force Core Values and examples of their use throughout the evolution of USAF air and space power.

AERO 2020  Evol. of Air/Space Power II  (1 Credit Hour)

Description. A course designed to examine general aspects of air and space power from a historical perspective. The course covers the period from the first balloons and dirigibles to the space-age systems of the Global War on Terror. Historical examples are provided to show the development of Air Force distinctive capabilities (previously referred to as core competencies), and missions (functions) to demonstrate the evolution of what has become today's USAF air and space power. Furthermore, the course examines several fundamental truths associated with war in the third dimension, e.g., principles of war and tenets of air and space power. As a whole, this course provides the students with a knowledge-level understanding for the general employment of air and space power, from an institutional, doctrinal, and historical perspective. In addition, what the students learned about the Air Force Core Values in AERO 1000 will be reinforced through the use of operational examples, and they will complete several writing and briefing assignments to meet Air Force communication skills requirements. The individual should know the events, leaders, and technical developments that led to the evolution and employment of USAF air and space power. The individual should demonstrate basic verbal and written communication skills. The individual should know the Air Force Core Values and examples of their use throughout the evolution of USAF air and space power.

Corequisite(s): AERO 2021.

AERO 2021  Evol of Air/Space Power II Lab  (0 Credit Hours)

AERO 2021 Leadership Laboratory (LLAB)* is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. It is a student planned

Corequisite(s): AERO 2020.
### AERO 2390  Semester Abroad  (1-20 Credit Hours)

### AERO 2940  Transfer Coursework  (0 Credit Hours)

### AERO 3010  Leadership Studies I  (3 Credit Hours)

Description: AERO 3010 is a study of leadership, management fundamentals, professional knowledge, Air Force personnel and evaluation systems, leadership ethics, and communication skills required of an Air Force junior officer. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of the concepts being studied. A mandatory Leadership Laboratory complements this course by providing advanced leadership experiences in officer-type activities, giving students the opportunity to apply leadership and management principles of this course. Course Objectives: The AERO 3000 cadet should comprehend selected individual leadership skills and personal strengths and weaknesses as applied in an Air Force environment. The individual should comprehend the responsibility and authority of an Air Force officer, the Air Force officer's responsibilities in the counseling and feedback process, and the selected duties and responsibilities as a subordinate leader. The individual should comprehend and apply concepts of ethical behavior as well as comprehend the selected concepts, principles, and theories of quality in Air Force leadership and management. The individual should apply listening, speaking, and writing skills in Air Force-peculiar formats and situations with accuracy, clarity, and appropriate style.

### AERO 3011  Leadership Studies I Lab  (0 Credit Hours)

AERO 3011 Leadership Laboratory (LLAB)* is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. It is a student planned course.

### AERO 3020  Leadership Studies II  (3 Credit Hours)

Description: AERO 3020 is a study of leadership, management fundamentals, professional knowledge, Air Force personnel and evaluation systems, leadership ethics, and communication skills required of an Air Force junior officer. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of the concepts being studied. A mandatory Leadership Laboratory complements this course by providing advanced leadership experiences in officer-type activities, giving students the opportunity to apply leadership and management principles of this course. Course Objectives: The AERO 3000 cadet should comprehend selected individual leadership skills and personal strengths and weaknesses as applied in an Air Force environment. The individual should comprehend the responsibility and authority of an Air Force officer, the Air Force officer's responsibilities in the counseling and feedback process, and the selected duties and responsibilities as a subordinate leader. The individual should comprehend and apply concepts of ethical behavior as well as comprehend the selected concepts, principles, and theories of quality in Air Force leadership and management. The individual should apply listening, speaking, and writing skills in Air Force-peculiar formats and situations with accuracy, clarity, and appropriate style.

Corequisite(s): AERO 3021.

### AERO 3021  Leadership Studies II Lab  (0 Credit Hours)

AERO 3021 Leadership Laboratory (LLAB)* is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. It is a student planned course.

### AERO 4010  National Security Affairs I  (3 Credit Hours)

Description. AERO 4010 examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Special topics of interest focus on the military as a profession, officer ship, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Within this structure, continued emphasis is given to refining communication skills. Course Objectives: The AERO 4000 cadet should comprehend the basic elements of national security policy and process. The individual should comprehend the air and space power functions and competencies. Also, the individual should comprehend selected roles of the military in society and current issues affecting the military profession as well as selected provisions of the military justice system. The individual should comprehend the responsibility, authority, and functions of an Air Force commander. The individual should apply listening, speaking, and writing skills in Air Force-peculiar formats and situations with accuracy, clarity, and appropriate style. The individual should comprehend the factors, which facilitate a smooth transition from civilian to military life.

### AERO 4011  National Security Affairs I Lab  (0 Credit Hours)

AERO 4011 Leadership Laboratory (LLAB)* is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. It is a student planned course.

### AERO 4020  Nat Security Affairs II  (3 Credit Hours)

Description. AERO 4020 examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Special topics of interest focus on the military as a profession, officer ship, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Within this structure, continued emphasis is given to refining communication skills. Course Objectives: The AERO 4000 cadet should comprehend the basic elements of national security policy and process. The individual should comprehend the air and space power functions and competencies. ROTC - Military Science (MILS)

MILS 1010 Intro Army & Critical Thinking (1 Credit Hour)
MILS 1010 introduces you to the personal challenges and competencies that are critical for effective leadership and communication. You will learn how the personal development of life skills such as cultural understanding, goal setting, time management, mental/physical resiliency, and stress management relate to leadership, Officerhood, and the Army profession. As you become further acquainted with MILS 1010, you will learn the structure of the ROTC Basic Course program consisting of MILS 1010, 1020, 2010, 2020, Fall and Spring Leadership Labs, and Base Camp. The focus is on developing basic knowledge and comprehension of Army leadership dimensions, attributes and core leader competencies while gaining an understanding of the ROTC program, its purpose in the Army, and its advantages for the student.

MILS 1011 Intro Army & Critical Thinking (0 Credit Hours)

MILS 1020 Intro Profession of Arms (2 Credit Hours)
MILS 1020 overviews leadership fundamentals such as setting direction, problem-solving, listening, presenting briefs, providing feedback, and using effective writing skills. You will explore dimensions of leadership attributes and core leader competencies in the context of practical, hands-on, and interactive exercises. As you become further acquainted with MILS 1020, you will learn the structure of the ROTC Basic Course program consisting of MILS 1010, 1020, 2010, 2020, Fall and Spring Leadership Labs, and LTC. The key objective this semester is to explore (in more detail) the Army's leadership philosophy and learn fundamental military concepts. Emphasis on Army leadership will provide the learner a better understanding of the ROTC program, its purpose in the Army, and its advantages for the student.

Corequisite(s): MILS 1020.

MILS 2010 Leadership & Decision Making (2 Credit Hours)
MILS 2010 explores the dimensions of creative and innovative tactical leadership strategies and styles by examining team dynamics and two historical leadership theories that form the basis of the Army leadership framework. Aspects of personal motivation and team building are practiced planning, executing and assessing team exercises. While participation in the leadership labs is not mandatory during the MILS II year, significant experience can be gained in a multitude of areas and participation in the labs is highly encouraged. The focus continues to build on developing knowledge of the leadership attributes and core leader competencies through the understanding of Army rank, structure, and duties as well as broadening knowledge of land navigation and squad tactics. Case studies will provide a tangible context for learning the Soldier's Creed and Warrior Ethos.

MILS 2011 Leadership & Decision Making (0 Credit Hours)

MILS 2020 Army Doctrine & Team Deve (2 Credit Hours)
MILS 2020 examines the challenges of leading teams in the complex operational environment. The course highlights dimensions of terrain analysis, patrolling, and operation orders. Further study of the theoretical basis of the Army Leadership Requirements Model explores the dynamics of adaptive leadership in the context of military operations. MILS 2020 prepares Cadets for MILS 3010. Cadets develop greater self-awareness as they assess their own leadership styles and practice communication and team building skills. Case studies give insight into the importance and practice of teamwork and tactics in real-world scenarios.

Corequisite(s): MILS 2021.

MILS 2021 Army Doctrine & Team Deve (0 Credit Hours)
Corequisite(s): MILS 2020.

MILS 2530 Military History (3 Credit Hours)

MILS 3010 Tring Mgmt & Warfighting Func (2 Credit Hours)
This course is designed to provide opportunities, apply learned skills, and evaluate progress in preparation for successful completion of LDAC. This course is physically and intellectually demanding. Ultimately, each MILS III Cadet is trained in skills such as map reading, land navigation, combat water survival training, basic rifle marksmanship, troop leading procedures, operations order process, briefing skills, problem solving and small-unit tactics/techniques. Active leadership and leadership application techniques is stressed and evaluated during the course.
**MILS 3011** Tring Mgmt & Warfig Func Lab (0 Credit Hours)

**MILS 3020** Applied Ldership-Sm Unit Ops (2 Credit Hours)
This is an academically challenging course where you will study, practice, and apply the fundamentals of Army Leadership, Officership, Army Values and ethics, personal development, and small unit tactics at the team and squad level. At the conclusion of this course, you will be capable of planning, coordinating, navigating, motivating and leading a team or squad in the execution of a tactical mission during a classroom PE, a Leadership Lab, or during a Situational Training Exercise (STX) in a field environment. Successful completion of this course will help prepare you for success at the ROTC Leader Development and Assessment Course (LDAC) which you will attend next summer at Fort Lewis, WA. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, and practical exercises, a mid-term exam, and a final exam. You will receive systematic and specific feedback on your leader attributes values and core leader competencies from your instructor and other ROTC cadre and MILS IV Cadets who will evaluate you using the ROTC Leader Development Program (LDP) model.

Corequisite(s): MILS 3021.

**MILS 3021** Appld Ldership-Sm Unit Ops Lab (0 Credit Hours)

**MILS 4010** The Army Officer (2 Credit Hours)
MILS 4010 transitions the focus of student learning from being trained, mentored and evaluated as an MILS III Cadet to learning how to train, mentor and evaluate underclass Cadets. MILS IV Cadets learn the duties and responsibilities of an Army staff officer and apply the Military Decision Making Process, Army Writing Style, and the Army¿s Training Management and METL Development processes during weekly Training Meetings to plan, execute and assess battalion training events. Cadets learn to safely conduct training by understanding and employing the Composite Risk Management Process. Cadets learn how to use the Comprehensive Soldier Fitness (CSF) program to reduce and manage stress.

**MILS 4011** The Army Officer Lab (0 Credit Hours)

**MILS 4020** Company Grade Leadership (2 Credit Hours)
MILS 4020 explores the dynamics of leading in the complex situations of current military operations in the full spectrum operations (FSO). You will examine differences in customs and courtesies, military law, principles of war, and rules of engagement in the face of international terrorism. You also explore aspects of interacting with non-government organizations, civilians on the battlefield, and host nation support. The course places significant emphasis on preparing you for BOLC B, and your first unit of assignment. It uses case studies, scenarios, and ¿What Now, Lieutenant¿ exercises to prepare you to face the complex ethical and practical demands of leading as a commissioned officer in the United States Army. This semester, you will: Explore Military Professional Ethics and ethical decision making facing an Officer Gain practical experience in Cadet battalion leadership roles Demonstrate personal skills in operations and communications Evaluate and develop MILS III small unit leaders and examine issues of force protection in FSO Prepare for the transition to a career as an Army Officer

Prerequisite(s): MILS 4010.
Corequisite(s): MILS 4021.

**MILS 4021** Company Grade Leadership Lab (0 Credit Hours)

**MILS 4910** Independent Study (1-3 Credit Hours)

**MILS 4920** Independent Study (1 Credit Hour)

**MILS 5190** Semester Abroad (1-20 Credit Hours)

**MILS 5940** Transfer Coursework (0 Credit Hours)

**ROTC - Naval Science (NAVS)**

**NAVS 1010** Intro To Naval Science (3 Credit Hours)
Freshman/Fall. A general introduction to the naval profession and to concepts of sea power. The mission, organization, and warfare components of the U.S. Navy and Marine Corps. Overview of officer and enlisted ranks and rates, training and education, and career patterns. Naval courtesy and customs, military justice, leadership, and nomenclature. Professional competencies required to become a naval officer.

**NAVS 1011** Intro to Naval Science Lab (0 Credit Hours)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory curriculum guide lists the topics for the laboratory periods.

**NAVS 1020** Sea Power & Maritime Affairs (3 Credit Hours)
This course is a study of the U.S. Navy and the influence of sea power on history that incorporates both a historical and political science process to explore the major events, attitudes, personalities, and circumstances that have imbued the U.S. Navy with its proud history and rich tradition. It deals with issues of national imperatives in peacetime, as well as war, varying maritime philosophies that were interpreted into Naval strategies/doctrines, budgetary concerns which shaped force realities, and the pursuit of American diplomatic objectives. It concludes with a discussion of the Navy's strategic and structural changes at the end of the Cold War and its new focus, mission, and strategy in the post-September 11, 2001 world.

Corequisite(s): NAVS 1021.

**NAVS 1021** Sea Power & Maritime Affairs Lab (0 Credit Hours)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory curriculum guide lists the topics for the laboratory periods.

Corequisite(s): NAVS 1020.
NAV 1060 Leadership Lab (0 Credit Hours)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory curriculum guide lists the topics for the laboratory periods.

NAV 1290 Semester Abroad (1-20 Credit Hours)
Freshman study abroad credit.

NAV 1940 Transfer Coursework (0 Credit Hours)
Freshman level course worked accepted as credit for Naval Science program and curriculum.

NAV 2000 Leadership & Management I (3 Credit Hours)
The course introduces the student to many of the fundamental concepts of leading Sailors and Marines, which shall be expanded upon during the continuum of leadership development throughout NROTC. It develops the elements of leadership vital to the effectiveness of Navy/Marine Corps officers by reviewing the theories and parameters of leadership and management within and outside of the Naval Service and progressing through values development, interpersonal skills, management skills, and application theory. Practical applications are explored through the use of experiential exercises, readings, case studies, and laboratory discussions.

NAV 2001 Leadership & Management I Lab (0 Credit Hours)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory curriculum guide lists the topics for the laboratory periods.

NAV 2010 Naval Ship Systems I (3 Credit Hours)
In this course, students learn detailed ship design, hydrodynamic forces, stability, propulsion, electrical theory and distribution, hydraulic theory and ship control, and damage control. The course includes basic concepts of theory/design of steam, gas turbine, diesel, and nuclear propulsion. Case studies on leadership/ethical issues in the engineering arena are also covered.

NAV 2011 Naval Ship Systems I Lab (0 Credit Hours)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory curriculum guide lists the topics for the laboratory periods.

NAV 2390 Semester Abroad (1-20 Credit Hours)
Sophomore study abroad credit.

NAV 3010 Navigation I (3 Credit Hours)
This course is an in-depth study of the theory, principles, procedures, and application of plotting, piloting, and electronic navigation, as well as an introduction to maneuvering boards. Students learn piloting techniques, the use of charts, the use of visual and electronic aids, and the theory of operation of both magnetic and gyrocompasses. Students develop practical skills in plotting and electronic navigation. Other topics include tides, currents, effects of wind/weather, voyage planning, and an application and introduction to the international/inland rules of navigation. The course is supplemented with a review/analysis of case studies involving moral/ethical/leadership issues pertaining to the concepts listed above.

Corequisite(s): NAV 3011.

NAV 3011 Navigation I Lab (0 Credit Hours)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory curriculum guide lists the topics for the laboratory periods.

Corequisite(s): NAV 3010.

NAV 3020 Naval Ops Analysis (3 Credit Hours)
This course is a continued study of relative motion, formation tactics, and ship employment. It includes introductions to Naval operations and operations analysis, ship behavior and characteristics in maneuvering, applied aspects of ship handling, afloat communications, Naval command and control, Naval warfare areas, and joint warfare. The course is supplemented with a review/analysis of case studies involving moral/ethical/leadership issues pertaining to the concepts listed above.
NAVS 3021 Naval Ops Analysis Lab (0 Credit Hours)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory curriculum guide lists the topics for the laboratory periods.

NAVS 3030 Evolution of Warfare (3 Credit Hours)
In this course, students trace the development of warfare to the present day. It is designed to cover the causes of continuity and change in the means and methods of warfare. It addresses the influence of political, economic, and societal factors on the conduct of war, with significant attention focused on the role of technological innovation in changing the battlefield. Students will explore the contribution of preeminent military theorists and battlefield commanders to our modern understanding of the art and science of war.

NAVS 3031 Evolution of Warfare Lab (0 Credit Hours)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory curriculum guide lists the topics for the laboratory periods.

NAVS 3050 Fund of Maneuver Warfare (3 Credit Hours)
Corequisite(s): NAVS 3051.

NAVS 3051 Fund of Maneuver Warfare (0 Credit Hours)
Corequisite(s): NAVS 3050.

NAVS 3940 Transfer Coursework (3 Credit Hours)
Transfer coursework.

NAVS 4010 Naval Ship Systems II (3 Credit Hours)
Junior/Spring. Theory and employment of weapons systems, including the processes of detection, evaluation, threat analysis, weapon selection, delivery, guidance, and explosives. Fire control systems and major weapons types, including capabilities and limitations. Physical aspects of radar and underwater sound. Facets of command, control, and communications as means of weapons system integration.

Corequisite(s): NAVS 4011.

NAVS 4011 Naval Ship Systems II Lab (0 Credit Hours)
Corequisite(s): NAVS 4010.

NAVS 4020 Leadership and Ethics (3 Credit Hours)
Senior/Spring. The interaction of leadership, organizational behavior, and human resource management. Subordinate interviewing and counseling, performance appraisal, military and civilian law, and managerial ethics and values. This capstone course integrates professional competencies to develop understanding of the issues faced by leaders, managers, and naval officers.

NAVS 4021 Leadership & Ethics Lab (0 Credit Hours)
Corequisite(s): NAVS 4020.

NAVS 4030 Fundamentals Maneuver Warfare (3 Credit Hours)
A historical survey of the development of amphibious doctrine and the conduct of amphibious operations. The evolution of amphibious warfare in the 20th century, especially during World War II. Present-day potential and limitations on amphibious operations, including the concept of rapid deployment force.

Corequisite(s): NAVS 4031.

NAVS 4031 Fundamentals Maneuver Warfare (0 Credit Hours)
Corequisite(s): NAVS 4030.

NAVS 4890 Service Learning: NAVS 4010 (0-1 Credit Hours)
Service learning component.

NAVS 4910 Independent Study (3 Credit Hours)
Independent study.

NAVS 4940 Transfer Coursework (3 Credit Hours)
Transfer coursework.

NAVS 5190 Semester Abroad (1-20 Credit Hours)
Semester abroad.

NAVS 5380 Junior Year Abroad (1-20 Credit Hours)
Junior year abroad.

NAVS 5390 Junior Year Abroad (1-20 Credit Hours)
Junior year abroad.

NAVS 5940 Transfer Coursework (0 Credit Hours)
Transfer coursework.

Russian (RUSS)

RUSS 1010 Elementary Russian I (4 Credit Hours)
Introduction to Russian grammar. Development of basic language skills, with particular emphasis on the active use of present-day Russian. For students with little or no knowledge of Russian. Meets four times a week.

Prerequisite(s): minimum score of PASS in ‘RUSS 1010 Placement’.

RUSS 1020 Elementary Russian II (4 Credit Hours)
Continuation of the development of introductory language skills. Practice in reading, speaking, writing and understanding.

Prerequisite(s): minimum score of PASS in ‘RUSS 1020 Placement’ or RUSS 1010.

RUSS 1190 Freshman Writing Sem (4 Credit Hours)
Freshman Writing Seminar on varying topics. Consult department for details.

RUSS 1290 Semester Abroad (1-20 Credit Hours)
Semester Abroad.

RUSS 1940 Transfer Coursework (0 Credit Hours)
Transfer Coursework.
RUSS 2030 Intermediate Russian (4 Credit Hours)
Advancement of all language skills, including aural-oral, writing, and communicative fluency. Reading of literary texts.

Prerequisite(s): minimum score of PASS in ‘RUSS 2030 Placement’ or RUSS 1020.

RUSS 2040 Intermediate Russian II (4 Credit Hours)
This course is a continuation of second-year Russian. Discussion of and essays on subjects related to Russian history, culture, and contemporary life. Advancement of all language skills.

Prerequisite(s): minimum score of PASS in ‘RUSS 2040 Placement’ or RUSS 2030.

RUSS 2390 Semester Abroad (1-20 Credit Hours)
Semester Abroad.

RUSS 2910 Topics in Slavic Studies (3 Credit Hours)
Topics in Slavic Studies, including literature, culture, and film, that change from year to year. See current semester's course schedule for details.

RUSS 2940 Transfer Coursework (0 Credit Hours)
Transfer Coursework.

RUSS 3030 Masterpieces Russ Lit I (3 Credit Hours)
Selected readings from among the most outstanding works of Russian literature from its beginnings through the 19th century. Advancement of all language skills through study and analysis of literary texts.

RUSS 3040 Masterpieces Russ Lit II (3 Credit Hours)
Selected readings from the most outstanding works of 20th-century Russian literature. Advancement of all language skills through study and analysis of literary texts.

RUSS 3250 Advanced Russian Grammar (3 Credit Hours)
Phonemic, grammatical, and syntactical patterns of standard literary Russian. Practice in composition and vocabulary building.

RUSS 3330 Oral Discussion (3 Credit Hours)
Discussion of topics from contemporary Russian politics and history. Students learn syntax and vocabulary aimed at building discourse competence. Hypothesization, narration, questioning, contradicting, speaking in paragraphs. Reading, listening, speaking.

RUSS 3450 Tolstoy/Dostoevsky-Trans (3 Credit Hours)
Readings and discussions of the major novels. Comparative study of literary method, theme and structure, modern critical approaches. No knowledge of Russian required. May be counted toward major.

RUSS 3530 Survey of Russian Art (3 Credit Hours)
An introduction to the art and architecture of Russia, from the 12th century to the present. The first part of the course deals with the medieval period (church architecture, icons, frescoes). The second part begins with the assimilation of western Europe.

RUSS 3700 Russian Poetry (3 Credit Hours)
Readings in Russian poetry, including Pushkin, Lermontov, Tyutchev, and the symbolists. Lectures, discussions, and compositions in Russian.

Prerequisite(s): RUSS 2040 or minimum score of PASS in ‘RUSS 3000 Level Placement’.

RUSS 3780 Soviet Jewish Experience (3,4 Credit Hours)
The course examines major trends in Russian Jewish history, culture and identity as developed during the Soviet period. Taught in English.

RUSS 3880 Writing Intensive: RUSS 3450 (1 Credit Hour)
Writing Intensive Component in conjunction with RUSS 3450.

RUSS 3940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

RUSS 4810 Special Topics (3 Credit Hours)
See Schedule of Classes for specific topic. May be repeated for credit under different topic up to 3 times.

RUSS 4811 Special Topics (3 Credit Hours)
See Schedule of Classes for specific topic. May be repeated for credit under different topic up to 3 times.

RUSS 4812 Special Topics (3 Credit Hours)
See Schedule of Classes for specific topic. May be repeated for credit under different topic up to 3 times.

RUSS 4813 Special Topics (3 Credit Hours)
Special Topics in Russian.

RUSS 4820 Special Topics (3 Credit Hours)
See Schedule of Classes for specific topic. May be repeated for credit under different topic up to 3 times.

RUSS 4880 Writing Intensive: RUSS 4810 (1 Credit Hour)
Writing Intensive Component in conjunction with RUSS 4810.

RUSS 4910 Independent Study (3 Credit Hours)
An independent research project in any advanced area of Russian language, literature or culture. Open to superior students with the approval of the department.

RUSS 4920 Independent Study (1-3 Credit Hours)
An independent research project in any advanced area of Russian language, literature or culture. Open to superior students with the approval of the department.

RUSS 4990 Honors Thesis (3 Credit Hours)
Research and writing in conjunction with Honors Thesis (first semester).

RUSS 5000 Honors Thesis (4 Credit Hours)
Research and writing in conjunction with Honors Thesis (second semester).

RUSS 5110 Capstone Component: RUSS 4810 (0 Credit Hours)
Capstone Component in conjunction with RUSS 4810.

RUSS 5190 Semester Abroad (1-20 Credit Hours)
Semester Abroad.

RUSS 5380 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

RUSS 5390 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

RUSS 5940 Tulane Non-Equivalent (1-3 Credit Hours)
Tulane Non-Equivalent.
SLAM 2010 Financial Literacy (3 Credit Hours)
This class will walk students through the fundamentals of financial planning with topics including but not limited to saving for the future, insurance needs, philanthropic giving, major life purchases and taxes all within the framework of creating a life that is meaningful and affordable.

SLAM 3010 Leadership (3 Credit Hours)
The purpose of this course is to help develop the next generation of leaders for our country and the world. They study of leadership begins with a conceptual understanding of the genealogies and evolution of leadership theory. It follows with students gaining practical knowledge about different leadership styles, traits and characteristics through case studies and personal interactions with proven leaders. The course also creates an opportunity for students to assess their leadership capabilities and to develop a personal leadership plan for the future.

SLAM 3020 Management (3 Credit Hours)
There are no prerequisites for this three credit hour course. This course serves as an introduction to the discipline of management. It is designed to integrate the accepted theories in the area with real world applications to provide students with the basic knowledge and skills needed for managing others. This course begins with a discussion of the current issues in management and then proceeds to cover the traditional functions of management: planning, organizing, leading, and controlling. Lecture and class assignments given in the course are intended to help students understand the needs of modern public and private organizations, including emerging national and international trends.

SLAM 3030 Principles of Marketing (3 Credit Hours)
This course introduces principles and problems of marketing goods and services. The course will provide a basic understanding of the role of marketing within an organization, and within the US marketplace. The relationship between marketing and other major business activities such as production and finance will also be addressed.

SLAM 3050 Public Relations (3 Credit Hours)
"The course is an introduction to the professional practice of public relations, emphasizing its dynamic functions and processes and its relationship to society. Students will examine fundamental theories that are essential to the professional practice of public relations. Emphasis will be on how public relations practitioners work to build meaningful and sustainable relationships with various publics, including employees, customers, community partners, news media, government officials, regulators, etc."

SLAM 3060 Philanthropy & Social Change (3 Credit Hours)
This course is designed to educate students to the process of philanthropy through a social justice lens that takes into account the unequal distribution of wealth and resources in the United States. It looks at the meaning and history of philanthropy in America, while also examining conceptual frameworks for envisioning the relationship between philanthropy and social change.

SLAM 3070 Sports as an Industry (3 Credit Hours)
This course considers the multibillion dollar sports industry, mostly in the United States but also on a global scale in the cases of soccer and the Olympic Games. We examine professional sports -ownership structure of teams, organization of leagues, revenue generation and division, player compensation, race and gender inequities, and the costs and benefits of stadium construction. We also examine the development of intercollegiate sports, their financial aspects, and the impact of Title IX.

SLAM 3890 Service Learning: SLAM 3060 (0-1 Credit Hours)

SLAM 4910 Independent Study (3 Credit Hours)

SLAM 4920 Independent Study (3 Credit Hours)

SLAM 5380 Junior Year Abroad (1-20 Credit Hours)

SLAM 5390 Junior Year Abroad (1-20 Credit Hours)

School of Prof Adv (SOPA)

SOPA 1500 Advanced Placement (0-12 Credit Hours)
Course designated for transfer credit.

Science & Engineering (SCEN)

SCEN 1010 Communicating Science:Teaching (1 Credit Hour)
As the high schools in New Orleans rebuild, one of their many challenges is the uneven level of preparation among students entering the 9th grade. At the New Orleans Charter High School for Science and Math (SciHi), founded by two Tulane professors, the students are motivated but the disparities in their backgrounds are enormous. In this course, we learn how to help high school students who’ve fallen behind, both academically and by understanding the origins of their difficulty. Then we apply that knowledge by working with the students and also fulfilling one of the Tulane Center for Public Service requirements. The service, a minimum of 30 hours over the course of a semester, can take the form of teaching, tutoring, assisting with in-class exercises, and always includes acting as a mentor and role model to the SciHi students.

SCEN 1015 Computers & Musical Creativity (3 Credit Hours)
For high school students enrolled in the TSSP summer program.

SCEN 1020 Comm Sci:1st Lego League (1 Credit Hour)
If you are looking for a service learning opportunity this fall, in this course, you will mentor a middle-school robotics team using FIRST LEGO League (FLL) as a platform. Typically run on-site as an after-school program, FLL provides motivation in STEM fields (Science, Technology, Engineering, and Math) by requiring middle-school students to design and build a LEGO robot and prepare a 5-minute research presentation on the theme of the challenge. Past themes have involved Trash/Recycling, Natural Disasters, Senior Citizens, Biomedical Engineering, Climate, Energy, and Nanotechnology. Tulane students will assist the teams throughout the semester and will accompany them to the qualifying competition in New Orleans in November and potentially the state competition in New Orleans in December if the team advances. Previous robotics experience is not required.
SCEN 1500 Interdisciplinary Science (3 Credit Hours)

SCEN 1890 Service Learning: SCEN 1010 (0-1 Credit Hours)
Service learning component to SCEN courses. See Schedule of Classes each semester for offerings. 20 or 40 hours of public service with a CPS approved community partner.

SCEN 1891 Service Learning: SCEN 1020 (1 Credit Hour)

SCEN 1940 Transfer Coursework (3 Credit Hours)

SCEN 2010 Clin Musculoske Anat -Upper Ex (3 Credit Hours)
This course is designed to provide students with a fundamental working knowledge of normal gross anatomy of the upper limb - the shoulder, arm, forearm, and hand. The structure of this part of the body is taught as a basis for applying the knowledge learned to normal function (physiology). In order to encourage students to understand the relationship between structure and function, examples of tools used in the clinical practice of medicine will be taught. Radiologic imaging (radiographs and ultrasound scans) will be used to aid learning of the structure of the upper limb. Examples of abnormal function and conditions seen in clinical medicine will also be taught. During laboratory, students will work in teams of 5 (small group learning) to perform structured dissection of the limb, and learn basic skills in how to use dissecting tools, and how to suture.

SCEN 2020 Clin Musculoske Anat-Lower Ext (3 Credit Hours)
This course is designed to provide students with a fundamental working knowledge of normal gross anatomy of the lower limb - the hip, thigh, knee, leg, ankle, and foot. The structure of this part of the body is taught as a basis for applying the knowledge learned to normal function (physiology). In order to encourage students to understand the relationship between structure and function, examples of tools used in the clinical practice of medicine will be taught. Radiologic imaging (radiographs and ultrasound scans) will be used to aid learning of the structure of the lower limb. Examples of abnormal function and conditions seen in clinical medicine will also be taught. During laboratory, students will work in small groups to perform dissection of a cadaver, and learn basic skills in how to use dissecting tools and how to suture. <br/>

SCEN 2070 Comm Sci.: STEM Enrichment (1 Credit Hour)
The Tulane Center for K-12 STEM Education has partnered with local middle schools to bring hands-on STEM activities into their school. Students will work with various graduate students who are leading these workshops at the Center’s local partner schools and/or assisting with the planning and execution of the Center’s events. Tulane students will learn middle school pedagogy (teaching techniques) as well as how to make learning science fun and exciting for our local students. SCEN 2070 satisfies the lower tier Service Learning graduation requirement. The service is a minimum of 40 hours over the course of the semester. Class time is not counted toward hours, and weekly attendance is required.

SCEN 2660 Special Topics (1-3 Credit Hours)
Special Topics.

SCEN 2890 Service Learning: SCEN 2070 (0-1 Credit Hours)
Service learning component to SCEN courses. See Schedule of Classes each semester for offerings. 20 or 40 hours of public service with a CPS approved community partner.

SCEN 2940 Transfer Coursework (3 Credit Hours)

SCEN 3010 Physical Dimen of Aging (3 Credit Hours)
This course is designed to introduce students to the physiological, behavioral, and cognitive changes associated with aging. In particular, we will focus on what physiological and structural changes are typical for an aging human body focusing on the brain, cardiovascular and musculoskeletal systems. We will also discuss what it means to become older within a community, what can a person expect during the aging process, and what kind of control a person has over his/her aging body. Course participants travel to local aging centers and continuing care facilities as part of the learning process.

SCEN 3030 Anatomy & Physiology I (3 Credit Hours)
The course objectives are to learn the principal structure and physiology of the musculoskeletal, peripheral nervous, and central nervous systems and to be able to relate the structures to their functions.

Prerequisite(s): EIBIO 1010, 1010, 1010, 1010, CELL 1010, 1010, 1010 or 1010.

SCEN 3035 Anatomy & Physiology I Lab (1 Credit Hour)
The first of two sequenced laboratory courses that complements SCEN 3030. Discussion of anatomical nomenclature, skeletal, muscular, peripheral and central nervous systems dissections. Dissection and exploration of human cadavers are an integral component of the laboratory experience.

Prerequisite(s): SCEN 3030.

SCEN 3040 Anatomy & Physiology II (3 Credit Hours)
The second of two sequenced courses in human anatomy and physiology. The second sequenced course explores special senses, the respiratory, cardiovascular, lymphatic and reproductive systems.

Prerequisite(s): SCEN 3030.

SCEN 3045 Anatomy & Physiology Lab II (1 Credit Hour)
The second of two sequenced laboratory courses that complements SCEN 3040. Systems covered included: autonomic nervous system, special senses, endocrine, cardiovascular, respiratory, digestive, urinary and reproductive systems. Dissection and exploration of human cadavers are an integral component of the laboratory experience.

Prerequisite(s): SCEN 3035.

Corequisite(s): SCEN 3040.

SCEN 3050 Biotech Entrepreneurship (3 Credit Hours)
SCEN 3050 provides a multi-disciplinary exploration of “real world” topics that science and engineering researchers must consider when translating their innovations from the laboratory to the medical arena. The focus is on such processes as identifying and validating a need, brainstorming and selecting a concept, developing an intellectual property strategy, determining funding sources, and evaluating the reimbursement and regulatory pathway. The goal is to provide students with critical information pertinent to the translation of their idea or invention from original conception in the university laboratory all the way to the healthcare marketplace where it may impact patients.

SCEN 3660 Special Topics (1-3 Credit Hours)
Special Topics.
SCEN 4570 Internship (1-3 Credit Hours)
An experiential learning course in which students will work with community partners in a variety of settings (health, environmental, education, etc.). In-class sessions and assignments will consist of discussions, readings, and written and oral reflections to place the volunteer service into the greater academic context. Fulfills the second tier service requirement.

SCEN 4580 Internship (1-3 Credit Hours)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the academic department sponsoring the internship.

SCEN 4590 Internship (1-3 Credit Hours)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the academic department sponsoring the internship.

SCEN 4660 Special Topics (1-3 Credit Hours)
Special Topics.

SCEN 4890 Service Learning: CENG 4910 (0-1 Credit Hours)
Students complete a service activity in the community in conjunction with the content of a three-credit corequisite course.

Corequisite(s): SCEN 4570.

SCEN 4910 Independent Study (1-3 Credit Hours)
Laboratory or library research under direction of a faculty member.

SCEN 4920 Independent Study (1-3 Credit Hours)

SCEN 4940 Transfer Coursework (3 Credit Hours)

SCEN 4945 Transfer Coursework Lab (0-3 Credit Hours)
Transfer Coursework Lab.

