

RIVER-COASTAL SCIENCE AND ENGINEERING, MS (RESIDENTIAL)

Overview

The River-Coastal Science and Engineering program is an effort by faculty and students to understand a key component of the Earth system—the linked environments of river basins, deltaic river mouths, and coastal ocean systems. Much of our focus surrounds the nexus issue of water: water exerts a strong control over landform evolution and ecosystem health, and is a priority human need for agriculture, industry, and health.

The resident MS degree program is a 2-year program, in which a student will take 24 graduate credit hours of coursework and write a thesis (6 research credits). The program is well suited as a stepping stone to students considering pursuing a Ph.D. degree programs at Tulane or elsewhere in this discipline or related areas. The program is also useful for students planning to enter more advanced professional degree programs (e.g., law, public health, business, natural resources management, etc.). It can be useful for students interested in seeking employment with environmental agencies of federal, state, and municipal government; non-governmental organizations; education; and in private industry, including environmental consulting firms.

Requirements

All students must complete 24 graduate credit hours in order to obtain the degree, over the course of 4 semesters.

- M.S. students can transfer up to 12 credit hours from previous graduate-level coursework to the degree. The RCSE Graduate Advisor and Department Chair must approve all transfer credits.
- Students hoping to transfer graduate credits should prepare and submit the paperwork at the start of their second semester at Tulane. SSE will only transfer credits when the student has completed one semester (it is at that point that a Tulane transcript is available).
- Academic graduate electives from other departments may be applied to the degree up to a limit of 9 credit hours. All other courses must originate from RCSE. If a class is not on the approved list, a student may petition the Graduate Advisor for it to be accepted as an elective.
- Note that thesis MS students typically do NOT register for any credits over the summer (Ph.D. students must due to health insurance reasons, but not MS students).
- Unless students have been exposed previously to the material offered, thesis committees will strongly urge students to take two introductory technical courses offered by the RCSE, RCSE 6800 Intro to River Science & Eng (3 c.h.) and RCSE 6802 Intro to Coastal Science and Engineering.

Course ID	Title	Credits
RCSE 6010	Water Resources Engineering II (offered Fall semester)	3
RCSE 6030	Water Resources Engineering III (offered Spring semester, even years)	3
RCSE 6040	Coastal Marine Geology (offered Fall semester, odd years)	3
RCSE 6660	Special Topics (Offered periodically)	1-3
RCSE 6710	Open Channel Flow (offered Spring semester, odd years)	3
RCSE 6800	Intro to River Science & Eng (offered every Spring semester)	3
RCSE 6802	Introduction to Coastal Science and Engineering (offered every Fall semester)	3
RCSE 6810	River and Stream Restoration (offered Fall, even years)	3
RCSE 6820	Introduction to River-Coastal Hydrologic and Hydraulic Modeling (offered Spring semester, even years)	3
RCSE 6830	River Mechanics & Management (offered Spring, even years)	3
RCSE 6840	Methods in River Sampling (offered Spring, odd years)	3
RCSE 6850	Estuarine Processes (offered Spring semester, odd years)	3
RCSE 7100	Seminar in River Coastal Science and Engineering (Every semester)	1
RCSE 6900	Independent Study (Every semester)	1-3
RCSE 9980	Masters Research	3

M.S. students must enroll in three semesters of the 1 credit Seminar course (RCSE7010). The goal of this is to expose students to state-of-the-art research topics and methodologies in concert with the departmental seminar series. They must also enroll in the 3 credit Technical Writing course (RCSE 7020) that is offered each Fall. Generally students take this class in their third semester.

Additionally, students must enroll in 3 credits of Masters Research (RCSE9980) over two successive semesters (6 credits total). Typically, students do this in the 3rd and 4th semesters. The student may register for more Masters Research credits if desired in previous semesters; however, these credits do not count toward the 24 course credits necessary for the degree. Masters Research credits are an additional and different type of credit, and they

bring the total credits up to $24+6=30$. Note that if all other credit requirements are met, the student can enroll in ONLY 3 hrs of Masters Research to maintain enrollment, i.e. this maintains full time enrollment.
