DEPARTMENT OF HEALTH POLICY AND MANAGEMENT

Programs
Interim Chair: Lizheng Shi, PhD, MsPharm, MA (https://sph.tulane.edu/hpm/lizheng-shi/)
Endowed Regents Professor
Director, Health Systems Analytics Research Center

Mission
The mission of the Department of Health Policy and Management is to conduct health management and policy research and to prepare a diverse group of future managers and leaders to improve health care delivery services, increase access to health care, reduce health disparities, and advance health care policy worldwide.

About HPM
Faculty in the Department of Health Policy and Management investigate the impact of financing models, organizational structures, processes, and social determinants on quality, cost, and access to healthcare to improve population health in both domestic and international settings.

This department prepares students to meet the ever-changing demands of the health care, public health, and health policy environments using financial models, organizational structures, and social determinants to improve quality, contain costs, improve access to healthcare, and address health disparities for all populations. We envision a future where our graduates enhance quality of life by improving public health and healthcare delivery systems worldwide.

Areas of faculty expertise include health policy, organizational theory and behavior, management, economics, medicine, law, sociology, political science, and statistics. Faculty have experience in leadership and policy in healthcare organizations, national nonprofits, and international agencies and health care systems.

Graduate Certificates
• Health Care Leadership & Innovation Certificate (Graduate) (https://catalog.tulane.edu/public-health-tropical-medicine/health-policy-management/health-care-leadership-and-innovation-certificate/)

Graduate Degrees
• Health Administration, MHA (https://catalog.tulane.edu/public-health-tropical-medicine/health-policy-management/master-health-administration-mha/)
• Health Policy and Management, PhD (https://catalog.tulane.edu/public-health-tropical-medicine/health-policy-management/health-policy-management-phd/)
• Health Policy, MPH (https://catalog.tulane.edu/public-health-tropical-medicine/health-policy-management/health-policy-mph/)
• Health Systems Management, MPH (https://catalog.tulane.edu/public-health-tropical-medicine/health-policy-management/health-systems-management-mph/)
• Medical Management, MMM (https://catalog.tulane.edu/public-health-tropical-medicine/health-policy-management/medical-management-mmm/)

Courses
Health Policy & Management (HPAM)

HPAM 6050 Health Systems Concepts (3)
This course introduces students to the historical development, current structure, operation, and future direction of the U.S. health care system. The primary topics include public health activity and health care delivery systems, the factors that determine allocation of health care resources, and the relationship of health care costs to benefits. Students learn to assess organized efforts to influence health delivery and policy formulation, the impact of these efforts on leaders of health care organizations, and the role of societal values and individual behaviors on health system performance, reform efforts, and the health status of our population. Class time is devoted to open discussion of these complex and value-laden issues.

HPAM 6140 Leadership for Clin Improve (3)
The course offers students the knowledge, skills, and personal mastery tools that are a prerequisite to assuming leadership positions in the delivery of health services that improve the health status of the individuals and populations. Building on the perspective of clinical education and practice, the student begins his or her leadership journey, integrating and implementing the key structures and processes leading to clinical process improvement and the improvement of health outcomes. By grounding fundamental principles of organizational learning in experimental activities, this course enhances the student’s mastery of the core competencies: setting direction, enrolling participation, quality measurement and improvement, personal and team learning, effective health care design, clinical change and organizational design.
HPAM 6170 Qual Mgmt in Health Care (3)
This course introduces students to the concept of continuous process improvement and to the discipline of healthcare quality management. This practical course also introduces the tools to examine, evaluate, and implement the key structures and processes of quality management programs in health care organizations. An integrative approach to improvement and organizational learning is taken, combining topics and methods from diverse improvement approaches in the development of an organization-wide commitment to continuous improvement. Through case analysis and experiential learning, the course emphasizes practical applications that prepare the participants to use the theory and techniques of quality management in situations with complex clinical and managerial implications. Course topics include measurement systems, quality improvement tools, and the design of programs for change management.