SCEN 4950 Special Projects in SCEN (1-3 Credit Hours)
Students will work on their own project in consultation with a faculty member.

SCEN 4960 Special Projects (1-3 Credit Hours)

SCEN 5380 Study Abroad (1-20 Credit Hours)
Semester Abroad.

SCEN 5390 Study Abroad (1-20 Credit Hours)
Semester Abroad.

SCEN 6000 Entrepreneurship Eng & Biosci (3 Credit Hours)
This course focuses on taking graduate and senior capstone engineering and bioscience research projects to a commercial stage. Not only does one need to take the research projects to an advanced engineering/bioscience stage in order to be commercialized, one needs to develop a competitive business plan, an intellectual property position, and a sustainable competitive advantage. Additionally, this course explores the major economic and technological developments that are shaping the world, how to develop and sustain a competitive bioengineering or biotech start-up firm, how to write a competitive business plan and the proper interaction with venture capitalists, lawyers and investment bankers through the entire business cycle. All through this process, the importance of ethics is continually studied, stressed and examined. Guest speakers are incorporated throughout the semester including a venture capitalist, a business ethicist, startup attorney, investment banker and several bioscience and biomedical engineering entrepreneurs.
SCEN 6010 Physical Dimen of Aging (3 Credit Hours)
This course is designed to introduce students to the physiological, behavioral, and cognitive changes associated with aging. In particular, we will focus on what physiological and structural changes are typical for an aging human body focusing on the brain, cardiovascular and musculoskeletal systems. We will also discuss what it means to become older within a community, what can a person expect during the aging process, and what kind of control a person has over his/her aging body. Course participants travel to local aging centers and continuing care facilities as part of the learning process.

Prerequisite(s): (CELL 1010, 1010, 1010 or 1010) and (EBIO 1010, 1010, 1010 or 1010).

SCEN 6030 Anatomy & Physiology I (3 Credit Hours)
The course objectives are to learn to identify the principal components of the musculoskeletal, peripheral nervous, and central nervous systems and to be able to relate the structures and their functions. (Graduate section of SCEN 3030.)

SCEN 6035 Anatomy & Physiology I Lab (1 Credit Hour)
The first of two sequenced laboratory courses that complements SCEN 6030. Discussion of anatomical nomenclature, skeletal, muscular, peripheral and central nervous systems dissections. Dissection and exploration of human cadavers are an integral component of the laboratory experience. (Graduate section of SCEN 3035.)

Prerequisite(s): SCEN 6030.

SCEN 6040 Anatomy & Physiology II (3 Credit Hours)
The second of two sequenced courses intended to address human anatomy and physiology. This course explores the respiratory, cardiovascular, lymphatic and reproductive systems. (Graduate section of SCEN 3040.)

Prerequisite(s): SCEN 6030.

SCEN 6045 Anatomy and Physiology II Lab (1 Credit Hour)
The second of two sequenced laboratory courses that complements SCEN 6040. Systems covered included: autonomic nervous system, special senses, endocrine, cardiovascular, respiratory, digestive, urinary and reproductive systems. Dissection and exploration of human cadavers are an integral component of the laboratory experience. (Graduate section of SCEN 3045.)

Prerequisite(s): SCEN 6035.
Corequisite(s): SCEN 6040.

SCEN 6060 Applied Innovation (3 Credit Hours)
Given a vetted product that solves a real problem, why do some young projects and companies fail, while others thrive and achieve the commercial or societal impact necessary to make a real difference in the world? This course reviews the foundational aspects of applied scientific and engineering innovation — that is, translation of an idea or concept into a valid application and product — then addresses those rarely taught aspects of development that frequently mean the difference between success or failure in an early stage venture. Topics addressed revolve around opportunity selection and development, leadership of innovative efforts, team development and the daily operational elements necessary to successfully developing and executing a plan. While all students may not become entrepreneurs, most will at some point in their career benefit from a thorough understanding of how to lead and manage teams, and will use the concepts, frameworks and practical tools provided by the course.

SCEN 6080 Tech Invent & Commercialization (3 Credit Hours)
 models innovation and entrepreneurial theory & practices from across a range of commercial size-scales; from small startup companies to intrapreneural units within large, established companies. The twin poles of theory & practice are balanced through classroom lectures & experiential training. Weekly lectures furnish students with effective & portable theoretical frameworks for identifying, selecting and executing opportunities for technological innovations in healthcare, energy, water and the environment. In the experiential training, students will apply their classroom learning to targeted, formal innovation & entrepreneurship competitions;& including regional & national design contests, technology challenges, and business model competitions. Completion of this course will supply students with intellectual & practical experience in advancing inventive technological ideas towards commercialization and ultimately public benefit.

SCEN 6660 Special Topics (1-3 Credit Hours)
Special Topics.

SCEN 6940 Transfer Coursework (3 Credit Hours)

SCEN 6950 Special Projects in SCEN (1-3 Credit Hours)

SCEN 6960 Special Projects (1-3 Credit Hours)

SCEN 7010 Bioinnovation Internship (6 Credit Hours)
SCEN 7010 provides 6 credit hours for Bioinnovation PhD Fellows upon completion of their 12-week summer internship with the Food and Drug Administration in Washington, DC.

SCEN 7020 Bioinnovation Research (3 Credit Hours)
SCEN 7020 provides 3 credit hours/semester to Bioinnovation fellows. Students in the Bioinnovation PhD Program are eligible to register for this course once they have completed all didactic course requirements.

SCEN 7240 College Teaching Pedagogy (3 Credit Hours)
The objective of Teaching Pedagogy is to provide a structured learning experience for doctoral students to facilitate their preparation to teach at the collegiate level and to increase their competitiveness on the job market.
SCEN 7241 College Teaching Practicum (1-4 Credit Hours)
SCEN 7500 Intro to Scientific Writing (3 Credit Hours)
This course in English Composition is open to all students in PhD programs in the School of Science and Engineering. The course will focus on basic writing skills and skills needed in scientific writing and grant preparation.

SCEN 7650 ESL: Speaking Skills (1-2 Credit Hours)
SCEN 7660 ESL Writing Skills (3 Credit Hours)
SCEN 7940 Transfer Coursework (3 Credit Hours)
SCEN 9990 Dissertation Research (3 Credit Hours)
Research toward completion of a doctoral degree.

Social Innovation/Entrepreneur (SISE)

SISE 2010 Intro Social Innov/Entrepreneur (3 Credit Hours)
The introductory class gives students an appreciation for the field of social entrepreneurship and introduces students to several helpful frameworks that will be used in subsequent classes. Students will examine key concepts and the historical context, understand current theories and debates about social change, and discuss case studies of social entrepreneurs. The class will address two overarching tenets of SISE: Social impact can best be created by moving away from the current divisive approach of separate sectors and towards blended models that connect and combine sectors in new ways Social mission and social impact are the primary focus - understanding what your mission is, and how you create the greatest social impact, is key.

SISE 2020 Intro to Business (3 Credit Hours)
This course assumes no prior background in business concepts and is open to declared SISE minors who have completed SISE 2010. The course is designed to give students basic competence in understanding and analyzing the core elements of sustainable business models. Through this course, students will gain a working vocabulary, theoretical toolkit, and fundamental technical skillset for operating in a business environment. Topics include accounting, finance, strategy, marketing, sales, operations, organizational structure and management.

Prerequisite(s): SISE 2010.

SISE 2890 Service Learning: SISE 2010 (0-1 Credit Hours)
SISE 3010 Dsgn thinking Collective Impac (4 Credit Hours)
This course is a practical, experience-based introduction to design-thinking tools and techniques for SISE undergraduate minors from diverse departments across campus. Students will be exposed to applied research, ideation and problem-solving tools adapted from human-centered design and architecture. Using New Orleans as a laboratory and working with local partners, students will creatively and collaboratively address local community concerns, leading to a prototype for installation in a neighborhood. In addition, readings, case studies, lectures, and writing exercises will allow students to learn from these local design-thinking experiences to more fruitfully address global problems, such as climate change, poverty, and the AIDS pandemic, that they aim to pursue in their program major and SISE practicum.

Prerequisite(s): SISE 2010.

SISE 3020 Ldshp for Collective Impact (3 Credit Hours)
This seminar is about Leadership - how the term has been defined and studied

SISE 4020 Ldship for Collective Impact (3 Credit Hours)
Prerequisite(s): SISE 2010.

SISE 4030 Senior Practicum (3 Credit Hours)
SISE 4040 Collaborative Approaches (3 Credit Hours)
SISE 4050 Senior Seminar (1 Credit Hour)
Prerequisite(s): SISE 2010, 2020, 3010 and 4020.

SISE 4220 Prototyping Places (3 Credit Hours)
SISE 4560 Innov Approaches to Soc Change (3 Credit Hours)
SISE 4570 SISE Internship (3 Credit Hours)
SISE 4610 Development Issues (3 Credit Hours)
SISE 4820 Taylor Your Life (2 Credit Hours)
TAYLOR Your Life is an innovative career development lab that teaches students how to approach their future with the mindset and toolkit of a designer. Participants will ideate multiple life paths, clarify their interests, focus and target their search, prototype and test elements of careers that interest them, learn how to market and brand themselves to stand out from the crowd, and map their community to effectively join the network of movers and shakers in their field.

SISE 4880 Writing Intensive: SISE 4050 (1 Credit Hour)
SISE 4890 Service Learning: SISE 4020 (0-1 Credit Hours)
SISE 4910 Independent Study (1-3 Credit Hours)
SISE 4950 Special Topics (1-3 Credit Hours)
SISE 4951 Special Topics (3 Credit Hours)
SISE 4952 Special Topics (3 Credit Hours)
Prerequisite(s): SISE 3010.
SISE 4960 DT Deep Tive (3 Credit Hours)
Prerequisite(s): SISE 3010.
SISE 5380 Junior Year Abroad (1-20 Credit Hours)
SISE 5390 Junior Year Abroad (1-20 Credit Hours)
SISE 6020 Senior Practicum (3 Credit Hours)
SISE 6100 Social Innovation Toolkit (3 Credit Hours)
SISE 6220 Prototyping Places (3 Credit Hours)
SISE 6760 Pgrms for Htlh Nut Wom&Child (3 Credit Hours)
SISE 6820 Taylor Your Life (1 Credit Hour)

Social Work (PASW)

PASW 3210 Death and Dying (3 Credit Hours)
This course provides a comprehensive overview of the study of death and dying, covering the key issues and questions in the field. We look at the personal and social attitudes regarding death in our society as well as those of other cultures and times.
Social Work (SOWK)

SOWK 0201  India Abroad Program (0 Credit Hours)
SOWK 1000  Trauma! A Survey Course (3 Credit Hours)
This hybrid survey course introduces students to the universal concept of trauma and the global scope and impact of traumatic experience on individuals and communities. Students have the unique opportunity to be involved in the development of TraumaQuest, an innovative online Course Game that reinforces educational objectives and challenges students to apply knowledge in a gaming environment designed to simulate disaster and promote resiliency. The techniques and methodology pioneered during the development phase of TraumaQuest will provide students with an interdisciplinary examination of trauma and resilience, as well as facilitate engagement through student input on design considerations and stylization of academic content.

SOWK 1940  Transfer Coursework (3 Credit Hours)
SOWK 2000  Intro Social Policy/Prac (3 Credit Hours)
This course examines the processes that influence the development of social policy and social services. Included are legislative and political processes, models of policy analysis, service delivery and policy implementation. Effects of these on people are considered from global, political, economic and social policy perspectives. This course is developed around the general proposition that social workers utilize knowledge and skills to carry out roles and functions critical for practice. Such knowledge and skills include the application of social policy analysis, the legislative process, the role and impact of politics and political choice on the quality of life of people, and the effect of economic-social policy decision and judicial actions on social services. In addition, the course examines the variability of the common and uncommon attributes of service delivery systems.

SOWK 2100  Family Trauma-A Survey Course (3 Credit Hours)
This course introduces students to the universal concept of trauma and the global scope and impact of traumatic experience on individuals and communities. Students have the unique opportunity to be involved in the development of TraumaQuest, an innovative online Course Game that reinforces educational objectives and challenges students to apply knowledge in a gaming environment designed to simulate disaster and promote resiliency. The techniques and methodology pioneered during the development phase of TraumaQuest will provide students with an interdisciplinary examination of trauma and resilience, as well as facilitate engagement through student input on design considerations and stylization of academic content.

SOWK 2110  Family Violence:Interven (3 Credit Hours)
This course explores current thinking about domestic violence and its impact on adult participants, children and families. Emphasis is placed on understanding theories about what causes domestic violence and effective intervention strategies for eliminating violence in families. Topics include socio-cultural, intrapersonal, and interpersonal explanations for domestic violence, the co-occurrence of domestic violence and child abuse, and strategies for effective intervention with batters, victims, and children.

SOWK 2120  S.W. w/ Children & Youth (3 Credit Hours)
This course is designed to provide students with an overview of social work intervention services from historical, theoretical, and practice perspectives. Services to children and their families are divided into support services which enhance family life, supplemental services that help struggling families to maintain or regain their functioning, and substitute services that provide for the child on a temporary or permanent basis when the family cannot do so. Each service is considered in terms of need, rationale, provision of service, diverse populations, consumer views of service, and social trends that may affect future provision of the service.

SOWK 2130  Happiness & Human Flourishing (3 Credit Hours)
SOWK 2220  Drug Use: Univ & Inner City (3 Credit Hours)
This course is designed to explore the epidemiology, prevalence, and culture of embeddedness of polydrug use and abuse among college students and inner-city residents. Students will compare and contrast the sociopolitical, sociocognitive, legal, and economic processes that contribute to high risk health behaviors in college and inner-city communities. Participants will develop and understanding of how one's family, friends and current systemic anti-drug initiatives come to shape high-risk health behavior patterns. Panel presentations by former polydrug users from each community will be held with a focus on developing creative solutions for a growing problem.

SOWK 2230  Guns & Gangs (3 Credit Hours)
Unlike adult crimes, most juvenile delinquency is committed in groups. The aim of this course is to examine national and local gang dynamics within the context of weapon availability, drug markets, turf issues, and the economy. The rapidly changing social variables of race, social class, migration, and immigration are explored relative to gang membership, chronic gang problems, and solutions.

SOWK 2230  Socl Welfr Budh Cult Tib Refug (3 Credit Hours)
This course will introduce students to the fundamentals of communication skills with Tibetan refugees living in India and the conditions under which they live. Their life and culture will be addressed with special attention to the implications for their social and human welfare. This course will include the fundamentals of spoken and classical Tibetan. Students will have the option of participating in a four week trip to north India to work with the Tibetan refugee population in exile in a project co-sponsored by The School of Social Work titled Compassion in Action.
SOWK 2310 Buddhist Culture & Global SW (3 Credit Hours)
This course will introduce the student to Tibetan Buddhist philosophy, Tibetan culture, the historical and current political situation in Tibet, and the social service needs of the Tibetan refugee population living in exile in India. An optional component of the course is a four week journey to India to engage fully with the Tibetan Refugee population. The course will incorporate films, guest speakers, readings, class discussion, student presentations and basic Tibetan meditation practices to provide a comprehensive overview of this rich and varied system and people.

SOWK 2311 Mindfulness & Buddhist Practic (3 Credit Hours)

SOWK 2320 Tibet: Soc Welfare/Chnge (3 Credit Hours)
This course examines the Tibetan refugee life and the struggle to preserve their culture and way of life. We will also analyze the transformation of Tibet in the Western imagination and appropriation of Tibetan culture and their consequences for Tibetan people. How does the Tibetan refugee life affect the democratization of Tibetan society and internationalization of Tibetan issue? In order to answer these questions, we will explore a history of social movements taking place in Tibetan communities and on international platforms. Our study will be rooted in a broad variety of literary genres including historical accounts, autobiographies, and documentary films.

SOWK 2400 Human Sexuality & Mod Relation (3 Credit Hours)
This course explores human sexual functioning in the context of self in relationship to others and community. It provides content on various aspects of sexual behavior, problems and difficulties, and diversity of sexual experience. Grounded in the human services, ethical and professional values are considered and discussed throughout the course. The course format includes professor lecture, student discussions and presentations, role-play, and use of films. Discussion of central issues and introduction to treatment approaches are encouraged in class. Guest lecturers who are experts in various areas of human sexuality and sex disorders will provide additional content.

SOWK 2500 Comm Org For Social Chng (3 Credit Hours)
This course employs an interdisciplinary approach to the practice of community organizing. Drawing on classical and contemporary texts, students will engage in the works of Alinsky, Freire, Pharr, Piven and Cloward and others. Narratives of people of color and other oppressed groups organizing for social change will be emphasized. Student learning includes applying community organizing theories and methods through practical engagement in the most current issues in post-Katrina New Orleans such as environmental problems, housing advocacy, race relations, education and other issues pertinent to community development.

SOWK 2510 Making Meaning of Trauma (3 Credit Hours)
This course is about the suffering that may be caused by traumatic events, and the way that suffering is soothed through spirituality and faith. In this class students will: *explore the early history of religion and health, and through the benefit of a mind-body spirit approach to resilience; *learn about disaster impact - to a community, a family, and an individual - and the ways in which disaster recovery tests the human spirit; *learn the basics of stress and trauma from a clinical perspective, and from the perspective of the major religions traditions (Christianity, Judaism, Islam, Hinduism, Buddhism, non-believers, etc.); *discuss concepts such as pain, suffering, despair, pleasure, joy, forgiveness, grace and transformation; *acquire skills (e.g., relaxation and stress reduction methods) that, when practiced regularly, will be useful when life takes a dark turn for you or someone you know; and *learn about trauma theory and religions traditions, and ways in which an integrated approach to trauma recovery may be transformative.

SOWK 2600 Domestic & Intl Terrorsm (3 Credit Hours)
This course introduces the student to theories, motivations, tactics, and goals of terrorism. The course will provide insight into the ideology, structure, financing, and driving forces behind terrorist groups inside the United States (home-grown) and international (foreign) groups. Additionally, the course will offer a critical analysis of the governmental response to the war on terrorism including contemporary models of counterterrorism and how terrorist groups and governments’ responses affect social policy.

SOWK 2890 Service Learning (1 Credit Hour)
SOWK 2940 Transfer Coursework (3 Credit Hours)
SOWK 3000 Building Community Partnership (3 Credit Hours)
In this course students with previous experience in service learning or community service will have an opportunity to enhance their knowledge of civic engagement and strengthen their leadership skills. There are two major goals of the course. The first goal is to enhance students’ knowledge, strengths and abilities to facilitate university-community partnerships. The second goal is to foster a life-long commitment to civic engagement and democratic leadership. A combination of lecture, gust speakers, discussion group exercises and a community-based project will be used in this course. Students who satisfactorily complete this course will be eligible for future leadership opportunities with the Center for Public Service.

SOWK 3300 Social Welfare Tibetan Refug (3 Credit Hours)
SOWK 3310 Tibetan Refugees - India (3 Credit Hours)
SOWK 3400 Social Engagement (3 Credit Hours)
SOWK 3890 Service Learning: SOWK 3400 (0-1 Credit Hours)
SOWK 3891 Service Learning (0-1 Credit Hours) Corequisite(s): SOWK 3320.
SOWK 3892 Service Learning: SOWK 3320 (0-1 Credit Hours)
SOWK 3895 Summer SL in India (1 Credit Hour)
SOWK 3899 Service Learning: SOWK 3900 (1 Credit Hour) Corequisite(s): SOWK 3900.
SOWK 3900 Culturally Engaged Learnng Comm (3 Credit Hours) Corequisite(s): SOWK 3899.
SOWK 4000 SPP: Emerging Programs & Policy (3 Credit Hours)
This course is in the social policy curriculum area required for undergraduate SP&P Coordinate Majors. Students will apply both social work and interdisciplinary perspectives to analyze contemporary social welfare policy issues and programs at the federal, state, and local levels. This course will explore the historical, economic, political, ideological, and other social conditions that influence policy development in the United States. Specific policy areas discussed include: means-tested social welfare programs, immigration, education, intimate partner violence, community violence, incarceration and health. This course will give particular attention to the impact of social policies and programs on at-risk or marginalized populations (e.g. people of color, people with disabilities, women, children, LGBTQ individuals), highlighting social and economic justice dimensions of social policy and potentials for policy reform.

Prerequisite(s): SOWK 2000.

SOWK 4130 Legal Skills For Sowk (3 Credit Hours)
The following course was not found in the supplied content but, was listed in program requirements. Please review and provide us, if possible, with the correct information.

SOWK 4910 Independent Study (1-3 Credit Hours)
Independent Study courses give upper-level undergraduate and graduate students an opportunity to work with a faculty advisor to pursue a personal academic interest with greater focus. Qualified students must develop a syllabus and schedule with the faculty advisor to be approved by the program directors prior to registration.

SOWK 4920 Independent Study (1-3 Credit Hours)

SOWK 5380 Junior Year Abroad (1-20 Credit Hours)

SOWK 5390 Junior Year Abroad (1-20 Credit Hours)

SOWK 6670 Social Work (16 Credit Hours)

SOWK 6940 Transfer Coursework (3 Credit Hours)

SOWK 7000 Trauma Foundations (2-3 Credit Hours)
Trauma Foundations is an online only graduate course aimed at students being exposed to and critically evaluating the complex factors that affect people and their relationships following a traumatic event across the life cycle and across various traumatic events and circumstances. Students will focus on understanding the causes, consequences, assessment, and treatment trauma at the individual, interpersonal, and community levels. Through examination, discussion group leadership activities, and other assignments student learn about undergraduate students’ experiences with trauma, along with an examination of their own experiences and those of others in their life. They are more prepared to engage in personal reflection about how their life experiences may affect social work practice. Students will develop an understanding of how differing theoretical frameworks can empower and / or oppress diverse populations exposed to trauma. They will also learn to communicate this understanding in a professional and ethical way with fellow graduate students, the instructor, and those undergraduate students in the discussion group they lead. Collectively and together with other courses, students will be more competent assessment, intervention, and evaluation in social work practice.

SOWK 7010 Family Trauma (3 Credit Hours)
"Family Trauma is an elective graduate course that explores the roles and reactions of families to trauma in all contexts and how best to help traumatized families. The course is designed to introduce you to the concept and universality of trauma, the commonly observed definitions and theories of trauma, the causes and consequences of trauma, the critical risk and protective factors associated with trauma resilience, and to provide an overview and the best practices for helping traumatized families. The course used an anti-oppressive, trauma-informed psychosocial lens that promotes human development. The overall purpose of the course is to prepare professionals for working with the traumatized by being familiar with the research, theory, and practice of family trauma of promoting recovery and mental health. This course takes an anti-oppressive social work practice approach, tying together the values of social justice with the recognition of power differentials in the interpersonal and professional relationships. In doing so, the course also explores the importance of understanding and helping families who are underserved. This class will utilize a number of instructional techniques including: lectures, case studies, class discussion, and interactive group activities both online and offline."

SOWK 7026 Leadership in Disaster (3 Credit Hours)
This course will dive into recent disasters (Hurricane Harvey, Hurricane Maria, and others) as the backdrop to explore how theories of leadership ring true or are challenged in practice. Students will be invited to recognize that leaders in the disaster space must be students of people—their needs, motivations, and expectations. Students will have the opportunity to hear from a number of seasoned leaders who will speak to experiences navigating policy, power dynamics and personalities. The course will conclude with the opportunity for students to identify strategies, approaches, traits, and behaviors of leaders to be emulated and to craft those into a personal development roadmap for use in their careers as leaders in the disaster space.

SOWK 7050 Cross Cultural Issues Sw (2 Credit Hours)

SOWK 7060 Advanced Practice III (2 Credit Hours)

SOWK 7070 Psych Aspects of Disastr (2 Credit Hours)

SOWK 7075 Disaster Mental Health Intervention (3 Credit Hours)
Disaster Mental Health Interventions is an elective course that explores the role of mental health practitioners in disaster contexts using an anti-oppressive social work practice lens. The course is designed to follow the disaster management cycle, identifying the unique roles and responsibilities of disaster mental health practitioners in meeting the needs of diverse individuals, families, and communities that are impacted by disasters. The course introduces students to six practice methods and the settings in which these methods may be used. In addition, the course discusses how to building resilience, foster posttraumatic growth, and addresses the risk of compassion fatigue in helping following disasters.

SOWK 7080 Crisis/Brief Treatment (2 Credit Hours)
This is an advanced clinical practice course designed to teach second year practice students the theories and techniques of brief treatment and crisis intervention. Students will receive historical, theoretical, and clinical information sufficient to work with individuals, couples, families, groups, and organizations. Ethical, professional, transference, and counter transference issues will be addressed as they relate to brief therapy modalities.
SOWK 7090  Chronic Mental Illness (2 Credit Hours)

SOWK 7100  Social Work & Spirituality (2-3 Credit Hours)
This course provides a framework of knowledge, values, skills and experiences to promote culturally competent, ethical, spiritually-sensitive Social Work practice which takes into account diverse expressions of spirituality. In adopting a holistic perspective to guide practice, spirituality will be viewed as a vital and essential dimension of the bio-psycho-social assessment and treatment planning process.

SOWK 7110  Professional Foundations (1 Credit Hour)
This foundation course provides a developmental overview of the breadth of social work, including its definition, scope, history, ethics and values, required competencies, and the basics of becoming a reflective practitioner. The course focuses on the future development of the individual student as a professional. The course defines relationship-centered practice within a clinical-community context as part of the introduction to the TSSW curriculum.

SOWK 7111  Part Time Prof. Foundations I (0.5 Credit Hours)
This foundation course provides a developmental overview of the breadth of social work, including its definition, scope, history, ethics and values, required competencies, and the basics of becoming a reflective practitioner. The course focuses on the future development of the individual student as a professional. The course defines relationship-centered practice within a clinical-community context as part of the introduction to the TSSW curriculum.

SOWK 7112  Part Time Prof. Foundations II (0.5 Credit Hours)

SOWK 7120  Soc Welfare History & Policy (3 Credit Hours)
The course focuses on both the historical development of American social welfare policy and the practice of policy analysis in relation to contemporary social welfare policies. Issues central to understanding American social welfare policy such as poverty, racism, sexism, globalization, privatization and faith-based policies are addressed in this course.

SOWK 7130  Diversity & Social Justice (2 Credit Hours)
This course addresses concerns about social justice and populations-at-risk. A clinical-community approach is used to teach foundational concepts, theories, and topics related to human diversity, oppression and social justice. The meta-emotional themes of Connection/Disconnection, Power/Diminishment, Purpose/Invisibility, provide a relationship-centered framework to understand diversity and social justice for social work practice. The course structure consists of small class sections designed to support a psychologically safe environment for students to learn the skills necessary for having ‘tough conversations’ related to diversity and social justice. These discussions are led by two faculty from diverse social groups - center on issues related to age, social class, culture, ethnicity, race, gender, gender orientation, and disabilities. A strengths perspective is used to understand how different social behaviors and policies support and/or oppress individuals, families, groups, and communities. Student Learning Partners are used throughout the course to provide opportunities to understand our unique cultural selves and appreciate difference and diversity in others.

SOWK 7140  Intro to Orgs & Community Prac (2 Credit Hours)
This foundation course addresses community practice as it relates to human service agencies with special attention to non-profit and grassroots organizations. Building upon 2 theoretical approaches to human service organizations/ agencies and their distinct at tributes, the course addresses key practice knowledge, skills, and values that promote, develop, and maintain organizations that effectively meet community and client needs. This course also emphasizes models of community intervention as integral to the social work professional’s role in community and addresses challenges working with diverse populations in terms of community engagement, assessment, intervention and evaluation.

SOWK 7150  Gendr Issue & Treat Prac (1 Credit Hour)

SOWK 7160  Parent Education (1-2 Credit Hours)

SOWK 7170  Orgz Issues Wprlace Eap (2 Credit Hours)

SOWK 7180  Treatment of Adults (2 Credit Hours)

SOWK 7210  Theories of Human Behavior 1 (2 Credit Hours)
Kurt Lewin’s “nothing so practical as a good theory” paradigm provides the philosophical base for this course. Meta theoretical principles are used to understand theories of human relationship development across the lifespan. These meta theoretical principles - connection and disconnection; power and diminishment; purpose and invisibility - provide an overarching perspective for social workers to function as clinical community social workers with a relationship centered focus. These principles are applied to child and adolescent development and to issues related to diversity, oppression, class and social justice. This is the first semester of a two-semester sequence.

SOWK 7220  Theories of Human Behavior 2 (2 Credit Hours)
In this required second semester course of the two semester sequence, the focus continues to center around Kurt Lewin’s “nothing as practical as a good theory” paradigm. (Kurt Lewin, 1944, University of Iowa Studies in Child Welfare) The meta theoretical principles are used to continue to understand theories of human relationship development as they relate to the life span issues of adult development. Those principles - connection and disconnection; power and diminishment; purpose and invisibility - also highlight continuing discussions about diversity, oppression, class, social justice and the intersectionality of the "isms" with each other.

SOWK 7230  Community Org-Policy Advocacy (3 Credit Hours)
This methods course addresses community organization which is a form of social work practice that works through collective response to structural inequities. Through organizing - mobilizing people to combine their resources to act strategically on behalf of common interests - social workers aim for social change found through collective human potential. Through policy practice and policy advocacy, a social worker can transform the desires of community into laws and regulations that help achieve the goal of social and economic justice. Policy practice is an integral element of social work as practiced in all settings—at the local, state, and national levels, as well as within micro, mezzo, and macro levels of intervention.
SOWK 7250 Immigrants & Refugees (2-3 Credit Hours)
This course is especially designed to familiarize students with prominent theories, major issues, and controversies in immigration policy and social work practice with immigrants and refugees. While immigration has become a crucial concern of American social welfare system, as well as an issue of global urgency, the unsettling situation as immigration controls the fate of growing numbers of asylum seekers, and the adaptation problems of the children of immigrants, has called special attention to social work researchers and practitioners. This course is developed to increase students' knowledge and skills in working with immigrant and refugee population. Students are encouraged to understand immigration issues in comparative and interdisciplinary perspectives, and to seek applications to and implications for diversity. The course is one of the social work selective courses that will meet the needs of students for a variety of career objectives. Combining with social work foundation courses, the course prepares students by teaching them advanced knowledge and skills in working with the population of immigrants and refugees.

SOWK 7260 Primary Prevention In Sw (1 Credit Hour)
SOWK 7280 Legal Issues (2 Credit Hours)
SOWK 7300 Clinic Work w/ Child/Ad (2-3 Credit Hours)
This advanced elective provides the student with knowledge of the physical, psychological and social development of children and adolescents. Course content related to clinical intervention with children includes: 1) acquiring the skills needed to keenly observe and analyze child behavior for its hidden meaning; 2) how to gather a complete and meaningful social history of the child and family within a clinical-community context; 3) interviewing and assessment techniques; and 4) treatment techniques. Students examine a wide variety of problems common to adolescents as well as the social and psychological underpinnings that accompany these. Practical and specific assessment and treatment skills relevant to typical arenas of clinical-community social work practice with children and adolescents and their families are of primary concern.

SOWK 7310 Intro to Direct Social Work Pr (3 Credit Hours)
This foundation course is the first of three direct practice methods courses (it is followed by Methods II and Advanced Methods). It focuses on teaching students a broad and integrated variety of helping methods that span individuals, families, and groups within a clinical-community perspective. The central vehicle for navigating and managing these many systems is the social worker-client relationship, or Relationship-Centered Practice. Students will learn how to engage, assess, and facilitate change in small systems within the context of larger systems such as neighborhoods and communities. Students will learn to perform major social work practice roles and communication processes as well as procedures necessary for resource development, linkage, and utilization.

SOWK 7320 SW Prac with Inds Fams &Groups (3 Credit Hours)
This required methods course is the second of two foundation courses and integrates clinical with community practice. It contains distinct modules for practice particularly with individuals and families, and with small groups. The course continues to emphasize relationship-centered practice as a central premise for intervention, addressing traditional direct service approaches.

SOWK 7330 Adv Clinical-Community Prac (5 Credit Hours)
This advanced course integrates material from Methods I and Methods II and builds on content delivered in Theory, Tools, Professional Foundations and Field. The focus of the course is on the application of advanced relationship-centered clinical-community methods to a variety of complex cases. While students in this course are also taught advanced methods for discrete areas of practice (e.g., advanced case-management, intervention and termination, treatment matching, policy analysis, direct action organizing, locality development), integration of practice skills and professional identity is driven by the use of cases that require students to challenge and "work across" conventional conceptualizations of "micro," "mezzo," and "macro" practice.

SOWK 7340 Psychodynamic Psychothrpy &DSM (2-3 Credit Hours)
SOWK 7345 Psychopathology and the DSM (3 Credit Hours)
This course will provide you with an overview of mental health assessment and diagnostic tools, including the Diagnostic Statistical Manual (DSM) categories, and touches on treatment strategies and techniques. Building on the knowledge base acquired in the foundation course, this course examines the relationship between the biological, psychological, social, environmental, and cultural influences and emotional and mental health from an ecological context. Particular attention is given to variations in the assessment process and access to treatment for populations at social and economic risk. In addition, students examine the political and social implications of mental health and their relations to social work values and ethics.

SOWK 7350 Leadership & Mgmt Human Svc Or (2-3 Credit Hours)
The course covers the theoretical foundations, principles, skills and ethics of leadership and management in human service organizations. Theories of leadership and management are examined for usefulness in the social work profession, as well as for understanding organizational behavior and worker motivation. Through in-class lecture and discussion as well as agency-based consultations, students may observe and report on strategic planning activities; working with boards; entrepreneurial and intrapreneurial initiatives in the nonprofit sector; establishing partner ships; human resources, teamwork, and diversity; supervising for improved clinical-community and management skills; budgeting; and career development.

SOWK 7360 Contempr Pract w/ Couples &Fam (2-3 Credit Hours)
This advanced elective is designed to integrate theories, practice principles, and intervention strategies with traditional and nontraditional couples and families. It builds upon those theories and methods learned in the Theory Sequence (SOWK 7210, 7220) and in the Methods Sequence (SOWK 7310, 7320 & 7330). Contemporary couples and family treatment derives from post-modern theory and philosophy. How post-modern theories and methods are translated to couples treatment is also a major aspect of this course. While each session features mini-lectures, the course is case-centered and participatory. Integration of theories and practice principles as they are translated to specific intervention strategies is the major thrust of this course. A final oral presentation focuses on case analysis, treatment planning, and implementation of post-modern intervention strategies.
SOWK 7365 Clinical Practice in Addiction (3 Credit Hours)
This is a class designed to give the student clinical practice in conceptualizing, assessing and treating addictions and substance abuse and misuse in a relational context. Clinical Practice in Addiction and Substance Abuse is a 3-credit elective course designed to build upon the prerequisite course, SOWK 7370 or SOWK 7345. This clinical course has a focus on the importance of connection and family in healing from addiction and substance abuse. The relationship between trauma and addiction will be discussed. The course is organized in five modules: (1) The brain and attachment in healing, (2) Clinical assessment of addictions and substance misuse/abuse, (3) Treatment planning and implementation, (4) The ecosystem of the substance abuse and addiction health care delivery system and healing, (5) Work with specific populations. In the course, students will learn the importance of connection and relationships in healing. We will study the ecosystem of the addiction and substance abuse care delivery system. Treatment modalities and transitions will be mastered. Exams will build on one another throughout the five modules of the course. Throughout the five modules, the student will conceptualize a client and his/her family relational ecosystem. The student will complete a comprehensive assessment and treatment plan (with interventions) for each stage of recovery.

