INTELLIGENCE STUDIES CERTIFICATE (GRADUATE)

Overview

Intelligence Studies is an academic field devoted to developing analytical, communication, written, computer, critical thinking, and interpersonal skills. Students will gain both theoretical and practical knowledge from intelligence community experts to become highly skilled and sought after in the intelligence fields, both with government agencies and private industry.

The Intelligence Studies Certificate focuses on the missions, methods, and organizational arrangements of intelligence in general, and US intelligence in particular. It focuses on the three significant elements of intelligence – collection, analysis, and counterintelligence – and their applications in the real world. Additionally, courses will explore the relationship between intelligence and national security, the use of intelligence in policymaking and implementation, and privacy rights.

1 The School of Professional Advancement’s Graduate Certificate in Intelligence Studies has been submitted to the U.S. Department of Education for approval for federal financial aid eligibility. At the time of publication for Tulane University Spring 2021 academic catalog addenda, this certificate is pending approval from the D.O.E for federal aid.