HPAM 6200 Intro to Healthcare Analytics (3)
Vast amounts of diagnostic, procedural, pharmacy, administrative and financial data are collated and generated within the health care system. To support the financial health, operational efficiency and quality of care, stakeholders must transform this data into actionable information to support decision-making. Students in this introductory graduate-level course will utilize industry standard analytical tools, particularly Microsoft Excel® to analyze large institutional data commonly found in healthcare.

HPAM 6210 Health Law and Regulation (3)
This course is a graduate-level course that introduces students to a wide range of topics in the area of health law and regulation including a number of relevant statutes. Students learn to recognize potential legal problems in various health care settings, identify the issues and rights that are implicated, and propose solutions or plans of action. They also learn to differentiate between legal problems and problems which can more appropriately be solved in other ways. There is an emphasis on formulating analyses clearly, both orally and in writing.

HPAM 6300 Data Visualization and Comm (3)
Health organizations increasingly rely on data-driven decisions, requiring students to analyze and communicate pertinent information to inform stakeholders. HPAM 6300 is an applied analytics course that focuses on data-centered communication by emphasizing best practices in data visualization and storytelling. Students will build on the analytical skills developed in HPAM 6200 by creating key performance indicators and generating dashboards to monitor performance. Students will apply these skills by using cases and data visualization software, particularly Microsoft Excel and Tableau.

Prerequisite(s): HPAM 6200.

HPAM 6320 Managerial Communications (3)
The purpose of HPAM 6320 – Managerial Communications is to develop the written and oral communication skills that students will need as leaders to accomplish organizational objectives. To function effectively in complex professional environments, leaders must understand and use different communication behaviors and strategies. Students will strengthen interpersonal communication skills by sharing and receiving feedback and learn how to navigate conflict and other difficult conversations. This course will provide both underlying concepts and skill-building exercises to allow students to develop, improve, and perfect their communication skills.

HPAM 6380 Organizational Behavior (3)
HPAM 6380 introduces students to theories and concepts of organizational behavior within the context of healthcare. Students will consider influences such as emotional intelligence, values, psychological safety, perceptions, motivation, power, persuasion, and conflict, and how they affect individuals, teams and organizations. HPAM 6380 will consider current pressures and challenges in the current environment and how they affect culture, strategy and change management in healthcare organizations.

HPAM 6450 Health Economics (3)
This course introduces basic economic concepts and analytical tools used to address questions concerning the efficient and effective production of health and health services in the context of a market economy. The course emphasizes the application of economic tools of analysis to the management of health-related organizations and to health policy development. Students will study current research on the health care industry and the ways in which economic analysis is employed in the development of public policy on issues related to population health and healthcare.

HPAM 6500 Intro to Health Care Fiscal Management (3)
This course is an introduction to the principles that have evolved governing how private-sector health care organizations report standardized financial information to persons external to the organization (though obviously also available to internal parties as well). The course will emphasize reporting of (a) organizational fiscal posture, (b) organizational activity and performance, and (c) basic interpretation and analysis of the fiscal information reported. The course assumes students have no prior study of or experience in accounting or finance.

HPAM 6540 Mgr Acct. for Hlth Care Mgrs (3)
The main purpose of the Managerial Accounting course is to expose health management students to managerial accounting concepts within healthcare organizations. Mastering the fundamentals of fixed and variable costs, cost allocation, price setting strategies, budgeting, revenue cycle management and supply chain management will provide students with a foundational knowledge of the business side of healthcare allowing for improved decision making and outcomes. This foundational knowledge of said topics will be achieved through lectures, assigned readings, case studies, group projects and examinations.
HPAM 6550 Dynamics of Pay Sys Pol & Func (3)
This course introduces students to the ways providers of health care services have been, are, and will be paid for the services by private-sector payers and public-sector programs. Knowledge of economic concepts and of financial/managerial accounting will be used to analyze public policy issues as well as implementation and reporting issues. Topics include (1) the macro-economic environment within which current payment systems have evolved and continue to evolve; (2) payment mechanisms for institutionally based care, both acute and sub-acute, and for ambulatory care over a range of settings; (3) regulatory processes determining payment for services in entitlement programs; (4) the policy objectives furthered or impeded by public-sector and private-sector payment mechanisms; and (5) analysis of provider responses to payment systems incentives.