Prerequisite(s): SOWK 7370 or 7345.

SOWK 7370 Intro to Behavior Pharmacology (3 Credit Hours)
This elective course provides basic information about the naming of drugs and the process of pharmaceutical drug development for examining the biological social and behavioral mechanisms of substance use are presented. Current trends, cultural, ethnic, gender, and age related issues of substance use are explored. The impact of various forms of substance use on the family system and communities will be discussed.

SOWK 7380 Treatment of Anxiety & Depression (2-3 Credit Hours)
The course covers the etiologies, manifestations, nosology, and biopsychosocial interventions with depression and anxiety - the two most common complaints of clients in primary care and mental health service settings. Two general approaches serve as the epistemological foundation in the course: the Strengths Perspective and a coordinated holistic biopsychosocial approach that considers physiological, psychological, social, developmental, familial, cultural and environmental factors in both the assessment of and interventions with anxiety and depression. Students engage in active learning and practical case application of cognitive-behavioral, solution-focused, interdisciplinary case management, and comparative psychotherapy techniques. Accessing and evaluating the research literature using principles of Evidence Based Practice are integrated into examination of outcomes effectiveness of comparative clinical-community treatment approaches.

SOWK 7390 Advanced Family Treatmen (1 Credit Hour)

SOWK 7400 Psychosoc Perspect-Aids (2 Credit Hours)

SOWK 7410 Research for Evidence-Based Pr (3 Credit Hours)
This course focuses on the principles and process of Evidence-based Practice (EBP), a methodology for making practice decisions that emphasizes formulating practice questions, locating and evaluating information to answer these questions, applying the knowledge gained to practice situations, and evaluating outcomes. Essential to this approach is the core competency of critical thinking, which will be introduced and developed. Also inherent in EBP is the competency of information literacy, which will be addressed as students are familiarized with information resources vital to social work and learn strategies or accessing them. Additionally, students will work towards the effective use of acquired knowledge with others. Students will learn to utilize some of the written, verbal, and visual tools underlying the core competency of communication skills. They will also begin to explore the competency of team building with particular emphasis placed on working in learning groups.

SOWK 7420 Program Evaluation (2 Credit Hours)
Program evaluation is designed to continue guiding the student in mastering tools for lifelong inquiry and learning in social work practice. The course facilitates the students' successful entrance and integration into the field placement setting by addressing the key learning issues involved in that process. Program evaluation is useful and relevant to the field agency and a hands-on experience which explicates the interface between methods of inquiry and analysis and direct social work practice.

SOWK 7430 Data Analysis and Interp (3 Credit Hours)
In this class, students continue to develop skills related to the access, creation, utilization, and dissemination of knowledge for social work practice. The course focuses primarily on the principles, methods, and applications of quantitative and qualitative data analysis used in clinical-community social work research. The course emphasizes the practical application of data analysis knowledge in both assessing the quality of existing research evidence and contributing to knowledge through systematic inquiry on topics of concern to social work practitioners and their clients. The utilization of computer applications for data management and analysis is stressed.

SOWK 7440 Capstone Seminar (2 Credit Hours)
The Capstone Seminar in relationship-centered, clinical-community practice is designed to be integrative of all the previous foundation and advanced courses. The goal is to produce a graduate who is more grounded in professional identity, and in social work's values and propose. This is accomplished through an inquisitive, dialectic process between students and professors. Fundamental questions will be raised about the nature of social work's mission, the nature of knowledge for social work and the exercise of social work practices.

SOWK 7450 Death, Dying and Grieving (2-3 Credit Hours)
This course examines End-of-Life issues and how these issues impact the clients, families and social workers. Students will have the opportunity to examine their feelings regarding death, dying, grieving and other losses through class readings and exercises, discussions and field trip(s).
The Integrative Field Seminar is a required course and is taken concurrently with each semester field practicum (Full-time Field Practicum 7520, 7530, 7540 and Part-time Field Practicum 7910-7960). The seminar is designed to afford students the opportunity to discuss, analyze, and integrate their field experiences. This process-oriented seminar is intended to support the development of a full range of social work practice skills and help the learner assume a professional social work role. As is possible, placements are made in accordance with a student's stated learning objectives and professional career goals. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills and helping the learner assume a professional social work role. As is possible, placements are made in accordance with a student's stated learning objectives and professional career goals. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

The Integrative Field Seminar is a required course and is taken concurrently with each semester field practicum (Full-time Field Practicum 7520, 7530, 7540 and Part-time Field Practicum 7910-7960). It relates theory to practice and integrates classroom learning with field experiences. This process-oriented seminar is designed to afford students the opportunity to discuss, analyze, and integrate their field placement experiences.
**SOWK 7770** Theo/Treat Depression (2 Credit Hours)
**SOWK 7780** Tx Appr To Rel & Sex Dys (2 Credit Hours)
**SOWK 7800** Violence/Fam Comm Contxt (2 Credit Hours)
**SOWK 7810** Prog,Serv/Older Adlts II (2 Credit Hours)
**SOWK 7820** Prog, Serv/Older Adltsii (2 Credit Hours)
**SOWK 7830** Reading Course (1-4 Credit Hours)
**SOWK 7831** Reading Course (1-4 Credit Hours)
**SOWK 7840** Independent Study (1-3 Credit Hours)
**SOWK 7860** Clinical Comm Approaches (2 Credit Hours)
**SOWK 7870** Gestalt Concepts In Sw (1-2 Credit Hours)
**SOWK 7880** Restorative Approaches (2-3 Credit Hours)

This elective course will cover conflict and methods for its resolution from a restorative approaches perspective. It will touch on both theory and skills-based practice and participants will come to understand the principles of restorative approaches and learn the skills to enact them. Topics will include restorative philosophy, community building, Restorative alternative methods and consensus-based meeting facilitation. The course is a combination of lecture, discussion, and practice. We will use role-plays extensively and the scenarios will range across personal and professional life. We will start at the foundation of Restorative Approaches, personal skills, and community building and work our way up through various levels of conflict. This will be a skill-focused course built towards naturalizing restorative techniques. Restorative Approaches are more than set techniques for given scenarios. They are adaptable habits and practices that feed into a larger social movement aimed at dismantling systems of oppression and violence. These theories and skills will dovetail with any social work focus area by strengthening skills for dialogue and reconciliation.

**SOWK 7910** Field Practicum & Seminar PT 1 (2.5 Credit Hours)

Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills and helping the learner assume a professional social work role. As is possible, placements are made in accordance with a student’s stated learning objectives and professional career goals. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

**SOWK 7920** Field Practicum & Seminar PT 2 (2.5 Credit Hours)

Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills and helping the learner assume a professional social work role. As is possible, placements are made in accordance with a student’s stated learning objectives and professional career goals. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

**SOWK 7930** Field Practicum & Seminar PT 3 (2.5 Credit Hours)

Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills and helping the learner assume a professional social work role. As is possible, placements are made in accordance with a student’s stated learning objectives and professional career goals. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

**SOWK 7940** Field Practicum & Seminar PT 4 (2.5 Credit Hours)

Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills and helping the learner assume a professional social work role. As is possible, placements are made in accordance with a student’s stated learning objectives and professional career goals. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

**SOWK 7950** Field Practicum & Seminar PT 5 (2.5 Credit Hours)

Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills and helping the learner assume a professional social work role. As is possible, placements are made in accordance with a student’s stated learning objectives and professional career goals. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

**SOWK 7960** Field Practicum & Seminar PT 6 (2.5 Credit Hours)

Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills and helping the learner assume a professional social work role. As is possible, placements are made in accordance with a student’s stated learning objectives and professional career goals. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

**SOWK 7970** Independent Study (3 Credit Hours)

This class directly addresses the essential relationship between self-awareness, personal growth and professional practice. It incorporates practice methods and community development theory and practice to address the needs of the growing community of Tibetan refugees in the foothills of the Himalayan Mountains. Culturally competent community development and practice is a central tenet and incorporates the integrity and worth of individuals and communities with diverse backgrounds. As an advanced elective, students will have a profound opportunity to integrate classroom learning with field experiences in their application of knowledge, skills, values and ethics to community development and multi-cultural practice in an international arena.
SOWK 8000  Diaster-Trauma Certification  (0 Credit Hours)
SOWK 8880  No Courses This Term  (0 Credit Hours)
SOWK 9010  Portfolio Planning Seminar I (1 Credit Hour)
These 9000 level seminars (Portfolio Planning Seminar Units 1-4) are designed to offer individual academic support to Doctor of Social Work (DSW) students to develop their individual APP and professional portfolios. The Portfolio Planning Seminar provides individualized support for students as they develop their research questions, construct an argument, focus their review of the literature, identify statistical and data analytic methods appropriate to the research question, and demonstrate cohesion between the identified research topic and the application of a theoretical framework. These required courses are designed for students to identify their individual research interests relevant to their respective fields and to develop these interests into an approved APP Proposal.

SOWK 9020  General Internship II (0 Credit Hours)
SOWK 9030  General Internship III (0 Credit Hours)
SOWK 9101  Leader Evidence Inform Pract (4 Credit Hours)
This course introduces students to scholarly leadership principles in social work practice. The course allows the development of critical thinking skills by gaining an understanding of scientific, analytical, and ethical approaches utilized when conducting program evaluation and service outcomes research. Students' mastery of course content prepares them to develop, use, and effectively communicate evidence informed social work research knowledge.

SOWK 9102  Theory, Models & Methods (4 Credit Hours)
This course provides students opportunities to examine the structure of selected theories, models and principals that social workers use to support their practice. Specifically it provides both a framework and a forum for students to: (a) hold conversations about the historical and contemporary factors affecting social work practice theory, including the values of American culture and changing technologies; (b) examine practice effectiveness research; and (c) propose newly configured models for theory supported practice.

SOWK 9110  Quantitative Methods I (3 Credit Hours)
SOWK 9120  Qualitative Methods I (3 Credit Hours)
SOWK 9130  Intermediate Statistics (3 Credit Hours)
SOWK 9140  Adv Multivar Appro & Inf (3 Credit Hours)
SOWK 9150  Res. Meth., Dev. & Impl. (3 Credit Hours)
SOWK 9155  Research Design In Sowk (3 Credit Hours)
SOWK 9160  Soc Wk Pract & Thry:Comp (3 Credit Hours)
SOWK 9162  Sys and Theories of Org (3 Credit Hours)
SOWK 9164  Advanced Sem Ego Psych (3 Credit Hours)
SOWK 9165  Small Group Theory/Treat (3 Credit Hours)
SOWK 91670 Lit Sem:Child/Adolsnt I (3 Credit Hours)
SOWK 91680 Measure Social Phenomena (4 Credit Hours)
This course will provide students with the opportunity to expand their knowledge and understanding of the complexities related to working in varying contests given evolving priorities, pressures, opportunities and constraints. Students will become familiar with efforts to achieve and measure variables in the context of human development. This approach takes into consideration the multiple processes and inherent challenges that come into play across theoretical, economic, environmental, and political in society.

SOWK 91690 Lit Sem:Child/Adolsnt 3 (3 Credit Hours)
SOWK 9170  Hist App To Soc Welfare (3 Credit Hours)
SOWK 91720 Scholarship of Pract In P (3 Credit Hours)
SOWK 91730 Read In Hist of Soc Wel (3 Credit Hours)
SOWK 91740 Advanced Readings (1-3 Credit Hours)
SOWK 91750 Read In Soc Wel Org Adm (3 Credit Hours)
SOWK 91760 Advan Read In Hum Beh Sc (3 Credit Hours)
SOWK 91800 Ways of Knowing, Learnin (3 Credit Hours)
SOWK 91810 Conflict In Families (3 Credit Hours)
SOWK 91820 Sem In Advanced Meth II (3 Credit Hours)
SOWK 91840 Integrative Seminar (3 Credit Hours)
SOWK 91850 Sp Proj In Soc Wk Meth I (3 Credit Hours)
SOWK 91870 Sp Proj Soc Wk Meth II (3 Credit Hours)
SOWK 91880 Qualifying Exam (4 Credit Hours)
The purpose of this seminar is for the student to demonstrate their ability to develop a command of the literature in particular areas and subareas and synthesize this knowledge into a coherent framework. Students are required to demonstrate considerable knowledge about the evolution and growth of ideas in the area as well as the issues that continue to engage scholars. Students will need to go beyond formal coursework to master independently their identified area of expertise. Students must also demonstrate an ability to situation specific research fields, constructs, and theories within a broader academic framework.
This course is an introduction to statistical analysis for doctoral students in social work. It covers basic statistical methods for use with experimental, quasi-experimental, and non-experimental research designs. The course provides basic mathematical, conceptual, and design tools for data analysis in social work research. Beginning computer applications for data analysis in social work research are also introduced.

This course introduces students to applied social statistics where students will learn to analyze, interpret, and present real world findings. Content includes descriptive and inferential statistics for univariate, bivariate, and multivariate analyses, and the use of electronic data processing technology to manage and analyze secondary data. At the end of this course, students will be able to apply statistical techniques and communicate results common to program evaluation.

This course introduces students to scholarly leadership principles in social work practice. The course allows the development of critical thinking skills by gaining an understanding of scientific, analytical, and ethical approaches utilized when conducting program evaluation and service outcomes research. Students’ mastery of course content prepares them to develop, use, and effectively communicate evidence informed social work research knowledge.

This course focuses on the development of research knowledge and skill needed for effective evidence-based clinical-community research application. The purpose of this course is to prepare students with the needed skills to measure the effectiveness and appropriateness of program interventions. This course will specifically prepare students with the needed skills for effective community level (macro) practice.

This course provides students opportunities to examine the structure of selected theories, models and principals that social workers use to support their practice. Specifically, it provides both a framework and a forum for students to: (a) hold conversations about the historical and contemporary factors affecting social work practice theory, including the values of American culture and changing technologies; (b) examine practice effectiveness research; and (c) propose newly configured models for theory-supported practice.

This seminar explores the historical context for the development of professional social work values, ideologies and methods.

This seminar introduces students to the political and sociological approaches to investigate the formation, evolution, and implementation of social policy. Research studies in policy formation, policy implementation and policy evaluation are stressed. Materials on the legislative processes, societal institutions and societal values as reflected are stressed. The seminar is designed to provide a basic theoretical foundation for students to conduct advanced policy research. Students will review and critique some of the seminal theoretical literature that informs policy research and will examine specific applications of social theory to policy questions.

This course students register for while working on their dissertation products.

These seminars are designed to offer individual academic support to Doctor of Social Work (DSW) students to complete their individual ACP. Students will have the opportunity to apply knowledge and skills from their coursework in research methods, research design, and data analysis techniques. The goal of these courses is to provide additional individualized faculty support for DSW students in their final year of DSW courses and completion of the ACP.

These seminars are designed to offer individual academic support to Doctor of Social Work (DSW) students to develop their individual APP and professional portfolios. The Portfolio Planning Seminar provides individualized support for students as they develop their research questions, construct an argument, focus their review of the literature, identify statistical and data analytic methods appropriate to the research question, and demonstrate cohesion between the identified research topic and the application of a theoretical framework. These required courses are designed for students to identify their individual research interests relevant to their respective fields and to develop these interests into an approved APP Proposal.
SOWK 9993  Adv Clinical Proj Dev Sem I (4 Credit Hours)
This course is designed for doctoral students beginning to develop their own program of research. It will provide an emphasis on understanding the basic expectations and requirements of research proposal, as well as the ethical and pragmatic considerations to conduct a research study. The primary goal of this course is to provide an opportunity for students to identify research interests relevant to their respective fields and develop these interests into a proposal effectively.

SOWK 9994  Adv Clinical Proj Seminar I (1 Credit Hour)
These seminars are designed to offer individual academic support to Doctor of Social Work (DSW) students to develop their individual ACP. These required courses are designed for students to identify their individual research interests relevant to their respective fields and to develop these interests into an approved ACP Proposal. The ACP seminar provides additional support for students as they develop their research questions, construct an argument, focus their review of the literature, identify statistical and data analytic methods appropriate to the research question, and demonstrate cohesion between the identified research topic and the application of a theoretical framework. This ACP course will incorporate the knowledge and skills developed in previous course work in the program. The goal of these courses is to provide additional individualized faculty support for DSW students throughout their enrollment in the program.

SOWK 9995  Adv Clinical Proj Seminar II (4 Credit Hours)
This course is designed for doctoral students to further develop their programs of research. It will provide an emphasis on grant writing and funding attainment to conduct a research study. The primary goal of this course is to provide an opportunity for students to identify potential grants, funding justification, budgeting, and program evaluation; culminating in development of an effective grant proposal.

Sociology (PASO)

PASO 3300 Socio Health & Mental Illness (3 Credit Hours)
This course offers an introduction to sociological theories and research related to health and illness, with a focus on mental health and mental illness. Although many people think of mental illness as under the purview of healthcare providers (and psychiatrists and psychologists for mental illness), sociologists have made significant contributions to our understanding and conceptions of health, illness, and mental illness.

Sociology (SOCI)

SOCI 1030 Sociology of The Family (3 Credit Hours)
Consideration of the family as a social institution and a special form of small group. Examination of theoretical and empirical research focusing upon mate selection, marital interaction, and child socialization. Topics include contemporary demographic trends and cultural practices.

SOCI 1040 Gender & Society (3 Credit Hours)
Examines the social construction of gender and the consequences of gender equality. Topics include socialization, intimate relations, paid and unpaid work, violence, and social change.

SOCI 1050 Intro to Education & Society (3 Credit Hours)
This course is an introduction to sociological research, concepts, and theories about education. In the course, the purpose and function of education for the individual and society are critically considered, and a substantial amount of time is spent discussing the links between education and inequality. Topics that are discussed in detail include: the potential and limitations of schools, schools as agents of socialization, cross-national differences in educational systems, social relationships in schooling (the influence of community, social capital, parents, and peers), within and between school inequalities (school effects/ ability grouping), the effects of school characteristics and aspiritive forces on schooling outcomes, and variation in schooling outcomes themselves (achievement, attainment, labor market outcomes). Students will gain an appreciation of the role of schools as powerful determinants of the opportunities that individuals experience in modern societies.

SOCI 1060 Urban Sociology (3 Credit Hours)
The social patterns, processes, and institutional structure of urban life.

SOCI 1080 Deviant Behavior (3 Credit Hours)
Examines forms of human behavior that have been defined as deviant by the larger society. An emphasis is placed on understanding the social construction of such definitions, especially their cross-cultural variations, as well as motivations and social implications for those whose behavior is judged as deviant.

SOCI 1090 Social Problems (3 Credit Hours)
Examination of critical contemporary social problems and social policy options. Emphasis is placed on understanding the multidimensional sources of crisis, unrest, and instability as well as policy options and tradeoffs associated with ameliorative efforts. Topics vary by semester and instructor.

SOCI 1210 Sociology of Religion (3 Credit Hours)
Introduces students to sociological study of religious phenomena, including religious beliefs, practices, and behaviors as conditioned by sociological factors. A key emphasis is the relationship between religious systems and other social institutions, e.g., politics, family, economy, and social stratification.

SOCI 1290 Semester Abroad (1-20 Credit Hours)
Semester Abroad.

SOCI 1300 Criminology (3 Credit Hours)
Emphasizes the public’s perception of the crime problem and various sociological measures of amounts and trends of criminal behavior in society. Causal and noncausal theories of criminality, and the sociological implications of various selected offenses are explored.

SOCI 1460 Asian-Amer Communities (3 Credit Hours)
This course will provide a sociological introduction to America’s rapidly growing Asian American populations and to the major issues facing these populations.

SOCI 1470 Global Social Change (3 Credit Hours)
Examines global change and its implications for individuals and groups via exploration of issues of globalization of the economy, international development, urbanization, immigration, social movements, changing gender relations, etc. Emphasis will be placed on how such changes have come about and course focus will be international in scope with emphasis on Latin America, Asia, and/or Africa.
SOCI 1510 Work In American Society (3 Credit Hours)
Examines the concepts of occupations, professions, and work organizations. It considers issues about employee selection, job involvement, alienation, satisfaction, performance, and compensation; industrial mental health, occupation safety, health and medicine; social conditions of work in bureaucratic organizations, work groups and union membership; supervision and human resource management; and the changing conditions of work resulting from technological change, social change, shifts in the occupational structure and the interface of work with other institutions such as the family.

SOCI 1890 Service Learning: SOCI 1300 (0-1 Credit Hours)
Service Learning.

SOCI 1891 Service Learning: SOCI 1300 (1 Credit Hour)

SOCI 1893 Service Learning: SOCI 1300 (1 Credit Hour)
Service Learning.

SOCI 1940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

SOCI 2010 Foundations of Sociology (3 Credit Hours)
To provide substantive exposure to basic sociological concepts, theories, methods, and tools.

SOCI 2050 Population and Society (3 Credit Hours)
An examination of the dynamic relationship between population and society. The course focuses on the contemporary demography of developed and developing countries, with an emphasis on societal problems linked to population.

SOCI 2100 Special Topics (3 Credit Hours)
Special topic announced each semester.

SOCI 2101 Special Topics (3 Credit Hours)
Special topics in Sociology.

SOCI 2102 Special Topics (3 Credit Hours)
Special topics in Sociology.

SOCI 2103 Special Topics (3 Credit Hours)
Special topics in Sociology.

SOCI 2110 Special Topics (3 Credit Hours)
Special Topics in Sociology.

SOCI 2180 Wealth, Power and Inequality (3 Credit Hours)
Survey of theoretical and empirical literature on the distribution of wealth, power, and prestige within and across societies and historical periods. Emphasis is placed on the impact of social change on stratification systems.

SOCI 2210 Sociology of Reproduction (3 Credit Hours)
This course is an introduction to the Sociology of Human Reproduction. We frequently think about reproduction as a natural/biological event, but like other aspects of human life, it is socially constructed: shaped by and experienced in and through various social practices. We will cover topics ranging from childbirth to breastfeeding, contraception to childlessness, and even little-known issues such as manopause (i.e., male menopause). Much of the social science work on human reproduction comes from either demographic or feminist traditions so course readings reflect this dual genealogy.

Prerequisite(s): (SOCI 1040 and 2010) or GESS 2900.

SOCI 2220 Sociology of Medicine (3 Credit Hours)
Introduction to the sociological significance of medicine and medical procedures and professions.

SOCI 2230 Sociology of Law (3 Credit Hours)
Introduction to the sociological significance of law and legal procedures and professions.

SOCI 2450 Society Through Cinema (3 Credit Hours)
Examination of social organization, interaction, issues, and problems via the depiction of these issues and themes in selected commercial and documentary cinematic statements as illustrative material. Weekly class meetings are divided into lecture, screening, and discussion. Specific topical foci differ by semester.

SOCI 2490 Lat Amer Social Structur (3 Credit Hours)
An historical examination of the human condition in Latin America emphasizing three primary spheres of social relations: political, economic, and ideological. Within each sphere the following themes are addressed: national-international relations, urbanization, rural social structure, demographic trends, cultural change, and stability.

SOCI 2500 Organizational Behavior (3 Credit Hours)
An introduction to the sociological study of organizations in the private and public sectors. Topics include models for studying organizations, organization processes (communication, decision-making, negotiation, leadership), the impact of structural culture, and environmental factors on organizational behavior.

SOCI 2600 Environmental Sociology (3 Credit Hours)
This course examines political and economic aspects of global and local environmental problems. Topics include how societies and the environment interact, why some environmental risks have gained most attention, how support for environmental concerns can be measured, responses by environmental social movements, and visions of sustainable societies in the First and Third Worlds.

SOCI 2650 Latin Amer & the Environment (3 Credit Hours)
An introduction to the political economy of the environment in Latin America.

SOCI 2700 Soc Psych Everyday Life (3 Credit Hours)
An examination of issues involved in everyday social interactions, this course focuses on dimensions of interpersonal behavior against the background of sociological roles and role-playing. Emphasis is placed on the nature and process of interpersonal relationship, encounters, and public behavior against the backdrop of societal assumptions, norms, practices and beliefs. Related issues of affect/emotion, attitudes, cognition and perception will be discussed.
Paris, one of the most distinctive and historically rich cities in the world, is used as a living laboratory for an examination of social patterns, processes, and organization of contemporary urban life. Course materials and field investigations serve to contextualize modern Paris in the conditions that spawned its dramatic transformation over the past two millennia and its continuing evolution into the present. Much of this summer class is experiential: learn by doing—planning, exploring, observing, mapping, and interpreting. In-class and field projects focus on how cities and urban systems are organized, the structuring of public space and its uses, modes of interpersonal interaction, how people perceive and attach meaning to the built environment, how we “read” cities, and represent urban spaces and places in our minds via “cognitive maps.”

**SOCSI 2730 City of Paris (3 Credit Hours)**

Course materials and field investigations serve to contextualize modern Paris in the conditions that spawned its dramatic transformation over the past two millennia and its continuing evolution into the present. Much of this summer class is experiential: learn by doing—planning, exploring, observing, mapping, and interpreting. In-class and field projects focus on how cities and urban systems are organized, the structuring of public space and its uses, modes of interpersonal interaction, how people perceive and attach meaning to the built environment, how we “read” cities, and represent urban spaces and places in our minds via “cognitive maps.”

**Prerequisite(s):** SOCSI 100, 200, 200 or 300.

**SOCID 3030 Intro To Research Design (3 Credit Hours)**

Logic and techniques of social research, the relationships between theory and method, and alternative strategies in data collection.

**Prerequisite(s):** SOCSI 100 and 300.

**SOCID 3100 Special Topics (3 Credit Hours)**

Special Topics in Sociology.

**Corequisite(s):** SOCSI 3101.

**SOCID 3220 Social Theory (3,4 Credit Hours)**

An introduction to classical and contemporary sociological theory.

**Prerequisite(s):** SOCSI 100.

**SOCID 3940 Transfer Coursework (3 Credit Hours)**

Transfer Coursework.

**SOCID 4210 Urban Ethnography & Soc Justice (3 Credit Hours)**

In this course students will develop a practical working knowledge of the theoretical and conceptual frameworks used in analyzing urban issues of social justice through a combination of classroom instruction, applied ethnographic field instruction, practitioner engagement, and professional development activities.

**Prerequisite(s):** SOCSI 3040 and 3220.

**SOCID 4310 Crime Punishment & Comm NOLA (3 Credit Hours)**

This course examines the relationship among community changes/characteristics, crime, and punishment focusing on New Orleans. It includes an intense community engagement component that involves residential outreach to assess viewpoints on common crime prevention, policing and punishment practices.

**Corequisite(s):** SOCSI 4210 and SOCSI 4890.
SOCI 6014  Adv Special Topics: SOCI  (3 Credit Hours)
Adv Special Topics in Sociology.

SOCI 6020  Political Sociology  (3 Credit Hours)
Analysis of both the distribution and institutional bases of power in society and the values which legitimate them. Class, bureaucracy, occupations, and political participation as these correlate with power.

SOCI 6030  Monog, Poly-Sexualities Societ  (3 Credit Hours)
This class is a sociological exploration of the establishment and consequences of different kinship forms including monogamy, polygamy, polyamory, and polyqueer.
Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6060  Issues In Soc of Gender  (3 Credit Hours)
This course examines research in several areas of the sociology of gender. Topics include the acquisition of gender identity, face to face interactions, the changing roles of women and men, the intersection of work and family, and social movements. Students will conduct original research in one of these areas.
Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6070  Sociology of Sexuality  (3 Credit Hours)
An advanced sociology course on sexuality. The core theme of the course is to explore how the way we think about and experience the erotic, sex, and sexuality are constructed through and shaped by social processes. Considerable time will be spent on sexuality as a system of stratification that is separate from but intersects with inequalities on the basis of gender, race, ethnicity, and class.
Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6080  Mental Health and Illness  (3 Credit Hours)
Mental health has been typically understood as one of the defining characteristics of "normality"; in contrast, mental illness has long been stigmatized and contested. This course aims to show that the boundaries between the two have been far from stable and depend on the social and historical contexts in which they are drawn. Prerequisites: SOCI 2010, SOCI 3030, SOCI 3040, and SOCI 3220.
Prerequisite(s): (SOCI 3040 or 3040) and (SOCI 3220 or 3220).

SOCI 6090  Sociology of Medicine  (3 Credit Hours)
An examination of social and psychological factors affecting the prevalence and incidence of disease in human populations. Topics also considered include the organization of the health professions, comparative medical systems, social change and health care, and social factors affecting the utilization of health services.

SOCI 6100  Sociology of Health & Illness  (3 Credit Hours)
Advanced seminar in the social causes and effects of health, illness, and healthcare.
Prerequisite(s): (SOCI 3030 or 3030) and (SOCI 3040 or 3040).

SOCI 6120  Race/Ethnicity In Amer  (3 Credit Hours)
Sociological examination of the dynamics of race and ethnic relations in the United States. This course provides an opportunity for students to read about, think, and discuss issues of racial and ethnic relations in society. Topics include the social construction of racial classification systems, the historical record of the interaction between the races in America, public policy, and possible mechanisms for dealing with some of the issues that many consider most problematic in our society.
Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6130  Race, Crime and Control  (3 Credit Hours)
This course examines the US Criminal Justice system as a mechanism of racial control. It covers the socio-historical construction of race, different theories and practices of racism and their manifestation and institutionalization in the contemporary US Criminal Justice system, and ongoing strategies of resistance and antiracism. Prerequisite: SOCI 3030, SOCI 3040 and SOCI 3220
Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6160  Crime and Human Development  (3 Credit Hours)
This course will examine key conceptual and research issues such as the development of criminal behavior and criminal careers; stability and change in criminal behavior across developmental stages of the life course; trajectories, transition, and turning points through life; qualitative and quantitative approaches to studying crime and the life course, and social change and its link to individual lives.
Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6180  Wealth,Power,&Inequality  (3 Credit Hours)
Theories of stratification, status systems in various societies, measurement and research of social classes in the United States.

SOCI 6200  Issues In Soc of Family  (3 Credit Hours)
This course will consider the sociological, political, and cultural criticisms of the traditional definitions of family. This course focuses on family demography, gay/lesbian family issues, African-American families, and the "family values" wars as organizing topics.
Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6210  Sociology of Culture  (3 Credit Hours)
The sociology of culture provides a useful lens to examine culture in everyday life, in mass media, and in the fine arts.
Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6260  Gender, Work & Family  (3 Credit Hours)
This course focuses on the sociological intersections of gender, work, and family across a variety of countries, with emphasis on (but not limited to) the European Union and the United States. Major themes are (1) how national context influences the work-family nexus for adults (women and men) and children (girls and boys), (2) how people negotiate, share, and create culture as it relates to work-family issues, and (3) how the experiences and ideologies of parents and children vary within and across societies. The course will cover a wide range of sociological vantage points, from macroscopic to microscopic issues.
SOCI 6300 Urban Policy & Planning (3 Credit Hours)
This course examines how government policies and programs have shaped and affected cities and metropolitan areas in the United States and around the world over the last hundred years or so. The course investigates policies and planning actions pertaining to community organizing, welfare reform, adaption to climate change, post-disaster recovery and rebuilding, tourism and urban cultural production: real estate, housing, and uneven development, and sustainability. The course will focus on policies that have impacted the built environment and address relationships between cities, communities, and broader socio-political and economic processes. As a capstone course, assignments and course activities are designed for advanced undergraduate or for graduate students interested in connecting the course subject matter with a service learning project within the sociology of urban policy and planning.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6320 Global Political Econ & Enviro (3,4 Credit Hours)
This course provides an overview of sociological research pertaining to globalization and the environment. Topics include macro-comparative theories of development. and the interconnections among society, political-economic dynamics, the process of globalization. and natural system (ecology).

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6325 Global & Local Environ Justice (3 Credit Hours)
This service-learning course enriches student understanding of environmental justice at the global and local level. Students will sharpen their knowledge of various environmental movements, activism, and advocacy in the classroom, which will be supplemented with experience in the field. Specifically, students will collaborate with environmentally-focused organizations and nonprofits in the greater New Orleans area to implement environmental justice activities in the local community. SOCI 3040 is a pre-requisite for course enrollment.

Prerequisite(s): SOCI 3040.

SOCI 6330 Sociology of Education (3,4 Credit Hours)
This course will examine the social functions of educational institutions, the role of education in the American social and economic structure, and major controversies and debates concerning educational policy as social policy.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6340 Race & Ethnicity in Latin Amer (3 Credit Hours)
This course explores the development of racial categories throughout Latin America and the implications of these social constructs for group identities, community building, and social activism. We will begin with a theoretical overview of the scholarship on race and ethnicity in Latin America and on the process of racialization. We will explore the limitations of using a Western lens to understand race and racism in Latin America and the Caribbean. Students will learn to expand how they conceptualize these terms in order to better understand Latin America’s distinct racial landscape. Students will engage the empirical scholarship of indigenous populations as well as on Latin Americans of African descent. Students will learn about the complexities of mestizaje he erasure of blackness and rising inter-ethnic conflict.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6560 Soc Mvmts/Coll Behavior (3 Credit Hours)
An advanced theoretical and empirical analysis of the determinants of organized non-institutionalized forms of collective action. Topics include the interplay of structural conditions and voluntaristic actions, the logic of collective action, culture, and ideology as they shape social movement outcomes. The specific types or dimensions of collective action examined may vary from semester to semester.

SOCI 6640 Sociology of Organizatn (3 Credit Hours)
Exploration and development of organizational structures, processes and consequences. Interdisciplinary focus drawing conceptual, theoretical, and methodological tools from sociology, management, economics, and applied fields such as law and public administration. The seminar will examine classic and current issues in the sociology of organizations and the influence of complex organizations on different contexts and institutions (e.g., economy, family, healthcare, politics).

SOCI 6650 Sustainable Dev in LatAm (3 Credit Hours)
This course examines the dimensions of sustainable development in Latin America from the theoretical perspectives of environmental sociology and the sociology of development.

Prerequisite(s): (SOCI 3040 or 3040) and (SOCI 3220 or 3220).

SOCI 6660 Forensic Sociology (3 Credit Hours)
This course will introduce students to the ways in which scholars and researchers apply social science knowledge, methods, and theories to legal problems such as criminal trials, civil disputes, and arbitration proceedings. The course will address socio-legal questions and problems related to the following areas of civil litigation: premises liability and inadequate/negligent security, product liability and human-factors related litigation, climate change, toxic torts and crimmerts, racial segregation and fair housing, and employment discrimination lawsuits. Prerequisites: SOCI 3220; SOCI 3030; and SOCI 3040.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6700 Sociology of Law (3 Credit Hours)
An examination of the implications of law in the persistence and change of social systems, the relation of sociological theory and research to legal institutions, and law as an organization and profession.

SOCI 6873 Service Learning 20-hr (1 Credit Hour)
Service Learning 20-hr.

Corequisite(s): SOCI 6330.

SOCI 6890 Qual Research Methods (3 Credit Hours)
This course provides an introduction to key themes and practices in qualitative research methods, including major theoretical and methodological debates, project design, gaining access, and gathering and analyzing data.

SOCI 6891 Service Learning: SOCI 6330 (0-1 Credit Hours)
Service Learning: SOCI 6330.

SOCI 6892 Service Learning: SOCI 6010 (0-1 Credit Hours)
Service Learning: SOCI 6010.

Corequisite(s): SOCI 6330.
SOCI 6990 Service Learning: SOCI 6013 (0-1 Credit Hours)
Service Learning: SOCI 6013.

SOCI 6910 Gender In Latin America (3 Credit Hours)
A sociological examination of how changing political, economic and developmental issues in Latin America shape and are shaped by gender relations.

Prerequisite(s): SOCI 3030 and 3040 or SOCI 3220.

SOCI 6930 Soc Movements/Latin Amer (3 Credit Hours)
An examination of the factors shaping the emergence, development, and decline of social movements in Latin America. Issues addressed include why people join movements, what constraints there are on building of social movement organizations, and in what ways are leaders and ideologies crucial to movement development.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6940 Politic Soci Latin Amer (3 Credit Hours)
This course examines theories of the bases and distribution of power in Latin America. Topics include the role of elites and domestic class coalitions in state formation and regime transitions, the role of civil society/labor, popular associations, political parties in democratization, and the role of culture, including religion, in political life.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6960 Urban Latin America (3 Credit Hours)
This course is a study of the causes and social effects of urban growth and decay in rich and poor countries in the Americas. Examines contemporary urban social classes and political coalitions, and how these are changing with shifting regional economies. The course discusses theories of urban societies and regional growth, and examines case studies and theories from Latin America.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6970 Latin Amer Social Mobilization (3,4 Credit Hours)
Certain social networks and types of social practice specialize in subverting the state and dominant society. In this class we look diffusely at social mobilization; and focus on manifestations beyond social movements. We look at protest, at crime and violence, and at religion. The goal is to understand social history, or the way people who are not in positions of institutional power come together to change their world, sometimes to make the world better and sometimes to make it worse. Our goal is to develop sensibilities and analytic outlooks that allow us to understand these types of social mobilization as a way of understanding social change in Latin America, beyond the institutions that political scientists and economists tend to focus on. Prerequisites: SOCI 3030, SOCI 3040, and SOCI 3220 or approval of instructor.

SOCI 6990 Special Topics-Latin Am (3 Credit Hours)
Course topics vary. Courses will include: Latin American Immigration, Race and Ethnicity in the Americas, Caribbean Societies, and Drugs and Alcohol in the Americas.

SOCI 7010 Readings (3 Credit Hours)
Graduate Level Independent Study.

SOCI 7350 Advanced Top Data Analys (3 Credit Hours)
Course topics vary. Topics include: Innovations in data analysis.

SO 9980 Masters Research (0 Credit Hours)
Masters Research.

SO 9990 Dissertation Research (0 Credit Hours)
Dissertation Research.

Spanish (SPAN)

SPAN 0100 Spain Summer Program, Cadiz (0 Credit Hours)
Summer program.

SPAN 0990 Spanish For Reading Knwl (0 Credit Hours)
Summer program.

SPAN 1010 Introductory Spanish I (4 Credit Hours)
Prerequisite(s): minimum score of PASS in 'SPAN 1010 Placement'.

SPAN 1020 Elements of Spanish II (4 Credit Hours)
Continuation of SPAN 1010. The overall goal of this course is developing proficiency in the four language skills (listening, reading, speaking, and writing) essential to communicative language learning. The course uses a task-based approach which provides the learner with opportunities to use the language interactively.

Prerequisite(s): minimum score of PASS in 'SPAN 1020 Placement' or SPAN 1010.

SPAN 1120 Intensive Intro Spanish (4 Credit Hours)
Prerequisite(s): minimum score of PASS in 'SPAN 1120 Placement'.

SPAN 1290 Semester Abroad (1-20 Credit Hours)
Semester Abroad.

SPAN 1890 Service Learning: SPAN 1020 (0-1 Credit Hours)
Service Learning.

SPAN 1891 Service Learning: SPAN 1120 (0-1 Credit Hours)
Service Learning.

SPAN 1893 Service Learning: SPAN 2030 (0-1 Credit Hours)
Service Learning.

SPAN 1940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

SPAN 2030 Elements of Spanish III (4 Credit Hours)
Continuation of SPAN 2020 or SPAN 1120. The overall goal of this course is developing proficiency in the four language skills (listening, reading, speaking, and writing) essential to communicative language learning. The course uses a task-based approach which provides the learner with opportunities to use the language interactively.

Prerequisite(s): minimum score of PASS in 'SPAN 2030 Placement', SPAN 2020 or 1120.

SPAN 2040 Span Convers. & Comp (3 Credit Hours)
This course is designed to develop oral proficiency in Spanish through the study and analysis of recorded, visual, and written texts, as well as a variety of pair and group activities. Special emphasis is placed on pronunciation, vocabulary acquisition, and a review of Spanish grammar and syntax.

Prerequisite(s): minimum score of PASS in 'SPAN 2040 Placement' or SPAN 2030.

</table>
SPAN 4120 Soc Prob in Span Am Lit (3 Credit Hours)
The chief problems of Latin American society as reflected in poetry, short fiction, essay, and theatre. Representative works concerning the Mexican revolution; the social status of women, Indians and blacks; the life of urban and rural working classes; tyranny and political repression.
Prerequisite(s): (minimum score of PASS in 'SPAN 4000 level Placement', SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3550) and (SPAN 3270 or 3280).

SPAN 4130 Topics Span-Am Literatur (3 Credit Hours)
Readings in Spanish American stories, essays, and poems, focusing on a topic of historical and cultural importance. Some themes: women in Spanish American literature, regionalism and indigenismo, Afro-Latin American writing, testimonio. The precise topic varies from year to year.
Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

SPAN 4131 Creative Writing in Spanish (3 Credit Hours)
This course offers students the tools to articulate their ideas and experiences in a narrative form in Spanish. The course is designed to achieve this in two ways: by learning specific techniques through readings of short stories both in Spanish and English, which will be refined through numerous exercises; and by working through the semester on the crafting of at least one short story or nonfiction piece, about which the professor will make observations and suggestions as each student present drafts of their work. During the semester students will extensively practice writing, critical reading, and peer editing. The course introduces students to literary terminology and places significant emphasis on vocabulary building.
Prerequisite(s): (minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

SPAN 4140 Intro Colonial Letters (3 Credit Hours)
Introduction to the literary monuments and cultural history of colonial Spanish America (1492-1815), with special focus on the relationship between first-person narration and Spanish legal traditions. Cultural icons of the colonial period to be studied include Hernán Cortés, Álvar Nuñez Cabeza de Vaca, Catalina de Erauso, Sor Juana Inés de la Cruz, Carlos de Sigüenza y Góngora, Fray Servando Teresa de Mier. Visual texts and films to complement Spanish readings.
Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

SPAN 4150 Span Lit of the 20th Cen (3 Credit Hours)
Selections from the writings in all genres from the Generation of 1898 to the present.
Prerequisite(s): (minimum score of PASS in 'SPAN 4000 level Placement', SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3550) and (SPAN 3270 or 3280).

SPAN 4160 Afro-Latin American Lit (3 Credit Hours)
This course examines history, literature, and culture of Afro-Latin Americans from the colonial period up to the present. Throughout the course, students read articles concerning slavery, race relations, Afro-Atlantic religions, music, and Black political movements in Latin America. These readings provide socio-cultural context from the analysis of selected literary texts.
Prerequisite(s): (minimum score of PASS in 'SPAN 4000 level Placement', SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3550) and (SPAN 3270 or 3280).

SPAN 4170 Intro to Spanish Film (3 Credit Hours)
The development of the cinema in Spain from its origins to the present. Contextual topics such as the effects of civil war and censorship are discussed. Emphasis on a theoretical approach to the medium, with close analysis of individual films by directors such as Buñuel, Saura, Erice, and Almodóvar, among others.
Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

SPAN 4180 Latin Am Cultural Studies (3 Credit Hours)
Introduction to multiple aspects of Latin American culture. Students study a variety of cultural production, ranging from literature, film, music, and art, to its cooking and comics to form as complete as possible a vision of Latin American's complex and multifaceted culture. Students examine mainstream notions of national identity, while at the same time interrogating them by considering questions of gender, race, class, sexuality, and region.
Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

SPAN 4190 Intro to Latin Amer Film (3 Credit Hours)
The development of cinema in Latin American from its arrival as an imported technology to the present. Films studied in relation to the sociopolitical environment and emphasis placed on close analysis as well as a contextual understanding of the material. Topics include the struggle to create national film industries, the “art film” and New Cinema movements, and recent trends in countries such as Mexico and Argentina.
Prerequisite(s): (minimum score of PASS in 'SPAN 4000 level Placement', SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3550) and (SPAN 3270 or 32880).

SPAN 4200 Historical Novel Lat Am (3 Credit Hours)
Study of recent works by Latin America's premier novelists that considers how these writers articulate modern cultural identities by narrative the lives of iconic figures of the colonial past. Contemporary essays and selections from colonial texts are also discussed. Authors include Arenas, Carpentier, Fuentes, García Márquez, Lobo, Posse, Vargas Llosa.
Prerequisite(s): (minimum score of PASS in 'SPAN 4000 level Placement', SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3550) and (SPAN 3270 or 3280).
SPAN 4210 Topics in Latin Amer Cinema (3 Credit Hours)
A topics course on the cinemas of Latin America. Possible themes include representations of history, violence and politics, subaltern subjectivities, genres, cinema and cultural imperialism. The course may refer to a particular national tradition or to Latin American film in general.
Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

SPAN 4260 Span Phonetic/Phonology (3 Credit Hours)
A detailed investigation of the speech sounds of Spanish, their organization, and their proper articulation. Practice both in class and with recorded material.
Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

SPAN 4270 Iberoamer Dialectology (3 Credit Hours)
Survey of the varieties of Spanish spoken in Spain, Latin America, and the United States. We look at variation in pronunciation and grammatical usage, such as the tú/usted/vos, as well as variation by age, gender, and social class.
Prerequisite(s): (minimum score of PASS in 'SPAN 4000 level Placement', SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3550) and (SPAN 3270 or 3280).

SPAN 4280 Sex, Sentiment, Marriage (3 Credit Hours)
In the 18th century, there is a change in the expectations for marriage and gender relations in general. Instead of the assumption that marriage was to secure property and family alliances, there arose the hope that men and women would find attraction and companionship in marriage. We will look at the process of change in ideas about marriage, the education of women, the right to choose a spouse, romantic love and sexual seduction and practical problems of the division of power in a marriage.

SPAN 4350 Topics in Spanish Lit (3 Credit Hours)
A topics course on the literature and culture of Spain. Possible themes include science and literature, construction of gender and sexuality, revolution and repression, honor and violence, popular culture, satire, and metamannarative.
Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

SPAN 4430 Lit of the Golden Age (3 Credit Hours)
Readings and discussions of selected dramatic, poetic, and prose works of the Siglo de Oro by Cervantes, Lope de Vega, Tirso de Molina, Calderón, Quevedo and Luis de Góngora.

SPAN 4510 Hispanic Cities (3 Credit Hours)
This class explores the history, artistic production, literature, and cultural issues related to a Hispanic city, such as Buenos Aires, Madrid, Mexico City, or Seville. In an effort to investigate the city in a broad national and international context, the course connects an urban area to important events and sites in Latin American and Spain. Taught in rotation by different faculty in the department, the focus on a particular city changes with the professor.
Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

SPAN 4520 Spanish Cultural Studies (3 Credit Hours)
Spanish cultural studies applies interdisciplinary approaches to the study of popular and mass cultural forms. Depending on the instructors’ specialization, the course may encompass various chronological periods or special themes. In addition to the specifics of individual syllabi, all classes explore the role of culture in nation formation, the organization of leisure time through the culture industry, culture as a site of power, concepts of high and low culture, and how various cultural systems cut across boundaries of class, race, religion, and gender.
Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

SPAN 4560 Internship (1-3 Credit Hours)
Internship.

SPAN 4610 National Cinemas Lat Am (3 Credit Hours)
A detailed historical, thematic, and stylistic analysis of individual national cinemas in Latin America (Cuban cinema, Brazilian cinema, Mexican cinema, for example). Emphasis will be placed on understanding the development of national cinema industries and movements in the context of other social, economic, political, and aesthetic forces.

SPAN 4710 Environmental Literature (3 Credit Hours)
The importance and grandeur of the diverse environments of the Hispanic and Lusophone worlds as well as the problems and challenges posed by foreign and local exploitation of natural resources, environmental racism, climate change and environmental degradation. (3 credits)
Prerequisite(s): (SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280) or minimum score of PASS in 'SPAN 4000 level Placement'.

SPAN 4830 Hispanic Lit in Engl Trn (3 Credit Hours)
A study of Spanish and/or Latin American literary works in translation within a specific interdisciplinary topics format based on a central theme or problem. To receive credit toward the Spanish major or minor, all written work and selected weekly readings must be completed in Spanish.
SPAN 6090 Service Learning: SPAN 4120 (0-1 Credit Hours)
Service Learning

SPAN 6100 Literary Theory (3 Credit Hours)
An introduction to modern theories of literary analysis. Readings consist of primary texts in the schools of thought to be studied, which may include formalism, stylistics, semiotics, reader-oriented approaches, structuralism, deconstruction, feminism, poststructuralism, queer theory, and postcolonial studies.
Prerequisite(s): SPAN 4060.

SPAN 6120 Lit of Central America (3 Credit Hours)
Representative literary figures of the six Central American countries, including Darío, Asturias, Cardenal, Alegría, and Cuadra.

SPAN 6140 Lit of Spn Caribbean (3 Credit Hours)
With emphasis on the nineteenth and twentieth-centuries, the course traces the literary development of the Spanish Antilles (Cuba, Dominican Republic, Puerto Rico) through the works of Heredia, Hostos, Villaverde, Martí, Avellaneda, Palés Matos, Guillén, Bosch, Marqués, Carpenter, Lezama Lima, Cabrera Infante, Sarduy, L. R. Sánchez, and Ferré, among others.

SPAN 6200 Avant-Garde Move Lat Am (3 Credit Hours)
This course surveys the avant-garde movements in Spanish America and Brazil, focusing on the period from 1916 to 1935. Some of the movements to be examined include Huidobro’s creacionismo, ultraismo, Brazilian modernismo and verdeamarelismo, Mexican estridentismo and the “Contemporáneos” group and the impact in Latin America of surrealism and other European avant-garde movements. Readings in both Spanish and Portuguese, and the class is taught in both languages, but fluency in both languages is not expected.

SPAN 6210 Essay in Spanish America (3 Credit Hours)
A panoramic view of the essay in Spanish America. The leading authors (Bello, Sarmiento, Hostos, Martí, Rodó, Mariátegui, Borges, Castellanos, Ferré, Paz and others) are studied with emphasis on their contributions to the genre.

SPAN 6220 Chronicles & Epics of Span Con (3 Credit Hours)
This course examines the ways in which the discovery and conquest of America were narrated, with special focus on the relationship between early modern historiography, legal traditions, and rhetorical standards and practices. Additional topics may include Renaissance, Spanish colonial language policy, the status of the Americas and Native Americans in natural and moral history.
SPAN 6230 El Barroco de Indias (3 Credit Hours)
Assessment of the Baroque in Spain's American vicereignies during the seventeenth and eighteenth centuries in its relation to contemporary European literary practices, political culture, and religious values. Also considered are modern re-interpretations of the place of the Baroque in Spanish America's cultural tradition (Picón Salas, Lezama Lima, Paz, Sarduy).

SPAN 6250 La Ilustración: Spn Lit 18th (3 Credit Hours)
This course examines Spanish literature of the 18th century with special emphasis on the role of the Ilustrados in cultural production, along with popular resistance to their practices.

Prerequisite(s): SPAN 4060.

SPAN 6260 Spn Novel of 19th Cent (3 Credit Hours)
The development of the novel in the nineteenth-century, its different forms and literary trends: romanticism, realism, naturalism. Special attention is paid to Fernán Caballero, Alarcón, Valera, Palacio Valdés, Pereda, Galdós, Pardo Bazán, Alas, Blasco Ibáñez.

SPAN 6270 Spanish Romanticism (3 Credit Hours)
This course examines Spanish romanticism in the context of European trends. Special attention is given to the economic and political upheavals of the early nineteenth-century and the connection of these to the privileging of the individual subject.

SPAN 6330 Span Prose of Golden Age (3 Credit Hours)
Lectures and discussions of Lazarillo de Tormes, Cervantes's Novelas ejemplares, selections from Guzmán de Alfarache by Mateo Alemán, El Buscón and Los Sueños of Quevedo, and the novels of María de Zayas as well as the writings of Santa Teresa and Gracián.

SPAN 6410 Don Quijote (3 Credit Hours)
Discussions of Don Quijote in its entirety in the context of the intellectual and cultural tendencies of the Siglo de Oro and modern critical approaches.

SPAN 6430 Drama of the Golden Age (3 Credit Hours)
Study of the plays of Lope de Vega, Calderón de la Barca, Tirso de Molina, Ruiz de Alarcón and other dramatists.

SPAN 6440 Poetry of the Golden Age (3 Credit Hours)
Discussions of the pivotal movements represented by the poetry of Boscán, Garcilaso, Luis de León, Santa Teresa, San Juan de la Cruz, Lope de Vega, Góngora, and Quevedo.

SPAN 6450 Spanish American Theater (3 Credit Hours)
Main tendencies of the contemporary Spanish American theatre with emphasis upon such writers as Usigl, Marqués, Solórzano, Buenaventura, Arrufat, Piñera, Garro, and Chocón.

SPAN 6460 Maj Contemp Spn Amer Poet (3 Credit Hours)
The poetry in Latin America after modernismo. Special attention in each semester the course is offered is given to the work of four or five poets selected from among Vallejo, Huidobro, Agustini, Storni, Borges, Neruda, Parra, Paz, Guillén, Mistral, Cardenal and Lezama Lima.

SPAN 6510 Hist of the Span Lang (3 Credit Hours)
Evolution of Castilian from Roman times through the Middle Ages with consideration of internal change and outside influences.

SPAN 6520 Mexican Literature (3 Credit Hours)
Study of the various tendencies of Mexican literature from the colonial period to the present. Special attention is given to representative authors such as Barbuena, Sor Juana, Fernández de Lizardi, Gutiérrez Nájera, Azuela, Rufio, Fuentes, Paz, Garro and others.

SPAN 6530 Lit of the Andean Countr (3 Credit Hours)
Representative works from Peru, Bolivia, Ecuador, Colombia and Venezuela, with special emphasis on the twentieth-century. Study of such authors as the Inca Garcilaso, Guaman Poma, Isaacs, Matto de Turner, González Prada, Mariátegui, Arguedas, Vallejo, Gallegos, Vargas Llosa, García Márquez, Teresa de la Parra.

SPAN 6540 Lit of the Southern Cone (3 Credit Hours)
Survey of the literature of Argentina, Uruguay, Paraguay, and Chile from romanticism to the present. Study of such authors as Sarmiento, José Hernández, Blest Gana, Güiraldes, Quiroga, Huidobro, Mistral, Neruda, Borges, Bombal, Felisberto Hernández, Silvina Ocampo, Roa Bastos, Donoso, Parra, Eltit.

SPAN 6570 Span Poetry (1900-1939) (3 Credit Hours)
Examines the evolution of early twentieth-century Spanish poetry, then-current theories of poety, and accompanying attitudes in literary criticism, especially canon formation.

SPAN 6610 Span Novel 1900-1939 (3 Credit Hours)
Examines the evolution of the novel in the early part of the twentieth-century, with attention given to its relationship to philosophical and literary critical writing.

SPAN 6620 Span Poetry - 20th Cent (3 Credit Hours)
Explores twentieth-century Spanish poetry, poetics, and related literary criticism.

SPAN 6650 Modernism and Spain (3 Credit Hours)
Examines Spanish participation in Modernism, the international literary movement of the early twentieth-century.

Prerequisite(s): SPAN 4060.

SPAN 6670 Nov Post-War/Post Franco (3 Credit Hours)
This course studies developments in the Spanish novel from the 1940s to the present. Special attention is given to Franco dictatorship and Spain's transition to democracy. The course also examines the Spanish novel in its global context, with theoretical selections from formalism to post-structuralism.

SPAN 6680 Spectacle in Spain 1939+ (3 Credit Hours)
This course examines the significance of diverse forms of spectacle and popular culture, principally theatre and film but discussion of phenomena such as the novela rosa, comic books, or the bolero. Theoretical issues such as high/low culture and modernism/postmodernism are also considered.

SPAN 6690 Spanish Poetry 1939+ (3 Credit Hours)
This course examines Spanish poetry published from the Civil War to the present. While working to situate Spanish poetry within a larger European and American context, the course also considers and critiques the attempts by critics and creative writers to theorize a poetical practice and construct a literary history and canon.
SPAN 6710 Contemp Fict-Sp Am &Braz (3 Credit Hours)
A comparison of the contemporary fiction of Spanish America and Brazil. Topics may include: the short story; race, gender and nationalism; the regionalist novel; experimental fiction; fiction and popular culture. Among the selected authors are Julio Cortázar, Guimarães Rosa, Fonseca, Borges, Clarice Lispector, Rulfo, Donoso, Icaza, Ramos, Rivera. Reading competence in Spanish and Portuguese to be established by previous course work or judgment of instructor.

SPAN 6720 19 Cent Span Am Lit (3 Credit Hours)
A study of the literature of the emerging nations in Spanish America, with special attention to new genres such as the anti-slavery novel, gauchesque poetry, and the indigenist novel. Authors include Bolívar, Bello, Gómez de Avellaneda, Manzano, Sarmiento, Hernández, Isaacs, Galván, and Matto de Turner.

SPAN 6730 Women Writers in Spain (3 Credit Hours)
This course covers literature by women authors from the Middle Ages through the twentieth-century. Examination of the poetic, prose, dramatic, and cinematic works by women in Spain in various historical, political, social, and artistic contexts.

SPAN 6740 Woman Writers Latin Amer (3 Credit Hours)
A literary analysis of prose, poetry, and theatre by Latin American women tracing the development of intellectual thought in various Latin American societies. Cinematic works included. Special attention to the evolution of gender roles in conjunction with the development of a race, class, and ethnic consciousness as reflected in the literature of women. Authors include: Sor Juana, Gómez de Avellaneda, Matto de Turner, Storni, Agustini, Parra, Castellanos, Ferré, Allende, Eltit, Poniatowska.

SPAN 6750 Borges (3 Credit Hours)
Study of the poetry, prose fiction, and essayistic works of Jorge Luis Borges, in addition to an introduction to the vast secondary bibliography on the author.

SPAN 6760 Border Studies (3 Credit Hours)
Explores contemporary border theory from an historical perspective in the context of the Americas. Examines postmodern/postcolonial notions of racial and cultural difference and otherness as they play out in nineteenth-century literature. Studies border culture along the US-Mexican border as well as in other Latin American contexts.

SPAN 6780 Lat Am Cult Studies (3 Credit Hours)
The course is an intensive survey of Latin American cultural studies. Topics to be studied include: interactions among popular, erudite, and mass cultures; debates on modernity and postmodernity; relations between alphabetic and nonalphabetic writing systems in colonial and post colonial contexts; emergence and development of Latin American concepts such as mestizaje, hybridity, transculturation, heterogeneity; relations between culture and the state; issues of class, race, and gender in the study of Latin American culture. Theorists to be studies include Néstor García Canclini, José Martín Barbero, Beatriz Sarlo, Nelly Richard, Roberto Schwarz, Silviano Santiago.

Prerequisite(s): SPAN 4060.

SPAN 6790 Latin Am Film & Visual Culture (3 Credit Hours)
A study of Latin American cinema and visual culture from a historical, theoretical, and cultural perspective. Possible topics include: national cinemas, genre, main historical movements in Latin American film, Third Cinema and armed struggle in Latin America, New Latin American cinemas, cinema and other visual arts, Latin American documentary.

SPAN 6810 Reading Medieval Iberia (3 Credit Hours)
A study of the literatures and cultures of medieval Iberia through the fifteenth century, with a focus on topics that may include Andalusi poetry, love in the Libro de buen amor, or medieval manuscript culture.

SPAN 6850 Senior Sem Major Authors (4 Credit Hours)
This course is a capstone seminar on major authors of the Hispanic literary tradition from both Spain and Latin America.

Prerequisite(s): SPAN 4060.

SPAN 6890 Service Learning: SPAN 6010 (0-1 Credit Hours)
Service Learning.

SPAN 6910 Special Topics (3 Credit Hours)
This course covers topics not regularly covered by courses at the 6000-level.

SPAN 7910 Topics in Peninsular Lit (3 Credit Hours)
This course covers topics taught by faculty on a rotating basis.

SPAN 7920 Topics in Latin American Lit (3 Credit Hours)
This course covers topics taught by faculty on a rotating basis.

SPAN 7960 Ph.D Prep & Professional Dev (3 Credit Hours)
This seminar prepares students for the Ph.D. exam and dissertation prospectus. It is designed both as a workshop in academic research and writing and as a forum for examining the nature of our discipline and issues related to professionalism for academic careers.

SPAN 9980 Masters Research (0 Credit Hours)
Masters Research

SPAN 9990 Dissertation Research (0 Credit Hours)

**Swahili (SWHL)**

SWHL 1010 Swahili I (3 Credit Hours)
Introduction to essential skills in Swahili. Students will receive training and practice in speaking, listening, reading, and writing.

SWHL 1020 Swahili II (3 Credit Hours)
Elementary Swahili II is a second level introductory course for beginners of Swahili language. This course is open to students who have taken and passed SWHL 1010. In this course students will further develop the four language skills: listening, speaking, reading and writing. Pre-requisites: Elementary Swahili I (SWHL 1010) or instructor's permission.

Prerequisite(s): SWHL 1010.

SWHL 2030 Swahili III (3 Credit Hours)
Intermediate Swahili is a continuation of Elementary Swahili I and II. It is an intermediate course designed to reinforce communicative skills in reading, conversation and composition. Pre-requisites: Elementary Swahili II (SWHL 1020) or instructor’s permission.

Prerequisite(s): SWHL 1020.

**Taxation (TAXN)**

TAXN 1290 Semester Abroad (1-20 Credit Hours)

TAXN 2390 Semester Abroad (1-20 Credit Hours)

TAXN 4100 Principles of Entity Taxation (3 Credit Hours)
TAXN 4100 examines the federal system of taxation as it relates to businesses. The course includes an analysis of the taxation of corporations, S corporations, and partnerships. TAXN 4100 uses a business-cycle approach, wherein the tax effects of formation, ongoing operation, and disposition of the entity are discussed. Tax effects of various transactions as they relate to the shareholders/partners are also discussed. The course is Code (Internal Revenue Code) oriented, emphasizing the primary authorities that govern tax matters.

Prerequisite(s): ACCN 3100, 3010, ACCT 3030, ACCN 3101 or ACCT 3030.

TAXN 4200 Taxation For Non-Acct (3 Credit Hours)

TAXN 4250 Business Taxation (3 Credit Hours)

TAXN 4260 Taxation of Individuals (3 Credit Hours)

TAXN 4920 Ind. Study: Taxation (1-3 Credit Hours)

TAXN 5190 Semester Abroad (1-20 Credit Hours)

TAXN 5380 Junior Year Abroad (1-20 Credit Hours)

TAXN 5390 Junior Year Abroad (1-20 Credit Hours)

TAXN 7100 Principles of Entity Taxation (3 Credit Hours)
This course covers tax concepts as they affect corporations and partnerships. Starting with an understanding of what each form of doing business entails, the course examines how they determine taxable income and tax liability, and how they work on tax planning strategies. It will be taught in a lecture/discussion format with significant hands-on problem solving.

Prerequisite(s): ACCN 6010, 6020, 6050 or 2010.

TAXN 7260 Taxation of Individuals (3 Credit Hours)
The federal system of taxation, as it relates to individuals, is examined. The course uses a problem approach, wherein students analyze the facts presented and synthesize rules and concepts in arriving at a solution to individual tax problems. The course is "Code" (Internal Revenue Code) oriented, emphasizing the primary authorities that govern tax matters.

Prerequisite(s): TAXN 7100.

TAXN 7280 Research In Taxation (3 Credit Hours)
Specialized methods of tax research and the use of tax materials are covered in this course case. Specific sections of the Internal Revenue Code are examined, including income taxation of individuals, estates, corporations, and partnerships. Note: Cross-listed with 4LAW 6710.

Prerequisite(s): TAXN 7100.
TAXN 7290 Partnership & S Corp. (3 Credit Hours)
Partnership tax topics include asset contributions, liability assumption, distributions, operations, transfer of partners' interests, special allocations of tax attributes, partnership interests received for services, special basis adjustments, and analysis of the entity and aggregate approaches found in the law. Also included is a comprehensive study of the law of S-Corporations and how it compares to the law governing partnerships.

Prerequisite(s): TAXN 7100.

TAXN 7920 Ind Study-Taxation (1-3 Credit Hours)
Independent study: Taxation

Taylor Your Life (TYLR)

TYLR 1000 Taylor Your Tulane (1 Credit Hour)
TAYLOR Your Tulane is a 1-credit life design lab offered by the Taylor Center for Social Innovation and Design Thinking that uses design mindsets to teach how to create a Tulane experience that is uniquely TAYLORed to their interests and curiosities. Students will explore radically different academic pathways at Tulane, prototype and test areas of curiosity, and map the Tulane and New Orleans communities to effectively meet and connect with likeminded people on campus and in New Orleans.

TYLR 3000 Taylor Your Life (2 Credit Hours)
Learn how to approach your future with the mindset and toolkit of a designer. TAYLOR Your Life is an innovative career development lab that teaches students how to ideate multiple life paths, clarify their interests, focus and target their search, prototype and test elements of careers that interest them, market and brand themselves to stand out from the crowd, and map their community to effectively join the network of movers and shakers in their field.

Teach English Second Language (TESL)

TESL 3210 Methods for Teaching ESL (3 Credit Hours)
This course focuses on first language and ESL instruction for all English Language Learners especially elementary and secondary students (PreK-12). Second-language instructional theory and practice, materials selection and development for ELLs, and bilingual and ESL literacy and content area instruction are covered within the context a variety of language and program settings. Frameworks for evaluating curriculum materials and their instructional recommendations for ELL students are developed.

TESL 3220 Eng Structure for Teaching (3 Credit Hours)
This course explores the nuances of morphology, grammar, and semantics in English. Various approaches to the English language are covered, but the emphasis is on the practical implications for effective teaching.

TESL 3230 Language and Culture in Class (3 Credit Hours)
This course covers frameworks for understanding and analyzing language and culture. Within these frameworks, the course considers approaches to enhancing the cultural dimension of ESL/EFL instruction with an emphasis on developing enriching cultural interactions in the USA.

TESL 3240 Design for Multicultural Class (3 Credit Hours)
This course focuses on the processes and social factors that influence second language learning around the globe. In this discussion-based course, we will explore program models, national policies, theoretical bases, and current issues in curriculum design and consider the dynamics of creating culturally responsive curriculum that meets ever-changing and adapting student needs.

TESL 3892 Service Learning: TESL 3220 (0-1 Credit Hours)
TESL 3893 Service Learning: TESL 3210 (0-1 Credit Hours)
TESL 3894 Service Learning: TESL 3230 (0-1 Credit Hours)

Theatre (PATR)

PATR 2910 Special Topics (3 Credit Hours)
Special topics in theater.

PATR 2911 Special Topics (3 Credit Hours)
Special topics in theater.

Theatre (THEA)

THEA 1010 Plays and Playwrights (3 Credit Hours)
An introduction to the literature of theatre from the Greeks to the present with emphasis on the script in performance.

THEA 1020 Theatre in Contemporary Soc (3 Credit Hours)
This course surveys the history of theatre and develops an appreciation for and enjoyment of the performing arts. It also develops an appreciation for artists who bring the playwright's pages to life and considers the contribution of the audience.

THEA 1090 Voice and Speech I (3 Credit Hours)
Development of relaxation habits, physical alignment, breath control and release, tone production, and articulation.

THEA 1940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

THEA 2010 Performance I (3 Credit Hours)
A structured and at times spontaneous exploration of space, time, shape, sound, scenario, motion, and expenditure of energy to the end of attracting and holding the attention of the audience.

THEA 2020 Performance II (3 Credit Hours)
A structured and at times spontaneous exploration of space, time, shape, sound, scenario, motion, and expenditure of energy to the end of attracting and holding the attention of the audience.

THEA 2090 Voice II (3 Credit Hours)
Development of relaxation habits, physical alignment, breath control and release, tone production, and articulation with emphasis on corrective tutorial work.

Prerequisite(s): THEA 1090.

THEA 2100 Fundamentals of Acting (3 Credit Hours)
Class and workshop sessions in developing fundamental skills in the art and craft of acting as a creative process.
THEA 2110 Beginning Acting (3 Credit Hours)
Class and workshops sessions in developing fundamental skills in the art and craft of acting as a creative process.

Prerequisite(s): THEA 2010 or DANC 2010.

THEA 2810 Global Theatre & Performance (3 Credit Hours)
This course surveys the origins of global dramatic traditions and their legacies in modern and contemporary theatre. Course materials draw from predominantly non-Western theatre (that of India, Africa, China, Japan, The Caribbean and Latin America) as well as Europe and ancient Greece.

THEA 2940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

THEA 3010 Intermediate Acting (3 Credit Hours)
Continuing development of acting skills focused primarily on work within the text. (Scenes, monologues, two other texts related exercises).

Prerequisite(s): THEA 2010, 2010, 2010 or 2010.

THEA 3030 Suzuki Method of Acting (1 Credit Hour)
Internationally renowned theatre director Tadashi Suzuki developed the well-established Suzuki Acting Method. Technically speaking, the method consists of training to learn to speak powerfully and with clear articulation, and is also used to enhance the expressiveness of the whole body. It is thus that actors can learn the best way to exist on the stage. The goal is therefore to make it possible for actors to develop their ability of physical expression and also to nourish a tenacity of concentration. The class activities include a series of exercises involving the physical center of the body in motion off center/on center within a consistent level of energy. This training is a vocabulary necessary to materialize the theatre and requires assimilation of the vocabulary by the actor as a second instinct. These techniques should be studied, mastered, until they serve as an operational hypothesis.

THEA 3090 Stage Speech I (3 Credit Hours)
Corrective work on individual regional speech habits, articulation, and phrasing.

THEA 3210 Directing I (3 Credit Hours)
A theoretic and applied study of the basic elements of directing, including script analysis, blocking, composition, dramatic focus, and actor coaching. Staged scenes using outside actors make up a major part of the course activities.

THEA 3220 Advanced Directing II (4 Credit Hours)
Advanced studies in the principles and practice of directing. Course activities involve scene study and staging with special emphasis given to advanced techniques in composition, working with actors, and design collaboration.

THEA 3230 Playwriting I (3 Credit Hours)
The majority of exercises and discussions throughout this class will focus on finding your voice of expression. This can only be done by jumpstarting your writing. With that in mind, this class will throw you almost immediately into the act of habitually writing by insisting upon regular journaling, assigning a consistent stream of exercises that involve more radical theatrical approaches, and the creation of a monologue and ten-minute play.