HPAM 6710 Quantitative Decision Models (3)
This course encompasses a body of knowledge, a set of quantitative skills, and an orientation towards managerial situations which provide managers greater insight and analytic opportunities for improving the managerial process. Focuses on the systematic planning, direction, and control of the organizational processes that turn resources such as labor, equipment, and materials into services and the quantitative analysis that supports these decisions. In this environment, the processes involve allocation, scheduling, and procedural decisions that result in the effective and efficient utilization of resources for the delivery of health care services.

HPAM 6890 Health Mkt Analysis (3)
Health Market Analysis introduces students to the concepts of market analysis, marketing, strategic planning, and research presentation management; all of which are vital to successful health care organizations. This course integrates knowledge of marketing, statistics and planning. The course also incorporates understanding of the health care environment in the United States and its effect on the development, presentation and use of a strategic plan. This integration is accomplished through the use of cases and the performance of a strategic assessment and plan for a health care delivery organization.

HPAM 6910 Leadership & Ethics (3)
HPAM 6910 introduces students to leadership and ethics with an emphasis on the managerial application in the healthcare environment. Activities include assessing personal values and biases, examining relationships to personal and professional integrity, and critiquing classic and contemporary leadership theories. Students will generate a leadership platform that will serve as a basis to examine ethical challenges faced in contemporary health care environments. Students will analyze ethical duties owed to patients and stakeholders, social responsibility, and organizational culture and their influence on ethical behavior in organizations. This class will use case analyses and class discussion to expose students to diverse perspectives, challenges, and application of best practices.

HPAM 6920 Leadership, Imprvmt, and Innovtn (3)
Within the context that the healthcare ecosystem is undergoing a profound transformation towards a new consumer-driven market, often with increasingly constrained resources, this course offers students an open learning and design space to foster positive healthcare businesses through human-centered design of the work of care, while improving patient experience, health outcomes, workforce engagement, and revenue. This leadership focus is on successfully reaching key performance metrics and goals through innovation and improvement, while restoring humanity to healthcare.

HPAM 6930 Leadership and Innovation (3)
This course is designed to provide current and emerging physician leaders the knowledge, skills, abilities, and personal mastery tools, which are requisite to assuming leadership roles in the delivery of health services in the consumer-driven healthcare market. By grounding fundamental principles of individual, team, and organizational learning in experiential activities, simulations, and hands-on learn-by-doing exercises, this course will enhance the student’s mastery of the core competencies: assessment of current reality, creation of shared vision and purpose, understanding systems and complexity, teaching and learning, design thinking, dialogue, authenticity and personal mastery, positive-relationships and culture, innovation, and organizational transformation.

HPAM 6940 Business Trends, Models & Pmt (3)
This course offers physician leaders an introduction to strategic thinking within a business planning framework using a case-based and experience based analysis of environmental trends, business models and payment systems. The course helps the student understand and prepare for the continuously changing health care business environment in the US and prepares the student for future strategic planning responsibilities.

HPAM 6950 Relational Communication and Professionalism (3)
This course provides current and emerging healthcare leaders the knowledge, skills, and personal mastery of tools necessary for using human conversation and connection to navigate and positively impact complex systems, structures, and cultures of healthcare organizations. Students in this course will continue their leadership development journey by enhancing skills that allow for stronger relationships with all people present in health and healthcare organizations in order to create and sustain a positive, high-performance culture. By grounding fundamental principles of individual, team, and organizational conversation in experiential activities, simulations, and real-time feedback, this course will enhance each student’s mastery of core competencies in relational communication and professionalism—habits for fostering positive human connection, inquiry, skillful discussion, shared sense-making, empathy, and cultural transformation.
**Prerequisite(s):** quantitative tools for causality, pay for performance, quality improvement, and measures of success for innovation initiatives.