THEA 3240 Playwriting II (3 Credit Hours)
By the end of this semester you will have completed a 20 to 30-page one act.

Prerequisite(s): THEA 3230.

THEA 3311 Scene Shop Practicum (1 Credit Hour)
Course is open with credit to all students of the University and is designed to provide the student with practical production experience in the area of set construction and scene painting.

THEA 3312 Costume Shop Practicum (1 Credit Hour)
Course is open with credit to all students of the University and is designed to provide the student with practical production experience in the area of costume construction.

THEA 3313 Running Crew Practicum (1 Credit Hour)
Course is open with credit to all students of the University and is designed to provide the student with practical production experience in the area of backstage running crew in areas of sets, props, costumes, lighting, or sound.

THEA 3314 Box Office Practicum (1 Credit Hour)
Course is open with credit to all students of the University and is designed to provide the student with practical production experience in the area of box office, selling tickets, ushering, etc.

THEA 3315 Acting Practicum (1 Credit Hour)
Course is open to majors performing in department productions wishing to receive credit for the performance work. Note this does not count toward the 4 required Practicum credits.

THEA 3340 Production & Design I (3 Credit Hours)
An integrated introduction to the disciplines of scenic, costume, and lighting design coupled with the practical considerations of construction and execution of the design process. First of two semester course with Theatre 3350.

Prerequisite(s): THEA 3311* or 3312*.
* May be taken concurrently.

THEA 3350 Production & Design II (3 Credit Hours)
A continued exploration of the disciplines of scenic, costume, and lighting design coupled with the practical considerations of construction and execution of the design process. A finished final presentation will be required. One year sequence required of all theatre majors.

Prerequisite(s): THEA 3311* or 3312*.
* May be taken concurrently.

THEA 3410 History of Costume (4 Credit Hours)
An illustrated history of dress and society from the ancient Greeks to the present. Assignments emphasizing interpretation of costume research for the stage.

THEA 3510 Rehears Tech/Actor & Dir (3 Credit Hours)
Exploration of the interaction between actor and director during scene study with emphasis on developing the analytic and rehearsal techniques fundamental to the production process.
THEA 3610 Basic Makeup (1 Credit Hour)
The purpose of this class is to develop basic skills in the design and application of stage makeup. The work completed in this class has the objective of providing a background in the subject that is expected of the professional performer.

THEA 3710 Shakespeare on the Road (3-4 Credit Hours)
Students in this course will create, rehearse, and perform a piece of theatre that demonstrates Shakespeare's style and modern-day relevance. This piece will tour to middle and high schools in the New Orleans area. This course is also designed to fulfill a 1st or 2nd tier Service Learning requirement. May be repeated once.

THEA 3750 From Community to Stage (3 Credit Hours)
This course introduces students to the story circle methodology as formulated by the Free Southern Theater and Junebug Productions. Students also learn the history of the Free Southern Theater and the Black Arts Movement in the South. Collaboration with local artists will result in the production of an original theatrical performance at the end of the semester.

THEA 3810 Fashion Design Fundamentals (3 Credit Hours)
This course explores the student's creativity and imaginative thinking by carrying out small fashion design projects and developing a personal style. No special skills are required and all class materials will be provided.

THEA 3890 Service Learning: THEA 3710 (0-1 Credit Hours)
Service Learning.

THEA 3891 Service Learning: THEA 3820 (0-1 Credit Hours)
Service Learning.

THEA 3910 Special Topics (1-3 Credit Hours)
Specialty courses for undergraduates in performance techniques, projects, and theatre related subjects as designed by visiting or permanent theatre faculty. For description, consult the department.

THEA 3911 Special Topics in Theatre (1-3 Credit Hours)
Special topics in Theatre.

THEA 3920 Special Topics (1-3 Credit Hours)
Specialty courses for undergraduates in performance techniques, projects, and theatre related subjects as designed by visiting or permanent theatre faculty. For description, consult the department.

THEA 3940 Transfer Coursework (3 Credit Hours)
Transfer Credit.

THEA 3990 Stage Speech II (3 Credit Hours)
Corrective work on individual regional speech habits, articulation, and phrasing with added emphasis on the speaking of verse material.

THEA 4120 Acting IV (4 Credit Hours)
An advanced course in acting techniques.

THEA 4210 Documentary Theatre (3 Credit Hours)
The purpose of this course is to examine the nature of documentary or "verbatim" theatre. Students will investigate the following issues: What is the nature of the documentary material? What is the basis for selection? What is the organizing principle?

THEA 4320 Movement Stories (3 Credit Hours)
An interdisciplinary studio course that examines creation of and communication of stories through movement and theatre approaches with emphasis on creativity and invention.

THEA 4400 Clowning & Improvisation (3 Credit Hours)
A course that will teach students a form of French clowning popularized by Bataclown. The act of clowning as will be practiced in this class is based on corporeal, emotional, and vocal expression. Each student will create her or his own individualized clown character through improvisational exercises. A midterm research paper with presentation and final performance will be required of all.

THEA 4410 Thea & Social Change (3 Credit Hours)
Students are introduced to Augusto Boal's Theatre of the Oppressed techniques. They will be used to explore such issues as identity and representation.

THEA 4475 Shakespeare Performance (3 Credit Hours)
Exploration of Shakespeare's work through performance using the summer Shakespeare Festival as a catalyst. May be repeated once with different context.

THEA 4560 Internship (1-3 Credit Hours)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the academic department sponsoring the internship on TUTOR. Only one internship may be completed per semester. Note: A maximum of three credits may be earned in one or two courses.

THEA 4710 Foundations of Western Theatre (3 Credit Hours)
A course in the history and dramatic literature of theatrical production and performance in the Western tradition (mostly) from the Greek classical period through the 18th Century.

THEA 4720 Mod Brit & Eur Theatre History (3 Credit Hours)
A course in the history and dramatic literature of theatrical production and performance in Britain and Europe (mostly) from the rise of Romanticism in the 18th century to the present.

THEA 4730 U S Theatre History (3,4 Credit Hours)
A course in the history and dramatic literature of theatrical production and performance in the United States (mostly) from Colonial drama to the present.
THEA 4750 African American Theatre History (3 Credit Hours)
This course is a chronological examination of African-American theater history from 1821 to the present through the study of African-American plays, critical race theory, as well as political/social conditions in the United States. Upon completion of this course the student should be familiar with a crosssection of the major written works of African-American theater, have a more complete understanding of the intersection of American and African-American theatre histories. They should also know the position of African-American theater within the context of major American theatrical movements.

THEA 4790 Readings in Theatre History (1-2 Credit Hours)
This Independent Study is used when a transfer/study abroad course covers some, but not all, of the content in a required theatre history course.

THEA 4890 Service Learning: THEA 4210 (0-1 Credit Hours)
Service Learning.

THEA 4910 Independent Study (1-3 Credit Hours)
Independent practical and research study in theatre-related areas.

THEA 4920 Independent Study (1-3 Credit Hours)
Independent practical and research study in theatre-related areas.

THEA 4940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

THEA 4990 Honors Thesis (3 Credit Hours)
Honors Thesis.

THEA 5000 Honors Thesis (3-4 Credit Hours)
Honors Thesis.

THEA 5190 Semester Abroad (1-20 Credit Hours)
Semester abroad.

THEA 5380 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

THEA 5390 Junior Year Abroad (1-20 Credit Hours)
Junior Year Abroad.

THEA 5940 Transfer Coursework (0 Credit Hours)
Transfer Coursework.

THEA 6020 Shakespeare Verses (3 Credit Hours)
One or more topics will be covered each semester, e.g., Acting Shakespeare.

THEA 6110 Acting For Other Media (3 Credit Hours)
This course is designed to train the acting student in techniques that are required for successful performance in film, television, and radio. Students will explore the differences between acting for the stage and for the "mechanical" media and will be assigned scenes and copy to perform on camera and on microphone.

THEA 6130 Ensemble Production (1,3 Credit Hours)
Development of the ensemble in relation to specific genres and playwrights culminating in a public performance.

THEA 6140 Ensemble Production (1,3 Credit Hours)
Development of the ensemble in relation to specific genres and playwrights culminating in a public performance.

THEA 6220 Advanced Makeup (3 Credit Hours)
This studio style course explores the different types of theatrical makeup and it uses in different venues. The students are provided with supervised time in class to develop application skills both on themselves and using live models as well as thinking critically about an application.

THEA 6230 Special Effects (3 Credit Hours)
Introductory course designed to expose the student to the various types of special effects available, and their uses in the entertainment industry.

THEA 6310 Adv Technical Problems (3 Credit Hours)
A survey of the traditional methods of constructing and mounting scenery for theatre. A practical approach to planning technical production. Includes budgets for time and material, organization of shops and crews, and standards in drafting the production.

THEA 6330 Fundamentals of Lighting (3 Credit Hours)
A course in the art and craft of stage lighting. Basic electricity and color theory. Lighting instruments and their control. Practical experience in lighting the production. Laboratory in addition to lecture.

THEA 6340 Comp. Tech For Lighting (3 Credit Hours)
Advanced problems in stage lighting. Structured approach to the development of lighting for the stage. Analysis of available lighting control options. Practical experience in preparation of light designs for production. Laboratory in addition to lecture.

THEA 6350 Thea Drafting & Model-Making (3 Credit Hours)

THEA 6410 Design Fundamentals I (3,4 Credit Hours)
The development of scenic and costume designs from the modern viewpoint. Techniques of drawing, rendering, and perspective in relation to designers' presentation and portfolio. Laboratory.

THEA 6420 Design Fundamentals II (3,4 Credit Hours)
A continuation of THEA 6410. Equal emphasis on the designers' process and rendering techniques. Watercolor, pen and ink, scenic models.

Prerequisite(s): THEA 6410.

THEA 6440 Rendering For Designers (3 Credit Hours)
The development of the individual's graphic skills in regard to rendering for theatrical purposes. Stress will be placed on accurately representing designs on plates in a professional fashion and on the manipulation of different mediums.
THEA 6460 Adv Costume Rendering (3 Credit Hours)
To improve drawing/costume rendering skills. A course to advance the costume design student's understanding of the human body and how it moves and behaves, thus enhancing the student’s ability to communicate through costume design rendering. Exploration of the anatomy of the body; including the skeletal and muscular systems, how they interact and how they move; and exploration of how different fabrics behave on the body and how the body's movement is affected by clothing.

THEA 6470 Design for Television (3 Credit Hours)
This course is designed to give the students the knowledge of preparing the production of television programs with emphasis on the producer’s, the director’s, and designer’s responsibilities to the overall planning and execution of the program - both in the studio and in the field.

THEA 6480 Design for Puppetry (3 Credit Hours)
This course is an introduction to puppet design concepts. An exploration of the specifics associated with different puppet show genres.

THEA 6530 Period Style Designers I (3,4 Credit Hours)
In-depth study of the styles of architecture, decor, furniture, and costume from antiquity through Elizabethan England, 1625. Research and design adaptation assignments.

THEA 6540 Period Styles Design II (3,4 Credit Hours)
Further study in architecture, decor, furniture, and costume from Charles I through modern including Eastern cultures. Research and design adaptation assignments.

THEA 6550 Stage Management (3 Credit Hours)
Introduction to the multifaceted job of stage management.

THEA 6555 Costume Shop Management (3 Credit Hours)
Students will develop skills and an understanding of the daily responsibilities required of a Costume Shop Manager. These topics will include budgeting, managing labor, managing costume stock, writing rental agreements and sewing machine maintenance.

THEA 6580 Producing (3 Credit Hours)
Introduction to the different elements of producing for the theatre, as well as television, new media, and cinema. Students receive an overview of the different elements of producing, from the initial steps of putting together script, talent, and the team (writer(s), director, actors, designers), through financing, and into marketing and the launch of a new production.

THEA 6600 Welding (3 Credit Hours)
This class will cover a variety of metalworking techniques that are used in theatrical construction.

THEA 6650 Studies In Theatre Hist (3 Credit Hours)
Graduate History of Theatre I is an intensive course in the conventions, physical conditions and techniques of theatrical production in the Western tradition from the Greek classical period through the 18th C. Emphasis will be placed on setting each period of theatre within the aesthetic traditions of Western Culture.

THEA 6660 Theatre History II (3 Credit Hours)
Graduate History of Theatre I is an intensive course in the conventions, physical conditions and techniques of theatrical production in the Western tradition of Modern British and European Theatre.

THEA 6700 Sound Technology (3 Credit Hours)
Introductory level course designed to expose the student to the theories and technology of the professional audio world.

THEA 6730 Dramaturgy (3,4 Credit Hours)
This course explores dramatic structure as a means of achieving successful storytelling and examines the role of the dramaturg in modern theatrical practice.

THEA 6750 Costume Construction (3 Credit Hours)
Students will develop skills in the construction of theatrical clothing, specifically hand sewing skills, machine-sewing skills, reading and understanding commercial patterns, and construction of basic garments as assigned by instructor.

THEA 6751 Beginning Patternmaking (3 Credit Hours)
The course is designed to develop basic flat pattern making skills. A basic understanding of sewing techniques is preferred.

THEA 6760 Costume Technology (3 Credit Hours)
Concentrated introduction to the methods, tools, and techniques used in the construction of Theatrical Millinery. Focus will be placed on standard shop equipment, fabrics, and specific Millinery construction materials and techniques.

THEA 6761 Adv Millinery Techniques (3 Credit Hours)
Further development of the methods, tools, and techniques used in the construction of Theatrical Millinery. Focus will be on advanced techniques and materials.

THEA 6770 Costume Crafts I (3 Credit Hours)
This course is designed to develop skills in the construction of theatrical crafts, specifically mask-making.

THEA 6775 Corsets and Crinolines (3 Credit Hours)
This course is designed to explore the history and construction of female underpinnings from different eras.

THEA 6780 Adv Costume Technique Draping (1-4 Credit Hours)
Students will build on flat patterning skills and learn draping techniques needed to create theatrical costumes. Prerequisites: Basic Patternmaking.

THEA 6790 Costume Crafts II (3 Credit Hours)
Students will develop skills in the manipulation of textiles through various painting and dyeing techniques to achieve desired theatrical costuming objectives.
THEA 6800 Practical Applications (1-3 Credit Hours)
A design lab where the students put theory into practice. The lab assignments will be tailored by the faculty to the individual student’s needs. The objective is to provide actualized work experience in conjunction with faculty mentoring on design work productions.

THEA 6810 Theatrical Photography (3 Credit Hours)
Basic photography and darkroom techniques designed specifically for theatre design students to document their work. Both black and white and color will be covered.

THEA 6820 Scene Design Cad (3 Credit Hours)
We will introduce and explore Computer Aided Design using primarily the Vector Works program with its practical applications to theatrical scene design.

THEA 6825 Advanced CAD (3 Credit Hours)
This class will cover advanced functions of the Vectorworks CAD software, such as 3D modeling and photo-realistic rendering techniques with lighting and textures, with emphasis on its practical applications to theatrical scene and lighting design. This is a continuation of the Scene Design Cad course.

Prerequisite(s): THEA 6820 or 6820.

THEA 6830 Scene Painting (3 Credit Hours)
This is a collaborative class based upon professional practices of scenic studios. We will examine the working relationship between the scenic designer and the scenic artist, and look at historical changes to the profession over the past 400 years. There will be extensive time spent drawing and painting and learning techniques to realize different faux finishes. This introductory class will culminate with a full sized color drop, with all in the class participating.

THEA 6840 Intermed Costume Construction (3 Credit Hours)
Students will further develop skills in the construction of theatrical clothing, specifically hand sewing skills, machine sewing skills, reading and understanding commercial patterns, and construction of more complex garments as well as repurposing commercial patterns, and construction of more complex garments as well as repurposing commercial garments.

Prerequisite(s): THEA 6750, 6750 or 6750.

THEA 6850 Design For Dancers (3 Credit Hours)
Designed to expose the dancer/choreographer to the theories of lighting and sound design as it applies to dance.

THEA 6860 Advanced Costume Construction (3 Credit Hours)
The course is designed to develop advanced skills in the construction of theatrical costumes. Students will create projects resulting in finished pieces worthy of inclusion in their portfolios. It will also develop an understanding of costume technology for both design and performance students as well as build a vocabulary to enhance the collaboration process.

Prerequisite(s): THEA 6840 or 6840.

THEA 6880 Writing Intensive: THEA 6920 (1 Credit Hour)
Writing Intensive.

THEA 6890 Portfolio Techniques (3 Credit Hours)
This course will prepare the student’s portfolio, as well as the student, for the professional world. Stress placed upon plate layout, organization of materials, selection of pieces for inclusion, etc. Additionally, job search techniques and interview preparation will be explored.

THEA 6910 Special Topics (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For specific offering, see the Schedule of Classes. For description, consult department.

THEA 6920 Special offerings (3 Credit Hours)
Courses offered by visiting professors or permanent faculty. For specific offering, see the Schedule of Classes. For description, consult department.

THEA 6921 Special Offerings (3 Credit Hours)
Special offering.

THEA 6922 Special Offering (3 Credit Hours)
Special offering.

THEA 6923 Special Offering (3 Credit Hours)
Special offerings in Theatre.

THEA 6924 Special Offering (3 Credit Hours)
Special offerings in Theatre.

THEA 6925 Special offerings (3 Credit Hours)
Special offerings in Theatre.

THEA 6940 Transfer Coursework (3 Credit Hours)
Transfer Coursework.

THEA 6980 Professional Development (3 Credit Hours)
This Capstone course is designed for graduating seniors with a Performance track emphasis to address the skills necessary for a successful professional career in theatre and the performing arts. Emphasis will be placed on creation of resumes, self-promotion, and audition materials, including how to book auditions, preparing for callbacks and cold readings, making contacts, writing cover letters, finding an agent, and unions, among other topics.

THEA 6990 BFA Thesis Production (3 Credit Hours)
Required for B.F.A. designers. Student’s work in area of emphasis culminating in the design of a mainstage production. A written thesis is required.

THEA 7010 Graduate Text Analysis (3 Credit Hours)
This course is designed for graduate level students of theatre and dance. It will explore methods and vocabularies for the discussion of play texts as they relate to the mounting and production of plays, as well as ways of making meaning on stage.

THEA 7210 Advanced Directing I (3 Credit Hours)
This course is meant to give graduate theatre designers a theoretical, historical and practical overview of directing.
THEA 7310 Non-Profit Management (3 Credit Hours)
The objective of this course is to provide a detailed analysis of the managerial aspects of commercial performing arts in America. The course aims to relate principles of administration and business operations to theatre, dance, and music, and provide a basis for practical contemporary management of performing arts productions and organizations.

THEA 7320 Dev/Fundraising For Npos (3 Credit Hours)
This course focuses on not-for-profit performing arts organizations. Topics covered include the evolution of the field, economic impact, the internal culture and structure, external influences, leadership, governance, planning, human resources, marketing, fundraising, financial management, and others. Students will be introduced to a wide range of arts organizations, working arts managers, and institutional models through field trips, guest lectures, readings, and institutional data. In addition to understanding the organizational structures and functions of an arts organization, students will have begun to develop a philosophy of management in the arts, a theoretical model for general management, arts advocacy, and practical tools for its practice.

THEA 7410 Scene Design I (3 Credit Hours)
The objective of this course is to give the students the skills needed to design scenery for a contemporary American or European play that will be analyzed within its diverse visual expressions.

THEA 7420 Scene Design II (3 Credit Hours)
The purpose of this course is to empower students to present artistic set design solutions of opera in English translation, to discuss in depth and cross-culturally a theme, Music and Theatre.

THEA 7510 Costume Design I (3 Credit Hours)
The Development of costume designs from the modern viewpoint. As well as developing techniques of drawing, rendering, and perspective in relation to designers, presentation, and portfolio.

THEA 7520 Costume Design II (3 Credit Hours)
Continuation of THEA 7510.

THEA 7560 Production Management (3 Credit Hours)
The exploration of the role of the Production Manager and their responsibilities.

THEA 7610 Lighting Design I (3 Credit Hours)
The purpose of this course is to hone students' skills as lighting designers. This will be done through a series of projects and light plots over the course of the semester.

THEA 7620 Lighting Design II (3 Credit Hours)
Continuation of THEA 7610 with emphasis on multi-set shows, musicals, and operas.

THEA 7710 Technical Directing I (3 Credit Hours)
This course will cover a variety of techniques that are used in theatrical construction.

THEA 7720 Technical Directing II (3 Credit Hours)
Continuation of THEA 7710 with emphasis on structural engineering of scenery.

THEA 7890 Internship (9 Credit Hours)
Internship.

THEA 7910 Independent Study (1-3 Credit Hours)
Independent study in Theatre.

THEA 7920 Independent Study (1-3 Credit Hours)
Independent study in Theatre.

THEA 7990 Thesis Production (3 Credit Hours)
MFA Thesis Production.

THEA 9980 Master's Research (0 Credit Hours)
Master's Research.

Tides - Business (TIDB)

TIDB 1010 More Than Just Busn I (1.5 Credit Hours)
TIDB 1010 introduces students to the business world by critically examining the art of management. The course focuses on important business questions: Why and how do people start businesses? Why do people work together, and how does one lead them? How do businesses manage their finances? The objective of TIDB 1010 is to introduce students to basic business concepts; to develop plans for their fields of study; and to learn about potential careers, and have fun in the process.

TIDB 1020 Law and Order: Pre-Law (1.5 Credit Hours)
In Henry VI, Shakespeare wrote, "The first thing we do, let's kill all the lawyers"; however, "all the lawyers" have avoided being killed since Shakespeare wrote that line. Why? From the largest corporate mergers to the simplest adoptions, and from public policy to the enactment of criminal laws, the need for lawyers is increasing because the law is a central part of our daily lives and is the bedrock of a free society. Although the press might occasionally indicate otherwise, lawyers are members of an enduring profession. As such, they receive respect, but is being a lawyer really like the popular portrayals on television shows such as Law and Order, or in a John Grisham novel? This class will help students explore how one becomes a lawyer and what being a lawyer is like.

TIDB 1110 More Than Just Business II (1.5 Credit Hours)
TIDB 1110 continues with examining the art of management discussed in TIDB 1010. The course focuses on several key questions: Why and how do leaders create a vision? How do organizations sell and market their goods and services? What production and post-production activities do organizations perform? The objective of TIDB 1110 is to allow students to build upon the basic business concepts in TIDB 1010; to further refine plans for their fields of study; and to learn about potential careers, and have fun in the process.

TIDB 1890 Service Learning: TIDB 1010 (0-1 Credit Hours)
This course is a required add-on component to TIDB 1010 or 1020, and TIDB 1110 for any student who enrolls in it. In TIDB 1890 or 1892, students will engage in service learning activities that will complement the introductory business curriculum in TIDB 1010 or 1020, and TIDB 1110. Upon successfully completing TIDB 1890 or 1892, students will earn one full credit and they will complete the first-tier University Public Service Requirement.
enjoying some local cuisine (savoring). Orleans architecture and history on a walking tour (engagement) and enhancing practices through homework assignments and a few group will also expose students to local wellness resources at Tulane and strategies for enhancing their own health and happiness and for will also engage in experiential homework in which they will apply about the foundational theories and research of positive psychology meditation, nurturing social relationships, and more. Students will learn (and their application in academia), purpose, gratitude, kindness, emotions, hedonic misprediction and adaptation, character strengths for flourishing. This course will provide a theoretical and practical requires tapping human strengths and positive capacities; and (3) flourishing requires more than curing pathology; (2) flourishing and iron. Why are above-ground tombs more prevalent in New Orleans? What are the different tomb types and their architectural styles? Why do families in Louisiana visit cemeteries on All Saints Day? What symbolism does funerary art in stone and iron reveal? This TIDES course will provide several informative field sessions to local cemeteries combined with class lectures.

TIDE 1000 NOLA Cities of The Dead (1 Credit Hour)
Students will be introduced to the history and cultural folkways of New Orleans through the study of historic figures, cemetery architecture, monument construction and funerary symbolism reflected in stone and iron. Why are above-ground tombs more prevalent in New Orleans? What are the different tomb types and their architectural styles? Why do families in Louisiana visit cemeteries on All Saints Day? What symbolism does funerary art in stone and iron reveal? This TIDES course will provide several informative field sessions to local cemeteries combined with class lectures.

TIDE 1001 New Orleans’ Hidden Places (1 Credit Hour)
TIDE 1002 The Edge of Medicine (1 Credit Hour)
TIDE 1003 Happiness & Human Flourishing (1 Credit Hour)
What can scientific research tell us about practices and perspectives that lead to a happier life? What can psychology do to help ordinary people to thrive and flourish? Which practices lead to greater fulfillment and life satisfaction? Positive psychology engages such questions by utilizing scientific research methods to identify practices which lead to greater happiness and human flourishing – a life rich in purpose, relationships, and enjoyment. Positive psychologists maintain that (1) flourishing requires more than curing pathology; (2) flourishing requires tapping human strengths and positive capacities; and (3) scientific research methods can help us to identify and refine strategies for flourishing. This course will provide a theoretical and practical introduction to applied positive psychology. Topics will include positive emotions, hedonic misprediction and adaptation, character strengths (and their application in academia), purpose, gratitude, kindness, meditation, nurturing social relationships, and more. Students will learn about the foundational theories and research of positive psychology and will also engage in experiential homework in which they will apply strategies for enhancing their own health and happiness and for positively impacting their relationships and communities. This course will also expose students to local wellness resources at Tulane and New Orleans and will offer opportunities to explore a variety of life enhancing practices through homework assignments and a few group activities such as attending a yoga class (exercise), a meditation class (mindfulness), and a field trip to the French Quarter exploring New Orleans architecture and history on a walking tour (engagement) and enjoying some local cuisine (savoring).

TIDE 1004 Integrating Comp Med-Coll Exp (1 Credit Hour)
TIDE 1005 Mardi Gras: Greatest Free Show (1 Credit Hour)
TIDE 1006 American Jews on Screen (1 Credit Hour)
TIDE 1007 The Art of Letter-Writing (1 Credit Hour)
TIDE 1008 NO: A Spirituality Survey (1 Credit Hour)
TIDE 1009 NO Tourism: Auth & Sensational (1 Credit Hour)
TIDE 1010 Ldrshp, Pol, Powr,Change (1 Credit Hour)
Are leaders born or bred? How do leaders and their leadership styles impact change? How does one develop the courage and wisdom to lead and promote change effectively? This TIDES class provides an opportunity to examine the nature of leadership, its impact on the change process, and the underlying dynamics of power, politics, and conflict. Over the course of the academic year, this course focuses on developing an interdisciplinary understanding of the theories and practices of organizational and community leadership. As a TIDES member, you will actively study the theories that emerge from a variety of fields and reflect on their practical, political, and ethical assumptions as well as on their implications in a variety of settings. Through readings, classroom discussions, interviews with local leaders, and a group initiative, you will gain a greater appreciation for the issues that affect leaders and the components of successful leadership.

TIDE 1011 Exploring Russia (1 Credit Hour)
The seminar will introduce students to various aspects of Russian culture, history and life, including food, music and visual arts. In an informal and relaxed atmosphere, students will get a “taste” of a little bit of everything that Russia is famous for; from icon paintings to onion domes; from the times of Ivan the Terrible to Putin’s Russia. A variety of readings (mostly short articles), film screenings, musical videos, and guest lectures will be part of the class. No knowledge of Russian is needed or required.

TIDE 1012 Working for Change:New Orleans (1 Credit Hour)
TIDE 1013 The Architecture of Place (1 Credit Hour)
How can architecture define a place? How do buildings support social constructs and cultural patterns? How do spatial relationships, proportions, and forms shape how we move through and experience places? How do the lines, curves, textures, and colors of walls, roofs, railings and other built elements impact our senses, emotions, and memories? All of these questions will be explored as students learn about the particular built environment that makes New Orleans so unmistakably New Orleans. Students will be encouraged to think critically about built environment and to communicate their ideas effectively through writing, visuals, and speech.

TIDE 1014 Cultivate Residence Self Care (1 Credit Hour)
Health in college is so much more than avoiding pizza every night and occasionally going to the gym. Health is multifaceted and is pivotal to your ability to thrive during the next four years. This course will examine the most relevant health topics for college students from a public health perspective, integrating theories and practices relevant to your life. In addition, this course seeks to cultivate leadership skills as an element of being healthy and successful in college.
TIDE 1015 Cultivate Inner Changemaker (1 Credit Hour)
Cultivate your Inner Changemaker is devoted to exploring the skills, strategies, and ideas of effective social change advocates in the 21st century. Students will be learning about some of the essential skills of effective changemakers, including leadership, optimism, resilience, risk-taking, luck, relationship building, conflict resolution, creativity, and innovation. Throughout the course, students will practice these skills, both in class and through assignments.

TIDE 1016 Tolkien as Translator (1 Credit Hour)
While many have enjoyed J.R.R. Tolkien's The Lord of the Rings as an epic novel, few readers are aware of the fundamentally linguistic and anthropological nature of Tolkien's writing. As Oxford Professor of Anglo-Saxon, Tolkien was intimately familiar with the Germanic languages, their history, and their epic literatures. Because of his background, he went far beyond the invention of a few strange-sounding names for the characters and places of his world, instead developing a detailed proto-language (Common Eldarin) and following its development into two distinct but related Elvish tongues, Quenya and Sindarin. He also invented Khuzdul (Dwarvish), the Black Speech, Adûnaic (Nûmenorean) and Sôval Phârë (The Common Speech). Importantly, he assumed a role of translator of The Lord of the Rings, employing English archaisms and dialects to reflect the varying speech styles of his characters, their relative social status, and their complex interrelationships. Old English, Old Norse, and Gothic were all employed to accurately reflect the degree of kinship characters, places and languages had to the 'Common Speech'. In this course, we study the role of language in The Lord of the Rings, applying concepts and perspectives from linguistic anthropology to shed light on Tolkien's methods and purpose as the 'translator' of Middle-earth. Students are introduced to Tolkien's invented languages (and their real-world inspirations) and two of his invented alphabets. An appreciation of the linguistic foundations of Middle-earth greatly increases one's understanding of Tolkien's achievement, and provides insights into one linguist's view of the intricate and interdependent relationships of language, culture, and society.

TIDE 1017 Changemakers in NOLA Education (1 Credit Hour)
This one-credit course is designed for those interested in social innovation and social entrepreneurship. In addition to exploring design thinking, social and emotional learning, and health and wellness, students will explore the innovative initiatives currently shaping the landscape of education in New Orleans.

TIDE 1018 Case Studies in Leadership (1 Credit Hour)
This 1-credit course will utilize a variety of cases which highlight a real-life example of a challenge in leadership. Fields covered will include business, politics, non-profit work, and social movements - all highlighting decision making in New Orleans following Hurricane Katrina. In most class periods, you will be asked to "inhabit" the case and take up the dilemma of its protagonist. I may assign class members roles to prepare and play in the class discussion spontaneously or in advance. None of the cases have right answers, although we may have an epilogue that tells what actually happened (the historical outcome). You are asked to wrestle with the problem as if it were your own and bring your experience and classroom learning from Tulane University and elsewhere to bear on the questions. The Harvard Business School originated and developed the phenomenon of the teaching case to simulate business experience in novices, to create a concrete vehicle for applying abstract theories to real-world situations, and to engender engaged classroom discussion while fostering critical thinking skills as students were forced to wrestle with actual business dilemmas that had no easy answer. It is no accident that professional schools were drawn to case teaching—Law, for obvious reasons—but also schools of public affairs and public health whose missions are to utilize the best thinking of the disciplines to prepare students for careers as practitioners. Cases marry learning about real world policy and organizational problems with critical thinking, abstract reasoning, and theorizing valued in all academic disciplines. In particular, this course will offer you a chance to get to know New Orleans as a resilient city with monumental challenges left to tackle.

TIDE 1020 Cities & Urban Environmt (1 Credit Hour)
Focusing on selections from the seminal work "The Death and Life of Great American Cities" by Jane Jacobs, we will explore and discuss its relevance to the city of New Orleans. We will also look directly at what is currently happening in the city of New Orleans via field studies, guest presentations and movies. Selected neighborhoods of New Orleans will be explored as vehicles for looking at the social, political, and economic life of cities. By focusing on particular and local examples we will, in effect, also address urban issues that are both more general and global. You will be invited to learn 'how to see' (observe) the many aspects of the city, be introduced to tools for the analysis of city form and city behavior, and be asked to draw conclusions from what you read for this class as well as your experiences.

TIDE 1021 Design Thinking & Place Making (1 Credit Hour)
TIDE 1022 Computational Thinking (1 Credit Hour)
TIDE 1023 Reproductive Politics in NOLA (1 Credit Hour)
From sex education for middle and high schoolers to nutrition assistance for impoverished new parents, the phrase "reproductive politics" encompasses far more than debates over abortion and contraception. This one-credit first-year course explores American studies scholar Laura Briggs' claim that "all politics [are] reproductive politics," with a particular focus on the political and legal realities of reproductive life in the city of New Orleans.
TIDE 1024  Invisible Cities (1 Credit Hour)
TIDE 1025  Karate: Art & Philosophy (1 Credit Hour)
TIDE 1029  Do You Want to Study Abroad (1 Credit Hour)
TIDE 1030  Music & Culture of NOLA (1 Credit Hour)
The Music and Culture of New Orleans introduces the newcomer to New Orleans to the diversity of culture in the city and region. The 11-week course explores the music, literature, art, dance, architecture, and food that are unique to Southern Louisiana so that during your student years here you can fully enjoy them. This TIDES course includes general lectures by experts in the various aspects of the culture of New Orleans. Interspersed and alternating are small sections where these experts converse directly with the freshmen, helping each individual explore the city. Students are directed to the most important music venues in the city, as well as to the best Creole and Cajun restaurants. In addition to the class meetings, each student is expected to join in at least two field trips to witness the culture first hand.

TIDE 1034  NoLa - The Lay of the Land (1 Credit Hour)
This course explores the geography of New Orleans and coastal Louisiana, with a focus on forces that created and threaten the river delta on which the city sits. The course examines the levee system, climate change, sea level rise, industrial impacts to coastal wetlands, along with measures to promote a resilient city in the face of environmental and other threats. The course will also explore these issues in the context of social equity and environmental justice. Students will hear from a coastal specialist, learn about the city’s resiliency efforts, visit areas of the city that experienced the most devastation following hurricane Katrina, and tour a levee adjacent to a cypress swamp.

TIDE 1035  Introduction to Yoga (1 Credit Hour)
Yoga is a practice that offers many tools for living skillfully. This class will arm first year students with tools to help ground, calm, and focus them. The best part is that these lessons come from sweating, moving, going upside down, chanting, breathing, talking, listening, and having fun. The Sanskrit work Kula means a community, and we will create a Kula in our class, as well as connect with the New Orleans yoga community. This course is for anyone who loves yoga, or is just interested in learning more about it.

TIDE 1037  The Power of the Human Voice (1 Credit Hour)
TIDE 1040  Religion Media Politics & Food (1 Credit Hour)
From the influence of the religious right to the impact of gay marriage on the social fabric, religion is moving front and center in our culture. But so is food. Religion and food are often thought as distinct, separate. But in fact religion, cuisine, sexual orientation, the media, and way of life issues strongly impact politics. In this class we will discuss the relationships of these factors on present-day consciousness. This will be a student-centered class, so come ready to share your thoughts.

TIDE 1041  New Orleans Spirituality (1 Credit Hour)
TIDE 1042  NoLa’s Hidden Places & History (1 Credit Hour)
TIDE 1045  Compassionate Celeb Sightings (1 Credit Hour)
TIDE 1046  Think Like Leonardo da Vinci (1 Credit Hour)
This course introduces you to college study and research through emulation of the Renaissance genius Leonardo da Vinci (1452-1519). To coincide with the 500th anniversary of his death, you will be invited to keep notebooks just like he did. We will examine Leonardo’s artworks as a way to investigate Renaissance ideas of nature, its transformative potential, and the natural and built environment. Each week you will be tasked with a theme to explore that relates to one of his fields of interest. After viewing his drawings and writings (in English!), you too will investigate subjects that interested Leonardo and his peers—such as botany, anatomy, machine design, and flight—and learn to articulate in your notebooks your own insights and approaches to studying these topics. You’ll have ample opportunity to get to know New Orleans through prompts that invite you to study in New Orleans like Leonardo might have done: you’ll be invited to visit the New Orleans Museum of Art, the Pharmacy Museum, and Audubon Park. Weekly discussions will discuss the artist’s approaches and your own. For your notebooks, you will not be assessed on artistic merit, but rather for the depth of your engagement with the assignment.

TIDE 1050  Our Digital World (1 Credit Hour)
TIDE 1055  NO & JKTs “A Confed of Dunces” (1 Credit Hour)
TIDE 1060  NOLA Global at the Local (1 Credit Hour)
Open only to Altman Scholars, this TIDES experience plays an important role in the 4-year curriculum of the Altman Program in International Studies and Business. The students that make up each Altman “cohort” will take one class together each semester that they are on campus during their studies. Altman TIDES will kick off these courses during the Fall of their Freshman year. With an eye towards producing exceptional global citizens, Altman TIDES introduces students to the rich cultural fabric of New Orleans by examining past and present contributions made by peoples of different ethnicity and race. The cultures of French, Spanish, Italian, Creole, African, Latino, Jewish and Vietnamese residents, both past and present, have shaped New Orleans into the vibrant city that it is today. Specifically, we will discuss each group’s impact on New Orleans’ history, culture, economy and business and the challenges each faced in the process of social and cultural integration. Along the way, students will be exposed to some of the finest food representative of each group that makes New Orleans one of the greatest cities in the world — and an interesting place to directly study international influences at a local level. For Altman Scholars Only.
TIDE 1062 Calm the Wave: Being in NOLA (1 Credit Hour)
The transition to university life can present challenges, as you juggle less structure, more demands, new roles, and increased pressures. The purpose of this TIDES course is to help you develop social and emotional skills; benefitting you in academic and work contexts, interpersonal relationships, and overall well-being. Explore the tranquil side of New Orleans and discover your best self through mindfulness and self-awareness activities. This course is designed to help students develop strengths and assets that promote their social and emotional well-being as they transition to a higher education setting in New Orleans. Such settings typically present students with less structure, more demands, new roles, and increased pressures which may contribute to struggles with stress and adjustment difficulties. The purpose of this course is to help students develop social and emotional skills; benefitting them in academic and work contexts, interpersonal relationships, and overall well-being. Students will explore tranquil locations throughout the city of New Orleans. Along the way, they will be introduced to social and emotional competencies that can help promote their personal and interpersonal awareness and competence which will help students navigate new and challenging academic, social, and emotional terrain. These competencies include: self-awareness; self-management; social awareness; relationship skills; and responsible decision making.

TIDE 1065 Out Loud: Public Speaking NOLA (1 Credit Hour)

TIDE 1067 Nazism Fascism & the Alt-Right (1 Credit Hour)
This course is inspired by current events, including the rise of alt-right, populist, and authoritarian parties and governments across the globe. Its aim is to use the tools of media analysis and social and literary theory in order to deepen our understanding of where and how these movements arose, how neo-fascism appeals to voters in different places and contexts, and, crucially, how leaders have harnessed popular sentiments to their own end. Readings and discussions are based on contemporary media as well as classical historical sources. Important themes in the course will include roots and causes of fascism, fascism as imperialism and racism, fascist attitudes toward gender and class, theories of totalitarianism, the psychology of fascism.

TIDE 1068 The Pluto & Charon System (1 Credit Hour)
This TIDES course explores the Pluto-Charon system, the public’s perception of Pluto, its history, and its science. Students will learn about the search for ‘Planet 9’, the discovery of Pluto and objects beyond, as well as the recent exploration of the Pluto-Charon system and Ultima Thule by the NASA New Horizon’s mission. In addition, students will explore and discuss the elusive questions: What is a planet? Is Pluto a planet? The course will include one field trip to Gretna Observatory one evening during the semester. This course is 1 credit and does not have pre-requisites.

TIDE 1070 Nola Museums & Communities (1 Credit Hour)
Get to know New Orleans through an exploration of its museums, from art museums to contemporary galleries to house museums and beyond. Students will seek to understand how museums in New Orleans serve diverse communities in the city. To understand museum practice more generally, we will also explore past and current methods in museum curation and education, ethical issues museums face, and how museums respond in times of war and natural disasters. Ideal for students considering majors in art history or history.

TIDE 1075 Celebrate NOLA (1 Credit Hour)

TIDE 1080 Disease/Healing NOLA (1 Credit Hour)

TIDE 1085 Crime & Punishment in NOLA (1 Credit Hour)

TIDE 1090 Sports & New Orleans (1 Credit Hour)
Founded in 1718, the city of New Orleans has a long and rich history with sports. From the rise of social class-driven sports such as rowing and billiards to the New Orleans Saints’ heroic revival of the city post-Hurricane Katrina, sports has been as integral to the area as food, music, and Mardi Gras. Sports have made an enduring impact on the social world in which we all live. It is a taken for granted aspect of our everyday lives – whether that entails watching “Sportscenter” or noticing that every single major newspaper contains a “Sports” section that is as long if not longer than any other section. Yet there is more to sport than just what we see on a daily basis. In this course, we will explore general sports-related topics and examine actual case studies related to New Orleans’ sports scene. More than simply ‘talking sports,’ students will study issues from political, economic and social viewpoints and also gain an understanding of the rich sports heritage found here in New Orleans. Readings and discussions, field trips, and guest speakers will aid students to understand both historical accounts and modern-day subjects associated with sports such as governmental involvement, public financing, and community development. Students will participate in a mandatory service learning component with TBD. Their after-school programs promote development in boys and girls through activities that build character, cultivate new skills, and create a sense of belonging – in this case a place where kids can express themselves, play together and get fit. By participating in activities with NFL Youth Education Town students will deepen their understanding of the political, economic, and social ramifications of sports on a local level by making correlations to sports and its impacts on the city’s youth, infrastructure, civic pride, crime reduction efforts, poverty eradication, and other areas, and gain an awareness of their role as a citizen in the city of New Orleans.

TIDE 1095 Globe Trekking: Common Good (1 Credit Hour)

TIDE 1100 Society & Neuroscience (1 Credit Hour)

TIDE 1105 Cultural Nutrition & Wellness (1 Credit Hour)
Welcome! As a member of the Tulane community, you are also now a part of the larger New Orleans community. In a city with such rich history, there is a vast divide of health and wellness options among the diverse cultural groups. Whether we are talking about access to nutritionally complete foods or more esoteric resources, such as mindfulness training, there is a long-standing disparity in our community. This course is designed to introduce students to overall health and wellness needs and availability among various communities in and around New Orleans.
TIDE 1110 Public Ed: NOLA Path to Change (1 Credit Hour)
TIDE 1111 Legends in Eng and Sci (1 Credit Hour)
TIDE 1112 Contemporary Dance Appre. (1 Credit Hour)
TIDE 1113 Mindfulness: Self & Emotion (1 Credit Hour)
This class introduces different mindfulness techniques, application of mindfulness practices in understanding destructive emotions and cultivating positive emotions. Mindfulness techniques cover intentional cultivation of non-judgmental, non-reactive, present-moment awareness, bare attention and concentration. Concentration and mindfulness exercises will be practicallly studied and evaluated. Students will enhance their experience of awareness, clarity, and empathy. Students will also learn coping skills for emotional regulation, distress tolerance, depression, anxiety, stress, and insomnia. Students will be required to participate in daily mindfulness practices: self-awareness, identification of destructive emotions, logical and mindful responses, and compassionate living. The course will critically analyze mindfulness-based research articles and introduce to how to integrate different mindfulness techniques in research applications. Information itself, the United States, and the world. In addition, the students will use mindfulness-based research articles and introduce to how to integrate different mindfulness techniques in research applications. Information about the novel utilizes and – and what that means. We will discuss how the book depicts the idea of the protagonists, as well as, the idea of women and female characters function in the book. We'll talk about how the observation of discovery, and gaming, and responsibility for choosing one's own adventure. We will also read at least on “fantasy” novel and discuss the nature of the narrative itself. We will discuss how the students will be sent on an adventure during which they will have to learn to use the resources available to them in the Tulane University Library System. The students will be asked to go through Audubon Park (and Audubon Zoo) to find creatures and treasures. The students will be asked to go to the French Quarter and have specific foods that are specific to New Orleans Culture and listen to music that was created here in New Orleans. The students will be asked to take pictures and sample sounds as “proof” that they have completed their quests. The students will be asked to “scribe” and reflect upon their adventures. The students are going to be asked to consider the relationship between “game” and “real-life” when we talk to local New Orleans Health and wellness programs (CrescentCare). This course will be rooted in the concepts of discovery, and gaming, and responsibility for choosing one's own adventure. We will also read at least on “fantasy” novel and discuss the nature of the narrative itself. We will discuss how the idea of women and female characters function in the book. We'll talk about how the book depicts the idea of the protagonists, as well as, the “traditional” trope of male as default in much of fantasy fiction – and what that means. We will discuss how the novel utilizes and incorporates the concept of “race.”
TIDE 1114 Chinese Cinema (1 Credit Hour)
TIDE 1115 Race, Dialogue and History (1 Credit Hour)
TIDE 1116 3D Platforms-Educ & Business (1 Credit Hour)
TIDE 1117 N. O. Performance Culture (1 Credit Hour)
There will be two primary goals in this course. The first will involve introducing students to New Orleans's history, culture, and literature. The second will entail an interdisciplinary introduction to a wide array of influences with the effort of showing how New Orleans's turbulent history of changing possession, immigration, and migration have contributed to a “performance” of various versions of “New Orleansness.” The course will focus specifically on the presence of French, Spanish, African, and a brief overview of the various immigrant communities in the city's history and the various ways in which these groups have performed their own version of New Orleans for the city itself, the United States, and the world. In addition, the students will use the maps found in Unfathomable City: A New Orleans Atlas to look at how maps are constructions of authenticity.
TIDE 1118 Psychiatrist's Guide (1 Credit Hour)
TIDE 1119 Race, Gender, Sexuality-NOLA (1 Credit Hour)
TIDE 1120 Exploring Literary Nola (1 Credit Hour)
TIDE 1121 Global Hlth & Southern LA (1 Credit Hour)
TIDE 1125 New Orleans as a D&D Campaign (1 Credit Hour)
The central conceit of this course is that all participants build characters for, and participate in, a Dungeons and Dragons (styled) adventure that is based around collaborative storytelling, problem solving, the building and development of critical analytic skills, and the discovery of identity. This course will employ the city of New Orleans – and the Tulane Campus – as the “world” in which these new adventures discover themselves. The students will begin this course by building “character sheets” based on who and what they are (Identity location markers) and what they bring to the adventure. This part of the class will encourage students to articulate their own strengths and – areas of themselves upon which they are working. We will partner with The Office of Multicultural Affairs to engage these students in a discussion of identification (self-identification and how we identify others). The students will be sent on an adventure during which they will have to learn to use the resources available to them in the Tulane University Library System. The students will be asked to go through Audubon Park (and Audubon Zoo) to find creatures and treasures. The students will be asked to go to the French Quarter and have specific foods that are specific to New Orleans Culture and listen to music that was created here in New Orleans. The students will be asked to take pictures and sample sounds as “proof” that they have completed their quests. TIDE 1130 Mardi Gras:Myth &Myth (1 Credit Hour)
TIDE 1135 Ecosystem in New Orleans (1 Credit Hour)
TIDE 1140 Dead Sea Scrolls (1 Credit Hour)
TIDE 1145 Committed to Cultural Diversit (1 Credit Hour)
In 2016, Tulane University President Mike Fitts established the Race Commission composed of students, staff, faculty, and board members to address issues related to campus diversity. Join this TIDES course as an early step in becoming a student leader committed to this and other diversity initiatives at Tulane. You will learn about the array of programs offered by the Office of Multicultural Affairs. Activities will include academic and social events that bring together TIDES students and members of various student organizations involved in promoting intercultural exchange and understanding. We invite you to become a part of this group of change-makers.
TIDE 1150 The Blues (1 Credit Hour)
TIDE 1155 Social Innovation in Education (1 Credit Hour)
TIDE 1160 Kinetic New Orleans (1 Credit Hour)
TIDE 1165 Blurring Lines Tulane & NOLA (1 Credit Hour)
Congratulations - you're officially a Tulane student! As part of the Green Wave, you’ll be living both on the St. Charles campus and in a city whose future is as exciting and complicated as its past. In, "In" or "Of" New Orleans, students will have multiple opportunities to blur the lines between Tulane University and New Orleans, Louisiana while considering their own social identities as a member of these two communities. Through readings, guest speakers, as well as explorations of current events, festivals, and cuisine, this course will make clear what it means to be “in” AND “of” New Orleans.

TIDE 1170 Muffuletta, Mafia & Mardi Gras (1 Credit Hour)
TIDE 1175 Game of Thrones (1 Credit Hour)
TIDE 1180 Management of Epidemic Disease (1 Credit Hour)
TIDE 1185 Innov in Chemical Engineering (1 Credit Hour)
This course will introduce students to the modern approaches chemical engineers employ to solve real-world problems. Topics will emphasize engineering design and innovation. Students will learn through relevant readings, discussions, and guest lectures from leaders in the field. Fieldtrips to the NASA Michoud, Assembly Facility, Aquarium of the Americas, a local brewery, and the Tulane Maker Space will expose students to real-world applications.

TIDE 1190 Introduction to Yoga (1 Credit Hour)
TIDE 1195 Aikido: Self-defense & Harmony (1 Credit Hour)
TIDE 1200 New Orleans Neighborhoods (1 Credit Hour)
TIDE 1205 Local and National Cookbooks (1 Credit Hour)
TIDE 1210 Art Meets Physics (1 Credit Hour)
Art (in its broadest sense, including visual arts, literature, and various types of performance) is meeting science all around us. These interactions go well beyond the use of science as raw material by artists. The advancements in science lead to dramatic changes in our perception of the world clearly reflected in artists’ creations. Just as religious and mythological sources had influenced art before and during the Renaissance, artists are now being moved by the need to capture the complexities and mysteries of the physical universe. In many ways, science and art are profoundly similar. The best of each arises up from the depths of human creativity, in both the arts and science there’s the need for inspiration and hard work, the willingness to experiment and be brave, and the conviction that you are searching for or creating work that says something meaningful about the world or nature. In this course, we will discuss the mutual influence of arts and science (particularly physics) using examples from different art forms and historic periods. The course includes trips to New Orleans Museum of Arts and Laser Interferometer Gravitational Wave Observatory (LIGO-Livingston).

TIDE 1215 The Physics of Baseball (1 Credit Hour)
TIDE 1220 New Orleans & Hurricanes (1 Credit Hour)
TIDE 1225 Women in STEM (1 Credit Hour)
This course covers the challenges facing women pursuing degrees and careers in STEM. Many of these challenges are institutionalized barriers that still exist, creating a system in which it is harder for women to thrive in comparison with their male peers. Other minority groups in STEM face many of the same challenges as women, and the additional and different barriers for other underrepresented groups will also be discussed. The course will cover strategies for success in STEM and becoming an ally and advocate for other traditionally marginalized groups in STEM. One credit hour. No prerequisites.

TIDE 1230 Latin American Infusion (1 Credit Hour)
TIDE 1231 Youth Culture in Latin Amer (1 Credit Hour)
TIDE 1235 Memory & Neg of Public Space (1 Credit Hour)
In this course, we will come to a better understanding of the articulation of public space in its relationship to history and memory. We will first discuss a number of paradigmatic cases in the battle for the public expression of national, regional, or group trauma in the form of monuments, memorials, or sites of commemoration: the Holocaust memorial in Berlin, the Vietnam memorial in DC, the “Parque de la memoria” in Buenos Aires, and the alternative ways of remembering the totalitarian period in Indonesia. Next, we will focus on these negotiations in the recent history of New Orleans: the marks of Katrina in the city today, the ways New Orleans chooses to remember it, and the controversy about the removal of confederate monuments in the city.

TIDE 1240 Sex/Drugs/Rock’nRoll & Disease (1 Credit Hour)
Over the course of the next year students will develop an understanding of why young adults engage in high-risk health behaviors. During the first semester attention will focus on the social processes thought to underlie young adults’ uptake of behavior patterns which expose them to unnecessary health risks. Among the wide range of high risk behaviors to be covered over the course of the year will be drinking, drugging, smoking, eating, speeding, unsafe sex, and other risky choices. Participants will develop an understanding of how one’s family, friends and peers come to shape high-risk health behavior patterns. New Orleans provides an excellent vantage point from which to scientifically explore a culture in which exhibiting high risk health behavior patterns is almost normative. Students will work up epidemiological comparisons between their hometowns and New Orleans based on a wide range of available Internet databases. Students do no direct observations or participation in any high-risk behavior patterns as part of the course.

TIDE 1245 Sports Med: The Team Approach (1 Credit Hour)
The TIDES course Sports Medicine, The Team Approach is a one credit course. This course will explore current topics of sports medicine and how the topics influence practice within the field. Through the guidance of a team physician, students will gain perspective on how sports medicine professionals care for athletes of all ages, with an additional emphasis on collegiate athletes. Students will learn through relevant readings, discussions, and guest lectures from leaders in the field. Fieldtrips to the Professional Athlete Care Team Clinic, Tulane Institute of Sports Medicine, Tulane Athletic Facilities, and an inside look into a sports game will expose students to the interactions of healthcare professionals involved in the continuum of care for athletes.
TIDE 1255 Literature in New Orleans (1 Credit Hour)
In this course, students will explore a wide range of literature written in and about New Orleans, “the last frontier of Bohemia,” according to Mark Twain. Readings of literary works associated with the city will form the basis of group discussions about how literature can illuminate a sense of place, along with other themes such as race, gender, and existentialism. Works covered will range from the late 19th century stories of George Washington Cable to the 20th century works of Walker Percy, Tennessee Williams, and John Kennedy Toole. We will also read some of the most recent literature published by contemporary New Orleans authors. Students will keep weekly journals, in which they will compose either (1) a literary analysis of the reading assignment, (2) an autobiographical response to it in essay form, or (3) a related piece of creative writing. They will also write one short paper analyzing a local literary work of their own choosing. A field trip to the French Quarter to visit literary sites, and guest lectures by local authors will provide students with first-hand knowledge of the city and the literary imagination inspired by it. This course will help students to begin experiencing their new city as, “a little piece of eternity dropped into your hands” (Tennessee Williams).

TIDE 1260 Disasters, Disease &DevL (1 Credit Hour)
TIDE 1261 Environmental Literacy (1 Credit Hour)
Corequisite(s): TIDE 1990.

TIDE 1265 Indian Tribes on the Bayou (1 Credit Hour)
Want to explore the wilds of Louisiana outside of New Orleans? Try some alligator meat, shrimp caught fresh from the sea or, in general, explore another side of Louisiana’s rich cultural heritage—then this class is for you! The far-reaching impact of Native American Tribes of the lower Mississippi Valley on shaping Louisiana history is among the least explored subjects among the otherwise well-documented rich history of Louisiana. Recent and ongoing research shows that without the “Petit Nations”, as some of the Tribes were called, the history of this region would have been quite different. This course offers students the rare opportunity to participate in on-going, important research that entails working directly with Tribal members. In addition, students will have the opportunity to take a trip conducted by Tribal members down the bayous as they give a tour of their ancestral lands as well as explore other areas of Louisiana outside of New Orleans while also tasting some of the food native to Louisiana. An experience not to be missed!

TIDE 1270 Psychology In The Movies (1 Credit Hour)
TIDE 1275 Hullabaloo Excell at Tulane (1 Credit Hour)
“A Helluva Hullabaloo: Learning How to BeExcellent at Tulane” introduces students to developing life skills that will be useful not only in college, but also will help prepare them for the “real-world.” The broad-reaching goal of this TIDES course is to offer students the opportunity to gain valuable skills and lessons that can be used to succeed during their career at Tulane.

TIDE 1280 Detecting Crime (1 Credit Hour)
TIDE 1285 Crafting & Comm in New Orleans (1 Credit Hour)
Ever wondered about the distinction between arts and crafts, why crafting is popular, or how many beads are in a Mardi Gras Indian costume? Whether you do crafts, buy them, use needle and thread, hammer and nails, or scissors and glue, you are involved in crafting. We’ll learn about crafting as a hobby and a profession and look at local craft culture in New Orleans. We’ll explore assorted craft practices and communities, through creative workshops, guest speakers, and fieldtrips to local craft centers or markets. No experience necessary—but if you’ve ever wanted to learn a craft, this is your opportunity!

TIDE 1290 Reading The Graphic Novl (1 Credit Hour)
TIDE 1295 Inside the Ivory Tower (1 Credit Hour)
TIDE 1300 Haunting of Louisiana (1 Credit Hour)
TIDE 1305 Different Pictures-New Orleans (1 Credit Hour)
This TIDES course we will address the question, “What constitutes the heart and soul of New Orleans?” The most common answers are, great restaurants, Mardi Gras, Jazz Fest, French Quarter Festival, Voodoo, Ghosts, the Blue Dog, and of course, the Saints. Throughout the semester, we will study and discuss the city’s cultural fabric from a folkloric, historical, artistic, literary, and cinematographic point of view. Students will assess the different facets and components that build our great city and contribute to its unique culture through the analysis of assigned text and film material, the participation in class discussions, team presentations, and field trips, as well as in the format of a reflective final paper.

TIDE 1310 College Women:Film/Reali (1 Credit Hour)
TIDE 1315 Making New Orleans (1 Credit Hour)
TIDE 1317 Sports as a Leadership Model (1 Credit Hour)
This course uses a sports lens to introduce Tulane students to what character traits have made sports figures, coaches, teams, and organizations successful as well as aided in turning sports from recreational fun to a multi-billion-dollar global industry juggernaut. This class will introduce students to several different valuable life skills and lessons to aid them in them in their academic endeavors and professional journey. The goal of this class is to see what transferable skills those in the world of sports use in their respective venues to help them become success stories and pass those qualities along to you to aid you in achieving success in life during and after Tulane.

A student adopts and inhabits a new city, becoming native. Keep a journal of New Orleans. Write it down! Take moments, ideas to reflect the experience among peers living in the Crescent City. Write letters, poems, and lyrics, discussed during workshops in class and on excursions in the city. Become thoughtful...listen, read, write, converse through language. A journal may recollect moments in tranquility (Wordsworth) or may take the form of day-to-day experience (Bosworth). During particular classes the student will be asked to write while on a streetcar, in Audubon Park, and on the levee by the Mississippi river. Students will keep a journal, participate in a writer’s workshop, give a class presentation, and write a research paper. Participation is a must. There are no examinations.

As the concept of local foodways becomes entrenched in the growing “foodie” culture of the United States, local food and local dishes become an ever more important marker of place. Whether justified or not, Creole and Cajun food and, of course, the ubiquitous Cocktail, are perceived by many as synonymous with New Orleans. In this course, we will explore the myths and realities of these three key concepts as they apply to food and drink in New Orleans.
TIDE 1910 Tudors: Films, Fiction, History (1 Credit Hour)
TIDE 1720 Military In Amer Socicy (1 Credit Hour)
TIDE 1730 Women & Lit in New Orleans (1 Credit Hour)
TIDE 1740 Citizenship & Healthy Comm (1 Credit Hour)
TIDE 1742 Shakespeare in New Orleans (1 Credit Hour)
TIDE 1750 The Culture of Money (1 Credit Hour)
TIDE 1760 Narratives of New Orleans (1 Credit Hour)
TIDE 1765 TV, MD: Ready for Prime Time? (1 Credit Hour)

TIDE 1900 The Metaphor of Chess (1 Credit Hour)
TIDE 1910 SovietComedyFilm+RealityBehind (1 Credit Hour)
TIDE 1915 Sicilian Jazz:Italian Cult NOLA (1 Credit Hour)

The Italian Culture in New Orleans will focus on different facets and components of the Italians in the Crescent city. Special consideration will be given to the discussion of the following topics: New Orleans and the culture of the Italian emigrants, traditions, cuisine, music, fiction and movie rendering of the Italian emigration.
This course provides a foundation of knowledge about the human body in health and disease. It gives an overview of important concepts of the biological mechanisms of disease at the cellular, individual, and societal levels. At the cellular level, the course summarized DNA and cellular function, genomics, immunology, and vaccination. At the individual and societal levels, the course addresses the most important infectious and non-infectious causes of death worldwide, providing background on their pathophysiology, clinical aspects, and patterns of disease occurrence, risk factors, and methods of prevention.

**TRMD 6030 Multi dis app gl hlth & soc ju (3 Credit Hours)**

This course covers the parasitic worms with special reference to those causing disease in humans. In lecture, the student becomes acquainted with the different taxonomic groups of helminthes, their phylogenetic and zoological relationships, morphological and structural characteristics, geographical distributions, methods of transmission, vectors, reservoir hosts, pathology including location and tissue damage in the human body and including aspects of the molecular pathogenesis, anthelmintic chemotherapy including modes of action of anti-parasitic medications, parasitological diagnosis of helminth infections, aspects of the immunology of helminth infections, methods of helminth parasite control and other public health implications, and other tropical issues.

**TRMD 6060 Medical Entomology (3 Credit Hours)**

This course is designed to provide the fundamental information necessary for understanding and evaluating both the role of arthropods in transmission of pathogens causing human disease, and the role of arthropods in directly causing human disease. Following a brief overview of the general anatomy, physiology, and classification of arthropods, individual groups of medical importance are considered in detail with regard to the recognition of important species, the epidemiology and pathogenesis of associated diseases, and the principles and methods of vector control.

**TRMD 6070 Medical Protozoology (2 Credit Hours)**

The basic biology of protozoa capable of infecting humans as well as the clinical manifestations of the diseases they cause will be covered. This is a comprehensive course covering all aspects of medically important protozoa and the diseases they cause. Topics covered will include life cycles, morphological features, host-parasite interactions, geographical distribution, reservoir hosts, methods of transmission and control, pathology, clinical features, and immunological aspects. The biological and clinical perspectives gained in this course will assist students in the practical recognition, evaluation, and management of problems in public health or clinical practice involving protozoa that infect humans.

**TRMD 6080 Medical Protozoology Lab (1 Credit Hour)**

The identification of medically important parasites relies heavily upon macroscopic and microscopic examination of clinical specimens. In this course students will learn the basic principles of identifying parasitic helminthes and protozoa in blood, feces, and tissue specimen. Prepared specimens of the major helminth and protozoan pathogens of humans will be provided for macroscopic and microscopic examination. Students will learn the basic operations of the microscope and how to identify and distinguish the various helminthes and protozoa. Samples demonstrating the pathological features of the disease will also be provided. The techniques for preparing diagnostic specimens of parasites in blood and feces will be reviewed.

**TRMD 6090 Parasitology Laboratory (1 Credit Hour)**

The identification of medically important parasites relies heavily upon macroscopic and microscopic examination of clinical specimens. In this course students will learn the basic principles of identifying parasitic helminthes and protozoa in blood, feces, and tissue specimen. Prepared specimens of the major helminth and protozoan pathogens of humans will be provided for macroscopic and microscopic examination. Students will learn the basic operations of the microscope and how to identify and distinguish the various helminthes and protozoa. Samples demonstrating the pathological features of the disease will also be provided. The techniques for preparing diagnostic specimens of parasites in blood and feces will be reviewed.

**TRMD 6100 Health and Human Rights (1 Credit Hour)**

This course is designed to provide a forum for discussion of pertinent issues in global health and human rights and to motivate students to become active advocates for their resolution. Students will participate in weekly discussions with local and national experts in public health, clinical medicine, and health sciences research who are also strong advocates for human rights. The speakers will stress the importance of addressing the underlying social, political, and economic factors influencing health. Speakers will give examples from their background and the motivations for their career choices and discuss the skills and strategies necessary to become effective advocates for health and human rights.

**TRMD 6170 Immunology (3 Credit Hours)**

This course is designed for students of public health and the basic biomedical sciences who are interested in a current overview of immunology. This course is a comprehensive introduction to immunity and immunopathogenesis as it relates to health and disease. Following a thorough consideration of cells and tissues of the immune system, attention is given to immune recognition and regulation of immune responses, with special emphasis on the role of cytokines in immunity. Finally, clinical concepts are presented with current knowledge of basic immune mechanisms for each: autoimmunity and autoimmune disease, transplant rejection, immunity to tumors, primary immunodeficiency diseases, and immunity to infectious agents including viruses and parasites, and immunopathogenesis of HIV/AIDS.
TRMD 6200 Impact Evaluation in GH (3 Credit Hours)
This course provides students with basic concepts, principles, and practices for the evaluation of public health programs and interventions. The course is intended to 1) introduce students to impact evaluation, 2) provide a solid grounding in study designs relevant in field settings; 3) develop students’ skills in designing evaluation plans, and 4) serve as a foundation for more specialized program evaluation classes as well as for courses on data analysis, sampling, epidemiology, and operations research

TRMD 6240 Molecular Biol Meth Ph (2 Credit Hours)

TRMD 6250 Biomedical Research Methods (3 Credit Hours)
Students will be able to apply the basic biomedical methods used in public health and tropical medicine research or practice, and summarize the principle and the theoretical basis. They will be able to analyze the strengths and weaknesses of the different methods, and design hypothesis-driven studies to address public health and tropical medicine problems, applying the appropriate methods. Students will also assess scientific papers and critically appraise their relative merit in the field of public health research and practice

TRMD 6310 Clinical Trop Medicine (2 Credit Hours)
Clinical Tropical Medicine is designed to offer to an overview of topics of clinical importance in tropical medicine. In most cases, topics are presented in syndromic fashion. The course is expected to complement the other course offerings from the Tropical Medicine Department for the MPHTM and Diploma curricula. Participants should have some experience in clinical medicine and should either have experience or be in the process of learning about diseases of the tropics.

TRMD 6320 Preventive Trop Med (2 Credit Hours)

TRMD 6330 Microbial Disease of Trp (2 Credit Hours)
This course introduces students to the most important bacterial, viral, and mycotic pathogens in the tropics and to clinical features of the associated diseases. The course will focus on topics not ordinarily covered in depth in U.S. medical schools, such as cholera, tuberculosis, leprosy, arboviral infections, and hemorrhagic fevers, among others. The course will be team taught by both microbiologists and clinicians. Topics covered will include geographic distribution, transmission, and pathogenesis, clinical features of relevant diseases, immunologic considerations, laboratory diagnosis, treatment, and control.

TRMD 6340 Diagnostic Meth/Microbio (2 Credit Hours)
This laboratory course parallels topics presented in TRMD 6330. The course is designed to teach students how to perform basic laboratory tests using simple techniques applicable to developing countries. Most of these will be diagnostic tests for infectious diseases, although some clinically relevant non-diagnostic techniques will also be taught (e.g., complete blood counts). The bulk of the course consists of hands-on laboratory experience conducting laboratory tests with clinical specimens and analyzing prepared teaching specimens. Procedures for organism isolation and identification and rapid diagnostic kits will be covered.

TRMD 6350 Disease Prev and Control (2 Credit Hours)
This course is designed for students enrolled in the diploma in tropical medicine and traveler’s health program to prepare them to recognize and contribute effectively to the public health needs of communities in developing countries. The course focuses on disease prevention and control strategies with special reference to developing countries; assessment of community needs, and provision of basic preventive services; control of important endemic diseases such as malaria, tuberculosis, and HIV/AIDS; and other topics such as outbreak investigation, emerging infectious diseases, immunization programs, and disease eradication programs.

TRMD 6360 Clinical Case Presentatns (1 Credit Hour)
Students, faculty and visiting professors will present clinical cases pertaining to issues in tropical medicine, wilderness medicine and travel medicine. There will be active class participation.

TRMD 6420 Tropical Virology (3 Credit Hours)
This course covers broad concepts of, and important interventions for, major viral diseases. The course places emphasis on viruses that are found in tropical countries and/or are considered recently emergent pathogens. Students enrolled in the course should come with a basic understanding of communicable disease concepts.

TRMD 6450 Tb Global Trends & Inter (2 Credit Hours)
Students, faculty and visiting professors will present clinical cases pertaining to issues in tropical medicine, wilderness medicine and travel medicine. There will be active class participation.

TRMD 6780 Genomics In Public Hlth (2 Credit Hours)

TRMD 6800 Emerging Pathogens (2 Credit Hours)

TRMD 7000 Tropical Medicine Semin (1 Credit Hour)
Tropical Medicine Seminar is designed as a journal club, with the specific goal of training students to develop skills in critically evaluating and effectively presenting relevant scientific literature. Each student is expected to present at least one article to the class from recent tropical medicine literature, and to attend and actively participate during presentation delivered by other students

TRMD 7020 Infectious Disease Seminar (1 Credit Hour)
The seminar experience is intended to stimulate a critical reading of the current literature and to ensure that each student learns to present important and potentially controversial data in a rigorous and careful fashion.

TRMD 7180 Immunoparasitology (2 Credit Hours)
Prerequisite(s): TRMD 6170.

TRMD 7300 Mechanisms of Pathogen Intrvntn (2 Credit Hours)
This course provides an advanced foundation of knowledge about the selection and mechanisms of action of different interventions against important viruses, bacteria and unicellular parasites of public health significance. The course describes how drugs, vaccines and other intervention agents reach their cellular targets and how they act in harmony with the host immune system to control or eradicate the pathogen, inside the human or the arthropod hosts.

Prerequisite(s): TRMD 6170.

TRMD 7330 Advanced Topics in Host Pathog (2 Credit Hours)
Prerequisite(s): TRMD 6170, 6070 and 6330.
TRMD 7420 Pop Bsed Maria Prev and Ctrl (3 Credit Hours)
This course introduces the principles of prevention and control of malaria infection and disease, as well as population based methods for evaluating the success of control programs or new interventions. This course investigates how culture, society, and the environment influence disease transmission, risk factors, and health status. Students will analyze data and integrate information using a monitoring and evaluation framework to inform prevention and control policy. Topics covered will include vector ecology, malaria epidemiology, malaria control strategies, malaria monitoring and evaluation, issues around cost-effectiveness, and prospects for elimination.

Prerequisite(s): (EPID 6030 or SPHL 6060).