**Balanced Scorecard.** This course offers the necessary analytic methodology supported by business statistics for accountable care, utilizing outcomes. Within the new consumer-driven environment, positive change metrics must be defined, measured, and included in the leaders' new work. This measurement environment requires leaders to evaluate data sets of market-referenced utilization, cost, satisfaction, and quality improving the health of the population, reducing costs while offering value and creating the conditions for the workforce to find joy and meaning.

The healthcare industry now recognizes the key quality outcomes aims – the Quadruple Aim of enhancing patient experiences and engagement, improving the health of the population, reducing costs while offering value and creating the conditions for the workforce to find joy and meaning in their work. This measurement environment requires leaders to evaluate data sets of market-referenced utilization, cost, satisfaction, and quality outcomes. Within the new consumer-driven environment, positive change metrics must be defined, measured, and included in the leaders' new balanced scorecard. This course offers the necessary analytic methodology supported by business statistics for accountable care, utilizing quantitative tools for causality, pay for performance, quality improvement, and measures of success for innovation initiatives.

**Prerequisite(s):** HPAM 6930, 6940, 6950 and 6960.
HPAM 7220 Positive Organization Design and Development (3)
Healthcare delivery organizations are complex and often defy reductionistic models offered by much of management theory. While leadership and management training often focuses on enabling better performance through structural alignment, process control, and workforce compliance, human behaviors are the fundamental ingredient enabling positive organizational culture and outstanding performance. This course builds upon individual and team-based skills introduced in Relational Communication and Professionalism (HPAM 6950), and focuses on broader questions of organizational design through the lens of human behavior, narrative, and culture, with an emphasis on creating enabling factors (trust, distributed responsibility, shared mental models, and leverage points for systemic change). Participants will engage with new ways of seeing common systems within their own organizations and will work to redesign them.

Prerequisite(s): HPAM 6930, 6940, 6950 and 6960.

HPAM 7230 Decision Models, Informatics, and Market Analysis (3)
Critical thinking skills and data-driven decisions and planning capacities are essential in the complex consumer-driven health care ecosystem. This course supports the leader’s development of decision models to predict future trends and demands, including the application of simulations determining the probability of success, as well as an analytical framework for building innovative business plans. This course has three foci. First, this course will improve physician leader’s ability to analyze complex and sophisticated decision problems and to design models of individual choice behavior, probability, and statistical decision theory. Second, this course will introduce the concepts of market analysis with emphasis on population health management. Third, this course integrates knowledge of data analytics, including statistics and epidemiology.

Prerequisite(s): HPAM 6930, 6940, 6950 and 6960.

HPAM 7240 Strategy and Transformational Change (3)
Students will use a suite of tools based on positive psychology, business models innovation, design thinking, high-performing teams, consumer-driven networks, and the creation and deployment of the organizational learning spiral to develop an organizational strategy plan. By introducing students to a variety of strategy and change theories and practices, with a focus on matching practice to organizational characteristics, the course builds flexibility and agility to ensure solutions are appropriate to the challenge addressed. Examining one approach more deeply, while surfacing commonalities with other models, the course provides a different lens through which to consider strategic options. The course continues to build capacity within four key design areas: consumer-driven care, inter-professional teaming, workforce wellbeing and humanizing care and services.

Prerequisite(s): HPAM 6930, 6940, 6950 and 6960.

HPAM 7250 Masters of Medical Management Capstone (3)
With the guidance and mentorship of program faculty, building on student course assignments throughout the Masters of Medical Management program, this culminating experience is based on a completed three-part management application paper, which details a proposed innovation and the creation of a positive-change intrapreneurial or entrepreneurial business plan for the prototype. This business plan includes a defined business model, applicable enabling social-change technology, plans for creation of a value network, identified consumer markets, the required inter-professional and inter-organizational collaboration, with deployment plans for iteration, ramp and scale deployment, and potential return on investment. The fully implementable business plan will be presented in an innovation competition to appropriate leaders, stakeholder and prospective investors.