TRMD 7440 Houshld Smplng Apps in Dvlping (3 Credit Hours)
The use of scientific household surveys to obtain population-level data for research and program-related needs in developing countries without adequate health information systems has become increasingly common in the international health, population and nutrition sectors. This is attested to by the proliferation of standardized survey protocols in these sectors. In order to take full advantage of recent developments in survey methodologies, professionals working in these sectors need to have a solid understanding of the intended uses and limitations of various standard sampling protocols, as well as the underlying principles of survey measurement.

Prerequisite(s): (BIOS 6030* or SPHL 6050* and EPID 6030* or SPHL 6060*).

TRMD 7800 Adv Medical Entomology (2 Credit Hours)
This is an advanced course that challenges students to consider basic principles in medical entomology relating to the ecology, epidemiology, and control of pathogen transmission. Lectures and corresponding laboratories cover topics such as vector behavior, physiology, genetics, immune response, molecular biology, vector-pathogen interaction and vector-borne disease surveillance and diagnostics. This material provides a foundation for understanding vector ecology and the dynamics of pathogen transmission. Students will learn how current research in medical entomology offers new prospects for the control of vector-borne diseases. They will also learn about and work through the process of grant preparation and submission to obtain funding for vector-borne disease research.

Prerequisite(s): TRMD 6060.

TRMD 7820 Malaria (2 Credit Hours)
This is an advanced course which provides a rigorous approach to both the basic and applied issues related to malaria and malaria control. Areas covered in detail include cell biology and biochemistry of the parasite-red cell interaction, antimalarial drug action and resistance mechanisms, parasite genetics and cell biology and the immunologic aspects of malaria, including asexual and sexual stage candidate vaccine antigens. At the conclusion of the semester, students are expected to critically review current malaria control and research strategies and to suggest and defend appropriate alternatives.

TRMD 7990 Special Studies (1-3 Credit Hours)
Masters students and advisor select a topic for independent study and develop learning objectives and the expected written final product.

TRMD 8100 Laboratory Rotation (2 Credit Hours)

TRMD 8800 Essentials in Rsrch Rdiness Sk (2 Credit Hours)

TRMD 8990 Doctoral Independent Study (1-3 Credit Hours)
Doctoral students and advisor select a topic for independent study and develop learning objectives and the expected final written product.

TRMD 9970 Dissertation (0 Credit Hours)
Doctoral candidates who have defended their prospectus and are engaged in research.

TRMD 9980 Master's Thesis Research (0 Credit Hours)
MS students engaging in thesis research

TRMD 9990 Dissertation Research (2 Credit Hours)
Doctoral students who have completed course work but not defended their prospectus.

Urban Studies (URST)

URST 2010 The City I (3 Credit Hours)
City I is the first semester of a two-semester-long survey introduction to the multi-disciplinary field of Urban Studies. Three broad substantive themes are explored: (1) History and Morphology of Cities and City Systems; (2) Urban Ecology and Demographics; and (3) Urban Design/ Aesthetics/ Land Use /Planning. Attention is given to historically, geographically, and culturally diverse cases in order to provide a comparative framework and backdrop to contemporary practices.

URST 2020 The City II (3 Credit Hours)
City II is the second semester of a two-semester-long survey introduction to the multi-disciplinary field of Urban Studies. Four broad substantive themes are examined: (1) Urban Political Economy; (2) the Social Psychology of Cities; (3) Urban Culture and Expressive Arts; and (4) Urbanism and Urban Issues. Course employs a modular focus and comparative framework and backdrop to contemporary practices.

URST 2890 Service Learning: URST 2010 (0-1 Credit Hours)

URST 2891 Service Learning URST 2010 (0-1 Credit Hours)

URST 2892 Service Learning: URST 2010 (0-1 Credit Hours)

URST 3010 The City I (3 Credit Hours)
Special topics course, content varies by semester.

URST 3100 Urban Geography (3 Credit Hours)
Surveys discipline of geography with focus on how various traditions within the discipline analyze cities and other human communities as spatial environments. Students will learn the tools, techniques, and datasets geographers employ to investigate questions pertaining to the shape, form, origins, transformative processes, and interaction of the natural and built environments; how and why phenomena are distributed spatially and through time; the concept and perception of place and how we distinguish places from one another; and how present-day cityscapes reflect these concerns. Lectures will focus on New Orleans but be comparative and students will be required to apply these approaches to other cities and towns.
URST 3400 GIS - Practical Applications (3 Credit Hours)
Geographic Information Systems (GIS) are widely used tools in the social, biological, and environmental sciences and in urban planning and design. This course provides a hands-on approach to solve problems and deepen geospatial awareness with a focus on modern urban space. End results are an ability to analyze and present geospatial data, knowledge of fundamentals of GIS, and basic skill in data acquisition and representation. Course provides a framework for functional application of GIS with a focus on local contemporary New Orleans data and issues.

URST 3880 Writing Intensive: URST 3100 (1 Credit Hour)
URST 3890 Service Learning: (0-1 Credit Hours)
URST 4560 Internship (1-3 Credit Hours)
URST 4567 Internship (1-3 Credit Hours)
URST 4570 Internship (1-3 Credit Hours)
URST 4910 Independent Study (1-3 Credit Hours)
URST 5380 Junior Year Abroad (1-20 Credit Hours)
URST 5390 Junior Year Abroad (1-20 Credit Hours)
URST 6010 Special Topics (3 Credit Hours)
Advanced level special topics course, content varies by semester.
URST 7100 Urban Geography: NO Case Study (3 Credit Hours)
URST 7400 GIS-Prac App the Build Environ (3 Credit Hours)

Wellness & Human Performance (WLHP)
WLHP 2950 Basic EMT Training (3 Credit Hours)
Basic EMT Training.

Yoruba (YRBA)
YRBA 1010 Elementary Yoruba I (4 Credit Hours)
This course provides an introduction to Standard Yoruba, the dialect form which is understood by speakers of Yoruba worldwide. Students will receive training and practice in speaking, listening, reading, and writing.

YRBA 1020 Elementary Yoruba II (4 Credit Hours)
Elementary Yoruba II is a second level introductory course for beginners of Yoruba language. This course is open to students who have taken and passed Yoruba I. In this course students will further develop the four language skills: listening, speaking, reading and writing. Pre-requisites: Elementary Yoruba I (YRBA 1010) or instructor’s permission.

Prerequisite(s): YRBA 1010.
YRBA 4910 Independent Study (3 Credit Hours)
Independent Study.
This listing includes Tulane University full-time employees with faculty status, visiting faculty, and postdoctoral fellows at the time of publication.

A

Abboud, Elizabeth Rachael
Professor of Practice
School of Science and Engineering
PhD, Tulane University

Abbrecht, Lisa Carrie
Assistant Professor
School of Medicine
PSYD, University Of Denver

Drew, Parker
Visiting Lecturer
School of Business
MBA, New York University

Dronyk-Trosper, Trey Lee
Visiting Assistant Professor
School of Liberal Arts
PhD, University Of Oklahoma

Drouin, Arnaud
Assistant Professor
School of Medicine
MD

Drury, Stacy S
Associate Professor
School of Medicine
PhD, Louisiana State Univ & A&M Colg

Du, Shanshan
Associate Professor
School of Liberal Arts
PhD, Univ Of Illinois @ Urbana-Champaign

Du, Yan
Postdoc Fellow
School of Public Health

Duchesne, Juan C
Professor
School of Medicine
MD, Ponce School Of Medicine And Health Scie

DuCoin, Christopher Garnet
Assistant Professor
School of Medicine
MD, St. George’s School Of Medicine, West Indies, Grenada

Dufour, Jason P
Associate Professor
Primate Center
DVM, Louisiana State Univ & A&M Colg

Duggan, James E
Associate Professor
School of Law
JD, University Of Mississippi

Duitch, Suri
Dean
School of Professional Advancement

Dulaney, Edward M
Assistant Professor
School of Liberal Arts
PhD, Brandeis University

Dumont, Aaron Sean
Professor
School of Medicine
MD, University At Calgary - Canada

Dumonteil, Eric Olivier
Associate Professor
School of Public Health
PhD, University Of N C-Chapel Hill

Dunbar, Alston Elmo
Assistant Professor
School of Medicine
MD, Wake Forest Univ - Sch Of Medicine

Dunn, Casey R
Assistant Professor
School of Medicine
MD, Tulane University

Dunn, Christopher J
Professor
School of Liberal Arts
PhD, Brown University

Dupre, Maurice J
Associate Professor
School of Science and Engineering
PhD, University Of Pennsylvania

Duthu, Stacie
Instructor
School of Medicine
MSN, Southeastern University

Dvorak, Christopher T
Instructor
School of Medicine
MD, Northwestern Univ

E

Earls, Laurie R
Assistant Professor
School of Science and Engineering
PhD, Vanderbilt University

Ebinger, Cynthia J
Professor
School of Science and Engineering
PhD, Massachusetts Inst Of Technology

Ebrahim, Sherif A
Professor of Practice
School of Business
MHA, Tulane University

Edwards, Arthur M
Instructor
School of Law
JD, Duke Univ - School Of Law

Edwards, Brian T
Dean
School of Liberal Arts
PhD, Yale University

Edwards, John H
Associate Professor
School of Liberal Arts
PhD, University Of Maryland, College Park

Edwards, Maura Kathryn Elizabeth
Assistant Professor
School of Liberal Arts

PhD, University Of Toronto - Canada
Egan, Patrick J.W.
Associate Professor
School of Liberal Arts
MFA, University Of N C-Chapel Hill

Ehrlich, Melanie
Professor
School of Medicine
PhD, Suny At Stony Brook

Eisele, Thomas
Professor
School of Public Health
PhD, Tulane University

El-Dahr, Jane M
Professor
School of Medicine
MD, Thomas Jefferson University - Jefferson

El-Dahr, Samir S
Professor
School of Medicine
MD

Ellis, Michael S
Clinical Professor
School of Medicine
MD, Louisiana State Univ & A&M Colg

Eloueini, Ammar
Professor
School of Architecture
Master's Degree, Columbia University

Emerenini, Uzodinma C
Assistant Professor
School of Medicine
MD, University Of Rochester

Emmerson, Allison Lucille
Assistant Professor
School of Liberal Arts
PhD, University Of Cincinnati

Engel, Astrid M
Associate Professor
School of Public Health
PhD, Louisiana State Univ & A&M Colg

Erickson, AnnieLaurie
Assistant Professor
School of Liberal Arts
MFA, School Of Art Institute Of Chicago

Escarra, Matthew D
Assistant Professor
School of Science and Engineering
PhD, Princeton University

Escher, Alice Pascal
Associate Professor
School of Liberal Arts
MFA, Temple University

Evers, Patrice B
Assistant Professor
School of Medicine
MD, University Of Wisconsin-Madison

Ezell, Mary B
Assistant Professor
School of Medicine
MD, Louisiana State Univ & A&M Colg

F

Fader, Sean
Professor of Practice
School of Liberal Arts
MFA, School Of Art Institute Of Chicago

Fadok, Jonathan
Assistant Professor
School of Science and Engineering
PhD, University Of Washington

Falaky, Faycal
Associate Professor
School of Liberal Arts
PhD, New York University

Falcon, Corey
Assistant Professor
School of Medicine
MD, Louisiana State Univ & A&M Colg

Falk, Nadja
Assistant Professor
School of Medicine
MD, University Of Texas-Austin

Fang, Xing
Visiting Assistant Professor
School of Business
PhD, Purdue University

Farooq, Shama
Clinical Instructor
School of Law
JD, Tulane University

Farrer, Emily C
Assistant Professor
School of Science and Engineering
PhD, University Of Michigan - Ann Arbor

Fauci, Lisa J
Professor
School of Science and Engineering
PhD, New York University

Faulkner, Folasade Marvel
Postdoc Fellow
School of Science and Engineering

Fedtke, Joerg Michael
Professor
School of Law
PhD

Fee, C. Edward IV
Professor
School of Business
PhD, Florida State University

Feibelman, Adam
Professor
School of Law
JD, Yale University

Feldman, Gabriel A
Associate Professor
School of Law
JD, Duke Univ - School Of Law

Feng, Qingxiang
Postdoc Fellow
School of Science and Engineering

Feoli, Ludovico
Research Professor
Stone Center for Latin American Studies
PhD, Tulane University

Ferdinand, Keith Copelin
Clinical Professor
School of Medicine
MD, Howard University

Ferreira, Regardt J
Assistant Professor
School of Social Work
PhD, University Of Louisville

Ferris, Kathleen G
Assistant Professor
School of Science and Engineering
PhD, Duke Univ - Grad Sch Arts & Science

Fettweis, Christopher J
Associate Professor
School of Liberal Arts
PhD, University Of Maryland, College Park

Figley, Charles R
Professor
School of Social Work
PhD, Penn State University

Finelli, Julianna M
Postdoc Fellow
School of Medicine

Finger, Julie Laurence
Assistant Professor
School of Medicine
MD, University Of Texas-Austin

Fink, Mark J
Professor
School of Science and Engineering
PhD, University Of Wisconsin-Madison

Fish, Abigail
Postdoc Fellow
Primate Center

Fitts, Michael Andrew
President
University Administration
JD, Yale University

Fitzmorris, Terrence
Professor of Practice
School of Professional Advancement
PhD, Louisiana State Univ & A&M Colg

Flemington, Erik K
Professor
School of Medicine
PhD, Louisiana State Univ & A&M Colg

Flowers, George C
Associate Professor
School of Science and Engineering
PhD, University Of California, Berkeley

Fo, Michelle A
Associate Professor
School of Liberal Arts
PhD, Princeton University

Fogel-Yaari, Hila
Assistant Professor
School of Business
PhD, University Of Toronto - Canada

Foldes, Peter J
Associate Professor
School of Medicine
MD, Drexel University

Fonseca, Vivian A
Professor
School of Medicine
MD

Force, Robert
Professor
School of Law
LLM, New York University

Foreman, John Sanders III
Lecturer
School of Business
MBA, Louisiana State Univ & A&M Colg

Forman, Robin
Senior Vice President
University Administration
PhD, Harvard Univ Grad S Of Arts & Scien

Foster, Kimberly L

Dean
School of Science and Engineering
PhD, Cornell University

Fotino, Alina Domnica
Assistant Professor
School of Medicine
MD, Albert Einstein Med Ctr Dept Dntl

Fou, Karen M
Senior Professor of Practice
School of Business
PhD, Tulane University

Fox, Peter H
Visiting Assistant Professor
School of Liberal Arts
PhD, Princeton University

Francavilla, Thomas
Assistant Professor
School of Medicine
MD, Tufts Univ School Of Medicine

Francois, Samantha
Assistant Professor
School of Social Work
PhD, Tulane University

Franklin, David Scott
Professor of Practice
School of Medicine
PhD, Louisiana State Univ & A&M Colg

Frantz, Jessica S
Postdoc Fellow
School of Medicine

Frasch, Elmer Thomas III
Lecturer
School of Medicine
BA

Frazel, Thomas Dooley
Associate Professor
School of Liberal Arts
PhD, University Of California (Ucla)

Freiberg, John
Assistant Professor
School of Medicine
MD, Tulane University

Freire Mondaini, Cecilia
Postdoc Fellow
School of Science and Engineering

Frey, Wesley D
Postdoc Fellow
School of Medicine

Freytag, Lucia C
Research Associate Professor
School of Medicine
PhD, Tulane University
Frieberg, Edwin M
Associate Professor
School of Medicine
MD, Albany Medical College

Friedlander, Paul L
Associate Professor
School of Medicine
MD, Louisiana State Univ & A&M Colg

Friedman, Joel W
Professor
School of Law
JD, Yale University

Frydman, Jason
Postdoc Fellow
School of Science and Engineering

Fuchs, Deirdre D
Lecturer
School of Business
MBA, Tulane University

Furness, James W
Postdoc Fellow
School of Science and Engineering

Fusco, Dahlene
Assistant Professor
School of Medicine
MD, Albert Einstein Med Ctr Dept Dntl

Fuselier, Joseph A
Research Assistant Professor
School of Medicine
MBA, Tulane University

Fuselier, Taylor T
Postdoc Fellow
School of Medicine

G
Gadir, Bouchaib
Senior Professor of Practice
School of Liberal Arts
PhD, Univ Of Louisiana At Lafayette

Gage, Anastasia J
Professor
School of Public Health
PhD, University Of Pennsylvania

Gaines, Jason
Visiting Assistant Professor
School of Liberal Arts
PhD, Brandeis University

Gajda, Amy
Professor
School of Law

Galagan, Robert
Assistant Professor
School of Medicine
MD, Saint Louis University

Galazo, Maria J
Assistant Professor
School of Science and Engineering
PhD

Gallagher, Amanda
Assistant Professor
School of Medicine
PhD, Florida State University

Gama de Cossio, Borja
Visiting Lecturer
School of Liberal Arts
PhD, Univ Of Massachusetts-Amherst

Gambala, Cecilia Tolo
Assistant Professor
School of Medicine
MD, Tulane University

Ganatra, Shashank R
Postdoc Fellow
Primate Center

Garcia, Amanda R
Professor of Practice
School of Professional Advancement
PhD, Texas A&M Univ Corpus Christi

Garcia, Guadalupe
Associate Professor
School of Liberal Arts
PhD, University Of N C-Chapel Hill

Garner, Sarah
Instructor
School of Medicine
MS, Tulane University

Garry, Robert F
Professor
School of Medicine
PhD, University Of Texas-Austin

Gasiorowski, Mark Joseph
Professor
School of Liberal Arts
PhD, University Of N C-Chapel Hill

Gaspard, Gregory P
Assistant Professor
School of Medicine
MD, University Of Texas At Dallas

Gasparini, Nicole M
Associate Professor
School of Science and Engineering
Gassen, Gavin
Assistant Professor
School of Medicine
MD, Tulane University

Gaver, Donald P III
Professor
School of Science and Engineering
PhD, Northwestern Univ

Ge, Dongxia
Postdoc Fellow
School of Medicine

Geddes, Leslie Ann
Assistant Professor
School of Liberal Arts
PhD, Princeton University

Genesio, Kimberly C
Assistant Professor
School of Medicine
MD, Tulane University

Geng, Xianjun
Professor
School of Business
PhD, University Of Texas-Austin

George-Hirons, Amy
Senior Professor of Practice
School of Liberal Arts
PhD, Tulane University

Ghinea, Vlad
Professor of Practice
School of Liberal Arts
MFA, Tulane University

Gibb, Bruce
Professor
School of Science and Engineering
PhD, Robert Gordon University - Scotland

Gibbons, Steven David
Assistant Professor
School of Medicine
MD, Ut Health Center-San Antonio

Gibson, Anne M
Administrative Assistant Professor
Newcomb-Tulane College
PhD, Tulane University

Gibson, Jennifer W
Assistant Professor
School of Medicine
PhD, University Of New Orleans

Gilbert, Margaret H
Associate Professor
Primate Center

Gilbertson, Lars George
Senior Professor of Practice
School of Science and Engineering
PhD, University Of Iowa

Gillis, Heather J
Clinical Assistant Professor
School of Social Work
PhD, Tulane University

Gilpin, Robert B
Associate Professor
School of Liberal Arts
PhD, Yale University

Gin, Steven
Postdoc Teaching Fellow
School of Liberal Arts
PhD, University Of Hawaii At Manoa

Giusti-Torres, Sixto G
Assistant Professor
School of Medicine
MD

Gladden, Paul B
Associate Professor
School of Medicine
MD, Columbia University

Glass, Marcia H
Associate Professor
School of Medicine
MD, Georgetown Univ, Sch Of Medicine

Glasser, Ryan Thomas
Assistant Professor
School of Science and Engineering
PhD, Louisiana State Univ & A&M Colg

Glatt-Holtz, Nathan Edward
Assistant Professor
School of Science and Engineering
PhD, University Of Southern California

Glaude, Maurya W
Assistant Professor
School of Social Work
PhD, University Of Houston

Gleason, Mary Margaret
Associate Professor
School of Medicine
MD, Columbia University

Gleckler, Elisabeth A
Clinical Associate Professor
School of Public Health
PhD, Tulane University

Glenn, Eric Matthew
Assistant Professor
School of Medicine
MD, University Of Georgia

Glenn, Mary E
Postdoc Fellow
School of Liberal Arts

Godbey, W T
Associate Professor
School of Science and Engineering
PhD, Rice University

Godebo, Tewodros R
Assistant Professor
School of Public Health
PhD

Goehring, Brent Marshal
Assistant Professor
School of Science and Engineering
PhD, Columbia University

Goldsmith, Jay P
Professor
School of Medicine
MD, Albert Einstein Med Ctr Dept Dntl

Goldvarg-Abud, Inna
Instructor
School of Medicine
MSN, Frontier Sch Of Midwifery&Family Nu

Gomez, Antonio Daniel
Associate Professor
School of Liberal Arts
PhD, University Of Pittsburgh

Goodenough, Amelia Chisolm
Assistant Professor
School of Medicine
MD, Drexel University

Goodwin, Bruce M
Associate Professor
School of Architecture
MARCH, University Of California (Ucla)

Gordley, James R
Professor
School of Law
JD, Harvard Law School

Gordon, Robert A
Associate Professor
School of Medicine
MD, Tulane University

Gotham, Kevin F
Professor
School of Liberal Arts
PhD, University Of Kansas

Gough, Daniel J
Postdoc Fellow

Stone Center for Latin American Studies
Graber, Jessica
Senior Professor of Practice
School of Science and Engineering
PhD, Tulane University

Grace, Amy Nicole
Assistant Professor
School of Medicine
MPH, University Of Alabama At Birmingham

Gragert, Loren
Assistant Professor
School of Medicine
PhD, University Of Minnesota-Twin Cities

Graham, Michael Edward
Assistant Professor
School of Medicine
MD, La State Univ Health Sciences Ctr

Grant, Brooke
Professor of Practice

PhD, University Of Rochester

Jensen, Joan F
Senior Professor of Practice
School of Liberal Arts
MFA, Tulane University

Jensen, Katherine
Postdoc Fellow
Stone Center for Latin American Studies

Jeon, Hoonbae
Professor
School of Medicine
MD

Jernegan, Jeremy H
Professor
School of Liberal Arts
MFA, San Jose State University

Jiang, Hai Bo
Visiting Assistant Professor
School of Business
PhD, University Of British Columbia - Canada

Jiang, Xin
Assistant Professor
School of Liberal Arts
PhD, Ohio State University-All Campuses

Jin, Lianjin
Postdoc Fellow
School of Medicine

Johannesson, Karen Haley
Professor
School of Science and Engineering
PhD, University Of Nevada Reno

John, Vijay T
Professor
School of Science and Engineering
PhD, Columbia University

Johnson, Carolyn C
Professor
School of Public Health

PhD, University Of New Orleans

Johnson, Colleen J
Assistant Professor
School of Medicine
MD, Johns Hopkins Univ Sch Of Medicine

Johnson, Janet E
Associate Professor
School of Medicine
MD, University Of Missouri - Columbia

Johnson, Katherine
Assistant Professor
School of Liberal Arts
PhD, Penn State University

Johnson, Kristin
Professor
School of Law
JD, University Of Michigan Law School

Johnson, Thomas R
Professor
School of Liberal Arts
PhD, University Of Louisville

Jones, Catherine E
Assistant Professor
School of Medicine
MD, Tulane University

Jones, Jacey Christina
Assistant Professor
School of Science and Engineering
PhD, Mcmaster University - Canada

Jones, Kevin Henry
Associate Professor
School of Liberal Arts
MFA, Yale University

Jones, Steven D
Assistant Professor
School of Medicine
MD, Tulane University

Jordan, Lisa W
Clinical Instructor
School of Law
LLM, Tulane University

Joselow, Andrew L
Postdoc Fellow
School of Medicine

Jover Biboum, Margarita
Associate Professor
School of Architecture
Joyce, Michael O
Professor of Practice
School of Science and Engineering
PhD, Brown University

Juan Lozano, Carlos
Professor of Practice
School of Liberal Arts
PhD

Kabinejadian, Foad
Postdoc Fellow
School of Science and Engineering

Kaczka-Weiss, Lauren
Assistant Professor
School of Medicine
DO, New York Institute Of Technology

Kahn, Marc J
Professor
School of Medicine
MD, University Of Pennsylvania

Kahn, Margie A
Associate Professor
School of Medicine
MD, Tulane University

Kaimal, Peggy D
Instructor
School of Medicine
Master’s Degree, Northwestern Univ

Kalka, Morris
Professor
School of Science and Engineering
PhD, New York University

Kalos-Kaplan, Elizabeth Anne
Postdoc Fellow
School of Liberal Arts
PhD, Tulane University

Kandikattu, Hemanth Kumar
Postdoc Fellow
School of Medicine

Kandil, Emad
Professor
School of Medicine
MD

Kang, Le
Visiting Assistant Professor
School of Business
PhD, Texas A&M University

Kapadia, Nishad
Assistant Professor

Kapadia, Nishad
Assistant Professor

School of Business
PhD, University Of N C-Chapel Hill

Kaphle, Upendra
Assistant Professor
School of Medicine
MD

Kaplan, Lev
Professor
School of Science and Engineering
PhD, Harvard Univ Grad S Of Arts & Scien

Karimian, Hamid Reza
Postdoc Fellow
School of Science and Engineering

Karlitz, Jordan J
Associate Professor
School of Medicine
MD, Mcgill University - Canada

Karubian, Jordan Oliver
Associate Professor
School of Science and Engineering
PhD, University Of Chicago

Kasper, Matthias
Postdoc Fellow
School of Liberal Arts

Kastl, Peter Robert
Professor
School of Medicine
MD, Tulane University

Katakam, Prasad V
Associate Professor
School of Medicine
PhD, University Of Georgia

Katin, Nicole Marie
Professor of Practice
School of Liberal Arts
PhD, Tulane University

Katner, David R
Clinical Professor
School of Law
JD, Tulane University

Kaur, Amitinder
Professor
Primate Center
MD, University Of Madras, India

Kaur, Navchetan
Postdoc Fellow
School of Medicine

Kaushal, Deepak
Professor
Primate Center
PhD

Kawasaki, Lumie
Associate Professor
School of Medicine
MD, University Of Pittsburgh - School Of Med

Kazan, Osman
Professor of Practice
School of Business
PhD, University Of Texas At Dallas

Keane, Matthew William
Assistant Professor
School of Medicine
MD, Tulane University

Kearney-Bagneris, Amanda Leonard (Mia)
Associate Professor
School of Liberal Arts
PhD, Harvard University

Keating, Joseph A
Professor
School of Public Health
PhD, Tulane University

Kehoe, Dennis P
Professor
School of Liberal Arts
PhD, University Of Michigan - Ann Arbor

Keil, Irene
Senior Professor of Practice
School of Architecture
MARCH, University Of California (Ucla)

Kelley, Anna
Assistant Professor
School of Medicine
PSYD, University Of Denver

Kelly, Dennis Clayton Jr.
Associate Professor
School of Medicine
MD, University Of Arkansas For Medical Scien

Kelly, Elizabeth
Instructor
School of Medicine
MD

Kelly, Tanika N
Associate Professor
School of Public Health
PhD, Tulane University

Kemsley, Deen
Associate Professor
School of Business
PhD, University Of N C-Chapel Hill

Kendall, Carl
Professor

School of Public Health
PhD, University Of Rochester

Kennedy, Brittany Powell
Senior Professor of Practice
School of Liberal Arts
PhD, University Of South Carolina

Kennedy, Thomas Preston
Clinical Professor
School of Medicine
MD, Vanderbilt Univ Med Ctr Alliedheal

Kenney, Sally J
Executive Director
Newcomb College Institute
PhD, Princeton University

Keyes, Angela W
Associate Professor
School of Medicine
PhD, University Of New Orleans

Khan, Mashfiqur R.
Postdoc Fellow
School of Liberal Arts

Khanna, Rajat
Assistant Professor
School of Business
PhD, University Of N C-Chapel Hill

Kheir, Fayez
Assistant Professor
School of Medicine
MD

Khismatullin, Damir B
Associate Professor
School of Science and Engineering
PhD, Bashkir State University, Russia

Khokher, Zeigham
Assistant Professor
School of Business
PhD, University Of Texas-Austin

Khunkhun, Vininder Singh
Assistant Professor
School of Medicine
MD, Ross Medical Education Center -

Kidd, Laura Robinson
Assistant Professor
School of Medicine
MD, University Of Missouri - Columbia

Kiel, Christina
Professor of Practice
School of Liberal Arts
PhD, University Of New Orleans

Kiernan, Michael Philip
Professor
School of Medicine
MD, Tulane University

Killackey, Mary
Associate Professor
School of Medicine
MD, Columbia University

Kim, Hogyoung
Instructor
School of Medicine
PhD

Kim, Hyunseob
Visiting Assistant Professor
School of Business
PhD, Duke University

Kim, Jae Yung
Visiting Assistant Professor
School of Business
PhD, University Of Florida

Kim, Joonkyung
Visiting Assistant Professor
School of Business
PhD, University Of Toronto - Canada

Kim, Sangkyu
Research Assistant Professor
School of Medicine
PhD, University Of Iowa

Kinnard, Judith A
Professor
School of Architecture
BARCH, Cornell University

Kinzie, Amy S
Instructor
School of Medicine
MSN, La State Univ Health Sciences Ctr

Kirwin, Paul D
Professor
School of Medicine
MD, University Of Rochester

Kissinger, Patricia
Professor
School of Public Health
PhD, Tulane University

Kleinpeter, Myra A
Associate Professor
School of Medicine
MD, Tulane University

Klingler, Thomas A
Associate Professor
School of Liberal Arts
PhD, Indiana University-Bloomington

Klingsberg, Ross C

Associate Professor
School of Medicine
MD, Tulane University

Kohler, Michelle Delia
Associate Professor
School of Liberal Arts
PhD, University Of Oregon

Kolls, Jay K
Professor
School of Medicine
MD, University Of Maryland, Baltimore

Komendarczyk, Rafał
Associate Professor
School of Science and Engineering
PhD, Georgia Institute Of Technology

Kondkar, Becki T
Senior Professor of Practice
School of Law
JD, University Of N C-Chapel Hill

Kopitz, Brent Douglas
Professor
School of Science and Engineering
PhD, Princeton University

Kordjamshidi, Parsa
Assistant Professor
School of Science and Engineering
PhD

Korndorffer, Melanie Leopard
Assistant Professor
School of Medicine
MD, University Of Alabama At Birmingham

Koss, Eugene H
Professor
School of Liberal Arts
MFA, Temple University

Krail, Katherine
Instructor
School of Medicine
MSN, Louisiana State Univ & A&M Colg

Kraker, Jessica Brand
Assistant Professor
School of Medicine
MD, Temple University

Krane, Louis S
Assistant Professor
School of Medicine
MD, Tulane University

Krane, N K
Professor
School of Medicine
MD, Tulane University
Kreisman, Norman R
Professor
School of Medicine
PhD, Drexel University

Krishna Moorthy, Lakshmana Kumar
Visiting Assistant Professor
School of Business
PhD, University Of Minnesota-Twin Cities

Kroghstad, Donald J
Professor
School of Public Health
MD, Harvard Univ Medical School

Krousel-Wood, Marie A
Professor
School of Medicine
MD, Louisiana State Univ & A&M Colg

Ku, Timothy
Assistant Professor
School of Medicine
MD, Northwestern Univ

Kuban, Scott
Assistant Professor
School of Business
PhD, Texas A&M University

Kubisch, Hans-Michael
Associate Professor
Primate Center
PhD, University Of Guelph - Canada

Kuczynski, Michael P
Professor
School of Liberal Arts
PhD, University Of N C-Chapel Hill

Kulthinee, Supaporn
Postdoc Fellow
School of Medicine

Kumar, Prerna
Research Instructor
School of Medicine
PhD

Kunnimalaiyaan, Muthusamy
Research Assistant Professor
School of Medicine
PhD

Kurdia, Anastasia
Professor of Practice
School of Science and Engineering
PhD, University Of Texas At Dallas

Kwasik, Slawomir
Professor
School of Science and Engineering
PhD, University Of Gdansk, Poland

Kwaske, Ilianna
Professor of Practice
School of Professional Advancement
PhD, Illinois Institute Of Technology

Labbe, Andre
Clinical Instructor
School of Medicine
BS, Louisiana State Univ & A&M Colg

Lacey, Michelle R
Associate Professor
School of Science and Engineering
PhD, Yale University

Lafaye, Kristina Mathews
Assistant Professor
School of Medicine
MD, Tulane University

LaGrone, John Robert
Postdoc Fellow
School of Science and Engineering

Lalka, Robert T
Professor of Practice
School of Business
Master’s Degree, Duke University - School Of Public Polic

Landry, Michael D
Associate Professor
School of Medicine
MD, Tulane University

Landry, Samuel J
Professor
School of Medicine
PhD, Louisiana State Univ & A&M Colg

Lane, Kris Eugene
Professor
School of Liberal Arts
PhD, University Of Minnesota-Twin Cities

Larrieu, Julie A
Professor
School of Medicine
PhD, Purdue University

Larson, Herbert Victor
Senior Professor of Practice
School of Law
JD, Loyola University New Orleans

Lasky, Joseph A
Professor
School of Medicine
MD, University Of Minnesota-Twin Cities

LaVeist, Thomas A
Dean
School of Public Health and Tropical Medicine
PhD, University Of Michigan - Ann Arbor
LaViers, Lisa
Assistant Professor
School of Business
PhD, Emory University

Lawson, Louise B
Research Assistant Professor
School of Medicine
PhD, Tulane University

Lay, Jennifer Celeste (Celeste)
Associate Professor
School of Liberal Arts
PhD, University Of Maryland, College Park

Layton, Jodi
Assistant Professor
School of Medicine
MD, University Of Texas-Austin

Lazar, Zachary Lane
Professor
School of Liberal Arts
MFA, University Of Iowa

Le Jemtel, Thierry
Professor
School of Medicine
MD

Lederer, Alyssa Mira
Assistant Professor
School of Public Health
PhD, Indiana University-Bloomington

Ledet, Elisa Marie
Instructor
School of Medicine
MD

LeDoux, Elma Ireland
Professor
School of Medicine
PhD, Louisiana State Univ & A&M Colg

Lee, Erica T.
Instructor
School of Medicine
MD, Tulane University

Lee, Raven
Instructor
School of Medicine
MS, Our Lady Of The Lake College

Lee, Sangho
Visiting Assistant Professor
School of Business
PhD, Georgia State University

Lee, Sean Bong
Associate Professor
School of Medicine
PhD, Suny-Downstate Medical Center

Lee, Seoungwoo
Assistant Professor
School of Business
PhD, University Of Maryland, College Park

Lefante, John J Jr.
Professor
School of Public Health
PhD, University Of Alabama At Birmingham

Leguizamon, Amalia
Assistant Professor
School of Liberal Arts
PhD, City University - England

Leissinger, Cindy A
Professor
School of Medicine
MD, Tulane University

Lenaz, Gerald Carl Walter (Jerry)
Professor of Practice
School of Professional Advancement
MBA, Tulane University

Lesen, Amy Elizabeth
Research Associate Professor
Office of Research
PhD, University Of California, Berkeley

Leslie, Camilo A
Assistant Professor
School of Liberal Arts
PhD, University Of Michigan - Ann Arbor

Lesmond, David Anthony
Associate Professor
School of Business
PhD, Buffalo State College - Suny

Levy, Laura S
Vice President
School of Science and Engineering
PhD, University Of California-Irvine

Levy, Shauna
Assistant Professor
School of Medicine
MD, University Of Texas-Austin

Lewis, Brian E
Assistant Professor
School of Medicine
MD, Tulane University

Lewis, Joshua
Research Assistant Professor
Office of Research
PhD

Lewis, Marva L.
Associate Professor
School of Social Work
PhD, University Of Colorado-Boulder

Lewis, Nghana T
Associate Professor
School of Liberal Arts
PhD, Univ Of Illinois @ Urbana-Champaign

Li, Caiyue
Postdoc Fellow
School of Medicine

Li, Jian
Associate Professor
School of Public Health
PhD, North Carolina State Univ-Raleigh

Li, Junchao
Assistant Professor
School of Business
PhD, University Of Washington

Li, Liwen
Postdoc Fellow
School of Science and Engineering

Li, Ming
Associate Professor
School of Medicine
PhD

Li, Yuwen
Assistant Professor
School of Medicine
PhD, Tulane University

Liang, Kun
Postdoc Fellow
School of Science and Engineering

Lichtveld, Maureen Y
Professor
School of Public Health
MD, University Of Suriname, Suriname

Liles, Andrew M
Professor of Practice
School of Architecture

MARCH, Tulane University

Lin, Dong
Postdoc Fellow
School of Medicine

Lin, Tiffany
Associate Professor
School of Architecture
MARCH, Harvard University

Lin, Zhen
Research Assistant Professor
School of Medicine
MD, University Of Iowa

Linden, Callie A
Instructor
School of Medicine
MD, University Of Louisville

Lindenhovius, Albertus Johannis
Postdoc Fellow
School of Science and Engineering

Lindsay, Elizabeth Balhoff
Assistant Professor
School of Medicine
MD

Lindsey, Sarah H
Assistant Professor
School of Medicine
MD

Ling, Binhua
Associate Professor
Primate Center
PhD

Lipman, Jana Kate
Associate Professor
School of Liberal Arts
PhD, Yale University

Lipton, Ann Meredith
Associate Professor
School of Law
JD, Harvard Law School

Liu, Hong
Assistant Professor
School of Medicine
PhD

Liu, Hongbing
Research Assistant Professor
School of Medicine
PhD

Liu, Sen
Postdoc Fellow
School of Medicine
Liu, Yaozhong
Associate Professor
School of Public Health
PhD, Creighton University

Lockman, Jeffrey J
Professor
School of Science and Engineering
PhD, University Of Minnesota-Twin Cities

Assistant Professor
School of Business
PhD, University Of Washington

Long, Hugh W
Professor
School of Public Health
PhD, Stanford University

Long, Wei
Assistant Professor
School of Liberal Arts
PhD, Texas A&M University

Lopez, Ana M
Professor
School of Liberal Arts
PhD, University Of Iowa

Lopiccolo, Anastasia Marie
Instructor
School of Medicine
BSN, Louisiana State Univ & A&M Colg

Lopreore, Courtney Lynn
Professor of Practice
School of Science and Engineering
PhD, University Of Texas-Austin

Love, Mary Casey
Senior Professor of Practice
School of Liberal Arts
PhD, Tulane University

Loveless, Megwen May
Senior Professor of Practice
School of Liberal Arts
PhD, Harvard Univ Grad S Of Arts & Scien

Luvre, Dragana
Assistant Professor
School of Medicine
MD

Lowenburg, Benjamin Mauldin
Assistant Professor
School of Medicine
MD, Tulane University

Lu, Hua
Professor
School of Medicine
PhD, Rutgers, The State University Of Nj

Luk, Alfred
Assistant Professor
School of Medicine
MD, Tulane University

Lumibao, Candice Yango
Postdoc Fellow
School of Science and Engineering

Luongo, Francis Thomas
Associate Professor
School of Liberal Arts
PhD, University Of Notre Dame

Lushtak, Faina
Professor
School of Liberal Arts
MS, Moscow Tchaikowsky Conservatory, Russia

Lusnia, Susann Sowers
Associate Professor
School of Liberal Arts
PhD, University Of Cincinnati

Lustig, Arthur J
Professor
School of Medicine
PhD, University Of Chicago

Lustig, Nora
Professor
School of Liberal Arts
PhD, University Of California, Berkeley

Lynch, Rebecca J
Postdoc Fellow
School of Medicine

Lyons, Nathan Jay
Postdoc Fellow
School of Science and Engineering

Ma, Wenbo
Postdoc Fellow
School of Medicine

Machado, Heather L
Assistant Professor
School of Medicine
PhD, Tulane University

Maclean, Andrew
Associate Professor
Primate Center
PhD, University Of Glasgow - Scotland

Madary, Michael
Visiting Assistant Professor
School of Liberal Arts
PhD, Tulane University

Madkour, Aubrey S
Associate Professor
School of Public Health
PhD, University Of N C-Chapel Hill

Mague, Joel T
Professor
School of Science and Engineering
PhD, Massachusetts Inst Of Technology

Mahoney, Anna
Administrative Assistant Professor
Newcomb College Institute
PhD, Rutgers, The State University Of Nj

Majid, Dewan
Professor
School of Medicine
MD, Ross University - Medical School

Mallik, Harminder S
Associate Professor
School of Medicine
MD, Indiana Univ-Purdue Univ Indpls

Maness, Nicholas J
Research Assistant Professor
Primate Center
PhD, University Of Wisconsin-Madison

Manguno-Mire, Gina M
Associate Professor
School of Medicine
PhD, Louisiana State Univ & A&M Colg

Manzoor, Umar
Postdoc Fellow
School of Science and Engineering

Mark, Rebecca
Professor
School of Liberal Arts
PhD, Stanford University

Markant, Julie Christina
Assistant Professor
School of Science and Engineering
PhD, University Of Minnesota-Twin Cities

Marks, Laura
Professor of Practice
School of Liberal Arts
PhD, Louisiana State Univ & A&M Colg

Marks, Ronald E
Associate Professor
School of Social Work

PhD, University Of Pittsburgh

Marksbury, Richard A
Associate Professor
School of Professional Advancement
PhD, Tulane University

Maroteaux, Matthieu J
Research Assistant Professor
School of Science and Engineering
PhD

Marques, Laura Marie
Assistant Professor
School of Medicine
PhD, Tulane University

Marshall, Thomas
Assistant Professor
School of Medicine
MD, Louisiana State Univ-Shreveport

Martinez, Matthew J
Professor of Practice
School of Liberal Arts
MFA, University Of New Orleans

Marx, Preston A Jr.
Professor
Primate Center
PhD, Louisiana State Univ & A&M Colg

Masquelier, Adeline M
Professor
School of Liberal Arts
PhD, University Of Chicago

Matambanadzo, Sarudzayi M
Associate Professor
School of Law
PhD, University Of California (Ucla)

Mathieu, Jane Katherine
Assistant Professor
School of Liberal Arts
PhD, University Of Texas-Austin

Mathurumandiram Sivadasan, Padmakumar
Assistant Professor
School of Business
PhD, Univ Of Illinois @ Urbana-Champaign

Matsunaga, Yasuka
Postdoc Fellow
School of Medicine

Mattes, Katherine M
Senior Professor of Practice
School of Law
Mauldin, Brandon
Assistant Professor
School of Medicine
MD, Florida State University

Maulucci, Christopher Michael
Associate Professor
School of Medicine
MD, New York College Of Health Professions

Mauvais-Jarvis, Franck
Professor
School of Medicine
PhD

Maveety, Nancy
Professor
School of Liberal Arts
PhD, Johns Hopkins University

Maxwell, Judith M
Professor
School of Liberal Arts
PhD, University Of Chicago

May, Jonathan Horace
Assistant Professor
School of Medicine
MD, University Of Arkansas For Medical Scien

May, Margaret M
Instructor
School of Medicine
MSN, College Of New Rochelle

Mayer, Vicki A
Professor
School of Liberal Arts
PhD, University Of California-San Diego

Mayhall, Kim Gregory
Assistant Professor
School of Medicine
MD, Louisiana State Univ & A&M Colg

Maylin, Marlowe M
Assistant Professor
School of Medicine
MD, Louisiana State Univ & A&M Colg

Mcbride, Jesse B
Professor of Practice
School of Liberal Arts
Bachelor’s Degree

Mcbride, Ryan Kenneth
Administrative Associate Professor
School of Public Health
PhD, Marquette University

Mccall, Grant S
Associate Professor

School of Liberal Arts
PhD, University Of Iowa

McCarron, Felicia
Professor
School of Liberal Arts
PhD, Stanford University

McCaskill, Michael Louis
Assistant Professor
School of Public Health
PhD, Florida A & M University

Mcclure, Brian Patrick
Assistant Professor
School of Medicine
MD, Louisiana State Univ & A&M Colg

McCormick, Elizabeth
Visiting Assistant Professor
School of Architecture
MS, Massachusetts Inst Of Technology

McCoy-Torres, Sabia
Assistant Professor
School of Liberal Arts
PhD, Cornell University

McCusker, Christopher R
Professor of Practice
School of Business
PhD, Univ Of Illinois @ Urbana-Champaign

Mcduffie, Roberta H
Instructor
School of Medicine
MSN, University Of South Alabama

McEvoy, Timothy Graham
Clinical Instructor
School of Law
JD, American University

McFadden, Bernice L
Visiting Professor
School of Liberal Arts
MFA, Saint Joseph’S College

Norman, Carrie E  
Assistant Professor  
School of Architecture  
MARCH, Princeton University

Norton, Elizabeth B  
Assistant Professor  
School of Medicine  
PhD, Tulane University

Norton, Guy Vincent  
Senior Professor of Practice  
School of Science and Engineering  
PhD, Tulane University

O’Brien, Laurie T  
Associate Professor  
School of Science and Engineering  
PhD, University Of Kansas

O’Brien, Michael J  
Associate Professor  
School of Medicine  
MD, Tulane University

O’Neill, Patrick  
Professor  
School of Medicine  
MD, Creighton University

Oatley, Thomas H  
Professor  
School of Liberal Arts  
PhD, Emory University

Oberhelman, Richard A  
Professor  
School of Public Health  
MD, Univ Of Texas Southwestern Med Ctr

Ocasio, Manuel A  
Assistant Professor  
School of Medicine  
PhD, University Of Miami

O’connor, Kim C  
Professor  
School of Science and Engineering

Odo, Emilia  
Assistant Professor  
School of Liberal Arts  
PhD, University Of Cincinnati

Ofengenden, Ari  
Professor of Practice  
School of Liberal Arts  
PhD

Ogola, Benard O  
Postdoc Fellow  
School of Medicine

Okoli, Adaora  
Postdoc Fellow  
School of Medicine

Oldenburg, Scott Keith  
Associate Professor  
School of Liberal Arts  
PhD, Suny At Buffalo

Oldham, Greg Ralph  
Professor  
School of Business  
PhD, Yale University

Oliver, Christopher Scott  
Professor of Practice  
School of Liberal Arts  
PhD, Michigan State University

Oliveros, Virginia  
Assistant Professor  
School of Liberal Arts  
PhD, Columbia University

Olson, Mary K  
Associate Professor  
School of Liberal Arts  
PhD, Stanford University

Omerbasic, Delila  
Professor of Practice  
School of Professional Advancement  
PhD, University Of Utah

Orian Peer, Nadav  
Visiting Assistant Professor  
School of Law  
SJD, Harvard Law School

Orie, Kenneth K  
Clinical Assistant Professor  
School of Public Health  
PhD, Mcgill University - Canada

Orie, Olanike-Ola Olajumoke  
Professor  
School of Liberal Arts
PhD, University Of British Columbia - Canada
Ostertag, Stephen F
Assistant Professor
School of Liberal Arts
PhD, University Of Connecticut-Storrs

Otte, Marline Syeta
Associate Professor
School of Liberal Arts
PhD, University Of Toronto - Canada

Overstreet, Stacy
Professor
School of Science and Engineering
PhD, Tulane University

Owen, Graham Warwick
Associate Professor
School of Architecture
Master's Degree, Harvard Univ Grad Sch Design

Ozcan, Esra
Professor of Practice
School of Liberal Arts
PhD, Jacobs University Bremen, Germany, Germany

Page, John R
Associate Professor
School of Business
PhD, Tulane University

Page, Trenton B
Visiting Assistant Professor
School of Business
PhD, University Of Rochester

Pahar, Bapi
Associate Professor
Primate Center
PhD

Palacios, Enrique
Professor
School of Medicine
MD

Palmer, Morgan E
Visiting Assistant Professor

School of Architecture
JD, University Of Michigan Law School

Pearson, Kristen E
Postdoc Fellow
School of Medicine

Pejic, Rade Nicholas
Associate Professor
School of Medicine
MD, Tulane University

Pena, Jose M
Professor
School of Medicine
MD, Northwestern Univ

Percek, Jeffrey Michael
Assistant Professor
School of Medicine
MD, Rush University

Perepelitsa, Victoria P
Associate Professor
School of Medicine
PhD, Tulane University

Perez, Sarah R
Assistant Professor
School of Medicine
MD, Louisiana State Univ & A&M Colg

Pesika, Noshir Sheriar
Associate Professor
School of Science and Engineering
PhD, Johns Hopkins University

Petchampai, Natthida

Peters, Ryan H
Assistant Professor
School of Business
PhD, University Of Pennsylvania

Peterson, Tim Gerard
Clinical Assistant Professor
School of Medicine
MD, Louisiana State Univ & A&M Colg

Pfister, Amy Elizabeth
Assistant Professor
School of Liberal Arts
Master's Degree, Loyola University New Orleans

Philips, Menaka M
Assistant Professor
School of Liberal Arts
PhD, Northwestern Univ

Phong, Binh Le
Postdoc Fellow
School of Medicine

Piacun, Marsha Emerman
Clinical Assistant Professor
School of Public Health
MBA, Loyola University New Orleans

Pierie, Nakeisha Landry
Associate Professor
School of Medicine
MD, Louisiana State Univ & A&M Colg

Pipsair, Jeanne
Instructor
School of Medicine
Master's Degree, Emory University

Pizza, Juan C
Assistant Professor
School of Public Health
PhD, University Of Paris, France

Plante, Michael
Associate Professor
School of Liberal Arts
PhD, Brown University

Plesl, Carlie B
Assistant Professor
School of Medicine
MD, Virginia Tech Carilion School Of Medicine

Pletsch, Gayle R
Assistant Professor
School of Medicine
MD, Tulane University

Pociask, Derek
Assistant Professor
School of Medicine
PhD, Louisiana State Univ & A&M Colg

Podewell, Jessica
Professor of Practice
School of Liberal Arts
MFA, Ohio State University-All Campuses

Pollard, Kevin James
Postdoc Fellow
School of Science and Engineering

Pollock, Linda A
Professor
School of Liberal Arts
PhD, University Of Saint Andrews - Scotland

Popescu, Ion Razvan
Postdoc Fellow
School of Medicine
PhD

Porras, Stephanie
Associate Professor
School of Liberal Arts
PhD, Courtauld Institute Of Art, United Kingdom

Porto, Mauro P
Associate Professor
School of Liberal Arts
PhD, University Of California-San Diego

Potash, Mordecai N
Associate Professor
School of Medicine
MD, New York Medical College

Prasad, Ambika
Lecturer
School of Business
PhD, University Of North Texas

Pratt, Lawrence R.
Professor
School of Science and Engineering
PhD, Univ Of Illinois @ Urbana-Champaign

Pridjian, Gabriella
Professor
School of Medicine
MD, Medical College Of Wisconsin

Prieto, Minolfa C
Associate Professor
School of Medicine
PhD, Tulane University

Prilmeier, Robert
Assistant Professor
School of Business
PhD, Ohio State University-All Campuses

Pritchett, Jonathan B
Professor

School of Liberal Arts
PhD, University Of Chicago

Proctor, III, John F. Rayfield
Assistant Professor
School of Liberal Arts
PhD, University Of Wisconsin-Madison

Prokosch, Marjorie L
Postdoc Fellow
School of Science and Engineering

Pulda, Molly
Administrative Assistant Professor
Newcomb College Institute
PhD, Cuny Graduate Sch & Univ Ctr

Pursell, Zachary F
Associate Professor
School of Medicine
PhD, University Of California, Berkeley

Putnam, Philip
Assistant Professor
School of Medicine
MD, University Of Alabama At Birmingham

Qi, Lu
Professor
School of Public Health
PhD, Tufts University

Qu, Zhuolin
Postdoc Fellow
School of Science and Engineering

R

Rabito, Felicia A
Associate Professor
School of Public Health
PhD, Tulane University

Rafail, Patrick
Associate Professor
School of Liberal Arts
PhD, Penn State University

Rafferty, Elizabeth C
Staff Instructor
Newcomb-Tulane College
PhD

Rafique, Amina
Assistant Professor
School of Medicine
MD

Rajan, Latha
Clinical Associate Professor
School of Public Health
MD, All India Institute Of Medical Sciences, India

Ramazani, Vaheed
Professor
School of Liberal Arts
PhD, University Of Virginia - Sfs

Ramer, Samuel C
Associate Professor
School of Liberal Arts
PhD, Columbia University

Rando, Roy J
Professor
School of Public Health
SCD, Tulane University

Rappaport, Jay
Director
Primate Center
PhD, University Of Pennsylvania

Ratchford, Mark
Visiting Assistant Professor
School of Business
PhD, University Of Colorado-Boulder

Ratterree, Marion S
Assistant Professor
Primate Center
DVM, Tuskegee University

Ray, Laurie C
Instructor
School of Medicine
MSN, Louisiana State Univ & A&M Colg

Raybon, Curtis L Jr.
Associate Professor
School of Liberal Arts
DMA, Louisiana State Univ & A&M Colg

Raymond, Katherine Kleinpeter
Professor of Practice
School of Science and Engineering
PhD, Tulane University

Rebeka, Aleksandra
Visiting Assistant Professor
School of Business
PhD, University Of N C-Chapel Hill

Recile, Georgiana P
Instructor
School of Medicine
Master’s Degree, Louisiana State Univ & A&M Colg

Redfield, Wendeline Harriet
Associate Professor
School of Architecture
MARCH, University Of Virginia - Sfs

Reed, Linnette F
Senior Professor of Practice

School of Liberal Arts
PhD, Tulane University

Reed, Wayne F
Professor
School of Science and Engineering
PhD, Clarkson University

Reese, Carol Mcmichael
Professor
School of Architecture
PhD, University Of Texas-Austin

Reese, Thomas F
Executive Director
Stone Center for Latin American Studies
PhD, Yale University

Reese, William Arthur Jr.
Professor of Practice
School of Business
PhD, University Of Arizona

Regenstein, Fredric Gary
Professor
School of Medicine
MD, Washington University

Remer, Gary
Professor
School of Liberal Arts
PhD, University Of California (Ucla)

Remer, Karen Weissbecker
Assistant Professor
School of Medicine
PhD, Virginia Commonwealth University

Reuber, Alexandra Maria
Senior Professor of Practice
School of Liberal Arts
PhD, Louisiana State Univ & A&M Colg

Reynaud, Peter
Clinical Assistant Professor
School of Medicine
MD, Louisiana State Univ & A&M Colg

Rials, William Theodore Ph.D. (Bill)
Professor of Practice
School of Professional Advancement
MS, Mississippi State University

Ribeiro, Renata D
Professor of Practice
School of Science and Engineering
PhD, University Of Missouri-St Louis

Ricchiuti, Peter Francis
Senior Professor of Practice
School of Business
MBA, University Of New Orleans

Richards, Robert J
Associate Professor
School of Medicine
MD

Richardson, Sally
Associate Professor
School of Law
JD, Louisiana State Univ & A&M Colg

Riedel, Norbert
Associate Professor
School of Science and Engineering
PhD, Technische Universität München, Germany

Riley, Jonathan M
Professor
School of Liberal Arts
PhD, University Of Oxford - England

Rink, John
Instructor
School of Medicine
BS, University Of Alabama At Birmingham

Rioja, Felix
Associate Professor
School of Liberal Arts
PhD, Arizona State Univ (All Campuses)

Ritterbusch, Megan
Staff Instructor
Newcomb-Tulane College
PhD

Rivera Diaz, Fernando Cesar
Associate Professor
School of Liberal Arts
PhD, Princeton University

Ro, Joon Hyoung
Assistant Professor
School of Business
PhD, University Of Texas-Austin

Roberts, John E III
Assistant Professor
School of Medicine
MD, Tulane University

Robins, Russell P
Professor
School of Business
PhD, University Of California-San Diego

Robinson, Anne
Professor
School of Science and Engineering
PhD, Univ Of Illinois @ Urbana-Champaign

Robinson, Dean Edward
Associate Professor
School of Medicine
MD, Louisiana State Univ & A&M Colg

Robinson, James E
Professor
School of Medicine
MD, Tulane University

Robinson, William R III
Professor
School of Medicine
MD, University Of Tennessee-Health Sci Ctr

Rodning, Christopher Bernard
Professor
School of Liberal Arts
PhD, University Of N C-Chapel Hill

Rodríguez, Ramon Francisco
Assistant Professor
School of Medicine
MD, Louisiana State Univ & A&M Colg

Rodríguez, Raoul P
Professor
School of Medicine
MD, Tulane University

Romero, Maryellen
Assistant Professor
School of Medicine
MD, University Of Southern California

Rose, Donald M
Professor
School of Public Health
PhD, University Of California, Berkeley

Rosen, Jenna
Assistant Professor
School of Medicine
PSYD, Pace University - New York

Rosensteel, George T
Professor
School of Science and Engineering
PhD, University Of Toronto - Canada

Rosenzweig, Emily
Assistant Professor
School of Business
PhD, Cornell University

Roser, Cordula
Professor of Practice
School of Architecture
BARCH, Technical University Of Berlin

Rossi, Mary Alice
Assistant Professor
School of Medicine
Rothenberg, Molly Anne
Professor
School of Liberal Arts
PhD, University Of California-Irvine

Rothwell, William B
Assistant Professor
School of Medicine
MD, Tulane University

Rouse, Jeffrey Christopher
Assistant Professor
School of Medicine
MD, Tulane University

Rout, Namita
Assistant Professor
Primate Center
PhD

Rout, William R
Assistant Professor
School of Medicine
MD, University Of Louisville

Rowan, Brian G
Associate Professor
School of Medicine
PhD, SUNY At Buffalo

Roy, Chad J
Professor
Primate Center
PhD, University Of Iowa

Rubtsov, Igor V
Professor
School of Science and Engineering
PhD, Russian Academy, Russia

Ruiz, Emmanuelle Marie-Laure
Postdoc Fellow
School of Medicine

Ruscher, Janet Beth
Professor
School of Science and Engineering
PhD, Univ Of Massachusetts-Amherst

Russell, Katie
Professor of Practice
School of Science and Engineering
PhD, Tulane University

Russell-Lodrigue, Kasi
Associate Professor
Primate Center
DVM, Louisiana State Univ & A&M Colg

Russo, Ralph R.
Professor of Practice
School of Professional Advancement

Master's Degree, University Of Phoenix

Rutherford, Holly
Assistant Professor
School of Medicine
MD, Tulane University

Rutkai, Ibolya
Assistant Professor
School of Medicine
MD

S

Saba, Nakhle
Associate Professor
School of Medicine
MD, Lebanese American University - Lebanon

Sabo, Oana Anca
Associate Professor
School of Liberal Arts
PhD, University Of Southern California

Sachs, Martin L
Professor
School of Liberal Arts
MFA, Florida State University

Sackey, Michael Andrew
Senior Professor of Practice
School of Law
JD, Washington & Lee University

Safah, Hana
Professor
School of Medicine
MD, American University Of Beirut - Lebanon

Sahai, Achal
Assistant Professor
School of Medicine
MD, Tulane University

Saifudeen, Zubaida R
Associate Professor
School of Medicine
MD, Tulane University

Saito, Shigeki
Assistant Professor
School of Medicine
MD

Sakakeeny, Matt K
Associate Professor
School of Liberal Arts
PhD, Columbia University

Sakamuri, Siva Sankara Vara Prasad
Postdoc Fellow
School of Medicine

Saketkoo, Lesley Ann
Sartor, Alton O
Professor
School of Medicine
MD, Tulane University

Sato, Ryosuke
Assistant Professor
School of Medicine
PhD

Savkovic, Suzana
Associate Professor
School of Medicine
PhD, Univ Of Illinois At Chicago

Savoie, Felix H III
Professor
School of Law
LLM, University Cambridge - Trinity Coll - England

Scaraffia, Patricia Y
Assistant Professor
School of Public Health
PhD, University Of Cordoba, Spain

Scheeringa, Doctor Michael Scott
Professor
School of Medicine
MD, Indiana Univ-Purdue Univ Indpls

Scherer, Avery E
Postdoc Fellow
Office of Research

Schlieffelin, John S
Assistant Professor
School of Medicine
MD, Tulane University

Schippers, Mary Angela
Professor
School of Liberal Arts
PhD, University Of Wisconsin-Madison

Schmehl, Russell
Professor
School of Science and Engineering
PhD, University Of N C-Chapel Hill

Schmid, Janet Lee
Associate Professor
School of Medicine
MD, University Of Minnesota-Twin Cities

Schmieg, John Joseph III
Assistant Professor
School of Medicine
PhD, New York University

Assoc Prof
School of Medicine
MD, Tulane University

Salerian, Justin A
Assistant Professor
School of Medicine
MD, Tulane University

Saltzman, Leia Y
Assistant Professor
School of Social Work
PhD, Boston College

Samarov, Maxim
Senior Professor of Practice
School of Liberal Arts
DMA, Michigan State University

Sammarco, Mimi C
Research Assistant Professor
School of Medicine
PhD, Louisiana State Univ & A&M Colg

Samson, Rohan
Assistant Professor
School of Medicine
MD

Sanchez Rojo, Ana P
Assistant Professor
School of Liberal Arts
PhD, University Of Chicago

Sanchez, Fernando L
Associate Professor
School of Medicine
MD

Sanchez, Michelle Hewlett
Senior Professor of Practice
School of Science and Engineering
PhD, Stanford University

Sander, Gary Edward
Clinical Professor
School of Medicine
PhD, Tulane University

Sandoval, Antony F
Professor
School of Liberal Arts
MFA, University Of Delaware

Sandoval, Nicholas Richard
Assistant Professor
School of Science and Engineering
PhD, University Of Colorado-Boulder

Sarris, Leah Renee
Instructor
School of Medicine
BS, Johnson & Wales University
Schneider, Mark
Visiting Assistant Professor
School of Liberal Arts
PhD, Columbia University

Schoellmann, Karis
Clinical Assistant Professor
School of Public Health
MPH, Tulane University

Schrader-Kriek, Laura
Associate Professor
School of Science and Engineering
PhD, Tulane University

Schroll, Rebecca W.
Assistant Professor
School of Medicine
MD, Saint Louis University

Schuetze, Andre
Visiting Assistant Professor
School of Liberal Arts
PhD, University Of California (UCLA)

Schuler, Timothy Michael
Senior Professor of Practice
School of Science and Engineering
PhD, Tulane University

Schwartz, Carrie Lee
Senior Professor of Practice
School of Professional Advancement
MFA, Rhode Island School Of Design

Schwartz, Kenneth A
Executive Director
School of Architecture
MARCH, Cornell University

Scott, John W Jr.
Assistant Professor
School of Medicine
PhD, University Of Oregon

Scott, Leslie A
Assistant Professor
School of Liberal Arts
MFA, California Institute Of The Arts

Seal, David W
Professor
School of Public Health
PhD, The University Of New Mexico

Seely, Bryan P
Instructor
School of Medicine
MPA, University Of Florida

Segar, Henry C
Postdoc Fellow
School of Medicine

Seicshnaydre, Stacy Elizabeth
Professor
School of Law
JD, Tulane University

Senot, Claire
Assistant Professor
School of Business
PhD, Ohio State University-All Campuses

Sensen, Oliver
Associate Professor
School of Liberal Arts
PhD, King’S College- Univ Of Cambridge - England

Serou, Michael John
Assistant Professor
School of Medicine
MD, Louisiana State Univ & A&M Colg

Settles, Lisa D
Assistant Professor
School of Medicine
PhD, University Of Indianapolis

Shaffer, Jeffrey George
Assistant Professor
School of Public Health
PhD, Tulane University

Shakov, Khazhgery Kh
Senior Professor of Practice
School of Science and Engineering
PhD, Tulane University

Shakya, Shasta
Visiting Assistant Professor
School of Business
PhD, Penn State University

Shamsnia, Morteza
Professor
School of Medicine
MD, University Of Southern California

Shankar, Arti
Clinical Professor
School of Public Health
PhD, Indian Institute Of Technology, India

Shantz, Daniel
Professor
School of Science and Engineering
PhD, University Of Delaware

Sharp, Daniel Benson
Associate Professor
School of Liberal Arts
PhD, University Of Texas-Austin

Shea, Maureen Elizabeth
Associate Professor
School of Liberal Arts

Glossary:

**Academic year**: The period consisting of fall and spring semesters.

**Advanced placement**: Exemption or credit awarded to beginning first-year students based on scores on the College Board Advanced Placement [AP] Tests.

**Audit**: To enroll in a course for no credit.

**Capstone experience**: A core curriculum requirement, designed by the student's school or major department; every senior completes the capstone by applying information, skills and ideas from the major to one significant project.

**Code of Academic Conduct**: Statement of norms for conduct in academic work. The Code also contains procedures for dealing with alleged academic dishonesty.

**Code of Student Conduct**: The regulations of behavior that prohibit unsatisfactory or disruptive conduct. Disciplinary action and sanction resides with the Office of Student Affairs.

**Course load**: The total number of semester hours for which a student is registered in one semester or summer term.

**Credit hour**: Program Integrity Rules issued by the U.S. Department of Education require institutions to establish a definition of "credit hour". This applies to all degree programs (including credit for full and part-time undergraduate, graduate, professional, post-baccalaureate, and online programs):

- The assignment of credit-hours to a course occurs through a formal review process conducted at the appropriate levels of faculty governance.
- For courses in lecture format, one credit-hour represents the subject content that can be delivered in one academic hour (50 min) of contact time each week for the full duration of one academic semester, typically fifteen weeks along. For undergraduate courses, one credit-hour also includes associated work that can be completed by a typical student in 1-2 hours of effort outside the classroom. For graduate and professional courses taught in lecture format, 2-3 hours of outside work is expected for each academic hour of contact time as well.
- For courses taught in other than lecture format (e.g., seminars, laboratories, independent study, clinical work, research, online courses, etc.), one credit-hour represents an amount of content and/or student effort that in aggregate is no less than that described in (2) above.

While Tulane's standard definition of a credit hour applies across the University, in some cases the definition may vary to meet specific accrediting body requirements.

**Cross-registration**: Courses designated in other local universities with which Tulane participates in a consortium.

**Cumulative or overall grade point average**: A student's grade point average based on the total number of quality points earned and total number of semester hours attempted.

**Curriculum**: A program of courses required for a degree in a particular field of study.

**Departments**: The academic units of the university within colleges or schools; administered by chairs or directors.

**Elective**: Course chosen by the student, as opposed to a required course. The term "elective", without a qualifier, will be understood to be a free elective, chosen by the student at his or her option from all the courses offered by the university for degree credit, with due regard for prerequisites and subject to restrictions of the school or college in which the student is enrolled.

**Equivalent**: When used in a course prerequisite (e.g., "Prereq: SOCI 101 or equivalent"), this term means either credit in a comparable course, or equivalency to be determined by individual department.

**Gibson Online**: A gateway to online services such as Registration, Grades, Degree Audit, myTulane, etc. (gibson.tulane.edu)

**Good standing**: The typical status of a student who is not on academic probation and is eligible to continue in or return to the university.

**Grade-point average (GPA)**: A measure of scholastic performance; the ratio of quality points earned to semester hours attempted.

**Interdivisional transfer [IDT]**: The procedure for transfer from one school or college within the university to another.

**Joint-degree programs**: A program whereby a student may pursue two degree programs simultaneously.

**Leave of absence**: An interruption in enrollment, approved by the student's Dean, which permits re-enrollment without an application for readmission.

**Major**: The primary field of study; students will take the majority of their required courses in this area.

**Matriculation**: The state of being registered for credit and working toward a specific degree.

**Minor**: The student's field of secondary academic emphasis.

**Over/Under load**: Stated minimum and maximum course loads for which approval must be obtained from the student's dean.

**Pre-professional program**: A program of study in preparation for entry into a professional degree program at another institution or another division of the University.

**Prerequisites**: The preliminary requirement, usually credit in another course, that must be met before a course may be taken.

**Priority registration**: A specified period of time during a semester when a student may enroll in courses for the following semester.

**Privacy act**: The privacy (https://registrar.tulane.edu/sites/g/files/rdw891/f/FERPA_Policy_FINAL.pdf) of students' records and affairs is protected under the Family Educational Rights and Privacy Act of 1974 as amended [P.L. 93-380], preventing the distribution of any information other than 'directory information' on a student.

**Probation and dismissal**: Failure to meet the minimum semester requirements toward graduation for the fall or spring semester will
result in being placed on academic probation. Academic deficiencies not corrected in the subsequent semester or in a summer term may be cause for dismissal from the University.

**Quality of work:** The progress toward the baccalaureate degree measured by credits and quality points at the close of each semester.

**Quality point:** Numerical value assigned to each letter grade from A to F, when given as the final grade in a course; provides a basis for quantitative determination a grade point average.

**Registration:** The process by which a [duly admitted] student, upon payment of required tuition and fees, is enrolled in classes.

**Residency requirement:** The period of time students are required to be enrolled for a designated number of courses or credits at Tulane University.

**Schools:** The academic units of the university that offer the university’s academic programs, and are administered by deans. The degree anticipated determines the student’s choice of school or college.

**Student schedule:** The courses in which a student is enrolled.

**S/U option:** Satisfactory or unsatisfactory is elected as an irrevocable option (following the announced deadline) for a course in which a letter grade and quality points are not awarded, thereby not affecting the GPA.

**TIDES (Tulane InterDisciplinary Experience Seminar):** a one-credit seminar required for all first-year students.

**Transfer student:** A student who terminates enrollment in another university and subsequently enrolls in Tulane University.

**Withdrawal:** Extensive nonattendance to class(es) requires formal withdrawal from: course(s), section(s), or the college/school, with appropriate approvals including that of the dean.
SCHOOLS, DEPARTMENTS AND THE COLLEGES

Newcomb-Tulane College
Founded in 2006, the Newcomb-Tulane College (http://college.tulane.edu) has administrative oversight for the full-time undergraduate experience and the common core curriculum. The Newcomb-Tulane College comprises all full-time undergraduate programs at the university, including those in architecture, business, liberal arts, public health and tropical medicine, and science and engineering. When a student designates a major, whether that decision is made upon admission or before the end of spring semester of the sophomore year, the student also will be considered a student in the school that houses that major. Thus, students simultaneously will be in the Newcomb-Tulane College and a school. The School of Professional Advancement oversees programs for part-time students.

Schools and Departments
As the homes of the academic departments, the schools define the requirements for the school-specific core curriculum and are responsible for designing majors/minors and the capstone experience. For graduating students, the schools also certify completion of majors/minors, the school core curriculum, and the capstone experience for the degree. The schools also deliver graduate and professional education and programs.