Prerequisite(s): (SPHL 6020 or minimum score of PASS in ‘SPHL 6020 Exemption’) and HPAM 6930, 6940, 6950, 6960, 6970, 7200, 7210, 7220, 7230 and 7240.

HPAM 7330 Negotiation Analysis (2)
Strategic Management of Health Care Organizations will introduce you to strategic thinking, strategic planning and strategic management, which are vital to successful health care organizations. This course integrates students’ knowledge of management.

HPAM 7580 Financial Management (3)
This is a course on financial management focused on making good decisions at the institutional level about investments/divestments (primarily real assets) and about the financing choices (raising and servicing capital).

Prerequisite(s): HPAM 6500, 6540 and 6450.

HPAM 7660 Health Policy Analysis (3)
The primary aim of this elective course is to present an overview of health policy in American government, its scope, dynamics, and conceptual and practical dilemmas. It is designed to acquaint students with major issues involved in formulating, implementing, and assessing patterns of decisions established by government. Because the study of policy is essentially interdisciplinary, readings for the course have been drawn from several fields, including sociology, political science, and economics. Specific areas of consideration will be addressed during the seminar through analysis and discussion of the functions of state and local government and various stakeholder groups that attempt to influence governmental action.

HPAM 7740 Econ. Eval. and Modeling (3)
This course introduces economics concepts and modeling tools applied to economic evaluation in health care. Topics include: cost analysis, effectiveness measures, cost-effectiveness, cost-utility analysis, and cost-benefit analysis. The course will use case studies to illustrate the use of economic evaluation. Students will develop skills in software to build decision tree models, and Markov models for economic evaluation. There are no prerequisites but the students should be familiar with basic geometry, algebra and statistics.
HPAM 7800  Health Policy Capstone (3)
Prerequisite(s): HPAM 6210*, 6450*, 7100*, 7660* and 7740*.
* May be taken concurrently.

HPAM 7990  Master's Independent Study (0-3)
Masters students and advisor select a topic for independent study and develop learning objectives and the expected written final product.

HPAM 8310  Org Theory And Assessment (3)
HPAM 8310 is a required course for doctoral students in the Health Policy and Management PhD program. The purpose of this course is to develop the ability to conduct theory-based research on health care organizations. To foster this development, we will examine theoretical literature along with contemporary empirical studies of health care organizations. Special focus is placed on exploring in depth the link between theory and research exhibited in this empirical work to enable students to develop the capability of using theory to guide their own research.

HPAM 8350  Policy Analysis Natural Experi (3)
This course is intended for doctoral students interested in policy analysis. It will focus on when to apply the various econometric methods to panel data. Discussion will focus on how each technique is applied in practice. Techniques will include differences-in-differences, synthetic controls, regression discontinuity, and quantile regression.

Prerequisite(s): (IHSD 8250 or ECON 7170).

HPAM 8410  Cost Benefit/Effective Analysi (3)
The purpose of the course is to introduce techniques of economic evaluation applied to health interventions and clinical decision making. Topics covered include: cost analysis, effectiveness measures, cost-effectiveness, utility measures and cost-utility analysis, benefits of health interventions and cost-benefit analysis. The course will discuss a number of case studies in clinical health economics to illustrate the use of economic evaluation techniques in the health sector. There are no prerequisites for the course but each student should be familiar with basic geometry, algebra and statistics.

HPAM 8770  Health Services Research Methods (3)
This course develops theoretical knowledge and applied skills in designing and conducting research in health systems. You will utilize and build upon knowledge gained in prerequisite courses as you learn to carry out each step of the research process. You will study textbooks, and articles, present reports to the class in a seminar setting, and complete a number of assignments with contribute to the experience of research design and analysis. You will develop and understanding of factors which, unless planned and accounted for, sometimes result in serious flaws in the research project.

HPAM 8990  Doctoral Independent Study (1-3)
Doctoral students and advisor select a topic for independent study and develop learning objectives and the expected final product.
